Mr. Dana was fond of travel, and though he was seldom long absent from his post, his numerous trips enabled him to see a large part of the civilized world. He was an accomplished linguist, having a thorough knowledge of the French, German, Spanish, and Italian languages and literatures, and of the Scandinavian tongues. His wide scholarship, as well as his energy and shrewdness, constantly manifested itself in the columns of the journal that he edited. At one time he was an assiduous collector of books, and he secured many rare and interesting volumes. He took an interest in pictures, and he was an intelligent and judicious buyer at the art sales. He also gave considerable attention to porcelain, and made a thorough study of that branch of industrial art. For several years his summer home, Dosoris, on the northern shore of Long Island, has been noted for its col-

"New American Cyclopædia" (16 vols., 1857-'63), which they thoroughly revised and increased under the title of "The American Cyclopædia" (1873-'76). Meanwhile Mr. Dana, with that indefatigable industry for poetry, and was always ready to see a new and genuine poetic genius issued in verse. His "Household Book of Poetry," the first volume of its kind in this country (revised ed., 1887), was co-edited, with Rossiter Johnson, "Poetry for the People" (1883). With Gen. James Harrison Wilson he wrote a "Life of Ulysses S. Grant." He wrote a few poems in his earlier days, some of which may be found in popular collections. In his later years he delivered addresses, which were published, notably those on "Journalism" and on Abraham Lincoln. His "Reminiscences of the Civil War" and his "Eastern Journeys" appeared posthumously.

Mr. Dana was a man of fine physique, and throughout his long and active career he enjoyed the best of health. He was enthusiastically fond of outdoor recreation. He was an expert horseman, a good judge of horseflesh, and likewise a good judge of all kinds of live stock. At one time he was a very ambitious and successful poultry farmer. Immediately after his death appeared innumerable anecdotes, with many elaborate eulogies and warm personal tributes. Whatever may have been thought of the sharpness and apparently unrelenting nature of his criticism as occasionally shown in "The Sun," Mr. Dana, to those who knew him personally, was one of the most charming of companions and one of the most faithful of friends. Of all his vast learning and experience, there appeared to be not one item that was not at instant command; and it would be difficult to mention any human activity in which he was not interested. He may have had prejudices; but his love of truth and his editorial instinct causing the word "editorial" in its widest

CHARLES A. DANA'S SUMMER HOME, NEAR GLEN COVE, L. I.

lection of plants. There is also a great and beautiful variety of trees—lindens, beeches, horse chestnuts, firs, hemlocks, pines, and strange trees seldom seen in this country. Mr. Dana's first publications in book form were "The Black Ant" and "Anne and the Elves," two small volumes of stories translated from the German (1848 and 1852). In 1855 he planned and edited, with George Ripley, the

possible sense) dominated everything that passed through his mind. He did not merely edit a newspaper and a cyclopædia, he edited himself. A single anecdote may be recalled to illustrate this. He was supposed to have an unreasoning hatred of President Grant, whom "The Sun" had severely criticized. But when one of Mr. Dana's assistants, preparing a biography of the president,

repeated, apparently from the best authorities, the alleged refusal of the army to obey an order for a second assault at Cold Harbor (the most damaging thing, if true, in the General's whole military career), Mr. Dana promptly struck it out in the proof, and wrote on the margin, "*This is not true.*" His last illness was painful, and confined him to his country home for several months. The funeral was attended by a large delegation from New York, which included many men of eminence and nearly all that remained of his associates of earlier days. His resting-place is in the cemetery that crowns the hill back of the Protestant Episcopal Church in Glen Cove.

DAUDET, ALPHONSE, a French novelist, was born in Nîmes, France, May 13, 1840; died in Paris, Dec. 16, 1897. He was the son of a poor tradesman, who gave him the best education he could afford. His boyhood was spent chiefly at Lyons, where he attended the *lycée*, which he left to become usher in a school at Alais. For about a year he did the drudgery of that humble calling, the butt of the scholars, who ridiculed him for his near-sightedness, and who also played all sorts of cruel tricks upon him. The misery of his life at Alais left a lasting impression on his mind, and he said long afterward that his sufferings there far exceeded any that he experienced later in Paris.

ALPHONSE DAUDET.

Leaving Alais when but seventeen years old, he set out for Paris with his brother Ernest, hoping to earn a livelihood by the aid of his pen. On their arrival in the French capital both found employment with the Comte de Morny (sometimes styled Duc de Morny), at that time president of the Corps Législatif, whom Alphonse Daudet was accused of lampooning somewhat later in his novel "*Le Nabab*." The book created such heated discussions in French literary journals on account of this that Daudet wisely silenced the clamor by declaring in a new edition that he had not attempted to pasquinade any prominent character of the empire.

Daudet's first literary effort was a volume of verse, "*Les Amoureuses*" (1868), which contained an exquisite *fantasia* entitled "*Primes*." The book was well received, and several of the newspapers threw open their columns to his contributions.

Under the title of "*Les Gueux de Province*" he described vividly, in "*Figaro*," the unhappy experiences of the ushers in the provincial schools, and he followed this by a poem, "*La Double Conversion*" (1861). In 1863 he published "*Le Roman du Chaperon Rouge*," a collection of articles that he had contributed to "*Figaro*."

Daudet also wrote for the stage, and although his fame is derived chiefly from his novels, he became well known as a dramatist. In 1862, in collaboration with Ernest Lépine, he presented at the Odéon Theater "*La Dernière Idole*," which was followed by "*Les Absents*," originally written for the Comédie Française, and produced at the Opéra Comique. His next production, originally named "*Le Lys*," was brought out at the Comédie Française in 1865, under the title of "*L'Éillet Blanc*," and was followed by "*Le Frère Aîné*" in 1868. "*Le Sacrifice*," a melodrama, was put on at the Vaudeville in 1869, and was uniformly praised by the press. Among his less successful plays were "*L'Arlesienne*," produced at the Vaudeville Theater, for which he wrote incidental music, and "*Liso Tavernier*" at the Ambigu in 1872. Subsequently he dramatized two of his novels, "*Numa Roumestan*" and "*Sapho*." The latter, in which Mme. Réjane played a leading part, was immensely popular. These were followed by "*L'Obstacle*" and "*La Lutte pour la Vie*."

Much of Daudet's best work first appeared in the Parisian newspapers, and he contributed regularly to "*Figaro*," the "*Moniteur Universel*," the "*Monde Illustré*," and "*L'Illustration*." In 1869 he collected and published his "*Lettres de Mon Moulin*," a masterpiece of pathos and irony, when the gathering war clouds interrupted his work. During the siege of Paris by the Germans in 1870 he was very active in forming companies to take part in the defense of the city, and was also engaged with the troops in several sorties. In 1871 he issued "*Lettres à un Absent*," "*Robert Helmont*," and "*Contes du Lundi*," the latter having appeared in "*Figaro*" under the pen name Gaston-Marie. He signed his verse for his journal Jehan Froissart. Subsequently he published several novels, short stories, and collections either under his own name or under the pen name Baptistet. His charming extravaganza "*Tartarin de Tarascon*," which exhibits his lightest and gayest humor, was issued in 1873, and was followed by "*Le Petit Chose*" (reminiscent of his days at Alais), "*Tartarin sur les Alpes*," "*Jack: Histoire d'un Ouvrier*," and "*Les Femmes d'Artistes*." But his best work, "*Fromont Jeune et Risler Aîné*," saw light the following year. For this he received the Jouy prize of the Académie Française, a body for which, in later years, he showed supreme contempt. Some time in 1874 he became one of the editors of the "*Journal Officiel*," a sinecure that gave him ample time to pursue his literary labors. In 1877 he published "*Les Contes Choisis*" and "*Le Nabab: Mœurs Parisiennes*," "*Les Rois en Exil*" appeared in 1879. In the course of a review of his brother's book, "*Mon Frère et Moi: Souvenir d'Enfance et de Jeunesse*," in the "*Atlantic Monthly*" for June, 1882, Henry James, Jr., said: "Alphonse Daudet is a passionate observer—an observer not perhaps of the deepest things in life, but of the whole realm of the immediate, the expressive, the actual. This faculty, enriched by the most abundant exercise and united with the feeling of the poet who sees all the finer relations of things and never relinquishes the attempt to charm, is what we look for in the happiest novelist of our days. Ah, the things he sees—the various fleeting, lurking, delicate, nameless, human things! This beautiful vivacity finds itself most complete in '*Les Rois en Exil*,' a book that could have been pro-

duced only in one of these later years of grace. Such a book is intensely modern, and the author is in every way an essentially modern genius. With the light, warm, frank, Provencal element in him, he is, in his completeness, a product of the great French city. He has the nervous tension, the intellectual eagerness, the quick and exaggerated sensibility, the complicated, sophisticated judgment, which the friction, the contagion, the emulation, the whole spectacle, at once exciting and depressing, of our civilization at its highest, produces in susceptible natures. There are tears in his laughter, and there is a strain of laughter in his tears, and in both there is a note of music."

In 1883 Daudet fought a duel with Albert Delpit, who had accused him of "disinterring the style of Chateaubriand, of lack of imagination, and of not knowing even how to write." In this encounter M. Delpit was wounded in the arm. The same year Daudet published "Numa Roumestan," in which, it is said, he introduced Léon Gambetta, and "L'Évangéliste," a romance treating of the Salvation Army. He surprised Paris in 1884 with "Sapho," which was dedicated to his son on his attaining his majority. The sensation that this book created was due partly to its being out of the author's usual line, and its dedication did not tend to abate the astonishment, which had scarcely died out when "L'Immortel" was put on the market (1888). In this work Daudet exercised all his marvelous power of ridicule in an attack on the Académie Française. Under a thin disguise he mercilessly satirized the members of that august body, and declared that the Academy itself was "a hollow idol—nothing—the under side of nothing." By doing this he cut off all chance of admission to that body; yet his recent enthusiasm for the establishment of the De Goncourt Academy seems to indicate that he was not altogether opposed to academies.

Émile Zola considers "Numa Roumestan" the one of all Daudet's productions that is most personal to himself. Of this work and of him as a writer Zola says: "He has put his whole nature into it, helped by his southern temperament, having only to make large drafts upon his most intimate recollections and sensations. I do not think that he has hitherto reached such an intensity either of irony or of geniality. Happy the books which arrive in this way at the hour of the complete maturity of a talent! They are simply the widest unfolding of an artist's nature; they have in happy balance the qualities of observation and the qualities of style."

In later years he wrote several books of a more serious nature, and his "Trente Ans de Paris" and "Souvenirs d'un Homme de Lettres" are among these. The former work treats of the struggles of his early literary career; the latter is reminiscent of more prosperous times. They appeared in 1888, and in 1890 he published "Port Tarascon, Dernières Aventures de l'illustre Tartarin." "Rose et Ninette," a pitiful story of the disposition of two children of divorced parents, was issued in 1892, and was followed in 1895 by "La Petite Paroisse," which exhibits the author's finest qualities. In 1894 Daudet wrote a charming preface to Gonzague Privat's romantic story "Joie Perdue," and in 1896 produced another novel, "Soutien de Famille." At the time of his death he was collaborating with M. Léon Henricque on a new work.

As a man, Daudet was the most accessible, never turning a visitor, no matter how obtrusive, from his door. As a worker, he was spasmodic, but when once started he would work as many as eighteen hours a day. He wrote slowly and laboriously, and seemed never satisfied with his work until he

had revised and rerevised it time and again. He belonged to the naturalistic school in French fiction. With Coppé, de Maupassant, Renan, and Zola he stood in the foremost ranks of French literature of the present day. Most of his works are marked by keen observation and truthfulness, but some of his later works contain many overstrained pathetic scenes. His characters are generally from life, and he made no attempt to conceal the fact. He has been quoted as saying that rather than cease to work in that way he would cease to write. Daudet was happy in the choice of his characters, and had the art of making his reader feel a sympathy with them. He portrayed the higher culture of the social system, and at one time was called "the novelist of elegant aristocratic society." He kept closer to the ideals of Flaubert than the rest of his contemporaries, and was not an extremist. He became a classic in his native language, and a model whose lucidity and style are the envy of writers in other lands. Anatole France says: "The style of Alphonse Daudet is that of a light, supple raconteur. His sentences are subtle and sometimes end abruptly, yet, when they do, one feels that they end in the smile or jest of the narrator. I am not always sure that they are well formed, but they flow and sparkle. In picturesque language he excels." Daudet was a master in poetry, fiction, and the drama, and in each of these fields he has left several masterpieces.

DELAWARE, a Middle Atlantic State, one of the original thirteen; ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 39,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; and 168,493 in 1890. Capital, Dover.

Government.—The following were the officers during the year: Governor, Ebe W. Tunnell; Secretary of State, William H. Boyce, succeeded, on his appointment to the bench, in June, by James H. Hughes; Treasurer, William M. Ross; Auditor, B. L. Lewis; Attorney-General, Robert C. White; Adjutant General, Garrett J. Hart; Insurance Commissioner, Edward Fowler; Agricultural Inspector, E. H. Bancroft—all Democrats; Chancellor, John R. Nicholson; Chief Justice of the Supreme Court, Charles B. Lore; Associate Justices, William C. Spruance, Ignatius C. Grubb, James Pennewill, and William H. Boyce, appointed in June, when, according to the revised Constitution, the Court of Errors and Appeals was abolished and the Supreme Court was established. Up to that date Charles M. Cullen and David T. Marvel served as associate judges of the former court together with the two first named above.

Finances.—The statement of the liabilities and assets of the State at the beginning of the year gave: Total liabilities, \$719,750; total assets, \$1,024,452; investment assets in excess of liabilities, \$304,702. The State property has been increased during the past few years by buildings aggregating a value of \$130,000, including the Insane Hospital, the library addition to the State house, and the armory in Wilmington. The expenses of the State in 1896 were about \$426,000.

Education.—Delaware College held its fifty-second annual commencement June 16. The total enrollment in 1896-'97 was 77. The enrollment for 1897-'98 had reached 89 in October; of these 63 were freshmen. The faculty consists of 10 professors and 3 instructors. To the six courses heretofore offered a seventh, called the general course, has been added. The entrance requirements have been raised, and the range of subjects has been enlarged. A special short course in agriculture,

January to March, was inaugurated this year. Tuition has been made free to all students belonging in the State. Peter B. Ayars has been appointed to look after military instruction in the schools of the State, and expects to introduce military drill into all the public schools.

EBE W. TUNNELL, GOVERNOR OF DELAWARE.

Charities.—A committee of the Legislature appointed to examine the affairs of the State Insane Hospital reported May 7. The following items are from the report: There are 153 male and 105 female patients in the institution. The total number of employees, exclusive of the superintendent and his assistant, is 36, the male attendants in the wards receiving \$19 a month and the female attendants \$14 a month. The average daily cost for each patient is about 42 cents. The increased appropriation asked by the Board of Trustees is largely accounted for by the fact that the large annex will make it necessary to employ from 12 to 14 extra attendants, and the extra lighting, heating, etc., will entail more expense. It was recommended that imbecile patients be returned to their counties, and that an adjacent tract of 36 acres be bought for raising vegetables for the institution. The annex referred to above was finished this year.

The State Industrial School for Girls has been in operation more than three years, and now has 20 inmates. A grade system has been adopted, and promotion depends upon conduct. The grades are denoted by ribbon badges of various colors, and a silver medal marks the grade of trust and honor. For those who have remained long enough in this grade to justify their doing so, the committee find suitable homes and a visiting committee continues to exercise care over them.

Railroads.—The new Queen Anne Railroad was formally opened April 8 from Greenwood to Queens-town, Md.

The report of the treasurer of the Delaware Railroad Company in January showed: Gross earnings for the year, \$1,296,358.64; net earnings, \$443,-

274.82; surplus, \$254,619.03. Compared with 1895 the total increase was \$37,328.69. The lease to the Pennsylvania road was renewed in May for thirty years on the same terms as heretofore.

A new road, the Delaware Central, is proposed to run between Lewes and Seaford.

The Wilmington and Northern Railroad Company reported in May: Gross earnings, \$463,726; operating expenses, \$397,500.

Harbor Improvement.—The annual report of the chief of engineers, United States army, in October, has the following account of improvements to navigation in the Delaware:

"The work on the ice harbor at Marcus Hook, which was begun in 1866, has cost \$211,584.28. The object of the improvement is to provide a harbor to protect vessels against moving ice.

"The total expenditures to June 30, 1897, on the construction of a landing pier 1,700 feet long, extending into the Delaware Bay, opposite the breakwater, were \$378,500. The work was begun in 1880. The pier is of great use for the purposes of the engineer, lighthouse, and quarantine services. Since 1828, when work on the Delaware Breakwater was begun, \$2,721,992.14 has been expended on the project."

Mineral Oils.—The export of mineral oils from the customs district of the State in 1896 amounted to 92,032,487 gallons, valued at \$4,723,005. During the year ending June 30, 1897, it was 95,049,253 gallons, valued at \$4,611,500.

State Boundaries.—A decision was made in February in a case involving the line between Pennsylvania and Delaware, that the new boundary can not be treated as legal until the work of the Boundary Commission has been ratified by the Legislatures of the two States and approved by Congress. A case involving the boundary line between New Jersey and Delaware, which has been on the Supreme Court of the United States docket for twenty years, was revived in that court, Oct. 12, by the entering of a motion by the Attorney-General of New Jersey for a decree in the interest of that State. The proceeding looking to the definite establishment of the line had been instituted in March, 1877, and had been postponed by stipulation from one term of the court to another. Senator Gray said the fact of the long pendency of the case was significant of the real disposition of the two States—that they did not desire to bring it to an issue. He suggested another continuance of the case until the beginning of the next term of the court, with the understanding that if in the meantime the case was not settled by the two States it should be taken off the docket. This solution was accepted. The case involves the control of fishing rights in Delaware river.

Constitutional Convention.—This body began its sessions Dec. 1, 1896 (see "Annual Cyclopædia" for 1896, page 241), and adjourned June 4, 1897.

The 5 Union Republican members from Kent County who at first declined to take their seats finally decided to accept the places allotted to them. Their contention was that if they were elected their 5 colleagues on the Union Republican ticket were also elected, and that all 10 should be made to fare alike—either be seated or rejected—while the convention had decided to settle the contest by admitting 5 from each of the contesting parties.

June 10, 1897, was the date fixed for the amended Constitution to go into effect. The convention decided, by a vote of 20 to 6, to promulgate it instead of submitting it for ratification to a vote of the people.

The number of Representatives was fixed at 35, and that of Senators at 17. The provision of the old Constitution that a Senator must have a free-

hold estate of 200 acres of land in his county, or an estate of the value of at least \$1,000, was omitted. The *per diem* allowance of the presiding officers was fixed at \$6, and that of other members at \$5, and the season for which pay is allowed is limited to sixty days. The cost of stationery and other supplies is limited to \$25 for each member at a regular and \$10 at a special session. An apportionment of Legislative districts was included in the article on the legislature. Other additions to this article were:

"No bill or joint resolution, except bills appropriating money for public purposes, shall embrace more than one subject, which shall be expressed in its title.

"Lotteries, the sale of lottery tickets, pool selling, and all other forms of gambling are prohibited.

"No divorce shall be granted, nor alimony allowed, except by the judgment of a court, as shall be prescribed by general and uniform law.

"The General Assembly shall not pass any local or special law relating to fences; the straying of live stock; ditches; the creation or changing the boundaries of school districts; or the laying out, opening, alteration, maintenance, or vacation, in whole or in part, of any road, highway, street, lane, or alley.

"Any member of the General Assembly who has a personal or private interest in any measure or bill pending in the General Assembly shall disclose the fact to the House of which he is a member and shall not vote thereon.

"No person who shall be convicted of embezzlement of the public money, bribery, perjury, or other infamous crime shall be eligible to a seat in either House of the General Assembly, or capable of holding any office of trust, honor, or profit under this State.

"Every person who shall give, offer, or promise, directly or indirectly, any money, testimonial, privilege, personal advantage, or thing of value to any executive or judicial officer of this State or to any member of either House of the General Assembly for the purpose of influencing him in the performance of any of his official or public duties shall be deemed guilty of bribery."

Among the changes in regard to the executive department, the Governor is made ineligible for a third term instead of a second, as formerly. His appointment of the Secretary of State need be confirmed by the Senate, and, except as specially provided, such confirmation of appointments to office shall be required only when the emoluments of the office exceed \$500. The Governor has the power to veto, but an act may be passed over the veto by a three-fifths vote of each house. If a bill is not returned by the Governor within ten days, it becomes a law as if signed, unless its return is prevented by adjournment, in which case it does not become a law without the Governor's approval. The office of Lieutenant Governor is created. In case of the inability of both Governor and Lieutenant Governor, the duties of Governor devolve upon the Secretary of State; in case of his inability, upon the Attorney-General, next upon the president *pro tempore* of the Senate, next upon the Speaker of the House. The Attorney-General and the Insurance Commissioner, whose terms are four years, and the Treasurer and Auditor, whose terms are two years, are to be chosen by the people at general elections. Other officers to be so chosen are probationaries, clerks of the peace, registers of wills, recorders, registers in chancery, and clerks of the Orphans' Court, whose terms are four years, and sheriffs and coroners, whose terms are two years. Sheriffs may not be elected twice in any term of four years.

The Court of Errors and Appeals is abolished,

and the Supreme Court is established, consisting of a chancellor, a chief justice, and four associate justices; there must be one associate justice at least from each county. All these judges are to be appointed by the Governor, with the consent of the Senate, for twelve years; and no more than three of the five law judges shall be of the same political party. The salaries are to be not less than \$10,000.

An educational test is required of voters, the section on elections providing that no one may have the right to vote unless he can read the State Constitution and write his name. It is also provided that any person who shall attempt to bribe a voter or in any way interfere with the lawful expression of the people's will at the ballot box shall be subject to a fine of \$100 to \$5,000 or imprisonment for one month to three years, or both, with disfranchisement for ten years in certain cases. There is to be a uniform biennial registration of qualified voters, and a registration fee of \$1 is prescribed.

The clause in the old Constitution prohibiting clergymen from holding civil office while in the exercise of clerical functions is omitted.

The Board of Paroles is to consist of the Chancellor, Lieutenant Governor, Secretary, Treasurer, and Auditor of State.

A State Board of Agriculture is created, of 3 commissioners, 1 from each county, appointed by the Governor with consent of the Senate. The Legislature is to fix the compensation, and may abolish the board after eight years.

For the purpose of providing for local option the State was divided into 4 districts.

The General Assembly is to provide for levying and collecting poll taxes, to be used exclusively in the county in which they are collected.

The section on education provides that in apportionment of school moneys no distinction shall be made on account of race or color, and separate schools for white and colored children shall be maintained. No such moneys may be used by or in aid of any sectarian church or denominational school; and property used for school purposes shall be exempt from taxation for public purposes.

Legislative Session.—The General Assembly met Jan. 5 and continued in session till May 29, when a recess was taken till Jan. 11, 1898, in order that any business necessitated by changes in the Constitution might be done before the next regular session. Hezekiah Harrington was elected Speaker of the Senate, and Emory B. Riggins Speaker of the House.

Gov. Tunnell was inaugurated Jan. 19. The caucus of Democratic members nominated, on the twenty-fifth ballot, Richard R. Kenney for United States Senator for the unexpired part of the term which began March 3, 1895, Willard Saulsbury receiving 8 votes and James L. Wolcott 3. Mr. Kenney was elected Jan. 19. He was seated and sworn in Feb. 5, Mr. Chandler having said that no objection would be made to the swearing in of Mr. Kenney on the credentials now presented. He believed, however, that the seat should be filled by Mr. Du Pont, who, in the judgment of the Senator, was legally elected to the Senate. If, however, Mr. Du Pont had not been elected, then, in the judgment of Mr. Chandler, the Legislature that named Mr. Kenney was not legally constituted, as its organization was attended with fraud and irregularity. These matters would be brought before the Senate at a later stage and a full hearing asked. Mr. Chandler's statement brought the contest to an unexpected close. Senator Hear spoke to the same effect, with the further statement that the Du Pont case could not be reopened, having once been passed upon by the Senate.

The Legislature elected William M. Boss State Treasurer, and B. L. Lewis State Auditor.

A so-called "rump" Legislature was organized by the Kent and Sussex Republican candidates who claimed to have been elected in 1896, with Thomas C. Moore as Speaker. This body elected J. Edward Addicks as United States Senator, and the certificate of his election was taken to the Governor, who refused to sign it. C. H. Atkins was chosen for State Treasurer and Beniah Watson for Auditor. An adjournment was taken *sine die* Jan. 21, after the adoption of a manifesto of which the following is a part:

"When, as now in Delaware, all the destructive influences of corrupt politics have conspired to completely overthrow the will of the people as expressed at the ballot box; have inaugurated a revolutionary government; have organized an illegal constitutional convention in which are seated men who were not elected; a constitutional convention which proposed to abolish trial by jury, and which will proclaim and impose a new organic law for the State, made by delegates who were not sworn to observe or respect any form of law or constitution without submitting it to the people for ratification; have organized a General Assembly, in both houses of which are members whose seats are held by fraudulent titles; and when these revolutionary bodies are in possession of the Capitol of the State to the exclusion of the citizens who were rightfully chosen by the people to represent them in those bodies, it becomes the duty of every citizen whose public spirit is not in its decadence, whose energy and courage have not been paralyzed by the poison of political corruption and fraud, to protest against such destructive invasions of the common and sacred rights of free citizenship.

"When the rightfully elected representatives of the people are evicted by fraud from the legislative bodies to which they have been elected, the eviction does not absolve them from the discharge of the duties imposed upon them by the people.

"We therefore, the representatives of the people of Delaware, in General Assembly convened, having to the best of our ability under the adverse conditions to which we call attention in this declaration of warning and protest, averring the truth of all which we have herein set forth and declared; appealing to the Supreme Judge of the world for the rectitude of our intentions, do in the name of the people of Delaware appeal to the Congress of the United States for the fulfillment to the State of Delaware of the United States Constitution guarantee of a republican form of government to each of the States of the Union."

An act called the Adams bill, for the taxation of investments, designed to place the burden on owners and investors, was one of the chief measures of the session. The preamble says, "The present system of taxation is unjust and oppressive, in that it taxes most the property least profitable, and relieves altogether that which produces the greatest income." Investments taxed in any other State are exempt. It is provided that "each and every debtor by bond, judgment, mortgage, recognizances, decree, or otherwise (whose debt is liable to taxation under this act), when the creditor is a nonresident of the county or State, shall be liable for the tax on his debt, in the first instance; but upon payment thereof he shall be entitled and it shall be his duty to deduct the same from the interest due or accruing thereon; and any such creditor refusing to allow such credit on taxes so paid shall forfeit all accrued interest; and no debtor shall remit or make any payment to his creditor out of the State until the tax imposed upon his said debt by this act has been paid." Of the moneys collected under the act, one fourth is to go to the State and the remainder to the county in which they are collected.

"An Act in relation to foreign corporations" requires all such corporations to file with the prothonotary of each county a certificate "designating the name of some person or agent within the State upon whom service or process may be made." Its object is to oblige these corporations to defend in the State the contracts made there.

Some important changes were made in the ballot law "to provide further for the purity and secrecy of the ballot." The office of voters' assistant was abolished; but any person physically unable to prepare, stamp, or fold his ballot may take into the booth with him another elector of the district, who is forbidden under penalty to disclose anything regarding the vote of the person so assisted. The small squares on ballots are done away with. No person not nominated for an office may be voted for for that office. Challengers named by the two parties are to be peace officers with the same powers for preserving the peace that inspectors of election have. The county committees of the Democratic and Republican parties in each county shall name and select each a judge of election for each election district outside of the city of Wilmington, who shall be appointed and qualified at the time and perform the duties as now provided by law of judges of election in the districts for which they are chosen, respectively. The Democratic and Republican county committees may each select and designate one suitable, reputable, and sober person as a special officer to stand at the entrance of the polling place, to be not less than 30 feet away from the entrance to the voting room as now provided by law to regulate the admission of persons to the polling place, and while so stationed and performing their duties as herein provided, the persons so designated shall be clothed with all the powers of officers of the peace. The penalty for violation of any of the provisions of the act by any officer of election, where no other punishment is already provided for by law, is to be a fine of \$300 to \$500 and imprisonment at the discretion of the court for not more than two years.

The returning-board law providing for the canvassing of the vote in the three counties was repealed, and it is now provided that future returning boards shall be composed of the resident judge of the county, the sheriff, and the register of wills, and on the inability of the register of wills to serve, the prothonotary. The object of this measure was to shut off further litigation on the action of the Kent County returning board at the election of 1896.

A new law was made for the maintenance, discipline, and regulation of the State militia. It provides for one regiment of infantry, doing away entirely with the cavalry companies. The Governor, as commander in chief, shall have power, in case of war, invasion, insurrection, riot, or imminent danger, to increase the force and organize it as necessary, but the increase shall be disbanded as soon as the emergency ceases.

The law in regard to the collection of poll taxes was amended. Following is a section of this law: "If any person against whom a poll tax is assessed in accordance with the provisions of this act shall neglect or refuse to pay the same within thirty days after demand, the collector shall again demand the same of such person, together with 30 cents for the cost of such demand; and if any such person upon whom second demand is made as aforesaid shall neglect or refuse to pay such tax or taxes, together with the costs of making such second demand, within five days after the date of such second demand, then the collector of taxes shall seize upon the body of such person and commit him to the jail of New Castle County, there to remain until he shall pay such tax and all legal costs."

Among other bills passed were these:

To prevent the spread of the San José scale in the orchards of the State, providing for the appointment of an inspector.

Opening Blake's channel to oystermen throughout the year.

Appropriating \$75,000 to the State Insane Hospital.

Appropriating \$4,000 for the State College for Colored Students.

For the protection of employees in New Castle County.

For the preservation of the old Latin Bible.

For the protection of oysters and sturgeon.

To promote and improve the colored schools.

To refund a portion of the State debt.

To equalize taxation for State and county purposes.

For graded licenses on grain distilleries.

Amending the charter of Wilmington.

Providing a new primary-election law for New Castle County.

Providing for the attendance of newspaper correspondents at executions.

Amending the health laws of Wilmington.

Providing for the payment of costs in cases of misdemeanor by the prosecuting witness when bills are returned ignored by the grand jury, the jury to decide whether the witness or the county shall pay, and similarly in cases of acquittal by justices of the peace, municipal judge, or petit jury.

A joint resolution expressing sympathy for the people of Cuba was passed.

The cost of the session was about \$23,000.

Political.—In the Kent County election cases the Court of Errors and Appeals reversed the decision of the Superior Court, deciding in favor of the Democrats; but in May the Chief Justice of the Supreme Court delivered a decision in favor of the Republicans, ordering the canvassers to reconvene and count the vote again.

The Union (Addicks) Republicans held a State convention at Dover, Nov. 4. The chairman said in relation to the object of the convention:

"You are aware that a recent constitutional convention changed the political conditions of the State so much that it is necessary to make new rules before entering upon another campaign. That is one reason for this convention, and the other reason is that because we polled 13,000 Republican votes, two thirds of the Republican votes of the State, the responsibility of that 13,000 votes places upon us the leadership of the Republican party in the State. To lay down this leadership would be for the Union Republicans to sacrifice their manhood. To continue this organization means ultimate Republican success in the State."

New rules were adopted and the proportion of representation was changed. It was provided that the State convention should consist of 185 delegates of whom 85 are appointed to New Castle County, and 50 each to Kent and Sussex. Wilmington's representation is 35.

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigslag, is composed of the Landsting and the Folkething. The Landsting is the upper house, consisting of 66 members, of whom 54 are elected by the highest taxpayers in the country, delegates elected by the same class in the towns, and delegates elected by the general body of electors, and 12 are appointed for life by the Government. The Folkething, or popular assembly, is composed of 114 members elected for three years by the direct suffrage of all male citizens thirty years of age who are not recipients of public charity, unless they have repaid all sums received, or are not in private service

without households of their own, and who have resided twelve months in the same electoral district. The reigning sovereign is Christian IX., born April 18, 1818, son of Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, who was named successor to the throne by the Treaty of 1814. In 1852, and succeeded Frederick VII., the last King of the Oldenburg line, on Nov. 15, 1863. The heir apparent is Prince Frederik, born July 28, 1843.

The Cabinet at the beginning of 1897 was composed as follows: President of the Council and Minister of Foreign Affairs, Baron Reeskrantz, appointed Aug. 7, 1894; Minister of the Interior, H. E. Hoerring, appointed in January, 1894; Minister of Justice and Minister for Iceland, N. R. Rump, appointed June 13, 1896; Minister of Finance, C. D. Lüttichau, appointed Aug. 7, 1894; Minister of War, Col. J. G. F. Schnack, appointed April 25, 1896; Minister of Marine, Vice-Admiral N. F. Ravn, appointed Jan. 4, 1879; Minister of Public Instruction and Ecclesiastical Affairs, V. Bardenfleth, appointed Aug. 7, 1894; Minister of Agriculture, K. Scheestel, appointed May 22, 1896.

Area and Population.—The area of Denmark is 15,289 square miles, and the population in 1890 was 2,185,335, of whom 312,859 lived in the city of Copenhagen, within a space of 8 square miles; 917,401 in the islands of the Baltic, 5,024 miles in area; 942,120 on the peninsula of Jutland, of which the area is 9,743 square miles; and 12,955 in the Färø Islands, 514 square miles in extent. The number of marriages in 1894 was 15,687; of births, 69,977; of deaths, 41,185; excess of births, 28,792. The emigrants, nearly all of whom go to the United States, numbered 3,607 in 1895 and 4,105 in 1894. Education has been compulsory since 1814. Children are kept in school from seven to fourteen years of age. The schools, which are maintained by local taxes, number 2,940, with 231,940 pupils in 1896. The state grants 300,000 kroner a year to 67 high schools and 21 agricultural schools, and 100,000 kroner to 72 trade and commercial schools, and supports the University of Copenhagen, which has 1,300 students.

Finances.—The revenue for the year ending March 31, 1896, was 79,051,735 kroner (1 krone = 26.8 cents), and the expenditure 74,470,636 kroner. For 1897 the revenue was estimated at 67,423,955 kroner, and the expenditure at 67,419,059 kroner. The budget for 1898 makes the revenue 66,634,597 kroner, of which 10,182,350 kroner come from direct taxes, 43,455,400 kroner from customs, excise, and other indirect taxes, 201,140 kroner from post and telegraphs, 1,390,000 kroner from profits of lotteries, 765,157 kroner from balance of domain revenues, 722,275 kroner from separate revenues, 4,332,467 kroner from interest on state assets, and 5,385,608 kroner from employment of property and funding of debt. The total expenditure is estimated at 64,986,020 kroner, divided as follows: Civil list and appanages, 1,155,200 kroner; Rigslag and Council of State, 319,016 kroner; interest and expenses of the state debt, 6,973,370 kroner; military, invalid, and civil pensions, 3,197,178 kroner; Ministry of Foreign Affairs, 618,656 kroner; Ministry of Agriculture, 2,196,705 kroner; Ministry of the Interior, 4,433,382 kroner; Ministry of Justice, 4,315,761 kroner; Ministry of Worship and Education, 4,109,654 kroner; Ministry of War, 10,000,924 kroner; Ministry of Marine, 6,719,791 kroner; Ministry of Finance, 3,686,623 kroner; and 81,764 kroner; extraordinary expenditures, 474,474 kroner; improvement of state property, 1,000,000 kroner; reduction of debt, 12,482,322 kroner. The reserve fund for extraordinary emergencies, March 31, 1896, amounted to 17,863,517 kroner. The public debt at that date stood at 199,091,871 kroner.

having been reduced 9,366,155 kroner during the year. The foreign debt, most of which pays 3 per cent. interest, amounted to 66,542,500 kroner. The investments of the state (including the reserve fund, but not the domains nor the state railroads), amounted to 57,292,857 kroner on March 31, 1896.

The Army.—All young men fit for military duty are liable to serve from the age of twenty-two for eight years in the regular army and reserve and eight years more in the extra reserve. The amount of training required of them is six months for the infantry, eight months for the cavalry, and three months for the artillery and engineers, with supplementary drill for those who have not become proficient in the first period, lasting eight months for the infantry, eleven months for the cavalry, and twelve months for the artillery and engineers. The strength of the regular army in 1895 was 751 officers and about 10,000 men. The war effective is 1,352 officers and 45,910 men, besides the volunteer corps, numbering about 14,000 men, and the extra reserve of about 16,500 officers and men.

The Navy.—The navy is one of considerable strength for defensive purposes. Appropriations of 6,000,000 or 7,000,000 kroner a year for the maintenance and improvement of the fleet have brought it to a higher state of efficiency in recent years. It consists of 1 battle ship of 5,300 tons, 3 port-defense ironclads, with another building, 3 armored cruisers of the first, 1 of the second, and 16 of the third class, and 7 torpedo boats of the first, 3 of the second, and 2 of the third class, with 2 first-class torpedo boats and 4 destroyers building. Copenhagen is completely fortified on the seaward side.

Commerce and Production.—The land laws of Denmark forbid the amalgamation of separate farms into large estates; they encourage, on the other hand, the subdivision of existing estates into small properties, and give tenants full control over leased farms so long as they pay their rent. The crop of oats in 1894 was 28,900,000 bushels; of barley, 21,760,000 bushels; of rye, 15,670,000 bushels; of wheat, 4,035,000 bushels; of potatoes, 15,900,000 bushels; of beets and other roots, 85,960,000 bushels. The value of all farm crops was 262,858,982 kroner. There were 410,639 horses, 1,696,190 cattle, 1,246,552 sheep, and 829,131 hogs in 1893. The exports of live animals in 1894 were 17,905 horses, 113,023 cattle, 8,218 sheep, and 130,107 hogs. The product of beet sugar in 1894 was 44,400 tons. The product of alcohol was 3,536,000 gallons; of beer, 45,290,000 gallons.

The total value of the imports in 1895 was 364,039,120 kroner, and of the exports 268,420,032 kroner. Of the former sum, 140,000,000 kroner represent food substances, 110,600,000 kroner raw material and products, 34,400,000 kroner machinery and other means of production, and 79,000,000 kroner manufactured goods; of the sum of the exports 210,000,000 kroner stand for food exports, 28,800,000 kroner for raw products, 16,300,000 for means of production, and 12,900,000 kroner for manufactured articles. The imports of colonial products were 31,787,284 kroner, and exports 10,158,401 kroner in value; imports of beverages 5,107,611, and exports 2,222,475 kroner; imports of textiles 41,574,414, and exports 5,494,969 kroner; imports of metals and hardware 41,695,142, and exports 5,923,539 kroner; imports of timber and wood manufactures 18,131,931, and exports 2,406,169 kroner; imports of coal 22,145,584, and exports 1,758,630 kroner; imports of animals 2,253,165, and exports 39,049,515 kroner; imports of pork, butter, eggs, and lard 35,916,790, and exports 156,049,515 kroner; imports of cereals 44,559,097, and exports 5,359,270 kroner.

The foreign trade of Denmark in 1895 was di-

vided among different countries as follows, values being given in kroner:

COUNTRIES.	Imports.	Exports.
Great Britain	70,693,076	155,375,901
Germany	122,101,500	65,548,053
Sweden and Norway	62,654,327	31,011,448
Russia	39,607,443	2,423,212
United States	10,084,955	934,922
Netherlands	9,398,449	340,968
France	6,935,218	1,754,418
Belgium	6,392,302	1,009,917
Danish colonies	4,188,821	8,988,576
Other American countries	1,634,894	234,726

Navigation.—During 1895 there were 27,760 vessels, with 2,264,559 tons of cargo, entered, and 27,736, with 548,290 tons of cargo, cleared at Danish ports, not including 31,438 coasting vessels entered and 32,368 cleared. The Danish merchant navy, on Jan. 1, 1896, consisted of 3,468 sailing vessels, of 185,102 tons, and 422 steamers, of 144,931 tons.

Communications.—There were 1,407 miles of railroad in operation in 1895, of which 1,067 miles belong to the Government, having been built at a cost of 190,080,660 kroner.

The telegraph lines belonging to the Government had a total length, on Jan. 1, 1896, of 3,246 miles, with 8,686 miles of wire. The number of dispatches in 1894 was 1,796,527, of which 627,564 were private internal, 1,130,198 international, and 38,765 official dispatches.

Dependencies.—The colonial possessions of Denmark are the islands of Santa Cruz, St. Thomas, and St. John (see WEST INDIES), Greenland, and Iceland. The Danish colony in Greenland occupies 46,740 square miles on the east coast, and has a population of 10,516 souls. The trade is a monopoly of the state. The imports in 1894 were valued at 460,606, and the exports at 396,301 kroner. Iceland has an area of 39,756 square miles. The population is 70,927. The value of the imports in 1894 was 3,235,536 kroner; of the exports, 2,716,719 kroner.

Ministerial Crisis.—When Baron Redtz-Thott assumed office in 1894, at the conclusion of the constitutional conflict that had lasted nine years, he declared his intention to act as a mediator between the two houses of Parliament. The majority of the Landsting was still as strongly Conservative as ever, and that of the Folkething continued to be Radical. In pursuance of his policy, the successor of the unbending Estrup introduced in the Folkething a series of measures bearing a democratic stamp, by which the antiquated system of direct and indirect taxation has been reformed, and at the same time he kept the military policy of the Government along the main lines demanded by the Landsting. The Cabinet was originally composed of Landsting Conservatives, but the Premier gradually approached the Agrarian section of the Folkething and received his strongest support from that quarter, while he alienated thereby the Conservatives. An item of trifling importance in the military budget introduced in March of 1897 was so magnified by the urban Radicals and Socialists that the Folkething refused to sanction the expenditure. The Landsting insisted on its retention, and a conference led to no agreement. On April 1 a provisional budget was sanctioned by both bodies for the expenditures about which there was no dispute, and the ministry was requested to continue the administration pending further negotiations. The Agrarian Union appealed to the legislative bodies to effect a compromise so as to retain the ministers in office. The Radicals, on the other hand, threatened to drive out the Premier if he did not yield to the Folkething. The Landsting meanwhile remained passive, expecting the

Radicals to overthrow the ministry. As soon as an agreement was reached between the ministry and the Radicals the Conservatives suddenly took up a position of strong hostility to the government, although the points at issue were insignificant except to serve as a pretext. When the budget was laid before Parliament early in May exceptions were taken on both sides, and the Premier soon found himself in conflict with both houses. Parliament suspended its sittings on May 11, and the King summoned ex-Premier Estrup. The leaders of the Landthing were disinclined to assume office, though the King was averse to the formation of a Radical ministry. The crisis was finally terminated by the retirement of the Premier and a reconstruction of the Cabinet on May 23. H. E. Hoerring became Premier and Minister of Finance; Vice-Admiral Ravn, while remaining Minister of Marine, took the portfolio of Foreign Affairs *ad interim*; V. Bardenheath became Minister of the Interior, being succeeded as Minister of Public Worship and Instruction by Bishop Stühr; N. R. Rump retained his portfolio as Minister of Justice; Alfred Hage, a member of the Landthing, entered the Cabinet as Minister of Agriculture; and Col. C. F. Tuxen was appointed Minister of War. The new Premier was not so closely allied with the Agrarians as Baron Reedtz-Thott, and was therefore more acceptable to the Landthing. He obtained the prolongation of the provisional budget for three months, promising the introduction of a new budget bill.

On Oct. 5 the Premier submitted the budget for 1898-'99, in which revenue was calculated at 68,600,000 kroner and expenditure at 200,000 less. The army and navy estimates were of the usual kind, being 11,000,000 and 7,500,000 kroner respectively. Several new credits were proposed for the improvement of the position of agriculture, including 200,000 kroner for establishments connected with meat exportation, appropriations for combating tuberculosis in cattle, and 8,000,000 kroner for new branch railroads.

A failure of the codfishery and diminished sheep exports have caused depression of trade in Iceland. The average value of exports for fifteen years has been 5,670,000, and that of imports 5,940,000 kroner. For many years from 50,000 to 70,000 sheep were exported annually to Great Britain, which has also received large numbers of ponies, chiefly for use in the coal mines. Salt fish are exported to Spain and Genoa, and wool to England. Other exports are whale oil and salted mutton. Cotton goods and hardware are imported from England and Germany. England supplies salt and coal, and Denmark grain and spirits. Sugar, coffee, rice, clothing, timber, tobacco, wine, and beer are other important imports. Everything that the people use comes from abroad except the fish, mutton, beef, and milk, which form the main part of their diet, and the cloth that they weave from their wool, mostly on hand looms. Of the population, which was 72,177 in 1894, about 65 per cent. live by rearing sheep and cattle and 18 per cent. by fishing. There was a good deal of emigration, chiefly to Manitoba, prior to 1890, but since there has been little. Trade is in a transition state from the old credit and barter state to the system of buying and selling for cash, which has been brought about by the operation of the Bank of Iceland, established in 1885, and the co-operating trading societies that are being formed in all parts of the island. The effect has been to lower prices very much, but at the same time to relieve the people of constant losses and accumulating indebtedness, because when money was seldom seen the merchants fixed arbitrary prices, much higher than the market values,

both for the foreign goods with which they supplied the farmers and fishermen, and for the produce that the latter brought to sea, a part of which it was ready for export, to clear off the debt standing against them at the store. The crisis is aggravated, however, a balance to the credit of the merchant at the end of the year. The Icelandic fishermen have been alarmed of late years by the operations of British steam trawlers. It was when the North Sea fisheries began to fail rapidly that the British fishermen began to visit the fishing banks of Iceland. The catch in the North Sea grew yearly less and less and the fisheries were becoming exhausted because the demand for fish food in Great Britain suddenly expanded enormously, and no legal restrictions were placed upon the sale of under-sized and immature fish in the English markets. Very large and speedy vessels were specially built for the wholesale capture of the splendid fish of Iceland. Frequently these craft poached on the shore fisheries when the fish were running inside. After many thousands of tons of fish had been taken by the British fishermen out of the Icelandic seas, until these, too, began to show the effects of the drain, the Icelandic Government passed a law forbidding any vessel with a trawl or beam to navigate within territorial waters. It also enacted that no foreign fishing vessel should be allowed to visit the ports of Iceland, even for the purpose of purchasing food and stores. A Danish gunboat stationed off the coast during the season of 1896 arrested many English vessels, on which fines were inflicted for breaking the laws. Complaints having been made that vessels were overhauled and fined when quite outside the territorial waters, a whole squadron of British gunboats were sent up later to Iceland to guard the rights of British fishermen, and in 1897 it was stationed there for the entire season. The British claim the right to fish in Taxe Bay, but will waive this right in return for permission to fish within the three-mile limit along the southern coast. In the session of 1897 the Althing, or Icelandic Parliament, voted to give a subsidy of 35,000 kroner a year for twenty years to the cable company of Copenhagen, which has undertaken to lay a cable from the north of Scotland to Iceland by way of the Färöe Isles. The Danish Government also has promised financial help.

DISASTERS IN 1897. The year has not been conspicuous for great or overwhelming disasters, though probably the totals reach about the usual average. Most of the following items are gathered from the daily New York papers, modified and corrected where possible by comparison with other sources of information. The statistics of railroad accidents are from the "Railway Gazette," and are more complete and trustworthy than those relating to other accidents, since that journal makes a specialty of collecting and verifying such statistics. The figures in regard to fires are from "The New York Journal of Commerce and Commercial Bulletin," probably the best authority on the subject in the United States.

January 1. Trains in collision at Schenectady, N. Y., 2 killed, 1 hurt.

3. Storms of great violence in Arkansas, Louisiana, Texas, Missouri, and Oklahoma; men and animals perish and much property is destroyed. Train derailed, New Haven, Me., 4 killed, cause a washout.

4. Floods: the Mississippi rises to the danger line at St. Louis. Landslide, Modena, Italy, 182 buildings wrecked in the town of Stanna.

6. Trains in collision at Terra Alta, West Va., 2 killed. Shipwreck: steamer *Belgicque* sinks off the coast of Brittany, many lives lost.

15. A severe storm of snow and rain over southern California, where snow is very unusual.

16. Train derailed by mischievous boys, nine and thirteen years of age, Media, Pa., several passengers injured. Train derailed also at Springdale, Texas, supposed to be the result of malice, 1 killed, 3 hurt.

18. Disastrous storms in the Western States.

20. Shipwreck: schooner Nahum Chapin, off Quogue, Long Island, 9 lives lost.

23. Train derailed at Shippensville, Pa., a trestle breaks down under a train going too fast, 4 killed, 6 hurt. Snowstorm of unusual severity in the British Islands.

25. Intensely cold weather throughout the Northern States. Train derailed on a broken bridge at Spartansburg, S. C., 2 tramps killed.

28. Trains in collision at Le Roy, N. Y., 2 killed, 5 hurt.

31. United States man-of-war Brooklyn strikes a rock in the Delaware river near Philadelphia and is considerably damaged.

Fires in January: Nashville, Tenn., business houses burned, loss, \$600,000; Danville, Va., tobacco warehouses, \$175,000; Montreal, Canada, warehouses, \$160,000; Chicago, four different fires involving factories, residences, stores, grain elevators, etc., \$1,100,000; Sandusky, Ohio, business houses, \$250,000; Philadelphia, factories, \$750,000; Cincinnati, malt-house, etc., \$200,000; and 248 others; total loss for the month, \$12,049,700.

Summary of train accidents in January: 51 collisions, 68 derailments, 7 others; total, 126. Killed: 26 employees, 2 passengers, 5 others; total, 33.

February 2. Fire: Harrisburg, Pa., State Capitol burned. Trains in collision, Arlington, S. Dak., wreck catches fire, 4 killed, 2 hurt, cause fog. Train derailed between Matanzas and Havana, Cuba, several Spanish soldiers killed, also a number of the trainmen. Hurricane in South Australia, destruction of Fort Darwin.

6. Train derailed, Danville, W. Va., 2 killed.

9. A viaduct breaks down in Cornwall, England, 12 killed.

17. Train wrecked, Montana, Ala., 1 tramp killed.

21. Train derailed by a washout, Lavalatto, W. Va., 2 killed, 1 hurt.

22. Train derailed by a washout, Glen, Ky., 1 killed, 10 hurt.

23. Disastrous floods in western Maryland, Virginia, West Virginia, Pennsylvania, Kentucky, Tennessee, and Ohio, property loss amounting to many hundreds of thousands of dollars; 19 lives lost on the Ohio river alone.

24. Explosion: Nobel works, Scotland, 6 killed.

28. Train derailed, Zedikers, Pa., 20 cars wrecked, 2 men killed.

Fires in February: Harrisburg, Pa., State Capitol burned, loss, \$750,000; Salt Lake City, business houses, \$360,000; Ottawa, Ontario, Parliamentary buildings, \$150,000; Toledo, Ohio, grain elevator, \$300,000; Grand Forks, N. Dak., sundry buildings, \$225,000; Fort Wayne, Ind., stores, \$150,000; and 189 others; total loss for the month, \$8,676,750.

Summary of train accidents in February: 44 collisions, 71 derailments, 2 others; total, 117. Killed: 21 employees, 2 passengers, 1 other; total, 24. Hurt: 40 employees, 41 passengers; total, 81.

March 1. Partial destruction of the monastery of St. Bernard by an avalanche. Destructive gale on the British Islands, disasters to vessels and harbor works, many lives lost.

3. Train wrecked, Cordele, Ga., 2 tramps hurt.

4. Train derailed, Zanesville, Ohio, 3 killed, 2 hurt. Explosion in Boston subway, 6 killed, 30 hurt.

5. Train wrecked, Northville, Mich., 5 tramps hurt.

7. Train wrecked, Birmingham, Ala., 1 tramp

hurt. Mining shaft flooded, Dover, England, 8 lives lost.

9. Train derailed at Casa Grande, Arizona, with theatrical company on board, 1 tramp killed, several passengers slightly injured.

10. Train derailed at Hazelton, Ind., 4 killed, 2 hurt, cause a washout.

11. Boiler explosion, Denver, Col., 3 tramps killed.

12. The Mississippi river is dangerously high at Memphis and vicinity.

13. Train wrecked by a broken trestle at Rome, Ga., 2 killed, 3 hurt, cause high water in the Etowah river. Shipwreck: loss of the British steamer Normand and crew in the Bay of Biscay, many lives lost.

14. Trains in collision, Danville, Ill., 3 killed, and at Wolf Creek, Kan., 2 killed, 6 hurt. The river at Memphis higher than at any time for a quarter of a century.

15. Train derailed, La Grande, Ill., 2 killed, 3 hurt. Explosion of a gun on a Russian war ship off Crete, 15 killed, many wounded. Fire: Mandelay, Burmah, 1,500 houses burned, 7,000 persons homeless, estimated loss, \$2,000,000.

18. Shipwreck: steamship San Nazaire, off Cape Hatteras, all hands supposed to be lost, but part of the crew subsequently rescued. Violent and disastrous storms in Germany, lives lost and property damaged.

20. Train wrecked, Oakland, Md., 1 killed, several hurt. Floods in Mississippi continue to increase and work destruction to life and property. Some 50,000 persons, it is estimated, have been driven from their homes and usual employments.

22. Tornado in the valley of the Chattahoochee: a partial report of deaths places the number at 13, with at least 200 hurt; very large loss in property. Earthquake shocks reported at Malone, N. Y., and throughout the Canadian provinces. Trains wrecked by a broken bridge at Aldridge, Ill., 2 drowned, and at Springfield, Ohio, 4 tramps hurt.

24. Severe snowstorm in Illinois, Iowa, and Wisconsin. Explosion on board the British war ship Theseus, 30 men hurt.

28. Tornado in Texas, injuring the State University and other buildings at the capital, at least 2 lives lost.

30. Breaks in the Mississippi levees inundate some of the richest plantations on the lower Mississippi. Tornado in Oklahoma nearly every building in the town of Chandler destroyed, 25 persons reported killed, and nearly 200 more or less hurt.

31. Severe frosts injure the fruit crops in California.

Summary of fires in March: Alexandria, Ind., glass works burned, loss, \$200,000; Philadelphia, electric plant, \$500,000; Worcester, Mass., business houses, \$400,000; Peoria, Ill., grain elevator, \$350,000; Chicago, Ill., storehouses, \$350,000; St. Louis, Mo., stores, \$1,300,000; Ottumwa, Iowa, business houses, \$225,000; San Francisco, residences, \$400,000; New London, Conn., residences, \$200,000, and 183 others; total loss for the month, \$10,502,950.

Summary of train accidents in March: 49 collisions, 71 derailments, 3 others; total, 123. Killed: 32 employees, 4 passengers, 4 others; total, 40. Hurt: 47 employees, 29 passengers, 10 others; total, 86.

April 1. A destructive snowstorm in Nebraska, Colorado, Kansas, Wyoming, and South Dakota. Much suffering and probable destruction of early crops.

4. Extensive forest fires in the mountains of Pennsylvania.

5. Crevasses reported at various points along the Mississippi. About 16,000 square miles of territory under water below the mouth of the Ohio.

7. Train derailed, Pilot Mountain, N. C., 2 killed.

8. Cars burned, Indianapolis, Ind., 1 tramp killed. Fire, Knoxville, Tenn., estimated loss, \$1,500,000, several lives lost.

9. The river at New Orleans reaches a higher point than ever before recorded.

11. Trains in collision, Harrisburg, N. C., 3 killed, 9 hurt, 2 of them tramps.

19. Destructive floods in New Zealand.

21. Train derailed, Garland, Ala., 2 killed, 5 hurt, 4 of them tramps, malice the supposed cause. Levee gives way at Shipland, Miss., and 3 of the neighboring counties are inundated.

23. Earthquakes in the Leeward Islands, West Indies, houses thrown down and some lives lost.

25. Heavy and destructive rains throughout Nebraska and Iowa, disastrous floods in many of the streams.

27. Train derailed, Fairbanks, Texas, 1 killed, 12 hurt, supposed result of malice. Additional breaks in Mississippi levees near Keokuk, Iowa, and Gregory, Mo. A bomb explodes in a London Underground Railway carriage, 1 passenger killed, many injured.

28. Bridge breaks under a train near Blacksburg, S. C., no reason assigned. A sudden and overwhelming flood on the Cottonwood river nearly destroys the town of Guthrie, Oklahoma; the river, already swollen by heavy rains, suddenly increased in volume and swept everything before it, involving the loss of many lives and the destruction of houses; about 50 lives are supposed to have been lost.

29. Railway bridge breaks at Carpenter, Ohio, 22 cars fall into the water, 2 men killed, 1 hurt. The bridge had been recently inspected, and no reason for the accident is given. Earthquake in the island of Montserrat, West Indies, many houses destroyed, several lives lost.

30. Explosion: 4 wagon loads of dynamite in the city of San Salvador, many persons killed, two blocks of houses nearly destroyed.

27. Train derailed, Fairbanks, Texas, 1 killed, 12 hurt, malice the probable cause.

28. Train wrecked by a broken bridge at Blacksburg, S. C., no reason assigned.

29. Bridge breaks at Carpenter, Ohio, 22 cars fall into the river, 2 killed, 1 hurt, reason unknown.

Summary of fires in April: Cambridge Springs, Pa., sundry buildings, \$225,000; Cincinnati, Ohio, stores, \$400,000; Chattanooga, Tenn., business houses, \$400,000; Knoxville, Tenn., sundry buildings, \$1,000,000; New Orleans, La., business houses, \$500,000; Whitney's Point, N. Y., sundry buildings, \$200,000; Peoria, Ill., grain elevators, \$200,000; Newport News, Va., piers and ships, \$1,500,000; and 184 others; total loss for the month, \$10,833,000.

Summary of train accidents in April: 36 collisions, 63 derailments, 6 others; total, 9. Killed: 16 employees, 2 passengers, 3 others; total, 21. Hurt: 54 employees, 28 passengers, 8 others; total, 90.

May 1. Earthquake in Peru, causing great alarm, but no serious damage.

4. Fire: destruction of Charity Bazaar in Paris, about 150 lives lost, many persons badly burned.

5. Train wrecked, Gilmore, Mo., 4 tramps hurt.

6. Shipwrecks: 500 fishermen drowned in a storm off the coast of China.

8. Train wrecked, Lamar, Col., 2 tramps hurt.

9. Fire at sea: ship Francis totally destroyed off Little Egg Harbor, N. J. The steamship Leona arrived in New York on fire, 11 passengers and 2 stewards having already died from exposure and exhaustion. Rosse Hall burned, at Kenyon College, Ohio.

13. Train wrecked, Plainfield, Ind., 1 tramp hurt. Freezing weather in southeast France destroys vines and fruits to the amount of several million dollars.

14. Wreck of a military train in Russia, 102 killed, 60 hurt.

19. Fire in Hoboken, N. J., 60 families driven out of their homes.

23. Fire in Savannah, Ga., destruction of Christ Church.

25. Flood in Texas: levee of the Rio Grande breaks, flooding the town of El Paso and sweeping away about 120 houses.

27. Train wrecked, American Falls, Idaho, 5 tramps killed, 4 hurt, 3 trappers hurt; the tramps were suspected of having tampered with the air brakes.

28. Train wrecked by a misplaced switch, at Cabaze, Col., 2 killed, 6 hurt; 2 more killed in a railway wreck near Philadelphia.

29. A panic, caused by the falling of a candle, occurred in the cathedral at Pisa, 7 killed, 17 hurt. Earthquake shocks in Italy and Greece.

30. Fire destroys Namsos, a Norwegian town.

31. Earthquake shocks noticed from Washington to Georgia and in Ohio, Indiana, Kentucky, and Tennessee. At Valley Stream, Long Island, a trolley coach with a party of 21 excursionists was struck by a train, 5 killed, 15 hurt.

Summary of fires in May: Pittsburg, Pa., sundry buildings burned, loss, \$2,300,000; New York city, cold-storage warehouse, \$270,000; San Francisco, tannery, etc., \$400,000; Toronto, Ontario, department stores, \$275,000; Hoboken, N. J., dwellings, \$700,000; and 163 others; total loss for the month, \$10,193,600.

Summary of train accidents for May: 33 collisions, 46 derailments, 8 others; total, 87. Killed: 11 employees, no passengers, 5 others; total, 16. Hurt: 17 employees, 33 passengers, 15 others; total, 65.

June 5. Earthquake of some severity in the vicinity of Helena, Mont. Shipwreck: loss of a French fishing vessel, 23 drowned.

6. Fire: San Francisco, 2 killed; loss, \$100,000. A cloudburst in the province of Isère, France, causes much loss of life and destruction of property to the amount of 10,000,000 francs.

7. Trains in collision, Hudson, Wis., 6 killed, 2 hurt. Boiler explodes at Puebla, Mexico, 20 killed.

8. A destructive hailstorm in Texas ruins crops in the vicinity of Roger and Granger. Cholera is epidemic in certain districts of Siam.

10. Trains in collision at Bradford, Tenn., 2 killed, 3 hurt; also at Exeter, N. H., 3 killed, 1 hurt. Destructive rains fall throughout New England. A mining accident in Gaith colliery, Wales, causes the death of 10 men.

13. Floods continue in New England, causing the loss of 12 lives and much damage to railroad and mill property. Train wrecked at Oliver, Mo., 4 killed, 3 of them tramps. Tornado in the Windward Islands, 3 lives lost at St. Vincent.

15. Fire: burning of the immigrant station on Ellis island, New York harbor, loss, about \$650,000.

17. Severe earthquake shocks throughout southern Mexico.

18. Destructive storms in Kentucky and several Western States, numbers of lives reported lost. Earthquakes in British India devastate wide tracts of land and destroy, as is estimated, some 6000 persons.

20. Earthquake shocks occur in Canada, but little damage is done.

21. Trains in collision at Conroe, Texas, 6 tramps killed, 3 of them white and 3 black, 6 others hurt. A sudden flood drowns 19 Russians near the

river Kur. Fire at sea: destruction of a coasting steamer in the Baltic, 6 lives lost.

24. Tornado in the vicinity of Salina, Kan., 3 lives lost.

25. Shipwreck: the Russian ironclad Gangoot runs upon a reef near Transund and sinks almost immediately, many of the crew perish.

26. Train wrecked near Hurts, Va., 4 tramps injured, another at Missouri city caused by a broken trestle, 11 hurt. Floods in Galena cause great destruction in the town of Kassina, on the river Preuth; a bridge was swept away with a railway train upon it, and many persons perished.

28. A volcano eruption takes place in the Philippine Islands and works great destruction of life and property.

Summary of fires in June: Alexandria, Va., sundry buildings, \$243,000; Ellis island, N. Y., immigrant station, \$650,000; Auburn, Cal., business houses, loss, \$125,000; New York, factories, \$160,000; New Orleans, rice mills, \$160,000; and 139 others; total loss for the month, \$5,684,450.

Summary of train accidents in June: 40 collisions, 52 derailments, 3 others; total, 95. Killed: 32 employees, 4 passengers, 9 others; total, 45. Hurt: 47 employees, 72 passengers, 8 others; total, 127.

July 2. A submarine earthquake off the coast of Spain causes the sea to rise, and at Barcelona in a very alarming manner. The sea rose and fell a yard every ten minutes for several hours.

3. Excessive heat causes much suffering and numerous deaths throughout the Western United States. A heavy rainfall does damage to the amount of some \$200,000 in Duluth and vicinity, 2 miles of pavement destroyed and 20 bridges washed away. Disastrous floods also reported in the south of France, where 300 deaths from drowning are reported.

5. Train wrecked at Kalispell, Mont., 1 tramp hurt.

6. Explosion: a thrashing machine bursts its boiler near Hartzville, Tenn., 9 killed, 5 hurt. A tornado kills 10 persons in Minnesota.

10. Many fatal sunstrokes reported all over the Northern States.

13. Trains in collision near Boone, Iowa, 1 tramp killed.

14. Reservoirs burst near Fishkill Landing and Matteawan, N. Y., village at Dutchess Junction, nearly destroyed by the rush of water, 8 persons drowned.

15. Train wrecked by a boiler explosion at Caml, Pa., 2 fatally scalded.

16. Trains in collision, Edgartown, Kan., 5 trainmen hurt, 1 tramp killed, 1 hurt.

17. Fire: destruction of 5 oil refineries in Baku, Russia, several lives lost.

18. Earthquake in the island of Stromboli.

21. Hail destroys crops and fruit trees and damages buildings in Switzerland near the Lake of Zurich.

23. Explosion of naphtha on the steamer Nutmeg State at Bridgeport, Conn., 4 killed, 6 hurt.

28. Train derailed at Veral, Nev., 3 Indians killed, several passengers hurt.

30. Train derailed by malice at Thorntown, Ind., 4 killed, 2 of them tramps. Floods in Silesia destroy hundreds of lives and large amounts of property; also in Bohemia and the Crimea.

Summary of fires in July: Packerston, Pa., storehouse burned, loss, \$250,000; East Angus, Canada, mills, \$150,000; Peoria, Ill., sugar refinery, \$600,000; Richfield Springs, hotel, etc., \$150,000; Kankana, Wis., mills, \$250,000; Yorkers, N. Y., factories, \$450,000; Montgomery, Ala., railroad property, \$160,000; and 132 others; total for the month, \$6,626,300.

Summary of train accidents in July: 47 collisions, 97 derailments, 2 others; total, 146. Killed: 16 employees, no passengers, 9 others; total, 25. Hurt: 56 employees, 50 passengers, 10 others; total, 116.

August 2. Extensive forest fires in Algiers.

3. Railway bridge breaks at Beyers, Col., 2 killed, 11 hurt.

4. Train derailed at Irving, N. Y., 3 tramps killed, 1 hurt, cause broken axle. Train wrecked at Reno, Nev., 6 Indians killed who were stealing a ride, 2 trainmen and 9 tramps hurt.

7. Explosion of gunpowder in a cartridge factory at Rustchuk, Bulgaria, 56 killed, 25 fatally injured, 30 hurt. Landslides and storms devastate eastern Germany.

12. Fire: Grand Hotel burned near Zurich, Switzerland.

15. Train derailed at Roseburg, Ore., by a burning stump which fell from the mountain side, 1 tramp killed, 3 tramps hurt. Fire resulting from a flash of lightning burns property to the value of \$600,000 in Baltimore.

16. Fire: town of Ostrow, in southern Russia, burned, 4,000 people homeless.

27. Trains in collision, Hershey, Neb., 1 tramp hurt.

Summary of fires in August: Louisville, W. Va., loss, \$157,000; Chicago, grain elevators, \$175,000; Barnum, Texas, lumber, \$250,000; Baltimore, Md., lumber, \$260,000; Eagle River, Wis., lumber, \$150,000; Chapachet, R. I., woolen mills, \$260,000; Paulsboro, N. J., fertilizer works, \$250,000; Chicago, trunk factory, \$150,000; Virginia, Ill., sundry buildings, \$200,000; and 142 others; total for the month, \$6,454,950.

Summary of train accidents in August: 64 collisions, 61 derailments, 3 others; total, 128. Killed: 17 employees, 2 passengers, 13 others; total, 32. Hurt: 55 employees, 67 passengers, 18 others; total, 140.

September 2. Trains in collision, Cairo, W. Va., 1 killed, 1 hurt, both tramps. Train derailed at Blodgett's Mills, N. Y., 1 killed, 12 hurt. A storm in England causes wide damage to trees, crops, and shipping. A mountaineering party of 4 ascending Mount Pleurer in the Alps are swept into a crevasse by an avalanche.

3. Train derailed, Valley Park, Mo., 3 tramps hurt, cause a defective switch.

4. Explosion of natural gas, Indianapolis, 5 killed, 25 hurt. Trains wrecked: Buffalo Gap, S. Dak., 1 killed, 1 tramp hurt; Ravenna, Ohio, 1 killed, several tramps hurt; Etna, Me., excursion train, 1 killed, 32 hurt; Foristill, Mo., 2 killed, 1 of them a tramp, 1 hurt.

6. Yellow fever appears at Ocean Springs, Miss. Several hundred persons perished during the volcanic eruption in Philippine Islands.

8. Trains in collision, Emporia, Kan., 13 killed, 2 of them tramps, 15 hurt, 11 of them trainmen.

9. Train derailed at Albany, Ind., 2 tramps killed.

10. Train wrecked, New Castle, Col., 18 killed, 16 hurt, cause disregard of orders.

11. Shipwreck: British steamship Polyphemus sunk by collision in the Red Sea, 27 drowned.

12. Yellow fever makes its appearance at New Orleans and at other points near the Gulf coast. Train wrecked at Hanson, Indian Territory, 7 tramps killed, 6 tramps hurt, cause a broken brake.

13. A hurricane destroys several towns in Texas.

15. Trains wrecked, Wesley Hill, Pa., 1 tramp killed; also at Keytesville, Mo., 1 killed, 6 hurt, 2 of them tramps.

17. Trains in collision, Chippewa Falls, Wis., 9 killed.

18. Train wrecked, Helper Switch, Ohio, 1 killed,

1 tramp hurt. A destructive fire is reported in Cabul, capital of Afghanistan.

19. Severe earthquakes are reported from Asia, Russia, and Europe.

20. Yellow fever continues to spread in the Gulf States.

22. Shipwreck: torpedo boat No. 26 capsized off Cuxhaven, 8 of her crew drowned, including her commander, the Duke Frederick William of Mecklenburg-Schwerin. Hurricane in Italy: reported loss of 40 lives and 70 more or less injured, many houses destroyed.

24. Landslide at the sulphur mines near Gergenti, Italy, nearly 40 lives lost.

25. Landslide on the White Pass trail, upper Yukon region, a mining camp destroyed and the trail rendered impassable. Train wrecked in India near Maddur, 150 lives reported lost.

28. Train wrecked, Hinsdale, N. Y., 1 tramp killed. Forest fires in Wyoming destroy some 3,000,000 feet of lumber. Fire near Manila, the capital of the Philippine Islands, many lives reported lost.

Summary of fires in September: New York city, warehouses burned, loss, \$200,000; Reading, Cal., mining property, \$200,000; Pendleton, Ore., flour mills, \$200,000; La Crosse, Wis., brewery, \$300,000; Big Horn County, South Dakota, forest and prairie fires, \$500,000; Ironton, Ohio, mills, \$350,000; Washington, D. C., power house, \$750,000; Santa Cruz, Cal., power house, \$250,000; and 176 others; total loss for the month, \$9,392,000.

Summary of train accidents in September: 77 collisions, 70 derailments; total, 147. Killed: 39 employees, 16 passengers, 17 others; total, 72. Hurt: 68 employees, 78 passengers, 19 others; total, 165.

October 2. Prairie fire in the vicinity of Winnipeg, Manitoba, many farms destroyed and several lives lost. France again devastated by floods in some of her southern provinces.

7. Prairie and forest fires cause great distress in many of the Western States.

10. Yellow fever appears at Galveston, Texas.

17. Fire in Nova Scotia: the town of Windsor, Hants County, nearly destroyed, some 3,000 people homeless, loss, estimated at \$3,000,000.

18. Cholera appears among the British troops in India. Shipwreck of the steamer Triton, supposed loss, 150 lives.

21. Cyclone in the Philippine Islands, several towns and villages destroyed and several thousand lives lost.

22. A disastrous typhoon swept over Cochin-China.

24. Train wrecked near Garrisons, N. Y., 20 killed; for some unexplained reason the roadbed gave way, hurling the engine and several sleeping cars into the Hudson river. Shipwreck: schooner Casper at Point Arena, Cal., 13 drowned. Overflowing of the river Tronto in central Italy, many persons drowned.

25. Eleven deaths from yellow fever in New Orleans.

26. A blizzard rages in Colorado and adjoining States, much damage to property, several persons frozen to death.

30. Mining disaster at Scranton, Pa., where 7 are suffocated by smoke from a fire in the Van Storch mine.

Fires in October: Ontario, Canada, brush fires, loss, \$500,000; Detroit, Mich., opera house, etc., \$750,000; Gilsonburg, Ohio, various buildings, \$200,000; Durham, N. C., tobacco factories, etc., \$250,000; Windsor, Nova Scotia, sundry buildings, \$1,250,000; New York city, stained-glass factory, \$300,000; Nelson Run, Pa., forest fires, \$200,000; Hudson, N. Y., knitting mills, \$200,000; St. Louis, Mo., business block, \$200,000; Buffalo, N. Y., grain

elevator, \$200,000; Morris, Ill., tannery, \$225,000; and 173 others; aggregate loss, \$11,387,500.

Summary of train accidents in October: 91 collisions, 68 derailments, 6 others; total, 165. Killed: 25 employees, 24 passengers, 5 others; total, 54. Hurt: 65 employees, 41 passengers, 10 others; total, 116.

November 4. Train derailed near Old Stoddell, Va., 4 killed, 17 hurt.

6. Shipwreck: The steamer Idaho sank in a heavy storm near Long Point, Lake Erie, and 49 persons were drowned.

7. Collision near Brockville, Ontario, 1 killed, 2 hurt.

12. Mining disaster near Antonienhuetta, Silesia, 7 killed. Disastrous floods, with loss of life, reported in provinces of Saragossa, Valencia, and Malaga, Spain.

13. Two seamen lost from the station pilot boat New York, off Sandy Hook, New York harbor. Snow slide near Sannon, British Columbia, overwhelms mining property, 1 killed, 1 hurt.

17. Vault of Maximilian cellar at Munich collapses, 6 killed.

18. Train derailed, Williford, Arkansas, 1 killed, 30 hurt.

19. Great London fire in Cripplegate district, loss, \$5,000,000. Destructive storms and floods in the far West.

20. Train wrecked at Coal Bluff, Ind., 3 killed, 18 hurt.

21. Trolley-car collision in Baltimore, Md., 2 killed, 6 hurt. Destructive fire at Melbourne, Australia, loss, \$4,000,000.

24. Trains in collision, Tournay, France, 12 killed. Floods and earthquake reported in Thuringia, Germany.

26. Austrian steamer sank in collision off Dungeness, England, 4 drowned.

27. Fire, Jamestown, N. Y., 3 persons suffocated.

28. Train derailed on trestle, Winchester, Ky., 2 killed. Severe gales on English coast, with many wrecks and great loss of life.

Fires in November: St. Augustine, Fla., Hotel San Marco, loss, \$250,000; Middlesborough, Ky., machinery works, \$500,000; Chicago, Ill., department store, \$165,000; Williamsport, Pa., tannery, \$150,000; Streator, Ill., department store, \$207,000; Escanaba, Mich., ore docks and steamer, \$225,000; and 160 others; aggregate loss, \$7,189,000.

Summary of train accidents in November: 92 collisions, 111 derailments, 8 others; total, 211. Killed: 23 employees, 8 passengers, 0 others; total, 31. Hurt: 85 employees, 163 passengers, 3 others; total, 191.

December 1. Anti-German riots in Prague, Austria, instigated by young Czech party, result in injuries to many people, and martial law is proclaimed in the city. Thirty miners killed and 40 injured by an explosion of fire damp in a mine in Rhenish Bavaria.

Summary of fires in December: Philadelphia, Pa., carpet store and other business houses burned, loss, \$800,000; Grand Forks, N. D., various buildings, loss, \$750,000; St. Louis, Mo., jewelry and other stores, loss, \$335,000; Kansas City, Mo., Auditorium Hotel, loss, \$225,000; Cleveland, Ohio, several business blocks, loss, \$675,000; Chicago, Ill., Coliseum Building, loss, \$772,000; and 186 others; total loss for the month, \$11,328,650.

The aggregate loss by fire in the year 1897 was \$110,319,650.

Summary of train accidents in December: 107 collisions, 95 derailments, 6 others; total, 208. Killed: 18 employees, 2 passengers, 8 others; total, 28. Hurt: 135 employees, 50 passengers, 10 others; total, 195.

DISCIPLES OF CHRIST. The General Missionary Conventions of the Disciples of Christ were held in Indianapolis, Ind., beginning with the meeting of the Woman's Board, Oct. 15. The receipts of this organization, \$62,601, showed a substantial increase over those of any previous year. The board had 26 missionaries in India, Japan, and Mexico, and 36 in the United States. It had undertaken to establish Bible chairs in secular colleges and universities. One such chair at the University of Michigan was in successful operation, and others were contemplated at the Universities of Virginia and Georgia. One of the means of raising money that were adopted by the board was through a regular assessment of 10 cents a month on each member.

The receipts of the home board (American Christian Missionary Society) had been \$30,548, showing a gain of \$8,000, aside from a special debt collection of \$6,000. The board was out of debt, and had a balance of \$2,514. Seventy-one missionaries had been employed in 21 States; and under their labors 294 churches had been helped, 34 churches organized, and 3,174 members added by baptism. The missions had raised \$44,365 for

self-support. In the process of the unification of the mission work through bringing the State and general bodies into closer co-operation the majority of the State conventions had made themselves auxiliary to the American Christian Missionary Society, and had this year filed their reports for the first time. The State and district missionary societies had employed 304 missionaries, who returned 169 churches organized, 18,548 additions of members, and \$268,641 of money raised. A new plan had been adopted by the acting board of interesting special congregations or groups of congregations to make particular mission points their special fields, assisting them through the home board. With the Foreign Christian Missionary Society the year had been the most successful in its history. Its receipts had been \$106,222, or \$12,354 more than in the previous year, and its expenditures had been \$99,195. The Sunday schools had contributed \$30,027, and the Christian Endeavor Societies \$3,358. Of the receipts, \$6,800 belonged to the Annuity fund, no part of which was available for current expenses, and would be spent on buildings. The Permanent fund had been increased by \$3,950. The sum of \$8,570 had been received from bequests. One hundred and sixty-two missionaries had been employed in the various fields. Two new missionaries had been sent to the Congo, in Africa, where the agents of the American Baptist Missionary Union gave them all the assistance in their power. The Scandinavian missions had been extended into Sweden. Ten other missionaries had been sent to China, India, Japan, and Turkey.

All the missions showed increase in their respective totals of church membership: India of 43, Japan of 33, China of 72, Turkey of 72, Scandinavia of 80, and England of 31. The number of children in the schools exceeded the membership of the churches. In China 18,125 patients had been treated by the physicians; in India 5,000 patients had been treated, hundreds of starving children had been gathered into orphanages, 45 lepers had been cared for, and 1,992 persons had been treated at the dispensary of a native physician.

A steadily growing interest was manifested in the work of colored evangelization, which had been begun seven years before. The contributions to this cause had amounted to \$8,100. Evangelists were aided or wholly sustained in the States of Mississippi, Kansas, Virginia, Florida, Missouri, Alabama, and other States; and three schools were maintained—a Bible school in Louisville, Ky., for the education of preachers and teachers; a collegiate institute at Edwards, Miss.; and a graded school at Lum, Ala.; while a school had been begun at Martinsville, Va., and other schools were in preparation in Texas and South Carolina. The receipts for church extension had been \$32,580, and the receipts for ministerial relief \$11,068. A table was presented at the meetings showing that the total amount of the year's contributions of the Disciples for missionary and benevolent work had been \$454,337.

DOMINION OF CANADA. See CANADA.

E

EAST AFRICA. The coast of Africa between Cape Guardafui and Cape Delgado, over which the Sultan of Zanzibar formerly exercised sovereign rights, has been divided, by agreement between Germany, Great Britain, and Italy, among those three powers. German East Africa is divided from the Portuguese possessions on the south by the river Rovuma; from British East Africa on the

north by a conventional boundary running north-west from the Umbe river to the shore of Victoria Nyanza, deflected so as to include the Kilimanjaro district in the German territory; and continued west of the Victoria lake along 1° of south latitude to the boundary of the Congo Free State, which forms the western limit of the German sphere. British East Africa, according to the agreement

made with Italy, is divided from the protectorate then asserted by the latter power over Abyssinia and adjacent territories by the Juba river up to 6° of north latitude, by that parallel as far as 35° of east longitude, and by that meridian northward to the Blue Nile. The British sphere merges in the Soudanese and equatorial provinces formerly ruled by Egypt and still nominally belonging to Egypt and under the suzerainty of Turkey. The Italian sphere embraces Somaliland, with the exception of the district reserved to Great Britain that fronts on the Gulf of Aden and extends from Wabadu to Bandar Ziyada in 49° of east longitude. The sphere claimed by Great Britain covers over 1,000,000 square miles. A British protectorate has been established over the territory acquired by the British East Africa Company from the Sultan of Zanzibar, having an area of about 270,000 square miles and 5,000,000 inhabitants; over Uganda, which has an area of 58,000 square miles and 1,000,000 inhabitants; and over the islands forming the sultanate of Zanzibar, with an area of 988 square miles and 210,000 inhabitants. German East Africa has an estimated area of 380,000 square miles and a native population supposed to reach 4,000,000. Italian Somaliland has an area of 190,000 square miles, with about 400,000 inhabitants. British Somaliland, with an area of 75,000 square miles, is attached to Aden, which is a dependency of the Indian Government.

British East Africa.—The British East Africa protectorate, which was evacuated by the British East Africa Company on June 30, 1895, and taken under the direct administration of the British Government, comprises the territory lying between the coast and Uganda, including Witu, the administration of which had been transferred from the company to the native sultan on July 31, 1893. The Imperial Commissioner and consul general is A. H. Hardinge. Mombasa, the capital, has a good harbor, protected by jetties, and is connected by an electric telegraph with Lamu and by a cable with Zanzibar. The revenue from customs in 1893 was 261,554 rupees. The imports at Mombasa were valued at 1,867,208 rupees, and exports at 1,287,399 rupees. The imports of Kismayu, the port and capital of the province of Jubaland, amounted to 104,132 rupees in 1895, and exports to 100,611 rupees. The shipping entered at Mombasa in 1893 was 100,602 tons; cleared, 100,388 tons. The imports are Manchester cottons, Bombay cloth, brass wire, beads, and provisions. The exports are ivory, caoutchouc, cattle, copra, cereals, gum copal, hides, etc. The foreign trade is conducted by Banian merchants from Bombay. The rebellion of Mubarak interfered with trade in the southern part of the protectorate until it was suppressed, in June, 1896. The attacks of Masai on caravans in the interior have been checked, and are becoming infrequent. Cattle-raising on the rich grass lands of the interior plateaus is encouraged by the Government, but there has been no influx of European capital and immigration. A railroad is being built from the coast to Fort Victoria, on the Victoria Nyanza.

The construction of the Uganda Railway was begun on Dec. 11, 1895. From Mombasa to Victoria the distance is 670 miles. The first 100 miles were completed and opened for traffic in November, 1897. Owing to the discovery of a shorter and less costly route to Victoria Nyanza, the original estimates have been considerably reduced. Before the end of 1898 the road is expected to be completed to Kikuyu, 300 miles from Mombasa. The railroad has been considered necessary even for the present and necessary traffic, which can not be carried on longer by human portage, which costs

£180 a ton. The building of this line is expected to give the deathblow to the slave trade of the interior, and to destroy the trading as well as lifting of the Masai tribe. Indian coolies were employed at first, but gradually natives of the country were attracted by wages paid in cash. In the summer of 1897 there were 1,400 employed. The total cost of the line is not expected to exceed £2,000,000, voted by the English Parliament in 1896.

Within the 10-mile strip of the mainland the Islamic laws of Zanzibar prevail, although these are administered by British officials. An arrangement was made in the time of the British East Africa Company that slaves escaping from their owners should be returned to them by the company's police. Missionary societies were warned against harboring runaways. Search warrants were issued for slaves that had run away from their masters, who before receiving them back were required to prove ownership before the authorities. The British Government, on assuming administration of the protectorate, issued a proclamation ordering these practices to be discontinued. This proclamation, however, was disregarded by the officials in East Africa. The Imperial Commissioner and his representatives continued to award fugitive slaves to their masters, and the police took part in hunting them and seized them wherever they were found, just as the company's officials had done for eight years with the approval and by the express command of the Foreign Office. The missionary societies made no effective protests until after the legal status of slavery was abolished in Zanzibar, when the Anglican Bishop of East Equatorial Africa, Alfred E. Tucker, raised the question. The Attorney-General of the last Liberal Cabinet had expressed the opinion that the institution of slavery in the British protectorate was absolutely illegal, both by common law and by special acts of Parliament. His Conservative successor likewise considered it illegal to detain slaves against their will in the coast strip. Still the Foreign Office allowed slaves to be seized by British soldiers and handed over to their owners by the decrees of British courts, in defiance of British law and the special engagements undertaken by the powers under the Brussels act. Plantation slavery was still upheld in the coast territory under direct British administration, although it was no longer legal in the sultanate of Zanzibar. The Imperial Commissioner ceased in December, 1896, to issue warrants allowing the forcible capture of runaway slaves, but the administrator at Mombasa, who had authority to deal with each case according to discretion, continued to hand over fugitives to the slave owners without any stipulation against their being cruelly punished. The effect was that runaways made their escape into German territory, where the authorities did not deliver them up to their former owners. In the territory of the British protectorate beyond the 10-mile strip slavery is not recognized. The importation of slaves overland into the coast strip was made illegal by the Sultan's decree in 1889, and in 1890 children born of slaves were declared free, and the purchase or sale of slaves was prohibited on the mainland as well as in the islands. The condition of slaves on the mainland was less arduous than on the islands. Laboring on the coconut and mace plantations, they received a share of the produce. The Government was reluctant to free the slaves in this territory, on account of the question of compensation. When in June the question was brought up in Parliament and the practice of arresting, detaining, and restoring slaves was mentioned, the Attorney-General sustained the action of Sir R. Reid that, however legal the proceedings were by Zanzibar law, any British official who magis-

trate, or private person who detained against his will the person of a slave committed an offense against British law. Mr. Balfour, the leader of the House, gave the assurance that it would be made clear to the administrative officers in East Africa that no breach of the law would be permitted.

Liquidation of the East Africa Company.—The Imperial British East Africa Company was wound up in May, 1897, with a net loss of £193,000 on £427,000 of capital paid up. The shareholders received a return of 10s. 11d. in the pound. They pleaded in vain with the Imperial Government for a reconsideration of the terms offered and finally accepted by the directors. Of £250,000 returned to the company, £200,000 was paid by the Sultan of Zanzibar for his concession and only £50,000 came from the British treasury. They were comforted by the reflection that what they had done was their patriotic duty, but this did not alleviate the sense of wrong that they felt toward the Government. Formed to administer a limited territory, of which it was supposed it would receive peaceable possession, the company had first resisted at its own cost the aggression of a foreign state, obtaining a coast line of 400 miles from Wanga to Juba, and then in response to public opinion it had extended its operations 800 miles into the interior as far as Uganda. The Government of the day to a certain extent recognized the position of the company by proposing to build a railroad. After the survey had been made at the company's expense, in 1892 another Government came in, which would neither allow the company to go on nor relieve it of its concession, and finally, after a lapse of three years, determined to get rid of the company before constructing the railroad. The efforts of the company were thus paralyzed, and, having no further means to carry on such an enormous undertaking, it was reduced to the necessity of retiring after having secured East Africa and Uganda as British possessions.

Zanzibar.—The islands of Zanzibar and Pemba, which were all that remained of the dominions formerly ruled by the Sultans of Zanzibar after the division of the mainland between Germany, Great Britain, and Italy, were declared a British protectorate with the assent of France in 1890, and in October, 1891, a British administration was formed under Sir L. Mathews, acting nominally as Prime Minister to the Sultan. The present Seyyid, or Sultan, is Hamoud bin Mahomed bin Said, who was selected by the English to succeed Seyyid Hamed bin Thwain when the latter died suddenly, on Aug. 27, 1896, and who was placed on the throne after a fight between the British naval forces and the rival claimant accepted by the people, in which the royal palace was shelled and destroyed by the British fleet. The island of Zanzibar has about 150,000 inhabitants; Pemba, where the Arab aristocracy raise cloves by slave labor, has 50,000. In Zanzibar there are about 7,000 British Indian traders and 150 to 200 English, Germans, Americans, Frenchmen, Greeks, Italians, and Roumanians. The town has a population of 30,000. The Sultan's revenue was formerly obtained from customs duties and taxes on cloves and other produce. When the coast region belonged to Zanzibar a large revenue was collected from imports and from caravans. After the lease of these territories Germany paid the capital sum of 4,000,000 marks, yielding 82,000 rupees interest, and the British East Africa Company paid 170,000 rupees a year. His total revenue exceeded 1,000,000 rupees. When British officials assumed the administration they fixed the Sultan's civil list at 120,000 rupees annually, and decided to devote all the rest of the revenue to police, harbor improvements, and public works. The police and military number 700 men.

The imports into Zanzibar in 1895 were valued at £1,293,646, of which £466,823 came from British India, £179,529 from the Sultan's dominions, £173,589 from German East Africa, £91,163 from Great Britain, £65,126 from Germany, £52,542 from the Netherlands, £50,245 from the United States, £47,790 from Madagascar, Mauritius, and the Comoro Islands, £45,422 from British East Africa, £33,141 from Benadir ports, and £88,276 from other countries. There was an increase in American and Indian imports and a decrease in those from British East Africa and in those from Germany. The total value of the exports was £1,199,841 in 1895. The export of piece goods to the Continent was £262,751; cloves, £161,847; ivory, £119,744; rice, £106,885; copra, £57,529; caoutchouc, £31,295; gum copal, £17,582; hides, £10,823; tortoise shell, £10,421; clove stems, \$6,095; simsim, £6,229; chilies, £4,795; hippopotamus teeth, £3,027; all other articles, £400,818. During 1895 there were 170 vessels engaged in ocean commerce entered at Zanzibar, of which 70, of 99,175 tons, were British; 59, of 84,884 tons, were German; and 26, of 47,738 tons, were French.

Abolition of Slavery.—In 1873, under pressure from the British Government, the Sultan of Zanzibar signed a treaty abolishing the slave trade, Sir Bartle Frere having been sent out there for the purpose of obtaining this treaty. Other treaties and edicts were issued by the Sultan under successive British representatives, the most notable being that of Aug. 1, 1890, which Sir C. Euan Smith, the British consul general, thought would so ameliorate the condition of the slaves that they need no longer form objects of compassion on the part of humanitarian societies. The lot of the plantation slaves in Zanzibar and Pemba was scarcely improved, nor was the slave trade suppressed, though British and French vessels patrolled the neighboring seas to intercept slave dhows. By the edict of Seyyid Ali the sale of slaves or their transmission except by direct inheritance was forbidden. It was declared that, subject to the conditions stated in the decree, all slaves lawfully possessed at the time should remain with their owners, and that their status should remain unchanged and their possessors could not be deprived of any rights enjoyed under the decree without receiving compensation. The proportion of the slaves lawfully held in 1890 must have been small, as their life on the plantations is much shorter on the average than the time that had elapsed since fresh importations were made illegal. Out of a total slave population of 140,000 not more than 7,000 were believed to be lawfully held in slavery at the beginning of 1897. After Zanzibar became a British protectorate and the Government was controlled in all particulars by the British Foreign Office the antislavery and religious organizations became clamorous for the abolition of slavery in Zanzibar and Pemba, where it existed in its cruellest form and where the Arab slave-raiders of Africa found their chief market. Sir Arthur Hardinge, the consul general in Zanzibar, opposed such a measure, but the home Government felt constrained to act under the pressure of public opinion in England. Accordingly Lord Salisbury, on Feb. 10, 1897, in fulfillment of pledges, sent a dispatch recommending to the Sultan of Zanzibar the abolition of the legal status of slavery in his dominions. This resulted in a decree abolishing the legal status of slavery in Zanzibar and Pemba, issued on April 6, 1897, to take effect from that date. The preamble of the decree set forth that, owing to the lapse of years and other causes, the number of slaves legally imported and held in the islands had greatly decreased, so that many estates had gone out of cultivation; that the existing sys-

tem of slavery deterred free laborers from coming to the islands to take the place of those who from death or other causes had disappeared, to the detriment of agriculture and of the people, who were driven to borrow money against the law of Islam and their own welfare; and that the Sultan was desirous of following the precepts of the Prophet, who had pronounced the liberation of slaves most praiseworthy, and of encouraging the introduction of free labor. Under the decree the courts must decline to enforce any alleged rights over the body, service, or property of any person on the ground that such person is a slave, but shall report to the Prime Minister what pecuniary compensation any person claiming and establishing such rights is entitled to in consideration of the loss of his rights and damages resulting therefrom. Any person whose right of freedom has been formally recognized is liable to any tax, abatement, or *corvée* that the Government may impose on the general body of the subjects, and shall be bound, on pain of being declared a vagrant, to show that he possesses a regular domicile and means of subsistence, and where such domicile is situated on land owned by another person he is bound to pay to the owner of such land such rent, which may take the form of an equivalent in labor or produce, as may be agreed upon between them before the district court. Concubines shall be regarded as inmates of the harem in the same sense as wives, and shall remain in their present relations unless they should demand their dissolution on the ground of cruelty, which must be proved before the district court. A concubine who has not borne children may be redeemed with the sanction of the court. Any person making a claim under any of the provisions of the act may appeal from the decision of the district court to the Sultan or to such judge or public authority as he may delegate for the purpose.

The Sultan endeavored to induce the Arabs to liberate their slaves and make agreements with them whereby they would work three or four days a week for their former masters in lieu of rent for their huts and plots of ground. Few of the masters made such arrangements with the slaves, and few of the slaves applied to the courts for liberation. In the course of three months only 25 slaves were freed, the owners being compensated in 21 cases. The district courts mentioned in the decree were specially created for the purpose, the island of Zanzibar being divided into 3 districts, each under the supreme control of an Arab official having the rank of *scali*, with authority to form the district court. The Arab officials and district judges, who are all slaveholders, had no desire to carry out the decree, and after a brief show of zeal, would only make a pretense of administering justice when pressure was brought to bear upon them. They fell into the way of imprisoning for a few days the applicants for manumission, and then sending them back to their masters.

The British Government was prepared to consider the question of financial aid if the compensation to owners placed a serious strain on the financial resources of the Zanzibar Government, and it promised to renew its attempt to procure coolie labor from India to replace slave labor. Two thirds of the population of the islands were believed to be slaves. The slaveholders of Pemba and Zanzibar complained about the time the decree was issued that their slaves were being kidnaped and carried off to Soor, in Arabia, by dhows flying the Muscat or the French flag. In September the captain and crew of a French dhow were imprisoned at Mombasa on the charge of slave-dealing.

Creation of British Courts.—The establishment of British tribunals to take the place of the

system of consular jurisdiction was announced in July, 1897. A principal court was established in Zanzibar and another in the East Africa protectorate, to be supplemented by subordinate courts when necessary. The powers of jurisdiction of the courts extend to all British subjects and foreigners whose governments have agreed to accept British jurisdiction, and to their personal and proprietary rights; also, under certain restrictions, to natives and subjects of Zanzibar. The code of British India will be followed where it is applicable, and so far as it is inapplicable the common and statute law of England. Arbitrary powers are granted to the consul general to banish for two years without appeal any person dangerous to peace and good order or endeavoring to excite enmity of the Sultan or people against England or intriguing against the powers and authority of the British Government, and also to forbid any evidence to be taken or any document produced in court that he considers would be injurious to the service. For purposes of civil and criminal procedure Zanzibar and the protectorate are to be regarded as though they constituted a district in the Bombay presidency. From the court of the protectorate an appeal can be taken to that of Zanzibar, and from the latter to the High Court of Bombay. While the native courts of Zanzibar continue to decide cases between the Sultan's subjects, suits in which natives are plaintiffs against British subjects or foreigners coming within the court's jurisdiction must be brought in the British court. In the protectorate natives can only be sued or tried in the native court, but the Commissioner may make rules for the administration of justice in these courts, and he has power to abolish or to establish native courts. When a British subject or other foreigner under the jurisdiction of the British court is defendant, the protectorate court shall try the cause.

Uganda.—The protectorate over the native kingdom of Uganda was declared on June 19, 1894, the British East Africa Company having abandoned the country in March, 1893, when the provisional administration was committed to a British officer. In June, 1896, the protectorate was extended beyond Uganda proper so as to include Unyoro and other countries in the west up to the boundary of the Congo State, and in the east the district of Usoga. King Mwanga still nominally rules in Uganda, but the administration is really conducted by the British Commissioner and consul general, E. J. L. Berkeley, under instructions from the Foreign Office in London. The armed force is composed of Soudanese soldiers, commanded by Englishmen. The soil is fertile and suitable for growing coffee. The natives are skillful in working iron and making pottery.

Revolt of Mwanga.—The King left Uganda secretly on July 6 to head a revolt in the Buddu district against the British. This district is the portion of Uganda reserved for the French or Roman Catholic party, which was predominant before the occupation of the country by the East Africa Company's forces. The Roman Catholic natives resisted the English, who formed an alliance with the Protestant natives, and finally conquered the Mohammedan, heathen, and Roman Catholic factions. In the subsequent partition of the country the Roman Catholics, who were the last to submit, received the least desirable section, which was, moreover, insufficient in area. In June Mwanga, the Roman Catholic Prime Minister, one of the few loyal members of the Roman Catholic party, was dispatched with an army to Tororo to guard the frontier against the mutinous Ogiei. The people of Buddu availed themselves of the opportunity afforded by the absence of the Prime

Minister and the other supporters of the Government who accompanied him to rise against the British. Mwanga, who felt aggrieved on account of the prevention of his people from exporting ivory and other produce into German East Africa, and other restrictive measures of the Government, was willing to make common cause with the Buddu party in the attempt to throw off the British yoke. On arriving in the Buddu district he organized a large army and marched out to meet the British forces. A battle took place on July 20, when Major Ternan, the deputy commissioner, by means of his Maxim guns and trained soldiery easily defeated the King's forces. Order was soon restored, since throughout Uganda there was no other insurrectionary movement. Mwanga escaped to German territory and surrendered to the German authorities, by whom he was detained. The British authorities, declaring the throne vacant, proclaimed as his successor the infant son of Mwanga, born in July, 1896, and established a regency.

Zanzibar is becoming more and more the chief center of commerce for East Africa, both for the transshipment of goods for the coast and the interior and for the trade with the southern ports. The port is being improved by the construction of a wharf and a pier and dry dock will be made. The imports for 1896, including produce from the islands of Zanzibar and Pemba, amounted to more than £1,250,000, and the exports to somewhat less. British India stands first among the importing countries, followed by German East Africa, with Great Britain third. In addition to the imports and exports large quantities of goods are transhipped direct in the port of Zanzibar from the line steamers to coasting steamers and dhows. The chief articles of trade are piece goods, ivory, cloves, rice, and coins.

British Central Africa Protectorate.—The protectorate of British Central Africa was constituted on May 14, 1891. It is administered by an Imperial Commissioner under the direction of the British Foreign Office. The Commissioner from the beginning has been Sir Henry H. Johnston. The population in 1895 was 289 Europeans, 263 British Indians, and 844,995 natives, counting 3 persons to every hut paying a tax. Blantyre, the chief town, has a population of 100 Europeans and 6,000 natives. In the Shire highlands, where the Europeans live, good roads have been made and an efficient police service is maintained. Here rice is cultivated and wheat, oats, and barley have been introduced. The imports in 1896 were valued at £82,760, consisting of cottons, machinery, provisions, hardware, and agricultural implements. The chief exports are ivory of the value of £11,530, coffee of the value of £7,136, tobacco, and strophanthus. The Portuguese Government has granted land at Chinde, on the navigable mouth of the Zambesi, for a British free port, where goods can be landed and reshipped on the Zambesi without paying the Portuguese custom duties. A naval force of 5 gunboats is maintained on the Zambesi, the Shire, and Lake Nyassa. The military force consists of 250 Sikh soldiers and 500 native police. A telegraph has been built to connect Zomba, the seat of government, and Blantyre with Tete, on the Zambesi, and the Cape system at Salisbury, and it is being continued to Lake Tanganyika with the view of reaching Uganda and eventually joining the European telegraph system in Egypt.

Sir Henry Johnston has organized an administration in Central Africa that stands in marked contrast to the system of governing natives organized in most parts of Africa by European officials who seek to uphold slavery or, under various disguises, to reintroduce it. Under his administration, sec-

onded by the missionaries and traders in Nyassaland, the natives are educated and encouraged to become free laborers and independent producers, and treated as if destined to become the equals and rivals of the whites in intelligence and wealth. Mpesini, the only one of the unconquered Angoni chiefs who continued to raid the country round the British settlements, gave up the struggle against civilization in 1897 and removed his people to the Bua river, within the protectorate.

British Central Africa.—The British sphere of influence in Central Africa wrested from Portugal was committed to the care of the British South Africa Company, with the exception of the district lying between the southern and western shores of Lake Nyassa and the Zambesi, where Scottish missionaries had labored for fifteen years. This was made a separate protectorate. The area of the sphere of influence is about 500,000 square miles, and the population is estimated at 4,000,000. The European population is over 350. The Barotse country, east of the upper Zambesi, is populous. In other parts slave-raiders have exterminated the people. A few Indian traders have settled on the lower Zambesi, and settlements have been begun on Lake Mweru, Lake Tanganyika, and the upper Luapula river in the neighborhood of Bangweolo. About 40 Arab chiefs are recognized by the British Government. They have their seats near the lakes of Tanganyika and Nyassa. The representative of the British South Africa Company is Major P. Forbes.

The Barotse are the ruling tribe, each member of which is accounted a chief by birth. They are of fine physique, dignified and courteous in demeanor, and skillful in wood carving, while the Mabunda are clever in making mats and baskets, the Matutela supply their neighbors with assegais, knives, and other iron implements, and build all the canoes, which are paddled mostly by the Masubia, a hunting tribe of strong physique. The Matoka cultivate cereals and furnish porters. The Mankoaia, a small race, hunt with poisoned arrows, which are used also by the indolent and treacherous Mashikolombwe in their predatory warfare. The Barotse country is an alluvial plain, supporting large herds of cattle. Lewanika is the paramount chief. His eldest sister, Mokwai, exercises great power and is at liberty to wed or depose a husband at will, which she has made use of by having six successive husbands put to death.

German East Africa.—The German protectorate is administered by a Governor. Major H. von Wissmann held this office at the beginning of 1897, but Lieut.-Col. von Trotha acted in his absence as deputy Governor and commander of the imperial troops. The native population consists of Bantu negroes mainly, much intermixed with Arabs near the coast. There are forests of mangroves, coconut palms, baobab, tamarind, etc., in the coast districts, and of acacias, cotton trees, sycamores, banyans, etc., in the higher regions of the interior. In the more settled districts the natives have large banana plantations and cultivate pulse and corn. They rear large numbers of goats and some sheep and cattle. The Government has established experimental stations for raising cattle and planting coffee and other tropical produce, and grants subsidies to steamers and railroads. The railroad from Tanga to Pongwe, 10 miles, is being carried through to Karagwe. A telegraph line joins the coast towns and is extended by cable to Zanzibar. Coal, iron, malachite, salt, and gold have been found. The chief article of export is ivory. The total value of the imports in 1895 was 6,725,098 rupees, and of the exports 2,879,368 rupees. The value of ivory export in 1894 was \$873,467; caoutchouc, \$247,470; sesame, \$80,100; cocoanuts, \$44,140; copra, \$24,-

862. The expense of administration in 1868 is estimated at 6,069,000 marks, toward which the Imperial Government contributes 4,369,900 marks.

Italian Somaliland.—The Sultan of Obbia accepted an Italian protectorate in February, 1892, and in April of that year the protectorate was extended to the country between 5° 33' and 8° 3' of north latitude belonging to the Sultan of Mijertain, who agreed to make no treaty with another power regarding the rest of his dominions. After an agreement was reached with Great Britain and the boundary between the respective spheres of influence settled, on March 24, 1891, the Somali coast from Obbia to the Juba river was ceded to Italy by the Sultan of Zanzibar in August, 1892, and in September of the following year Italian officials assumed the administration of the seaports. The administration of the Benadir district was granted in May, 1893, to V. Filonardi & Co. for three years. A supplementary Anglo-Italian agreement, made on May 5, 1894, defines the bounds of the protectorate of British Somaliland.

ECUADOR, a republic in South America. The Congress consists of a Senate and a Chamber of Deputies. There are 30 Senators, 2 from each province, elected for four years, one half retiring every two years. The Deputies, elected for two years by Roman Catholic adult males able to read and write, in the ratio of 1 to 35,000 of the population, number 33. The President, whose term is four years, is Gen. Eloy Alfaro. The ministers in the beginning of 1897 were the following: Interior, A. Ribadeneira; Foreign affairs, J. Robles; Finance, C. P. Quiñones; War, Gen. Morales; Public Works, D. Morla; Public Instruction, V. Govgotena; Public Worship, R. Barba Jijon.

Area and Population.—Ecuador has an area of about 120,000 square miles. The boundary on the side of Peru is unsettled, a treaty made in 1890 for the adjustment of the difficulty having been amended by Peru in 1893, after it was sanctioned by the Ecuadorian Congress, which consequently canceled it in 1894. The population of the republic is estimated at 1,271,861, of whom only about 100,000 are white, while 300,000 are of mixed blood and 870,000 are pure Indians. Quito, the capital, has about 85,000 inhabitants; Guayaquil, 50,000; Cuenca, 25,000; and Riobamba, 12,000. Education is free and compulsory. There are 1,088 primary schools, with 1,498 teachers and 68,380 pupils.

Finances.—The revenue for 1893 was 4,325,702 sucres, and expenditure 4,433,450 sucres (1 sucre = 68 cents). Since then no complete statement of the finances has been published. The receipts from customs in 1894 were 3,102,340 sucres; in 1895 they were 2,840,000 sucres. About 70 per cent. of the public income comes from this source, 15 per cent. from duties on cacao, rum, and tobacco and the land tax, 6 per cent. from monopolies of salt and powder, and 9 per cent. from railroads, the post office, and excise duties.

The foreign debt was scaled down to £750,000 in 1892, and a further reduction and compromise was made in 1894, but it was upset in 1896, when the Government, after the bondholders had given their consent, suspended payments pending a more advantageous arrangement. The foreign bonds outstanding amounted to £693,160, and internal bonds to £264,000.

The Army and Navy.—The regular army of Ecuador has a fixed strength of 3,341 officers and men, organized in 1 brigade of fortress artillery, 1 of field artillery, 4 battalions of infantry, 2 columns of light infantry, and 1 regiment of cavalry. The National Guard is estimated to number 30,000 men. The naval force consists of 1 torpedo launch and 1 transport, manned by 128 men.

Commerce and Production.—The most important commercial product of the country is cacao. Other products are coffee, rice, vegetable ivory, and rubber. Mines at Cachaqui, Puyo, etc., tin, and Umbi are operated by American corporations. Besides gold, which is widely distributed, silver, copper, iron, lead, petroleum, and coal are found. The imports at the port of Guayaquil for 1895 amounted to 8,520,000 sucres, and exports to 11,502,740 sucres. The imports consist mainly of cotton goods and provisions. Among the exports the chief articles exported in 1895 from the port of Guayaquil were cacao for £768,283 sterling, coffee for £146,212, and rubber for £30,583.

Navigation.—There were 955 sailing vessels, of 22,208 tons, entered at Guayaquil in 1895, of which 942, of 14,200 tons, were Ecuadorian and 13, of 8,008 tons, foreign; and 950, of 20,963 tons, cleared, of which 938, of 13,900 tons, were Ecuadorian and 12, of 7,063 tons, foreign; and 158 steamers, of 266,474 tons, entered, of which 86, of 138,330 tons, were British and 72, of 128,144 tons, of other nationalities, and cleared 159 steamers, of 267,840 tons, of which 87, of 139,606 tons, were British and 72, of 128,144 tons, belonged to other foreign nationalities.

Communications.—There are 17 American and Ecuadorian steamboats plying on the rivers. The only railroad is one from Duran to Chimbo, 38 miles, the continuation of which to Sibambe has been approved by Congress, special freight charges being imposed to provide the means.

The telegraphs have a length of 1,242 miles. The post office in 1893 carried 1,808,806 external letters and 6,346,595 papers, etc. The internal traffic amounts to about 820,000 letters a year.

Politics and Legislation.—Since the advent of Gen. Eloy Alfaro to the presidency he has been obliged to maintain an attitude of constant vigilance toward the Conservatives and their ecclesiastical supporters of the Jesuit and other religious orders which have exercised a dominant influence in politics for thirty years or more. The Indians, who have been held in practical bondage, and who aided Gen. Alfaro in the revolution of 1895, were relieved of the obligation of paying tribute and admitted to citizenship. A presidential election was held in January, 1897, when Gen. Alfaro was elected Supreme Chief. At that time a formidable revolution for the overthrow of the existing Government was apprehended. All revolutionary attempts of the Conservatives rely on the financial support of the wealthy and influential religious bodies. Arms were imported from France and collected at a point in Colombia near the frontier. The revolutionists established their headquarters at Pasto, in the Colombian department of Cauca. Gen. Plutarco Bowen, who was aid-de-camp to Gen. Eloy Alfaro during the revolution of 1895 and was condemned to death for treason, his sentence being subsequently commuted to exile, arrived in Colombia in the beginning of April with the intention of invading Ecuador at the head of a revolutionary army. The Colombian Government, being apprised of his coming, at once expelled him from the country. Some prominent politicians, Liberals as well as Conservatives, were exiled from Ecuador. Bishop Andrade, of Riobamba, was arrested and taken on board of a gunboat, where he was offered the alternative of going abroad or remaining in Guayaquil under police surveillance.

The Congress authorized the Executive to raise a loan of \$5,000,000 to advance the construction of the Southern Railway, which an American syndicate undertook to build. A loan of \$1,000,000 was authorized for the purpose of paying off the internal debt.

EGYPT, a principality in northern Africa, tributary to Turkey. The Government is an absolute monarchy, hereditary in the order of primogeniture in the dynasty founded by Mehemet Ali in 1811. The monarch bears the title of Khedive, or Viceroy, conferred by the Sultan in 1867. The reigning Khedive is Abbas Hilmi, born July 14, 1874, son of Mehemet Tewfik, whom he succeeded on Jan. 7, 1892, receiving the firman of investiture from the sultan on March 26, 1892. Since the suppression of the military revolt of 1882 Egypt has been occupied by a British army. The Khedive appoints an English financial adviser, who has a seat in the Council of Ministers and power to veto any financial measure. Two popular legislative bodies were established at the beginning of the British control, viz., a Legislative Council, half elected and half nominated, which has the right to examine all proposed general laws and offer advice to the Khedive regarding them, and the Legislative Assembly, which meets once in two years and has the right to veto any new direct personal or land tax. The Cabinet in office at the beginning of 1897 was composed as follows: Prime Minister and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohammed Abani Pasha; Minister of Public Works and Education, Hussein Fakhry Pasha; Minister of Foreign Affairs, Butros Ghali Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha.

Area and Population.—Previous to the evacuation of the Soudan, in January, 1885, Egypt had an area of 1,420,520 square miles, containing 17,500,000 inhabitants. Within its present limits the area is 400,000 square miles, not counting the reconquered province of Dongola. The Nile valley and delta, constituting the inhabited portion of Egypt proper, have an area of only 12,976 square miles, of which 3,750 are covered by canals, roads, lakes, marshes, and desert. The estimated population of Egypt in 1894 was 7,739,000, of whom 7,368,400 were Egyptians and Nubians, 25,300 sedentary Arabs, 236,900 Bedouin Arabs, and 110,400 foreigners. In respect of religion the population was divided into 7,069,200 Mohammedans, 475,000 Copts, 164,000 other Christians, and 30,800 Jews and others. The estimated population of Cairo, the capital, was 430,000; of Alexandria the chief port, 250,000. There were about 9,000 schools in 1895, with 11,000 teachers and 170,000 pupils.

A census taken on June 1, 1897, shows the present population of Egypt to number 9,700,000, an increase of 42 per cent. as compared with the inaccurate census of 1882. The population is believed to have grown threefold since 1845 and now surpasses the figures given by the ancients for the palmy period of Rameses. European nationalities have greatly increased, with the exception of the Greeks, whose diminished numbers in the provinces is regarded with satisfaction, they being the chief usurers and liquor-sellers.

Finances.—The international commission of liquidation invited by the late Khedive Ismail to reconstruct the Egyptian finances in 1880 estimated the future revenue at £ E. 8,411,622 a year (1 Egyptian pound = \$4.24), of which £ E. 3,513,734 was assigned to the service of the debt, and £ E. 4,897,888 to the Government. The annual charge of the privileged and unified debts was £3,421,404 sterling. A new guaranteed loan of £9,000,000 was issued in 1885, requiring a fixed annual payment of £315,000. The privileged debt and the loans guaranteed on the Daira Sanieh estate and the khedivial domains were converted into a new privileged loan in 1890, issued at 91 for 100 of the old debt, and paying 3½ instead of 5 per cent. The Moukabalah, or internal debt, was scaled down by the

debt commissioners to a fixed annuity of £150,000, to be paid until 1930, and then to cease. This and the Turkish tribute of £681,486, the interest on the Suez Canal shares held by the English Government, and £34,000 for the Daira Khassa were to be paid out of revenue assigned to the Government.

The actual revenue of the Egyptian Government in 1896 was £ E. 10,693,000, and the total expenditure £ E. 10,377,000, leaving a surplus of £ E. 316,000. In 1895 the surplus amounted to £ E. 1,088,077, of which £ E. 354,193 went to the reserve fund of the Caisse de la Dette, £ E. 332,240 to the special reserve fund of the Government, and £ E. 401,644 were deposited in the Caisse de la Dette as the amount of the economy from conversions of loans. The fund of economies from conversions amounted to £1,883,070 at the beginning of 1896; the general reserve fund to £ E. 2,717,196; and the special reserve fund to £ E. 471,411. The budget for 1897 makes the total revenue £ E. 10,497,435, of which £ E. 5,002,461 are derived from the land tax, £ E. 136,000 from other direct taxes, £ E. 789,744 from customs, £ E. 1,000,000 from tobacco, £ E. 205,128 from *octrois*, £ E. 177,436 from the salt duty, £ E. 87,179 from fisheries, £ E. 71,795 from navigation dues, £ E. 38,974 from various duties, £ E. 1,800,000 from railroads, £ E. 44,102 from telegraphs, £ E. 128,205 from the port of Alexandria, £ E. 2,052 from other ports, £ E. 101,795 from the post office and postal packets, £ E. 71,795 from lighthouses, £ E. 6,154 from the gold assay office, £ E. 405,128 from the law courts, £ E. 20,513 from various administrative departments, £ E. 97,436 from exemption from military service, £ E. 25,641 from interest on deposits, £ E. 92,308 from Government property, £ E. 13,333 from Suakin, and £ E. 59,487 from deduction from salaries for the Pension fund.

The total expenditure for the financial year 1897 was estimated at £ E. 10,492,307, of which £ E. 260,370 is for the Khedive's civil list, £ E. 4,074 for the Council of Ministers, £ E. 8,482 for the Legislative Council, £ E. 11,401 for the Ministry of Foreign Affairs, £ E. 87,380 for the Ministry of Finance, £ E. 107,877 for the Ministry of Public Instruction, £ E. 396,693 for the Ministry of the Interior, £ E. 400,630 for the Ministry of Justice, £ E. 748,789 for the Ministry of Public Works, £ E. 115,248 for general expenses of the ministries, £ E. 333,950 for provincial administrations, £ E. 76,918 for collection of customs, £ E. 89,524 for the coast guard, £ E. 35,795 for the collection of *octrois*, £ E. 45,762 for collecting the salt duty, etc., £ E. 10,367 for collecting fishery dues, £ E. 3,210 for collection of navigation dues, £ E. 897,617 for expenses of the railroads, £ E. 43,077 for operating the telegraphs, £ E. 28,718 for the port of Alexandria, £ E. 3,794 for other ports, £ E. 100,026 for the post office, £ E. 81,485 for the khedivial packet boats, £ E. 27,625 for lighthouses, £ E. 2,663 for the assay office, £ E. 406,308 for the Ministry of War, £ E. 87,000 for the expenses of the British army of occupation, £ E. 123,607 for the administration of Suakin, £ E. 102,564 for the Dongola province, £ E. 441,026 for pensions, etc., £ E. 682,093 for the Turkish tribute, £ E. 34,872 for the Daira Khassa, £ E. 153,846 for the Moukabalah debt, £ E. 2,044 for interest and exchange, £ E. 82,051 for the domains deficit, £ E. 34,872 for expenses of the Caisse de la Dette, £ E. 315,000 for the service of the guaranteed loan, £1,028,775 for the preference debt, £2,238,878 for the unified debt, £ E. 256,410 for suppression of the *corvée*, £ E. 32,821 for unforeseen expenses, £ E. 271,833 economy from conversion of the privileged debt, and £276,832 for the Government share of receipts in excess of expenditure.

The ordinary revenue of the Government in 1896

reached £ E. 10,693,000, and the expenditure £ E. 10,377,000, leaving, despite exceptional expenditure incurred on account of the cholera, a surplus of £ E. 316,000 where one of £ E. 17,000 only was expected. These figures do not include the extraordinary expenditure on the Dongola expedition, which came to £ E. 715,000, of which over £ E. 172,000 was spent on railroad extension, and £ E. 65,000 on gunboats. In the estimates for 1897 the sum of £ E. 100,000 was provided for the province of Dongola, of which £ E. 60,000 was for the army, £ E. 25,000 for railroad expenses, and £ E. 15,000 for civil purposes. The Caisse de la Dette held £ E. 5,590,000 at the end of 1896. The special reserve fund showed a deficit of £ E. 780,000, taking all liabilities into account.

The amount of the Egyptian debt on Jan. 1, 1890, was £104,636,960 sterling, made up as follows: 3 per cent. guaranteed loan, £8,699,700; 3½ per cent. privileged debt, £29,393,580; 4 per cent. unified debt, £35,974,820; Daira Sanieh loan, paying 4 per cent., £6,644,360; domains loan, paying 4½ per cent., £3,924,840. The domains and Daira Sanieh loans are guaranteed by the estates, which are administered by commissioners for the bondholders; in case the revenue of the lands proves insufficient to pay the interest the Government must make good the deficiency. An annual payment of £34,871 is made to the Daira Sanieh Commissioners. The revenues available for the service of the debt are paid over to the Caisse de la Dette, an international committee. The large sums of money that remain in the hands of the Commissioners of the Debt at the close of each year they invest in Egyptian bonds, thus forming a large and constantly increasing sinking fund. The average amount of debt either paid off or withdrawn in this way from the market has been £850,000 a year for three years past, at which rate the whole debt would be redeemed in forty-four years. Owing to these operations the amount of bonds in the hands of the public on Jan. 1, 1897, was only £3,455,000 more than on Jan. 1, 1883, notwithstanding fresh loans made during the British occupation to the amount of £13,000,000, and a nominal addition of £2,000,000 to the capital of the debt by conversion operations. The interest charge on the £99,912,000 of bonds outstanding is £3,776,000, which is £387,000 less than in 1883. The charges for the various debts in 1897 were £315,000 sterling for the guaranteed loan, £1,029,000 for the privileged debt, £2,239,000 for the unified debt, £265,264 for the Daira Sanieh loan, £160,990 for the domains loan, £34,871 for the Daira Khassa, and £154,000 for the Moukabalah; total, £4,198,125.

The Army.—The Egyptian army, commanded by the sirdar, Sir Herbert Kitchener, and about 100 English officers, has a strength of 17,000 men. The English army of occupation, for which the Egyptian Government pays £87,000 a year, averages more than 4,000 men.

Commerce and Production.—The fellahin who cultivate the land make 61 per cent. of the total population. Over three fifths of the area cultivated is divided into holdings of less than 50 faddans, or acres. About three fourths of the land belongs really to the Government, and the life tenants must pay a tax that amounts to the agricultural rent equal to \$5.35 on the average. The rest is privileged land, which is taxed at the rate of \$1.60 a year. The Wafk lands, which were originally assigned to the mosques for religious and charitable purposes, are rented to life tenants at low rates. The fellahin, in addition to their tax or rent, pay about \$1 a year for the material used in repairing the dikes and canals. The *corvée*, or forced labor, which has otherwise been abolished, is still exacted

for the purpose of guarding the banks of the Nile banks in time of flood or of building in emergency. The lands owned by the Government are mortgaged. The registered mortgage transactions, which does not include the debts of small proprietors, amounted in 1894 to the sum of £ E. 7,323,990. The chief crops are cotton, sugar, rice, corn, wheat, barley, maize, gum, ghom, cucumbers, and vegetables in the delta and the canal tracts of upper Egypt, and most vegetables, beans, clover, and vegetables where the lands are irrigated in flood only. Wheat, maize and cotton, sugar, cotton, beans, and barley occupy more than half of the cultivated lands. The area under cultivation is 4,361,402 faddan, one fifth of which bears double crops. There are 3,452,674 bearing date trees. The number of cattle, horses, and camels is 1,067,850.

The imports of merchandise in 1895 amounted to £ E. 8,289,933; exports, £ E. 12,632,450. The imports of specie were £ E. 4,319,265, and exports £ E. 2,322,190. The chief imports were: Cotton, £ E. 1,365,946; silk, woolen, and other textiles, £ E. 939,425; tobacco, £ E. 510,822; timber, £ E. 490,319; coal, £ E. 404,578; iron and steel manufactures, £ E. 344,800; machinery, £ E. 345,722; apparel and hosiery, £ E. 369,616; wheat and flour, £ E. 285,607; wine, beer, and spirits, £ E. 268,660; coffee, £ E. 265,350; petroleum and oils, £ E. 250,842; fruits, £ E. 220,525; indigo, £ E. 192,616; live animals, £ E. 166,322; rice, £ E. 106,861; refined sugar, £ E. 23,122. The chief exports in 1895 were: Cotton, £ E. 9,463,498; cotton seed, £ E. 1,200,364; sugar, £ E. 472,953; beans, £ E. 469,482; onions, £ E. 159,244; corn, £ E. 113,245; hides and skins, £ E. 95,357; wheat, £ E. 89,465; wool, £ E. 52,525; lentils, £ E. 13,199; gum arabic, £ E. 5,856.

The shares of the various countries in the foreign trade of Egypt for 1895 are as follow:

COUNTRIES.	Imports.	Exports.
Great Britain.....	£ E 2 641 773	£ E 7 312 610
Turkey.....	1 672 915	344 410
France.....	954 365	1 057 796
Russia.....	509 007	1 252 854
Austria-Hungary.....	635 331	527 519
Italy.....	293 004	437 260
Germany.....	216 791	294 916

All other countries.....	378 474	426 581
Total.....	£ E 8 289 933	£ E 12 632 450

For 1896 the imports were valued at £9,550,000, not including tobacco worth £524,000 and £578,000 for goods in transit. The exports amounted to £24,630,000, besides £415,000 for re-exports. The specie imports were £3,813,000, and exports £1,872,000. Including specie, the exports exceeded the imports by £1,547,000. The receipts of customs were £761,000 from imports, £131,000 from exports, £19,000 from sundries, and £1,082,000 from tobacco; total, £1,943,000, collected at a cost of £70,500, or 3.63 per cent., not including £88,000 for the coast-guard service. Of the increase of £1,474,000 over the imports of 1895 more than a third was due to 69,000 tons against 37,600 in 1895, coming from France and Russia, and by its close to shipping native wheat and maize out of Egypt. The rest of the increase was due to iron imports for railroads and sugar works, and to the exports of textiles, especially woollen fabrics, and to the exports of wheat, beans, maize, and cotton. The increase in quantity and value of exports

exceeded those of 1895 by £615,000. The sugar crop was 30 per cent. larger than any preceding one, and shipments were valued at £784,000, of which over 57 per cent. went to the United States, and 27 per cent. to England. Cotton exports were smaller in quantity, but £536,000 more in value than the preceding year. The crop of 1897 largely exceeded that of 1895. Cotton seed, wool, and henna showed increases, while rags and hides fell off, owing to quarantine measures against cholera. The tobacco and cigarette trade has increased steadily since 1892, and in 1896 there were 185,780 thousands of cigarettes exported, weighing 258 tons, of which 109 went to Great Britain and 90 to Germany. Of the total imports, amounting to £10,974,000, Great Britain and British possessions furnished £3,781,000, Turkey £2,032,000, France £1,358,000, and Austria, Belgium, Russia, Italy, Germany, etc., came far behind. Of the exports, valued at £13,563,000, Great Britain and British possessions took £7,226,000, Russia £1,510,000, France and French colonies £1,246,000, the United States £951,000, and Austria, Switzerland, Turkey, Italy, Germany, Spain, etc., the remainder. Of the total foreign trade, 47.45 per cent. was with England, 10.64 per cent. with France, 10.29 per cent. with Turkey, 7.67 per cent. with Russia, 4.21 per cent. with the United States, and the remaining 19.74 per cent. was divided among a dozen countries. The trade with the United States, owing to the sugar shipments, was double that of the previous year.

Navigation.—During 1895 there arrived at Alexandria 2,393 vessels, of 2,206,667 tons, and cleared 2,339 vessels, of 2,194,964 tons. Of the arrivals, 620, of 899,015 tons, were British; 137, of 286,009 tons, French; 999, of 255,333 tons, Turkish; 150, of 235,829 tons, Austrian; 133, of 228,843 tons, Italian; 79, of 156,984 tons, Russian; 40, of 49,280 tons, Norwegian and Swedish; 26, of 42,263 tons, German; 167, of 30,810 tons, Greek; 5, of 10,411 tons, Danish; 1, of 5,016 tons, Belgian; 3, of 2,703 tons, Spanish; and 33, of 4,171 tons, of other nationalities.

Communications.—The Egyptian state railroads had a total length at the end of 1896 of 1,143 miles. There were 9,854,000 passengers and 2,498,000 tons of goods transported during that year. The gross receipts were £ E. 1,820,970, and the working expenses £ E. 787,930, leaving as net receipts £ E. 1,033,040, equal to 57 per cent. of the total receipts.

The state telegraphs had at the end of 1896 a total length of 2,269 miles, with 8,450 miles of wire. The number of messages sent in 1896 was 2,392,036.

The Egyptian post office in 1895 carried 10,470,000 internal and 4,234,000 international letters and postal cards, 4,800,000 internal and 2,942,000 international newspapers, etc., and 456,000 orders and remittances, of the amount of £ E. 16,400,000.

Suez Canal.—The number of vessels that passed through the canal in 1895 was 3,434, of 11,833,637 tons, of which 2,318, of 8,382,075 tons, were British; 278, of 1,005,951 tons, were French; 314, of 977,029 tons, were German; 192, of 497,903 tons, were Dutch; 72, of 248,995 tons, were Austrian; 78, of 224,358 tons, were Italian; 57, of 145,877 tons, were Norwegian; 33, of 140,007 tons, were Spanish; 39, of 137,288 tons, were Russian; 36, of 51,954 tons, were Turkish; 3, of 6,090 tons, were Portuguese; 5, of 4,606 tons, were American; 2, of 3,562 tons, were Egyptian; 2, of 3,401 tons, were Japanese; 2, of 3,168 tons, were Swedish; 1, of 1,208 tons, was Danish; and 2, of 1,975 tons, were Chinese. The receipts amounted to £3,124,149. The number of passengers who went through the canal was 216,936. The share and loan capital and surplus expended on the improvement of the canal amounted to 610,298,770 francs at the end of 1895. The net profits in 1895 were 41,969,014 francs.

Internal Affairs.—The English have made progress in assimilating the judicial system of the country, as well as the administrative services, to European models. However much the Egyptians resent the rule of the foreigners and the exploitation of their country by Europeans whose commercial methods have deprived a large proportion of fellahin of their hereditary acres, they would not return to the old system of arbitrary tyranny, under which the *mamours* could insult, flog, and imprison their *omdehs* with impunity, the officials from the Khedive down despoiled the fellahin at will, palace favorites and public functionaries turned all the Nile water upon their own lands and forced the fellahin to dig canals and make roads and embankments for the benefit of their large estates under the *corvée* system, justice was purchasable, public offices were given to the highest bidders, the mudirs exacted ransom from the village notables under threat of punishing them on trumped-up charges, and the lives of private persons were at the mercy of the administrative authorities, who put them to death or exiled them without any form of law. Under the expensive British control, taxation is felt to be severe, yet the rate per feddan is only a third of the multifarious taxes formerly imposed—£ E. 14 instead of £ E. 44. Corporal punishment is so thoroughly abolished that the highest Government official can not arbitrarily molest a field laborer. The inviolability of property is so secure that the Khedive himself can not take a feddan of land unless he buys it with the owner's consent and pays for it in full. The poorest fellah enjoys the same right of water as any state dignitary. Offices are bestowed on the ground of capacity. The professional tax paid by merchants and manufacturers has been removed. No one is above the law, and as to the administrative forced labor, which formerly existed all the year round, it is demanded only in cases of public danger. Moreover, the irrigation works have been greatly improved, the area of cultivation extended proportionately, and the growth of cotton doubled since the British occupation.

The improvement in the administration of justice was begun before the British occupation by the institution of the Mixed Tribunals in 1876 after eight years of negotiations between the European powers, who surrendered to these courts the rights of consular jurisdiction enjoyed under the capitulations. The Egyptian Government was desirous of having independent courts administer some uniform system of jurisprudence for its own protection, as some of the consuls had enforced all sorts of imaginary and exaggerated claims in behalf of foreigners against the Khedive and the Government. Nubar Pasha, the originator of the idea, proposed to have these courts, to be composed of equal numbers of foreign and native judges, adjudicate upon all questions, civil and criminal, international and native, in the hope of educating an enlightened native magistracy, trained in the principles of French law. But the consenting powers insisted that mixed civil cases alone should be tried, and that a majority of the judges should be Europeans. The six great powers also insisted on appointing all the foreign judges in the Court of Appeals, and each two judges in the courts of first instance. The other European judges were chosen from the secondary powers, mostly from northern Europe. A full bench in the Appellate Court was fixed at five Europeans and three natives, in the lower court at three Europeans and two natives. The emoluments were placed at a high figure, to attract able jurists. The judges appointed were men of the highest legal science, who worked laboriously and organized a system of jurisprudence that was admired in all countries, and served to instill

ideas of justice from which have developed the codes and procedure of the present native tribunals. The outstanding claims against the Khedive they disposed of rapidly, reducing millions to thousands, and throwing out innumerable flittitious cases. The mixed tribunals were established for the purpose of deciding civil and commercial disputes between natives and foreigners, and between foreigners of different nationality, but they extended their jurisdiction to cases by which foreigners were in any way affected, or in which they were introduced by a fiction in order to bring the matter before them, and until the English came both Egypt and the powers were willing that all important questions should be adjudicated by tribunals applying the most enlightened principles of civilized law with the purest impartiality and fearless independence. As there was no court above them, they could interpret their charter as they saw fit. They have declared their competency in suits against the railways, Daira, domains, and other public administrations, against corporations any of whose shares are held by foreigners, against the city of Alexandria, etc. In the matter of taxes they have declared themselves competent to examine whether a tax is illegal, excessive in amount, or oppressively collected. Judgments concerning land or mortgages registered in the native tribunals are not recognized by the mixed tribunals, so that the people in all parts of Egypt, in order to protect themselves, must register their titles and liens in the mixed tribunal at Cairo. The British found the mixed tribunals the only institution that they could not bend to their purposes. As these courts followed established rights and precedents based on French or Continental rather than on English law, the Khedive's English advisers conceived that they were actuated in their decisions by hostility to British methods and a desire to preserve French influence and institutions in Egypt that the French had introduced. In trying to recast the legal institutions of the country, in order to establish British influence on a lasting basis, the English and Anglo-Indian officials were disturbed by finding French jurisprudence so firmly implanted in the native courts as well as in the mixed tribunals. When the mixed court in 1896 decided, to the chagrin and confusion of the British Government, that the reserve of the Caisse de la Dette could not be used to defray the expenses of the Soudan expedition, the English declared war against the mixed tribunals. They would not abolish them at once, for insuperable political obstacles stand in the way, and besides they have nothing to take their place, and can not expect to create a set of tribunals that would enjoy such authority and respect, even if they could abolish the capitulations. But they desire to curtail their jurisdiction, which would allow more scope to the native tribunals under their own tutelage. The powers of the mixed courts are renewed every five years. Their present period of existence expires on Feb. 1, 1899, and the English authorities in Egypt wish at that time thoroughly to revise the charter, if it can be accomplished by negotiation with the fourteen powers interested. Meanwhile they are trenching wherever possible on the functions assumed by these courts before the occupation. In accordance with the unanimous vote of the Legislative Council on April 16, the Government decided to establish a single land registry office under the direction of the Minister of Justice in Cairo, with branches attached to the native tribunals throughout the country. This system, taking the place of dual registration in the mixed courts and the Mekemmeh tribunals, met the approval of the judges of the mixed courts when suggested four years previous. The Mekemmeh, or native religious courts, dealing with the personal status of Moham-

medans, with *wakfs*, marriage, inheritance, and minors, have been the subject of much criticism and complaint. In April the Government issued a decree placing them under the Ministry of Justice, and reforming their organization and procedure, which is conformed to that of the native tribunals. The reform, which followed a measure that was carried out in Turkey some years before, secures speedy judgment and execution, and the nomination of honest and capable judges. Cases come before a single judge, from whose decision there is only one appeal, and who shall admit written evidence, whereas only oral evidence has heretofore been accepted. There being ten European judges in the native Court of Appeals, it was decided to make two of them presidents in two of the six chambers. The ministry, all of whose members but one are Mohammedans, roused considerable opposition by appointing a representative of the Coptic community on the Legislative Council, which was founded on the suggestion of Lord Dufferin to give an opinion on all important Government measures, and, being partly elective and partly nominated, is intended to represent all the people, of whom a tenth are Christians.

The newspapers enjoying European protection are accustomed to print unrestrained attacks on foreign governments, but when a petty native paper published a silly slander about the German Emperor the consul general of Germany complained, with the result that the editor was subjected by the native court of Cairo to a severe sentence, which was reduced on appeal. Some rioters made an attack on a British detachment at Qualoub in September, and in consequence of this British troops, which had been garrisoned only at Cairo and Alexandria, were marched through the country and stationed at various towns to impress the Egyptians. There were 22 arrests made in connection with the riot, and the arrested persons were tried and sentenced by a special tribunal for the trial, without appeal, of cases of assault on the British troops. This tribunal had not before been constituted, but was authorized by the law of February, 1895, and was composed of native and English judges. This disturbance was the result of an excited state of Mohammedan feeling against Christians, growing out of the Greco-Turkish war. In Zagazig and Suez rioters had plundered Greek shops. The English police officials, however, had effectually prevented any serious public demonstration. One planned at Alexandria they promptly checked. The Greek reservists and volunteers in April embarked demonstratively at Alexandria, and those who remained collected subscriptions for the Greek cause, which prompted the Turks, including Cretan Mohammedans and sympathizing Egyptians, to contribute £200,000 in aid of the Sultan. The Khedive took the opportunity to fit out secretly, without the knowledge of his ministers, an expedition of 100 men, with munitions, for the purpose of occupying the Turkish island of Thasos, which had belonged to his ancestor Mehemet Ali, who bequeathed the revenues to the islanders. The expedition did not reach its destination, the Turkish vessel that carried it being captured by a Greek war ship. The command of the British army of occupation was vacated by Gen. Knowles in August, and on Oct. 7 Sir Francis Grenfell took command.

Foreign Affairs.—When the Mixed Court of Appeals decided, on Dec. 2, 1896, that the money advanced by the Caisse de la Dette to defray the expenses of the Dongola expedition would have to be refunded by the Egyptian Government, the British Government promptly announced that it would hold itself prepared to advance, on condition to be decided thereafter, such a sum as it felt satisfied

that the Egyptian treasury was powerless to provide. The Egyptian Government at once accepted, with expressions of lively satisfaction, this arrangement, and on the same day the sum in dispute, which was about £ E. 515,600, was paid back to the Caisse de la Dette by the Egyptian Minister of Finance. The French and Russian diplomatic representatives protested against the Government's intention of borrowing the money from Great Britain, and the Egyptian minister explained that it would be done under a law authorizing the Government to obtain advances and was not considered to be in any way an infringement of international engagements. Sir Michael Hicks-Beach, speaking in Parliament, said that when the position of the mixed tribunals had again to be reconsidered it would be necessary, from the point of view of international policy, to decide how far they should be permitted to interfere in political affairs. He gave notice to France and Russia that England proposed to remain in occupation of Egypt. M. Hanotaux, in the French Chamber, said that, whatever might take place in parliamentary debates, the international situation would remain unchanged, and the French Government would not modify its determination not to consent to any infringement of rights based on public acts or repeated promises, and, above all, on the accord of the powers established by international agreements.

The Soudan Expedition.—English officers were ordered to be at their posts in readiness for a fresh Soudan advance before the end of June. The Egyptian troops were echeloned along the left bank of the Nile so as to command the approaches from Omdurman, Metammeh, and Berber. The advance was planned to be made from Merawi about the middle of July, as soon as the railroad across the desert from Wady Halfa to Abu Hamed should be completed halfway. The Khalifa was expected to strengthen the garrison at Abu Hamed for the purpose of arresting the completion of the railroad, and the plan of the British commander was to capture Abu Hamed so as to prevent the dervishes from interfering with the railroad construction or from attacking the steamers in the difficult channels below that town. From Abu Hamed it would be easy to reconnoiter in the direction of Berber, and a farther advance to that place was contemplated. The advantage of carrying a railroad 230 miles across the Korosko desert, and so avoiding the great loop of 700 miles in the Nile, was recognized for future commercial as well as for present strategical purposes. The line was first started from Korosko, but this route, winding through rocky defiles swept by torrents after a rain, was abandoned, and a new start made from Wady Halfa across the perfectly level desert. There were 2,000 men, and afterward 3,000, employed in the construction, many of them Soudanese dervishes taken prisoners in Dongola. The work, designed and superintended by English engineer officers, with Lieut. Gorringe at their head, is a permanent railroad, of 3-feet-6-inch gauge, not a light military line, as first intended. It advanced at the rate of a mile at first and subsequently two miles a day. As far as curves and grades are concerned, it would rank as a first-class railroad in any country. It traverses an utterly desert tract, a flat waste of hard yellow sand, ribbed in places with black crags, and in spots sprinkled with clumps of camel thorn.

The province of Dongola, which was pictured as the granary of Egypt before its reoccupation in 1896, was found to be a poor country. The cultivated area, never more than 90,000 feddans, had shrunk to 30,000 feddans. The famine resulting from a low Nile and cattle disease in 1888 and the

disastrous dervish expedition of the following year, which took away many of the able-bodied male population and the cattle, left the province impoverished. There were few people left but women, old men, and children. The Khalifa had abolished male slavery, and hence there were few cultivators, so that the only hope for an increase of production was in a supply of labor from Egypt. The number of cattle had fallen from 36,000 to 12,000. The abandoned farms were grown up to woods. Population had fallen from 75,000 in 1885 to 56,426, of whom about 47,000 were natives of the province and the rest Soudanese and Arabs. About 6,000 men were absent in the Soudan and in Egypt, half of them living in Wady Halfa and not at all disposed to return. A decree was issued requiring owners of land to establish their rights before Jan. 1, 1899, under pain of forfeiture. Following the example of the Khalifa, the Egyptian Government abolished the minor taxes exacted before 1885, retaining only the land tax and the date-tree tax. Previous to the advance from Dongola a khedivial decree was issued creating a Government monopoly of the trade in ivory, feathers, and gum in the country south of Wady Halfa. The collection of these products was placed under the regulation of the Government, which purposed establishing depots to which they should be brought for subsequent sale to traders. This measure, reintroducing the system enforced by Gen. Gordon, was considered necessary not only for revenue purposes, but also in order to foster a revival of the trade by preventing the extermination by hunters and traders of the elephants, ostriches, and gum trees, which were already vanishing under dervish rule. The Khalifa Abdullahi was known to be concentrating his forces at Omdurman, and there was every indication that he would fight to the death, but whether he would oppose the Egyptian advance on the way or await attack at Omdurman remained in doubt and could not be determined until after the council of war was held, which he had appointed for the middle of June. The dervish army withdrawn from Darfur was ordered to move on from El Obeid to Omdurman as soon as the river should rise early in June. The railroad between Kerman and Wady Halfa was in operation, and of the one from Wady Halfa to Abu Hamed 58 miles were built, making together 263 miles completed since the Dongola expedition was decided upon in March, 1896. It was reported in June that the Khalifa had withdrawn most of the troops garrisoned at Abu Hamed and Berber, intending to make a stand at Omdurman, where he then had 30,000 men, including 6,000 cavalry. If defeated there, he had a great number of camels ready to transport his treasure to Kordofan. A rising in that province disappointed him greatly, and he dispatched Mohammed Mahmoud to the spot to put down the disturbance.

The dervishes under Osman Digna were raiding in the vicinity of Suakin in May and June, but later withdrew when the Khalifa collected his forces together. The trade of that port almost ceased after the Egyptian Government placed an embargo on Soudanese products in 1896. Subsequently a large quantity of gum arabic, the chief export of Suakin, was allowed to be brought down to save it from spoiling, but it was detained in the Government storehouses. The first skirmish with the dervishes at Abu Hamed occurred when a reconnoitering force of 600 mounted men in the beginning of June proceeded from Merawi up the left bank of the Nile to Salamat, which was being fortified. The Jaalin tribesmen were ordered to supply Mahmoud's army with provisions at Metammeh, but, fearing that they would be stripped bare, they collected there to oppose him. In the fighting that ensued the Jaalin

were defeated. The few Jaalin armed with rifles repelled an attack, but the dervishes effected an entrance on the opposite side and, encountering only spearmen, hemmed in the garrison and killed 2,000, and Mahmoud occupied Metammeh on July 1. Of the Khalifa's forces left at Abu Hamed and Berber many deserted, and certain of the riverain tribes near Berber embraced the Egyptian cause. The remnant of the Jaalin joined with the Hassameh tribe in forming an armed post at Gakdul. The Hawawir also rose against the dervishes, killing a large number with their Emir in an attack on Gabra, and all the Bayuda Arabs sided with the Egyptian Government. After the capture of Metammeh large re-enforcements of dervishes were sent to Abu Hamed.

The sirdar, Sir Herbert Kitchener, established his headquarters at Merawi and organized the frontier field force in the middle of July. On July 29 the advance was made from Merawi by a column consisting of 4 battalions, a field battery, and a small detachment of cavalry. Major-Gen. Hunter, the commander of the column, kept his preparations secret in order to surprise the dervishes. The last 18 miles of the 50 were made in a night march, and on the morning of Aug. 7 the Anglo-Egyptian troops attacked the town. They were assisted by the friendly Ababdeh Arabs from Murat. After carrying the high ground overlooking the place, they attempted to carry it by storm, but the houses were defended by 1,000 dervishes, of whom 150 were horsemen and 500 riflemen, and they fought so stubbornly that it was necessary to bring up the artillery before the position could be carried. The dervishes charged repeatedly through the narrow streets and fought till they were almost annihilated, only 100 infantry and about half their cavalry finally taking flight after the commander, Mohammed Zein, was captured and the other chief Emir killed. The Nile was filled with floating corpses. The Egyptians lost 21 killed, including 2 British officers, and 61 wounded. They fought with great steadiness and vigorous dash throughout the attack, when most of the fighting was at the point of the bayonet. Many prisoners and arms were taken, with standards, camels and horses, and other property. The inhabitants, as at Dongola, showed signs of rejoicing at deliverance from the dervishes.

After the loss of Abu Hamed the Khalifa sent re-enforcements to Mahmoud at Metammeh, and the latter strengthened the garrison at Berber and threatened to advance on the position of the revolting Arab tribes at Gakdul. The Baggara dervishes took terrible vengeance on the Jaalin dwelling on the left bank of the Nile between Berber and Metammeh, butchering every male, throwing women and children into the river, and taking the handsome wives and maidens into their harems. The Khalifa was too well advised to offer a strong resistance to the Egyptian advance at any point north of Berber, and it was doubtful whether, for political as well as military reasons, he would care to hold even Berber. The tribes through whose territory the expedition had so far advanced were ill affected by the tyranny exercised from Omdurman. The cultivators on the banks of the Nile, even south of Berber, were certain to welcome the expedition; while, if he detached a large force to the north, the Khalifa's authority would be weakened in the neighborhood of his capital and in his line of retreat. He succeeded in assembling 60,000 men at Omdurman, badly armed, lacking proper ammunition, and undisciplined, but representing the best fighting elements in the Soudan. The English commander, not deceived by the unexpectedly feeble resistance offered thus far, was equally cautious. The Egyptian battalion had behaved well at Abu Hamed, but the

dervishes, though outnumbered 5 to 1, had given a stiff battle and stood their ground before the black battalions, of which 3 were employed, formed of the same material as themselves and armed and trained in the European manner, so that after the first attempt at assault the place had to be reduced by bombardment. When facing superior numbers of these terrific fighters the morale of the Egyptian troops were liable to break down, as it had on former occasions, the memory of which was extremely demoralizing; and the Soudanese troops of the Egyptian army were likely, when opposing superior forces of their own race, to forget their training and discipline and relapse into their natural instincts for irregular fighting. As to the disaffected tribesmen, no effective military aid could be expected against their oppressors from people so crushed and cowed. It was hopeless to attempt to take Khartoum without the support of British troops. The British Government, which was responsible for the whole enterprise and with which rested the decision at every stage, being precluded, for the present at least, from obtaining the funds for the campaign from the Egyptian treasury, and thus compelled to apply to Parliament, had suddenly to face, in addition to the political difficulty, the new military danger of the risings on the Indian frontier, and therefore would not venture to detach any troops for service in the Soudan. The railroad was pushed forward, and rails were laid for a distance of 138 miles from Wady Halfa before the end of August. At different places water was obtained in abundance by boring. Gunboats and war material were taken up the river past the fourth cataract to Abu Hamed. When the gunboats appeared the dervishes evacuated Berber and retired to Metammeh. They also withdrew all their eastern outposts, leaving the route from Berber to Suakin free so that communications could be opened between this port and the Nile force. Osman Digna remained for some time on the Atbara, whence he was called to Omdurman in the middle of August. All the tribes of the eastern Soudan renounced Mahdism, and trade began to revive there, as it had on the Nile. The pretensions of Abdullahi to a divine mission were not credited by any of the people of the Soudan. The Khalifa Abdullahi had determined on Metammeh as the northernmost point to be held. This was the place on which the garrisons of Berber and Kassala were ordered to fall back years before if the British advanced farther after routing Osman Digna at Tokar. The loss of the river and eastern tribes did not greatly weaken the military power of the Khalifa. His main reliance was the powerful Baggara tribe, to which he himself belongs, who were linked to his fortunes by complicity in all his oppressions and would incur by his overthrow not only the loss of their political ascendancy and material wealth, but sanguinary retaliation at the hands of their victims. The oppressed and plundered tribes, whose fidelity the Khalifa suspected, he was accustomed to place in the front of the battle, where, if they wavered, they would be shot down by their oppressors. The wives and children of suspected individuals he retained as hostages. In such soldiers he could place no trust in a conflict with equal forces, but on the Baggara he could depend for resistance to the death, and they had abundantly proved their splendid fighting qualities. Berber was occupied by friendly Arabs on Sept. 7. Gen. Hunter arrived with Egyptian troops, brought by 4 gunboats, and took possession a few days later. Two of the gunboats sailed in pursuit of the retreating dervishes, and captured 14 barges laden with grain at Darnah, where the Atbara joins the Nile, 30 miles above Berber. The dervishes fortified Metammeh on both sides of the river and Shabluka, on the right bank,

just below the sixth cataract. At Omdurman they constructed a large intrenched camp. They held the post of Gabbra in the desert, but all the desert tribes were friendly to the Egyptians, who supplied them with arms, and, in addition to the Gakdul wells, held by Jaalin tribesmen, there were posts of friendlies established to screen the fortified stations on the river, extending entirely across the Bayuda desert. The Egyptians established armed posts along the river at Dongola, Debbeh, Kortî, Merawi, Abu Hamed, and Berber. At the mouth of the Atbara a gunboat was permanently stationed. Lieut.-Col. Parsons, Governor of Suakin, went to Massowah, and thence with an Italian officer to Kassala to make arrangements for the reoccupation of that place, which the Italians were ready to restore to Egypt at any time.

EVANGELICAL ASSOCIATION. The statistical reports of this Church for 1897 give it 1,645 itinerant and 482 local preachers, 115,465 members, 2,140 Sunday schools, with 23,288 officers and teachers and 143,216 pupils, 855 catechetical classes, with 10,033 catechumens, 974 Young People's Alliances, with 32,911 members, 1,792 churches, and 689 parsonages. During the year covered by the report 1,524 adults and 6,706 infants had been baptized. Of the year's collections only those for missions and the aggregate amount were completely summarized. The missionary contributions footed up to \$146,645, of which \$15,000 had been contributed in the form of bequests and special gifts. The total amount of collections was given as \$871,311, showing the average contribution per member to be \$7, this being 40 cents less than in 1896.

The publishing department returned a net increase of profits during the year of nearly \$34,000, or \$400 larger than the increase of the preceding year. After deducting \$24,070 to be applied to annual appropriations and benevolences, \$9,398 were added to the assets. More than 200,000 copies of books had been published. The branch publishing house in Germany was represented as being in a prosperous condition.

The total receipts of the Missionary Society for the year had been \$152,485, and the expenditures \$137,615. The permanent fund amounted to \$78,003; the annuity fund to \$66,561; and real estate belonging to the current fund was valued at \$12,000. The debt of the society was being gradually reduced. The home missions comprised 524 stations, of which 25 were new ones, with 521 missionaries and 42,437 members. Six missions had become self-supporting churches. The foreign missions returned 99 stations (of which 2 were new stations) 129 missionaries, and 13,233 members. The churches in Germany reported a net gain of 417 and a total of 7,629 members, and those of Switzerland 5,190 members. The 19 stations in Japan were managed by 17 missionaries, who had the charge of about 50 preaching places, and returned 807 members, while 67 persons had united with the Church. The contributions of the Woman's Missionary Society amounted to \$4,076, or \$288 more than those of the previous year, and averaged \$1.72 per member.

EVENTS OF 1897. January 1. New York: Frank S. Black inaugurated Governor. Michigan: Hazen S. Pingree inaugurated Governor.

2. Philippine Islands: Alleged victory of the Spaniards over the insurgent forces. Germany: A new bill presented to the Reichstag proposing an addition of 177,000,000 marks to the military budget.

3. France: Elections to replace a large proportion of Senators—64 Republicans, 21 Radicals, and 12 Reactionaries chosen.

4. Wisconsin: Inauguration of Major Edward Scofield as Governor.

5. Delaware: Meeting of the Legislature.

6. Opening of the Legislatures in Connecticut, Illinois, Maine, Michigan, New Hampshire, New York, and North Carolina. Connecticut: Inauguration of Lorrin A. Cooke as Governor. Baltimore: Launch of torpedo boat No. 5. Nebraska: Opening of the Bimetallic Conference at Lincoln.

7. Inauguration of governors in Maine, Massachusetts, Minnesota, Nebraska, and New Hampshire. Transvaal Republic: The Government files its complaint against Great Britain, demanding an indemnity of £2,000,000 for the Jameson raid.

8. Illinois: Riots among the striking miners at Rutland. South Carolina: Simon Cooper, a negro murderer, lynched in Sumter County. England: Installation of Dr. Frederick Temple as Archbishop of Canterbury.

9. Chicago: Conference of the leaders of the National Democracy, Gen. Simon B. Buckner, of Kentucky, chairman. Russia: Prof. Simon Newcomb, of the United States Naval Observatory, elected an honorary member of the Russian Academy of Sciences. London: The Royal Astronomical Society awards a gold medal to Prof. Edward Emerson Barnard, of the Yerkes Observatory.

10. Palestine: Rioting in Jerusalem between Roman Catholics and members of the Orthodox Greek Church.

11. Meeting of the presidential electors in the several States to cast formal ballots for President and Vice-President. Washington: Signing of the general Anglo-American arbitration treaty at the State Department by Secretary of State Olney and Sir Julian Pauncefote, the British ambassador. Governors inaugurated in Illinois, Kansas, Indiana, and Missouri. South America: Massacre of a peaceable British expedition reported in upper Guiana.

12. Indianapolis: Meeting of the National Monetary Conference. California: George C. Perkins re-elected United States Senator. Colorado: Alva Adams inaugurated Governor. Africa: Reports of the massacre of a British expedition in the Niger Coast Protectorate, all but 3 of the whites and nearly 250 native carriers killed.

13. Indianapolis: Adjournment of the National Monetary Conference after adopting a plan for currency reform. Washington (State): Inauguration of John R. Rogers as Governor.

14. New York: Election of Thomas C. Platt as United States Senator. Arrest of Gen. Charles Roloff, Secretary of War of the Cuban Republic, on a charge of aiding filibusters.

15. Canada: Election of Hugh John McDonald to the House of Commons declared void because he hired vehicles to take voters to the poles.

16. United States gunboat *Machias* ordered to Siam to support a demand for the punishment of the assailants of the vice consul general.

17. Canada: Bishop Begin issues a mandament regarding the Manitoba school question.

18. Decision by the Supreme Court that the South Carolina dispensary law is in part unconstitutional. Cuba: Sinking of a Spanish gunboat in the Canton river by insurgents. South America: A British syndicate receives a concession of a million acres of gold lands in Dutch Guiana.

19. Delaware: Installation of Gov. Tunnell. Washington: Meeting of the National Marine Engineers' Association, the American Association of Inventors and Manufacturers, and the American Colonization Society. Installation of the Rev. Dr. Thomas J. Conaty as rector of the Roman Catholic University. Russia: The Imperial Government informs the nations of the world that for the first time in her history Russia is taking a census. London: Opening of the British Parliament, the

Queen's speech referring to the arbitration treaty between Great Britain and the United States.

20. Washington: The Secretary of State is called upon to explain the arbitration treaty before the Committee on Foreign Relations. Florida: Meeting of the Atlantic and Gulf States Harbor Defense and Improvement Convention at Tampa. California: A mass meeting in San Francisco urges Congress to pass the Nicaragua Canal bill. New York: Senator Lexow's resolution passes the Senate, providing for a committee to investigate trusts. London: The public prosecutor withdraws charges of conspiracy against Edward J. Ivory, of New York, who was arrested in Glasgow on suspicion of being concerned in a dynamite plot. Lord Salisbury consents to a Venezuelan representative on the Board of Arbitration.

the provisions of the new law. British India: Great activity in the military departments in anticipation of a frontier war.

15. The British Government informs the President that the naval force on the North American station will be increased. Paris: Duel between the Italian Count of Turin and Prince Henri of Orléans; swords are used, and both parties are slightly wounded. Nearly 1,000 gold seekers sail from Victoria, British Columbia, bound for the Klondike region.

17. Detroit, Mich.: Twenty-third annual meeting of the American Bankers' Association. England: Fifty men-of-war's men desert the British battleship *Sovereign*, and many are under punishment for alleged insubordination.

18. Indianapolis: Convention of the Young People's Christian Union of the United Presbyterian Church; about 10,000 delegates present. Turkey: A dynamite bomb exploded by supposed Armenian revolutionists in Constantinople. France: President Faure leaves Paris for St. Petersburg; a bomb explodes just after he passed, but no one is hurt. British India: Dispatches from Simla indicate a widespread uprising on the northern frontier.

19. New York: Meeting of the National Temperance Society at Saratoga.

21. West Africa: Submission of the King of Benin to the British authorities, who captured his capital city in revenge for the massacre of Consul Phillips and his companions.

22. France: Bread riots threatened on account of the rise in the price of flour. London: Anarchists hold a meeting in Trafalgar Square, and incipient riots are suppressed by the police. Bohemia: Anti-Jewish outbreaks at Pilsen; troops called out. Uruguay: Negotiations between the Government and the insurgents having failed, a state of war will continue.

23. Buffalo, N. Y.: Opening of the encampment of the Grand Army of the Republic. Russia: Arrival of M. Faure, President of the French Republic, at the palace of the Emperor.

24. South Carolina: A large number of negroes become worked up to a high pitch of religious excitement, so much so that the authorities are alarmed. Denver, Col.: Meeting of the Supreme Court of the Order of Foresters. British India: News received that the tribesmen have captured the forts in the Khyber pass. Hungary: A strike occurs in the building trades of Buda-Pesth; more than 20,000 workmen are involved, and incipient riots take place.

25. Washington: The President appoints W. R. Halloway, of Indiana, consul general at St. Petersburg. Cleveland, Ohio: Annual meeting of the Cleveland Bar Association. Mystic, Conn.: Session of the Universal Peace Union; Alfred H. Love, of Philadelphia, is elected president. St. Louis, Mo.: First national convention of a new political party calling itself the American party; 50 delegates present, representing 9 States. New York city: General strike of cloakmakers ordered; several thousand stop work. Uruguay: Assassination of President Borda. South Africa: President Krüger, in a speech at Pretoria, declares that the Transvaal Republic can not recognize the suzerainty of Great Britain.

26. Buffalo, N. Y.: J. P. S. Gobin, of Lebanon, Pa., elected Commander in Chief of the Grand Army. Washington State: Other vessels reach Puget Sound from Alaska, bringing gold and miners from the Klondike country and increasing the gold fever on the Pacific coast. British India: The hostile tribesmen capture the remaining fortifications in the Khyber pass, and are in full possession.

27. Africa: King Menelek and the Italian authorities have agreed upon the Erythrean frontier as the recognized boundary. South America: A force of 600 Bolivians has invaded Peru.

28. England: Return of the Jackson-Harmsworth polar expedition after an absence of three years.

29. Switzerland: Meeting of the Zionist Congress at Basel. Discussion of a plan for the purchase of Palestine by the Jews.

30. St. Louis, Mo.: Opening of the Congress of Labor Leaders. Japan and Portugal agree upon a commercial treaty.

31. France: President Faure returns to Paris from his visit to Russia. Montreal: First session of the British Medical Association held in Canada. British India: The month closes with the situation extremely critical on the northern frontier. The tribesmen have gained many victories over local British posts, but powerful re-enforcements are hurrying to the front.

September 1. New York: Nomination of Seth Low, President of Columbia College, to be Mayor of Greater New York.

2. Washington: It is announced that the postal authorities of the United States and Canada have made arrangements for the transmission of mails to and from the Klondike region. St. Paul, Minn.: Declaration by the Farmers' Congress against Government ownership of railroads. Russia: Appointment of a special commission to consider the introduction of compulsory education in the empire. Germany: The King of Siam visits Prince Bismarck at his home.

3. New York: Strike of 5,000 vestmakers for higher wages. Washington: The appointment is announced of Rifaat Bey to be Turkish minister resident, in place of Mustapha Tachsin Bey.

4. Washington: The War Department orders 4 troops of cavalry to the Mexican frontier, to assist the authorities in the arrest of the Zufi Indians.

5. New Mexico: A train is held up and robbed by 4 masked men, who make their escape. British India: It is estimated that 17,000 tribesmen are under arms in the vicinity of the Khyber pass.

7. England: Trades-Union Congress in Birmingham pledges aid to the striking miners.

8. New York: Arrival of Gen. Fitzhugh Lee, consul general of the United States at Havana, on leave of absence. A German war ship has been sent to New Guinea to avenge the murder of Capt. von Hagen, slain by natives. Bolivia: It is reported that hostile forces from Peru have seized some of the principal towns along the border.

9. Indianapolis: Opening of the National Encampment of the Sons of Veterans. England: The Trades-Union Congress at Birmingham demands the abolition of child labor under the age of fifteen, and of all night labor under the age of eighteen. Brazil: A considerable engagement is announced with the insurgent fanatics at Canudos; the Government troops suffered severely.

10. Cuba: Capture by the insurgents of Victoria de las Tunas, the most important post that has yet fallen into their hands.

11. Pittsburg coal region: A large party of miners fired upon by deputy sheriffs near Latimer; 21 dead and 40 wounded. Paris: Arrival of the King of Siam, who is welcomed in state by the President and members of the Cabinet.

13. Spain: Gen. Stewart L. Woodford, the new United States minister, presents his credentials to the Queen Regent at San Sebastian.

14. Brown University: President Andrews withdraws his resignation. England: Celebration at Ramsgate by the Roman Catholic authorities of Great Britain of the thirteen hundredth anniversary of the landing of St. Augustine.

15. Lexington, Va.: Installation of Hon. William L. Wilson as President of Washington and Lee University. Versailles, Ind.: Five members of a gang of robbers hanged in the public square. Mexico: Attempted assassination of President Diaz; no harm done. England: The Bank of England announces that it is prepared to lend in silver one fifth of the bullion required to guarantee its note issue.

18. Consul-General Lee has a long interview with the President, and consents to return to Havana. Turkey and Greece sign a treaty of peace.

19. Waterford, Me.: A large body of Italian workmen seize a foreman and two of his assistants, and hold them as hostages for unpaid wages.

20. Return from Greenland of Lieut. Robert E. Peary, U. S. N. Pennsylvania: End of the miners' strike in the Hazleton district, more than 5,000 men returning to work.

22. Greece: Great indignation over the terms accorded by the treaty of peace.

23. London: The action of the Bank of England in regard to silver arouses widespread indignation and protest throughout business circles, and the bank reconsiders its action.

24. Pennsylvania: It is deemed safe to withdraw State troops from the lately disturbed mining district. New Orleans: A mob attempts to burn a schoolhouse used as a hospital for yellow-fever patients. British India: An engagement of considerable importance between the insurgent tribesmen and the British; the British have the best of the encounter.

25. Washington: Exchange of ratifications of the new treaty between Japan and Chili. London: It is officially announced that England will take no part in the Bering Sea Conference at Washington if Russia and Japan are to participate. Austria: Duel between Count Badeni, the Premier, and Dr. Wolf, the German Nationalist.

26. Springfield, Ill.: Adjournment of the Sovereign Grand Lodge of Odd Fellows, which has been in session. Hawesville, Ky.: Lynching of Raymond Buskrod, a negro.

28. New York: Republican Convention of the Greater New York. Ex-Secretary of the Navy Benjamin F. Tracy nominated for Mayor. Massachusetts: Democrats nominate George Frederick Williams for Governor, and approve the Chicago platform. Washington: It is announced that the Creek Indians have agreed to allotment of their lands and to a reform government. Warsaw: A conspiracy discovered to assassinate the Emperor Nicholas; the roadway was undermined; 130 arrests followed.

29. Spain: Resignation of the Cabinet. London: Horatio David Davies, Conservative member of Parliament, chosen lord mayor.

30. New York: Democratic Convention of Greater New York nominates Robert A. Van Wyck for mayor.

October 1. New York: Henry George nominated by the Jeffersonian Democracy for mayor. South America: Boundary dispute between Nicaragua and Costa Rica decided in favor of Nicaragua by Gen. Alexander, the United States commissioner.

3. East Africa: Members of the English-Cavendish sporting expedition are reported to have been murdered by natives.

5. Washington: The President appoints Lester V. Swenzen minister to Denmark and ex-Congressman Hunter, of Kentucky, minister to Guatemala.

6. Carnivals are celebrated at St. Louis, Kansas City, and Denver, attracting large numbers of visitors. British India: The Government notifies the British Cabinet that it will not consent to suspending its mints for the free coinage of silver.

7. London: Final meeting of the Indian Famine Commissioners; subscriptions from Great Britain, her colonies, and the United States amounted to about £1,500,000. Switzerland: The National Council decides to purchase the five principal railroads in the country for about \$200,000,000.

8. Washington: The Post Office Department adopts a largely extended money-order system.

9. Germany: Sentence of a Socialist member of the Reichstag to ten months' imprisonment for publicly criticising high state officials. The Socialist Congress at Hamburg decides to take part in national elections. London: Sharp decline of South African securities on a report of the illness of Cecil Rhodes.

12. Washington: Failing to secure a representative of Great Britain in a seal conference in which Russia and Japan should be represented, Secretary Sherman invites her to a conference with the United States alone. Indianapolis: Democrats carry the municipal election, re-electing Mayor Taggart. Washington: A board of naval experts sets out for the South, with a view to selecting a location for the proposed national armor-plate works.

13. New York: Opening of the Fifteenth Conference of Friends of the Indian at Lake Mohonk. New Haven, Conn.: Meeting of the American Board of Commissioners for Foreign Missions. London: Leading men of all parties are signing petitions objecting to Government action favoring bimetallism.

14. Washington: Resignation of Justice Stephen J. Field of the Supreme Court because of advanced years. Appointment of the Hon. John A. Kasson, of Iowa, special commissioner regarding the reciprocity arrangements under the tariff act. New Jersey: A Holman friction-gear locomotive runs a mile in forty-two seconds on the South Jersey Railroad. Indianapolis: National gathering of the Church of the Disciples. Paris: A banquet given to President Faure in commemoration of his visit to Russia. Cuba: Amnesty granted by Gen. Weyler to 46 political prisoners. Additional re-enforcements hurrying from Spain.

15. The old United States man-of-war Yantic sails for Detroit to serve as a training ship for the Michigan naval reserve on the lakes.

17. Washington: It is officially reported that clerks of the Railway Mail Service during the last fiscal year handled 11,571,540,680 pieces.

18. Washington: The Secretary of the Navy orders the cruiser Detroit to Guatemala to protect American interests.

20. Washington: A military reservation ordered on St. Michael island, Alaska, to preserve order in the gold fields. British India: Continued fighting between the tribesmen and Government forces on the frontier. Madagascar: A French military post attacked by a band of natives, and many of its garrison killed.

21. Washington: The President appoints Medical Director W. K. Van Reypen to be surgeon general of the navy, in place of the late Newton L. Bates. Boston: Celebration of the centennial anniversary of the launching of the frigate Constitution, the old ship being present to take part in the ceremony. London: Celebration of the anniversary of the battle of Trafalgar.

22. Egypt: News reaches Cairo that the Abyssinians are devastating Somaliland and are committing terrible atrocities.

23. Washington: Meeting of the delegates representing the United States, Russia, and Japan to act on the sealing question. Harvard defeated Brown University and Princeton beat Cornell at football. Paris: An exciting debate in the French

Chamber of Deputies regarding the threatened bread riot.

24. Turkey: The Porte demands the recall of two American missionaries from Aleppo.

25. Princeton: Prof. Charles W. Shields announces his decision to resign from the Presbyterian Church, in view of adverse criticism by various governing bodies of the Church. Rome: The Pope declines to interfere in the case of Prof. Schroeder, of the Catholic University in Washington. Cairo: A column of troops, commanded by Gen. Hunter, has started to drive Osman Digma from the Atbara river.

26. Madrid: Señor Gullen, the Spanish Minister for Foreign Affairs, hands to United States Minister Woodford a note containing the reply of his Government to the communication which Minister Woodford had given to the Duke of Tetuan early in September.

27. Milwaukee: Twenty-ninth annual meeting of the Army of the Tennessee convenes. Denver: Trouble is reported from the vicinity of Fort Duchesne with Indians who have left their reservations. Buda-Pesth: The possibility of absolutist government for Austria foreshadowed in a speech by the Hungarian Premier. India: The insurgent tribesmen have returned a defiant answer to the British commander's proclamation, and are preparing to attack the British.

28. New York: Thomas A. Edison announces the successful operation, at Dover, N. J., of his new process for recovering the iron in low-grade ores. New Haven: Semi-centennial celebration of the founding of the Yale Sheffield Scientific School. Tangier: The Sultan of Morocco has won a victory over the Benanian tribe at Tadia. Madrid: A number of important reforms for Cuba passed upon and approved by the Spanish Cabinet.

29. Washington: The President appointed Gen. James Longstreet Commissioner of Railroads and Prof. Henry S. Pritchett Superintendent of the Coast and Geodetic Survey. The delegates representing the United States, Russia, and Japan reach an agreement in regard to the suspension of pelagic sealing. Constantinople: Turkish consuls ordered to resume their duties in Greece. India: The British forces, under Gen. Sir William Lockhart, capture Sempahga pass.

30. Cincinnati: President McKinley is entertained by the Cincinnati Chamber of Commerce and other societies. San Francisco: The cruiser Baltimore sails for Honolulu. Havana: Capt.-Gen. Blanco arrives and takes over the command of the island from Gen. Weyler, the retiring Governor General.

November 1. Omaha: The Union Pacific Railroad sold to the Reorganization Committee for the sum of \$53,528,532.76. Washington: The new Congressional Library is opened to the public. Newfoundland: Sir William Whiteway, Premier of Newfoundland, is defeated in the general election, and his party reduced to a minority in the Assembly.

2. New York: Robert A. Van Wyck elected the first mayor of the greater city of New York, carrying with him the entire Tammany ticket. Buffalo: Miss Frances E. Willard is re-elected President of the National Woman's Christian Temperance Union.

3. Pittsburg: President McKinley attends the Founder's Day exercises at the Carnegie Library. Madrid: Reports of Carlist activity in Spain.

4. London: The Liberals win a parliamentary election in Lancashire. Vienna: Scenes of confusion and violence repeated in the lower house of the Reichsrath.

5. Rio Janeiro: Attempted assassination of President Moraes, of Brazil, by a soldier of the garrison. Dr. Moraes was not injured.

6. Washington: The sealing treaty between the United States, Russia, and Japan is signed at Washington.

7. St. Augustine: The Hotel San Marco is destroyed by fire; loss, \$250,000. Madrid: The Cabinet Council approves the proposal of political amnesty for Cuba and the Philippines.

8. Washington: The United States Supreme Court denies the appeal of Durrant, convicted of murdering Blanche Lamont, in San Francisco. President McKinley appoints Dr. W. Godfrey Hunter, of Kentucky, minister to Guatemala and Honduras. Havana: Marshal Blanco issues an edict granting full pardon to all Cuban rebels who have been prosecuted for rebellion. Rome: Charges in connection with bank scandals against Ex-Premier Crispi, of Italy, are quashed. London: Horatio David Davies installed Lord Mayor of London.

9. Washington: The Spanish reply to Minister Woodford's note, read at the Cabinet meeting, is considered as allaying any fear of hostilities. Premier Laurier and Minister Davies of Canada arrive, with the purpose of negotiating for a settlement of matters in dispute between the United States and the Dominion. Philadelphia: Annual meeting of the National Baseball League begun. Paris: The French ministry declines to open the case of Captain Dreyfus in the absence of fresh evidence. Japan: Count Nishi has been appointed Foreign Minister in place of Count Okuma, resigned.

10. Washington: Conference between the sealing experts of the United States, Great Britain, and Canada begun. Secretary Sherman insists on the prompt settlement of the McCord claim by Peru. India: British forces under General Westmacott repulsed by rebels on the Afghan frontier.

11. Washington: Premier Laurier and Secretary Sherman hold a conference in regard to harmonizing differences between the United States and Canada. Greece: The Turks have repulsed bands of Greek irregulars who crossed the Thessalian frontier.

12. Washington: General George S. Batcheller, of New York, is commissioned by President McKinley to represent the United States as a judge on the mixed tribunal at Cairo. The President issues a proclamation suspending discriminating tonnage dues on Mexican vessels. Austria: Dr. Abrahamovics elected President of the Austrian Reichsrath. Havana: The prisoners captured on board the American schooner Competitor are included in the general amnesty. Russia: M. de Kotzebue, Russian minister to the United States, has been relieved of his post, at his own request, on account of his wife's health.

13. St. Louis: The United States Circuit Court of Appeals decides that boycotting is illegal. Cuba: The Cuban insurgents blow up a railroad train with dynamite. Berlin: German war ships ordered to the scene of the recent outrages on missionaries in China. Famine conditions reported as threatening a large part of the German population.

14. North Dakota: Three Indian murderers are taken from the jail of Emmons County and hanged. Washington: Lieutenant Stoney, United States Navy, recommends the sending of a naval expedition to the Yukon country to suppress lawlessness. Australia: Rich strikes reported in the gold fields of New South Wales. China: German marines and sailors land in force at Kiaochau Bay and hoist the German flag in token of occupation.

15. Africa: A British force has been sent against the slave-raiding Prince of Idau, on the West Coast. Athens: Capt. Rastopoulo is cashiered for culpable negligence in the matter of the torpedo scandal during the late war with Turkey.

16. Washington: The Sealing Conference closes without final results. President McKinley signs

the treaty adopted by the recent Universal Postal Congress. Paris: Count Esterhazy, implicated in the Dreyfus scandal, has demanded an investigation. India: Gen. Kempter repulses a night attack of the tribesmen by the aid of star shells.

17. Havana: Spanish residents of Cuba from the ages of fourteen to forty are requested to enlist as volunteers in the Government army.

18. Havana: The Competitor prisoners are released from Cabanas fortress. Paris: The friends of Capt. Dreyfus declare that he is the victim of a conspiracy. Madrid: Capt. Gen. Primo de Rivera has announced the complete pacification of the Philippine Islands. Ottawa: The Canadian Cabinet decides to send a commission to Washington for the settlement of disputed questions.

19. St. Petersburg: The appointment of Prof. P. de Maartens as arbitrator in the Anglo-Venezuelan boundary dispute has been formally approved by the Czar.

20. Washington: Lieut. D. H. Jarvis, executive officer of the Bear, is selected to lead the overland expedition for the relief of the ice-imprisoned whalers in the Arctic. Paris: Premier Mellin promises to introduce a bill for the relief of agricultural distress in France. Constantinople: Russia, in view of proposed Turkish expenditures for armaments, renews her demand for payment of war-indemnity arrears.

21. Vienna: Social Democrats attack a meeting of Christian Socialists at Grätz; the riot is suppressed by the police, many persons being injured. Norway: The steamer Victoria sent to Spitzbergen to search for Andrée, the missing aeronaut, returns without news of the explorer.

22. Madrid: The Spanish Cabinet approves the scheme of autonomy for Cuba.

23. Buffalo: The Buffalo City Gas Company incorporated with a capital of \$7,000,000. Madrid: Gen. Weyler arrives in Barcelona, and the demonstration in his behalf does not equal expectations.

24. Pittsburgh: A syndicate of capitalists has purchased all the stock of the United Traction Company, amounting to \$20,000,000. Vienna: Another riotous demonstration takes place at the sitting of the Austrian Reichsrath. India: Continuance of the spread of the bubonic plague.

25. London: Three hundred Americans observe Thanksgiving Day by dining at the Hotel Cecil; Ambassador Hay is among the speakers. Havana: Rear-Admiral Vicente Manterola arrives from Spain and takes charge of the Admiralty Office.

26. Madrid: Royal decrees have been issued, extending the Universal Suffrage law to the Antilles. Rio Janeiro: The Chamber of Deputies approves the Franco-Brazilian treaty involving the settlement of boundary disputes. Shanghai: Germany makes demands upon China in compensation for the murder of German missionaries and destruction of German property, which include the maintenance of the German force at Kiaochau Bay.

27. Rome: The Pope appoints Archbishop Chapelle, of Sante Fé, to the archbishopric of New Orleans. Madrid: The royal decrees granting autonomy to Cuba and Porto Rico are published. Ottawa: The Canadian Government declines the proposition of the United States to suspend sealing for one year; the Canadian reply proposes the immediate appointment and meeting of a joint commission.

28. Seattle: Returning miners from the Klondike region report a shortage of provisions at Dawson City. Austria: Resignations of the Russian ministry accepted by the Emperor. Paris: "L'Espresso" publishes letters alleged to have been written by Count Esterhazy, which express sentiments reflecting on the French army.

30. Vienna: Announcement of the new Austrian Cabinet, with Baron von Gautsch as Premier. Berlin: Emperor William opens the Reichstag in person.

December 1. Washington: Associate-Justice Stephen J. Field retires from the United States Supreme Court, his term of office having continued five days less than forty-four years. Austria: Anti-German riots in Prague; the city is declared under martial law. Constantinople: United States Minister Angell renews the demand for an indemnity for the pillage of American missions in Armenia.

2. Ohio: Mrs. Nancy Allison McKinley, mother of President McKinley, is stricken with paralysis at Canton. Washington: President McKinley appoints Blanche K. Bruce, of Mississippi, Register of the Treasury. Berlin: Re-enforcements are being hastened forward to Kioochau Bay.

3. Brussels: The Belgian Government has decided that Americans living in Belgium will hereafter be exempt from service in the Civil Guard. Cuba: The special commissioner of Spain, Señor Canalejas, reports the presence of 15,000 orphans in the province of Pinar del Rio.

4. Constantinople: The definite treaty of peace between the Sublime Porte and Greece is signed. Bombay: Departure of a British military expedition for the island of Mombaza, off the coast of Zanzibar.

5. Berlin: Monsignor Schroeder, formerly professor in the Catholic University at Washington, receives an appointment to the faculty of the Catholic Academy at Münster. Imperial-Chancellor Hohenlohe declines to recommend that the Emperor declare Capt. Dreyfus innocent. Rome: Resignation of the entire Rudini Cabinet.

6. Washington: Meeting of Congress. Hayti: Two German war ships arrive at Port au Prince and demand satisfaction in the case of Herr Lueders; the demand is complied with.

7. Washington: The President transmits the report of Major Handy, Special Commissioner to the Paris Exposition, and recommends a liberal appropriation. Paris: The French Senate accepts the Government's declaration regarding the Dreyfus case. China insists that the German claim for reparation is merely a pretext for the occupation of Kioochau Bay.

8. Chicago: The price of wheat rises above \$1 a bushel. Fall River, Mass.: The Cotton Manufacturers' Association votes to reduce wages in all mills of the city. Paris: The French and German governments reach an agreement as to the upper Nile territory in Africa. Germany: Prince Henry, brother of the German Emperor, departs for Kiel to command the second German squadron *en route* for China. Cape Breton island: New extensive discoveries of coal deposits reported.

9. Atlanta, Ga.: Strike and riotous demonstrations on the part of cotton operatives. Cuba: Capture of Caimanara, the port of Guantanamo, by the insurgents reported. Madrid: At a Cabinet council Premier Sagasta declares that, in the event of intervention in Cuban affairs by the United States, the Government is prepared to defend the rights and honor of Spain.

11. Washington: The Japanese minister to the United States announces that Japan is not opposed to the annexation of Hawaii. Colorado: Discovery of the rare metal uratrium reported at Black Hawk. Peking: China yields to the German occupation of Kioochau Bay and vicinity.

12. Canton, Ohio: Death of Mrs. McKinley, the mother of President McKinley. Hayti: The entire Haytian ministry resigns, as the outcome of the recent German demonstration.

13. Hayti: The new Haytian ministry is proclaimed at Port au Prince.

Scott, of West Virginia, appointed Commissioner of Internal Revenue, and William W. Thomas, Jr., to be United States minister to Sweden and Norway. London: Alfred Harmsworth has presented to Lieut. Peary the arctic steamer Windward. Cuba: The Spanish Col. Joaquin Ruiz, commissioned to approach the insurgent leader Aranguren, is arrested and shot by the insurgents.

18. Washington: Joint resolution for the relief to the Klondike miners finally agreed to. Paris: Trial of the French Deputies accused of complicity in the Panama scandals. St. Petersburg: Announcement that a Russian squadron has entered and will winter at Port Arthur, on the Chinese coast.

20. Memphis, Tenn.: Meeting of the American Cotton-Growers' Protective Association. Paris: The French Chamber of Deputies passes a bill providing for higher duties on hogs and hog products.

21. Massachusetts: Josiah Quincy re-elected Mayor of Boston.

22. Ottawa: The Bering Sea arbitrators have awarded \$464,000 to the Canadian seamen.

23. Philadelphia: Failure of the Chestnut Street National Bank and the Allied Trust and Saving Fund Company. The Hague: The Holland Chamber votes to abolish the export duty on Java sugar.

24. Washington: Secretary Sherman, by direction of the President, issues an appeal on behalf of the Cuban *reconcentrados*. Rome: The Pope issues an encyclical on the Manitoba school question.

25. Indiana: Fifteen thousand window-glass workers in the gas belt return to work, their strike having been settled. Berlin: The German Government refuses the request of the United States for lower duties on animal products.

26. Madrid: Local newspapers call for an increase of the Spanish fleet in view of the latest note presented by United States Minister Woodford. Yokohama: The Japanese Diet has been dissolved. Premier Matsoukata has resigned.

27. London: Lord Salisbury declines to enter into an agreement with the United States, Russia, and Japan, to stop sealing.

29. President McKinley signs the pelagic sealing bill. India: Renewal of the bubonic plague. Havana: Gov.-Gen. Blanco issues a decree announcing the lines on which the home-rule Government is established.

31. Havana: Gov.-Gen. Blanco issues an edict permitting the exportation of tobacco from Cuba. Paris: The French Deputies, tried for complicity in the Panama scandals, have been acquitted. Vienna: Emperor Francis Joseph orders the session of the Reichsrath to be closed.

F

FARMERS' CONGRESS. Nearly 500 delegates and many visitors, composing the seventeenth annual session of the Farmers' National Congress of the United States, convened in the hall of the House of Representatives, in St. Paul, Minn., Aug. 31, 1897. The convention was called to order by the president, Hon. Benjamin F. Clayton, of Indianapolis, Iowa, at ten o'clock, with Hon. J. M. Stahl, of Illinois, Col. D. O. Lively, of Texas, and Prof. George A. Stockwell, of Rhode Island, as secretaries. Mayor Doran, of St. Paul, extended a welcome to the city, as did also Vice-President McGinnis, in behalf of the State Agricultural Society, which was responded to by Secretary Stahl. Gov. Clough extended a welcome to the North Star State, which brought a response from President Clayton.

The president, in his annual address, said, in part: "From the crude method of sowing the seed in slime deposited by the overflow of the Nile and having it trampled in by the swine, when all agricultural labor was performed by the lowest menial and the common slave, we have advanced to a point where agriculture is one of the first sciences. The farm is the foundation of wealth and the main source of national and State prosperity; but to the due and adequate success of the farm and the farmers there are issues pregnant with profound thought. Changes in the laws of common carriers, and especially in the more just and equitable interpretation of such laws, are not only demanded as due to the common rights of the people, but are of vital concern in making for your labor and the products of your labor a market and a corresponding reward.

"It is doubtful if there is a proper appreciation of the vocation of farming. Only within a few years has agriculture taken its place on a par with other professions, although, like Atlas, it bears the world upon its shoulders. Our fathers looked upon the profession with pride and pleasure, and most of the great men of the past generation were farmers or sons of farmers. No factories or warehouses show so beautiful results as spring from the farmer's hand. Fields white and yellow with their more than silver and golden harvests and orchards bending under their weight of fruit. It is not a business in which great fortunes can be made and riches quickly and easily accumulated, but the majority of the farmers are better off than the army of employees in factories or mines.

"The farmer of this generation is confronted by problems more serious, and requiring a more trained mind to solve, than were presented to the generation which cut off the primeval forests and planted the virgin soil; but he holds in his hands a key to these problems and the power to redress his wrongs. He should therefore educate himself to a full understanding of his grievances and to a sufficient knowledge of the principles which should be employed to remedy them.

"The outlook is promising. The real crystallization is apparent in the unity of action. Until the organization of the Farmers' National Congress and its kindred institutions a few years ago each farmer was as isolated as Robinson Crusoe on his island. The benefits which these societies have conferred on agricultural communities can not be estimated in dollars and cents. They have taught the virtues of systematic organization, installed the precept that the greatest good to the greatest number is a good state of mind, good thoughts and good feelings, and established the tenets of a higher measure

of general intelligence and culture. The special mission and work of these gatherings is to prepare the seed for the sowing, to do the planting and plowing and fostering which must precede a harvest of intelligent votes; not to invent imposing theories, but to apply more effective and judicious measures.

"History teaches me that a government that will not protect the interests of the great masses of her people can not become perpetual. Under four hundred years of democracy Rome became the commercial center of the world's civilization; but when plutocracy and aristocracy seized upon that magnificent republic in the forgotten interest of the great masses of her people, the beautiful valleys of fair Italy were devastated and the proud city of Rome was made to tremble for her very existence. As long as the Carthaginian republic was governed by just and equitable laws she was prosperous. Every sea was white with the sails of her vessels, her commerce was upon every ocean, her flag floated in every civilized port. It was the boast of Carthaginian statesmen that no man dare wash his hands in the great Mediterranean sea without the consent of the Carthaginian republic. But when the interests of the people were discarded and their substance absorbed by the regal grandeur of those in authority, that splendid republic in turn became an easy prey to the Roman Empire. One by one Spanish dependencies have been disposed of to secure gold to support a royal household, until about all there is left of that once proud kingdom is her pride of royal blood. For four hundred years Spanish authorities have been crushing the life blood out of the inhabitants of that little gem of an island of Cuba, until they have become hopeless and desperate. Those people have been forced to choose between starvation and revolution.

The session of this congress held at Indianapolis in November of last year was at the end of three years of the most fearful commercial depression known to our country during any peaceful period of its history. While every interest and industry felt the shock, and while the merchant, the manufacturer, and the great financial institutions was driven to desperation to avoid bankruptcy, it fell with double force upon the farmer and upon agricultural pursuits. The cause of this sudden calamity is a debatable question upon which I do not care to enter. That the world's overproduction with the perfect facilities for transportation that makes the nations of the earth neighbors largely contributed to it I have no doubt; and that mistaken legislation on the part of the Congress of the United States has plunged the agricultural interests of America still deeper in the unfortunate calamity is an indisputable fact. For the last four years, notwithstanding the price of transportation has been reduced, much of farm produce has been sold below the cost of production. The farmer is confronted with investments and obligations contracted under a high tide of prosperity. These obligations, together with undiminished taxation for the support of the Government, must be met from the meager revenues secured from reduced processed farm products.

"When we consider that in so short a time we have stepped to the front as the wealthiest nation on the earth, that our increase of wealth under normal conditions is at the rate of \$2,500,000,000 a day; when we consider the rapid machinery and science

sific development of the last quarter of a century, it is not strange that we should see the combination of capital and the formation of trusts. They are the logical outgrowth of a most wonderful progress. During the past twenty-five years we have been engaged in settling the great questions involving the right to control these vast corporations. As far as law is concerned, we have the right to check the rapacious greed of aggregated capital. Through legislative enactments and through the courts the contest has been long and bitter, but the principle has been established and is now recognized by the two great contending forces. I am not an alarmist; I take no pride in making war on any organization or institution that has for its object the greatest good to the greatest number of people. I bid them Godspeed and a magnificent success in all legitimate enterprises; but I hope and believe there will never come an hour when the Congress of the United States will purposely give their consent to the building up of trusts and combinations for the control of the prices of the necessities of human existence. You, gentlemen, hailing from all parts of the country, know much better than I can tell you the importance of urging prompt action regarding every obstacle preventing the success of the farmer. The Congress of the United States, when placed in possession of facts, have been quick to eradicate existing evils. We should seek to do no damage to other legitimate enterprises, but we should insist upon the recognition of our interests, and we should be satisfied with nothing less."

The Hon. Benjamin F. Clayton, after serving eight years as secretary and four years as president of the congress, was voted a life member. The following-named officers were elected for the ensuing term of two years: President, ex-Gov. William D. Hoard, of Wisconsin; First Vice-President, F. L. Maxwell, of Louisiana; Second Vice-President, C. A. Wieting, of New Jersey; Secretary, J. M. Stahl, of Illinois; Assistant Secretary, D. O. Lively, of Texas.

Many valuable addresses were delivered, among which was that of James J. Hill, President of the Great Northern Railway, his subject being "Farming from a Business Standpoint."

Fort Worth, Texas, was selected as the place of meeting for 1898. After an excursion through the Red River valley and the wheat fields of Minnesota and North Dakota for three days, the congress adjourned.

For a copy of the constitution, see the "Annual Cyclopaedia" for 1896.

FEDERATION OF FREE CHURCHES. National Council.—The National Council of the Federation of the Evangelical Free Churches in England met in London, March 9. A reception had been given the delegates the previous evening by the lord mayor at the Mansion House. The meeting was opened with a sermon by the Rev. Hugh Price Hughes, Wesleyan, ex-president of the council. The address of the president of the present meeting, the Rev. Dr. Monro Gibson, was begun with an affirmation of the perfect loyalty of the ministers and members of the free churches as subjects of the Queen. The president laid down as the great doctrines for which the free churches stood: spirituality—"the spirituality of the New Testament teaching as distinguished from the formality of sacerdotalism"; the ascription of the function of the presbyter rather than that of the priest in the sacerdotal sense to the office of minister; and the ministry of the Spirit. The object of the association of the free churches was not, however, to attack sacerdotalism, but "to show the truth in full operation." In a paper on "The Old and the Present Nonconformity," the Rev. Dr. J. Guinness Rogers, Congregationalist, described

the difference between the objects sought by the nonconformists at the beginning of the Queen's reign and their attitude then and now. The feeling between the nonconformists, then one of separation and rendering united action impossible, had changed for the better, and now permitted harmonious co-operation. The Rev. Dr. Clifford, Baptist, defined as being among the present aims of the free churches: "To realize in the Church the ideal which Jesus Christ himself has given us as his own society; to carry to perfect fullness and maturity the individual and collective spiritual life; the churches were charged with a mission to the millions at their gates and to the regions beyond; for both these ends the churches aim at the fullest use and perfect consecration of all their members' gifts and opportunities; and the mission of the churches was to save men." The report of the Executive Committee showed that while the number of churches represented at the Birmingham Congress of 1895 was 130 and had increased at the Nottingham Congress of 1896 to 209, it was now 384. More than 300 conferences and meetings had been held during the year, and, almost without exception, the largest hall in the place was crowded with leaders and workers of all the evangelical denominations. A county federation had been established in Hampshire, and the idea, not a year old, was being taken up in all parts of the country. Seventy London councils were united in the metropolitan federation. Councils already formed included 11,000 associated churches with a membership of about 1,400,000, sitting accommodation for at least 4,000,000, and not less than 1,800,000 Sunday-school scholars. A circulating library established during the year included 3,000 volumes, sent out in boxes of about 50 each. Four thousand more volumes were required to meet applications, now registered. Forcible expression of the feeling of the free churches in respect to Armenia and the education bill had been given. The local work had included house-to-house visitation, waiting upon newcomers to the town in respect to their attendance upon some church; promotion of the adoption of the nonconformist parochial scheme; united missions; formation of unions of lay preachers; social, philanthropic, and civic work, and work in behalf of public morals; and lectures on free-church history and principles. Hampshire Federation had started a movement for building federation mission chapels in neglected or growing districts. If the mission should become self-supporting, the members, by a five-sixths vote, may resolve what denomination it shall belong to, and then purchase the chapel from the federation. Sermons were preached to the council by the Rev. Joseph Parker, the Rev. Dr. C. A. Berry, and the Rev. Dr. G. S. Barrett. Among the subjects discussed were "Women as Missionaries," "Moravian Missions," "Missions and Lay Preaching," "The State of London," "The Claims of London," "Wicked West London," "Poverty and Church Going," "What is to be Done?" "Christian Endeavor," "Secondary Education," "The Puritan Type of Spiritual Life," "The Methodist Type of Spiritual Life," "Sunday-School Reform," and, at a special meeting for young men and women, "Our Young People and the Free Churches," "Our Young People and Christian Citizenship," and "Our Young People and Home Missions." A resolution expressing sympathy with the Cretan people was passed.

The following comparative view of the growth of the nonconformist churches and of the Church of England has been prepared by the Rev. John Clifford, of London: In 1801 there were 4,289,883 sittings in the houses of worship of the Church of England, and 881,240 sittings in those of the free churches. In 1851 the figures stood—Church of Eng-

land, 5,317,915; free churches, 4,894,648. In 1896, the 10 leading free churches being represented—Church of England, 6,778,288; free churches, 7,610,063. Thus the free churches have steadily gained on the Established Church, till they surpass it in the number of sittings. The same is the case with the number of communicants, thus—free churches, 1,807,733; Church of England, 1,778,351. For the Sunday schools the following figures are given: Teachers—free churches 373,685, Church of England 300,596; pupils—free churches 3,103,285, Church of England 2,329,813.

FINANCIAL REVIEW OF 1897. The most important political event in Europe this year was the Greco-Turkish war. Early in February Greece intervened in behalf of the Cretans against the Mussulmans at Canea, and on the 5th there was an outbreak of hostilities in which the Cretans were defeated. This news created intense excitement at Athens, and the Greek Government dispatched two war ships to Canea, at the same time occupying the island with an infantry force, under Col. Vassos, and it was announced that it was the intention of the Government to annex the island to Greece. Turkey at once began to re-enforce the Mussulman garrison in Crete, and on the 14th the Turkish transport "Fuad," while leaving the port of Candia for Canea, was fired upon by a Greek war ship and compelled to return. While this act of war greatly encouraged the Greeks, it aroused the European powers, an allied fleet was sent to Cretan waters and a force of marines and sailors was landed to take possession of the principal seaport cities of the island. The Greeks re-enforced the army of occupation and prepared to oppose intervention by the powers. On the 21st an advance of Cretans upon a Mussulman force at Canea, despite the warnings of the commander of the fleet, was checked by shells from the combined naval forces of England, Italy, Germany, and Russia, and the Cretans retired. The explanations made in the English Parliament and in the French Chamber of Deputies regarding this act of forcible intervention by the powers were that the pacification of Crete had been prevented by the precipitate action of Greece, and, moreover, that the Greeks had violated international law by seeking to annex Crete. The excitement in the European financial centers caused by these events was soon allayed, and at the close of the month the situation grew more peaceful. On March 1 the foreign admirals notified Greece that she would be required to evacuate Crete, and in the event of refusal coercion would be applied. Greece refused to obey the mandate of the powers and made active preparations for war, massing all available troops upon the Thessalian frontier, and on the 30th Crown-Prince Constantine took command of this army. On March 21 a pacific blockade of Cretan ports went into effect; the fleets of the powers sought to protect the principal ports of the island, and at the same time to prevent the re-enforcement or provisioning of the Greek army of occupation. On April 9, a band of a few hundred Greeks, members of the Ethniki Hetairia, or Greek National Society, invaded Turkish territory, first attacking Balto, and then, being re-enforced by Macedonians and mountaineers, they moved rapidly upon other Turkish positions, with the object of severing the enemy's lines of communication between the headquarters at Ellassona and the Gulf of Arta. The Turks were greatly enraged by this movement, but they were restrained by the powers until the 18th, when the Turkish Council of Ministers officially declared that a state of war existed between Greece and Turkey, the Porte insisting, despite the denials of the Greek Government, that Greek soldiers participated in the inva-

sion of Turkish territory. The Turks promptly moved upon the passes of the Cossus mountains, capturing, in turn, Milona, Kevena, and Mati, and advancing upon the Greek seaport cities at Larissa, which was taken April 23, after being evacuated by the Greeks. Meanwhile the Greek fleet operated against Preveza, on the Gulf of Arta, and also against seaport cities near Salonica, destroying Turkish military stores, but the enemy's fleet remained inactive in the Dardanelles, the admiral commanding declaring that it was in an ineffective condition. After the fall of Larissa the Greeks sought to defend Volo, but they were unsuccessful. While the army was in retreat political dissensions arose in Athens, and the Government was arraigned for intrusting unskillful leaders with the management of the forces in the field. The ministry was dismissed on the 29th. The Turkish army gradually moved upon Dhomoko early in May, the Greeks feebly opposing the advance, and after capturing that position, a truce was arranged on the 19th and the war ended, one hundred and four days elapsing after the preliminary movement of intervention in Crete, Feb. 5, and forty days after the invasion of Turkish territory by the Greek National Society. The ending of the war caused a marked advance in international securities on the European market, but at no time during the progress of the contest was there very serious financial disturbance, the fact being recognized that the result must be the defeat of the Greeks, who were in every way unable successfully to cope with their opponents. After the close of the war the powers began negotiations for peace, June 3. These were prolonged until Sept. 18, when the treaty was arranged, Greece being required to pay an indemnity of £4,000,000 and Turkey retaining possession of the important passes in the mountains on the Thessalian frontier. The treaty was not finally signed by representatives of Greece and Turkey until Dec. 4.

With the exception of the revolt of the tribesmen in India during August and September, calling for vigorous repressive measures by the Indian Government, occasional political disturbances in France, and a ministerial crisis in December in Austria-Hungary, there was nothing of a greatly unsettling character in Europe.

On Nov. 15 the commander of the German Asiatic squadron took possession of three Chinese forts in Kiao-Chou Bay, on the Shan-Tung coast, to obtain satisfaction for the murder of two German missionaries. This movement caused some excitement in European political circles, and later the German Asiatic squadron was re-enforced. There was nothing more than simple protest on the part of China at this action of Germany. Early in December a Russian naval force took possession of Port Arthur, but it was asserted that this occupation was intended to be only temporary, Russia desiring a winter refuge for her fleet. On Dec. 16 Prince Henry, brother of Emperor Wilhelm of Germany, was ostentatiously put in command of an expedition at Kiel with orders to proceed to re-enforce the Asiatic squadron presumably for further operations against China, and on Dec. 21 it was announced that a British fleet had left Hong-Kong Sound, it was supposed, for the Gulf of Pechili for the protection of British interests. On the 23d a French cruiser left Toulon for China, and the Italian Cabinet took measures for adequate naval representation in the far East. On the 26th it was reported that the English fleet had arrived off Chemulpo, Korea, supporting the British consul general who had protested against the removal of the English consular adviser to the Korean Government, and was against the Russian monopolization of the Korean customs service. These movements were regarded with

much concern by Japan, and at the close of the year there were indications of her co-operation with England. It is claimed that the occupation by Russia and Germany of Chinese territory was in pursuance of the provisions of a secret treaty between Russia and China, made during the summer of 1895, after the treaty of Shimonoski had been modified, at the demand of Russia, Germany, and France, which modification compelled Japan to recede to China the Liao-Tung peninsula and other portions of the Chinese mainland, receiving in return a further indemnity. One of the terms of this secret treaty was said to be the acquisition by Russia of privileges in Chinese Manchuria, together with the right to occupy an ice-free port, presumed to be Port Arthur. Subsequent to the execution of this treaty Russia aided China in the negotiation of a loan with which to pay the first installment of the indemnity to Japan. Russia did not immediately take advantage of this treaty, preferring to await the completion of the Trans-Siberian Railway, but it is claimed that during the visits of the Emperor Wilhelm and of President Faure to St. Petersburg, in the summer of 1897, an understanding was reached regarding the course which Germany and France should pursue to acquire their share of the provisions of the secret treaty. That the English Government was informed of the terms of this treaty appears probable from the fact that no steps were taken for the protection of British interests until the King of Korea had removed the English consul general. Then England protested, and at the same time sought to prevent China from appointing a Russian controller of the customs after the expiration of the term of Sir Robert Hart. At the end of the year it was reported that Viceroy Li-Hung-Chang had been recalled to power at Peking and that the Chinese Government was actively making preparations for defense. The indications then seemed to point to the eventual partition of the greater portion of northern China between Russia, Germany, and France; and also that Russia would, by negotiating another loan for China, secure control of the customs revenues to the exclusion of England, while Germany and France would obtain important commercial as well as territorial advantages. But early in January, 1898, it was semi-officially announced that China had declined the offer of Russia for a loan and that the British Government would guarantee a Chinese loan of £16,000,000. Concurrently it was stated that the political situation in the far East was more harmonious. It was also announced that Germany had obtained from China a lease of Kiao-Chu Bay and the surrounding territory for fifty years.

In March the Japanese Parliament passed a measure providing for a gold standard and the suspension of the free coinage of silver. The weight of the gold yen was reduced one half, leaving the silver yen unchanged, and thus the ratio of 1 to 32 was established. This action of the Government was one reason assigned for the fall in the market price of silver in London to 28½ pence per ounce in March. Purchases of silver for the East were limited thereafter, and the plague and famine in India so greatly unsettled the finances of that country that India Council bills could not be sold, and on Sept. 1 the sale of these bills was temporarily suspended, and it was not resumed until Dec. 15. The suspension caused a further fall in the price of bar silver in London to 23½ pence per ounce, and it did not react until Sept. 21, when, partly influenced by the issue of a rupee loan by the India Council and partly by the report below referred to regarding the intentions of the English Government with respect to silver in the Bank of England, there was a recovery to 27½ pence. This was followed by a decline to

25 pence by the end of September, but early in October the price reacted to 27½ pence, and the announcement on Oct. 16 that the English Government would not entertain any proposition favoring bimetalism appeared to have no influence upon the price. Thereafter silver fluctuated between 27½ and 25½ pence per ounce, and the price at the close of the year was 26½ pence. The new currency law of Japan went into effect Oct. 1, and in the following week the applications for gold in exchange for silver yen amounted to only about 950,000 yen, or 2 per cent. of the outstanding bank circulation, and applications for Bank of Japan notes in exchange for silver yen amounted to about 2,600,000 yen. The currency plan of the empire was therefore regarded as a success.

The most important domestic event was the passage of the Dingley tariff bill by Congress. Immediately upon the inauguration of President McKinley the Committee of Ways and Means of the House began to formulate the new bill preparatory to its presentation at the extra session. The measure was passed by the House May 3, and it was at once reported to the Senate. The Finance Committee of that body proceeded to amend it in several important particulars, and consideration of the bill began in open session May 25, but it was not passed until June 24. Pending its consideration imports of raw and manufactured goods were very large, those of wool alone amounting in March to 54,676,832, and in April to 95,550,933 pounds, and the excess of imports over exports of all articles for April was \$23,673,620, for May \$1,486,871, and for June \$11,989,987. The following month showed an excess of \$17,420,639 exports over imports, and in August the excess of exports was \$40,976,738, the movement in the last-named month being largely due to the European demand for breadstuffs in consequence of the short foreign supplies. The export movement of cereals continued large in September and in October, while imports were small, and the excess of exports in the first-named month was \$62,133,510, and in October it was \$61,822,636.

Another event was the appointment by President McKinley of Senator Wolcott, of Colorado, Gen. Charles J. Paine, of Massachusetts, and ex-Vice-President Stevenson, of Illinois, commissioners to European nations for the promotion of an international agreement for bimetalism, the appointment being made under authority of an act of the last Congress which became a law March 3. The commissioners entered upon their duties during the summer and held several conferences with the representatives of foreign governments, but it was not until near the close of September that their mission seemed to be bearing the least fruit. Then it was announced that, for political reasons, the English Government had proposed to the governors of the Bank of England that one fifth of the reserve of the bank be held in silver and that the bank increase the legal tender of silver coins from £2 to £5. It was also reported that a plan for the reopening of the Indian mints to the free coinage of silver was in contemplation. These propositions elicited vigorous protests from the principal bankers of London, and on Oct. 16 it was unofficially stated that the Government had definitely decided not to recommend any change in the Bank of England's holdings of silver and not to reopen the Indian mints. The official correspondence, published on Oct. 22, disclosed the fact that on July 27 the United States commissioners proposed to the English Government the opening of the Indian mints to the free coinage of silver; the repeal of the order making the sovereign the legal tender in India; the placing of one fifth of the bullion in the issue de-

partment of the Bank of England in silver; the raising of the silver legal tender from £5 to £10; the issue of £1 notes based upon silver; the retirement of the half sovereign of gold and the substitution thereof of paper based upon silver; an agreement to coin or to purchase annually a sum—not named—in silver; the opening of the English mints to the coinage of rupees and the British dollar, which shall be a legal tender in the Straits Settlements and other silver colonies and in Great Britain up to the limit of the silver and legal-tender action by the colonies, and the coinage of silver in Egypt. Conferences were held at the English Foreign Office at which France announced her willingness to open her mints to unlimited free coinage of silver at a ratio of 15½ to 1 if Great Britain would co-operate with her as in the plan stated. The heads of the English Government were unanimous in their refusal to open the English mints to the free coinage of silver, and the Indian Government refused to entertain the suggestion of the reopening of the Indian mints. Lord Salisbury regarded it as unnecessary to discuss the remaining proposals until he knew whether the views of the United States and France had been modified by the refusal to reopen the Indian mints. This was regarded as putting an end to further consideration of the matter, and late in October the American commissioners returned to the United States.

The following tabular survey of the economical conditions and results of 1897, contrasted with those of the preceding year, is from the "Commercial and Financial Chronicle":

ECONOMICAL CONDITIONS AND RESULTS.	1896.	1897.
Coin and currency in the United States, Dec. 31.....	\$1,905,590,736	\$1,948,665,430
Bank clearings in the United States.....	\$51,183,004,950	\$57,310,000,000
Business failures.....	\$226,096,834	\$154,700,000
Imports of merchandise (year).....	\$681,579,556	\$742,631,350
Exports of merchandise (year).....	\$1,005,837,341	\$1,009,743,554
Gross earnings 205 roads (year).....	\$924,329,561	\$1,037,502,518
Railroad construction, miles.....	1,750	1,850
Wheat raised, bushels.....	412,000,000	530,000,000
Corn raised, bushels.....	2,211,000,000	1,850,000,000
Cotton raised, bales.....	8,500,000	10,257,030
Pig iron produced (tons of 2,240 pounds).....	8,623,127	9,500,000
Steel rails, Bessemer (tons of 2,240 pounds).....	1,102,902	1,614,390
Anthracite coal (tons of 2,240 pounds).....	43,177,485	41,500,000
Petroleum (runs) production, barrels.....	30,406,398	34,125,386
Immigration into the United States (fiscal year).....	258,538	194,960

The prices of leading staples on or about Jan. 1, 1898, compared with prices at the same date in 1897 and 1896 were as follow:

STAPLES.	1896.	1897.	1898.
Cotton, middling uplands, per pound.....	8 ¹ / ₂	7 ¹ / ₂	5 ¹ / ₂
Standard sheetings, per square yard.....	18 to 19	16	14 to 15
Wool, Ohio XX, per pound.....	\$12 to \$14 50	\$11 to \$13	\$10 to \$12 25
Iron, American pig No. 1, per ton.....	\$28 00	\$25 to \$28	\$19
Steel rails at mills, per ton.....	60 ¹ / ₂	50 ¹ / ₂	\$1 00
Wheat, No. 2 red winter, per bushel.....	34	29	31
Corn, Western mixed No. 2, per bushel.....	\$4 75 to \$5 25	\$4 25 to \$4 75	\$4 10 to \$4
Pork, mess, per barrel.....			

Money.—The feature of the money market early in the year was a concentration of silver certificates at this center, which was largely due to the policy of the Treasury Department of reissuing these certificates in small and legal-tender notes in large denominations, with the object of forcing the former

into circulation, and toward the end of January the amount of \$5 silver certificates outstanding was \$102,617,270 and \$114,177,971 of the denomination of \$10, while United States \$5 notes in circulation were \$58,448,979 and \$10 notes \$82,261,645. Only about \$7,000,000 in United States \$1 and \$2 were outstanding, while the \$1 silver certificates were \$33,412,800 and the \$2 notes \$18,956,127. The expenditures of the Government were \$5,952,335 in excess of revenues during January and \$4,395,050 in February, and therefore the silver notes continued to accumulate in the banks and in the Treasury until March, when the receipts of the Government, principally from duties on goods withdrawn from warehouse in anticipation of the new tariff, were in excess of expenditures, and this aided in partially relieving the congestion of silver notes. The net gold in the Treasury gradually increased through the exchange of gold for legal-tender notes, and by April 28 it had reached \$155,639,773, falling to \$143,976,196 by June 4, and then rising to \$160,726,563 by Dec. 31. Toward the end of September the Treasury refused offers of gold in exchange for legal tenders, receiving it only for transfers of currency to interior points, and consequently the specie holdings of the banks at this center were in excess of those of legal tenders. When the panic arrived for the movement of the grain crops to the distributing centers, the institutions in the interior were well supplied, and not only at the chief Western centers, but in localities remote therefrom the banks had a surplus of money, and one bank in Nebraska closed its doors, assigning as the reason that it could not employ its surplus money; and it was stated that Nebraska banks had over 50 per cent. of their deposits in their vaults. Even by the middle of October Chicago banks bought paper in New York, being unable advantageously to employ their money at home. When the movement of currency from this center to the West actually began only comparatively small amounts were withdrawn, mainly for the reason that there was an urgent inquiry for cash wheat for export which prevented the accumulation of the grain in Western elevators, and consequently the money used to move the wheat was promptly returned to the banks in the form of drafts. The outbreak of the yellow fever in the vicinity of New Orleans toward the middle of September effectually stopped the movement of money, except by telegraphic transfer, to localities embraced within the quarantined districts, and it was not resumed until the epidemic had disappeared, and even then the movement was quite moderate.

As early as the week ending July 3 the loans of the New York banks were \$10,000,000 and the deposits \$9,878,800 above the highest on record, and the latter continued to increase until Sept. 11, when they stood at \$642,149,900. Then they began to fall off, while loans were augmented, reaching

1896.	1897.	1898.
8 ¹ / ₂	7 ¹ / ₂	5 ¹ / ₂
18 to 19	16	14 to 15
\$12 to \$14 50	\$11 to \$13	\$10 to \$12 25
\$28 00	\$25 to \$28	\$19
60 ¹ / ₂	50 ¹ / ₂	\$1 00
34	29	31
\$4 75 to \$5 25	\$4 25 to \$4 75	\$4 10 to \$4

\$579,313,700 in the following week. By Oct. 13 loans had been reduced to \$562,175,400 and deposits to \$616,079,600, but then came an increase to \$597,744,000 loans and \$666,278,000 deposits by Dec. 4, influenced in November by preparations for the payment by the Union Pacific syndicate

date of the purchase money due the Government for the road, the Treasury arranging for placing the greater part of this money in specially designated depository banks in this city. On Dec. 11 the banks reported \$875,169,900 deposits—the maximum for the year. Preparations for the payment of the remaining installments of Union Pacific purchase money into the Treasury instead of the banks—it being necessary for the department to make provision for paying off \$29,904,952 currency 6s, due January 1, 1898, issued in aid of the Pacific railroads—more or less unsettled bank conditions for the remainder of the year. The loans were augmented, standing at \$610,606,300 Dec. 25, the highest on record, while deposits and legal tenders were reduced. The specie in the New York associated banks showed almost an uninterrupted gain from the beginning of the year, reaching the maximum Dec. 31. Legal tenders were at the highest, \$120,-

days and $3\frac{1}{2}$ to 4 for sixty days to six months. Commercial paper was in comparatively limited supply during the entire year. Merchants were not large borrowers, and the improvement in business which resulted from the passage of the tariff made collections good, and therefore but little paper was made. The inquiry was somewhat urgent in the fall months, and rates fell off to about the lowest of the year for choice names during November, when indorsements were 3 per cent., and the best four to six months single names were 3 to $3\frac{1}{2}$ per cent. In the last month rates were firmly held at $3\frac{1}{2}$ to 4 per cent. for indorsements and 4 to 5 for choice single names.

The condition of the New York Clearing House banks, the rates of interest, exchange and silver, and the prices of United States bonds on Jan. 3, 1898, compared with the same items for the preceding two years are given in the following table.

ITEMS	1896.	1897.	1898.
NEW YORK CITY BANKS:			
Loans and discounts	\$465,580,700	\$491,375,000	\$607,781,600

296,600, Jan. 30. They fell to \$99,115,600 by May 8, rose to \$111,615,100 by July 24, declined to \$73,721,300, the lowest of the year, Oct. 9, reflecting the

The following is the New York Clearing House statement of totals at the beginning of each quarter of 1897 and at the end of the year.

DATE.	Loans.	Specie.	Circulation.	Deposits.	Legal tenders.
January 2	\$491,375,000	\$76,342,300	\$19,600,100	\$530,785,000	\$89,640,900
April 3	502,732,700	85,388,300	15,701,800	569,226,500	103,984,000
July 3	532,707,900	90,496,600	13,781,300	604,983,700	102,134,200
October 2	571,933,400	92,915,100	15,790,400	619,353,200	78,023,600
December 31	607,781,600	104,730,700	15,507,200	675,064,200	79,824,100

movement of currency for crop purposes, and then advanced to \$84,202,800 Dec. 4. The surplus reserve of the banks was at the highest, \$59,148,250, Jan. 30, and at the lowest, \$11,523,450, Dec. 25.

Money on call at the Stock Exchange loaned at 5 $\frac{1}{2}$ and at 1 per cent. during the year, but there was an abundant supply in the summer and in the fall, and loans were made at an average of about 2 per cent., later falling to $1\frac{1}{4}$. Toward the end of October there were free offerings of money on call and on short time on sterling collateral, and some banks in the interior competed with city institutions for these loans. In December the market was deranged by calling of loans in connection with the Union Pacific settlements, and the rate advanced to 5s per cent., fluctuating thereafter between 5 and 2 per cent. Time contracts were quoted at 2 per cent. for thirty days, 2 $\frac{1}{4}$ for sixty days, and from 3 to $3\frac{1}{4}$ for longer dates until after the middle of the year, when there was a firmer feeling in this branch of the market, but no material advance in rates for short periods. Those for from four to six months were quoted at $3\frac{1}{2}$ to 4 per cent. In October the rates fell to the lowest of the year, owing to a light demand. In December there was a good inquiry, especially for short dates, and the quotations at the close of the year were 3 per cent. for thirty

The Crops.—The grain crops of Europe and the Argentine Republic were deficient this year, and there was a shortage in India due to bubonic plague and drought, and there was also a deficiency in Australia, while conditions in this country were favorable at least for small grains. Though the yield of corn was below that of last year, the unsold stocks were abundant. The wheat crops of Kansas and of Nebraska were enormous, and nearly all the great wheat-producing States had large yields of this cereal, which was marketed at comparatively high prices, these being influenced by the urgent European demand and also by an inquiry from the domestic mills. One feature in August, and again in December, was a speculative movement in wheat at Chicago. This carried the price in August to \$1.09, the best figures of the year, and the advance to \$1.02 $\frac{1}{2}$ in December induced the marketing by producers of a large proportion of their unsold stocks. The cotton crop was large, estimated at 10,257,030 bales, but its marketing during the fall was greatly retarded by the yellow-fever epidemic at New Orleans and other Gulf ports. At the same time the overland movement from districts outside those quarantined was liberal. On the removal of the quarantine restrictions exports of the staple were large, but then

depression in the Eastern manufacturing centers tended to check overland shipments. The price was unfavorably influenced by the check to exports caused by the fall in silver. The Bureau of Statistics reports the export movement of wheat for the year at 108,664,977 bushels, of corn at 186,450,601, and of oats at 52,263,174 bushels. The shipments of cotton were 6,455,319 bales.

The following shows the yield and the value of the crops for the years 1896 and 1897 on the basis of the price at New York at the beginning of the years 1897 and 1898:

PRODUCTS.	CROP OF 1896.			CROP OF 1897.		
	Yield.	Price, Jan. 2, 1897.	Value.	Yield.	Price, Jan. 2, 1898.	Value.

Total values			\$1,577,248,176.39			\$1,899,994,781.76

Stocks.—The stock market was generally strong in January. The important features early in the month were a fall in Delaware and Hudson, due to the reduction of the dividend; a rise in Reading, caused by the decision of the Attorney-General of Pennsylvania not to attack the charter; an advance in Manhattan; and a general improvement in the whole list, influenced by the neglect of Senator Cameron to press his resolution for the recognition of the independence of the "republic" of Cuba. Later, there was an irregular movement, with Wheeling and Lake Erie weak, on the financial embarrassments of the company, and the bituminous and the anthracite coal stocks were depressed by the unfavorable trade conditions. By the middle of the month the tone grew stronger, but later the Grangers were raided on reports of cutting rates. Long Island was freely sold, and the whole market was lower until toward the end of the month, when there was a recovery in the leading stocks, and the tone was quite strong at the close. Sugar, Chicago Gas, Consolidated Gas, the Northern Pacifics, Pullman, and the Grangers recording the most important advances. The market was strong early in February, influenced by European purchases of the Northern Pacifics, by an improvement in the dry-goods trade and in iron and steel, but later the industrial stocks were unfavorably affected by the State Senate investigation into the management of trusts. The bears vigorously raided these properties, and the market was more or less unsettled until the last week, when there was a recovery due to rebuying of stocks, and the market was strong at the close of the month, with Consolidated Gas and Lake Shore showing the greatest improvement. The feature early in March was the announcement of an issue of \$50,000,000 3½-per-cent, one-hundred-year bonds by the Lake Shore and Michigan Southern road, for the purpose of retiring maturing issues. This news caused an immediate advance in all the Vanderbilt properties, which stimulated an improvement in the whole market, and the tone was quite strong until the last week in the month, when it was unfavorably affected by the announcement that the United States Supreme Court had decided, in the Trans-Missouri case, that railroad combinations and agreements for the maintenance of rates were in violation of the act of July, 1890, known as the Sherman antitrust law. The United States Circuit Court of Appeals, sitting in New York, had affirmed Judge Wheeler's decision, that the Joint Traffic Association was not operated in violation of the interstate commerce act, but in view of the decision, above noted, in the Trans-

Missouri case, it was deemed advisable that the Government should appeal to the United States Supreme Court, and an unsuccessful effort was made to secure an early argument. The Western roads promptly withdrew from the Traffic Association, of which they were members. It was feared that demoralization of rates would follow, and this fear caused free selling of railroad properties, keeping the market in an unsettled condition until the close, when there was a recovery due to a more confident feeling regarding the railroad situation and the absence of cutting of rates. The market

was irregular early in April, with the stocks of Western roads and of the Vanderbilts strongest, and there was also some improvement in Sugar and Chicago Gas. News of the outbreak of the Greco-Turkish war had a partially disturbing effect after the middle of the month, but later there was a recovery, led by Sugar and the Grangers, and though irregular, the market was generally strong to the close. Indications of a speedy ending of the Greco-Turkish war and the reporting of the tariff bill in the Senate had a favorable influence upon the market early in May, but subsequently the anthracite coal shares were raided, there was free selling of Sugar and of the other industrial stocks, and the tone was unsettled until the last week, when there was a recovery influenced by the rapid progress of the tariff bill in the Senate, and by a speech by Secretary Gage at Cincinnati declaring the intentions of the Administration regarding currency reform. This speech and the views informally expressed by the President upon this subject had a stimulating effect upon the market in June, and indications of the prompt passage of the tariff bill encouraged an improvement in business, which was reflected in the stock market. After the middle of the month there was an active and a higher market, the speculation grew broader, and nearly everything on the list advanced. The Vanderbilts were exceptionally strong under the lead of Chicago and Northwestern, which was affected by the announcement of the intended issue of refunding bonds, and there was good buying of the Grangers, of Sugar, and the local gas stocks. The market was generally strong to the close of the month. There was an irregular decline early in July, due to realizing sales, but toward the middle of the month the market again became active and the tendency upward, and the transactions were quite large, especially in the industrials, the Grangers, the Vanderbilts, the local gas stocks, and the Northern Pacifics. The improvement continued to the close of the month, though the tone was then a little irregular. One feature was a large business in railroad mortgages. Realizing sales and some bearish pressure brought about a partial reaction early in August, but the transactions continued large, not only in stocks, but in bonds. Assurance of abundant cereal crops gave an impetus to the stocks of the Granger roads, and increasing earnings stimulated buying of the trunk line and of other railroad properties. After the middle of the month a rise in wheat and an active demand for this grain for export encouraged a further advance in the Grangers, and the whole market grew strong, so continuing to the close.

The tone was buoyant in September until the third week, and the buying was general, embracing the railroad stocks, the industrials, the gas properties, and mortgages of all kinds. The market showed indications of being largely overbought after the middle of the month, there was some evidence that large blocks of stock had been marketed during the rise in prices, and nonprofessional speculators had apparently unwisely extended their operations, relying upon stop orders to protect them from loss. The bears took advantage of the situation to raid those properties which had been most rapidly advanced, including Consolidated Gas, Sugar, Manhattan, the Grangers, Missouri Pacific, Chicago Gas, and the Readings, and the market was more or less unsettled for the remainder of the month to the close. The movement was irregular in October, with more or less liquidation of speculative accounts and frequent raids by the bears, accompanied by disquieting reports of strained relations existing between this country and Spain regarding Cuba, and the tendency was generally downward. Early in November bearish demonstrations were frequent and vigorous, and on the 5th advantage was taken of a number of disquieting rumors to force important declines, involving outside speculators in heavy losses and discouraging rebuying. But toward the end of the month there were indications that professional operators were accumulating a general assortment of stocks, under cover of manipulation of Consolidated Gas, and the undertone was fairly strong, especially for leading railroad properties. The feeling was quite confident, based upon assurances that there would be nothing of a disturbing character in the President's message, and that a conservative course would be pursued by Congress regarding Cuba. The negotiation of the Rock Island refunding bonds, and generally increasing railroad earnings had a marked influence upon the speculation at the end of November, and there was an exceptionally good demand for railroad mortgages, indicating large investment buying. The conservative language of the President concerning our relations with Spain and the efforts of the Administration to induce Congress to pass some measure for the reformation of the currency had a stimulating effect upon the speculation in December, and the tone was generally strong with good buying of Manhattan Elevated, Metropolitan Street Railway, Third Avenue, and the local gas stocks as the feature. The activity in money after the middle of the month had only a temporary influence upon the market, simply tending to restrict business, and the tone was steady to firm at the close.

Total sales of stocks at the New York Stock Exchange for 1897 were 77,324,172 shares against 54,490,643 in 1896; 66,583,232 in 1895; 49,075,032 in 1894; 80,977,839 in 1893; 85,875,092 in 1892; 69,031,689 in 1891; 71,282,885 in 1890; and 72,014,600 in 1889.

The following table shows prices of leading stocks at the beginning of the years 1896, 1897, and 1898:

STOCKS.	1896.	1897.	1898.
New York Central	97	93½	106
Erie	14½	15	14½
Lake Shore	14½	15½	170½
Michigan Central	95½	90½	101
Rock Island	77½	66	89½
Northwest, common	100	102½	121½
St. Paul, common	108	73½	94½
Dela., Lackawanna and Western	100	157	155
Central New Jersey	100½	100½	96

The following shows the highest prices of a few of the speculative stocks in 1896, and the highest and lowest in 1897:

STOCKS.	1896.	1897.	
	Highest.	Highest.	Lowest.
American Sugar Refining Co.	126½	159½	109½
American Tobacco	95	90½	67½
Central New Jersey	110	103½	68½
Chicago, Burlington and Quincy	83½	102½	69½
Chicago Gas	78½	108½	73½
Consolidated Gas	108	241½	136½
General Electric	39½	41½	28½
Louisville and Nashville	55½	63½	40½
Manhattan Elevated	113½	113	81½
Missouri Pacific	29½	40½	10
Omaha	49½	80½	47
Pacific Mail	31	39½	34
Reading	31½	29½	16½
Rock Island	74½	97½	60½
St. Paul	80	102	69½
Southern, preferred	32½	38½	22½
Tennessee Coal and Iron	34½	35½	17
Union Pacific	12½	27½	14½
United States Leather, preferred	69½	72	50
Western Union	90½	96½	75½

Foreign Exchange.—The exports of merchandise for the year ending Dec. 31, 1897, were \$93,906,313 above those for 1896, and the imports of domestic and foreign merchandise were \$61,051,794 more. The excess of merchandise exports over imports for the year was \$357,112,204, against \$324,257,685 for 1896. The excess of exports over imports of merchandise, coin, and bullion for 1897 was \$382,340,503, against \$311,560,317 in 1896. Gold exports were \$256,529 in excess of the imports in 1897, against \$46,474,369 imports in excess of exports in 1896.

The foreign exchange market was firm until the last week in January, nominal rates being \$4.84 to \$4.84½ for sixty-day and \$4.87 to \$4.87½ for sight at the opening of the year, and advancing to \$4.85½ to \$4.86 for the former and to \$4.88 to \$4.88½ for the latter. The cause for the firm tone was the continued purchase of long sterling, which began in November last year, to hold until it ran to sight, and as often as bills bought sixty days previously became sight drafts they were sold, and the proceeds were reinvested in long sterling, thus extending the operation for another period of sixty, and in some cases of ninety days. Such movements were profitable only while discounts were high in London and while money was lending at a low rate here, and therefore when, on the 21st, the Bank of England reduced the minimum rate of discount from 4 to 3½ per cent., and the open market rate in London fell from 2½ to 2½ per cent., the profits of these exchange operations were materially lessened, the tone of the market grew easier, and at the close of the month there were liberal offerings of sight bills. After opening easy in February, the tone became firmer by reason of renewed purchases of long sterling, in the expectation that before the expiration of sixty days there would be an urgent demand to remit for goods imported in anticipation of the new tariff. After the middle of the month the political tension in Europe growing out of the troubles in Crete caused an advance in the open market discount rate in London, and the exchange market continued firm to the end of the month, when nominal rates were \$4.85½ to \$4.86 for sixty-day and \$4.87½ to \$4.88 for sight. The market was firm during March, closing at \$4.86 to \$4.86½ for long and \$4.88 to \$4.88½ for short, and one feature was buying of the former for investment to employ money which could not otherwise be used at remunerative rates. The firm tone continued until near the end of April. On the 24th there was a shipment of \$977,000 in gold bars to Europe, in violation of an agreement between bankers not to export gold unless a higher rate than \$4.88½ could be obtained for sight drafts. The bills against this shipment were sold at \$4.88½. The compact between

the bankers was then annulled, exchange fell off by reason of free offerings of bills against gold, and by the end of the month \$5,500,000 more gold was shipped. The market was dull and steady in May until the last week, when sixty-day fell to \$4.86½ and sight to \$4.88, and gold exports were made each week, the total for the month amounting to \$12,830,000, all of which went to Paris. The market was easier early in June, and it so continued until toward the middle of the month, when it grew firmer in consequence of a demand for remittance and a light supply of bills, and rates rose to \$4.87 for sixty-day, and \$4.88½ for sight. Shipments of gold for the month were \$6,750,000, chiefly to the Continent. The tone was steady in July. The market was influenced by small offerings of commercial bills against grain, and also by a comparatively good demand until the end of the month, when there was a better inquiry, and gold exports amounted to \$4,200,000. Early in August the market became weak, influenced by speculative sales of bills made in expectation of covering when the grain and the cotton exports should become free, and in the absence of an urgent demand rates fell to \$4.86 for sixty-day and \$4.87 for sight during the first week, later declining to \$4.84 for the former and \$4.85½ for the latter, but by the close of the month the tone grew steadier. Gold exports amounted to \$3,900,000, but these were made early in the month. When imports of gold from London were threatened by the decline in exchange in our market during August manipulation of the London open market discount rate by the Bank of England caused an advance in that rate, and concurrently there was selling in London of American securities. Remittances for those stocks, together with a light supply of grain bills and expectations that the movement of cotton would be late, made the exchange market firmer early in September. The outbreak of yellow fever at Ocean Springs, Miss., and its spread to New Orleans led to the organization of a stringent quarantine of Southern cities, and this checked the early shipments of cotton from the Gulf ports. Toward the middle of the month offerings of bills against future shipments of cotton, together with a lighter demand, caused a decline in rates to \$4.82½ for sixty-day and \$4.85 for sight, and gold imports began, \$1,000,000 being taken from the Bank of England and \$1,000,000 from Paris for export to New York. The Bank of England discount rate was advanced to 3½ per cent. Sept. 23. By the first week in October \$8,500,000 gold had been shipped from London and from Paris to this city, though efforts were made by the Bank of England to check the movement by advancing the minimum rate of discount to 3 per cent. on Oct. 7. The imports of gold from Europe then ceased, and exchange grew firmer by reason of a small supply of commercial bills, resulting from the light movement of cotton and breadstuffs, while there was a good demand for remittance and also an inquiry for long sterling to carry until it ran to sight. The market was generally firm at \$4.83 to \$4.83½ for sixty-day and \$4.86 to \$4.86½ for sight for the remainder of October and during the following month, when the absorption of long sterling for investment was the principal feature. Rates were \$4.83½ to \$4.84 for sixty-day and \$4.86½ to \$4.87 for sight by the end of November. The activity in the money market in December made it more profitable for the foreign bankers to loan their balances than to buy bills, and consequently rates fell to \$4.82½ for sixty-day and \$4.85½ for sight by the middle of the month, and \$500,000 gold was engaged in London, Dec. 24, for shipment to New York. In the last few days of the month expectations of easier money after the beginning of the new year induced a renewal of pur-

chasers of long sterling for investment, and the market was firm at the close, at \$4.87 for sixty-day and \$4.86 for sight.

Railroads.—The most important event affecting the transportation interests of the country was the decree, March 25, by the United States Supreme Court in the *Trans-Missouri* case, Judge Peckham, in an elaborate decision, declaring that the act of July 2, 1890, known as the Sherman anti-trust law, applied to all railroad and other combinations having for their object the regulation of rates or of prices, these being in restraint of trade within the meaning of the act. In consequence of this decision all railroad associations throughout the country organized for the purpose of regulating or maintaining rates were dissolved, except the Joint Traffic Association, which was continued in force pending an appeal taken by the Government from a decision by Judge Wheeler last year, and affirmed by the Circuit Court of Appeals, that the association was not operated in violation of the interstate commerce law. The dissolution of the Western railroad associations had a temporarily disturbing effect, but the executive officers of the principal roads informally agreed upon the maintenance of rates, carefully avoiding conflict with the law as interpreted by the Supreme Court, and there was no important derangement of railroad business thereafter. On Nov. 11 the United States Supreme Court in the *Alabama Midland* case decided against the Interstate Railroad Commission, which contended for the right to fix rates under what is known as the "long and short haul" clause of the interstate commerce act, and this decision encouraged a renewal of efforts to induce Congress to pass the railroad pooling bill. On Nov. 2 the Union Pacific, main line, was sold under foreclosure of the Government lien, and it was purchased by the Re-organization Committee for \$58,077,000.76, and the first installment of \$13,646,250 was paid by the syndicate Nov. 22. On Nov. 30 a further sum of \$6,100,000 was paid, on Dec. 6 another installment of \$8,538,401 was paid, followed by similar amounts on the 16th and the 27th, and the final payment on this account was on Jan. 6, 1898. The Northern Pacific reorganization syndicate in February sold to a combination of foreign capitalists a considerable portion of the syndicate holdings of the stock and bonds of the company, and at the same time Berlin holders of new Oregon Railway and Navigation, preferred, sold a block of their stock to parties here interested in the Northern Pacific, the Great Northern, and the Union Pacific. In March the Lake Shore made arrangements to refund its 7-per-cent. bonds into 3½ per cents. This was followed in April by a refunding scheme by the New York Central, and in May the Illinois Central announced issues of 3½-per-cent. bonds to finance operations connected with the Chesapeake and Ohio Southwestern and the St. Louis, Alton and Terre Haute roads. In August the Pennsylvania Company floated \$5,000,000 3½-per-cent. stock trust certificates guaranteed by the Pennsylvania road. Among the receiverships for the year were the Wheeling and Lake Erie, the Columbus, Sandusky and Hocking, the Sharpsville, the St. Clair, Madison and St. Louis, the Little Rock and Mississippi River, and the Greenwood, Anderson and Western in January. The Oregon Short Line and Utah Northern, the Chattanooga, Rome and Columbus, the Cincinnati, Jackson and Mackinaw, and the Kentucky Midland were sold under foreclosure. In February the Columbus, Hocking Valley and Toledo was placed in the hands of receivers, followed in March by the Gainsville, Jefferson and Southern, the Wilmington, Newbern and Norfolk, and the Allegheny and Kinzua. The Louisville, New Albany and Chicago was sold under foreclo-

sure in March, and the St. Louis, Chicago and St. Paul and the Quincy, Omaha and Kansas City in April. In the following month the Middle Tennessee and Alabama and the Utah Central were sold, and a receiver was appointed for the Harriman and Northeastern. In June a receiver was appointed for the Centralia and Chester. The Cape Fear and Yadkin Valley was sold by order of the court. In July there was a foreclosure sale of the Wilmington, Newbern and Norfolk; in September, of the Colorado Midland, the Lancaster and Handen, the Delaware River and Lancaster, the Emmitsburg and the Cuyler and the Western Maryland; and in October, of the Millen and Southwestern and the Richmond, Nicholasville, Irvine and Beattyville. In December receivers were appointed for the Columbia and Maryland and for the Lawrence and Emporia. The Louisville and St. Louis was sold at foreclosure. Among the notable dividend payments was the Omaha, on the common stock, Nashville, Chattanooga and St. Louis, Great Northern, Rio Grande Western, Buffalo, Rochester and Pittsburg, Canadian Pacific, Atlantic and Danville, St. Paul, Norfolk and Western, Rock Island, St. Joseph and Grand Island, and the Cleveland, Cincinnati, Chicago and St. Louis. Dividends were reduced on the Manhattan Elevated, Central New Jersey, and the Chicago and Alton.

The following shows gross and net earnings of the trunk lines:

Manufacturing Industries.—The most notable feature of the year was the steadily increasing production of iron notwithstanding the strike of the bituminous coal miners in western Pennsylvania, Ohio, Indiana, and Illinois, which began early in July and ended Sept. 15. This trouble restricted the supply of coal, and it was therefore embarrassing to the iron industry. The production increased from 164,064 tons per week in July to 226,024 tons in December. Prices were not high, and though there was a recovery from the low figures early in the year the rise was gradual. The steel-rail pool collapsed in February, causing a fall in steel rails from \$25 to \$15 per ton, and at the end of the year the price was \$19. Conditions in the cotton-goods trade were unsatisfactory. Competition of Southern manufacturers and an excess of production caused an accumulation of stocks, and at the end of the year there was a surplus of about 2,000,000 pieces of print cloths at Fall River, Mass. Manufacturers of finer lines of goods suffered from decreased consumption, this being largely due to the ability of consumers, by reason of the more prosperous times, to buy more costly goods of different material than cotton. The woolen manufacturers generally profited by the higher tariff, but early in the season they had to compete with the large foreign supplies which were imported before the Dingley bill went into effect.

Failures for the year 1897 were 13,090 in number, against 15,112 in 1896. The percentage of assets to liabilities was 54.4 per cent. in 1897 and 59.9 per cent. in 1896 and 65 per cent. in 1893.

FINE ARTS IN 1897. Under this title are treated the principal art events of the year ending with December, 1897, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris: Salon of the Champs Elysées.—The Société des Artistes Français elected the following officers for the year: President, Edouard Detaille; Vice-Presidents, Jean Louis Pascal, Achille Jacquet; Secretaries, Albert Maignan, Frédéric Auguste Bartholdi, Benoit Edouard Loviot, Alphonse Lamotte; Corresponding Secretary, Tony Robert-Fleury; Treasurer, René Marie Boisseau. President of the Jury of Painting, Fernand Cormon; Sculpture, Gabriel Jules Thomas; Decorative Arts, Benoit Edouard Loviot. The following are members of the Council of Administration: Zuber, Bussan, Dawant, Humbert, H. Levy, R. Collin, Dameron, Bouguereau, Vibert, Thomas, Georges Lemaire, Guilbert, Blanchard, Coqart, Normand, Maunon, and Mongin.

The annual exhibition (April 20 to June 30), held in the Palais de l'Industrie, comprised 4,322 numbers, classified as follow: Paintings, 1,776; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 857; sculptures, 837; engraving on medals and precious stones, 71; decorative art, 150; architecture, 152; engraving and lithography, 479.

The following are the honorary awards for

1897: Section of Painting: Medal of honor, Henri Harpignies, for his "Solitude." First-class medal, Albert Laurens, "Glaukè et Thalia." Second-class medals: Albert Charpin, "Le Versant des Alpes-Maritimes"; Lucien Pierre Sergeant, "Ordre de Charger" (battle of Friedland, June 14, 1807); Marius Perret, "Les Piroguiers de Guet N'Dar" (Senegal); Edgard Maxence, "Chanteuses"; Mlle. Achille-Fould, "La Coupe Enchantée" and "Cendrillon"; Albert Gosselin, "Un Coin de Province de Paris" (artesian well at Grenelle) and "Crepuscule"; Gonzalo Bilbao, "Triste Antesala" (Spanish pawnshop); Paul Jobert, "Le Retour du Pêcheur" (Jersey) and "Dans la Brume" (Banks of Newfoundland); Georges Bergès, "Saint Georges Vainqueur" and "Intérieur à Anso" (Aragon); Arnaud Auguste Balouzet, "Soir d'Automne, à Morestel" (Isère); Emmanuel de Dieudonne, "L'Attente aux Bosquets d'Approdite"; Henry Vollet, "Offrande Printanière"; Jules Octave Triquet, "L'Acte de Foi"; René Maurice Fath, "Midi sous Bois en Juillet"; Eugène Louis Chaylery, "Un Intérieur Parisien"; Ernest Bisson, "Réverie du Soir." Third-class medals: Clémentine Hélène Dufau, Anatole Bernart, Constant Georges Gaste, Charles Fouqueray, Émile Auguste Wery, Georges Scott, Louis Loeb, Henry O. Tanner, John Smith-Lewis, Georges Henri Burdy, Albert Cresswell, Maurice Demonts, Antonin Marie Rambaud, Ellen Gertrude Cohen, Angèle Delasalle, Fernand Sabaté, Charles Léon Godeby, Alexandre Claude Louis Lavalley, Émile Auréche, Silvain Grateyrolle, Julien Calvé, Jules Alexandre Grün, Victor Lecompte, Albert

Matignon, Alfred Magne, Amélie Rosier, Pierre Petit-Gerard, Henry Darien, Joseph Garibaldi.

Section of Sculpture: Medal of honor, Mathurin Moreau, for his marble group "Couronnement du Monument élevé à la mémoire de Jouineau." First-class medals: François Sicard, "Agar" (marble group, high relief); Georges Bateau, "Le Temps et la Sagesse" (plaster statue). Second-class medals: Antonin Clair Forestier, "L'Ouvrage et la Foudre" (plaster group); Jules Jean Pendaries, "La Fin du Jour" (marble statue); Aimé Jérémie Octobre, "Pour le Drapeau" and "Surprise" (plaster figures); Émile Laporte, "Hiver" (marble group); Alfred Félix Desruelles, "Job" (marble statue); Henri François Coutheillas, "Le Chêne et le Roseau" (plaster group); Prosper Lascourtier, "Cygne" (plaster group). Third-class medals: Eugène Paul Benet, Grégoire Calvet, Albert Dominique Roze, Pierre Laurent.

Section of Architecture: No medal of honor awarded. First-class medal: Emmanuel Pontremoli, "Restauration de Pergame." Second-class medals: Henri Eustache, Georges Morin-Goustiaux, Louis Pierre Blanc, Maistrasse et Berger. Third-class medals: Tony Garnier, Lucien Henri Woog, Jean Pailhès, Henri Guillaume, Charles Joseph Chaussepied, Jean Hébrard, Le Grand et Demierre.

Section of Engraving and Lithography: Medal of honor, Achille Sirony, "Portrait de M. Vigneron" (lithograph). First-class medal, Eugène Burney (steel engraving). Second-class medals: Camille Ponce (etching), Louis Isidore Journot (steel engraving), Henri Nicolas Dugourd (lithograph), Pierre Gusman (wood engraving), Jean Julien Tinayre (wood engraving). Third-class medals: René Paul Huet (etching), Camille Bellanger (lithograph), Émile Louis de Ruaz (wood), Henri Alasnière (etching), Petrus Aressy (lithograph), Pierre Mallet (etching), Alfred Lachnitt (lithograph), Georges Profit (steel engraving).

"Solitude," by Harpignies, which received the medal of honor, embraces all that is best in contemporary French landscape art. It represents a setting sun on the Rhone between Vienne and Avignon at one of the defiles through which the river penetrates before issuing into the plain. On the bank at the right is a clump of bushes, on the left a gnarled tree, and the sky is full of the warmth of late sunset. The picture contains no figure. Another picture by the same artist, "Bords du Rhône," renders a morning effect.

Jules Breton's "La Moisson des Oeillettes" is, next to it, one of the most interesting pictures from an artistic standpoint. It represents a poppy field with a group of women and one man gathering and binding up the flowers in sheaves, and is strong with the individuality of the master, who has now passed the allotted three score and ten.

The "Marceau" of Émile Boutigny illustrates an incident in the French revolutionary wars of 1796, representing the mortally wounded Gen. Marceau, seated on an improvised litter, brought in to Altenkirchen by his comrades and delivered up to the humanity of the opposing general. Marceau, then only twenty-seven years old, was out with a reconnoitering party when he was shot by a Tyrolean chasseur concealed behind a tree, and his officers had no resource but to throw themselves on the generosity of the enemy. He was buried at Coblenz, but in 1889 his remains were taken in state to the Panthéon in Paris.

"Ordre de Charger," by L. P. Sargent, represents an ad-de-camp of Marshal Ney carrying to the dragoons of the division Latour-Maubourg, at Friedland, June 14, 1807, the order to charge. The regiment is drawn up at the right and in the rear, apparently awaiting the order.

Another military picture is "Charge des Grenadiers de la Garde à Eylau," by L. S. Lantier, a large canvas showing the grenadiers, with their officers leading, riding at full gallop to the front, which is strewn with dead and wounded men and horses.

The "Résurrection de Lazare," by Henry O. Tanner, an American, son of Bishop Tanner of the Philadelphia African Methodist Church, attracted much attention. The scene is a ghetto crowded with the witnesses of the miracle, curious, amazed, or struck with awe. A lamp placed at the edge of the tomb (hidden by one of the figures, but giving by its clear and reflected light various values to the different actors) is the source of illumination in and center of the composition. It is a suggestive and interesting picture, with a treatment evidently inspired by the study of Rembrandt. It was awarded a third-class medal, and purchased by the French Government for the Luxembourg Gallery.

"L'Annonciation," by Georges Olivier Desvallières, is another religious picture, exhibiting a somewhat novel treatment of a subject on which so many painters have exercised their skill. The heavenly messengers bring to Mary a multiple and tragic message. While one places on her shoulders the heavy royal mantle, two, kneeling at her feet, present the scepter and the crown, and a fourth declares to her the choice which the Father has made of her, the fifth, in long mourning robes, lifts with a mournful gesture above her head the bleeding cross. The somber scenery, with its masses of brownish green, the sad glory of its sky, the blue mountains in the background, and the great pool which reflects the light of the sky and where the doves go to drink, give it a poetical bias which relieves it from the commonplace.

Bouguereau's "Compassion" is a sentimental picture representing Christ on the cross grouped with another figure of a man who places his head with an expression of love and sympathy against his body. While there is considerable pathos in the head, the picture generally is theatrical.

"La Lauragnais," a large decorative panel by Jean Paul Laurens, intended for the town hall of Toulouse, created much discussion. It represents the characteristic aspects of the Lauragnais, a part of Haut Languedoc, where the artist was born, and he has evidently dwelt lovingly on the scenes so familiar to him—the long rounding hills reaching to the horizon with yokes of oxen furrowing their sides with plows, and the fields, separated by low green hedges, cut by the furrows in lines side by side, with here and there the grass and the stubble turned yellow by the late summer's sun.

Gérôme contributed two pictures, "Fuite en Egypte" and "Entrée de Jésus à Jérusalem, le Jour des Rameaux." The first is a moonlight scene in the desert, with the well-known group dimly discerned in the foreground. The other is a scene without the walls of the city, with a crowd coming out to meet the Saviour and the road strewn with clothes and branches.

The portrait of the year is Benjamin-Constant's "Due d'Aumale," showing him seated on a bench in a park amid warmly lighted foliage. It is a fine picture, made doubly interesting by the recent death of the subject.

John Smith Lewis, of Philadelphia, exhibited "Vlo, vlo, vlo!—en Bretagne," a huge but casual picture of cattle driven into a pool by a Brittany peasant woman.

Paris: Salon of the Champ de Mars. The eight annual exhibition of the Société Nationale des Beaux Arts (April 24 to July 12) numbered 2,392 numbers, of which 1,272 were paintings, 514 designs, drawings, etc., 192 engravings, 147 sculptures, 212 art objects, and 54 architectural.

Puvis de Chavannes was re-elected president, and the following as heads of the several sections: Carolus-Duran, Rodin, Roll, Besnard, Montenard, Mathey, Injalbert, De Bandot, Courtes, and Friant.

Among the large decorative panels exhibited was one intended for the Hôtel de Ville, entitled "Bois de Boulogne," by P. Lagarde. It represents the lake of the Bois de Boulogne in the silent hours, when it is a solitude enveloped only by the great swans that slowly move across its waters, the tranquil surface of which reflects the sweetness of the sky and the somber green of the leaves about to fall.

"Le Bassin des Tuileries" is another decorative canvas for the same building, by Montenard, a bit of country in the sun. The same artist exhibited "Rade de Marseille," for the palace of the French Union at Constantinople, representing the roadstead glowing with naval life.

Still another decorative panel is the "Automne" of René Ménard, a beautiful quiet landscape, with a sky touched by the last rays of the setting sun above distant hills, its glories of green and gold reflected in the ample river winding through the plain. The peaceful scene is enlivened by figures in the foreground.

"La Fin de la Journée," by L'Hermite, is one of the strongest efforts of this artist, a picture likely to grow as it is studied. It is a simple composition, representing a young woman standing in the road, leaning upon a long staff and turning to speak to two youths who are reclining on the grass. In the background is a chateau with a square gateway, through which the cows she has driven home are about to pass.

The largest picture in the exhibition was Gervex's "La Distribution des Récompenses au Palais de l'Industrie (Exposition Universelle)." As the Exposition took place in 1889, it must have been a long time in painting. It was, of course, ordered by the Government.

Another large canvas, by Dubufe, intended for the library of the Sorbonne, is entitled "Et Scintilla quoque Poesis erit!" It is an attempt at allegorical decoration and has the usual figures seated on clouds, but is unintelligible without a description.

Victor Prouvé's "La Vie," for the staircase of the Mairie at Issy-les-Moulineaux, is a long landscape with a group of lovers and dancing peasant girls on the right, the story continued through the family group in the center to that where the lovers appear as grandparents on the left. The picture, though decorative, has a human interest and is warmly colored.

Carolus-Duran was resplendent, as usual, with several portraits of Parisian ladies in rich costumes. He exhibited also some small but pleasing landscapes and several pictures of still life.

Cazin sent seven landscapes and F. Thaulow, an artist who is rapidly coming to the front, as many.

Paris: Miscellaneous.—At the sale of the Lagarde collection, in January, 141,000 francs was realized. The best prices obtained were: Corot, "L'Étang de Villard-Avray," 38,000; Daubigny, "Les Lavandières," 29,100; Troyon, "Chiens Écossais," 15,000.

The sale of the Henry Vever collection, in January, brought a total of 967,970 francs. Among the best prices obtained were: Corot, "Eurydice blessée," 26,800; "L'Abbaye," 32,000; "Chemin Montant," 27,800; "Nymphe couchée au bord de la Mer," 30,000; "Le Lac," 16,000; "Villard-Avray," 35,000. Daubigny, "Les bords de l'Oise," 78,000 (bought for America, the highest price ever obtained for a Daubigny. Millet, "Femme au Puits," pastel, 27,000; "Les Puiseuses d'Eau," cray-

on, 20,200. Meissonier, "Le Déjeuner," 72,000; "Officier d'État-major en Observation," 94,100. Théodore Rousseau, "La Vallée de Tiffauge," 77,500. Claude Monet, "Pont d'Argenteuil," 21,500 (5,000 in 1887); "Sainte-Adresse," 12,000; "L'Église de Vernon," 12,000. Puvis de Chavannes, "Ludus pro Patria," reduction of the great composition at Amiens, 22,500.

The sale of the collection of drawings, water colors, and pastels belonging to the late brothers Goncourt, in February, realized 695,729 francs.

The sale of the collection of M. van den Eynde brought several good prices: Daubigny, "Le Printemps," 20,000 francs; Corot, "Paysage," 16,500; Decamps, "Marchands Arméniens," 15,500; Delacroix, "Les Convulsionnaires de Tanger," 36,200; "Lion et Caïman," 18,000; Th. Rousseau, "Montagnes d'Auvergne," 34,000; Roybet, "Les Joueurs d'Échecs," 25,000; Troyon, "Les Cygnes," 20,000.

London: Royal Academy.—The council of the Royal Academy for 1897 is made up as follows: Alma-Tadema, Marcus Stone, Luke Fildes, J. W. Waterhouse, Onslow Ford, Hamo Thornycraft, J. L. Pearson, H. H. Armistead, G. H. Boughton, and W. B. Richmond. The last five are the new members of the council, Messrs. Boughton and Richmond being newly elected academicians. J. S. Sargent also was elected an academician and Alfred Parsons and J. J. Shannon associates.

The twenty-eighth annual winter exhibition was devoted to the works of the late president, Lord Leighton, covering a period of nearly half a century. Most noticed among them were the large "Cimabue's Madonna carried through Florence," painted in 1855, now owned by the Queen; the "Romeo and Juliet," painted in 1858; the "Daphnephoria," in 1876; and of his other pictures between 1870 and 1880, his best period, the "Summer Moon," "Egyptian Slinger," "Music Lesson," "Antique Juggling Girl," "Winding the Skein," "Sister's Kiss," and portrait of Sir Richard Burton. His later works, excepting, perhaps, the "Flaming June" and the "Clytie," his last work, are marked by an overelaboration which grew upon him yearly.

The one hundred and twenty-ninth summer exhibition was particularly noticeable by the absence of works by the late presidents, Lord Leighton and Sir John Millais, whose pictures were always so marked a feature. The present president, Sir J. E. Poynter, sent two pictures, "The Message" and "Phyllis." The former represents two Roman maidens leaning on a balcony overlooking a quay, alongside of which is a boat, of which only the mast and cordage is seen, from which a young mariner is leaning to hand one of them a letter. The background shows a range of black marble columns leading up to a temple. The other picture is the Phyllis of Horace, whom the poet invites to come and spend the day with him in honor of Maecenas. The nymph is gayly crowning herself with ivy under an overspreading tree and admiring the effect in a hand mirror.

G. H. Boughton's "After Midnight Mass, Fifteenth Century," represents troops of worshippers streaming out of church after midnight mass on Christmas Eve. Snow is on the ground, and torch bearers light the way for a noble lady in pink and ermine, whose train is borne by pages. On the left people have drawn to one side to see the train pass by. This picture sold for £1,200.

"In Time of Peril," by E. Blair Leighton, is a scene from mediæval times, showing fugitives from danger seeking refuge in a monastery. A boat, rowed by two stalwart oarsmen and containing a knight in chain armor, a lady, two children, and household treasures, has stopped alongside of steps

leading up to the water gate of the monastery. The knight, who holds the helm, is leaning forward and explaining the situation to a gray-bearded cowed monk who is looking through the half-open door, while the lady looks up beseechingly.

J. W. Waterhouse's "Hylas and the Nymphs" was one of the principal successes of the exhibition, and attracted much attention. Hylas, kneeling at the left amid guarded roots and branches of trees which spread their leaves above him, is seized by the arm by the naiads, who rise up all around him from among the pond lilies and welcome him with sad and sympathetic faces. The picture is reminiscent in treatment both of Lord Leighton and of Burne-Jones.

Edwin Abbey's "Hamlet" expresses under the guise of decoration much of the strong dramatic feeling which characterizes his work. It is the play scene. The king, splendid in red and gold, seems to shrink from the fierce eyes of Hamlet, who watches the impression made on his uncle by the players. The queen, in blood red and sable, looks on the performance with set lips and fixed eyes, while the aged Polonius, clad in gray, stands behind her and looks down askant at his daughter. Quite in front sits Ophelia, dressed in white, her loose yellow tresses covering her shoulder, her face marked by bewilderment, apprehension, and pain. Her concern is not with the players, but with Hamlet, who, lying at her side in disordered costume and roughened hair, keeps his eyes on the king with a regard full of wrath and hate. It is a strongly colored, dramatic picture, worthy to be classed with Mr. Abbey's "Gloucester and the Lady Anne," which was the figure picture of last season.

F. D. Millet's "Youth" is reminiscent of the best work of Alma-Tadema, who has painted more Greek and Roman lovers than any of his contemporaries. Mr. Millet's Roman lovers represent a graceful and stately lady walking slowly down a rocky path sloping gently to the shore between a steep cliff and the ocean, beside her tall and brawny lover. She leans slightly on his shoulder and clasps with one hand his arm, which is about her waist.

"Pilehards," by C. Napier Henry, represents a scene at daybreak on Mount's Bay in the fishing season, where two boats are drawn together with their crews lifting from the green depths of the sea a portion of their drift net. These nets, set over night, are often found so full of fish that part has to be abandoned, as shown in the picture. The artist has successfully seized the picturesque elements of his theme—the rugged fishermen adroitly grouped, the resplendent silver of the pilehards, and the ravenous gulls fluttering screaming over the capture. It is one of the successful pictures of the season, and was bought for £1,200 with the Chantrey fund.

Alma-Tadema's "Watching" exhibits a charming damsel in rose-colored tissue turning for a moment from the object of her watch. An open door behind her reveals an inlet of sunlit sea, athwart which flits the white sail of the boat she has waited for, but will thenceforth wait for in vain. In another picture, entitled "Her Eyes are with her Thoughts," the damsel leans her brow upon her hand, and as she looks seaward and shades her face from the intense light, she sees a wide sunlit sea, a turquoise sky, and a rocky coast with purple shadows, which recedes, headland after headland, into the dim distance, where the maiden's thoughts are.

London: New Gallery.—The winter exhibition was devoted to a collection of the pictures of Mr. G. F. Watts, including most of his important figure pieces, 17 of which have been set apart by him as a bequest to the nation. (Chief among the larger canvases shown were the "Court of Death," "Love and

Death," "Love and Life," "Hags," "Pachy and Francesca," "Orpheus," and "Eurydice," "Time, Death, and Judgment," "Faintest of Nations," "Mammon," the two versions of "The Lady Morgana," the "Spirit of Christianity," "Christ," and the "Childhood of Jupiter." Besides these were many smaller pictures and portraits, including among the latter the two of Lord Leighton, Lord Leighton, William Morris, Sir Edward Burne-Jones, and his own portrait, painted in 1864.

The summer exhibition contained fewer important pictures than usual. Sir Edward Burne-Jones sent one only, entitled "Love and the Pagans," and Mr. Waterhouse but one, "Mariana in the South." Among the portraits were J. F. Sargent's "Mrs. George Swinton," J. J. Shannon's "Lord Ross," and Arthur Melville's "Martin White, Esq."

London: Grafton Galleries.—At the winter exhibition one of the chief attractions was a group of canvases by Sir John Millais, mostly portraits of members of his family. Among them were the half-length of Lady Millais, a masterly work in the artist's strongest manner, and portraits of the Earl of Shaftesbury and others. Other contributions were by Whistler, Alma-Tadema, Dagman-Bauveret, Prof. Herkomer, and G. F. Watts, the last sending a head of Sir John Millais in middle life.

London: Miscellaneous.—The famous Wallace collection, probably the largest and most valuable ever brought together by private persons, has become the property of the British nation. Begun by the Marquis of Hertford, it passed at his death into the possession of Sir Richard Wallace, who rebuilt Hertford House, in Manchester Square, and added considerably to its treasures. In 1890 Sir Richard bequeathed the collection to Lady Wallace, through whose noble generosity it is to be kept intact for the public benefit. It is especially rich in pictures of the old and the new French schools, among the former being 11 Watteaus, 22 Greuzes, 9 Lancret's, 15 Paters, and 2 Claudes, with good examples of François Boucher, Fragonard, and others. Of modern masters, there are 33 pictures by Decamps and 15 each by Paul Delaroché and Meissonier, while the Barbizon school is well represented. The Dutch school is represented by 11 splendid Rembrandts, and many examples by Pieter de Hooch, Terborch, Cuvp, Frans Hals, Metsu, Paul Potter, Ruysdael, Hobbema, and many others. There are 11 works by Rubens, and pictures by Vandyke, Velasquez, Murillo, Alonso Cano, Titian, Bernardino Luini, Andrea del Sarto, Canaletto, and many other famous Spanish and Italian masters. The collection has been valued from £1,000,000 to £2,000,000 sterling.

The great event of the year was the sale of the collection of the late Sir John Pender, at Christie's, in May, with a result scarcely equalled by that of the Goldsmid sale of 1896. In the latter 17 pictures by British painters realized more than £50,000, while in the Pender sale 4 Turners alone brought an aggregate of £30,345. For these pictures Sir John paid about £8,000. The several prices were, in guineas: Turner, "The Wreckers," 7,600 (Bicknell sale, 1893, 1,800); "Mercury and Horse," 7,500; "The State Procession," 7,000; "Venice: the Grand Canal," 6,800 (Bicknell sale, £1,655). For this last picture Mr. Bicknell paid originally only 250 guineas. Though Turners have changed hands at private sales for larger sums, none ever before sold so high by auction, the sale of the "Sheerness" at the Wells sale of 1890 at 7,100 guineas coming nearest to these figures. Philip's chief work, "La Grotte," was acquired by the National Gallery for £8,000 at 5,000 guineas. Landseer, "The Last of the Great Hunt" (Bicknell sale, 2,800); "Event-matching," 2,500. Millais, "The Proscribed Royalist," 2,000. Paint

sale, 1862, 525). W. Muller, "Encampment in the Desert," 1,600. Rosa Bonheur, "Landscape with Cattle," 1,500. Troyon, "Heights of Suresnes," 1,700. Secretan sale, 1889, 2,900. J. Phillip's "Gypsy Toilet," 1,700 (Knowles sale, 1865, 525); "Baptism in Scotland," 1,400 (Eden sale, 1874, 1,755). Ary Scheffer, "Paolo and Francesca," 320 (Ellesmere sale, 1870, 1,830). Sir D. Wilkie, "Cotter's Saturday Night," 1,250 (1872, 500). W. Collins, "Buying Fish," 1,100 (Beckwith sale, 960). The single day's sale realized £75,916.

At the sale of the pictures of Sir John Millais 7 canvases by the late president were disposed of at the following prices, in guineas: "The Empty Chair," 700; "The Naturalist," exhibited in 1885 as "The Riding Passion," 1,700; "The Girlhood of St. Theresa," 650; "The Forerunner," 480; "Time," 420; "Sweet Emma Moreland," 390; "The Moon is up, and yet it is not Night," 1,050. A fine portrait by Holburn, bought by Millais for 70 guineas, was sold for 3,000 guineas to the Berlin Museum, Vandyke, "Time clipping the Wings of Love," 1,050 (Blenheim sale, 1886, 230). The entire properties realized £10,968.

Some important early British pictures from the collections of Earl Soudes, the Marquis of Normandy, and William Sharpe, a nephew of the poet Rogers, were sold on May 8. Among them were: Gainsborough, "Mrs. Puget," 4,800 guineas; "Lady Mulgrave," 1,020 (Price sale, 1895, 3,500); "Charles Frederick Abel," 1,200 (Egremont sale, 1892, 1,400); Romney, "Mrs. Tickell," 2,000; "Mrs. Grove," 3,500; "Anne Henshaw," 2,300. Reynolds, "Lady Waldegrave," 800 (1896, 1,050); "Alexander Wedderburn," 1,200; "Lady Anne Fitzpatrick as Sylvia," 1,800 (Montrose sale, 1895, 1,500). Hoppner, "Young Lady," 1,460.

The Unthank collection of old masters brought a total of £16,500. The principal prices were: Hondelcoeter, "Two Cocks fighting," 2,180 guineas; Hobbema, "Village Scene," 1,900; Giorgione, "Italian Nobleman," 900.

The Cholmondeley sale included several noteworthy pictures, among them Sir Thomas Lawrence's "Miss Farren," 2,250 guineas. A picture attributed to Velasquez sold for 1,340.

In the sale of the late Baron Hirsch's collection a Vandyke, "Portrait of a Boy," brought 1,600 guineas, and a Gainsborough, "Second Baron Mulgrave," 700.

Romney's portraits of "Two Children in a Garden," from the Carleton Hall collection, Penrith, sold on June 16, realized the large sum of £9,100, a price exceeded only by the Clifden Romney "Viscountess Clifden and Lady Spencer," which brought in 1896 19,500 guineas.

Several notable pictures were sold at Christie's on July 10, among them Sir Thomas Lawrence's portrait of "Benjamin Gott," which brought 1,650 guineas, and his "Sisters Hamond," 1,400. Romney's "Lady Hamilton as a Bacchante" attained 1,900, and his "John Walter Tempest," 1,200.

Copenhagen.—The International Exhibition of the Fine Arts, May 1 to Oct. 31, held in the new Ny Carlsberg Glyptotheca in commemoration of the transmission to its future home of the splendid collection of sculpture, the gift to the city of Mr. Carl Jacobsen, was one of the most successful of the Continental exhibitions. This collection, begun by Mr. Jacobsen in 1882, is probably the best of the modern French school to be found outside of Paris, it containing good examples of all the great names. Here are Dubou's "Florentine Singer" and "Comte de Montmorency," Bary's "Les Premières Funérailles," Chapu's "Jeanne d'Arc," Delaplanche's "La Musique," Gautherin's "Le Travail," Falguière's "Diane," Lord Leighton's "Athlete with a Ser-

pent," Baily's "Eva," McDowell's "Day Dream," and many other equally known works from Germany, Italy, and other countries. The building to contain this collection and other art treasures, with commodious halls for exhibitions, was finished this spring. Of the 924 canvases shown, the United States contributed 41, Great Britain 99, France 114, Germany 148, etc. Among the American painters represented were Stewart, Harrison, and Pearce.

Dresden.—The international art exhibition (May 1 to Sept. 30) was in commemoration of the twenty-fifth anniversary of the reign of King Albert of Saxony. Of the total number of 718 paintings exhibited, 370 were contributed by foreigners, and of the 207 sculptures, 191 were the work of foreigners.

Munich.—The international exhibition held in the Crystal Palace (June 1 to Oct. 31) was organized by the two rival societies, the so-called "Secession" having agreed to unite for the occasion with the Artists' Society.

Venice.—The second international art exhibition, one of a series held every three years, was opened in April. The sections were: Italian, French, Spanish, Belgian, Dutch, Russian, German, Austro-Hungarian, Anglo-Saxon (England, Scotland, America), Scandinavian (Denmark, Sweden, Norway), and Japanese. Prizes were awarded as follow: For best work by an Italian artist, 10,000 lire, divided between Ettore Tito and Alessandro Milesi; best work by a foreign artist, 10,000 lire, divided between Ludwig Dettmann, Otto Sinding, and Fritz Thaulow; Italian Government prize, 5,000 lire, divided between E. Marsili and A. Zorn; province of Venice prize, 5,000 lire, divided between P. S. Kroyer and J. Sorolla Bastida.

New York: National Academy of Design.—The Academy decided on Feb. 6 to remove to a new site on 110th Street and Amsterdam Avenue. The new galleries to be erected there, after the designs

GENERAL GRANT'S TOMB IN RIVERSIDE PARK, NEW YORK.

of Messrs. Carrière and Hastings, the architects of the new Public Library, will be of white marble. The council for 1897-'98 consists of the following: President, Thomas W. Wood; Vice-President, James M. Hart; Corresponding Secretary, J. Carroll Beckwith; Recording Secretary, George H. Smillie; Treasurer, James D. Smillie; Harry W. Watrous, J. G. Brown, Robert Blum, F. S. Church, Frederick Dielman, H. Bolton Jones. The Academy now has 92 academicians and 52 associates.

At the seventy-second annual exhibition (April 5 to May 15) 405 canvases were exhibited. The prizes were awarded as follow: The Thomas B. Clarke

prize (\$300), for the best American figure composition, to Robert Reid, of New York, for "Moonrise," a decorative panel; the Norman W. Dodge prize (\$300), for the best picture painted by a woman, to M. L. Macomber, of Waverly, Mass., for "St. Catherine"; the first Julius Hallgarten prize (\$300), to Wilbur F. Rensser, of New York, for "Mother and Child"; second Julius Hallgarten prize (\$200), to Leo Moeller, of South Sandfield, Mass., for "Patriot at Valley Forge"; third Julius Hallgarten prize (\$100), to Charles E. Proctor, of New York, for "Grandpa."

Among the noteworthy pictures was "Cleopatra on the Terraces of Phila," by F. A. Bridgman, a clever reproduction of part of the architectural splendors of the island with the opposite bank of the Nile in the background, and the river enlivened with boats. The queen stands in the foreground looking dreamily off on the scene while a maid throws a shawl over her shoulders. Another attendant is leaning over the stone parapet, looking at the boats below.

Another large canvas, by Daniel Huntington, represents the "American Projectors of the Atlantic Cable." Cyrus W. Field is standing at the right, as if speaking, holding a roll in his left hand and pointing with his right to a map on the table. At the other side sits Peter Cooper beside a globe, and grouped behind the table are Marshall O. Roberts, Moses Taylor, and others. The picture belongs to the New York Chamber of Commerce.

"Vesuvius from near Sorrento," by James D. Smilie, is a striking composition, the foreground showing the walls and towers of Sorrento on the right, and a rugged hill on the left with a solitary traveler coming down the steep descent, while the mountain is in the misty background across the bay.

"To Decide the Question" is a characteristic group by J. G. Brown, exhibiting three old men, seated, apparently in a carriage house, engaged in earnest discussion.

Edmund C. Tarbell's "Josephine and her Mother," a child standing beside her mother, seated, in the almost shadowless light of a summer day, on the seashore, is a well-balanced, dignified composition, painted with great breadth and unity of effect. Robert Reid's "Moonrise" and "Evening Song," too, are in an equally high key and broadly treated. The former, to which was awarded the Clarke prize for the best American figure composition, is a decorative panel representing a nude female figure floating upward amid lilies from the surface of a lake. E. A. Bell's "Spring Flowers," Henry Prellwitz's "Ferdinand and Ariel," and Miss D. L. Murdock's "My Neighbors" are also noteworthy among the figure compositions.

The sixteenth annual autumn exhibition contained 431 numbers, including portrait busts and medallions. Conspicuous among the portraits were John S. Sargent's head of Claude Monet, the now recognized chief of the impressionists, and Carroll Beckwith's "Portrait Study," a clever painting of a beautiful woman. Gilbert Gaul sent his "Exchange of Prisoners," a story of frontier warfare, Theodore Wores two of his characteristic Japanese scenes, and Thomas Moran "Santa Maria and the Ducal Palace, Venice."

New York: Society of American Artists.—The nineteenth annual exhibition opened on Monday, March 29. The Webb prize (\$300) was awarded to Bruce Crane's "Signs of Spring," a picture exhibiting great technical skill as well as careful observation of Nature. Winslow Homer's contribution, "The Lookout," representing a sailor's head by moonlight, with a background of dark rigging, is one of the best figure pieces. Birge Harrison sent an exquisite snow scene entitled "Winter." Joe

Evans "A Garden in White," and Edward H. Barnard "A Summer Day." The most satisfactory rendering of the effect of light shining through a heavy shower, "A Mountain Lake," by William T. Smedley, is a pleasing effect of light and color. John S. Sargent contributed a portrait of a lady in white satin, exhibiting his usual superb handling

BRONZE BUST OF ABRAHAM LINCOLN, WASHINGTON PARK, NEWARK, N. J.

and delicacy of touch, and Edwin Abbey a decorative panel, called "A Pavane," illustrating one of the early stately dances, but suggestive rather of the theatrical stage than of the ballroom. W. M. Chase was represented by a charming little interior "In the Studio."

New York: Metropolitan Museum.—The autumn reopening, Nov. 1, was interesting as offering to the public the first view of Mr. McMonnies's "Bacchante" in her new home. This much-abused young woman, repudiated by Boston, has been given a prominent place opposite the principal entrance, where all can admire her unveiled beauties. John S. Sargent's portrait of Mr. Henry G. Marquand, the president of the museum, is, after the "Bacchante," the principal acquisition. It is in the painter's characteristic style, excelling in cleverness of handling and harmony of color, and placing the sitter's personality before the spectator without the appearance of posing. Three paintings of the English school were presented by Mr. Hearn—a "Coast Scene" by Bonington, "The Bridge on the Stour" by Constable, and a "Portrait of Lord Temple" by Sir Peter Lely. Among other acquisitions by the museum during the year is a life-sized portrait of Washington, painted in 1779 by C. W. Peale, presented by Mr. C. P. Huntington. It was obtained from a family in Surrey, England, where it had been for several generations. An altarpiece in silver repoussé and enamel, a copy from Perugia, representing the Madonna enthroned, was presented by J. Pierpont Morgan. Another gift is a colossal group of statuary, by George Grey Barnard, entitled "There are Two Natures struggling within me," presented by Mrs. Elizabeth S. Clark, in memory of her husband, Alfred Corning Clark.

New York: Architectural League.—The twelfth annual exhibition was held in the American Fine Arts Building in February. Among the interesting exhibits were designs for the reconstruction of the new Library of Congress, in Washington, D. C., by

pecially those by Kenyon Cox and E. H. Blashfield. Sketches in color for painted friezes were shown by Mrs. M. Lesley Bush-Brown and by Dudley Carpenter. A notable part of the exhibition was a collection of portrait busts, medallions, and other works by the late Olin Warner. Another interesting design was the model for the proposed memorial of the late Richard M. Hunt, to be set into the wall of Central Park in Fifth Avenue, near the entrance to the Metropolitan Museum, which was erected by Mr. Hunt. The memorial is in the form of an exedra, surmounted by a colonnade supported by Ionic columns, with a bust of Mr. Hunt on a pedestal in the center and draped figures at the extremities representing Painting and Architecture. The work is by Bruce Price and Daniel C. French.

The gold medal of the League was awarded to William C. Ayres for his design of "The Principal Entrance of a Terminal Railway Station," and the silver medal to Raymond Bossange. The Avery prize was given to J. F. Harper for a design for an electric-light pole for a public square.

The Fine Arts Federation, organized in 1895, filed its certificate of corporation in June of this year. It now includes the National Academy of Design, the Society of American Artists, the New York Chapter of the American Institute of Architects, the American Water-Color Society, the Architectural League of New York, the Municipal Arts Society, the Society of Beaux-Arts Architects, the National Sculpture Society, and the National Society of Mural Painters.

Boston.—The Museum of Fine Arts has acquired two late pictures by Whistler, "The Master Smith of Lyme Regis" and "The Little Rose of Lyme Regis," both half-lengths, evidently portraits.

The Longfellow traveling scholarship of \$600 a year for three years, offered by the museum, was won by William Homer Haskell, of Merrimac, Mass. The recipient must spend it in art schools in Europe under the supervision of American painters.

Philadelphia.—The sixty-sixth annual exhibition of the Pennsylvania Academy of the Fine Arts, held in March, was very successful, having been visited by more than 50,000 persons.

Pittsburg: Carnegie Institute.—The second annual art exhibition, opened on Founder's Day, Nov. 3, was signalized by the presence of the President of the United States, who delivered an address. The exhibition was a most satisfactory one, including many examples from London, Paris, and Munich, selected by advisory committees of painters resident in those cities. The honorary awards were: J. J. Shannon, London, first-class medal (gold) carrying with it a prize of \$1,500; Fritz Thaulow, Dieppe, France, second-class medal (silver), with prize of \$1,000; J. Alden Weir, New York, third-class medal (bronze), with prize of \$500. Wilton Lockwood, Boston, Mass., and Louis Paul Dessar, Paris, France, received honorable mention.

Monuments, etc.—New York's grandest memorial, the Grant monument, was formally dedicated on April 27. Its site is unrivaled, upon the highest part of Manhattan island, at the present termination of the Riverside Drive, where it overlooks the Hudson and the Highlands for many miles. The monument, of white granite, consists, in its general design, of a huge, nearly cubical base, surmounted by a cylindrical structure terminating in a cone, to be capped eventually with a colossal statue in bronze. The front of the base, on the south, where the entrance is, has a hexastyle Doric portico, rising about two thirds of its height, with a flat entablature intended for statuary. On each of the other three sides the portico is replaced by columns *in antis* against a blank wall. At the an-

gles of the base are square pedestals for sculpture. The cylinder above the base is encircled by twenty-four Ionic columns resting upon a plain circular wall. Above this a secondary attic carries the cone,

STEVENSON MEMORIAL FOUNTAIN, IN THE OLD PLAZA, SAN FRANCISCO.

which consists of a series of receding steps capped by a circular pedestal for the statue. The interior shows an open crypt, surrounded by a parapet within which the sarcophagus rests on a pedestal, like that of Napoleon in the Invalides, and surmounted by a well-proportioned hemispherical dome. The construction of the monument, which still needs statuary and other sculpture before it can be called completed, is chiefly due to the efforts of Gen. Horace Porter. The architect was John H. Duncan, and the sculptor J. Massey Rhind.

A Washington memorial, erected in Philadelphia by the Society of the Cincinnati, was dedicated May 15, in the presence of the President and Vice-President of the United States, members of the Cabinet, and other distinguished visitors. The monument, the work of Prof. Rudolph Siemering, of Berlin, is about 40 feet high, the equestrian statue of Washington rising 20 feet above the pedestal. The four corners of the platform are decorated with fountains with figures of Indians and guarded by American animals. At the front and

rear are allegorical figures of America, and on the sides are bas-reliefs, representing the American army on the march and a westward-bound emigrant train.

A statue of Peter Cooper, by Augustus St. Gaudens, was unveiled, May 29, in the small park facing the south front of the Cooper Union Building, New York. It represents the philanthropist seated, cane in hand, in a massive armchair. The commemorative address was made by John E. Parsons.

The Shaw Memorial, in memory of Col. Robert Gould Shaw, who was killed while leading the Fifty-fourth Regiment of Massachusetts Infantry in the assault on Fort Wagner, South Carolina, July 18, 1863, was unveiled in Boston on Decoration Day. The monument, the work of Augustus St. Gaudens, which stands directly in front of the Statehouse, consists of a terrace 70 feet long, with a balustrade and seat of pink granite on three sides. In the center, flanked by bronze lion pilasters, is a granite panel bearing a bronze in high relief, representing Col. Shaw on horseback followed by the colored soldiers of his regiment. On the side toward the Common the balustrade is supported by a wall relieved by three large lions' heads, from whose mouths streams of water flow into a massive granite basin.

A colossal bronze bust of the late Dr. Abraham Coles, of Newark, N. J., was unveiled in Washington Park, in that city, on July 6. Dr. Coles, prominent as a physician and active in labors for the promotion of physical, religious, educational, and scientific development, found time also for literary effort, and was well known as the author of "The Evangel in Verse" and translations of the "Dies Irae." The bust, the work of J. Q. A. Ward, is mounted upon a pedestal of selected stones from Palestine, the base being a boulder weighing seven tons, from Plymouth, Mass. In it is inserted part of a stone from the pyramid of Cheops in Egypt. The base represents two large folio volumes, bearing the titles of the published works of Dr. Coles. The monument was presented to the city by his son, Dr. J. Ackerman Coles.

The Robert Louis Stevenson monument, in the old Plaza, San Francisco, erected by the Guild of Arts and Crafts, has been crowned by a bronze representation of a ship under full sail, a "thirty-gunner" of the sixteenth century, speeding westward, with a figure of Pallas looking toward the setting sun on the bow. The sculptor of the ship, which is about 5 feet high and is named the "Bonaventure," is George Pipers, and it was cast in San Francisco.

FLORIDA, a Southern State, admitted to the Union March 3, 1845; area, 58,680 square miles; population, according to each decennial census since admission, 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; and 391,422 in 1890. By the State census of 1895 it was 464,639. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William D. Bloxham; Secretary of State, John L. Crawford; Comptroller, William H. Reynolds; Treasurer, Clarence B. Collins, succeeded in June by James B. Whitfield; Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant General, Patrick Houston; Commissioner of Agriculture, Lucius B. Wombwell; State Examiner, W. V. Knott; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry and Francis B. Carter.

Finances.—The Governor, in his message, said: "Florida's financial condition, notwithstanding the panics and other destructive forces from which she has suffered, is most gratifying. Her Comptroller's warrants pass current in the banking institutions

and moneyed parts of the Union. The small amount of bonds she has issued are in the hands of individuals and at a price which will enable her but a few years to run, to pay off the principal, and has cash in the treasury to meet her ordinary expenses. Her entire debt is but \$1,232,500 per capita, being less than any State in the Union, and her State tax proper is smaller than any Southern State."

The total amount of warrants issued in 1895 was \$714,013.36, and in 1896 it was \$647,864.87. This does not include interest on the bonded debt.

The State's entire debt for all purposes is \$1,232,500. Of this sum the State holds in her educational funds and under her control \$850,800, and her internal-improvement fund holds \$25,000.

The rate of taxation for 1897 for all purposes is 5½ mills, divided as follows: General revenue, 3½ mills; pensions, ½ mill; general school tax, 1 mill; State Board of Health tax, rate fixed by the Governor, ¼ mill.

Florida has 728 pensioners, at a cost of \$58,870.49 a year.

The direct-tax fund, amounting to \$38,486.08, was all paid out before Jan. 1, except \$8,063.88; but claims were on file amounting to \$1,173.43.

WILLIAM D. BLOXHAM, GOVERNOR OF FLORIDA.

Valuations.—The report of the Comptroller gives the following items for 1896: Aggregate value of real estate, \$61,363,219; personal property, \$16,006,322; railroads, rolling stock, etc., \$17,728,982.63; total value of real estate, personal property, railroads, and telegraphs, \$95,389,966.38. Taxes levied for State purposes, \$358,076.82; for county purposes, \$1,089,000.86; State license tax, \$150,000; auction tax, \$282.03. Value of real estate, in town or city lots, \$36,377,524; value of town or city lots, \$24,985,695; cash value of all animals, \$8,439,519. The eleven telegraph lines are valued at \$227,439.50, on 2,995.74 miles of wire.

Education.—The number of scholars in June, 1896, was 2,350, and the number enrolled was 100,373, of whom 26,787 were females.

The aggregate salaries paid teachers were as follows: White, \$383,809.35; negro, \$99,704.87; total, \$483,514.22. The total amount received for school purposes was \$732,926, and the amount expended \$609,249. The total cost of negro schools for 1896 was \$156,292.44; cost per pupil based on population, \$2.65; on enrollment, \$4.25; on average attendance, \$6.47. *Per capita* cost of schools, counting both races, based on population of 1895, \$1.45; on youth of school age, \$4.33; on enrollment in schools, \$6.58; on daily attendance, \$9.95.

The report of the summer training schools in 1897 shows that the number maintained was 12—8 for whites, 3 for negroes, and 1 for both races in separate departments. The total enrollment was 717, being 28 per cent. of the whole number of teachers employed in 1896.

Charities.—The report of the superintendent of the asylum for the insane at Chhattahoochee shows that during 1895 there were in the institution 216 males and 149 females. Counting every item of expense, these were maintained at a *per capita* cost of \$105.06. At the close of 1895 the patients numbered 288—males, 159; females, 129. The number of admissions for 1896 was 171. The deaths were 35, the discharges 86. The year closed with 373 patients. The aggregate cost of the institution for 1896 made the *per capita* expense \$95.58.

The disbursements on account of the institution were \$49,263.72 for 1895, and in 1896 they aggregated \$63,515.56. The products of the asylum farm for 1895 were valued at \$5,177.50, and at \$8,750.50 for 1896. The Legislature of 1895 abolished that section of the lunacy law which permitted private parties to care for lunatics, and required that they be re-examined and admitted to the asylum. Improvements have been made in the sanitation of the buildings, and the Legislature made appropriation for an electric-light plant.

Militia.—The Adjutant General's report gives the following data: Infantry, 80 officers, 90 non-commissioned staff and bands, and 1,220 men; artillery, 4 officers and 80 men; total, 84 officers, 90 noncommissioned staff and bands, and 1,300 men. Naval militia, 25 officers and 262 men, making the aggregate of land and naval forces 1,761 officers and men. State appropriations, \$16,000—for annual camps of instruction, \$8,000; transporting troops, \$4,000; other expenses, \$4,000. National appropriation, \$3,486.48. At home stations most of the companies have recitations in tactics and guard duty; in camp, battalion commanders have officers' schools.

Insurance.—During 1896 there was paid for insurance \$1,239,028.43. The losses during the same period were \$249,795.45. This does not include the sums paid to building and loan and investment companies outside the State, or to insurance companies not authorized to do business there. The receipts of life insurance companies alone from the State for 1896 were \$587,741.38, while the losses amounted to \$65,063.79.

Banks.—The Merchants' National Bank of Ocala failed Jan. 14. It was regarded as being in danger as early as 1894, but the State Treasurer did not withdraw the State's money; on the contrary, he continued to loan public funds to the bank. In June the receiver found evidence against the president of the bank, and his arrest was ordered; but when the officer appeared to arrest him he shot himself, and died almost instantly.

Water Ways.—The annual report of the chief of engineers shows the following amounts expended during the year ending June 30, 1897, on Florida rivers and harbors: St. John's river, \$500,000; Indian river, \$29,000; Key West harbor, \$225,000; Charlotte harbor and Pease creek, \$25,000; Sara-

sota Bay, \$42,500; Manatee river, \$29,000; Apalachicola Bay, \$50,000; Pensacola harbor, \$50,000.

It was announced in July that a company had been organized to build a ship canal across the peninsula of Florida from a point near St. Augustine to one near Cedar Key. The estimated cost of a 200-foot canal is \$75,000,000. The length will be 114 miles. It would save about 600 miles to vessels trading between Gulf ports and the Atlantic coast.

Products.—In an article on the resources of Florida, in the "Manufacturers' Record," the Governor says: "Twenty-five years ago the total value of her entire export trade—foreign, coastwise, river, and overland—was less than \$9,000,000; to-day the value of her forest products exported to foreign and domestic ports, not counting overland shipments, alone exceeds that sum. The value of her phosphates exported by water and transported by rail aggregates \$5,500,000, while the value of tobacco, in bales and manufactured, is upward of \$17,000,000.

The annual report of the cotton crop credits the State with 60,000 bales.

The total investment for fishing in salt waters is \$1,329,937, with an annual production valued at \$1,209,725. These figures are from the report of a recent investigation by the United States Fish Commission, which gives the nine leading items as follows: Sponge, \$363,107; mullet (fresh and salted), \$284,773; snappers, \$155,346; oysters, \$61,723; pompano, \$37,893; turtles, \$28,503; trout, \$27,170; mullet roe, \$25,961; Spanish mackerel, \$21,455.

Lawlessness.—Among the recommendations in the Governor's message to the Legislature was one for an amendment to the Constitution, allowing a circuit judge to be appointed for the State who could hold court in any county where immediate necessity called for it; and that, for the interval before the time such amendment could go into effect, the Governor might have the power to assign any of the circuit judges to hold a special term in an emergency, for the purpose of preventing lynchings; two, he said, had occurred this year before the assembling of the Legislature. In June another lynching was attempted at Key West; but a mob of negroes collected and prevented the prisoner from being taken. They tried to lynch the white man who led in the attempt, but he escaped. A white man was shot by negroes during the excitement, and the result was another attempt to lynch the prisoner. The militia was ordered to be in readiness, and the assistance of Government troops was called for, but the anticipated race war did not take place.

Court Decisions.—Formerly the State Supreme Court, in order to give its judgments effect, was compelled to file a written opinion in every case decided by it, in which the reasons for its decision on every question or point presented were required to be set forth at length, and this whether it affirmed, reversed, or modified the judgment of the lower court. This provision was amended at the election of 1896, and the court is no longer obliged to file written opinions and give authority to its decisions.

A decision was rendered in the United States Court at Jacksonville in March sustaining the separate-coach law.

The Legislature of 1893 imposed a graduated license tax upon express companies. The Southern Express Company resisted the payment of this tax, on the ground that the statute was unconstitutional and infringed that clause of the Federal Constitution which reserved to Congress the right to regulate interstate commerce. The Supreme Court of

Florida held the statute to be constitutional. Appeal was taken, and about the beginning of this year the United States Supreme Court affirmed the judgment of the State court. The amount involved was about \$20,000.

Conventions.—Three conventions were held early in the year. The National Tobacco Growers' Convention assembled at Ocala, Jan. 12. Delegates from a large number of States were present. On Jan. 20 the South Atlantic and Gulf Coast and Harbor Defense Convention assembled at Tampa. Twenty-two States were represented. A permanent organization was made and resolutions were adopted looking to the securing of more adequate coast defenses in the Southern States. The National Good Roads Congress met at Orlando, Feb. 2.

Legislative Session.—The Legislature met April 6 and adjourned June 5. Charles J. Perrinot was elected president of the Senate and Bennett H. Mays Speaker of the House. The Governor recommended in his message that the Legislature provide for an increase of revenue by imposing a collateral inheritance tax, restoring the tax of \$1 which the revenue law of 1893 required before any civil action could be docketed in any court other than a court of a justice of the peace, and which was omitted from the revenue law of 1895. He also favored a tax of \$6 in civil cases where a jury is demanded, a tax upon extradition warrants, the assessment of bank stock as railroad property is assessed, and measures for securing fuller assessment of personal property. He recommended action in regard to the suppression of lynching, to convict labor, for better protection of game and fish, for the establishment of a reform school, and for the creation of the officer of auditor.

Balloting for a United States Senator to succeed Wilkinson Call began April 21. The leading candidates were Senator Call and W. D. Chipley; George P. Raney, W. A. Hocker, R. A. Burford, and M. H. Mabry also received votes. Toward the end of the contest Mr. Call withdrew and his supporters went to J. N. C. Stockton. Finally the supporters of Mr. Stockton and Mr. Hocker united and chose Stephen R. Mallory as their candidate, and he was elected on the twenty-fifth ballot by a vote of 53 to 44. He spoke in the House of Representatives after his election, saying that he "indorsed all the planks of the Chicago platform, dwelling particularly on the financial question and advocating the free coinage of silver at a ratio of 16 to 1, regardless of foreign countries." The Governor had appointed John A. Henderson to fill the seat in the Senate during the special session, but he was not admitted.

Resolutions proposing amendments to the Constitution as to bonds, as to establishment of courts, and relating to the legislative department were passed.

A bill was passed creating a State railroad commission.

The committee to decide upon the best method for employment of State convicts reported that they deemed it inexpedient, in view of the financial condition of the State, to make any change, as such would involve cost out of proportion to the benefit; and they therefore recommended the passage of a resolution calling for bids for lease of the convicts for the ensuing four years, and providing that all bids should be submitted to the Legislature. Action was taken in accordance, and but one bid was received, offering \$20,000 a year on the basis of 700 convicts; this was deemed too low, and the bid was raised to \$21,000 for all the convicts, without reference to number, and in this form it was accepted.

An act was passed providing for the location and erection of a State reform school.

The committee to investigate the Treasurer's office in regard to the loss of State funds in the Merchants' National Bank of Ocala (see under "Banks," in this article) made a report, sustaining the charges against the Treasurer, showing a total shortage in his accounts of \$50,987, and recommending that he be requested to resign at once, and, in case of his failure to comply, that steps be taken to remove him from office. In accordance with the report, a committee of the House was appointed to draw up articles of impeachment, which they presented May 20, charging him with loaning money to the bank knowing it to be insolvent, with unlawfully loaning State money to others, with investing it in uses and enterprises not for the purposes of the State, with depositing \$254,124 in various banks without adequate security, with exhibiting a trial-balance sheet purporting to show cash on hand and deposits amounting to \$343,127.39, which was more than \$2,000 above the actual amount, with making fictitious and irregular entries, and with reporting that there was no money on deposit at the Merchants' National Bank when there was \$32,927 there. The articles were accepted, and a committee from the House appeared before the bar of the Senate and impeached the Treasurer. He was summoned to appear and answer the charges, but before the time appointed he tendered his resignation to the Governor, and it was accepted. Both Houses were notified, and the House sent its committee to the Senate to ask permission to withdraw the charges. After much discussion, the Senate, sitting as a high court of impeachment, refused permission. The House then adopted a resolution withdrawing the articles of impeachment, and discharged the prosecuting committee, in consequence of which the court of impeachment was adjourned. Suits were brought against the Treasurer and his bondsmen.

Acts were passed amending the law relating to embezzlement by public officers, and to define and declare what is *prima facie* evidence thereunder, and that with reference to an examination of the State Treasurer's office by the Governor, and monthly statements to the Governor; also an act authorizing the Governor, Comptroller, and Treasurer to deposit the public moneys in such banks in the State as shall furnish collaterals, providing for the sale of such collaterals, and prohibiting the Treasurer from depositing any moneys in any bank without the consent of the Governor and the Comptroller.

Amendments were made to the election laws—regulating primaries, to prevent the use of money for political purposes by corporations, and amending the provisions for registration and holding of general and special elections.

The revenue laws were amended, and provision was made for the levy of a tax of a half mill for payment of pensions.

Several acts were passed in regard to the taking of fish.

Two acts concerned phosphates—providing for the appointment of official samplers of phosphates, and requiring the sampler of each port from which phosphates are shipped to inspect every car of phosphates arriving at such port for shipment, and to issue certificates for it.

The Sanibel Island Railway and Construction Company was incorporated; also the West Florida Gulf Coast Railroad, the act providing for its organization, construction, and operation, and for issuing bonds and granting lands in its aid; also the Alafia, Manatee and Gulf Railway Company; and the Tallahassee and Central Florida Railway Company, with grant of lands to aid in its construction. The time for the beginning of work on the Titusville, Canaveral and Peninsular Railroad and on the Jacksonville and Tampa Bay Improved Rail-

way was extended; and also the time for the completion of the main line of the South American and International Railroad; and the charter of the Carrabelle Railroad was extended.

Amendments were made to the laws in regard to the giving of bonds in judicial proceedings; to the acquisition of liens by persons in privity with the owner, and by those not in privity with the owner; to the examination of accounts; to the selling of liquors in counties or precincts voting against such sales; to the fine and forfeiture fund in the counties; the payment of criminal costs, and the provision for the feeding of prisoners and hire of convicts; to the granting of permits for the sale of liquors, wines, or beer; to the protection of growing crops; to examination and licensing of pilots; to the classification of sawed pine timber; to the disposition of the proceeds of life insurance; to trespassing on farms and gardens; to the prosecution by the State of violations of the prohibition regulations; to the construction of railways by companies incorporated in other States.

Resolutions were passed requesting the representatives of the State in Congress to take steps to have the President, Vice-President, and Senators elected by popular vote; requesting them to use their efforts toward securing an appropriation for deepening the harbor at Boca Grande; and asking Congress for an additional appropriation for the improvement of the Appalachian river, including the cut-off and the lower Chipola river. Various other memorials to Congress also were adopted. Other acts of the session were:

Imposing a penalty for landing sick seamen or paupers in the State.

Encouraging and protecting growers of artificial sponges.

Relating to fire insurance policies—prescribing a rule of evidence and measure of damage in cases of loss.

To punish the improper exhibition of dangerous weapons.

Relating to negotiable instruments; to establish a law uniform with the laws of other States.

To prevent adulteration of candy.

To establish a battalion of naval militia.

To punish desertion of wife and children.

To prohibit arrangements, contracts, agreements, trusts, or combinations, and certain other acts or things tending to prevent or obstruct the lawful sale of Florida-fed beef or other beef or fresh meat or cattle, or other edible animal.

To fix a penalty for horse and cattle stealing.

To provide for teachers' summer schools, and to make appropriations therefor.

To enable cities and towns to manufacture and distribute gas and electricity.

To declare valid the acts of notaries when commissions are more than four years since issued.

Requiring a special license tax to be paid by express companies doing business in the State.

Hon. Wilkinson Call was appointed agent to effect a settlement of the Indian war claims against the Government, the fees to be 15 per cent. of the amount collected.

FRANCE, a republic in western Europe, proclaimed on Sept. 4, 1870, when the Emperor Napoleon III was deposed. The Constitution of June 16, 1875, was amended by the National Assembly in June, 1879, August, 1884, June, 1885, and, for the last time, in July, 1889. The legislative power is vested in the Senate and the Chamber of Deputies. The Senate is composed of 300 members, elected for nine years in the several departments by electoral bodies formed of electors representing the voting citizens of the communes of the department in proportion to their population, together with the

Senators, Deputies, councilors-general, and, district councilors. Since the discontinuance of life senatorships by the Senate bill of 1884, whenever the seat of a life Senator becomes vacant one of the 225 departments, selected by lot, elects a Senator for the regular term. The Chamber is composed of 584 Deputies, elected for four years by the whole adult male civil population of the several arrondissements except those who are disqualified for crime, or who have not yet resided six months in the commune. An arrondissement having more than 100,000 inhabitants is divided into two or more constituencies. There were 10,446,178 registered electors in 1893, of whom 7,427,354 voted. The President of the republic is elected for seven years by the National Assembly, which is composed of the Senate and the Chamber of Deputies united in Congress. Félix Faure, born in 1841, was elected President on Jan. 17, 1895. The Cabinet, formed on April 29, 1896, was composed as follows: President of the Council and Minister of Agriculture, J. Méline; Minister of the Interior, M. Barthou; Minister of Finance, G. Coehery; Minister of Foreign affairs, M. Hanotaux; Minister of War, Gen. Billot; Minister of Marine, Admiral Besnard; Minister of the Colonies, A. Lebon; Minister of Public Worship and Education, M. Rambaud; Minister of Justice, M. Darlan; Minister of Commerce, Industry, and Posts and Telegraphs, Henri Boucher; Minister of Public Works, M. Turrel.

Area and Population.—The area of France according to the surveys of the Ministry of War is 536,408 square kilometres; according to the cadastral survey 528,876 square kilometres, or 204,092 square miles. The table on page 327 gives the area of the several departments and the population as determined by the census of April, 1896, compared with the population in April, 1891.

The number of foreigners residing in France in April, 1896, was 1,027,491, forming 2.66 per cent. of the total resident population. The number of marriages in 1894 was 286,662; of births, 855,388; of deaths, 815,620; excess of births, 39,768. The number of divorces granted in 1894 was 6,419. Emigration in 1893 amounted to 5,586 persons; the number of emigrants of all nationalities sailing from French ports was 34,215. The population of the principal cities in 1896 was as follows: Paris, 2,536,834; Lyons, 466,028; Marseilles, 442,239; Bordeaux, 256,906; Lille, 216,276; Toulouse, 149,963; St.-Etienne, 136,030; Roubaix, 124,661; Nantes, 123,902; Havre, 119,470; Rouen, 113,219; Rheims, 107,963.

Finances.—The budget estimates for 1897 make the total revenue of the Government 3,392,554,662 francs, of which 3,213,638,203 francs are the ordinary revenue, 56,610,860 francs various extraordinary receipts, 70,158,405 francs receipts *d'ordre*, and 52,147,194 francs the revenue of Algeria. Of the ordinary revenue 483,231,289 francs come from direct taxes, 37,932,550 francs from taxes assimilated to direct taxes, 1,984,266,750 francs from indirect taxes, 657,562,864 francs from Government monopolies and factories, and 50,644,750 francs from state domains and forests. The direct contributions comprise 156,900,620 francs from the income tax, 80,971,988 francs from the land tax, 118,637,264 francs from the tax on buildings, 125,589,317 francs from trade licenses, and 1,132,100 francs from the tax for advertisement. The taxes assimilated to direct taxes are 6,956,640 francs from property in mortmain, 2,275,070 francs from mines, 5,049,000 francs from verification of weights and measures, 12,636,250 francs from carriages and horses, 2,568,705 francs from velocipedes, 5,212,885 from the military tax, and 3,234,000 francs from other taxes. Of the indirect taxes registration dues yield 530,010,500 francs, stamps 185,253,370 francs, income from transferable securities 65,-

594,000 francs, import duties 366,474,000 francs, statistical dues 6,610,000 francs, navigation dues 7,258,000 francs, customs duty on salt 23,316,000 francs, various dues and fines, 6,195,880 francs,

taxes on wine, cider, etc., 173,715,000 francs, tax on beer 23,546,000 francs, tax on spirits 262,145,000 francs, railroad taxes 51,800,000 francs, licenses for beverages 73,527,000 francs, various excise duties 73,527,000 francs, and the duty on sugar 194,818,000 francs. The revenue from Government monopolies and factories is made up of 381,200,000 francs from tobacco, 39,504,840 francs from matches and gunpowder, 224,937,950 francs from posts, telegraphs, and telephones, and 11,920,974 francs from other establishments.

The total expenditure for France was estimated in the budget for 1897 at 3,321,007,350 francs and Algerian expenditure at 71,219,959, making the total budget 3,392,226,309 francs. Of the expenditures for France 1,243,777,152 francs are for the public debt, 13,211,720 francs for the President, Senate, and Chamber of Deputies, 19,514,810 francs for the Ministry of Finance, 34,696,733 francs for the Ministry of Justice, 14,837,800 francs for the Ministry of Foreign Affairs, 74,579,112 francs for the Ministry of the Interior, 391,457,151 francs for the army of France, 100,977,656 francs for the colonial army, 237,147,390 francs for the navy, 207,610,931 francs for the Ministry of Instruction and Fine Arts, 43,181,633 francs for the Ministry of Worship, 195,480,518 francs for the Ministry of Commerce, Industry, and Posts and Telegraphs, 33,036,913 francs for the Ministry of the Colonies, 28,657,583 francs for the Ministry of Agriculture, 233,530,450 francs for the Ministry of Public Works, 209,356,516 francs for *régie* and collection of taxes, and 39,954,162 francs for repayments.

The national debt of France on Jan. 1, 1894, amounted to the capital sum of 31,035,252,322 francs, of which 22,005,373,951 francs represent the consolidated debt, 243,788,253 francs the Morgan loan, 3,986,320,000 francs redeemable loans, 3,347,428,776 francs the capitalized value of annuities, 1,146,889,547 francs floating debt, and 305,451,995 francs guaranteed debts. The interest and annuities paid in 1896 amounted to 1,219,792,036 francs, as stated in the budget, and of this sum 693,761,924 francs were interest on the consolidated debt, 298,813,194 francs interest and amortization of redeemable debt, and 227,216,918 interest and payments on the floating debt.

The sum of the revenues of the departments for 1894 was 273,456,452 francs, and their expenditure 274,229,204 francs. The debts of the departments amounted to 408,313,542 francs. The revenue of all the communes was estimated in their budgets for 1895 at 730,380,393 francs from ordinary sources, and their ordinary expenditure at 693,814,543 francs. The total of the communal debts on March 31, 1894, was 3,514,436,672 francs. The revenue of the city of Paris was estimated for 1896 at 336,738,175 francs, balancing the budget of expenditure. The debt of Paris in 1896 stood at 1,769,000,000 francs.

The Army.—Every Frenchman not physically unfit may be called upon to serve in the active army or the reserves between the ages of twenty and forty-five. The active army is composed of all the young men of the nation, not legally exempted, who have reached the age of twenty. Their period of service is three years, but all soldiers who have learned their duties sufficiently and are able to read and write may be sent on an indefinite furlough after a year of service with the colors. Students and seminarists are only required by law to serve a single year, on condition of their completing their studies and attaining a certain grade. Young men who are the main support of their parents can also claim exemption at the end of a year. At the end of the legal period of active service the soldier passes into the active army reserve, at the end of ten years more into the territorial army, in which

he is inscribed for six years, and then for six years in its reserve. The colonial army is recruited exclusively by voluntary enlistment. Men who are not capable of bearing arms or who have not served the full three years pay a military tax of 6 francs a year, with a variable surtax. The number of conscripts called into the service in 1895 was 224,535, including the marines and volunteers. The conscripts from the French population of Algeria are not obliged to serve more than a year. The number of French conscripts that can pass into the reserve after a year of active service is fixed every year by the Minister of War. The infantry arm is the Lebel rifle of the model of 1886, holding 8 cartridges in the magazine and having a caliber of 8 millimetres. The field artillery is armed with cannon adopted in 1877, having a caliber of 90 millimetres for the mounted batteries and 80 millimetres for the horse artillery. There are 103 batteries of foot artillery armed with cannon of 95, 200, and 270 millimetres caliber and mortars of 15 centimetres. Rapid-firing guns of 12 centimetres caliber have been introduced, each battery being formed of 6 pieces and 6 ammunition carts.

The peace strength of the active army, including men on leave of absence, was fixed in the budget for 1897 at 559,525 men, including 27,376 officers, with 127,484 horses. The effective colonial army in Algeria and Tunis and in France numbered 53,417 men, including 2,495 officers, with 13,521 horses. The 18 army corps of France have a total effective of 525,637 men, including 21,129 officers, of which number 341,936, including 12,697 officers, are infantry; 12,462 are administrative troops; 69,178, including 3,550 officers, are cavalry; 80,838, including 4,027 officers, are artillery; 12,468, including 476 officers, are engineers; and 8,755, including 379 officers, are train. The general staff numbers 4,170 men, of whom 3,462 are officers; the military schools have 3,204 men, of whom 397 are officers; and there are 1,928 men, of whom 1,682 are officers, unclassified among the troops. The total for the army of France includes also the gendarmerie, numbering 21,535 men, of whom 623 are officers, and the Garde Républicaine, 3,050, of whom 83 are officers.

In Algeria and Tunis there are 345 men on the general staff, 656 unclassified, 28,874 infantry, 1,547 administrative troops, 6,714 cavalry, and 5,393 artillery in the army corps, and 1,276 men in the gendarmerie, and in France 8,612 officers and men belonging to the colonial army. The present effective of the French active army for 1897, with deduction of sick and absent, was 493,555 officers and men, and that of the gendarmerie and Garde Républicaine 24,340.

The army corps in case of mobilization are formed according to the necessities into armies. Each army corps on a war footing consists of from 36,000 to 38,000 infantry, 1,200 cavalry, and 114 pieces of artillery. The army had 2,274 effective field pieces in 1896.

The Navy.—The French navy in 1895 comprised 33 armored battle ships, 5 armor-clad cruisers, 8 armor-clad coast guards, 8 armored gunboats, 18 first-class, 17 second-class, and 28 third-class cruisers, 6 torpedo catchers, 8 first-class and 20 other avisos, 12 transport avisos, 14 torpedo avisos, 13 gunboats, 33 sloop gunboats, 16 sloops, 1 torpedo cruiser, 36 seagoing torpedo boats, 74 first-class, 92 second-class, and 41 third-class torpedo boats, 14 torpedo vedettes, and 18 transports. There were in course of construction 4 battle ships, 4 first-class, 6 second-class, and 5 third-class cruisers, 1 torpedo aviso, 1 transport, and 5 first-class torpedo boats. The Mediterranean squadron consisted of 8 armored battle ships, 3 armored cruisers, 2 second-class and 2 third-class cruisers, 3 torpedo cruisers, 3 torpedo

dispatch boats, and 5 seagoing torpedo boats, with 2 battle ships, 2 armor-clad coast guards, 1 first-class cruiser, 2 third-class cruisers, 2 torpedo cruisers, 2 torpedo avisos, and 3 seagoing torpedo boats forming the reserve. The squadron of the north coast numbered 1 battle ship, 1 armored cruiser, 4 armor-clad coast guards, 2 first-class cruisers, 1 third-class cruiser, 1 torpedo cruiser, 2 torpedo dispatch boats, and 4 seagoing torpedo boats.

The *personnel* of the French navy consists of 1,898 officers and aspirants, 1,330 mechanics and employees, 37,178 active seamen and marines, and 3,531 officers and men in the reserves.

Commerce and Production.—The production of wheat in 1895 was 119,967,745 hectolitres; of oats, 94,877,753 hectolitres; of rye, 25,167,623 hectolitres; of barley, 17,014,736 hectolitres; of buckwheat, 9,896,641 hectolitres; of corn, 9,219,658 hectolitres; of potatoes, 129,249,146 quintals; of sugar beets, 63,782,875 quintals; of other beets, 109,477,513 quintals; of colza, 565,001 quintals; of flax, 176,077 quintals of seed and 222,819 of fiber; of hemp, 119,629 quintals of seed and 272,899 of fiber; of tobacco, 248,453 quintals; of clover, 44,262,743 quintals; of hay and grass, 198,317,045 quintals. The wine vintage was 26,917,981 hectolitres, compared with 39,436,878 in 1894, 50,702,611 in 1893, and 28,891,406 in 1892. The imports of wine were 6,356,000 and the exports 1,696,000 hectolitres. The production of cider in 1895 was 25,587,000 hectolitres. There were 154,800 persons engaged in silk culture, producing 9,300,727 kilogrammes of cocoons. The exports were 625,400 kilogrammes of cocoons, valued at 4,827,960 francs, besides 3,161,000 kilogrammes of raw silk, valued at 76,800,640 francs. The farm animals in France on Dec. 31, 1895, included 2,812,447 horses, 211,479 mules, 357,778 asses, 13,233,828 cattle, 21,163,767 sheep, 1,509,502 goats, and 6,306,019 hogs.

The production of coal and lignite in 1894 was 27,417,000 metric tons; of iron ore, 3,772,000 tons; of pig iron, 2,069,714 tons; of manufactured iron, 785,781 tons; of steel, 674,190 tons. The mines of France, employing 157,724 persons, yielded 337,896,000 francs worth of minerals in 1893. There were 356 sugar mills in 1896, employing 48,794 persons. The product of refined sugar in 1893 was 593,647,000 kilogrammes. The fisheries in 1894 employed 27,415 boats, of 171,312 tons, and 155,125 men. Of the boats 353, of 40,153 tons, and of the fishermen 9,046 were engaged in the cod fisheries; their catch was valued at 12,992,000 francs. The product of the other fisheries in 1893 was valued at 100,958,000 francs. In 1895 there were 511,325 quintals of codfish and oil obtained. The Government grants premiums to cod fishers amounting to 3,800,000 francs a year. The quantity of herring landed in 1895 was 369,605 quintals.

The total value of the general commerce in 1895 was 4,920,000,000 francs for imports and 4,589,000,000 francs for exports. The special imports amounted to 3,720,000,000 francs and the special exports to 3,374,000,000 francs. In 1896 the special imports amounted to 3,837,000,000 francs and the special exports to 3,404,000,000 francs. The imports of food products in 1896 were 1,060,000,000 francs and the exports 640,000,000 francs in value, the imports of raw materials 2,154,000,000 francs and the exports 830,000,000 francs, the imports of manufactured goods 623,000,000 francs and the exports 1,334,000,000 francs. The values of the principal imports in the special commerce in 1895 were as follow: Wool, 308,000,000 francs; raw silk, 226,000,000 francs; wine, 212,000,000 francs; coffee, 177,000,000 francs; coal, 169,000,000 francs; cotton, 167,000,000 francs; cereals, 162,000,000 francs; oil seeds, 157,000,000 francs; hides, skins,

and furs, 135,000,000 francs; timber, 430,000,000 francs; cattle, 112,000,000 francs; flax, 60,000,000 francs; silk manufactures, 50,000,000 francs; ores, 49,000,000 francs; woolen manufactures, 42,000,000 francs; sugar, 38,000,000 francs; cotton manufactures, 34,000,000 francs. The values of the principal special exports in 1895 were as follow: Woolen textiles, 323,000,000 francs; silk textiles, 271,000,000 francs; wine, 222,000,000 francs; small wares, 154,000,000 francs; raw wool and yarn, 153,000,000 francs; raw silk and yarn, 126,000,000 francs; cotton textiles, 118,000,000 francs; leather, 105,000,000 francs; linen and lingerie, 96,000,000 francs; skins and furs, 94,000,000 francs; leather goods, 83,000,000 francs; hardware and tools, 70,000,000 francs; chemical products, 70,000,000 francs; cheese and butter, 61,000,000 francs; spirits, 48,000,000 francs; refined sugar, 41,000,000 francs. The imports of flax were 86,835,828 kilogrammes; of hemp, 22,753,071 kilogrammes; of jute, 77,183,267 kilogrammes. The imports of cotton yarn were 15,400,000 francs in value and the exports 2,600,000 francs; the imports of cotton cloth, 34,300,000 francs and the exports 117,900,000 francs. The imports of woolen manufactures were 13,600,000 francs worth of yarn and 41,900,000 francs worth of cloth; the exports, 31,100,000 francs worth of yarn and 323,100,000 francs worth of cloth. The imports of silk cloth were 50,200,000 francs and the exports 270,800,000 francs.

The foreign commerce was distributed among different countries in 1895, as shown in the following table, which gives the values of the special imports and exports in francs:

COUNTRIES.	Imports.	Exports.
Great Britain.....	496,000,000	1,000,000,000
Belgium.....	298,000,000	407,000,000
Germany.....	310,000,000	234,000,000
United States.....	284,000,000	289,000,000
Algeria.....	245,000,000	203,000,000
Spain.....	215,000,000	109,000,000
Italy.....	118,000,000	134,000,000
Argentine Republic.....	180,000,000	43,000,000
Russia.....	195,000,000
British India.....	163,000,000
Switzerland.....	163,000,000
Brazil.....	76,000,000

In the general commerce of 1895 the imports by sea were 3,457,000,000 francs in value, of which 1,625,000,000 francs were carried in French and 1,832,000,000 francs in foreign ships; imports by land, 1,462,000,000 francs. Of the general exports 3,176,000,000 francs went by sea, 1,699,000,000 francs in French and 1,477,000,000 francs in foreign ships, and 1,413,000,000 francs were shipped in land vehicles. The transit trade in 1895 was valued at 636,000,000 francs.

The special imports of gold coin and bullion in 1895 were 253,875,195 francs, and the special exports 244,381,198 francs; the special imports of silver were 141,132,976 francs, and the exports 78,459,257 francs; total imports of specie, 395,028,171 francs; total exports of specie, 322,840,455 francs.

Navigation.—During 1895 there were 97,810 vessels, of 20,363,600 tons, entered and 98,416, of 20,714,818 tons, cleared at French ports. Of the vessels entered 8,476, of 4,113,737 tons, were French vessels engaged in the foreign trade, of which 7,694, of 4,000,823 tons, carried cargoes and 872, of 112,914 tons, were in ballast; 19,222, of 9,665,348 tons, were foreign vessels, of which 16,770, of 9,220,572 tons, carried cargoes and 2,452, of 444,776 tons, were in ballast; and 70,112, of 6,584,524 tons, were French coasting vessels, of which 52,983, of 5,525,250 tons, carried cargoes and 17,129, of 1,059,274 tons, were in ballast. Of the total number cleared 8,910, of 4,417,497 tons, were French vessels in the foreign

trade, of which 7,552, of 3,963,773 tons, carried cargoes and 1,358, of 489,724 tons, were in ballast; 19,394, of 9,712,797 tons, were foreign vessels, of which 12,480, of 5,239,061 tons, carried cargoes and 6,914, of 4,373,781 tons, were in ballast, and 70,112, of 6,584,524 tons, were coasting vessels, of which 52,983, of 5,525,250 tons, carried cargoes and 17,129, of 1,059,274 tons, were in ballast.

The merchant marine on Jan. 1, 1896, consisted of 14,386 sailing vessels, of 386,510 tons, and 1,212 steamers, of 500,568 tons. Of the sailing vessels 274, of 136,334 tons, and of the steamers 170, of 266,897 tons, navigated the high seas, while 235 sailing vessels, of 23,991 tons, and 249 steamers, of 180,453 tons, were employed in European seas, and the rest in the coasting trade, the service of the ports, and the maritime fisheries. The French Government offers premiums amounting to 12,500,000 francs a year for the construction, equipment, and navigation of vessels.

Communications.—There are 22,505 miles of railroads of general interest, 2,300 miles of local interest, and 1,413 miles of tramways. The receipts of the national lines in 1895 were 1,293,550,000 francs and the expenses 684,050,000 francs. There were 348,852,000 passengers and 100,834,000 tons of freight carried during the year.

The telegraphs had a total length on Jan. 1, 1895, of 57,574 miles, with 193,184 miles of wire. The number of messages transmitted during 1894 was 41,434,727, of which 33,785,162 were internal, 4,962,534 international, 1,345,426 forwarded in transit, and 1,401,605 official.

The post office in 1894 carried 716,098,000 ordinary letters, 38,000,000 registered letters, 45,974,000 postal cards, and 928,246,000 newspapers, samples, etc., in the internal service and in the international service 98,502,000 letters, 2,147,000 registered letters, 4,144,000 postal cards, and 81,297,000 newspapers, etc. The receipts from the post office alone amounted to 214,311,331 francs; the expenses of posts and telegraphs together, 167,808,136 francs.

Senatorial Elections.—The triennial elections for the renewal of one third of the elective Senators were held on Jan. 3, 1897. Including casual vacancies and the assignment to departments of the seats of deceased life Senators, there were 97 seats to be filled. The Radicals hoped to make a conspicuous inroad in the Moderate majority. In this they were disappointed, for the Moderates won 66 seats, the same number that they had before; the Radicals 10, a gain of 6; the Socialists 3, a gain of 2; and the Conservatives 12, losing 8. The Radicals wrested 6 seats from the Moderates, who displaced as many Conservatives, and the Radicals and Socialists obtained 2 seats previously held by Conservatives.

The Session.—The Chamber and Senate began the legislative session on Jan. 12. M. Brisson was re-elected president of the Chamber without opposition. The Radicals assailed the Government for appointing one of their leaders, M. Doumer, to the post of Governor-General of Indo-China. They carried a majority of Republicans with them when they proposed the demolition or secularization of the Basilica of Montmartre, built by popular subscription and accepted by the National Assembly in 1873, against the votes of the Republicans of that time, as a national monument in sign of the dedication of France to the Sacred Heart in expiation of the causes that had led to the crushing defeat of the French armies. The sermon delivered on the twenty-fifth anniversary of this occasion, when spoke of the sacrilege then committed against the Holy See in Rome, led M. Rouanet to bring in a bill for repealing the act of the Chamber of 1873. The Government was sustained by 332 votes to 196, but withdrew the

measure was approved by the committee. The seat for Lanillis, near Brest, rendered vacant by the death of Monsignor d'Hulst, who succeeded Bishop Freppel as the representative of the Clerical and Royalist cause, was contested by the Abbe Gairaud, a Rallied Republican, representing the reconciliation of the Pope with the republic, and the Comte de Blois, a Royalist. The latter had the support of the anti-Clerical Republicans, but nevertheless the priest won, being zealously supported by his fellow clerics. The Chamber condemned the electioneering of the clergy, holding that under the Concordat they are forbidden to intervene in electoral contests, and consequently annulled the election; but when it was held again, Pere Gairaud was elected anew. The Council of Education approved a proposal for teaching the dangers of alcoholism in schools of all grades.

Admiral Besnard asked for 80,000,000 francs to be expended in six years on new vessels, exclusive of the normal amount granted in the budget for new construction, which was 72,000,000 francs for 1897 and in other years about 76,000,000 francs. The extra expenditure was declared to be necessary owing to the rapid increase of the naval forces of other powers, especially those of the triple alliance. The vessels to be constructed are an 18-knot ironclad turret ship of 12,050 tons, 2 armored 21-knot cruisers of 7,550 tons, 2 protected cruisers of 2,500 tons, 4 torpedo-boat destroyers of 300 tons, and 9 coast-defense torpedo boats of 85 tons. M. Lockroy brought forward a counter-scheme proposing to spend 200,000,000 francs in four or five years, of which 150,000,000 francs would go for new ships, mostly cruisers of a large sphere of action; 40,000,000 francs for fortified naval stations in Diego Suarez, New Caledonia, Martinique, etc.; and 10,000,000 francs for repairing and reconstructing existing vessels. The Minister of Marine was compelled by the action of the Naval Committee to combine this proposal with his own. The committee proposed that 120,000,000 francs be applied to the construction of large armored cruisers and light vessels, 60,000,000 francs expended on torpedo boats, destroyers, and submarine boats, and 17,000,000 francs devoted to necessary repairs of battle ships and gunboats in active service. The need of distant refuge and coaling stations throughout the world was insisted on, and the Government promised to establish such stations, obtaining the necessary funds by the sale of public buildings and lands. The vessels to be commenced were 1 battle ship, 6 cruisers, 4 destroyers, and 9 torpedo boats. The naval budget for 1898 amounted to 284,000,000 francs, an increase of 26,000,000 francs over that of 1897. The sum of 92,000,000 francs is devoted to construction. The new vessels to be begun during the year are 2 battle ships, each to cost 28,000,000 francs, an armored cruiser of 9,000 tons, costing 19,000,000 francs, 5 seagoing torpedo boats, and 6 first-class coast-defense torpedo boats. Public anxiety about the navy was increased after the close of the session by an accident to the gunboat "Bruix," caused by a flaw in the propeller shaft.

The Government carried a bill to raise some money from sugar by increasing the excise duty in order to meet the expense of increasing the bounties. M. Jaures, the Socialist leader, proposed to make a state monopoly of sugar-refining as a substitute for bounties. M. Siegfried suggested lowering the duty as more productive of revenue than increasing it. The Chamber voted to restrict the decorations of the Legion of Honor to 20 grand crosses, 50 grand officers, 250 commanders, 2,000 officers, and 12,000 chevaliers. A Government bill subjects foreigners who neglect to notify the police of a change of residence to a penalty of 50 to

200 francs, the same as for neglect to notify their original residence in France. The Minister of War arranged with the Army Committee that the gradual addition of a fourth battalion to each infantry regiment should not reduce the strength of the existing three battalions. The decline of the French mercantile marine, in spite of bounties equal to half the cost of building ships and premiums on navigation, and the deflection of trade to the railroads and ports of Belgium and Holland, attributed to recent legislation in those countries, was the subject of much discussion. A bill was adopted imposing 1½ franc on each metric ton of merchandise, each passenger, and each head of cattle landed from foreign vessels. A duty was imposed on lead, which will enable French mines, M. Boucher calculates, to supply half of the quantity required. A step was taken in the direction of reforming the secret magisterial inquiries that have been the subject of criticism for nearly a hundred years. Under the French law, as it has hitherto existed, a suspected person may be imprisoned for days, sometimes for months, while undergoing secret interrogation by the magistrate, unable to confer with his counsel, who is as ignorant as the client of the deposition of the witnesses and of the objects of the inquiry. A bill was passed by the Senate providing that any person arrested is to be interrogated within twenty-four hours; that, at this first examination, the prisoner's identity is to be proved and he is to be informed of the offense with which he is charged; that at subsequent examinations he shall not be interrogated nor confronted with witnesses except in the presence of his counsel; and that the magistrate shall not debar the prisoner from all communication with outsiders for more than two periods of ten days.

A Senate bill makes married women valid witnesses to legal documents. The new law decentralizing the universities and emancipating them from the rigid control of the Ministry of Education had the effect of reviving the activity of some of the lesser ones by opening the door to bequests and donations for the endowment of special studies. Each university is to have a council consisting of the rector, the heads of faculties, and delegates elected by the professors, which council will have control of the teaching, discipline, and property of the university, subject in some cases to the Supreme Education Council. The state will continue to pay the stipends of professors and to receive the fees for examinations and diplomas; the university will have the students' fees, and from these and endowments must maintain the buildings. The degree of Doctor can henceforth be worn by foreigners as well as Frenchmen, but a very high examination must be passed before it can be awarded to any one. M. Bérenger extracted a promise of a stricter censorship over some of the Parisian places of amusement, but the Minister of Education was averse to fettering the freedom of artistic productions or that of the city of pleasure in which foreigners found delight, while the laboring people of Paris constituted a different city, one that would meet the tests of the best civilization. A bill of M. Bérenger that passed the Senate imposes the punishment of imprisonment from a month to two years and a fine of from 100 to 5,000 francs for circulation of indecent speeches, songs, books, drawings, emblems, or objects inciting to debauchery. The budget was passed, with no material changes from previous budgets, before the Chamber adjourned on April 12 to meet again on May 18. The burning of a charity bazar on May 4, by which the Duchess d'Alençon and 130 others lost their lives, led to an examination of the arrangements for safety in case of fire in all the theaters and public halls of Paris, which

resulted in alteration of the Opera, the Trouaders, and numerous others.

An interpellation by the Socialists on a labor strike at Grande Combe ended in tumult and the abrupt termination of the sitting. Gerault Richard, being pointed out by members of the Right as interrupting, denounced them as spies, and for this insult was suspended by a vote of the house and led out by soldiers sent for by the president. Turning then on M. Brisson, the Socialists, to whom he largely owed his seat, shouted to him to resign, declaring him as reactionary, rascal, and traitor. The proposal by M. Cavaignac of an income tax as an amendment to the bill renewing the direct taxes was negatived by the narrow majority of 282 to 249. The Cadenas bill empowering the Government to levy duties without previously obtaining the consent of Parliament was passed by 425 votes to 110. A bill was voted for the relief of land taxation.

The principal act of the session was the bill for renewing the privileges of the Bank of France. The Radical and Socialist amendments for creating a state bank or for reducing the Bank of France to the complete control of the Government were rejected. The Radicals carried an amendment disqualifying the governor and deputy governor of the bank from sitting in Parliament. Near the close of the debate, having failed to elicit any particulars regarding the agreement between the Government and the bank in the event of war, excepting a statement that all eventualities had been provided for and that in any case war would entitle the Government to take all requisite measures, the Radicals proposed a clause enabling the Government to draw on the bank to any extent necessary for the national defense, and, when this was rejected, a second amendment giving the Government in the event of war the entire management of the bank. Both houses were prorogued on July 20.

The Panama Scandals.—Emile Arton, the lobbyist who distributed bribes among the Deputies to secure support for the Panama Canal Company's projects, before his sentence of two years' imprisonment was confirmed promised to reveal the names of recipients of 2,000,000 francs of the bribery fund. His disclosures implicated many of the sitting Deputies, each of whom demanded a suspension of his parliamentary immunity in order that he might meet the accusation before the tribunals. This was done in the cases of Deputies Naquet, Maret, and Boyer, but the Minister of Justice said that no case could yet be made out against Deputies Rouvier, Salis, Clovis Hugues, Goirand, and Jullien, as to whom Arton affirmed that he had intrusted money to a third party to be paid over to them. The Senate removed the parliamentary immunity of M. Levrey. The papers of M. Vian, ex-Deputy, were seized. M. Rouanet, the Socialist, proposed that a new parliamentary commission be appointed to probe the Panama affair to the bottom. The Prime Minister deprecated the reopening of the investigation, at least for the present, and promised that the documents brought together by the magistrates would be communicated to the Chamber. The Chamber approved deferring the investigation while judicial investigations were proceeding, but voted in favor of appointing a new commission within three months. At the end of June the commission was appointed, all the parties being represented on it in proportion to their numbers. M. Quesnay de Beaupre, who was public prosecutor at the time of the trials and was now a magistrate, refused to testify before the Committee of Inquiry. Ex-Minister Baillaut underwent imprisonment for failing to pay the fine imposed, for which M. Blondin and Charles de Lessops, who were abroad, were declared jointly responsible, and he was released after the

inquiry began, having secured his term. Arton declared that the police agent he had promised that he would be let off easily, but was disappointed. The Minister of the Interior refused to divulge the police reports on the Arton case, or search for Arton. Dr. Cornelius Herz, who the English Government had refused to extradite, offered to reveal the whole truth and deliver up all documents and the whole correspondence if the members of the committee would come to him at Bourne-mouth. He threatened to reveal important state secrets, and declared that the revelations would prove his own innocence. Already he had presented as an American citizen a claim against the French Government of \$5,000,000 for false imprisonment in England on a charge of swindling. When the members of the commission were on the point of going to Bourne-mouth, Dr. Herz, in answer to their telegrams, backed out, postponing the meeting and imposing unacceptable conditions. The judicial investigation of the fresh evidence proceeded at the same time with the parliamentary inquiry. Others besides those already indicated were implicated, among them Camille Richard, ex-Deputy for the Drôme, who committed suicide on Aug. 31 to avoid prosecution.

The Dual Alliance.—A formal treaty of alliance between France and Russia is believed to have been the subject of negotiations since 1889, when the understanding between the two countries was first established. In the beginning of 1894 President Carnot and M. Casimir-Périer, then Premier, are said to have signed a military convention, while continuing negotiations for a definitive treaty until M. Carnot's assassination. These negotiations, resumed for a brief period by President Casimir-Périer, afterward actively carried on during M. Faure's presidency by M. Hanotaux and Prince Lobanoff, and after the latter's death resumed once more after the Czar's visit to Paris by Count Muravieff, are supposed to have resulted in a definitive treaty, which awaited President Faure's return visit to the Czar to be signed by the heads of the two governments and by the ministers, M. Hanotaux and Count Muravieff. In the summer of 1897 President Faure paid his visit to the Czar. At the gala dinner given for his reception at the Peterhoff Palace, on Aug. 23, the Czar expressed the hope that the sojourn of the President of the republic in Russia would "draw still closer the ties of friendship and deep sympathy that unite France and Russia," and M. Faure, in responding to the toast, said that in obedience to the profound sentiment of the entire French nation he had come "to affirm and draw still closer the powerful ties" uniting the two countries. At the farewell banquet, given on board the flagship "Pothuau," on Aug. 26, before the French squadron sailed for home, President Faure spoke of "two friendly and allied nations, guided by a common ideal of civilization, law, and justice," uniting in a brotherly manner in a most sincere and loyal embrace, and the Czar in answering this toast said, "I am happy to see that your stay among us creates a new tie between our friendly and allied nations, who are both equally resolved to contribute by everything in their power to the maintenance of the peace of the world in a spirit of justice and equity." These phrases demonstrated to the world that then, if not before, France and Russia stood united by a sincere bond in a common policy and allied for its maintenance.

Colonies.—Algeria and the French Sahara were represented in the Senate and Chamber. Algeria has an administration and laws independent of the colonies proper, and is considered as a distinct portion of France. The other possessions are governed under the direction of the Minister of the

Colonies, except the protectorate of Tunis, which is under the Minister of Foreign Affairs. The total area and population of the colonies and protectorates are given in the following table:

DEPENDENCIES.	Square miles.	Population.
Algeria.....	181,174	4,125,000
Tunis.....	45,000	1,500,000
Senegal, French Soudan, Guinea, and Gabon.....	514,000	5,000,000
French Congo.....	258,000	5,000,000
Sahara.....	1,000,000
Réunion.....	970	171,780
Comoro Isles.....	620	53,000
Mayotte.....	143	8,700
Nossi Bé.....	113	7,800
St. Marie.....	64	7,670
Obock and Somali coast.....	46,320	200,000
Madagascar.....	227,750	3,500,000
French India.....	197	286,910
Cochin-China.....	22,950	2,126,330
Annam.....	81,000	6,000,000
Tonquin.....	122,000	12,000,000
Cambodia.....	40,000	1,500,000

The special trade of France with the colonies in 1895 amounted to 120,272,790 francs of imports, and 103,632,550 francs of exports, not including the trade with Algeria and Tunis, which would bring the total up to 399,872,000 francs of imports and 326,980,000 francs of exports. The commerce of the several colonies for the latest years reported was, in francs, as follows:

COLONIES.	Imports.	Exports.
Senegal.....	13,866,000	17,985,000
French Guinea.....	4,893,000	5,222,000
Ivory Coast.....	3,124,000	4,070,000
Dahomey.....	10,772,000	9,974,000

Oceania.....	2,585,000	3,141,000

The expenditure of France for the colonies in 1897 amounted to 33,036,013 francs and the revenue from the colonies was 7,892,000 francs, including 4,690,000 francs from Cochin-China, 600,000 from the penal establishment, and 691,110 francs from the various colonies, besides 185,000 francs of contributions toward expenditures occasioned by the colonies. The above sum does not include Algerian expenses and contributions nor expenditure of the Ministries of War and Marine in the colonies.

The Algerian population includes 271,101 French, 47,564 Jews, 3,554,067 native Algerians, and 18,617 Moors and Tunisians. The revenue for 1897 was 52,147,194 francs, of which 12,286,089 francs came from direct taxes, 13,800,310 francs from registration and stamps, 13,072,025 francs from customs, 5,492,310 francs from monopolies, 2,986,700 francs from domains and forests, 1,125,840 francs from various sources, and 3,383,920 francs were *recettes d'ordre*. The total expendi-

ture was 71,219,959 francs, of which 2,771,250 francs were for justice, 11,194,632 francs for the interior, 7,718,066 francs for instruction and worship, 1,394,750 francs for agriculture, 31,143,175 francs for public works, 696,078 francs for various administrations, 15,360,208 francs for *régie*, etc., and 935,800 francs for repayments. The Nineteenth Army Corps, forming the military force of Algeria, consists of 3 regiments of zouaves, 3 regiments of tirailleurs, 2 foreign legions, 3 battalions of light infantry, 3 discipline companies, 3 companies of cavalry remounts, 12 batteries of artillery, 3 companies of engineers, 9 companies of train, and the staff and recruiting corps. A new force, consisting of spahis and tirailleurs has been formed for the defense of the southern Saharan frontier.

The value of the imports in 1895 was 280,643,273 francs, of which 222,594,350 francs came from France and 58,048,923 francs from foreign countries. The exports were valued at 307,787,357 francs, of which 253,293,225 francs went to France and 54,494,132 francs to other countries. The principal exports are wheat and flour, iron ore, esparto fiber, cork, wine, and fruits and vegetables. The length of railroads in 1896 was 1,820 miles.

Tunis has been a French protectorate since 1881. The French Government is represented by a Minister Resident, at present R. P. Millet. The Bey of Tunis is Sidi Ali, born in 1817. A body of 11,300 French troops occupies the country, the cost of which is borne by France. The ordinary revenue for 1897 was estimated at 23,676,100 francs, of which 7,800,000 francs come from direct taxes, 8,000,000 francs from customs, 5,682,300 francs from monopolies, 1,305,500 francs from domains, and 797,700 francs from various sources. The expenditure was estimated at 23,675,256 francs, of which 1,851,900 francs were for civil list and pensions, 9,842,500 francs for finance and debt, 3,431,504 francs for administration, 4,342,000 francs for public works, and 4,207,352 francs for various expenses. The debt amounts to £5,702,000 sterling, paying a perpetual *rente* of 6,307,520 francs. The imports in 1895 were valued at 44,085,945 francs and the exports at 47,525,784 francs. Of the imports, 24,691,033 francs came from France and Algeria, to which 30,927,267 francs of exports were destined. The chief exports were of the following values: Cereals, 14,692,000 francs; olive oil, 6,883,000 francs; cattle, 2,710,000 francs; wines, 2,635,000 francs; hides, 2,051,000 francs; tan bark, 1,844,000 francs; fruits, 1,448,000 francs; fish, 1,205,000 francs; textiles, 1,457,000 francs; esparto grass, 1,057,000 francs; zinc, 1,057,000 francs.

Agreements with Germany and other countries enabled the French Government to abolish the capitulations and to regulate the customs tariff. There were ten of these conventions, beginning with the one concluded with Austria-Hungary on July 20, 1896, and ending with that signed on May 5, 1897, with Sweden and Norway. The acceptance of this treaty by Italy went far to restore cordial relations between that country and France. While the Anglo-Tunisian treaty of 1875 remained still in force the other countries, which under the new agreement received the most-favored-nation treatment, with the exception of France, paid the regular 8-per-cent. duty on imports fixed in that treaty. The new treaty to be negotiated with England would fix the future duties for all countries, but by the stipulations in the Italian treaty the rate was not to exceed the French minimum tariff except in certain articles. This new Anglo-French treaty, after fourteen months of negotiations, was signed at Paris on Sept. 18. The old treaty was of indefinite duration, and in exchange for the concession which Great Britain made in terminating it Tunis

agreed to reduce the duty on British cotton goods to 5 per cent. *ad valorem* for fifteen years. As to all other goods, France was at liberty to fix any duties she liked, and England obtained no other concession for agreeing to the abolition of the capitulations and consular jurisdiction. The treaty remains in force for forty years. The free importation of Tunis cattle, wine, and oils into France is limited by annual decrees, and imports of fruit, cereals, horses, and other products are rendered impossible by the prohibitive tariffs. Efforts have been made to open up new markets for the oils, cereals, and wines of the protectorate in England, Sweden, Norway, and Russia. The new harbor at Sfax was opened in the summer of 1897. A railroad has been built between Bizerta and Zaghan, where there are valuable mines. The old fortifications at Bizerta will give place to new ones enclosing a larger area, and an arsenal and graving docks are to be built at a cost of 14,000,000 francs, of which Tunis will contribute 2,000,000 francs and the French Government the rest. The military harbor will be at Sidi Saad, at the extremity of the lake, 7 miles from the sea, and the canal leading to the lake will be fortified.

The French establishments in India are the towns of Pondicherry, Karical, Shandernagar, Mahé, and Yanam, with their dependant districts. The local revenue in 1896 was 1,609,415 francs. The chief export is oil seeds.

French Indo-China comprises Cochinchina, Tonquin, Annam, and Cambodia. There are 23,370 troops in Annam and Tonquin, of whom 14,500 are natives. The products of Annam are rice, maize, areca nuts, cinnamon, tobacco, sugar, betel, silk, manioc, timber, caoutchouc, dyes, and drugs. Tonquin produces immense quantities of rice for export, chiefly to China. Other products are sugar, silk, cotton, pepper, and oils. The railroad from Phulang to Langson, 64 miles long, is being extended to the Chinese frontier at Nacham. The transit trade to Yunnan has amounted to 5,000,000 francs and the transit trade from there to 3,200,000 francs. The local revenue of Annam and Tonquin in 1895 was \$7,570,000; the expenditure of France in 1897 was 24,200,000 francs.

M. Doumer, the new Governor General of Indo-China, induced the King of Annam to sign a decree abolishing the office of Viceroy of Tonquin and transferring its functions to the French Resident, who takes full charge of the Annamite administration in Tonquin. In Cambodia, where the political situation was disturbed for some time, the Governor General obtained important concessions from the king of that country. Frenchmen and French subjects who are not natives of Cambodia will always be subject to French jurisdiction. The rights of private property are recognized, and slavery is abolished. The execution of the king's decrees will henceforth be subject to the approval of the Resident General.

New Caledonia is a French penal colony. The population in 1896 consisted of 8,384 European civilians, 10,757 convicts, 1,506 military, 3,041 Asiatics, and 27,345 natives. The chief exports are nickel, preserved meat, chrome ore, and silver-lead ore. Attached to the administration of New Caledonia are the Isle of Pines, the Loyalty Archipelago, the Huon Islands, the Chesterfield Islands, and the Wallis Archipelago. The French establishments in Oceania are the Society Islands and the neighboring Marquesas, Tuamotu, Gambier, and Tubuai groups, and Rapa Island. The colony of Tahiti with its population of 25,000 depends on the outside world for nearly all the necessaries and all the luxuries. The United States is the main source of foodstuffs and the leading importing country. Of

late the canned meats of Australia and New Zealand have begun to displace those of Chicago, while American prints and calicoes of the cheaper grades have ousted those of Manchester manufactures, being free from dressing and of faster colors. An improvement in trade has followed upon increased production of mother-of-pearl at Puanahia, with higher prices for the shells. Copra and vanilla are the principal other exports.

After hostilities lasting seven years the rebellion in Raiatea and Huahine was put down in the early part of 1897. Queen Nanae and her chief men were captured by the transport dispatch boat "Aute" and the "Caroline" after a severe fight, in which 36 natives were killed and 16 drowned. The queen and 136 chiefs were sent on Feb. 28 into exile for life in New Caledonia, and an armed French force remained in charge of the islands. (See MADAGASCAR, WEST AFRICA, WEST INDIES.)

FRIENDS. The "Independent," New York, in its statistics of the churches of the United States for 1897, gives the following numbers for the several branches of the Society of Friends: Orthodox, 1,208 ministers, 830 churches, and 90,921 members; "Hicksite," 115 ministers, 201 churches, and 21,992 members; "Wilburite," 38 ministers, 53 churches, and 4,329 members; Primitive, 11 ministers, 9 churches, and 232 members; total, 1,462 ministers, 1,093 churches, and 117,474 members. For all the branches except the Orthodox, the numbers returned in previous years are repeated. The increase shown—of 148 ministers, 6 churches, and 485 members—belongs therefore to the Orthodox branch.

The third General Conference of Friends in America was held in Indianapolis, Ind., in October. O. Edgar Nicholson presided. Unlike the two former conferences the proceedings of this meeting were conformed to a definite prearranged programme. In the discussion of the first subject, "The Theory and Practice of Quakerism," the mission of the Society of Friends was set forth to be to represent New Testament Christianity without encumbering additions or weakening subtractions. Long and careful consideration was given to the subject of forming a central organization with authority in a limited sphere, which will bind the yearly meetings together for more effective work on common lines. In the end the Conference declared its belief "that much benefit would result to our branch of the Church of Christ from such a union of our yearly meetings as would tend to protect them from common dangers and to strengthen their joint participation in Christian work. We believe much could be accomplished by the yearly meetings conferring upon future conferences limited legislative authority within distinctly defined spheres that would not interfere with the autonomy of the yearly meetings in their relation to their own members or to their separate interests." A committee was appointed to formulate a plan for closer union and to prepare a discipline to go into effect under similar conditions.

Friends' Missions.—The foreign mission work of American Friends began in 1871, when missionaries were sent by Indiana Yearly Meeting to Matamoros, Mexico. Other yearly meetings followed, until now nearly every one has its foreign-mission committee, and nearly all have work directly under their control. The reports for 1896 showed that work was carried on in 13 principal stations in Mexico, Japan, Palestine, India, China, Jamaica, and Alaska, with 48 subordinate stations, 41 foreign missionaries, 14 recorded as ministers, 2 missionaries, 9 native ministers, 91 native helpers, 21 churches, 882 native members, 104 native converts during the year, 1,262 attendants not members, 120 Sunday schools, with 1,211 pupils, and 34 day schools, with

1,030 pupils. For the support of this work American Friends gave \$30,311, slightly in excess of 33¢ cents per member, or 12½ less than the amount *per capita* (\$4.20) by English Friends.

Acts of Yearly Meetings.—The Philadelphia Yearly Meeting this year sent out epistles to other meetings for the first time since 1857. Two epistles were sent out—one addressed to all meetings bearing the name of Friends and to Friends who "may be members of them," and one to the smaller or Barnesville Yearly Meeting in Ohio, addressing the members as "fellow-believers who had adhered to the doctrines of the faith," and exhorting them to continue a concern for those who have gone astray. This step marked the end, in sentiment, of a split in the orthodox branch of the society of forty years' duration. It occurred in the Ohio Yearly Meeting, and was the occasion of such a difference of opinion in the Philadelphia Yearly Meeting that it was evident that the sending of an epistle to either body in Ohio would produce a separation at home. To avoid the difficulty the meeting decided "to suspend all epistolary correspondence for the year." The suspension continued till the present time, when the correspondence has been renewed without objection. The Indian Committee reported an attendance of 45 pupils at the Indian boarding school in Tunessa, N. Y., with 70 waiting for admission. The Indian Aid Association had a boarding school at Skiatook, Indian Territory, with about 80 pupils. A report was read from a third boarding school, and aid had been given to 6 family and 13 meeting schools.

In the New York Yearly Meeting the Home and Foreign Mission Board reported concerning work in Mexico; at High Point, N. C. (school for colored boys and girls); and among the Seneca Indians of Indian Territory and the Indians of Herpa valley, Cal. The legacy of Lindley Murray, originally of \$34,000, had been increased in sixty-three years to \$54,700, and was still applied according to the plans of the givers, with practical benefits bestowed upon Indians, colored people, and the oppressed and degraded of other races. The Book and Tract Committee, whose work had continued through one hundred and fourteen years, distributed literature "likely to promote the principles of truth, virtue, and our Christian testimony" in nearly all the yearly meetings of America. The Evangelistic Committee had held 22 series of meetings, resulting in nearly 100 accessions to membership. The Woman's Foreign Missionary Society was supporting 3 girls and 1 young man at the training schools in Japan, 6 girls at Ramallah, 3 boys in India, and 1 in China, a mission work at Yokohama, Japan, and had given aid to the Armenians and the Jews.

In the New England Yearly Meeting the women, having held a single separate session, informed the joint session that they thought no separate session would be needed at the next meeting.

The Foreign Missionary Board of the Oregon Yearly Meeting reported concerning work at Kake island, Alaska. In connection with the report of the Peace Association of Friends in America, the introduction of the military system into the schools and colleges was deplored. The resolutions of the meeting upon temperance regard total abstinence not alone as a means whereby each man protects himself, but also as one of the means by which he may aid in protecting others, and in the trying conditions of the present day as a patriotic as well as a Christian duty.

London Friends.—The London Yearly Meeting met in May. The year had been one of rather larger growth than usual in membership, an increase of 200 members and 800 recorded attendants of meetings being returned. The total membership was 16,670 in

Great Britain, and it appeared that the society was more than keeping pace with the growth of the population. Only about one fourth of the new members, however, were members by birth. In a discussion of the report of a committee of visitation appointed in 1896 to visit all the meetings on ministry and oversight, it was recognized that Quaker ministry, all impromptu as it is, has always been weakest on its expository or intellectual side; and the problem of combining the freedom of operation of the Divine Spirit upon the preacher's heart at the time with the intellectual fullness and state of preparation possessed by preachers of the sister churches was acutely felt. Some speakers pleaded for the permission of more variety in ministry, and held that there was much service of the utmost value which would be considered unfit for Friends' meetings. Strong expression was given, however, to the sentiment that there should be no lowering of the standard of Friends' warrant for preaching, no preaching for the sake of occupying the time or for the sake of avoiding long silences, or because strangers were present who would not understand an hour's silent meeting. The need was considered of some means of bringing into communion with the membership the thousands of adult scholars who were practically convinced of the principles of Friends, and yet hesitated to join them. Of course great care should be exercised, as is done in admission; but some closer, some intermediate stage, might perhaps bridge the gulf. The subject was referred to the Home Mission Committee to make inquiry and tabulate the results for contemplation at the next Yearly Meeting. A plea was made for the recognition of the "Hicksite" Friends in America, who differ from the orthodox Friends on important theological questions, but nothing was done with reference to it. The meeting directed the abolition of the queries which were now publicly answered every year concerning the numbers attending the several yearly meetings. Reports were received from the foreign missions in Madagascar, India, China, and from the industrial mission to freed slaves at Pemba, near Zanzibar. About 90 missionaries were sustained in these countries and in South Africa, Constantinople, and Syria. At this meeting, in pursuance of and under an order made in 1897, men and women met together in the meetings on a footing of perfect equality.

A summer school of theology was instituted under the auspices of individual Friends and held at Scarborough, Aug. 4 to 18. Its purpose, as expressed in the circular of its promoters, was to "stimulate thought, promote helpful reading and study, and awaken in the society a fuller conception of the place in the service of Christ of the trained and consecrated intellect." It was attended by 700 men and women accustomed to minister in meetings for worship or to teach in the Sunday schools. Lecturers were invited from different denominations, each an expert in his special field. Two of them were from the United States. The programme included lectures or courses on "The Literary Study of the Bible"; "Assyriology"; "The Old Testament Canon, the Prophets, the Exile, and Post-Exilic Thought"; "The Logia of Jesus," just discovered (by Mr. Grenfel, the discoverer); "Early Christianity in England"; "The Bible and the Spirit"; and "The Early Poetry of Israel and the Book of Jonah."

The 308 schools for working men and women of London Yearly Meeting, which are the society's chosen form of home missions, were attended by 43,376 pupils, of whom two thirds were adults; 1,600 members had been added to them during the year, and 16 new schools had been begun.

C

GEOGRAPHICAL PROGRESS IN 1897.

The Arctic Regions.—The Jackson-Harmsworth expedition, the progress of which was described in part in the "Annual Cyclopaedia" for 1896, returned from Franz Josef Land in September, after an absence of three years. The story of the return and the explorations of the past year are given briefly as follow:

"Having practically completed the exploration of Franz Josef Land, with the exception of some odd corners, we left Cape Flora on Aug. 6. It was toward evening when we sailed, and before leaving I carefully sealed up Elmwood, which had been our home for three years. With the exception of our luggage, specimens, etc., we left Elmwood just as it had been during our stay. The windows were carefully boarded and nailed up, the door, to which I fastened a Union Jack, was carefully protected by two spars, and a flag was left floating on the pole at Flagstaff Point. I also left behind, for the use of subsequent explorers, six tons of coal and anything that I considered might be useful. In the room of our living house I left a quantity of supplies, in case Andr   should turn up in that region. Of course I did not know of the safety of the 'Fram' until the arrival of the 'Windward,' and I had established a depot on Bell island in Leigh Smith's old house, in case any of Nansen's companions should have gone in that direction. This contains a good supply of provisions, and can be easily found, the house being on a prominent part of the island. After leaving Elmwood we steamed north-west for 50 miles, but saw no indication of land. The water was very open, and there was less ice than I had ever seen before. We landed at Cape Mary Harmsworth for a few hours, and collected some specimens from a low spit projecting beyond the ice-covered cape. This was done with the object of refuting or confirming the opinion I had formed in the spring that Gillis Land has no existence in the position assigned to it on the charts. We then steamed within 10 miles of the situation given for the east coast of the eastern Johannesen island in very clear weather, but failed to see any land. South of Bear island we met with bad weather, but, thanks to the skillful navigation of Capt. Brown and the staunch little 'Windward,' we have reached home safely."

Speaking of the work of the expedition since the departure last year of the 'Windward' with Dr. Nansen, Mr. Jackson said:

"We passed the winter (1896-'97) very busily, happily, and comfortably. Scientific observations and researches of all kinds were conducted to the utmost extent. The winter was less severe and less windy than usual. On March 16 Mr. Armitage and I left with sledges and two teams, consisting of the pony and 13 dogs, to go round western Franz Josef Land and define its limits. We met with bad weather at the very outset, and found the snow lying deep and soft, with very trappy, rough ice on the western side of the British Channel, up which we laid our course. On March 28 we discovered a new headland and fjord, and on the 29th we rounded the northeast extremity of the western land and proceeded west, having explored all the western shores of the British Channel to the Queen Victoria Sea. The weather continued exceedingly bad, with almost constant gales and driving snow, and with temperatures often more than 40° below zero, which played havoc with our animals. On

April 7 we had lost all but 5 dogs, when, north of the head of Cambridge Bay, and on the 10th we were forced to take to the high glaciated land as open water up to the glacier face cut off all advance upon sea ice. On the 12th our pony died, which necessitated leaving behind all equipment not absolutely essential. The weather, at an altitude of 1,500 feet, now grew worse than ever, with exceedingly dense and constant mist, in addition to gales and driving snow. On the 19th we descended the high glaciated land behind Cape Mary Harmsworth (the land does not extend west of the point, and no land could be seen during the short, clear intervals anywhere off the coast) from an altitude of 1,500 feet. We crossed over behind Cape Lofley, as the sea ice was broken up all along the coast, and kept us on the glacier, and found a little fast ice at the head of Weyprecht Bay, stretching toward Cape Ludlow. On approaching the cape we again met open water, which obliged us to climb the high glaciated land behind the cape. In Weyprecht Bay we left a canoe behind, as we could not get along with it, owing to the badness of the ice. The weather continued excessively bad, and gales gave us no rest. Above Cape Ludlow I shot the only bear we had seen, which supplied us with meat and blubber for cooking. On April 29 we rounded Cape Neale. We encountered exceedingly rough ice crushed up against the land. To get along at all, we had to avail ourselves of every minute of fine weather offered to us, and frequently marched for twenty-four hours at a stretch, marching from the time one gale ceased until another began.

"The rough ice of the sea and the steep inclines of the glaciers forced us for a great part of the journey to go three times over the same ground. On May 3 we crossed Gray Bay, but on approaching Cape Grant we were again cut off by open water and had to climb the steep glacier behind, hauling our sledges with a purchase up the glacier face (45 feet) aided by a snow drift, and descended at the head of the bay to the west of Cape Stephen. On May 5 we reached Bell island, where we were met by Dr. K  ttilitz and Messrs. Bruce and Wilton, who had brought a sledge with provisions to look for us, and had got anxious, as we were nearly a fortnight overdue.

"This journey was successful in every way, but had occupied two months. We had only thirteen and a half fine days. After staying at Elmwood for ten days to refit, Mr. Armitage and I started off east, taking with us, however, no canoe or boat, as we could not carry it and go along rapidly. We covered 21 miles the first day, but on the second, when nearing Cape Cecil Harmsworth (southeast extreme of Hooker island), the ice became very thin, and when within 400 yards of the cape the sledge broke through, and in spite of our utmost endeavors we lost all our provisions and dog meat except the food which we had kept for lunch, and all our cartridges were wetted. As we could not reach the shore, owing to the very thin ice, we retraced our steps and tried to approach Hooker island, farther to the west, with the intention of crossing the glacier to Cape Cecil Harmsworth, to ascend it and map in the neighborhood of Bell island from there. But whenever we approached Hooker island very thin ice stopped us, and on advance east also being cut off, we returned. Open water was visible in many places, and the ice generally was remarkably thin. The

less of our provisions we were compelled to march twenty-five and three fourths hours consecutively, and in that time covered 42 miles, completing the 20 miles back to Elmwood the next day.

In the course of this journey Mr. Jackson solved a most interesting geographical problem, for he not only determined the northern coasts of Franz Josef Land, hitherto absolutely unknown, but he was also able to decide the problem of Gillis Land. It is now quite clear, at any rate, that this much-discussed land does not lie where arctic geographers have been in the habit of putting it. This journey, in spite of the comparatively short march subsequently undertaken by Mr. Jackson, practically completed the map of what may be called British Franz Josef Land. The main points of this map have completely revolutionized all old ideas of Franz Josef Land, for Mr. Jackson has swept away a continental mass of land, and in its stead placed a vast number of small islands; where lofty mountains were supposed to be Mr. Jackson found the long, ridged hummocks of arctic ice pack; and, most curiously of all, perhaps, to the north of these frozen areas he discovered an open sea which is at present the most northerly open sea in the whole world. It has been named the Queen Victoria Sea.

Other discoveries in the vicinity of Franz Josef Land are reported in the Dundee "Advertiser" as having been made by Capt. Robertson, of the Dundee whaler "Balena." "Cruising along the south coast, Capt. Robertson discovered several islands which had not been mapped either by Leigh Smith or Jackson. The largest of these was about half a mile long. It was visited in a boat by the first mate, who planted a pole, upon which was carved the name of the whaler, and thus, in all likelihood, it will be christened by those responsible for such matters. Between Franz Josef Land and Spitzbergen, in latitude 79°, the charts show two islands which are said to have been discovered by Capt. Johannesen and Andreassen in August, 1884. The "Balena's" homeward course lay toward these islands, but instead of land in the locality in question there was found to be 100 fathoms of water, so that the existence of the islands must either be erroneous or they have since been engulfed. Capt. Robertson describes the scenery of Franz Josef Land as very wild and romantic. Highland, broken at frequent intervals by great glaciers, meets the eye on every hand, but the country is not so bleak in the summer months as one might imagine. There is plenty of grass and great variety of mosses and flowering plants. Of bird life there is abundance, the most plentiful species being the loon. The chief inhabitants of the waters were walrus, the pursuit of which led Capt. Robertson to these far-off regions. They were found congregated in little colonies on the ice, and were dispatched with the rifle."

The balloon voyage of Salomon August Andrée to the polar regions, which was originally planned to begin in 1896, but was postponed to 1897 on account of unfavorable climatic conditions the former year, has awakened the greatest interest, and tidings from him have been watched for with anxiety throughout the civilized world. Before setting out Herr Andrée had his balloon enlarged in Paris, making it 23 by 22 metres in size, with a capacity, in round numbers, of 5,000 cubic metres. The expedition left Gothenburg, May 18, for Danes' island, north of Spitzbergen, where the balloon was revarnished and filled with hydrogen, the filling occupying eighty-nine hours. On July 11, the wind being favorable, Herr Andrée started, accompanied by Nils Strindberg and Knut H. E. Frænkel. When asked when news from him might be looked for,

Herr Andrée said: "At least not before three months; and one year—perhaps two years—may elapse before you hear from us, and you may one day be surprised by news of our arrival somewhere. And if not—if you never hear from us—others will follow in our wake until the unknown regions of the north have been surveyed."

These details are taken from an article in the "Century" magazine for November, 1897, by Jonas Stading, who was with the balloonists at Spitzbergen. He says further: "In the month of January, 1896, the owners of the Stockholm daily 'Aftonbladet' bought 104 trained carrier pigeons in Holland, and sent them to the most northern lighthouse in the world, Fruholmen, Norway, in the same latitude as North Cape, where they were kept until the expedition started from Tromsø on June 14, 1896. There being no carrier pigeons in Norway, and no time for training a new stock, which would have taken two or three years, it was necessary to use pigeons from another country. During April and May, when both day and night had become light, several of these pigeons were sent with fishermen and whalers out into the polar sea, and then set free. Several flew south; one of these was caught, three days after its escape, 1,000 miles south of the starting point. The pigeons that had laid eggs at their new home almost invariably returned there. About eighty that thus seemed to feel at home in Norway were selected and sent last year with the expedition to Spitzbergen. A large number of these pigeons were sent up at different times from Spitzbergen, and all, except three which stayed, flew first high, and then south. None, however, were captured in Norway; but carrier pigeons were seen both in northern Norway and in Sweden at times corresponding with the flight of the Spitzbergen messengers. On our return in 1896 from Spitzbergen to Tromsø the remaining carrier pigeons, which had thriven admirably in the polar regions, were left in the last-named town during the past winter; and thirty of the strongest and best were sent back this summer with the balloon, being lodged in small two-storied baskets fastened under the balloon above the stores. It is, of course, very doubtful whether these carrier pigeons will ever reach inhabited parts of the globe, but they might alight on vessels in the arctic seas."

Reports have come from time to time of the taking of pigeons supposed to be from Andrée, but some of them seem to have been from among a large number of birds released by pigeon-flying associations in the vicinity of Heligoland. A pigeon, shot by one of the crew of a sealing vessel some time previous to July 22, was reported to have carried a message, signed by Andrée, addressed to the "Aftonbladet," Stockholm, and reading: "Eighty-two degrees passed. Good journey northward." Still another pigeon dispatch was brought to Hammerfest by a whaling ship, reading: "July 13, 12.30 p. m., latitude 82° 2' north, longitude 12° 5' east. Good voyage eastward. All well." As the first three days were expected to be the most dangerous, this dispatch was regarded as auguring well for the success of the expedition. It indicated that the explorer had gone across the open sea north of Spitzbergen in safety and reached the beginning of the pack ice. There were also reports that the balloon had been seen, but none of them gained credence. The most probable of these was one that it had been seen by inhabitants of a village in the district of Jeneseisk, in arctic Russia, on the night of Sept. 14. Some shipwrecked sailors reported that they had heard mysterious cries of distress, Sept. 22, off the Dammands isles west of Spitzbergen, and the next day saw a driving reddish-brown object on the sea a mile from land. They were unable to go to see what

the cry came from, as their boat was small and the sea was rough; and the captain who picked them up thought the noise came from a bird. On their report a relief ship was sent out under Paul Bjorveg, but it returned Nov. 20, having found no traces of the explorer. The supposition is that the cries came from birds, and that the object seen was a dead whale.

Dr. Nansen's story of his adventures appeared this year in "Farthest North," a book in two volumes with photogravure illustrations and maps; and the explorer has lectured to large audiences in Great Britain and America. Dr. Nansen has asked permission to name the Siberian peninsula, discovered by him, after King Oscar of Sweden. The King and the Russian authorities have given their consent.

In a lecture at Christiania, Dr. Nansen said the best course for another expedition would be through Bering Straits in a northerly and northeasterly direction. The explorers could then drift in the ice with the current, which would bring them out on the coast of Greenland.

The Cullum geographical medal, instituted by Gen. George W. Cullum, late vice-president of the American Geographical Society, was conferred in January on Lieut. Robert E. Peary, in recognition of his services in arctic exploration. Lieut. Peary made a voyage to North Greenland in the summer to establish a settlement there to be used as a base of supplies for an expedition in 1898. Of the result of this he said:

"What I consider the most important discovery was my finding of the relics of Greely's expedition. These I found on Cape Sabine. We touched Meteoric island on Aug. 30, and proceeded to get the meteorite which we had discovered before on board the 'Hope.' It was just large enough to go into the hold. It measured 12 by 8 feet, and weighed 100 tons. It is a beautiful specimen; in fact, the best I ever saw. I have tested it, and I find that the composition is almost similar to that used in plate armor on United States war ships. It looks like nicked steel."

The story of Sir Martin Conway's expedition, noted last year, has been published this year in his book "The First Crossing of Spitzbergen."

Antarctic Regions.—An expedition sailed from Antwerp Aug. 16 for antarctica. It is under the lead of Capt. Adrien de Gerlache. Its object is to penetrate those waters of antarctica which have hitherto proved impenetrable to the unsuitable craft that endeavored to navigate them, chart the coast line, if any is found, effect a landing at Cape Adare, where a house and observatory will be erected and left in charge of officers and men, who will traverse the ice cap or interior of the continent as far as possible, endeavor to discover the true position of the south magnetic pole, and make constant records of the climatic, magnetic, and astronomical conditions. For this purpose the steam whaler "Belgica" will, after completing her coal supply at Punta Arenas, touch at Graham's Land and work through Waddell Sea to Enderby Land, continuing her way along the shores of Wilkes Land to Cape Adare, in Victoria Land, where the shore-going party will land and winter, the "Belgica" herself, unless compelled by circumstances to remain, proceeding to Melbourne for a time, returning in the following year either to reshoulder or revictual the explorers at Cape Adare. The expedition arrived at Rio Janeiro Oct. 22, and was joined by Dr. Cook, who was one of the scientists of Lieut. Peary's party.

North America.—An examination of the Noddawai river system was made in 1896 by Dr. Robert Bell, of the Canadian Survey, who discovered a hitherto unknown river. The Noddawai flows into the southeastern part of James bay. It has its rise

in Mattagami lake, into which the Mattagami or Bell river flows from the south-west. The Noddawai flows from the east. The territory between the system is a kind of plateau, formed by a series of low ridges, and has a large number of lakes. Dr. Bell thinks the region favorable for settlement, the soil and climate are suitable for all ordinary crops especially for wheat. The Indians met with were semi-civilized.

An ascent of Mount St. Elias was made July 30, by Prince Louis Amadeus, of Savoy, and several of his countrymen. The details and results of the expedition are reported as follows:

"After six days' travel, Malaspina glacier was reached. Although but 20 miles wide, this glacier occupied four days in crossing. For two days a heavy fog enshrouded everything, and the party were compelled to rely on their compasses for their direction. They were then at the foot of Seward glacier, and they were obliged to journey about 12 miles until an available spot was found to cross the field of ice. Crossing the glacier, they came to Dome pass, and from here the descent of 2 miles was made to Agassiz glacier slowly. The party then proceeded up Agassiz glacier to a point where the Mount Newton glacier joins the divide at the foot of Mount St. Elias. This glacier at the foot of Mount Newton is, in the opinion of all mountaineers who have seen it, the roughest in the world. From this point no one was allowed to march alone, all being securely attached to one another with ropes. Here the American members of Prince Louis's party were left, and they formed a camp to await the return of the mountain climbers.

"The ascent of Mount St. Elias began on Friday, July 30, and after several hours' hard climbing the party arrived at the top of the divide. Here a tent was pitched. Then the ascent began again, and in four hours from the divide they were on the most lofty peak of the mountain. About two hours were spent on the peak, and during this time much was done. Some members of the party took scientific observations. The photographer took many pictures from the summit, all of which, together with data secured, will be submitted in a report to the Alpine Club. The expedition has fixed the altitude of Mount St. Elias at 18,100 feet. The figures are subject only to such slight correction as may change the total 30 or 40 feet either way. The expedition has also answered in the negative the question whether St. Elias was at one time a volcano. There is not the slightest indication of volcanic action anywhere. A new glacier was discovered between the Augusta mountains and Great Logan. It takes its course apparently to the sea, and was named 'Colombo.'

One of the party that went part of the way up the mountain described a wonderful mirage seen from the Malaspina glacier. "It was about sunrise," he said, "and I was looking around at the mountains in their rugged grandeur and the sky with its limitless sea of light blue. Mount St. Elias, Mount Newcomb, Mount Augusta, and Mount Cook, the Seward, the Marvior Mervin, the Pinnacle, and Agassiz glaciers lay before our enchanted eyes. I looked to the north, and was thunderstruck to behold a city, apparently resting on a ridge which is an extension from the west side of massive Mount St. Elias. Every detail of streets and buildings was plainly visible. I called the attention of my companions to the strange sight, and found that they saw everything exactly as I saw it. The mirage, for such it must have been, lasted from 11 o'clock in the morning until 4:20. It began to disappear gradually, and required five minutes to disappear."

Utmost Source of Missouri River.—The geographic and topographic surveys of the Missouri

in the main range of the Rocky mountains, the final results of which were published in 1897, have been conducted by Jacob V. Brower at the head waters of Missouri river, incidental to the computation of the length of the longest continuous stream of water in the world that maintains perennial flowage. In the Centennial valley, Madison County, Montana, are two small bodies of water known as Upper and Lower Red Rock lakes. These lakes are in low depressions in the upper portion of the valley, which formerly constituted a glacial lake bed, drained at the most northwestern limit. From the Three Forks, decided by Lewis and Clark in 1805 to be the initiation of the main channel of the Missouri, at the confluence of the Jefferson, Madison, and Gallatin forks, the principal stream was found to be continuous and uninterrupted, except by artificial irrigation, up the channel of Jefferson fork. By what ought to be considered an erroneously adopted rule in hydrographic nomenclature, the stream again changes its name to Beaver Head river near the point where it passes Beaver Head Rock, likewise again changing its name to Red Rock river near the point where it flows past a picturesque red butte. Following this as the direct and longest channel, explorations up its course led on to these Lower and Upper Red Rock lakes and to the channel of the brisk and sparkling mountain stream above those lakes which flows through the Alaska basin. Into this basin the main stream descends from a point near the crest of the main range of the Rocky mountains, through an eroded and rugged channel in Culver's Cañon. At the head of this cañon, twenty miles above Upper Red Rock Lake, is an amphitheatrical *caldera*, formed by volcanic walls and eroded declivities. Along these walls and declivities are perpetual snowbanks, which, melting in the summer sun, saturate the immense mountains to such an extent that perennial springs and streamlets send forth a constant supply of water, decreasing in winter and increasing in summer, supplied exclusively by secular precipitation.

The high elevations—from 8,000 to 11,000 feet above the sea—surrounding the Missourian *caldera* causes the melting snows to be resupplied every month in the year, the freshets beginning about the last of May and generally ending by Aug. 1. No person, except Indians, is known to have penetrated to this utmost source of Missouri river previous to this discovery, Aug. 28, 1895. It was ascertained by Mr. Brower, who again ascended the mountains to the *caldera* in July, 1897, that a village had been maintained there, at an elevation of 9,000 feet above the sea, in prehistoric times, as shown by the discovery of numerous flint and obsidian spearheads, arrow points, spalls, and other stone utensils. An extensive fossiliferous deposit was also discovered at the same place, in contact with limestone, identifiable as *Phillipsia tuberculata*, *Penductus cora*, etc. The total length of the river channel is as follows: Missourian *caldera* to Three Forks, 399 miles; thence to Mississippi river, 2,547 miles; thence to the Gulf of Mexico, 1,276 miles; longest river channel in the world, 4,221 miles.

Quivira.—The remarkable march of the forces under Francisco Vasquez Coronado from Compostela, Mexico, to a termination at the province of Quivira, 1540-'42, where were situated about 25 villages of barbarous Indians, living upon the flesh and blood of the buffalo, has from time to time received the careful attention of historians and geographical writers, who have been perplexed in identifying the locality of Quivira. Gen. J. H. Simpson, Adolph F. Bandelier, and George Parker Winship have severally traced Coronado to a cross-

ing of the Arkansas river, and thence northwardly to portions of Kansas. In March, 1897, Jacob V. Brower explored the region along both sides of Kansas river to the lower waters of Smoky Hill river, from 100 to 150 miles northwardly from Great Bend, and definitely located more than thirty old Indian village sites near extensive chert quarries, where were made flint implements of war and arms of the chase. These Indian village sites are almost exactly comparable with the descriptions left by Coronado and his chroniclers, and as they are situated favorably to the most certainly determined line of march at its termination, there is little doubt that the definite location of the village sites of the province of Quivira have been finally discovered and ascertained. Several thousand flint tomahawks, spearheads, and arrow points have been recovered from the village sites described in the report of the exploration.

South America.—An ascent of Mount Aconcagua, believed to be the highest peak of the Chilean Andes, was made in January by an expedition from the Royal Geographical Society, headed by Mr. E. A. Fitzgerald. They entered the Horrocones valley, where, at a height of 12,500 feet, a camp was pitched on Jan. 7. Another camp was established at a height of 14,000 feet, from which the actual ascent began. At the height of 18,000 feet it was decided to plant on the side of Aconcagua the last camp. On Jan. 15 Mr. Fitzgerald, accompanied by the chief guide, Matthias Zurbriggen, set out for the summit, but found himself unable to proceed. The guide went on alone, and in the afternoon reached the highest summit. Almost a month later, Feb. 13, Mr. Vines also reached the top, after a journey of nine hours, starting from the camp at 8 o'clock in the morning and arriving at the summit at 5 in the afternoon. Explaining the difficulties which he had to overcome, Mr. Vines said that every 4 or 5 metres he was compelled to stoop down on all fours and wait two or three minutes to recover his breath. This was the only mode of ascent possible at such an altitude. The summit was found to be flat, having an area of 60 square metres. The Pacific Ocean from that height, 23,000 feet, resembled, in the words of the explorers, a vast unruffled pond; while in the afternoon, when the sun shone in the west, the ocean appeared like an immense conflagration. Mr. Vines studied the geological structure of the mountain. The hillside, he said, is porphyritic and has a thick covering of argillaceous earth, which can not sustain vegetation. The south side is broken up into peaks. Mr. Vines also ascended Mount Tupungato and another mountain unnamed, about 19,000 feet high. Tupungato is volcanic, but Aconcagua is not.

Drs. Steffen and Dusen, O. von Fischer, and others spent January to May in an excursion for exploring the Chilean river Aisen. It flows to the sea through a broad estuary in about 45° 20' south latitude, entering the channel that runs behind the Chonos archipelago, and is formed by two branches, the smaller from the east, the larger from the northwest and springing from a fine glacier between the Aisen and Lake Fontana.

The expedition that was sent in February, 1896, by Princeton University, under the control of Prof. Scott, of the United States Geological Survey, to explore Patagonia, returned in August, 1897. From the port of Gallegos, on the eastern coast, investigations were conducted as far northward as Port Desire, and southward to Sandy Point in the Straits of Magellan. The expedition went into the interior, where many new glaciers and water courses were discovered. Many plants and animals new to science were collected, while the information obtained relating to geological phenomena was of the

greatest value. Numerous volcanic cones, hitherto unreported, were discovered. After a little more than a year had been passed on the mainland the expedition proceeded to Tierra del Fuego and the adjoining islands, where collections were made and observations were taken of the geology and palaeontology of the islands. The collection secured by the expedition comprises a nearly complete series of mosses and flowering plants, 800 skins and skeletons of recent birds and mammals, and 8 tons of fossils, including more than 1,000 skulls and many nearly complete skeletons.

Asia.—The researches of Dr. Sven Hedin, a Swedish explorer, in Asia resulted in many discoveries, not only in geography, but in archaeology, geology, and ethnography. His travels occupied nearly four years. The following summary is from the London "News":

"The explorer started at the beginning of 1894 for the Pamir military post in Kashgaria, and four times in the course of the ensuing summer made the ascent of the Mustagh Ata, one of the highest summits in the Pamirs. He reached an altitude of 20,000 feet. The mass of the mountain is composed of gneiss and crystalline schist.

During the autumn of the same year the traveler proceeded in the direction of Lake Teschil-Kul to explore it and also the Alid-Schur mountain range.

In February, 1895, Sven Hedin set out to cross the Takla Mahkan desert, which had never been explored, even by natives. His object was to observe the sand hills in that region, which rise sometimes to a height of 100 feet. The complete dearth of vegetation and water rendered this journey very arduous and dangerous, inasmuch as instead of taking enough water for ten days he only took four days' supply. On his way across the desert he lost several of his men, his camels, and a number of scientific instruments, including his photographic apparatus. Eventually he had to return to Kashgar by way of Anso to obtain a fresh supply of provisions. Pending the arrival of new apparatus and instruments, which could not reach him for three months, Sven Hedin explored the source of the Amu-Daria and the Hindu-Kush range. In December, 1895, he left Kashgar for the last time, traveling by way of Khotan toward Lake Lob Nor and traversing another desert 300 kilometres across. During this journey, which occupied four months and a half, Sven Hedin discovered the remains of two ancient towns and the ruins of Buddhist monuments. Proceeding as far as the Keria-Daria river, he ascertained that this stream ran as far as 39° 30' north. He found in that region a tribe of half-savage shepherds unknown even to the Chinese. Pushing on to the Chinese town of Koria, along the banks of the river Tarim, Sven Hedin reached the Chinese or northern part of Lake Lob Nor, which Prjevalsky was unable to discover, apparently because this lake empties itself, whenever there is an abundance of water, into its southern portion, the only one seen by the Russian explorer. Farther on the Swedish traveler followed up the course of the Kutchu-Daria river, which flows into the northern part of Lob Nor and connects a whole series of oblong lakes, the more northerly of which had not been discovered.

From Lob Nor Sven Hedin, in the spring of 1896, came back to Khotan via Tcherien, Kipa, Nia, and Keria, and then returned to Keria in order to undertake a journey in northern Tibet. During the expedition the explorer discovered a lofty mountain range, whose highest peak rose about 24,000 feet, which was named Mount Oscar. He also found in this region 23 salt-water lakes. During the two months the expedition lasted not a single human being was met with. Sven Hedin then proceeded,

via Tsaidam, Kahu Nor, Suin-Fu, Lian-Tchu, the deserts of Alia-Schan and Onides, to Peking, which city he reached March 14, 1897, across northern China. The expedition, the cost of which was defrayed by the King of Sweden, Mr. Nohel, and several other rich Swedish gentlemen, was the means of securing botanical, geological, and archaeological collections (notably several Buddhist manuscripts found at Khotan) and about 500 sheets of topographical plans, as well as a large number of photographs.

A letter was received in October from Henry Savage Landor, who has just reached the frontier of India after an unsuccessful attempt to make his way into Lhasa, the Tibetan capital. Mr. Landor, who is an artist and writer besides being an explorer, says that he has had a wonderful journey, but had some terrible experiences in Tibet. Of 30 men who set out with him, 28 abandoned him a few days after they had crossed the frontier of Tibet. Mr. Landor proceeded for 56 marches with only one bearer and a sick coolie. He lost all his provisions, and then the Tibetans, by an act of treachery, made him and his men prisoners. They were put in chains and sentenced to death. The bearer was cruelly flogged, and Mr. Landor was brought to the execution ground. The Tibetans decided to behead him. A man held Mr. Landor by the hair, while another swung a long sword to right and left of his neck as a preliminary to the fatal blow. At the last moment the Grand Llama stopped the executioner and commuted the sentence to torture, which injured his spine, legs, feet, arms, and hands. Mr. Landor remained chained up for eight days, while his servants were kept in fetters and manacles for eighteen days. In the end the prisoners were released, and Mr. Landor is now in India, with 22 wounds."

M. Bogdanovitch, who has begun a tour of exploration in eastern Siberia, reports that the Samovoi mountains, which form 3 parallel chains, are rich in gold-bearing rocks, and that traces of gold are also found in the water courses.

A report from Mr. Bourne, of the British consular service, describes an extraordinary landslip on the banks of the upper Yangtse, creating a new and dangerous cataract, much the worst rapid in the Yangtse. All junks have to be emptied and their cargo carried at least half a mile. The rapid was formed on the night of Sept. 30, 1896, by a landslip after forty days of rain; and since then 100 junks and 1,000 men are said to have been lost. A block of ground, measuring 700 yards north and south by 400 yards east and west, has fallen from the slope of the mountain on the north bank, a distance of 150 yards, reducing the breadth of the river from 250 to 80 yards. The removal of this obstruction would probably present no great difficulties to a foreign engineer, but the Chinese are only making roads on both banks of the river out of Government funds and subscriptions of the trade guilds at Wanhien and Chung-King, as if they regarded the rapid as permanent.

Africa.—In a paper read to the Royal Geographical Society, "An Expedition to the Sources of the Niger," Col. J. K. Trotter, who was the principal British officer of the Anglo-French Delimitation Commission appointed in 1895, said that practically nothing was previously known about the Niger sources. When, on Jan. 13, 1896, the commission reached the western watershed of the Niger, whence from an elevation of 3,280 feet they looked down upon the Tembi valley, their native guides considered their task ended. They declined to point out the source of the Tembi, declaring that it was the seat of the devil, whom they had no anxiety to meet, though they were devil

worshippers. But the commission had not much difficulty in finding the source. They were disappointed at not finding the elevation of the Niger sources greater, the highest recorded being 3,379 feet. The adjacent country was mountainous, but none of the summits exceeded 5,000 feet.

In the western Sudan the Kulikoro has been explored throughout its length and its navigability proved, by the Hourst expedition, which in 1895-96 descended the stream in a little aluminium steamer. M. Hourst says that Barth, notwithstanding the forty years and more that have passed since his explorations, is still held in pleasant remembrance by the native population, especially by the Tuareg.

In the Cameroons Lieut. Baron v. Stein discovered lately a small lake named Lungasi or Ossa, north of the lower Sanaga, and connected with it by a narrow, tortuous channel.

About Jan. 1 a party consisting of Acting-Consul-General Phillips and other officials and civilians, together with a number of Kroomen and native carriers, set out unarmed from the coast to go to Benin City on a peaceful errand. It was surprised on the frontiers of the chief of Benin City, fired upon, surrounded, and captured. All the white men in the party except Capt. Boisragon and Mr. Loeke were killed. The king and the country have a reputation for most terrible barbarities, and human sacrifices are common there; the city is said to be the seat of a powerful theocracy of fetish priests. The king and his chiefs were tried for the massacre. Three chiefs were convicted of murder and sentenced to death, and two were shot, while the third committed suicide. The king denied that he had anything to do with the crime, though he was reported to have said previously that he would kill the next white man found in his city. Capt. Boisragon has published a book giving details of the tragedy and describing the country.

The agreement between France and Germany upon the boundaries of Togoland, the German colony west of Dahomey, gives to it the island Bayol in the south, and in the north Gambaga and Sansanne-Mango, the northern boundary being the eleventh parallel. On the west is the neutral territory including Jendi and Salaga. Germany resigns the claim for an extension to the Niger based on the treaties made by Dr. Gruner and Lieut. von Carnap, and makes no further claim to Borgu, Gurma, and Gando. The neutral zone is in the back country of the English and German colonies of the Gold Coast and Togoland, the boundaries of which were created by an Anglo-German agreement of 1888. Its position is indicated on official maps by a square of which the northern limit is the tenth parallel and the southern limit lies about 10' above the eighth parallel, the western limit being drawn through 1° 15' west of Greenwich, and the eastern limit through 35° east of Greenwich. An agreement was made between England and Germany that this zone should be left neutral for conveniences of trade until such time as the colonies should be more definitely delimited. France was not a party to it. There is still a conflict of claims between France and England.

Lieut. Seymour Vandebeur describes the capital city of Belau as follows: "The main thoroughfares are fairly broad, and lead from one gate to another, bordered by great inclosures and compounds surrounded by lofty walls excellently made, and often 18 feet in height, and the doorways are in some cases roughly carved outside. The walls of the large buildings are very massive, and often the roofs of the rooms are arched and supported on pillars of black clay, which is polished and looks exactly like stone. Outside of the late Emir Meliki's palace

lies the slave market, where formerly it was common to see 200 slaves exposed of an evening for sale to the highest bidder. The entrance to the palace is covered with a high dome made of bamboos resting on thick walls, and supported at the bottom by short, carved wooden pillars. Between the main roads of Bida there is a network of narrow streets with walls on each side, and there are many mosques, though none of any size or importance. A stream leads to the Wanangi creek, which in the rainy season gives boat communication with the Niger. Bida is an interesting place, with its schools and institutions. A great many books and boards with Arabic writing, also a very tattered old lion skin with a plan and some Arabic characters on it, were found here. There are numerous dye pits in the town, and indigo forms a valuable article of commerce. The people are great workers in leather, and make very good saddles, scabbards, and slippers; they are also workers in glass. They are very superstitious, and carry charms wrapped up in little leather and leopard-skin cases; and they even tried to bring disaster upon us by planting little sticks with writing on them in the pathway. Ilorin, though not nearly so imposing as Bida, seemed to cover an immense area, and, I afterward found out while employed in making a plan of it, is nine miles in circumference, and, except on the northeast, is surrounded by a dilapidated mud wall. From the many gateways well used roads lead in all directions across the open grass country."

According to a German traveler, Capt. Langheld, Lake Rikwa, or Leopold, east of Tanganyika, has almost disappeared. He made a journey through the region in January and February, 1897, and was told by the natives that about six years ago the lake was so dried up that only a pond remained with great swamps in the southeastern part of what had been the lake. Other travelers have reported that the lake seemed to be drying up.

Poulett Weatherly, who has been traveling for some years in Central Africa, has written a letter, descriptive of a visit made recently to Lake Bangweolo, which throws some new light on the geography of this part of Africa. "The Luapula," he writes, "up to the falls, Mambilima No. 1, or Johnston's Falls, must be delightful. From where I struck it, 30 or 40 miles south of Kinyama's present Boma, you get delightful reaches, but above and below each of those reaches are rapids without end. There seems but little deviation in its course. It is, in most parts, tremendously broad." Where it leaves Bangweolo it is fully a mile wide. Giraud put it at 250 feet. What surprises me is, that the adjoining curious lake, Chifunanti, should have escaped notice, but I fancy Livingstone saw it, and thought it Bangweolo. It is one to three miles in breadth, and runs the whole length of Bangweolo. Lifungwe is marked as an island; it is an isthmus of white sand hills, 30 to 50 feet above the lake level, and 400 to 600 yards in breadth, extending from a little to the west of the Liposochi, right away down till it merges in the south shore of Bangweolo. Bangweolo is distinctly wrong. It is Bangweulu, meaning, 'There where water and sky meet.' A native points and says, 'Ulu,' in varied intonations, according to the distance, extending one arm and snapping his fingers. The whole of the east and northwest shores are swamp. The whole way from the Luapula to Kirui is a wall of papyrus."

Some notable discoveries were made in eastern Africa by Mr. H. S. H. Cavendish, who began a journey through Somaliland in September, 1896, and was gone a year. About 100 miles east of Lake Stefanie he found a remarkable salt crater 1,300 feet deep; while south from it, and afterward

west of Lake Rudolf, he discovered beds of good coal. West of Lake Rudolf is a mass of uninhabited mountains, separated from the lake by a plain 50 miles wide, which is often flooded in part by the waters of the lake. The Teleki volcano, which Dr. Donaldson Smith saw in activity, has disappeared as if shattered by a convulsion, nothing being found now in its place but a plain of lava. Mr. Cavendish discovered a new lake in which a former volcano had been engulfed not far from Lake Baringo.

Noteworthy journeys have also been made in East Africa by Mr. Ramsay, who in 1896 explored the region between Tabora and Tanganyika, and confirms the report of the lowering of the surface of this lake, and who also examined the Lusaia river, and by Lieut. Brasseur, who visited the hitherto unexplored parts of the Luailaba and the Luapula, whose junction forms the Congo. He holds the Luailaba to be the head stream of the Congo, basing his opinion on geologic grounds, though he admits that in both length and volume the Luapula is the greater stream. He also explored the great bend of the Ubangi and some of its tributaries not hitherto laid down on the maps, the principal of which is the Lualaba.

Intelligence was received in May that many of the Böttego exploring party in East Africa had been killed in an encounter with natives while attempting to enter Ethiopian territory on the Galla side. The news was afterward confirmed. Capt. Böttego was killed. Two of his companions, Lieuts. Vannutelli and Citerri, were taken prisoners, but afterward released. They brought away the results of the explorers' work, which are important. The course of the river Omo, which has been in doubt, was settled; it proves to be identical with the Nianam, the principal tributary of Lake Rudolf. It runs through a narrow valley bordered by high mountain walls. The Sobat river was examined as well as the Upeno, its main tributary, a wide but shallow stream. The borders of the southern Ethiopian range of mountains were located and the western side of Lake Rudolf was surveyed. A lake which was known to exist but had not been explored was visited. It is described as very beautiful, about 95 miles long and containing 12 inhabited and cultivated islands. The native name is Pagade, but the explorers named it Lake Regina Margherita. It is connected by a short affluent with a smaller lake, which was called Abbaya by Prince Ruspoli, but was named by them Chiamo; but it seems to have no connection with Lake Stefanie. The party traversed 6,000 kilometres, 3,000 of which were through regions hitherto unknown to Europeans.

Australia.—The Calvert exploring expedition set out in June, and reached the Fitzroy river after suffering great hardship from scarcity of water. Mr. A. E. Calvert gave the following details in December, 1896: "Mr. Wells, the leader of the expedition, says that his hardships began when he was unable to find Johanna springs, and he attributes this mishap to their being wrongly mapped on the chart or else dry. He was then 500 miles distant from the Fitzroy. He pushed on to a small native well, out of which he managed to get 360 gallons of water in two days. As his camels were in a very bad way, he abandoned all his extra gear, firearms, ammunition, specimens, photographic camera, and survey plant, and five camels. Mr. Wells wisely reserved four buckets of water, which eventually proved to be the means of saving the party, for one of their stages without water was one of 200 miles. Mr. Wells describes the country as simply a red desert, consisting of nothing but sandstone. Mr. Keartland, the naturalist, had to abandon his collection

of about 3,000 specimens. Two of the party left the line of traverse 500 miles from the Fitzroy to make a flying trip 80 miles westward to the surveyor's line, and meet Mr. Wells, but they have not since been heard of. The missing members are Mr. G. L. Jones, the geologist, and Mr. C. F. Wells. The bodies of the two missing explorers were found in June about 20 kilometres southwest of Johanna springs; there seemed to be no doubt that they had died from thirst.

Polynesia.—The Royal Geographical Society sent an expedition to the Ellice Islands last year, to make borings with the object of throwing light on the origin of coral islands. The borings could not be successfully carried through the sand-filled hollows of the coral; but this year the operations were renewed at Funafuti with improved apparatus, and were carried to a depth of 643 feet without reaching the end of the coral formation. The result supplies confirmation of Darwin's theory of the origin of such islands.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,696 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,296 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; and 1,937,253 in 1890. Capital, Atlanta.

Government.—The following were the State officers during the year: Governor, William Y. Atkinson; Secretary of State, Allen D. Candler; Treasurer, W. J. Speer; Comptroller, William A. Wright; Attorney-General, Joseph M. Terrell; Adjutant General, J. McIntosh Kell; State School Commissioner, G. R. Glenn; Commissioner of Agriculture, Robert T. Nesbitt; Commissioner of Pensions, Richard Johnson; Railroad Commissioners, Allen Fort, L. N. Trammell, and T. C. Crenshaw; State Librarian, John Milledge; State Geologist, W. S. Yeates; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, Spencer R. Atkinson, Andrew J. Cobb, William A. Little, and William H. Fish. All the State officials are Democrats.

Finances.—The report of the Treasurer in October shows that the cash balance in the Treasury when he took the office was \$460,923.08, and that the receipts since have been \$2,929,388.89, making a total of \$3,396,311.97. The disbursements during the same time amounted to \$2,974,065.77, leaving a balance of \$422,246.20. This balance does not consist of cash, but is largely represented by the semiannual interest on the public debt paid on July 1, advances to the civil establishment for the quarter ended Sept. 30, the *per diem* and mileage for the extra session of the Legislature, and expenses of the investigating committee authorized by resolution approved Feb. 4, 1897. All these will appear in the next annual report of the office.

The Comptroller's report shows that the total of taxes due to the State from the various counties for 1897 was \$2,269,741.33.

The pensions paid by the State amount to more than \$500,000, of which widows of Confederate veterans get about \$240,000. About 6,000 veterans have filed applications.

Education.—The following on the schools of the State is from the Atlanta "Constitution":

"In 1895 about 250,000 of our school population out of 600,000 did not attend school at all. The schoolhouses were for the most part so constructed that the children could not attend in the winter term, and in the spring and summer the schools were large enough were obliged to work. The present policy of maintaining the public-school system is radically wrong. Some of the counties in 1895

defense, have supplemented the fund they receive from the State with money raised by local taxation, and wherever this has been done the result is satisfactory. The great majority of the counties are content with the pittance received from the State fund—a pittance that is not sufficient to provide comfortable schoolhouses, much less pay capable teachers. In 1895 the average pay of teachers in schools supported by local taxation was \$502 a year. In the country schools unsupported by local tax the pay of teachers was \$120 a year."

The sum given for the school fund for 1897 was \$1,169,945, less \$6,585, which was devoted to expenses. The fund was apportioned at the rate of \$1.92 *per capita* of school population. This was about 1 cent and 3 mills greater than in 1896.

The School of Technology, at Atlanta, sent out a class of 8 in June. At its entrance the class numbered 60.

At the Normal and Industrial School more than 200 applications for admission were refused for lack of accommodations in June; 200 had applied for admission in September. A course of one year will be added to the normal department separate from the collegiate department, designed to give practical instruction to teachers.

The Industrial School for Negroes has a fine new building near Savannah, and is in charge of six colored professors. In addition to the industrial work in wood and metal, the literary curriculum is high for a Southern negro school, and the standard in all departments is most excellent.

The State University, at Athens, had 301 students in 1896-'97, and graduated 87 at its ninety-sixth commencement, in June, 43 of whom were in the law class. This institution was originally Franklin College, and as such a fund of \$20,000 was given to it for the endowment of a professorship of agriculture. When the grant from the Morrill fund was accepted by the State, a College of Agricultural and Mechanical Arts was organized, and the two colleges were united as the University of Georgia.

The chancellor and the Board of Visitors recommended that the university should be opened to women. The Board of Trustees declared itself favorable to this change, but decided that it had no power to act until the Legislature should take steps in the matter. More about the university will be found under the head "Legislative Session."

Emory College graduated a class of 37 in May.

The number of students at the State Normal School has increased in two and a half years from 23 to 557. The school was opened April 17, 1895. The Legislature grants \$22,500 a year. About \$12,000 of the amount has been used this year for buildings and permanent improvements, only \$7,000 having been specially appropriated for that purpose since the establishment of the school.

A staff correspondent of the Atlanta "Constitution" says: "A roll call of 23 pioneers in April of 1895 has increased to the marvelous proportion of 557 in October of 1897. Co-education of young women and young men has proved the success of that plan, and what the university has feared to touch for a hundred years has been accomplished here in a day. Co-operation has demonstrated that students may be well housed, well fed, and well instructed for \$7 a month. 'I was driving along a country road to catch an early train,' says School-Commissioner Glenn. 'I passed a field where half a dozen white children were at work, and shortly after came across a party of negro children going to school. The whites in the field, the negroes at school! My heart bled for my race.' 'Riding in a railroad train,' says Mrs. W. H. Felton, 'I saw a well-dressed negro girl who had just laid down a book she was reading. It was one of the Greek

classics in the original tongue, and the girl was reviewing it. Looking out of the car window I saw a white girl whose thin garments but ill concealed her form. She was picking cotton. My mind, in horror, shrank from a contemplation of the contrast of the present as well as that of the future unless there was a change.'"

State Institutions.—The building for negroes at the Insane Asylum was almost totally destroyed by fire Jan. 9, and but little of the furniture was saved. There were about 1,000 inmates, one of whom died in the excitement of removal. The cost of the building was \$90,000 originally, and within the past year two additions have cost \$30,000 each. The insurance is \$71,000.

The Soldiers' Home was ordered sold by decree of court, and in November the trustees advertised for bids. Funds were raised by private subscription and a fine building was erected, with the expectation that the State would accept and maintain it. The State refused, and the building never has been occupied.

At the Academy for the Blind, at Macon, there are 93 in the department for the whites and 23 in that for negro children. The expense for maintenance for each is \$3.80 a month, and the expenditure for clothing is not more than \$5 for the ten months.

A convict camp at Dakota was struck by lightning June 27. The men, to the number of about 150, were at supper. About 50 were struck to the floor, 3 were killed instantly, 2 died from the shock, and 20 were injured.

The Penitentiary convicts number about 2,340.

Convict Camps.—The Governor appointed Philip G. Byrd in the spring to investigate the condition of the county misdemeanor-convict camps of the State. This report, made in August, charges definitely and distinctly that the keepers of the misdemeanor convicts are guilty of these things: Robbing convicts of their time allowances for good behavior; forcing convicts to work fourteen to twenty hours a day; providing them no clothes; no beds; no heat in winter; no ventilation in single rooms in summer in which three score of convicts sleep in chains; giving them rotten food; allowing them to die when sick for lack of medical attention; outraging the women; beating to death old men too feeble to work; killing young men for the mere sake of killing; suborning jurors and county officers whose duty it is to avenge the wrongdoing of guards; cheating the State. The commissioner visited 51 chain-gang camps and inspected 1,793 convicts. These included 25 county camps, 2 municipal camps, and 24 chain gangs operated by private individuals. It is to be understood that this state of affairs applies only to part of the leased convicts. As a rule, those worked by cities and counties are well treated. The leased convicts numbered about 800. A sensation was caused by the publication of the report, and it was further disclosed that the leasing of convicts to private individuals was against the law of the State, which declares that they shall be employed upon public works and not given into the control of private persons. It therefore fell within the province of the courts to see that the private camps were broken up. The judges to whom the Governor forwarded the information gathered by the commissioner acted promptly, and the convicts were generally returned to the custody of public officers.

Militia.—A battalion of naval reserves has been added recently to the State Guard. They held their first encampment in July, on board the old monitor "Passaic," in St. Simon's Sound. There were present 120 men, with officers. The infantry, artillery, and cavalry companies were in camps of instruction in June at Griffin and Meldrim.

Banks.—The State Treasurer examined 116 banks during the year ending Sept. 30. There have been 3 failures and 3 have gone into voluntary liquidation. The Treasurer recommended some legislation for the better protection of depositors and stockholders. In particular, he says the "loans to officers and directors of banks should be in some way restricted and more fully protected. Their own bank stock is not sufficient or proper collateral for such loans, and should not be counted. This is the greatest difficulty with which the examiner has to contend, and is the prime cause of nearly all bank failures."

Since the State Savings Bank went into the hands of a receiver about \$30,000 of the \$108,000 of its indebtedness has been paid, and it is said that the amounts which can be recovered from stockholders under the double-liability clause in the bank's charter will be sufficient to pay the indebtedness in full.

The cashier of the Georgia Savings, Loan, and Banking Company confessed, April 25, to being a defaulter to the extent of \$45,000.

Loan Associations.—The report of the Georgia receivers of the Southern Mutual Building and Loan Association shows the total liabilities to be \$879,208.66, and the assets \$651,262.53. The receiverships in other States have been made ancillary to the Georgia receivership.

A bill for a receiver was filed against the Southern Home Building and Loan Association of Atlanta in November. The association declared that it was absolutely solvent.

Railroads.—Petition was made to the Railroad Commissioners in the summer for a reduction of 25 per cent. on the rates for hauling cotton, on the ground that the rates established some time ago by the commission are unreasonable under present conditions, and that the roads can afford the reduction. Hearings were given to the petitioners and to the roads, and the commission refused to order the reduction, judging from the reports of the companies that they were not in a condition to stand a loss in their revenues. One commissioner dissented from the decision.

Statements made by some of the companies to the commissioners showed their condition as follows: The Western and Atlantic's statement was—Gross earnings, \$9,137,629.52; net earnings, \$2,611,055.97; rental, interest, taxes, \$2,919,993.01; deficit, \$308,937.04.

The net earnings from the operation of the entire Central of Georgia railway system for the year ending June 30, 1897, were \$1,018,883. The company failed to earn within \$35,867.98 of its fixed charges and rentals, and had it not been for revenue derived from other investments of the railway, there would have been a deficit. In addition to this, it was shown that the Central's rates have been falling for years. A reduction of 25 per cent. on cotton rates would cost the Central \$138,255.50 on the basis of the average year's tonnage.

The Oconee and Western protested against the reduction because the company never has made a cent of money in its history. It has not paid any interest on the bonds for more than two years.

The Atlanta and West Point showed that the proposed reduction of 25 per cent. would decrease its revenue from \$7,500 to \$10,000.

The Plant system showed that it made only \$10,000 in Georgia last year above its operating expenses, and a reduction of 25 per cent. on cotton rates would cost it nearly \$29,000.

The Georgia Southern and Florida showed that it could not stand a reduction and keep out of the receiver's hands.

The Southern Railway showed that its lines made \$2,200,000 more in 1891 than in 1896, and this it

attributed to the reduction in rates which has been going on all the time through competition and the orders of railway commissions. Its net earnings have fallen off 15 per cent. in five years.

The rates on fertilizers were reduced 20 per cent. in January.

The Attorney-General, who made a report in October, says he has succeeded in collecting nearly all the taxes due the State by railroad companies now in charge of receivers. The case of the Northeastern was still in the courts.

The Northeastern Railroad was put up at auction in June, in accordance with the action of the Legislature of 1896, but there were no bids. The upset price was \$287,000.

Products.—The State produced 1,236,923 bales of cotton in 1896.

Georgia is said to have the best fire clay in the United States, and a bed of it has been found extending across the State from Columbus to Augusta, passing just south of Macon and near Milledgeville. The bed varies in width from 5 to 15 miles, and follows an irregular line. G. E. Ladd, assistant State geologist, who has been testing them, says: "I was astonished to find these days the most refractory in the United States. They will stand a greater heat than any clay I have ever tested in America."

The product of gold in 1896 was estimated at \$155,000. None of the mines of Georgia have been worked to any considerable depth, no mine around Dahlonega being as deep as 200 feet. The Craghton (Franklin) mine, in Cherokee County, is the deepest in the State, being nearly 500 feet deep. The general run of the ore averages between \$8.50 a ton.

Okefenokee Swamp.—This tract, comprising nearly 300,000 acres, was placed in the hands of a receiver in June, on account of the insolvency of the Suwanee Canal Company, by which it was bought from the State about six years ago at 26 cents an acre. The design was to open a canal to St. Mary's river, and the work was begun, but was found to be impracticable after it had been carried several miles, as the sandy desert in the center of the swamp became a barrier. The sand accumulated in the bed of the canal as fast as it could be shoveled out, and hence the canal was abandoned and a railroad was constructed from the end of the canal to the Savannah, Florida, and Western main line, and a boat was operated upon that bed of the canal which had been built. A large boat was secured, with which the trees were pulled up by the roots. As the work of draining the swamp progressed the owners saw a fortune in cypress timber and the supply appeared to be inexhaustible. Many sawmills were purchased and put into operation, and the cypress was placed on the market. Gradually the trees disappeared in the vicinity of the mills, and it became necessary to go farther out into the swamp to get the timber. This increased the expenses of operating. Large sums were advanced, and, now that most of the timber accessible is cut away, it is not deemed advisable to carry the work further.

Cotton-Growers' Convention.—The cotton growers of six Southern States met in Atlanta Dec. 14, and took steps toward the organization of a Southern Cotton-Growers' Association, the object of which shall be the protection of the interests of the South. The convention unanimously declared in favor of reduced acreage as the most feasible means of raising the price of the staple, and of the present system of gambling in cotton futures; heartily approved the American Cotton-Growers' Protective Association; declared in favor of making farms self-sustaining; determined to avoid poli-

ties; and decided to perfect an organization of cotton growers, extending into every State, county, and district of the cotton-growing regions.

Labor Strike.—In August the Fulton Bag and Cotton Mills in Atlanta employed 20 colored women and put them at work in the mills. In consequence, more than 1,400 operatives employed there went out on strike. It was settled in a few days, the superintendent promising to remove all negroes in direct contact with white labor, and to hold no operatives responsible for the present condition.

Lawlessness.—Several cases of lynching occurred during the year. One of these was that of Dr. W. L. Ryder, who murdered a young lady at Talbotton because she refused him. A local newspaper says: "The affair was so open that there was never for a moment a suggestion of doubt as to Dr. Ryder's guilt. He was brought to trial, and after a hard-fought legal battle, was convicted and sentenced to be hanged. Then began the usual contest for saving the life of the condemned through technicalities. The case was taken to the Supreme Court, and a new trial secured. A called term of the lower court was convened for the purpose of hearing the case. There were presented certain reasons why the trial should go over until another term of the court, and a continuance was granted. About fifteen months had passed since the commission of the crime when this last stay was granted. The prisoner was on his way from Talbotton to Columbus to be held for safe keeping, when a mob seized him and carried to its conclusion, without the right of law, the sentence of death that was imposed upon him at his first trial."

The newspapers generally laid the blame for the crime upon the law's delays.

Legislative Session.—An adjourned session of the General Assembly began Feb. 3. Its special object was to receive the vote on the report of an investigation that had been held of charges made by Senator Carter against Judge Seaborn Reese, of the Northern circuit, and Judge Joel L. Sweat, of the Brunswick circuit. The special committee reported that there was no ground for impeachment proceedings.

A resolution passed the House providing for the appointment of a committee of five to investigate all the departments of the State government and all the State institutions, and to report to the next General Assembly the expense of maintaining each of said departments and institutions, and recommending such reforms and rules of retrenchment as in its wisdom may be admissible without injury to said department or institution.

The Legislature convened for its regular session Oct. 27. The Governor devoted much space in his message to the subject of lynchings, urging action to prevent them. In reference to the lynching of innocent men he said: "I feel the more deeply upon this question because, from the best information I can secure, I believe that during my administration there have been in this State several men lynched who were not guilty of the crimes with which they were charged. I am informed that one man, whom the mob believed to be guilty, was shot down. A question then arose as to his identity, and he was salted down like a hog, shipped to the location of the crime, and found to be the wrong man—an innocent man. During my term of office one man who was rescued from the mob was accorded a trial, which resulted in showing that he was not guilty. Another fled from the mob to the executive office and asked for protection and a trial by jury. They were given him, and it developed that he was not guilty of the charge for which the mob endeavored to take his life."

The following resolutions were introduced the first day and passed:

"Whereas, In the town of Hogansville, State of Georgia, the President of the United States has seen proper to appoint to the office of postmaster a man whose appointment was opposed by 90 per cent. of the property owners and responsible citizens of that community; and,

"Whereas, In no other section of the United States would the President make, or permit to be made, an appointment of like character—on the Pacific slope the President would not dare appoint as postmaster of any town a Chinaman over the protest of 90 per cent. of its property owners and responsible citizens, nor would he dare in any town in the North or East appoint to a local office one who was opposed by 90 per cent. of the best people of the locality; and,

"Whereas, On the night of Sept. 16, 1897, unknown parties are said to have shot and attempted to kill the said appointee; therefore,

"Resolved by the House of Representatives of the General Assembly of the State of Georgia, That if said attempt to shoot said appointee be true, which we have reasons to disbelieve, we condemn in unmeasured terms the lawless conduct of the would-be assassins.

"Resolved, That we deplore this and similar appointments as exhibitions of petty spite and narrow sectional hate, unworthy the high office of chief magistrate of this great nation.

"Resolved, That we appeal to impartial public opinion to enter its powerful protest against presidential appointments to office for the manifest purpose of affronting and humiliating a community of American citizens for no other reason than a difference in party affiliations."

Resolutions were also adopted asking Congress to enact a national quarantine law, and favoring a constitutional amendment providing for the election of United States Senators by the people.

The committee appointed at the adjourned session, of which A. O. Blalock was chairman, began its work June 8, and reported to the Legislature Nov. 3. One member of the committee, J. D. Little, presented a minority report.

The majority report criticised the management of the university, or rather of the funds appropriated by the National Government for agricultural education, recommending that the College of Agricultural and Mechanic Arts be separated from the university. It was held by the committee that the agricultural department was of no value whatever, and was maintained merely for the purpose of securing the appropriations.

An extract was given from the catalogue for 1896-'97, in which it is said that farming is practically taught, and elaborate details of the instruction are given, and it is said that the college farm is conducted as a model, that it is designed that the students in agriculture shall take actual individual part in all the operations on the farm. The committee's report says: "We visited this 'model farm.' There was no diversity of crops thereon. We did not observe any evidence of skill or care in its management. It was pronounced by the committee and all who referred to the farm in our presence as a failure. It has not been visited in several years either by faculty, trustees, or students, therefore the glowing results in the catalogue are not and could not be realized, and this failure of beneficial results is mainly chargeable to the absence of interest, purpose, and effort on the part of those in control."

It was found, according to the committee, that the taxable values of the State are constantly shrinking; that between 1891 and 1896 there was a,

shrinkage of approximately \$51,000,000. The cause was set down to the present system of levying and collecting tax.

The committee reported the work of the geological department unsatisfactory, and recommended that no appropriation be made for its support the coming year. No field work to amount to anything has been done, it is said.

Criticism is made of the management of the agricultural department. Unnecessarily large rates had been paid for fertilizer tags, according to the report, and the oil inspectors, who are appointed by the Commissioner of Agriculture, had been paid, one at the rate of about \$50 a day for time actually spent, and the other at about \$25.

Reductions of salaries of the Railroad Commissioners and other officials and their assistants were recommended.

In consequence of the report on the State University the Legislature listened to addresses by the President of Emory College and a representative of Mercer College, both of whom urged the repeal of legislation favoring the State University and giving it an advantage over the denominational colleges. The faculty of the university replied to that part of the committee's report alleging that the faculty was hostile to the agricultural department, denying any such sentiment. The chancellor of the university addressed the Legislature, protesting against the proposed separation of the Agricultural College, and advocating the admission of women to the university.

The State geologist made a defense of his department, reviewing the work of issuing bulletins of interest and advantage to the people, mentioning those on marbles, corundum deposits, water powers, phosphates, and marls; on cotton, artesian wells, good roads, and other questions of interest; the examination of mineral deposits and forestry resources, the building up of the State Museum, the preparation of the exhibit for the Tennessee Exposition, and other work. The House committee resolved on the reorganization of the department.

The subject of convict labor took up much time in the Assembly, some better way than the existing lease system being urgently called for. A prison commission was created, consisting of three members, to serve at \$2,000 a year. The full term is five years.

A bill to prohibit prize or match games of football, or any other games of like character, was introduced at the preceding session, sent to a committee, and not reported. It was recalled to the attention of the Assembly by the death on the football field, Oct. 30, of R. V. Gammon, a member of the State University team. The occurrence called out general condemnation of the game on account of its brutality, and the Legislature passed the bill but it was vetoed by the Governor.

Among important bills introduced were the following:

Providing for the Australian ballot system.

Prohibiting any agent of a whisky firm going into a county where local option has prohibited whisky and taking orders for whisky.

To enlarge the power of exemption from taxation of all places of religious worship or burial and also all property belonging to colleges and incorporated schools, and to provide for the proper ratification by the people, etc.

Providing for repayment of insurance premiums to the policy holder, where a company has contested and won the suit.

Providing that the wages of all journeyman mechanics and day laborers in excess of \$1 a day shall be subject to garnishment.

To abolish the fee system.

For establishing a library commission.

Making attempt at raising a capital floor.

Allowing half-blood brothers and sisters on the maternal side to inherit equally with those on the paternal side in the estate of an intestate brother or sister.

For a tax on life insurance policies.

Providing for the establishment of a board of dental examiners, and making it unlawful for any person to engage in the practice of dentistry in the State without a license from the board, except such as have the right at the time of the passage of the act under existing laws.

Making the birthday of Jefferson Davis a legal holiday.

Removing the capital of DeKalb County to Stone Mountain.

Prohibiting the sale of cigarettes to minors.

Imposing a penalty for adulteration of foods.

Appropriating \$10,000 for establishing a textile department at the technological school, at Atlanta. The money is not to be available until an equal amount is given in cash or machinery by private subscription.

Among the measures defeated were these: For uniform school text-books throughout the State; providing for establishing a dispensary system in counties having no prohibition, if a majority of the voters should so desire; to abolish child labor; for a constitutional convention; to legalize prize fighting; providing for punishing any one who hires out misdemeanor convicts to private parties, or any such party receiving them; and an "anti-barroom" bill.

Political.—Serious trouble arose over the appointment of a negro postmaster at Hogansville. The former postmaster refused to resign the office, and continued to receive and distribute the mail, supported by the white people of the town, who had boycotted the President's appointee; and the latter was shot by some one unknown, and badly but not fatally hurt. Postal inspectors were sent to the town, and the ex-postmaster was threatened with prosecution for handling the mails without authority. It is said that probably 900 of the 1,500 inhabitants of the town are negroes. The new postmaster was educated in the public schools, and graduated at Clark University.

Great indignation was expressed at the appointment of a negro as collector of internal revenue for Georgia. Ten of the deputy collectors and storekeepers resigned as soon as he came into office.

The Savannah Cotton Exchange and Board of Trade adopted emphatic resolutions, Dec. 20, against the appointment of negroes to Federal office. The feeling in regard to these and similar appointments is expressed in the resolutions passed by the General Assembly, given under the heading "Legislative Session."

The People's party held a convention in Atlanta, June 22, and delegates were chosen to the national conference of the party held at Nashville, July 4. "That we condemn and disapprove of fusion as practiced in the past" was one of the resolutions adopted.

GERMAN EVANGELICAL SYNOD. The statistics of this body for 1897 give it 1,130 churches, 878 ministers, and 194,618 communicants, and show an increase of 29 churches, 12 pastors, and 8,618 communicants. The synod supports one of the very few homes for epileptics in the United States, at Emmaus, near Marthasville, Mo. Another institution has been founded near St. Charles, Mo., for treatment of less severe cases. One hundred home missionaries were supported during the year. The sum of \$10,000 was contributed for the

relief of sufferers from famine in India, chiefly in the provinces of Bismampur, Chandkari, and Rairpur, where the missions of the Synod are situated. Much was done for Sunday schools by numerous conventions and otherwise, and interest in them is represented to be much larger than heretofore. A plan for a Union of all the Young People's Societies has been proposed, but thus far it has not yet been carried out.

GERMANY, an empire in central Europe composed of the federated German states. The King of Prussia is German Emperor, and as such has supreme charge of political and military affairs, with power to conclude peace and, in case of an attack on the territories of the empire, to declare war; for an offensive war he must have the consent of the federated governments. The legislative bodies are the Bundesrath, or Federal Council, and the Reichstag, or Imperial Diet. The acts on which they agree become law on receiving the Emperor's assent and being countersigned by the Chancellor of the Empire. The Bundesrath has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 124,500 inhabitants, elected by universal manhood suffrage and by secret ballot for the term of five years.

The German Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III of Prussia, whom he succeeded on June 15, 1888. The Chancellor of the Empire is Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894, on the retirement of Gen. Caprivi. The following were the imperial ministers at the beginning of 1897: Minister of Foreign Affairs, Freiherr A. Marschall von Bieberstein; Minister of the Interior, Dr. Karl Heinrich von Bötticher; Minister of Marine, Vice-Admiral Hollmann; Minister of Justice, A. Nieberding; Minister of the Treasury, Graf A. von Posadowsky-Wehner; Secretary of State for the Imperial Post Office, Dr. von Stephan.

Area and Population.—The area of the German Empire is 208,670 square miles. The population on Dec. 2, 1895, was 52,279,901, having increased in five years from 49,428,470, in ten years from 46,855,704, since 1837 from 31,589,547, and since 1816 from 24,831,396. In the total population in 1895 there were 25,661,250 males and 26,618,651 females. The population dependent on agriculture, forestry, etc., on June 14, 1895, numbered 18,501,307; the industrial population, 20,253,241; the number depending on trade and traffic, 5,966,845; on domestic service, 886,807; on the army and public service, 2,835,222; without occupation, 3,326,862; total enumerated, 51,770,284.

The number of marriages in 1897 was 408,066; of births, 1,904,297; of deaths, 1,207,423; excess of births, 696,874. The number of emigrants in 1895 was 37,498, of whom 32,503 went to the United States, 1,405 to Brazil, 2,359 to other South American countries, 886 to Africa, 134 to Asia, and 211 to Australia. During twenty-five years the total emigration to the United States had been 2,370,958, and to Brazil 48,444.

Finances.—The imperial revenue is derived from customs, certain excise duties, stamps, the profits of the post office, telegraphs, and railroads, and assessments made on the states in proportion to their population to cover the deficiency. The ordinary revenue for 1897 was estimated at 1,219,714,000 marks and extraordinary receipts from loans, etc., at 28,159,000 marks, making a total of 1,247,873,000 marks. The ordinary expenditures were calculated at 1,227,169,000 marks, the extraordinary expenses for military and other purposes at the amount of the extraordinary receipts; total, 1,255,318,000 marks. The receipts from customs

and excise were estimated at 634,665,000 marks; stamps, 61,000,000 marks; posts and telegraphs, 33,914,000 marks; printing office, 1,525,000 marks; railroads, 23,464,000 marks; Imperial Bank, 5,618,000 marks; departmental receipts, 18,476,000 marks; interest of Invalid fund, 28,862,000 marks; various receipts, 1,582,000 marks; Federal contributions, 410,605,900 marks. The ordinary expenditure under the various heads was estimated as follows: Reichstag, 654,900 marks; Imperial Chancellery, 154,900 marks; foreign affairs, 10,606,500 marks; interior, 33,567,800 marks; army, 479,074,000 marks; navy, 55,382,300 marks; justice, 1,974,100 marks; imperial treasury, 392,509,900 marks; railroads, 355,500 marks; debt of the empire, 75,942,500 marks; audit, 737,300 marks; Pension fund, 56,562,100 marks; Invalid fund, 28,862,500 marks. The actual expenditure was 1,995,700 marks less than was anticipated in the budget. There was a saving of 4,372,000 marks in the estimated expense of the army and of 3,637,000 in the amount required for the debt, while the navy required 454,000 marks more than was estimated, the colonial department of the Foreign Office 1,973,000 marks more, the Ministry of the Interior 1,000,000 marks more, and the postal and telegraph services 1,131,000 marks more. The revenue receipts were 76,471,145 marks above the estimates. The receipts from customs and tobacco exceeded the estimates by 78,000,000 marks. The law of March 29, 1897, required 50,000,000 marks of the surplus revenue to be applied to diminishing the imperial debt, after deducting which there was still a surplus of 28,467,115 marks.

The funded debt of the empire on March 31, 1895, amounted to 2,081,219,800 marks, paying 3, 3½, and 4 per cent. interest. There were in addition 120,000,000 marks of treasury bills. The Invalid fund amounted at the same date to 447,708,500 marks, and the war treasure of 120,000,000 marks in gold was preserved in the fortress of Spandau.

The following table gives, in marks, the ordinary budgets and the debts of the several German states for 1897, or, in the case of a few, for 1896:

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine.....	52,441,216	51,007,881	24,895,100
Anhalt.....	23,065,600	23,065,600	975,579
Baden.....	79,168,591	86,551,695	335,998,769
Bavaria.....	345,356,565	345,356,565	1,386,875,020
Bremen.....	18,748,544	27,985,257	135,161,850
Brunswick.....	12,680,000	18,726,900	27,016,738
Hamburg.....	72,273,218	73,371,167	325,827,281
Hesse.....	27,352,964	27,593,890	49,357,748
Lippe.....	1,194,318	1,194,318
Lübeck.....	4,684,748	4,684,748	19,597,621
Mecklenburg-Schwerin.....	4,040,000	4,040,000	111,015,000
Mecklenburg-Strelitz.....	6,000,000
Oldenburg.....	9,210,571	10,445,551	46,614,244
Prussia.....	1,939,258,169	1,939,258,169	6,476,691,805
Reuss-Grreiz.....	1,332,418	1,332,418	91,000
Reuss-Schleiz.....	2,396,000	2,379,734	1,040,550
Saxe-Altenburg.....	4,057,798	4,050,189	887,450
Saxe-Coburg-Gotha.....	2,012,182	2,647,190	3,238,096
Saxe-Meiningen.....	2,827,963	2,297,480	9,485,558
Saxe-Weimar.....	9,656,218	9,656,218	4,870,943
Saxony.....	77,604,250	77,604,250	609,521,350
Schaumburg-Lippe.....	931,281	931,281	260,000
Schwarzburg-Rudolstadt.....	2,757,700	2,757,700	3,907,088
Schwarzburg-Sondershausen.....	2,964,755	2,964,755	3,042,244
Waldeck.....	1,401,428	1,401,428	2,068,800
Württemberg.....	70,900,447	71,744,325	468,051,000

The Army.—The Kaiser is the supreme chief of all German troops, though Bavaria, Saxony, and Württemberg have separate military organizations. He has the right to erect fortresses at any point, to declare any district in a state of siege, and to con-

trol all appointments and all matters concerning the organization, administration, or employment of the troops of any of the states. All the German troops swear to give absolute obedience and fidelity to the Emperor. Every German is liable to service in the army, and no substitution is allowed. There are about 360,000 able-bodied young men who reach the age of twenty every year, and of these the required number are drawn by lot for service in the active army, while the rest are attached to the reserve troops and receive some drill. The peace strength of the regular army for 1897 was 22,687 officers and 562,207 men, with 97,378 horses. The infantry consisted of 173 regiments of the line, 19 rifle battalions, and 228 district commands, numbering altogether 12,948 officers and 383,314 men. There were 83 regiments of cavalry, numbering 2,332 officers and 63,375 men. The 43 regiments of field artillery had a numerical strength of 2,671 officers and 58,321 men. Of foot artillery there were 17 regiments and a battalion, numbering 869 officers and 22,824 men. The pioneers, railroad regiments, and balloon detachment numbered 736 officers and 19,085 men. Of train there were 21 battalions, numbering 307 officers and 7,654 men. Special formations numbered 496 officers and 3,409 men. Of staff and non-regimental officers there were 2,308.

The Navy.—The German navy, built, partly built, and authorized up to the beginning of 1896, counted 5 first-class battle ships, 5 of the second class, 4 of the third class, 20 port-defense vessels, 1 first-class cruiser, 10 of the second class, 24 of the third class, 101 first-class torpedo craft, and 4 of the second class. The personnel in 1897 consisted of 960 officers and engineers, 5,069 petty officers, and 15,592 men and boys, making a total of 21,835 men, including surgeons, paymasters, etc. The Government subsidizes 7 of the Atlantic steamers as auxiliary merchant cruisers, each of which in case of war will be fitted with an armament consisting of 8 5½-inch, 4 4½-inch, 2 3½-inch, and 2 2½-inch Krupp guns.

The first of the 5 new second-class cruisers, the "Hertha," was launched at Stettin on April 14, 1897. She is built entirely of steel, has a displacement of 5,650 tons, is driven by 3 engines of 10,000 horse power, capable of producing a speed of 18½ knots, and carries 34 guns and 3 torpedo ejectors, a more formidable armament than the "Kaiserin Augusta" has. The first armored cruiser, the "Fürst Bismarck," was launched at Kiel on Sept. 25. The vessel has a displacement of 10,650 tons, a coal capacity of 1,000 tons, 4 9½-inch guns in armored turrets, 12 6-inch guns in casemates on small revolving turrets, 10 3½-inch guns, 10 machine guns, and 6 torpedo tubes. The maximum speed is 19 knots. The ironclad "Kaiser Wilhelm II" was launched at Stettin on Sept. 14. She is a sister ship to the "Kaiser Friedrich III," launched on July 1, 1896, is built entirely of German steel, has a displacement of 11,050 tons, is protected by a belt of 12-inch armor, is driven by triple screws of 13,000 horse power at the extreme speed of 18 knots, and is armed with 18 quick-firing 6-inch guns, 12 guns of 3½-inch caliber, 12 revolver guns, 8 machine guns, and 4 torpedo tubes.

The Emperor having become sponsor for the policy of a substantial increase in the naval forces as a condition of colonial expansion and a future world empire, and a safeguard against attempts, especially on the part of England, to crush the growing commerce and shipping of Germany, the naval estimate for 1898 was much larger than that for 1897. The permanent expenditure was set down as 58,925,277 marks, an advance of 3,542,971 marks, and the nonrecurring expenditure, chiefly

for shipbuilding and armaments, was more than doubled, being placed at 70,500,000 marks. The vessels built in pursuance of the programme of 1888 had raised the empire to the rank of a first-rate naval power, but these, including the four completed battle ships and the two under construction, were intended rather for coast defense and the exigencies of a European war than for the needs of colonial policy and the protection of commerce in distant seas. Of 10 small armor-clads specially designed for coast defense 8 were completed, and then this type was abandoned. Eight cruiser-corvettes with triple screws were planned, but only 1 of the first class was completed, the "Kaiserin Augusta"; the 2 others that have been built fall below the requirements. Of the "Bussard" class of small cruisers all 5 have been built, as well as the torpedo-boat destroyers and dispatch vessels of the original programme. In the naval budget of 1896 there was an advance of 5,298,532 marks in the recurrent expenditure, 4,029,450 marks in the ordinary nonrecurring charges, and 3,111,600 marks in the extraordinary expenditure. To replace the old "Leipzig" a powerful first-class armored cruiser of 10,500 tons was laid down, and 3 deck-protected cruisers armed wholly with quick-firing guns were begun. The new ships sanctioned in the budget of 1897 are a battle ship to take the place of the "Friedrich der Grosse," 2 second-class cruisers, a fourth-class cruiser, a torpedo division boat, and several torpedo boats. The plan of construction for 1898 included 2 more second-class cruisers, making 7 in all, some smaller cruisers, another modern battle ship, the seventh, the reconstruction of the 4 of the "Sachsen" class, and an addition to the torpedo flotilla, besides 2 division boats or destroyers. The Reichstag voted the sum demanded for the building of a new battle ship according to the earlier programme, but the new programme of the Emperor, involving world-wide schemes and boundless expenditures, was condemned by the Center, the Radicals, and the Social Democrats, by whose votes the sums required for two new cruisers were struck out of the estimates. On the reassembling of the Reichstag, the new naval plan was presented, after it had been approved by the Bundesrath. It contemplated the total expenditure of 410,000,000 marks, to be spread over seven years, 50,000,000 marks in 1898, and a little over 60,000,000 marks a year for the succeeding years till 1905. The Liberals would not hear of a fixed credit in advance for the whole period, a septennate for the navy, such as they once tenaciously opposed for the army. The contemplated expenditure was for the construction of more than 20 vessels, of which 10 should be large ships.

Commerce and Production.—Of the total area of Germany 91 per cent. is productive and 9 per cent. unproductive. There are 26,376,000 hectares of arable land, vineyards, and other cultivated lands, 8,789,000 of meadow lands and pasture, 13,956,827 of woods and forests, and 4,927,201 of waste land. There were 5,893,596 hectares sown to rye in 1896; to wheat, 1,930,830; to barley, 1,690,592; to oats, 4,028,692; to potatoes, 3,049,718; to the sugar beet, 406,837; to vines, 116,137; to hops, 42,074. Forestry is conducted by the state on scientific principles, and the forests, covering a fourth of the surface of the country, yield a large public revenue. The value of the mineral products of Germany in 1895 was 706,000,000 marks. The quantity of coal mined was 79,163,600 tons, not counting 24,713,200 tons of lignite; of iron ore, 12,349,600; of zinc ore, 706,300; of lead ore, 158,300; of copper ore, 633,300 tons. The production of pig iron in 1894 was 5,380,039 metric tons, valued at 231,570,000 marks. The value of the zinc prod-

net was 41,813,000 marks; of lead, 19,050,000 marks; of copper, 21,870,000 marks; of silver, 38,615,000 marks. The finished iron produced was 5,901,229 tons, valued at 692,282,875 marks. Prussia, Alsace-Lorraine, Bavaria, and Saxony are the iron-producing countries. Woolen manufacturing is carried on in some of the Prussian provinces, but has its chief seat in Saxony. Westphalia and Silesia produce linens; cotton goods are manufactured in Alsace-Lorraine, Baden, and Württemberg; and the silk textile industry is followed in Rhenish Prussia, Alsace, and Baden. Glass, porcelain, and earthenware are produced in Silesia, Thuringia, and Saxony; clocks and wooden wares in Württemberg and Bavaria; beer in Bavaria and Prussia; and sugar in Prussia, Brunswick and Anhalt. There were 1,769,331 metric tons of raw sugar and 347,090 tons of molasses obtained in 1895 from 14,521,030 tons of beet root. The product of refined sugar was 992,136 tons.

The total value of the special imports in 1895 was 4,246,111,000 marks. The value of the domestic produce and manufactures exported was 3,424,076,000 marks. The values, in marks, of the various classes of merchandise imports and exports in 1895 are given in the following table:

MERCHANDISE.	Imports.	Exports.
Live animals.....	205,357,000	27,243,000
Animal products.....	109,762,000	25,012,000
Articles of consumption.....	1,184,393,000	988,738,000
Seeds and plants.....	48,412,000	31,490,000
Fuel.....	113,507,000	149,078,000
Fats and oils.....	242,891,000	28,870,000
Chemicals, drugs, etc.....	279,814,000	338,953,000
Glass, stone, and clay goods.....	56,747,000	126,487,000
Metals and metal goods.....	296,308,000	481,696,000
Timber and wood manufactures.....	226,617,000	114,648,000
Paper materials and manufactures.....	19,004,000	102,181,000
Hides, leather, and leather goods.....	244,473,000	251,777,000
Textile materials and manufactures.....	1,068,981,000	939,073,000
Rubber and rubber goods.....	36,183,000	26,318,000
Machinery and instruments.....	60,199,000	201,816,000
Hardware.....	19,701,000	81,732,000
Books and objects of art.....	33,768,000	107,982,000
Miscellaneous.....	1,012,000
Total.....	4,246,111,000	3,424,076,000

The total value of dutiable merchandise imported was 2,177,493,000 marks, on which 409,126,000 marks of duties were collected, giving an average rate of 18·8 per cent. of the value of the imports subject to duty. The value of imports free of duty was 2,068,618,000 marks. The imports of horses were 74,843,000 marks in value; of hogs, 28,823,000 marks; of wheat, 144,545,000 marks; of rye, 80,043,000 marks; of barley, 89,845,000 marks; of coffee, 202,522,000 marks; of petroleum, 61,640,000 marks; of hides and skins, 143,954,000 marks; of raw cotton, 231,479,000 marks; of wool, 247,989,000 marks; of woollen yarn, 119,355,000 marks; of raw silk, 99,069,000 marks. The values of the principal domestic exports were as follow: Sugar, 192,867,000 marks; woollen fabrics, 150,700,000 marks; coal and coke, 142,534,000 marks; hosiery, 106,355,000 marks; mixed silk and cotton piece goods, 102,071,000 marks; haberdashery, 89,843,000 marks; leather goods, 89,570,000 marks; paper, 64,010,000 marks; cotton cloth, 63,642,000 marks; aniline dyes, 63,156,000 marks.

The gold and silver imported in 1895 had a total value of 104,495,000 marks; exports, 105,630,000 marks. The participation of the various countries in the commerce of the German customs union is shown in the following table, which gives the values, in marks, of the imports from and the exports to each country in 1895:

COUNTRIES.	Imports.	Exports.
German free ports.....	14,609,000	37,991,000
Great Britain.....	578,790,000	678,800,000
Austria-Hungary.....	525,431,000	435,706,000
Russia.....	508,705,000	230,881,000
Netherlands.....	164,331,000	245,193,000
France.....	229,922,000	292,769,000
Switzerland.....	144,516,000	219,029,000
Belgium.....	179,194,000	159,186,000
Italy.....	145,942,000	83,375,000
Norway and Sweden.....	78,241,000	118,951,000
Denmark.....	73,031,000	100,877,000
Spain.....	28,607,000	31,158,000
Balkan countries.....	74,362,000	83,192,000
Portugal.....	13,539,000	13,054,000
British India.....	162,128,000	44,661,000
Other countries of Asia.....	105,605,000	77,606,000
Africa.....	79,352,000	42,887,000
North America.....	564,825,000	411,418,000
South America.....	394,212,000	192,751,000
Australia.....	118,508,000	23,362,000
All other countries.....	2,237,000	1,146,000
Total.....	4,246,111,000	3,424,076,000

The rapid development of the industry and export trade of Germany during a quarter of a century, more rapid than that of the United States, which is not burdened with military armaments, and much more rapid than that of England or France, is attributed in England largely to the system of technical and practical education in Germany, which has converted the Germans into an ingenious and enterprising industrial nation at the same time that they have maintained and developed their great military establishment. More than any other people they have solved the problem of science applied to industry, constantly revising their processes and making daily progress. They have gained a high place in metallurgy, and in chemical industries the leading position. As merchants the Germans take more pains than the English or the French to study the requirements of their customers and to adapt their mercantile methods and the character of their goods to all tastes, good or bad, and to the customs and national prejudices of the people among whom they trade, never trying to school the habits and consumption of their customers. Considerable sums are set apart in the Prussian budget of 1898 for the extension of technical schools of spinning and weaving, the establishment of new ones, the education of teachers of spinning, weaving, dyeing, and dressing, the acquisition of model machinery, and the erection of laboratories. There are six schools devoted to the education of manufacturers and factory managers. The schools in the different industrial centers are occupied chiefly with the branch of manufacture predominating in each locality, as silk and velvet in Crefeld, linen in Sorau, cloth in Aix-la-Chapelle, mixed woollens in Berlin, mixed jute and cotton in Mülheim, etc. More than twenty schools give instruction in the cottage industry of hand-loom weavers, which is still flourishing in Prussia.

The expansion of the German export trade has been effected without relaxing the high tariff protecting the home market. The commercial treaties, of which ten have been made since 1891, have lowered special duties for favored nations in order to secure reciprocal reductions or prevent the increase of foreign tariffs to the disadvantage of German exporters, but the policy of the empire has remained strictly protective, and the tariffs in force fulfil its conditions. Under such tariffs, by their aid or in spite of them, the relative positions of Germany and Great Britain have been to a considerable extent reversed of late years. Formerly the principal exports of Great Britain to Germany were manufactured articles; latterly they have consisted largely of raw materials, of which a goodly proportion is returned in the shape of manufactured goods, not

only for re-exportation, but actually for British consumption. Of these exports to Great Britain the principal ones are manufactured articles similar to what the English themselves produce, in some cases the counterparts of England's staple products, such as woollens and worsteds, underwear, manufactured garments, printed and dyed cottons, hardware, corner and angle iron, paper, and glass. Great Britain is Germany's best customer, taking in 1895 about 20 per cent. of the total exports. The label, "Made in Germany," intended to discredit the rival goods as compared with the English make, has come to be regarded as a recommendation by the customers of English merchants in distant continents and islands. The domestic exports of Germany increased in value from \$715,000,000 in 1885 to \$835,000,000 in 1895, while those of British home produce fell off \$100,000,000 from the highest mark attained in 1890, being valued in 1895 at \$1,130,000,000. In quantity the German exports of domestic produce and manufactures increased from 18,814,000 metric tons in 1885 to 28,839,000 in 1895. The effect of German competition has produced alarm in France as well as in England. The German exports in 1895 were 20 per cent. greater in value than those of France, which, however, is less than Germany's excess in population, this being 25 per cent. Woolen textiles constitute at present Germany's chief export, and after beet sugar come cotton goods as third in importance, silk manufactures ranking fourth, coal fifth, machinery sixth, ironware seventh, and clothing and underwear eighth. In most of these the English formerly controlled the markets of the world. The export of coal was 10,360,000 metric tons in 1895, valued at 108,000,000 marks. The production of the coal mines has risen from 26,000,000 tons in 1870 to 76,000,000 tons. The United States buys the largest share of German exported woolen piece goods—17 per cent. of the whole—but England takes 16 per cent. of these, and nearly all the woolen hosiery. Of cotton piece goods the United States takes 21 per cent., while England is second, taking 17 per cent. of these, and of the cotton hosiery more than half. The development of the cotton industry has been phenomenal, especially since 1887. In 1895 there were over 4,672,000 spindles, nearly a third of which were in Alsace-Lorraine. The German exports of angle, bolt, and rod iron increased 142,000 metric tons in ten years, during which the English exports declined 19,000 tons, and in the same period German exports of bar iron increased 100,000 tons, while English exports fell off 101,000 tons.

Navigation and Shipping.—The number of vessels entered at German ports during 1894 was 71,453, of 15,856,968 tons, of which 60,732, of 14,755,743 tons, were with cargoes and 10,721, of 1,101,225 tons, in ballast. The total number cleared was 71,965, of 15,873,923 tons, of which 53,625, of 10,733,498 tons, were with cargoes and 18,340, of 5,140,425 tons, in ballast. There were 43,827 German ships, of 7,597,466 tons, and 16,905 foreign ships, of 7,158,277 tons, entered with cargoes and 8,260 German ships, of 674,146 tons, and 2,461 foreign ships, of 427,079 tons, entered in ballast. Of the total number cleared, 41,529, of 6,682,352 tons, were German and 12,096, of 4,050,146 tons, foreign vessels carrying cargoes and 11,119, of 1,622,756 tons, were German and 7,221, of 3,517,669 tons, foreign ships in ballast. Of the foreign vessels entered with cargoes, 5,196, of 4,607,622 tons, were British; 4,818, of 828,329 tons, Danish; 3,351, of 695,084 tons, Swedish; 1,842, of 243,560 tons, Dutch; 934, of 413,384 tons, Norwegian; and 508, of 163,464 tons, Russian. Of the total number cleared with cargoes, 2,966, of 2,177,171 tons, were British; 4,495,

of 689,682 tons, Danish; 2,034, of 490,524 tons, Swedish; 1,475, of 219,726 tons, Dutch; 654, of 267,745 tons, Norwegian; and 246, of 88,068 tons, Russian.

The merchant navy of Germany on Jan. 1, 1896, comprised 2,524 sailing vessels, of 672,100 tons, and 1,068 steamers, of 879,939 tons, total 3,592 vessels, of 1,552,044 tons. Of the sailing vessels 541, of 95,029 tons, belonged to Baltic and 1,973, of 577,071 tons, to North Sea ports, and of the steam vessels 381, of 144,346 tons, belonged to Baltic and 687, of 735,593 tons, to North Sea ports. The number of sailors manning the merchant navy was 39,397. Of the sailing vessels 450 and of the steamers 1,061 were constructed entirely of iron or steel. There were 22 sailing vessels and 114 steamers of over 2,000 tons, 215 sailing vessels and 223 steamers between 1,000 and 2,000 tons, 132 sailing vessels and 196 steamers between 500 and 1,000 tons, 443 sailing vessels and 261 steamers between 100 and 500 tons, and 1,712 sailing vessels and 274 steamers under 100 tons. Although shipbuilding is a comparatively new industry in Germany, the yards are greatly increasing their output and have had more orders than they could execute. In 1894, out of 71 ships built for the British merchant navy, 54 were constructed in German yards. The total tonnage built in Germany was less by 6,900 tons in 1895 than in 1894, being 110,400 tons, but it showed a remarkable advance from 48,200 tons in 1892 and 66,470 in 1893. The German shipbuilders have lately agreed to use German in preference to English materials, even though the former should be for a time more costly, and the German iron manufacturers have promised to increase largely their establishments and output in order to supply the demand, and to work without a profit or even at a slight loss at first, while the state railroads will co-operate by making special low freight charges on shipbuilding materials. In 1895 8 war vessels were built in German dockyards for the navies of Norway, Austria-Hungary, Brazil, and Turkey. In 1896 9 ships of war were constructed for nations abroad in Stettin, Elbing, and Kiel, including 3 armored cruisers and 4 torpedo boats for China and 2 torpedo cruisers and a remodeled ironclad for Brazil.

Communications.—Out of 28,237 miles of railroads in operation at the beginning of 1896 only 3,632 miles were in the hands of private companies. The Imperial or state governments owned all the rest. The total capital invested in German railroads was 11,230,120,000 marks. The receipts in 1895 were 1,416,951,000 marks, and the expenses 864,775,000 marks, leaving a net profit equal to 450 per cent. on the capital. There were 244,679,000 metric tons of goods and cattle transported, paying 937,780,000 marks, and 542,746,000 passengers, paying 378,675,000 marks.

There are 5,830 miles of navigable rivers, 1,371 miles of canalized rivers, and 1,391 miles of canals, not including the Kaiser Wilhelm or Elbe Ship Canal connecting the North Sea and the Baltic. This canal, begun in June, 1887, and opened for traffic on June 19, 1895, is 72 feet broad at the bottom, 213 feet broad at the surface, and 29½ feet deep. The total cost was about 156,000,000 marks. The canal was built primarily for naval purposes, but was expected to pay a profit from tolls levied on merchant vessels, especially steamers. However, the traffic of the Baltic canal for the first two years has fallen considerably below the estimates of the Government. During the first year 16,874 vessels of 1,505,983 tons, passed through, and in the second year, 22,081 vessels, of 2,036,800 tons. The official estimates were based on an average traffic of 18,000 vessels, of 5,500,000 tons, and a toll of 4,000,000 marks. The actual receipts were 2,974,451

marks for 1896 and 1,086,432 marks for 1897. Sailing vessels have taken to the canal, while the steamers that use it are relatively few. A proposal to widen and deepen the canal in order to attract the profitable steamer traffic is under consideration.

The imperial post office in 1895 forwarded 1,169,394,536 letters, 429,133,082 postal cards, 542,455,419 circulars, books, etc., 34,452,576 samples, 918,084,972 newspapers, and 21,320,215,318 marks of money remittances; the Bavarian post office, 122,525,720 letters, 28,964,700 postal cards, 46,380,795 circulars, etc., 2,867,490 samples, 146,285,329 newspapers, and 1,843,928,114 marks; the Württemberg post office, 49,611,884 letters, 16,329,118 postal cards, 27,379,566 circulars, etc., 1,216,384 samples, 47,831,467 newspapers, and 878,108,725 marks; total, 1,341,542,140 letters, 474,426,900 postal cards, 616,215,780 circulars, etc., 38,536,450 samples, 1,109,201,768 newspapers, and 21,042,352,157 marks. The receipts of the imperial post office were 287,049,616 marks and the expenses 261,781,081 marks, leaving a surplus of 25,268,535 marks, which is increased by the surplus of the Bavarian and Württemberg post offices to 29,781,646 marks.

The telegraph lines belonging to the imperial post office have a total length of 70,281 miles, with 269,038 miles of wires. The Bavarian lines have a length of 8,554 miles, with 26,998 miles of wire; the Württemberg lines a length of 3,084, with 8,288 miles of wire. The number of domestic messages sent over the imperial lines in 1895 was 23,037,772; over the Bavarian lines, 1,999,532; over the Württemberg wires, 1,230,358; total, 26,267,662. The number of foreign messages on the imperial lines was 10,333,809; on the Bavarian, 545,418; on the Württemberg, 201,066; total, 11,079,293.

Regulation of Stock and Produce Exchanges.

—The Bourse bill of June 22, 1896, took effect at the beginning of the new year. The immediate supervision of the Berlin Stock and Produce Exchanges was intrusted to a committee of the Mercantile Guild and the management was placed in the hands of a Bourse committee of 32 members, of whom 24 must be active dealers and the others senior members of the Mercantile Guild. The committee of the Produce Exchange must include 5 representatives of agricultural interests and 2 of the milling trade, and at least 2 of the agricultural representatives must be present whenever prices of grain, flour, malt, sugar, etc., are fixed, in order to restrain dealers from unduly depressing the prices of agricultural products. Prices are fixed for each day according to the sworn information of brokers appointed for the purpose. In the Stock Exchange official quotations settled by the Bourse committee are made once a day for stocks and bonds, and for foreign exchange at least three times a week. At the end of each month the monthly average of prices for grain, oils, spirits, and other produce is published. The chief feature of the Bourse bill is the total prohibition of time bargains in grain, in mining stocks, and in the shares of companies of less than 20,000,000 marks capital. Firms engaging in the traffic in futures and differences in other shares and commodities must be registered. In Halle the Produce Exchange was dissolved. In Brunswick, Stettin, and other towns the members of the exchanges organized free associations for the purpose of carrying on their business independently of the Bourse regulations. In Berlin the Bourse conformed to the regulations. The Produce Exchange members started a Free Commercial Union in a neighboring building known as the Fairy Palace. The mercantile community was so incensed against the law that none of the seniors of the Merchants' Guild would accept nomination to the Exchange committee, while the Produce Exchange

members, who had all deserted their own halls, declined to elect their quota. Free commercial unions were instituted all over the country. They refused to give out any reports of transactions or quotations of prices, so as to avoid being treated as bourses, and established an organization of the German grain and produce trade, with its center in Berlin. A supplementary bill was brought before the Federal Council by Prussia to meet the situation. The traffic in futures still continued, the contracting parties relying on each other's good faith. In May the Minister of Commerce notified the free associations that they were bourses in the meaning of the Bourse law, and must prepare and submit to the Government authorities their statutes and regulations. The produce dealers of Berlin, when their independent exchange was closed by the police in June, appealed to the courts.

The Session of the Reichstag.—The prospects of reform of the military courts, for which there was a strong popular demand, were not advanced by the introduction in the bill for the amendment of judicial procedure in the civil courts of modifications intended to give the measure a more liberal character. In consequence of this action of the Reichstag the minister withdrew the bill. Prince Hohenlohe promised to the Reichstag that the growing abuse of dueling in the army would be restricted by submitting quarrels and insults to the absolute decision of courts of honor. Such a court of honor consists of all the officers of a regiment or battalion and a council of honor of a captain and a first and a second lieutenant. On Jan. 1, 1897, an imperial edict was issued, providing that all private quarrels must be submitted to the councils of honor for settlement or for further reference to a court of honor, from which one or both parties may appeal to the Emperor. Quarrels between civilians and officers must also be referred to the council of honor, which has the same power to enforce its decision upon the officer in such a case as when two officers are involved.

The new commercial code for the empire was adopted on April 7. It constitutes the second part of the scheme of monumental legislation inaugurated by the passing of the civil code on July 1, 1896, and goes into force with this at the beginning of 1900. The commercial code contains but few entirely fresh legal enactments. It consists rather of a comprehensive collection of existing commercial laws, with such additions or alterations as were rendered necessary by the adoption of the civil code or were deemed expedient in the interests of modern German trade and commerce. The code is the product of long consideration and prodigious labor. Before it received the form in which it was laid before the Reichstag the first draft was submitted to a commission composed of eminent jurists and of representatives of trade and industry and of agrarian interests. Clauses affecting special branches of trade and industry were in every case subjected to the criticism of representatives of the interests concerned. The work of codifying commercial laws was begun as early as 1839 by the Government of Württemberg, and was carried on later by the Prussian Government and the North German Confederation, resulting in a code that was put in force throughout the empire. This body of law was the basis of the new code, being subjected to a thorough revision by legal experts and submitted to the criticism of mercantile communities. The experience of a third of a century had brought to light many shortcomings, and the new conditions of commerce made it desirable that whole sections should be recast in order to frame a measure embodying the most modern ideas and usages. New varieties of trades, the position of women in

trade, the existence of new classes of commercial agents, the creation of instruments passing to bearer by mercantile usage, warehouse and wharfinger's certificates, the multiplication of companies, new forms of contracts, especially in the stock and produce markets, and the extension and diversification of the banking business were some of the subjects demanding a revision of provisions that represented well enough the conditions of business intercourse in 1870, though the improvement and systematization of German commercial laws was already so advanced that other countries in remodeling their laws have borrowed from German legislation.

The introduction of the associations bill in the Prussian Diet led to interpellations and discussions in the Reichstag, which passed a bill to permit the union of political associations. The Social Democrats moved the repeal of the *lese-majesté* paragraphs in the criminal code, in order to expiate on the frequency of trials for this crime and the punishment of editors for their comments on public questions and of private persons for words uttered in the bosom of their families, and to draw a comparison between the expressions regarded as criminal and those recently uttered by the Emperor, such as the term "unpatriotic crew" applied to opponents of the extraordinary naval credits.

The Government carried through an emigration bill in furtherance of its policy to deflect the stream of emigration from the United States to countries of South and Central America, where large agricultural and industrial colonies will develop autonomous institutions, preserve their language and customs, and preserve a commercial and political connection with the fatherland; or to the Transvaal or other regions where the colonists can advance the political prestige of the empire; as far as possible also to German transmarine possessions. Companies undertaking to settle such colonies will be aided by grants of money and by political protection wherever required. Such a company was organized in Hamburg to take over a tract of 1,700,000 fertile acres in the Brazilian State of Catarina, with a railroad leading to the German colonies already established there. Permission to transport German emigrants will have to be obtained after April 1, 1898, from the German Chancellor, acting with the assent of the Federal Council, and can only be granted to German subjects or companies operating in German territory. A license granted to a navigation company or emigration agent can be canceled by the same authorities. The bill provides that consuls shall be appointed in ports of debarkation approved by the Government to protect the interests of emigrants; that the Government shall facilitate the discharge of their military obligations by Germans living abroad; that an official bureau of information shall be instituted to direct the stream of emigration to territories where the conditions are favorable for prosperity, and where there is the best prospect of the German nationality being perpetuated and relations to the mother country being maintained. The Government issued a decree permitting a sojourn of only a few weeks or months to German-Americans visiting their old home, although the treaty of 1868 was believed to grant the privilege of staying in Germany for an unlimited period to naturalized American citizens not guilty of military dereliction. The German Government protested against the differential duties imposed by the American tariff act on sugar from bounty-paying countries, but resisted the pressure brought by the Agrarians to precipitate the reprisals against the United States which were threatened in the diplomatic note. The Reichstag brought to an end

on June 25 the longest session on record. It began on Dec. 2, 1895, and was made continuous in order to secure the passing of the judicial procedure amendment bill, which was not passed after all, because the Government, after accepting the principle of an appeal in criminal cases, refused to constitute an appellate court. The imperial civil code and the commercial civil code were passed. The Agrarians carried a margarine law for protection of the butter industry, prohibiting in towns the sale of butter and margarine on the same premises, requiring margarine to be mixed with one of sesamum seed as a means of identification, and requiring the packages to have red bands. At the instance of the Conservatives also a measure was enacted partly restoring the mediæval system of the compulsory incorporation of trades in guilds. This is the handicrafts law, establishing and encouraging the organization of the trades and handicrafts in guilds. Elaborate bills for amending the workmen's insurance laws had to be dropped for want of time. A bill for prolonging the subsidy to the North German Lloyd mail steamers, and one for increasing the grant to the Asiatic line, met with such opposition from rival interests that they were abandoned. A vote of 44,000,000 marks for the introduction of quick-firing artillery was approved by all parties except the Socialists.

The Prussian Diet.—The budget presented by Dr. Miquel for 1898, making the total income 2,946,031,385 marks, ordinary expenditure 1,955,855,029 marks, and nonrecurrent expenditure 90,176,356 marks, provided the promised increase in the salaries of 73,500 officials, including professors and school-teachers. The accounts for 1896 had been closed with a surplus of 60,000,000 marks instead of the expected deficit of 30,000,000 marks. The growth of the revenue to the unprecedented sum of two milliards being due to the great development of the railroads and industrial undertakings of the state, the Minister of Finance adhered to the principle of further building up these enterprises by extraordinary outlay and creating a reserve fund to meet years of depression. The extraordinary and unexpected prosperity of trade and traffic had occurred so suddenly that it could not possibly have been anticipated. He has sought to carry out this latter policy in regard to the general finances of Prussia, and has laid before the Chamber proposals for a permanent fund for balancing the budget which would place the country in the position to contemplate with equanimity the advent of measures of progress involving an expenditure impossible to estimate even approximately beforehand, and thus smooth the path for any kind of legislation directed to the social and political development of the nation. The increase in official salaries involves a permanent augmentation of 20,000,000 marks and the new school law 9,000,000 marks more, the main part of which in future years will be met by the saving to be effected by the conversion of the Prussian 4 per cents. It was only the middle class of officials, receiving less than 12,000 marks a year, that was benefited, except undersecretaries of state, who were placed on the same footing with those of the empire, and provincial presidents, whose posts involved such expenses that only rich men could accept them without an increase in the emoluments. The state railroads in 1897 were expected to bring in an increased profit of 30,000,000 marks, customs an additional yield of 25,000,000 marks, state taxes over 8,000,000 marks, direct taxes 2,500,000 marks, stamps 3,000,000 marks, and the surplus at the end of the year would amount to over 80,000,000 marks. The enforced conversion of the 4 per cents into 3½ per cents, was to be completed by Sept. 30, 1897, when the new rate of interest began. The

saving in interest on 3,590,000,000 marks is 18,000,000 marks per annum. The Agrarians, who calculated on a corresponding reduction in the interest on agricultural mortgages, wished to have the rate lowered to 3 per cent.

The King, speaking in Brandenburg in February, spoke of having undertaken a battle against revolution, saying that "the party which ventures to attack the foundations of the state, which revolts against religion," must be vanquished, and pledging himself not to weary "in the struggle to rid our land of this disease which not only infects our nation, but also seeks to undermine the life of the family," and even assails the position of the sovereign. The Chancellor in the previous session had kept the Reichstag, while discussing the civil code, from abrogating the paragraph that prohibits the coalition of political societies by saying that the states of the empire contemplated taking such action individually. The extreme Conservatives, who had more influence over the King than his ministers, and who had persuaded him that the Social Democrats menaced the existence of the state and must be put down lest they sweep away the throne and the altar and uproot the foundations of society, resisted the proposal to permit political associations to unite one with another unless it should be coupled with police powers enabling the Government to dissolve assemblages and societies dangerous to the state, or to prohibit meetings which promote the campaign against the existing order of the state and of society. Prince Hohenlohe and Baron Marschall von Bieberstein were reluctant to associate their names with a reactionary revision of the law of association and public meeting that was repugnant to their principles, was probably unconstitutional, and was not likely to pass even the Prussian Chamber, while in the Reichstag it would create insuperable difficulties for the Government. Nevertheless, when the majority of the Prussian ministry voted for such a measure, they would not yield up their offices to the reactionary element that was trying to oust them. The bill was brought in on May 13. Under its provisions the police would have authority to break up meetings and to dissolve societies which contravene the criminal law or endanger the public safety, especially the safety of the state or the public peace; minors are forbidden to become members of political societies or attend meetings where politics are discussed, and any society or meeting in which persons under twenty-one years of age are found, unless such persons are instantly removed, or any society counting such persons among its members, could be peremptorily dissolved by the police. There were severe penalties attached to managing, promoting, belonging to, or renting premises to prohibited societies. A subsection redeemed the Chancellor's promise, declaring that the union of political societies one with another is permitted, but no union with a non-German society without the consent of the Minister of the Interior. The proposed law left it to police agents to decide what were to be considered associations dangerous to the safety of the state, intrusting them with functions belonging to the judicial power. All the parties except the Conservatives manifested their opposition to the bill. The Reichstag by 207 votes to 53 passed an emergency bill providing simply that associations of every kind may enter into union one with another, and repealing all laws to the contrary in the different German states. This action, which could not have the force of law without the concurrence of the Bundesrath, was intended as a direct vote of censure upon the Government. Cheers arose from four fifths of the benches when Herr Richter, the Radical leader, uttered the reminder "that the German Empire as such has no

native dynasty, and that the imperial dignity itself is in Germany no older than the Reichstag." The Minister of Justice affirmed in the Diet that the Prussian Constitution would have to be altered to make the bill a valid law. The Clericals and Radicals would not accept the bill on any terms. The National Liberals would only consider the question of excluding minors from public meetings. By the aid of their votes it was enacted that minors shall not take part in meetings where political subjects are to be discussed, or become members of political societies. The bill was cut down to this in committee, and passed on May 31. As the bill, even in its amended form, involved an alteration in the Constitution of Prussia, both Chambers adjourned in order to allow the prescribed period of twenty-one days to elapse before taking final action on the measure. The National Liberal party condemned its representatives for making the compromise they did with the reactionaries. Meetings were held and petitions signed protesting against the bill. The Socialists determined henceforth to make their influence felt in Prussian elections, not by putting forward candidates of their own, who under the three-class system of indirect suffrage could not be elected, but by voting for those who are free from reactionary sentiments.

On June 30 the upper house passed the bill with amendments providing that Social-Democratic or anarchistic agitation shall form sufficient ground for the dissolution of a public meeting or an association by the police, and then adjourned to allow the prescribed interval to elapse before again voting on the measure. On July 22 it was passed again by 112 votes to 19. On July 24 this antirevolution bill for Prussia alone, this "little Socialist law," as it was popularly called, came before the Chamber, which finally rejected it by the majority of 209 votes to 205.

Ministerial Changes.—A latent and chronic ministerial crisis in Prussia and in the empire dragged through many months. The Prussian Cabinet was divided on all the principal questions that arose. There were strong influences brought into play for the elimination of the Liberal ministers who were least in sympathy with the pet schemes of the Kaiser, such as the "boundless naval plans" and the associations bill. The trial of the journalists Leckert and von Lützow before the beginning of the year, and that of Major von Tausch, an officer in charge of the political police, which was concluded in June, revealed enough to show that the political spies and the "reptile press" employed in Prince Bismarck's time to carry out his schemes of statecraft have since been used as corruptly by jealous and discordant ministers to undermine the position and assail the reputation of each other. Baron Marschall von Bieberstein, who had been maligned and who attempted to bring into the light of publicity these dark methods, was the first to have his official position made too uncomfortable. He and Prince Hohenlohe are believed to have offered their resignations to the Emperor before the associations bill was brought in. Admiral Hollmann, after making a statement in the Reichstag of the naval plans, which Prince Hohenlohe immediately afterward declared to be without the authority of the ministry, received leave of absence, and Rear-Admiral Tirpitz, the supposed author of the "boundless naval plans," was designated as his successor when he finally resigned, on June 16. A few days afterward Baron Marschall took indefinite leave of absence on the plea of ill health, and Bernhardt von Bülow, the ambassador at Rome, was appointed to fill the post of Secretary of State for Foreign Affairs vicariously. On June 29 Dr. von Bötticher resigned the office of Imperial Secretary of State for the In-

terior, also the vice-presidency of the Prussian ministry and the general representation of the Imperial Chancellor in the Reichstag. Count von Posadowsky-Wehner, previous to this Secretary of the Imperial Treasury, succeeded as Secretary of the Interior in the Imperial Cabinet, with membership in the Prussian ministry without a portfolio. Dr. von Miquel, who had accomplished his great reforms in Prussian finance and was popularly dubbed "the Kaiser's man," assumed the vice-presidency of the Prussian ministry and the office of representing the Chancellor in the Prussian Diet, while Count von Posadowsky was his representative in the Reichstag. These changes were announced on July 1, together with the appointment of Lieut.-Gen. Podbielsky as Secretary of State for the Imperial Post Office in succession to the late Dr. von Stephan. Baron von Thielmann, German minister at Washington, was appointed Secretary of the Imperial Treasury. In October Baron Marshall von Bieberstein resigned and Herr von Bilow was appointed full Minister of Foreign Affairs.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes, of \$5,000 each and upward in amount or value, that were made, became operative, or were completed in the United States during 1897. It excludes the ordinary denominational contributions for educational and benevolent purposes, and all State and municipal appropriations to public and sectarian institutions. The known value of the gifts and bequests enumerated exceeds \$45,000,000. Beyond the scope of the list, and deserving of mention in the benevolent movement of the year are the following: In January the New York Court of Appeals affirmed the judgment of the lower court and terminated the litigation over the will of Daniel B. Fayerweather (see obituary in the "Annual Cyclopædia" for 1896). Under this decision, the residuary estate, originally amounting to \$2,100,000, but in 1897 aggregating about \$3,000,000, will be divided among the 20 universities and colleges mentioned in the ninth section of the will. Acting under the will of Baron Maurice de Hirsch de Gerenth (see obituary in the "Annual Cyclopædia" for 1896), as well as from her own choice, the Baroness de Hirsch forwarded to trustees several installments of the funds designated by her husband and set aside by herself for benevolent work among the Jews in the United States. The amount apportioned for the work projected in New York city was \$1,850,000, and the baroness pledged whatever additional amount the local board of trustees might deem necessary.

Adriance, John P., family of, Poughkeepsie, N. Y., gift to the city, a memorial public library; cost, \$75,000.

Alken, Albert J., Pawling, N. Y., gift to the Society of Friends of that place, productive property, a church edifice, a free library building, and more than \$120,000 in cash, the whole estimated at nearly \$500,000.

Morgan, John Pierpont, New York City, gifts to New York Lying-in Hospital, for a new building, \$1,000,000; Metropolitan Museum of Art, an altar-piece of silver repoussé and enamel, valued at \$10,000.

Morgan, Mrs. Josephine Wharton, Philadelphia, Pa., bequests to St. James's Protestant Episcopal Church, New Bedford, \$5,000; three institutions in Philadelphia, each \$1,000; and collectively to four other institutions there, \$9,000.

Morrill, Miss Mary G., Boston, Mass., bequests to Boston Museum of Fine Arts, \$50,000; Massachusetts Charitable Eye and Ear Infirmary, \$10,000; Children's Hospital, \$20,000; and Massachusetts General Hospital, \$70,000—the three last available on the death of her brother-in-law, and to the three foregoing institutions, her residuary estate.

Museum of Fine Arts, Boston, Mass., acquisition by purchase from an unrestricted sum of \$100,000 in the bequest of Harvey D. Parker, the collection of 23,000 prints formed by the late Henry P. Sewall, of New York, appraised at \$75,000.

New York University, New York City, gift to the public, a double drinking fountain on the new university grounds; cost, \$10,000.

New York University, six friends of, through Prof. Prince, gift to the Semitic department, a valuable collection of ancient Babylonian tablets, discovered in 1895, comprising 204 pieces and including a very uncommon black baked-clay cylinder inscribed in old Babylonian characters, said to date as early as 3000 B. C.

Noble, Mrs. William D., Washington, D. C., gift to Harvard University to establish a course of religious lectures, \$20,000.

Northwestern University, Evanston, Ill., gift by purchase with funds from friends, 2,700 volumes, embracing standard and complete editions of nearly all the classical and romantic writers of Germany from the middle of the last century, several hundred volumes of the sixteenth century, and a manuscript by Eyb, written in the fifteenth century.

Noyes, Crosby S., Brunswick, Me., gift to Bowdoin College, \$5,000.

Nutter, E. S., Concord, N. H., bequests to six institutions, each \$1,000.

O'Donohue, Joseph J., New York, bequests to Roman Catholic charitable institutions, \$8,250.

Otis Elevator Company, New York, gift to Columbia University, an elevator for the engineering building; cost, \$25,000.

Paige, John C., Boston, Mass., bequests to Stockbridge Association, Hanover, N. H., Dartmouth College Hospital, Hanover, and Insurance Library Association, Boston, each \$5,000; and to Boston Public Library his residuary estate of about \$225,000.

Palma, Swante, Swedish vice-consul at Austin, Texas, gift to the University of Texas, a collection of 25,000 books, valued at \$100,000.

Palmer, Francis A., New York, gift to LeGrand College, Eldora, Iowa, \$20,000, in consideration of which the name of the institution was changed to Palmer College.

Parker, James, Chicago, Ill., gift to U. S. Grant University, Chattanooga, Tenn., for a building fund, \$100,000. The name of the institution was changed to Parker College.

Parsons, John E., New York City, gift to Trinity parish, Lenox, Mass., a parish house; cost, \$20,000.

Pearsons, Daniel Kimball, M. D., Chicago, Ill., gifts to Colorado College on the basis of \$50,000 by its friends, \$50,000, and to Belmont College, a woman's dormitory; cost, \$20,000.

Phillips Exeter Academy. Exeter, N. H., gift from an anonymous friend, \$6,000.

Pierce, Henry Lillie. Boston, Mass., (see obituary in "Annual Cyclopaedia" for 1896). The settlement of this estate in 1897 indicated that the five residuary legatees would receive more than \$700,000 each, in addition to the specific bequests to them of \$50,000 each.

Plankinton, Miss Elizabeth. Milwaukee, Wis., gift to Milwaukee Downer College, \$5,000.

Pope, Albert A. Hartford, Conn., gift to New England Hospital for Women and Children in Boston, Mass., a dispensary building with equipment.

Pringle, Samuel M. New York city, bequest for a home for aged and indigent men, available on the death of his brother-in-law, \$75,000; with his sister, **Margaret P. Fenton**, reversionary bequests for a home for respectable invalids and aged and indigent men in New York State, \$200,000.

Pullman, George Mortimer. Chicago, Ill., bequests to thirteen local charitable institutions, each \$10,000. He also directed his executors to set aside \$1,200,000 for the founding and endowment at Pullman, Ill., of a free school of manual training for the children of persons living and employed there.

Randall, Miss Belinda L. Roxbury, Mass., bequest to trustees for distribution to worthy institutions, a fund apportioned as follows: Foxcroft Club of Cambridge, \$70,000; Massachusetts Institute of Technology, \$50,000; Children's Aid Society, \$50,000; Hampton (Va.) Normal Institution, \$25,000; Radcliffe College, Cambridge Prospect Union, and Tuskegee (Ala.) Institute, each \$20,000; Calhoun (Ga.) University, \$10,000; and reserved for a probable trade school, \$95,000.

Raymond, Mary Frances. New York, bequests to the Home for the Aged of the Little Sisters of the Poor, Brooklyn, \$5,000; Elizabeth Home for Girls, New York, \$5,000; and Carmelite sisterhood, New York, \$3,000.

Reynolds, Mrs. Mary Esther, gift to University of Chicago, \$225,000.

Rhineland, Miss Serena. New York, gift to St. James's Protestant Episcopal parish, New York, ground and a group of buildings comprising a church edifice, rectory, and parish house; total value \$500,000.

Richardson, Joseph. New York, bequest to Central Park Baptist Church, \$17,500.

Roby, Warren C. Wayland, Mass., bequests to Wayland public library, ground and money for a building.

Rockefeller, John D. New York city, gifts to Vassar College, a fully equipped hall; cost, \$100,000; to American Baptist Missionary Union and Baptist Home Missionary Society together, \$250,000; to Vassar College library, nearly 3,000 volumes on Greek art and literature; to Mount Holyoke College, for a dormitory, \$40,000.

Root, Elihu. New York city, gift to Hamilton College, a Hall of Science; cost, \$31,000.

Rotch, Miss Edith. Boston, Mass., bequests to Shelter for Homeless Girls, Syracuse, and kindergarten for the blind, each \$10,000; Lawrence Scientific School, St. Luke's Hospital, and Massachusetts Society for Prevention of Cruelty to Animals, each \$5,000.

Ronsmaniere, John Louis. Boston, Mass., bequest to Massachusetts Homoeopathic Hospital, \$5,000.

Rouss, Charles Broadway. New York city, gifts to University of Virginia, a scientific building; and to the city of New York, a replica of Bartholdi's bronze group of Washington and Lafayette in the Place des États-Unis, Paris; cost, \$30,000.

Rowan, Andrew K. Trenton, N. J., gift to New

Jersey Methodist Conference for a home for aged women, his residence property in Trenton.

Rowe, W. H., and family, Troy, N. Y., gifts to Humane Society, a memorial building; cost, \$30,000; and to Salvation Army, a memorial temple; cost, \$25,000.

Sage, Dean. Albany, N. Y., and **Sage, William H.** Ithaca, N. Y., gifts to Cornell University, for a students' hospital, the residence of the late Henry W. Sage, valued at \$80,000, a full equipment, and an endowment of \$100,000.

St. Augustine Roman Catholic Church, Brooklyn, N. Y., joint gift of three friends, three altars of native and Siena marble, comprising more than 10,000 pieces, and costing over \$50,000.

Schaffer, Miss Elizabeth, Philadelphia, Pa., bequests to Lutheran churches and institutions, the greater part of an estate of \$300,000.

Schiff, Jacob H., New York, gifts to Young Men's Hebrew Association, a building valued at \$20,000, and for enlargement of the equipment of the organization, \$30,000.

Scholle, Jacob, Orange, N. J., bequests to five Hebrew charitable institutions in New York and one in San Francisco, each \$2,500.

Schultz, Carl H., New York, bequests to German Hospital and Dispensary and Schultz Benevolent Association, each \$5,000.

Senff, Charles H., Long Island, N. Y., gift to Flushing Hospital, \$10,000.

Sheldon, Judge B. R., Rockford, Ill., bequests to Williams College and Hampton Institute (Va.), each \$100,000.

Shepherd, Mrs. Anne, Brooklyn, N. Y., gift to Vassar College, \$8,000.

Sloan, Samuel, New York, gift to Rutgers College, \$5,000.

Sloane, Mrs. Thomas C., New York, gift to Yale University, an installment of \$160,000 of a special legacy of \$200,000 left her by her first husband, on condition that the entire legacy should go to the university in case she remarried, which she did.

Smeltz, Mrs. George, Hampton, Va., gift to Richmond College, \$5,000.

Smith, Mrs. Elizabeth H., New York, bequests to two branches of Industrial School Association in Brooklyn, each \$10,000.

Smith, E. D., Menasha, Wis., gift to the city for a park, land worth \$25,000, and for a library, \$25,000.

Snell, Robert, New York, gift to Rutgers College, \$5,000.

South, George W., widow and daughter of, Philadelphia, Pa., gift to Pennsylvania Diocese of the Protestant Episcopal Church, the Church of the Advocate, on Eighteenth and Diamond Streets, Philadelphia; cost, \$1,000,000.

Stanford, Mrs. Leland. San Francisco, Cal., gift to the trustees of Leland Stanford Junior University, by deed to take effect at her death, her mansion in San Francisco, with all its furnishings, paintings, and other works of arts; value of ground and building, \$250,000; of contents \$750,000. She also signed a contract with a New York life insurance company by which her life was insured for the benefit of the university to the minimum amount of \$1,000,000. Should she live and continue her annual payments for ten years, the university will receive \$2,000,000 instead of \$1,000,000 at her death.

Starr, Egbert, New York city, bequests to Middlebury College (Vermont), for a library building, \$50,000; and to Presbyterian missions, \$6,000.

Stevens, Mrs. Edwin A., Hoboken, N. J., gift to Stevens Institute, real estate of present value, \$30,000.

Stokes, Rev. Ellwood H., D. D., President of Ocean Grove Camp Meeting Association, bequests to

Methodist institutions, \$5,700, and the residue of his estate to the loan fund of the Methodist Church Extension Society and Ocean Grove Association.

Stranahan, Mrs. James S. T., Brooklyn, N. Y., gift to Noble Hospital, Westfield, Mass., \$5,000.

Strauss, Levi, San Francisco, Cal., gift to the regents of the University of California, a fund yielding more than \$3,500 a year.

Syracuse University, Syracuse, N. Y., gifts from friends for a new Hall of Physics, \$25,000.

Talman, Miss Mary, New York city, bequests to institutions of the Protestant Episcopal Church aggregating \$141,000; she had previously erected the Church of the Beloved Disciple, a vestry house, rectory, and school, and endowed the church and school with \$100,000.

Tammany Hall, Executive Council of, New York, gifts for the poor of New York city, \$20,000; for relief of Cuban insurgents, \$20,000.

Taylor, Frederick, New York, bequests to the Five Points House of Industry, New York Ladies' Home Missionary Society, Children's Aid Society, Society for the Prevention of Cruelty to Children, St. John's Guild, Working Girls' Vacation Society, Auxiliary Society of the Working Girls' Association, Society for befriending Working Girls, Free Home for Destitute Girls, and the Female Guardian Society and Home for the Friendless, an aggregate of \$100,000.

Teachers' College, New York, gifts from three friends, each \$25,000, and from others money to cancel a mortgage of \$125,000.

Thayer, Alexander Wheelock, South Natick, Mass., and Trieste, Austria, bequest to Harvard University, \$30,000.

Thayer, Edward C., Keene, N. H., gift to the city of Worcester, Mass., a home for nurses employed in the city hospital, cost, \$35,000.

Thayer, Mrs. Nathaniel, Boston, Mass., bequests to Massachusetts General Hospital and Domestic and Foreign Missionary Society of the Protestant Episcopal Church, each \$25,000; Perkins Institution and Massachusetts School for the Blind, New England Hospital for Women and Children, Massachusetts Society for the Prevention of Cruelty to Children, Massachusetts Eye and Ear Infirmary, Boston Lying-in Hospital, and Boston Museum of Fine Arts, each \$10,000; 12 institutions, each \$5,000; and other charities, smaller sums—in all nearly \$200,000.

Thorn, Mrs. Emily A., New York city, bequests to local charities, \$8,000.

Thrall, Mrs. S. Maretta, Middletown, N. Y., bequests to the hospital built by her, \$20,000, and to the city for a library, \$30,000.

Thurston, Ellen, Brooklyn, N. Y., bequests to Hampton Institute, \$10,000; Brooklyn Industrial Home, Brooklyn City Mission, American Board of Commissioners for Foreign Missions, and American Missionary Society, each \$5,000; and other institutions, \$25,000.

Todd, William C., Atkinson, N. H., gift to the city of Boston, Mass., for purchase of newspapers, \$50,000.

Vanderbilt, Cornelius, New York city, gift to St. Bartholomew's Home, presented to St. Bartholomew's Church by Mrs. William H. Vanderbilt, an addition as large as the original building; cost, \$250,000.

Vanderbilt, William K., New York city, a founder's gift to the New York Zoological Society, \$5,000.

Van Nest, Mrs. Mary, New York city, bequests to Free Home for Destitute Girls and Ladies' Christian Union, each \$5,000.

Van Nostrand, Mrs. Sarah, New York, bequests to Yale University for Sheffield Scientific School,

\$25,000; General Theological Seminary of Protestant Episcopal Church, \$5,000, and Holland Society of New York, \$1,000.

Vihleln, Henry, Milwaukee, Wis., gift to National German Seminary in that city, \$5,000.

Walker, Edward C. R., Roxbury, Mass., contingent bequests to Massachusetts institutions, an aggregate of more than \$220,000.

Walker, Mrs. James, New York city, gift to New York Infirmary for Women and Children, \$30,000.

Warren, Joseph D., Stamford, Conn., gifts to Universalist Convention, \$5,000, and Universalist societies, \$5,000.

Watson, Stephen, London, Ohio, bequest to Ohio Wesleyan University, \$35,000.

Webb, Mrs. W. G., Salem, Mass., gift to Salem Hospital, \$10,000.

Werner, Max, Germany (died in Los Angeles, Cal., 1897), bequest to Open-Air Fund of New York, available on the death of his mother, \$50,000.

White, Charles, New York city, bequests to Ladies' Helping Hand Association of New York, \$4,000, and Library Association of Brooklyn, Conn., \$3,000.

Widener, Peter A. B., Philadelphia, Pa., gift to trustees of Free Library of Philadelphia, his magnificent city residence for a branch; estimated value, when equipped, \$600,000. He also agreed to place in the branch library a gallery of choice specimens of purely American art, valued at \$400,000. Mr. Widener, desiring to create an institution that will include a free art gallery, free museum of science and art, and a free library, also offered to bequeath to the city his art collection, estimated to be worth \$750,000, on condition that the city provide a suitable fireproof building and keep it always free to the public. He also promised that the collections of his partner, W. L. Elkins, and John G. Johnson should be added to his own, making the total value of the art gifts nearly \$1,500,000. The city made prompt provision for a building in West Philadelphia, and Mr. Widener, W. L. Elkins, Edwin H. Fittler, and Daniel Baugh subscribed \$30,000 each toward its construction.

Wilder, Charles T., Wellesley, Mass., bequests to American Board of Commissioners for Foreign Missions, Armenian Missionary Association, Robert College at Constantinople, Armenian School for Girls at Constantinople, Colorado College, Whitman College, and Carleton College, each \$10,000; Amherst College, \$15,000; the Mount Hermon School for Boys, at Northfield, \$10,000; Kimball Academy, Meriden, N. H., and Mary Hitchcock Hospital, Hanover, N. H., each \$5,000; and the residue of his estate for distribution among charitable, educational, and religious institutions.

Willard, Charles, Battle Creek, Mich., bequests for a library building for the local public schools, \$40,000; for Young Men's Christian Association, \$40,000; and to the Baptist College at Kalamazoo, \$40,000.

Wilson, Mrs. Laura H., Lowell, Mass., bequests to John Street Congregational Church, \$5,000; Worthen Street Baptist Church, \$3,000; Lowell Young Men's Christian Association and Home for Young Women and Children, each \$1,000; other institutions, \$250.

Withers, Mrs. Sarah, Bloomington, Ill., bequest for a library in Nicholasville, Ky., \$30,000.

Wood, Ambrose, New York, bequests to Worcester Hospital, \$10,000, and Allerton Wesleyan Chapel, Yorkshire, England, \$15,000.

Wood, Thomas W., President of the National Academy of Design, gift to the city of Massachusetts, Vt., an art gallery containing many famous paintings, friezes, and statuary. See *Bequests*, Jan. 6, W.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by the union of the Kingdom of Great Britain composed of the Kingdom of England, the Principality of Wales, and the Kingdom of Scotland with the Kingdom of Ireland, holding supreme dominion over the Empire of India and dependencies and colonies of various kinds—self-governing colonies, colonies administered by the Crown, and protectorates under native rule—the whole constituting the British Empire. The reigning sovereign is the Queen-Empress Victoria, born May 24, 1819, the daughter of Edward, Duke of Kent, who was the fourth son of George III. The heir apparent is Albert Edward, Prince of Wales, born Nov. 9, 1841, whose only surviving son, George, Duke of York, born June 3, 1865, of his marriage with Alexandra, Princess of Denmark, is next in succession.

The power to legislate for the United Kingdom and, except so far as is delegated to local legislative authorities, for the whole British Empire is vested in the British Parliament, consisting of the House of Lords and the House of Commons. Members of the House of Lords are royal princes, spiritual lords, who are the metropolitan bishops of ancient sees in England, hereditary peers of England, Great Britain, and the United Kingdom, law lords and life peers created by the sovereign on the advice of the ministers, and representatives elected from the Scotch and the Irish peerages. There were 575 peers on the roll in 1896. The House of Commons numbers 670 members, of whom 495 represent English, 72 Scotch, and 103 Irish counties, boroughs, and universities. All elections, according to an act passed annually by Parliament, are by secret ballot. The number of electors who voted in 1895 was 3,190,826 in England, 447,591 in Scotland, and 220,506 in Ireland; total, 3,858,923. Minors, clergymen of the English, Scotch, and Roman Catholic churches, Government contractors, sheriffs and returning officers, English and Scottish peers, Irish representatives, and all paid officials under the Crown are disqualified from sitting in the House of Commons. The committee of ministers called the Cabinet, representing the actual majority in the House of Commons, exercises in fact the executive authority in the United Kingdom and in the empire that is nominally vested in the Crown. The Prime Minister, who when a member of the House of Commons usually fills the post of First Lord of the Treasury, has the selection of his colleagues and a large degree of control over the administrative and legislative policy of the Government. The Cabinet formed on June 25, 1895, by the Marquis of Salisbury consisted in the beginning of 1897 of the following members: Prime Minister and Secretary of State for Foreign Affairs, Lord Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, Lord Halsbury; Lord Privy Seal, Viscount Cross; Chancellor of the Duchy of Lancaster, Lord James of Hereford; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, Sir Matthew White Ridley; Chancellor of the Exchequer, Sir Michael E. Hicks-Beach; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, G. J. Goschen; President of the Local Government Board, Henry Chaplin; President of the Board of Trade, C. T. Ritchie; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, W. H. Long.

Area and Population.—The area of the United Kingdom is 120,979 square miles. The estimated population in 1896 was 39,465,720. England and Wales, with an area of 58,309 square miles, contained 30,731,092; Scotland, area 29,785 square miles, 4,186,849; and Ireland, area 32,583 square miles, 4,547,779. The population of inner London in 1896 was 4,421,492, and of the outer ring 1,756,421; total for greater London, 6,177,913. The population of the principal English municipal boroughs in 1896 was as follows: Liverpool, 632,512; Manchester, 529,561; Birmingham, 501,241; Leeds, 402,449; Sheffield, 342,278; Bristol, 230,623; Nottingham, 229,775; Bradford, 228,809; Kingston-upon-Hull, 220,844; Newcastle, 212,223; Salford, 210,707; Leicester, 198,659; Portsmouth, 178,639; Cardiff, 162,690. In Scotland, Glasgow had 705,052 inhabitants in 1896; Edinburgh, 276,514; and Dundee, 161,620. Dublin, in Ireland, had 361,891 inhabitants in 1891; Belfast, 255,950.

The number of marriages in England and Wales in 1895 was 227,865; of births, 921,860; of deaths, 568,578; excess of births, 353,282. In Scotland the number of marriages was 28,380; of births, 126,454; of deaths, 81,864; excess of births, 44,590. The number of marriages in Ireland was 23,120; of births, 106,113; of deaths, 84,395; excess of births, 21,718. From 1815 to 1895 the emigration from the British Islands was 14,259,860. The emigration of persons of British or Irish origin between 1853 and 1895 was 8,100,540, of whom 2,390,748 were English, 2,585,005 Irish, and 449,670 Scotch. Of the total number, 5,425,423 emigrated to the United States. The number of Irish who emigrated from Ireland from 1851 to the end of 1895 was 3,651,128; the number who left Ireland in 1895 was 48,703. The number of emigrants, natives and foreigners, who left the United Kingdom in 1896 was 296,053, of whom 154,497 went to the United States, 22,629 to British America, 10,645 to Australasia, and 54,141 to other countries. The emigrants of British and Irish origin numbered 161,939, of whom 102,803 were English, 42,257 Irish, and 16,879 Scotch. The total emigration in 1895 was 271,772, and the immigration was 175,674, leaving a net emigration of 96,098. The number of emigrants of British and Irish origin in 1895 was 185,181, from which 109,418 immigrants of British or Irish origin must be deducted to find the net native emigration, which was 75,763.

Finances.—The estimated revenue for the year ending March 31, 1896, was £96,162,000, and the estimated expenditure was £98,498,496. The actual receipts amounted to £101,973,829, and the actual disbursements to £97,764,357, leaving a surplus of £4,209,472, compared with one of £765,341 in 1895 and a deficit of £169,436 in 1894. The net receipts from customs were £20,762,413, of which tobacco paid £10,748,522, tea £3,746,194, rum £1,985,105, brandy £1,311,728, other spirits £920,088, wine £1,254,994, currants £109,102, coffee £167,673, raisins £221,680, and other articles £297,327. The excise receipts were £26,826,754, of which £15,603,680 came from spirits, £10,718,719 from beer, £238,539 from licenses, £259,342 from railways, and £6,474 from other sources. The yield of the estate duty was £7,727,532; of the probate duty, £90,323; of the legacy duty, £2,730,861; of the succession duty, £1,051,512; of the corporation duty, £39,672; total, £11,639,900. Stamps brought in £7,339,231; the land tax, £1,020,801; the house duty, £1,486,948; the income and property tax, £15,982,843. The total yield of taxes was £85,058,890, and the revenue from other sources £17,076,106, making the total net receipts £102,134,996. Of the nontax revenue, £11,465,370 came from the post office, £2,835,749 from telegraphs, £519,068 from Crown

lands, £680,525 from interest on Suez Canal shares, and £1,566,394 from miscellaneous sources.

The expenditure under the three main heads for the year ending March 31, 1896, was £26,601,357 for the consolidated fund, £38,184,000 for the army and navy supply services, and £32,979,000 for civil and miscellaneous services, including the cost of collecting the revenue. The national debt charges were £35,000,000, of which £16,110,274 represented interest on the funded debt, £6,442,138 terminable annuities, £118,367 interest on unfunded debt, £170,447 management of debt, and £2,152,774 the new sinking fund. Other charges on the consolidated fund were £408,022 for the civil list, £305,312 for annuities and pensions, £81,276 for salaries, £515,714 for courts of justice, and £291,633 for miscellaneous expenses. The expenditure on the army was £18,460,000; on the navy, £19,734,000; for civil services, £19,800,000; for customs and inland revenue, £3,702,000; for the post office, £7,018,000; for the telegraph service, £2,744,000; for packet service, £715,000; total expenditure, £97,764,357.

The revenue for the year ending March 31, 1897, was £103,950,000, which was £3,470,000 more than the estimate. The total sum raised was £112,199,000, of which £8,249,000 went to the relief of local taxation, an increase of £283,000 over the preceding year, due to the agricultural rating bill and kindred legislation. There was a falling off of £95,000 in land taxes, owing to the recent remission, and of £770,000 in the estate duty, due to the transfer of a part of the proceeds by recent legislation. There were increases under all the other heads. The miscellaneous revenue was £547,000 more, gross post-office receipts £480,000 and telegraph receipts £70,000 more. Income-tax receipts showed an improvement of £550,000. The customs receipts were £21,354,000, an improvement of £498,000 over the preceding year, due to increased consumption of tobacco, rum, tea, and champagne. The excise receipts were £27,460,000. The death duties produced £13,963,000. There was a noticeable decrease, ascribed to the growing tendency of rich men to avoid paying duties by making over their property to their heirs and to substitute gifts for legacies. Stamps produced £7,350,000, the loss in transactions on the Stock Exchange being made good by increased receipts from deeds and joint-stock companies.

The estimated expenditure for 1897 was £100,046,000, and the supplementary estimates were £2,279,000, making a total of £102,325,000. The actual expenditures were £101,477,000, of which £799,000 was the advance to the Egyptian Government on account of the Dongola expedition, £145,000 was due to the expenses of the Indian garrison at Suakin, and £487,000 to increases in the army, navy, and education votes. The expenditures of the Government have grown 12 per cent. in four years, while the increase in revenue, apart from new taxation, has been only 9 per cent. The navy expenses have increased 40 per cent. and the education votes 43 per cent. The surplus of £2,437,000 left at the end of 1896 was devoted to the military works act.

The expenditure for 1898 was originally estimated at £100,925,000 for the exchequer and £8,979,000 for local-taxation account; total, £109,904,000. The relief of necessitous board schools, increased wages for post-office employees, etc., increased the amount to £101,791,000. The revenue was estimated at £103,300,000, leaving a surplus of £1,569,000, which, however, was swallowed up in supplementary navy estimates, amounting to £500,000, the expense of maintaining an increased garrison in South Africa, which is £200,000 a year, and the cost of improving postal facilities.

The funded and unfunded debts on April 1, 1896, amounted to £648,474,143, or, including other capital liabilities, to £652,540,105, of which £589,146,878 represented the funded debt, £49,351,465 the capital value of terminable annuities, £9,975,800 the unfunded debt, and £4,065,962 liabilities under various acts of Parliament. The liquid assets of the Government were £22,627,000 of Suez Canal shares and other assets, making the total £23,666,354, besides £8,975,201 of balances in bank.

On April 1, 1897, the gross liabilities of the Government amounted to £644,956,000, the funded debt having been reduced during the year by £1,448,000, the terminable annuities by £4,363,000, and the unfunded debt by £1,843,000. On the other hand, the temporary loans showed an increase of £70,000, owing to the purchase of the telephones and the Uganda Railroad, making the net reduction of debt £7,584,000.

The Army.—The strength of the regular army, as provided in the estimates for 1897, was 7,534 officers, 1,052 warrant officers, 15,941 sergeants, 3,684 drummers, trumpeters, etc., and 127,963 rank and file; total, 156,174 men of all ranks. The general staff numbered 335 officers; army accountants, 209; chaplains, 85; medical department, 619; veterinary department, 68; noncommissioned officers and men attached to staff, etc., 142; cavalry, 553 officers, 1,398 noncommissioned officers, musicians, etc., and 11,396 men; Royal Artillery, 870 officers, 1,950 noncommissioned officers, etc., and 20,457 men; Royal Engineers, 594 officers, 1,264 noncommissioned officers, etc., and 5,641 men; infantry, 2,804 officers, 6,655 noncommissioned officers, etc., and 79,587 men; colonial corps, 164 officers, 394 noncommissioned officers, etc., and 4,883 men; departmental corps, 199 officers, 1,399 noncommissioned officers, etc., and 3,062 men; army service corps, 246 officers, 818 noncommissioned officers, etc., and 2,792 men; gunnery and musketry instructors, military academies and colleges, regimental schools, and other establishments, 188 officers, 494 noncommissioned officers, etc., and 129 men. The number of horses provided for the establishment was 14,716. This does not include the British army maintained in India at the expense of the Indian Government. The number of troops maintained in the United Kingdom in 1896 was 107,656, comprising 12,340 cavalry, 17,834 artillery, 5,608 engineers, and 71,854 infantry and special corps. The total effective strength of the British army on Jan. 1, 1896, was returned as 232,194 officers and men, of whom 76,393 were in England, 3,735 in Scotland, 25,972 in Ireland, 4,407 in Egypt, 83,644 in the colonies, and 78,043 in India. The total effective of the regular forces at home and in the colonies in 1897 was 145,270; of the army reserve, 77,833; of the militia, 122,115; of the yeomanry, 9,745; of the volunteers, 232,150; making a total of 587,113, or, adding 78,041 British soldiers in India, 665,154 fighting men. Adding to this total the native Indian army, about 146,000 men, the imperial service troops in India, 19,000 men, and colonial troops, about 86,000, with military police, etc., the number of armed men wholly or partly trained that can be counted on for the defense of the empire exceeds 900,000. Of 33,351 British troops in the colonies, the number given in the army estimates, 9,735 were stationed at Malta, 4,924 in Gibraltar, 3,669 in Cape Colony and Natal, 1,669 in Bermuda, 1,620 in Jamaica, 1,459 in Barbadoes and St. Lucia, 1,694 at Halifax, 3,047 at Hong-Kong, 1,520 in the Straits Settlements, 1,076 in Mauritius, 1,063 in West Africa, 134 in Cyprus, and 226 at St. Helena.

The estimates for 1898 provide for the following additions to the army: 1 battery of field artillery, to provide a total strength at home of 45 field bat-

series, the complement for the 3 army corps authorized for home defense: 11 companies of garrison artillery, for strengthening the garrisons of coaling stations and naval bases, as recommended by the Colonial Defense Committee; 2 battalions of Foot Guards, raising their strength to 9 battalions, 3 of which will be garrisoned in Mediterranean stations, releasing 3 line battalions for home duty; 1 battalion of Cameron Highlanders; 1 battalion for the West India regiment; and 1 battalion for the Malta militia. This involves an increase of 7,835 men, of whom only 2,500 are expected to be raised during the year. The rearmament of the horse and field artillery is proceeding. The number of men to be maintained on the home and colonial establishments in 1898 is 158,774. The number of recruits raised during 1896 was 1,000 less than in the previous year, in spite of a lowering of the standard. Military men have raised an alarm on the subject of the inadequacy of the British military forces. The infantry of the line is organized on the system of linked battalions, and the result is that while the foreign army is largely made up of seasoned and well-trained men, the home army is mainly composed of boys, a great many of them untrained and wholly incapable of going into a campaign. The efficient men are drafted off in increasing numbers to complete the battalions serving abroad, of which there were 13 more than at home in 1897. The condition of the artillery is even worse, all the trained artillerymen being sent to render efficient the batteries abroad.

To provide a training-ground of sufficient extent for manœuvring troops the Government was empowered by the military-works bill of 1897 to purchase 60 square miles on Salisbury plain—new barracks and new rifle ranges with camps attached, accessible to all branches of the service. The same scheme, for which £5,458,000 was voted by Parliament, comprised other works in which the navy was concerned as well as the army, in the nature of further provision for the more effective defense against modern forms of attack of naval bases and coaling stations abroad and at home, and of certain important mercantile harbors in the United Kingdom. At the instance of the Admiralty it was decided to fortify also Berehaven, Lough Swilly, Falmouth, and Scilly, in order to enable trading ships to find protection in the event of war and allow the fleet to act with more freedom in the Atlantic.

The Navy.—The British navy at the beginning of 1897 counted 28 first-class battle ships, besides 5 under construction, 5 second-class, and 9 third-class battle ships, 23 port-defense vessels, 34 first-class cruisers above 5,000 tons and 17 knots, besides 10 building, 11 others of the first class, 54 second-class cruisers, 174 of the third class, 125 first-class torpedo craft, besides 42 building, 4 second-class and 20 third-class torpedo boats. The new programme provided for the laying down during 1897 of 4 battle ships, 3 small cruisers, 2 sloops, 4 gunboats, 8 river gunboats, and 2 torpedo destroyers. There are 13 ocean steamers subsidized to serve as auxiliary cruisers in the event of war, besides many more engaged in case they are needed, but receiving no subsidies. There were 209 ships in commission in November, 1896, of which 46 were armored vessels, 130 unarmored vessels, 6 training brigs and ships, and 27 miscellaneous. The Mediterranean and Red Sea squadrons in the beginning of 1897 consisted of 37 vessels, the Channel squadron of 14, the North American and West Indian squadron of 12, and in the East Indies were 10, on the China station 26, at the Cape of Good Hope and in West Africa 18, in the Pacific 7, on particular service 16, in Australia 12, on the southeast coast of America 4, on surveying service 8, and in the training squad-

ron 4; total on foreign or particular service, 168. The number of officers, seamen, boys, coast guard, and marines voted for 1897 was 93,750. The navy estimates for 1898 add 6,300, bringing up the total to 100,050.

The cruiser "Terrible," of 14,000 tons, in her steam trials made the same record as the "Powerful," with 18,000 horse power, the mean speed being nearly 21 knots; with the full 25,000 horse power she did better than her sister ship, making nearly 22½ knots. In these powerful deck-protected cruisers, much superior to any others afloat, the Admiralty has adopted for the first time the water-tube boiler. These vessels have a very strong and well-protected armament composed of 42 quick-firing guns, besides 9·2-inch bow and stern chasers. Their vital parts are underneath a 4-inch curved steel deck, and are further secured by water-tight compartments. Their bunker capacity is 3,000 tons.

Parliament voted £5,440,000 for shipbuilding during the financial year 1897-'98. Of four battle ships to be laid down, three will be of the "Majestic" class, with some improvements and with lighter draught for passing through the Suez Canal, and one will be like the "Canopus." There are already 9 war ships building of the "Majestic" type, the largest vessels in any navy except the Italian, with a length of 390 feet, 78 feet beam, a mean draught of 28 feet, and 14,900 tons displacement, having a mean speed of 16½ knots, which can be increased to 17½ knots under moderate forced draught, and carrying an armament consisting of 4 12-inch breech-loading guns of new type, mounted in pairs, 12 6-inch quick firers, 16 quick-firing 12-pounders (improved design), 12 6-pounders, and 5 ejectors for 18-inch torpedoes. The heavy guns are mounted in strong barbettes, with armored shields attached to the turntables, and are capable of being loaded by hand power in any position as well as by hydraulic power in the loading station. The hull is protected more completely than in the "Royal Sovereign" class, and the armor is hardened by the Harvey process. The "Canopus" has a displacement of 12,950 tons, and, with 12,000 horse power—the same as the "Majestic"—is capable of making 18 knots an hour. The main armament will consist of 4 12-inch guns, mounted in armored barbettes, and the quick-firing armament of 12 6-inch guns, 12 12-pounders, and 14 smaller guns, with 5 torpedo tubes. Of this type will be the "Ocean," "Goliath," "Albion," "Glory," and "Vengeance." The programme for 1898 includes 6 light-draught 13-knot screw steamers for river service, and a new royal yacht of 4,600 tons displacement, which will have a speed of 20 knots and great coal endurance, but will not be armed. To keep up with the movement of other naval powers in the direction of providing very strong large cruisers, the Admiralty decided to begin 4 very fast vessels, to cost £700,000 each, capable of taking part in action with fleets and also of guarding lines of communication. They will have a length of 440 feet, a breadth of 69½ feet, a mean draught of 26 feet, a displacement of 11,850 tons, and an armament like that of the "Powerful," consisting of 2 9-inch guns, 12 6-inch quick-firing guns, and 14 12-pounders, and will be protected with the superior armor of the "Canopus." They will be wood sheathed and coppered, so as to keep the sea for a long period, with a continuous speed of 19½ knots, which can be brought up to a maximum of 21 knots. Four new torpedo destroyers were also provided for. In the number and efficiency of these new vessels Great Britain has a long start, but other countries are making vigorous efforts to provide their navies with the fleetest and most formidable of these engines of destruction, destined in the opinion of many to

render obsolete and useless the great armor clads which governments have strained their financial resources to build. Vessels of this type cost £40,000 to build and equip. They carry a crew of 50 or 60 men, and they possess a speed which, from 25 knots in the earlier examples, has risen to 33 knots in the latest. The largest destroyers have a displacement of 400 tons. Provided with torpedoes of the newest type, they would be able by a single successful discharge to disable, if not to destroy, a "Magnificent" or a "Canopus," which a flotilla of the latest destroyers could overtake in five to seven minutes from a distance astern of 2,000 yards. There will be 90 of these destroyers.

A new naval harbor is being constructed at Dover which will afford berths for 20 battle ships, besides smaller vessels. A large dockyard and a deep basin at Hong-Kong, a breakwater to protect the harbor at Gibraltar, and a dock at Colombo are among the new naval works. The annual expenditure on new construction for ten years from 1887 averaged £4,450,000, rising to £7,900,000 in 1897. For 1898 the expenditure will be £9,230,000. The total expenditure on the navy has risen from £14,000,000 in 1888 to £21,838,000 for 1898.

Commerce and Production.—The wheat crop of Great Britain and Ireland in 1896 was 58,164,000 bushels; the barley crop in Great Britain was 70,775,000 bushels, and that of 1895 in Ireland was 6,378,000 bushels. The live stock of the United Kingdom in 1896 consisted of 2,115,557 horses, 10,942,423 cattle, 30,853,809 sheep, and 4,301,328 pigs. The value of the fishery products in 1896 was £7,435,199; the number of men engaged in fishing was 121,978. The exports of fish were £2,274,940, besides £524,780 of re-exports; imports, £2,975,273. The quantity of iron ore raised in 1895 was 12,615,414 tons, valued at £2,865,709, containing 4,394,987 tons of iron, of the value of £10,534,325. The iron ore smelted in 344 blast furnaces was 18,629,337 tons, from which 7,703,459 tons of pig iron were obtained. The imports of pig iron were 93,119 tons and the exports 866,568 tons. The iron and steel exports were £17,603,850 in value, the chief articles being tin plates for £4,239,193, cast and wrought iron for £3,727,607, hoops and plates for £3,014,488, railroad iron for £1,897,036, unwrought steel for £1,948,795, and bar, angle, and bolt iron for £854,017. There were 4,450,311 tons of iron ore imported, chiefly Spanish, valued at £2,977,952. Including tin, lead, zinc, copper, etc., the total value of metals extracted from British ores was £11,472,225. The imports of copper ore and regulus were 191,024 tons; unmanufactured copper, 45,761 tons; lead, 162,924 tons; zinc, 62,525 tons; tin, 41,601 tons. The quantity of coal raised was 189,661,362 tons, valued at £57,231,213. The exports of coal were 31,101,452 tons, valued at £15,435,803, going to France, Italy, Germany, Spain, Sweden, Russia, Egypt, Denmark, the Argentine Republic, Norway, Brazil, and India.

The imports of raw cotton in 1895 were 1,757,042,672 pounds, of which 1,553,758,080 pounds were retained for home consumption. The consumption of cotton in 1896 was 1,644,000,000 pounds; of wool, 616,000,000 pounds; of flax, 240,000,000 pounds. The imports of wool in 1895 were 775,379,063 pounds, and the exports 404,935,226 pounds. Of the imports, 541,394,083 pounds came from Australasia. The exports of cotton piece goods in 1896 were 5,220,000,000 yards; of woollens, 221,000,000 yards; of linens, 174,000,000 yards; of cotton yarn, 247,000,000 pounds; of woollen yarn, 62,000,000 pounds; of linen yarn, 19,000,000 pounds.

The total value of imports of merchandise in 1896 was £441,807,335; of domestic exports, £239,922,209; of exports of foreign and colonial prod-

uce, £56,466,465; total imports and exports, £708,196,000, compared with £702,522,065 in 1895, £682,130,677 in 1894, £681,826,448 in 1893, £715,434,048 in 1892, £744,554,982 in 1891, and £718,944,115 in 1890.

The values of the merchandise imports from and exports of British produce to the colonies and dependencies of Great Britain in 1895 were as follows:

BRITISH POSSESSIONS	Imports	Exports
India	£25,431,315	£24,166,569
Australasia	13,092,797	17,338,965
British America	13,000,550	5,536,565
South Africa	5,426,004	10,561,478
Strait Settlements	4,645,446	1,970,316
Hong Kong	759,441	1,465,766
British West Indies	1,869,678	2,104,354
Ceylon	4,524,843	959,400
British Guiana	705,111	527,329
Channel Islands	1,184,202	943,256
West Africa	2,114,504	1,566,804
Malta	50,167	666,405
Mauritius	97,795	225,410
All others	864,332	565,848
Total	£76,529,210	£70,001,504

The values of the imports from and domestic exports to foreign countries in 1895 were as follows:

COUNTRIES	Imports	Exports
United States	£26,546,890	£27,948,112
France	47,470,783	13,869,943
Germany	26,992,559	20,566,466
Holland	29,419,477	7,354,125
Belgium	17,545,696	7,324,551
Russia	24,739,919	7,004,537
Spain	11,314,518	3,639,453
Egypt	9,584,507	3,346,061
China	3,843,865	5,253,101
Brazil	3,614,155	7,222,986
Italy	3,132,730	5,545,947
Sweden	8,784,256	3,629,525
Turkey	5,757,557	5,347,785
Argentine Republic	9,084,497	5,349,691
Denmark	9,799,328	2,669,134
Portugal	2,491,626	1,461,501
Roumania	2,119,505	891,117
Chile	3,436,142	3,246,338
Japan	1,143,392	4,679,337
Norway	3,261,727	1,465,860
Java	870,419	1,730,730
Greece	1,241,406	806,328
West Africa	412,153	816,325
Austria	1,221,783	1,715,665
Peru	1,671,688	691,401
Central America	956,414	1,316,401
Uruguay	469,696	1,378,626
Spanish West Indies	141,567	943,793
Mexico	467,331	1,322,622
Philippine Islands	1,096,271	612,803
Colombia	434,865	1,257,244
Venezuela	53,419	882,964
Algeria	549,992	294,905
Morocco	404,440	629,793
Ecuador	117,567	226,856
Haiti and San Domingo	53,216	769,077
Tunis and Tripoli	302,255	369,843
East Africa	44,832	566,825
Persia	175,837	372,770
Siam	137,994	159,845
Bulgaria	21,283	159,026
Madagascar	139,005	66,377
Cochin China and Tonquin	11,944	190,722
All other countries	849,843	1,382,692
Total	£321,129,448	£155,886,692

The imports of gold in 1896 were £24,468,337 in value, and exports £30,123,925; imports of silver £14,329,116, and exports £15,048,134.

The value of the live animals imported for food in 1896 was £10,438,690; articles of food and drink free of duty, £146,301,708; articles of food and drink paying duty, £25,693,706; tobacco, £44,796,670; metals, £30,464,786; chemicals, dyestuffs, and tanning substances, £6,784,845; oils, £8,446,366; raw textile materials, £74,760,000; raw materials for various industries, £47,240,940; manufactured articles, £81,350,453; miscellaneous articles, £15-

626,432; imports by parcel post, £1,012,348; total imports, £441,807,335.

The imports of wheat were 16,361,600 quarters of 8 bushels, compared with 19,074,730 in 1895, 14,083,760 in 1890, 12,752,800 in 1880, and 7,131,100 in 1870. Of the total imports of wheat and flour, 30,604,800 hundredweight came from the United States, 17,241,600 hundredweight from Russia, 4,927,600 hundredweight from the Argentine Republic, 5,401,300 hundredweight from Roumania, 1,930,400 hundredweight from Turkey, 1,936,100 hundredweight from Chili, 1,032,910 hundredweight from Germany, 2,112,940 hundredweight from India, 3,617,900 hundredweight from Canada, and 8,500 hundredweight from Australia; total, 70,027,880 hundredweight, of which 5,739,340 was the product of British possessions and 64,288,540 hundredweight was brought from foreign countries. The imports of flour in 1896 were 21,293,220 hundredweight, of which 15,905,100 came from the United States. The imports of broadstuffs from the United States and Canada declined in four years from 14,500,000 to 12,711,000 quarters, or from 64 to 54 per cent. of the total importation, while those from Europe and north Africa increased from 2,400,000 to 6,934,000 quarters, or from 11 to 29 per cent. of the total quantity imported. The aggregate imports of cereals and flour were 189,644,479 hundredweight, against 179,927,460 hundredweight in 1895. The quantity of bacon and hams imported was 6,008,938 hundredweight; of butter, 3,037,947 hundredweight; of margarine, 925,934 hundredweight; of cheese, 2,244,535 hundredweight; of beef, 2,906,967 hundredweight; of fresh mutton, 2,895,158 hundredweight; of preserved meat, 701,970 hundredweight. The cheese imports, which used to come mainly from the United States, are now furnished largely by British colonies. Of 2,234,563 hundredweight imported in the financial year 1897, the colonies sent 58 per cent.; 1,329,374 hundredweight from Canada and 63,530 hundredweight from Australia, compared with 556,756 hundredweight from the United States. The butter imports in 1897 reached 3,086,400 hundredweight, coming from Denmark, France, Sweden, Holland, Australia, the United States, Germany, and New Zealand. The number of cattle imported in 1896 was 562,553; of sheep and lambs, 769,592. The imports of raw sugar were 15,769,226 hundredweight, and of refined sugar 14,778,314 hundredweight. The imports of spirits for consumption were 8,174,296 proof gallons; of wine, 15,861,251 gallons. The tea importation amounted to 227,785,599 pounds, valued at £10,651,253. In 1895 48·31 per cent. of the tea imported came from India, 32·67 per cent. from Ceylon, 15·52 per cent. from China and Hong-Kong, 1·34 per cent. from Holland, and 2·16 per cent. from other countries. The value of the grain and flour imports of 1896 was £52,792,697; of the raw cotton imported, £36,272,609; of wool, £24,958,346; of meat, £24,753,002; of timber and wood, £19,292,961; of raw and refined sugar, £18,383,765; of butter and margarine, £17,842,598; of silk manufactures, £16,707,163; of animals, £10,438,699; of flax, hemp, and jute, £9,236,794; of woollen manufactures, £9,236,794; of oils, £8,446,709; of leather, £7,593,599; of chemicals, dyestuffs, etc., £6,784,845; of seeds, £6,735,999; of wine, £5,951,047; of fruit and hops, £5,747,110; of cheese, £4,900,428; of lard, £4,370,670; of eggs, £4,184,567; of codfish, £3,578,947; of currants and raisins, £1,600,651; of iron manufactures, £1,574,588; of iron ore, £1,761,722; of iron bars, £570,413; of copper partly manufactured, £2,882,453; of copper ore, £2,839,200; of tin, £2,289,688; of lead, £1,853,468; of zinc and manufactures thereof, £1,664,450.

The exports of live animals in 1896 were £940,-

645 in value; of articles of food and drink, £11,355,141; of raw materials, £17,692,507; of yarns and textile fabrics, £105,353,592; of metals and metal manufactures, except machinery, £33,572,894; of machinery and mill work, £17,036,899; of apparel and articles of personal use, £10,473,345; of chemicals and chemical and medicinal preparations, £8,243,601; of all other manufactured or partly manufactured articles, £33,583,916; exports by parcel post, £1,669,669; total exports of British produce, £239,922,209.

The value of cotton manufactures exported in 1896 was £59,333,836; of cotton yarn, £10,047,568; total cotton exports, £69,381,404. The total exports of woollen and worsted goods were £18,266,972, and of yarns £5,665,995; total, £23,932,567. The exports of linen manufactures were valued at £5,030,975, and linen yarn at £1,041,814. Jute manufactures were valued at £2,344,700, and jute yarn at £378,560. The exports of apparel and haberdashery were £6,745,670 in value. The total value of iron and steel exports was £23,813,239, made up of £3,565,564 for railroad iron, £2,535,792 for pig iron, £3,691,632 for hoops, sheets, and plates, £3,035,931 for tin plates, £1,104,352 for bar, angle, bolt, and rod iron, £904,103 for wire, £4,724,322 for cast and wrought iron, £338,832 for old iron, and £3,912,711 for steel, steel manufactures, and mixed steel and iron goods. Hardware and cutlery exports amounted to £2,121,268; machinery, £17,036,898. Exports of coal and coke were £15,160,577 in value. Copper and its manufactures were exported for £2,548,898. The exports of chemical products were valued at £8,243,601.

In answer to inquiries sent out from the Colonial Office in November, 1895, the governors of the British colonies made reports touching the displacement of British by foreign goods which showed that in the selected classes of goods in which foreigners compete the values of imports from foreign countries increased from 25·71 in 1884 to 27·82 in 1889 and 31·88 in 1894, and that of the total imports from all sources foreign countries furnished 31·50 per cent. in 1894, compared with 25·79 per cent. in 1884. Excluding Australia, the imports from foreign countries of competing goods into the British colonies and dependencies, including India, was nearly 50 per cent. of the total imports of such goods in 1894. The countries that compete most seriously with Great Britain are the United States and Germany. Belgium is also an energetic competitor in some lines. In the trade of the far East the competition of Japan is rapidly becoming the leading feature. In many places the foreign merchants do more than 50 per cent. of a trade that was undeniably British a few years ago. The returns do not reveal the whole extent of foreign competition, as only the port of shipment, not the country of origin, is given. Cheapness, better finish, better packing, more accommodating terms, the adaptation of goods to the market, and commercial enterprise are some of the reasons given for the preference for foreign goods. The merchandise-marks act is said to have established, instead of discouraging, a demand for the cheaper foreign articles and to have transferred the orders for such goods from London merchants to the countries where they are made. In the best classes of goods the British manufacturers are held to be still supreme, with certain exceptions, such as machinery and tools of certain patterns turned out in the United States, in which Canadian manufacturers are now becoming active competitors. Finished cheap imitations are not made by British manufacturers, who reserve finish for the high grades, and hence when the colonial markets demand cheap articles of finished appearance these must be supplied by the Continent of Europe or the

Victoria R.I

United States. By taking the trade in cheap goods which British makers refuse to furnish, the foreign competitors obtain a chance to cut into the better class of trade also.

Navigation.—The number of vessels engaged in foreign commerce entered at the ports of the United Kingdom during 1895 was 60,714, of 40,001,000 tons, of which 37,534, of 29,175,000 tons, were British and 23,180, of 10,826,000 tons, were foreign; the number cleared was 60,696, of 40,537,000 tons, of which 37,283, of 29,516,000 tons, were British and 23,413, of 11,021,000 tons, were foreign. The tonnage of vessels entered with cargoes was 31,358,000, of which 22,992,000 tons were British and 8,366,000 tons were foreign; the tonnage of vessels cleared with cargoes was 30,272,000, of which 20,333,000 tons were British and 9,939,000 tons were foreign. Of a total foreign tonnage of 21,847,248 tons entered and cleared, Norway had 4,653,008; Germany, 3,652,788; the Netherlands, 2,293,796; Sweden, 1,900,571; Denmark, 1,940,097; France, 1,832,149; Spain, 1,304,660; Belgium, 1,082,445; the United States, 650,164; Russia, 615,153; Italy, 297,466; and Austria, 196,701. The tonnage entered and cleared at the port of London was 14,546,311; at Liverpool, 10,481,540; at Cardiff, 10,201,127; at Newcastle, 4,601,408; at Hull, 3,763,339; at North and South Shields, 3,513,864; at Glasgow, 3,096,276; at Newport, 2,246,123; at Southampton, 2,748,924; at Middlesbrough, 1,829,044; at Sunderland, 1,732,948; at Leith, Grimsby, Swansea, Grangemouth, and Kirkcaldy, more than 1,000,000 tons each.

The number of British vessels engaged both in the home and foreign trade in 1895 was 16,105, employing 240,486 seamen, of whom 32,335 were foreigners. Their aggregate tonnage was 8,861,848 tons. There were 21,003 vessels registered as belonging, on Jan. 1, 1896, to the United Kingdom, including the Isle of Man and the Channel Islands. The aggregate tonnage was 8,988,450, and they were divided into 12,617 sailing vessels, of 2,866,895 tons, and 8,386 steamers, of 6,121,555 tons. The number of vessels built and first registered during 1895 was 860, of 519,622 tons, divided into 319 sailing vessels, of 54,155 tons, and 541 steamers, of 465,467 tons. Of the total number of vessels belonging to the United Kingdom, 7,495 sailing vessels, of 479,764 tons, and 2,633 steamers, of 406,477 tons, were employed in the home trade and the adjacent seas; 222 sailing vessels, of 26,721 tons, and 329 steamers, of 238,633 tons, were engaged partly in the home and partly in the foreign trade; and 1,765 sailing vessels, of 2,330,285 tons, were engaged in the foreign trade exclusively. The total number of vessels entered coastwise during 1895 was 323,616, of 34,304,703 tons; the number cleared was 289,310, of 47,263,791 tons. The total number of vessels entered at British ports was for that year 384,330, of 94,306,394 tons; the total number cleared was 350,006, of 87,801,274 tons.

Communications.—The total length of railroads open to traffic in the United Kingdom at the beginning of 1896 was 21,174 miles, of which 14,651 miles were in England and Wales, 3,350 miles in Scotland, and 3,173 miles in Ireland. The paid-up share and loan capital amounted to £1,001,110,221. There were 929,770,909 passengers carried during 1895, exclusive of holders of season tickets. The receipts from all sources were £85,922,792; receipts from passengers, £37,361,162; from freight, £44,034,885. The working expenses were £47,876,637, equal to 56 per cent. of the gross receipts.

The number of letters that passed through the post office during the year ending March 31, 1896, was 1,834,000,000, of which 1,559,000,000 were delivered in England and Wales, 163,000,000 in Scotland, and 112,500,000 in Ireland, being 47 per head

of population for the whole United Kingdom, 51 for England and Wales, 39 for Scotland, and 25 for Ireland. The number of postal orders for the United Kingdom was 314,500,000; of bank parcels, 672,300,000; of newspapers, 149,000,000; of parcels, 60,500,000. The number of money orders was 10,900,963, for the total sum of £29,526,817, of which 9,334,296, for £25,582,236, were inland orders. The number of postal orders was 64,076,377, for the gross amount of £23,896,594. The receipts of the post office, exclusive of the telegraph service, were £11,465,379, and the expenses £8,080,873, leaving a net revenue of £3,384,507. The telegraph receipts of the post office were £2,835,749, and expenses £2,773,536, leaving a surplus of £62,213. The total receipts of the telegraph service, including the valuation placed on work done for the Government, were £2,879,794; the total expenses, including those paid by other departments, were £2,914,581. The interest on the capital invested is £208,888. There is thus a deficit on the operations for the year of £333,675. The number of messages sent during 1896 was 78,839,610, of which 60,436,549 were English, 8,095,581 Scotch, and 4,307,480 Irish. Important postal reforms adopted in 1897 are the free delivery of letters to every hamlet, and, as far as possible, to every house; the penny letter rate extended to 4 ounces, with a halfpenny rate for each additional 2 ounces, books to go at the same rate; the abolition of the sample post; the reduction, subject to the consent of the Postal Union, of foreign letter postage from 2d. to 3d.; and the free delivery of telegrams within 3 miles.

The Queen's Jubilee.—The diamond jubilee, marking the sixtieth year of the reign of Queen Victoria, was commemorated on June 22. The Queen, escorted by a gorgeous procession, went from Buckingham Palace to St. Paul's Cathedral, where a service of thanksgiving was held, and then back to her palace through a circuit of decorated streets. Besides 14,000 British regulars, Asiatic, and colonial contingents took part in the parade. To every part of the British Empire the Queen-Empress dispatched the telegraphic message: "From my heart I thank my beloved people. May God bless them!" The celebration was planned above all to demonstrate the power of the British Empire and the unity and loyalty of all its constituent members. Celebrations were held simultaneously in all the British colonies and dependencies from the Northwest Territories of Canada to Cape Colony and from Malta to New Zealand. President Krüger chose the occasion as an appropriate one for releasing two Uitlander rebels who had refused to sue for pardon. President McKinley sent a message to felicitate the English Queen on "the prolongation of a reign which has been illustrious and marked for advance in science, arts, and popular well-being." Lord Salisbury, in moving an address congratulating the Queen on "the longest, the most prosperous, and the most illustrious reign," spoke of it as a period marked by "a continuous advance in the frontiers of this empire, so that many races that were formerly alien to it have been brought under its influence, many who were formerly within its boundaries have been made to feel in some degree for the first time the full benefits of its civilization and its educating influence." He dwelt also on the great political change: "The impulse of democracy, which began in another century and in other lands, has made itself felt fully in our time, and vast changes in the center of power and the incidence of responsibility have been made almost imperceptibly without any disturbance or hindrance in the progress of the prosperous development of the nation." Mr. Balfour, in the House of Commons, extolled the virtue of the Queen, an example to every citizen in

her private life, and in her public life an example to sovereigns. "It is," he said, "because she has so well understood the difficult and delicate tasks which fall to a constitutional monarch to perform that the Constitution of this country has during her reign been able to adapt itself, without friction and without shock, to the varying needs of this great community." The Irish Nationalist members protested against the address and refused to take part in the jubilee, holding, as Mr. Dillon said, that in every item of the catalogue of the great advances made by the populations of Great Britain and the colonies since her Majesty came to the throne Ireland has gone back and not progressed," and, as explained by J. Redmond, "in almost every one of the sixty years of the reign there had been some coercion act for the suspension of trial by jury, the suppression of freedom of speech or the freedom of the press, or the abrogation of some part of the Constitution under which Ireland was supposed to live."

The jubilee celebrations lasted over the month. In the naval review of June 26 at Spithead 173 British war vessels were arranged in 4 lines, each about 5 miles in length. On July 1 there was a review of troops at Aldershot, in which 27,359 officers and men, 5,029 horses, and 57 guns paraded.

Relations with the Colonies.—The Premiers of Canada, Newfoundland, New South Wales, Victoria, Queensland, South Australia, Tasmania, New Zealand, Western Australia, Cape Colony, and Natal, representing all the self-governing colonies, went to England to take part in the jubilee celebrations and for an informal discussion of subjects of interest to the empire with the Minister of the Colonies in Downing Street. The Parliament of Cape Colony had in advance empowered Sir Gordon Sprigg to enter into tentative negotiations regarding a contribution of the colony toward the imperial navy. Sir Wilfrid Laurier had proposals to offer from Canada of preferential trade with the mother country. Australia had, in the first instance, offered a contribution in aid of the British navy, besides taking her full share of her military defenses.

The Prime Ministers assembled at the Colonial Office on June 24. Mr. Chamberlain broached the subject of a closer political and commercial union looking toward imperial federation. He suggested a great council of the empire, to which the colonies should send representative plenipotentiaries, which might slowly grow into a federal council. He was anxious to increase the authority of the Judicial Committee of the Privy Council. To this end the Government had secured the appointment as Privy Councillors of distinguished judges from the courts of Canada, Australia, and South Africa. He proposed that, instead of having in this place judges in active service in the colonies, the colonial governments should appoint and maintain permanently in England judges to assist in the trial of colonial cases brought before the Privy Council on appeal. He desired particularly to hear from the colonial Premiers their views as to what contributions the colonies would be willing to make in order to establish the principle of their participation in the naval defense of the empire. As regards the military defenses, the colonial defense committee of experts had accomplished a great improvement, with the assistance of the colonies; but the organization of the military resources of the colonies was very imperfect, and it was desirable to have a scheme of common defense against any probable enemy, such as already had been prepared in the case of some of the colonies. Uniformity of arms and equipment, some central provision for stores, and facilities for the military instruction of the local forces might be arranged to the advantage of the

colonies. The Colonial Secretary suggested the interchangeability of military forces between the colonies and the mother country and among the several colonies. If colonial regiments were to take up their quarters with the British army for at least a year at a time and British regiments in exchange were quartered in the colonies, the colonial troops would learn the drill, the discipline, and the manoeuvres practiced by the regular British army. The future commercial relations between England and her colonies he hoped to see take the shape of a *Zollverein*. He wanted an expression of opinion as to the desirability of denouncing commercial treaties, especially those with Germany and Belgium, standing in the way of preferential trade arrangements with the colonies. Germany and Belgium had already protested against the proposed preferential treatment of British goods by Canada. He mentioned, further, the subjects of the Pacific cable, imperial penny postage, and a common commercial code, and protested against the alien immigration bills excluding all of the Indian subjects of the Queen on account of their color, and even all Asiatics.

The commercial relations of the United Kingdom and the self-governing colonies were first considered and the following resolutions were unanimously adopted:

"1. That the Premiers of the self-governing colonies unanimously and earnestly recommend the denunciation, at the earliest convenient time, of any treaties which now hamper the commercial relations between Great Britain and her colonies.

"2. That in the hope of improving the trade relations between the mother country and the colonies, the Premiers present undertake to confer with their colleagues with a view to seeing whether such a result can be properly secured by a preference given by the colonies to the products of the United Kingdom."

The British Government had already decided to give effect to the first of these resolutions by notifying to the governments concerned its wish to terminate the commercial treaties with Germany and Belgium, which alone of the existing commercial treaties of the United Kingdom were a bar to the establishment of preferential tariff relations between the mother country and the colonies. From July 30, 1898, therefore, there would be nothing to preclude any action of any of the colonies in pursuance of the other resolution. Mr. Chamberlain warned the Premiers that if any colony should wish to extend the preferential treatment accorded to the United Kingdom to any foreign country then the most-favored-nation clause in all the commercial treaties, to which most of the colonies are parties, could be invoked, and the colony would be bound to give the same terms to nearly every important commercial country in the world. This is not applicable to the United States, which declined to include the British colonies in its most-favored-nation clause with Great Britain.

On the question of the political relations between England and the colonies the following resolutions were adopted:

"1. The Prime Ministers here assembled are of opinion that the present political relations between the United Kingdom and the self-governing colonies are generally satisfactory under the existing condition of things.

"2. They are also of opinion that it is desirable, whenever and wherever practicable, to group together under a federal union those colonies which are geographically united.

"3. Meanwhile, the Premiers are of opinion that it would be desirable to hold periodical conferences of representatives of the colonies and Great Britain for the discussion of matters of common interest."

Mr. Seddon, of New Zealand, and Sir E. N. C. Braddon, of Tasmania, dissented from the first resolution because they were of opinion that an effort should be made to render more formal the political ties between the United Kingdom and the colonies. Others of the Premiers were inclined to the view that with the rapid growth of population in the colonies the present relations can not continue indefinitely, and some means will have to be devised for giving the colonies a voice in the control and direction of those questions of imperial interest in which they are concerned equally with the mother country. They recognized at the same time that such a share in the direction of the imperial policy would involve a proportionate contribution to the imperial expenditure, for which, at present, the colonies are not prepared.

The commercial treaties with Germany and Belgium were formally denounced on July 30. Both were terminable on a year's notice. In the treaty with Belgium, signed in London on July 23, 1862, the article referring to colonial trade is worded as follows:

"Articles the produce or manufacture of Belgium shall not be subject in the British colonies to other or higher duties than those which are or may be imposed upon similar articles of British origin."

In the German commercial treaty of May 30, 1865, an article declares that:

"Any favor, privilege, or reduction in the tariff of duties of importation or exportation which either of the contracting parties may concede to any third power shall be extended immediately and unconditionally to the other."

Another article provides that this stipulation shall also be applied to the colonies and foreign possessions of Great Britain, in which "the produce of the states of the *Zollverein* shall not be subject to any higher or other import duties than the produce of the United Kingdom of Great Britain and Ireland or other country of the like kind; nor shall the exportation of those colonies or possessions to the *Zollverein* be subject to any higher or other duties than the exportation to the United Kingdom of Great Britain and Ireland."

The Marquis of Salisbury in his dispatches pointed out that such stipulations were unusual in commercial treaties, and he thought they must have been inserted through an oversight or a want of consideration of the consequences that would flow from them; that the self-governing colonies have for many years enjoyed complete tariff autonomy, and that in recent commercial treaties concluded by Great Britain it has been customary to insert an article empowering the self-governing colonies to adhere or not at will; and, beyond this, these stipulations constitute a barrier against the internal fiscal arrangements of the British Empire that is inconsistent with the close ties of commercial intercourse which subsist and should be consolidated between the mother country and the colonies. The explanatory dispatches contained proposals for the negotiation of new treaties of commerce and navigation, which were accepted by both governments. The German imports from Great Britain in 1895 amounted to £28,900,000, or 136 per cent. of the total imports, while the exports to Great Britain amounted to £31,900,000, or 198 per cent. of the total exports. Belgium exports annually to Great Britain more than she receives by over £3,000,000.

The Session of Parliament.—Parliament met on Jan. 19. In the programme of legislation the first place was given to the question of primary education. It was known that voluntary schools were to be relieved without having recourse to the

contested principle of rate aid. The second place was given to a measure for the compensation of workmen for accidents. The third place in the programme was assigned to national insurance, provision being given to persons connected with the army. A water bill was introduced for Ireland, and Ireland was to have an agricultural department. The other measures mentioned in the Queen's speech were promised on the condition that they permitted their passage through all the stages. These included a criminal-evidence bill, a land-registration bill, a bill-of-sales bill, a companies bill, an agricultural-holdings bill, a prison-miscellaneous bill, an unbranded-reformatory bill, and private bills procedure bills for Scotland and Ireland. In the debate on the address the Irish members raised the question of the financial relations between Great Britain and Ireland. The commission appointed to inquire into this question reported that the taxable capacity of Ireland was one-twentieth that of the United Kingdom, whereas the annual tax revenue collected from Ireland was one-eleventh of the total revenue. The Irish Unionists joined with the Nationalists in demanding that this arrangement, whereby Ireland was overtaxed at the rate of £2,500,000 a year, should be corrected. The conditions of the act of union gave to Ireland a distinct right to be treated as a separate entity for purposes of taxation, for it was therein provided that Ireland was to pay toward the expenditure of the United Kingdom two parts out of seventeen, subject to revision at the end of twenty years. Mr. Balfour averted a discussion on this subject by promising to give an opportunity for debate later, and announcing the intention of the Government to institute a new inquiry. The royal commission that conducted the previous inquiry was appointed by the Gladstonian Government and was presided over by Mr. Childers and, after his death, by the O'Connor Don. The English Conservatives were inclined to dispute the right of Ireland to be treated as a separate entity under the act of union since the provision to that effect had been ignored for eighty years. Statistics were marshaled to show that, after deducting the sums returned in local expenditures, Ireland contributed only one-thirtieth to what could be properly called imperial expenditure. The reference to a new royal commission was made to include an investigation into the amount of the common expenditure of the United Kingdom and into the amounts of the net contributions of England, Scotland, and Ireland toward that expenditure after deducting the outlay on common objects. The commission was further instructed to report "whether, when regard is had to the nature of the taxes now in force, to the existing exemptions, and to the amount of expenditure by the state on local services, then provision in the act of union between Great Britain and Ireland, with regard to the particular exemptions and abatements, calls for any modification in the financial system of the United Kingdom."

Patrick O'Brien moved an amendment, pleading the unanimous desire of the Irish people for the release of the remaining dynamiters undergoing punishment in English prisons "for offenses arising out of insurrectionary movements connected with Ireland." The refusal of the Home Secretary to grant an amnesty was supported by a majority of 204 against 132 votes. The question was brought up again later, when Parliament adjourned for the Queen's jubilee, and the Irish members took from the example of the Transvaal President who commemorated that event by setting free a number of the Johannesburg conspirators. The Irish members were joined by some of the Radicals in denouncing assaults, and the Dillonites in their support for the

reopening of the land question had the same support as well as that of the rival Irish faction. Sir Henry Howorth criticised the Home Secretary's action in releasing the dynamite conspirators who were discharged from prison in 1896, but the House of Commons accepted the explanation that it was done on the ground of medical reports.

The subject of Irish university education was raised by an amendment to the address, and the admission that there was a grievance and that something should be done to remove it was extracted from Mr. Lecky, which drew from Mr. Balfour a reiteration of former promises, which could not be carried out immediately because it was impossible to lay a plan before Parliament until the limits of the Roman Catholic claims were known. Other amendments that were withdrawn or rejected protested against the delay in legislating for Scotch crofters, against adulteration of food products, against undermanning merchant vessels, on the registration laws, and on the deportation of paupers to Ireland. Sir William Wedderburn's proposal for an independent inquiry into the condition of the Irish people gave to Lord George Hamilton an opportunity to explain the famine policy of the Indian Government. Coningsby Disraeli's proposal of a conciliatory mission to the Sultan met with no support from any section of the house. Immediately after the address was voted, on Jan. 26, the house took up the Government proposals for the relief of voluntary schools.

Parliament had been convened three weeks earlier than usual in order to get the voluntary-schools bill and the military-works bill through before the close of the financial year, so that they could receive the necessary allocations from the public funds, and be carried into effect immediately. The financial resolutions authorizing the payment of grants in aid of voluntary schools in England and Wales were moved in committee by Mr. Balfour on Feb. 1. He sought to obviate the objections raised by Liberal Unionists as well as by the Opposition to the exclusion of necessitous board schools by promising that they would be dealt with at an early date by Parliament. The present measure proposed to relieve voluntary schools from rates, to do away with the 17s. 6d. limit, and to increase the grant in aid of 4s. per child in average attendance allowed by the education act of 1896 to 5s., which would make the expenditure on voluntary schools £616,500 instead of £489,000. A distinction was drawn between town and country schools. The Government proposed to encourage the formation of associations of voluntary schools which would advise the Education Department as to how the money could best be expended by enabling the Education Department to refuse any assistance out of the grant to schools refusing to join an association, provided no school should be obliged to join an association belonging to a different denomination. When Mr. Balfour expressed a doubt as to the passage of the bill before the close of the financial year, the Liberals proposed an amendment extending the relief to all necessitous primary schools, which was rejected by 355 votes to 150, the Irish Roman Catholics generally voting with the Government on this and on the questions raised later regarding local control and the representation of parents among the managers of aided schools as a condition of the additional grant. Their support more than counterbalanced the defection of Mr. Courtney and other Liberal Unionist friends of the board schools and of the Conservative advocates of rate aid, such as Lord Cranborne and Lord Hugh Cecil. The closure was frequently applied to shut off debate on these points and on the conditions of distribution, on the constitution and functions of the

proposed associations, and on proposals to introduce restrictions on the amount of the grant. The bill was reported without any amendments, and, in spite of the warnings of Mr. Asquith and Mr. Morley, was carried on the third reading, on March 25, by the extraordinary majority of 331 against 131. The House of Lords passed it without amendment, the vote on the second reading being 100 to 15, and it received the royal assent on April 8.

Directly after the voluntary-schools bill was made law the Government introduced the financial resolutions for the promised necessitous board schools bill. A clause in the school act of 1870 sanctions an additional grant to make up the deficiency when the school rate of 3d. in the pound fails to produce 7s. 6d. per pupil. The new bill abolishes this fixed limit and provides for an additional grant, rising on a sliding scale in proportion to the rate required. The effect would be to relieve the majority of the highly rated school districts, and London would probably be the only town in which, owing to the great reserve of ratable value, no relief would be given. The bill was not opposed very earnestly, the only objections being the inequality in the degree and amount of relief to board schools as compared with voluntary schools, and the practical exclusion of London. It passed on the third reading without a division, and became law on June 3. An educational bill for Scotland, passed at the end of the session, confers upon Scotch schools substantially the same advantages secured by the Government measures to English schools of both categories, except that in Scotland the 17s. 6d. limit is preserved. The voluntary associations which were to distribute almost the whole of the grant under the English bill began to organize as soon as the bill became law. The Department of Education allowed them all the scope that it was intended that they should have, announcing that it would not recognize an association unless it extends over a sufficiently wide area and includes a large number of schools. The dignitaries of the Church of England, regardless of the protests of the nonconformists and the denunciations of the Liberals, assumed that the act placed the control of education in their hands. They organized the associations not by county lines, but by the ecclesiastical divisions of dioceses and rural deaneries, and not only did not invite the schools of the dissenters to join, but would not receive them.

The workmen's compensation bill was introduced on May 3 by the Home Secretary, but Mr. Chamberlain, who was its author and the originator and champion of the policy of social legislation of which it is an installment, took the leading part in the debates. Mr. Asquith's employers' liability bill had been rejected by the House of Lords three years before because it withheld, in compliance with the almost universal demand of workmen, the right of contracting out of its provisions. The Liberals exulted therefore when they found that their opponents had reduced this right in their own measure to a hollow sham. The principle of the compensation bill was to throw the ultimate cost of accidental injuries received by workmen in the course of their employment upon industry as a general trade charge to be distributed between employers, workmen, and consumers. The Government professed to believe that the burden would in the end be so distributed, and by an extension of the insurance would become an addition to the cost of production, though it is imposed by the bill in the first place on the employer without inquiry as to whether the fault was his or the injured workman's, or was attributable to neither one. The measure was admitted to be tentative and experimental. It is confined for the present to certain trades, the most

important exceptions being merchant shipping, agriculture, and domestic service. Workshops and building works where no steam power is employed are likewise excluded. For every accident happening to a workman in the course of his employment, in the trades to which the bill applies, the employer is liable to pay compensation, the amount of which is to be fixed by arbitration, within the limits of the scale fixed in the bill. This scale gives, in the case of disablement, half the weekly wages for the period during which the injured workman is unable to work; in case of fatal injury to a man leaving dependents, the employer is obliged to pay for their support either £150 or three years' wages, whichever sum is the larger. The doctrine of common employment is abolished. Contracting out is only permitted when the registrar of friendly societies certifies that the advantages to the men are not less than those offered by the bill. Mr. Asquith criticised the exclusion of any employments from the benefits of the bill and the absence of provisions for the prevention of accidents. Mr. Chamberlain argued that the bill would exercise an effectual, though indirect preventive influence. As to its adoption in agriculture and domestic service, it would probably create hardships in the absence of a more widespread system of insurance, but the Government was willing to consider the possibility of extending gradually in future years the securities now made applicable to the trades in which accidental injuries are most serious and most frequent. The bill passed unopposed into the committee stage, where Mr. Chamberlain showed a willingness to accept amendments proposed on behalf of the employers or the working class, provided the main principles of the bill were left unimpaired. One of these makes the employer liable for an accident caused to a workman in the course of his employment by the act of a stranger, the right to recover from the third party being secured to the master by an express provision. Another gives to an injured workman certain preferential rights against the estate of a bankrupt employer. In the interest of employers an amendment was adopted excluding from the benefits of the act any workman injured through his own serious and willful misconduct. Another requires reasonable notice of a claim, and fixes the limit beyond which none shall be entertained. A third allows the commutation of a weekly allowance into a lump sum, to be settled by arbitration, and not to exceed the aggregate payments of six years. The jubilee festivities interrupted the discussion, and before the bill was reported the Government modified the position it had taken on some points. In one or two cases, such as the inclusion of the shipbuilding industry, Mr. Balfour, who shared Mr. Chamberlain's hope of seeing the scheme embrace all the industries of the country, promised that the subject would be reconsidered in the upper house. The most serious opposition to the bill was offered by the colliery proprietors, who protested that, with the present scant margin of profit and high scale of wages, and with the competition of foreign coal mines in the international trade, it would ruin them to insure against the wholesale accidents that are liable to occur in mines, and that, if the charge were eventually shifted to the consumers, the rise in the price of coal would seriously handicap British manufacturers in the competition that was already sufficiently acute between them and their Continental and American rivals. The Government resisted all such appeals, for after having promised the boons contained in the act and affirmed the principles that it involved it could not retrace its steps without alienating a great part of its working-class

support. The House of Lords did, however, introduce some restrictive amendments of considerable importance. The amendment withholding compensation from workmen injured through their willful misconduct was altered so as to revive the principle of contributory negligence, which Mr. Chamberlain had been anxious to banish from the scope of the act. The provision that the employer should be required to make good the deficiency when the funds under a scheme of insurance proved insufficient to pay the statutory compensation was stricken out. A new clause was substituted in regard to subcontracts, giving practically a right of indemnity to the undertaker against the subcontractor. The House of Lords also postponed the commencement of the act till July 1, 1898. Proposals made by Lord Rathmore to free the employer from responsibility for accidents caused by strangers and by Lord Londonderry to restrict his liability to accidents disabling the workman for at least four weeks, instead of for two weeks, were defeated. Lord Salisbury vindicated the bill from the imputation of Socialism. Lord Kimberley approved of the bill in the main, and argued that it must lead to a system of state insurance. Mr. Chamberlain argued that the Lords' amendments did not diminish the value of the bill to workmen, and nearly all of them were accepted by the House of Commons. The compensation secured to the injured workman by this act will entail no expense either to him or to the employer. It will be settled by agreement between them, or by arbitration, or by the county court judge in the last resort, the cost of adjudication being borne by the state. The act does not deprive the workman of the right that he possesses under the common law to recover damages from the employer for an injury caused by the willful and wrongful act of the latter, or any person for whose act or default he is responsible, but the employer shall not be liable to pay compensation both independently of and also under the act. Mr. Chamberlain estimated that compensation was recoverable under the common law for about 12 per cent. of the accidents that occur in the employments covered by the act, namely, on railways and in factories, mines, quarries, and engineering works.

The surplus in the budget, beyond what was required for the supplementary army and navy votes and the postal reforms, was devoted to assisting Scotch education and Irish technical instruction and to the entertainment of the colonial guests during the jubilee festivities. No abatement of taxation was offered, and all parties accepted the proposals of Sir Michael Hicks-Beach without serious protest, except that the Irish Nationalists endeavored to obtain a reduction in the tea and tobacco duties on the ground that indirect taxes contribute too large a portion of the revenue, while some of the Conservative upholders of property rights, like James Lowther, protested against the retention of Sir William Harcourt's death duties.

The question of the overtaxation of Ireland was brought up again on March 29, when Mr. Blake moved a resolution declaring that Ireland was unduly burdened and required an instant remedy. Mr. Whittaker, an English Radical, moved and an Irish Conservative, Col. Waring, seconded an amendment declaring that the United Kingdom must continue to be regarded as a whole for fiscal purposes. Mr. Balfour, pronouncing the inquiry conducted by the commission in connection with the home-rule bill to have been incomplete and inadequate, would promise no legislation until a supplementary investigation placed the Government in possession of the facts regarding the expenditure to be set off against the excess of taxation. The

Chancellor of the Exchequer denounced the theory of taxing communities on some doctrine of their taxable capacity instead of keeping to the present plan of taxing individuals. Though the Opposition generally voted with the Irish Nationalists, Mr. Blake's motion was lost by a majority of 317 to 157. On May 6 Mr. Knox moved that the relief given to the British farmers by the agricultural rating act of 1896 operated as a bounty in their favor against Ireland, and that perfect equality should be granted. Sir Michael Hicks-Beach and Mr. Goschen, in contending against this proposal, abandoned the ground of perfect unity and equality throughout the United Kingdom, and put forward a plea that the Nationalists hated as involving Separatist principles. They denied that Ireland was suffering from agricultural depression, although the Land Commission was at the time reducing rents on that very ground, and they insisted on the plan of equivalent grants. The claim of Ireland for equal relief, although it was supported by the entire body of Irish members, Unionist as well as Nationalist, was defeated by a majority of 219 to 127. A few days later Mr. Balfour unexpectedly disclosed an entirely new Irish policy. The Government had till then limited the proposals of Irish legislation for the year to the agricultural-department bill, a poor-law bill, and a measure to reduce the number of Irish judges. The Irish members had exhibited no pronounced satisfaction over the promised agricultural department, which was not sufficiently popular in its basis to suit some, while others complained of the meagerness of the funds to be placed at its disposal. It was to be a department with a parliamentary head to look after Irish agriculture and other industries, and at the same time an independent board with a fixed separate income to institute experiments in the development of Irish resources. The proposal to reduce the number of Irish judges was opposed by Irish members of both parties, and the poor-law bill awakened no interest. The proposal to spend £500,000 in developing the tourist traffic in Ireland was received with satisfaction commensurate with the boon. The accession of the Irish Nationalists to the ministerial majority on the question of the voluntary schools and the defection of the Irish Unionists on questions of Irish finance had created a new situation. The Irish landlords were angrily protesting against the sweeping reductions of rent made by the Land Commission. Many of them were as fiercely denunciatory as the Nationalists in their invectives against England for overtaxing Ireland. When the Chancellor of the Exchequer refused to give Irish agriculture the relief from rates that had been accorded to England a crisis arose that, if not checked, would tend to unite all Ireland under the Nationalist banner. Mr. Balfour had long been pledged to deal with the problem of local government for Ireland. He now showed his mastery of political strategy by rising at once to the exigencies of the situation. The Irish department and poor-law bills were withdrawn, and he announced a more comprehensive policy for the following year by which the Government intended to deal with the rating grievance, and to give relief to the landlords by assuming the half of the poor rate which they now pay, and to the tenants by paying half of the county cess, of which the whole is now paid by the latter. This plan would remove the main obstacles that stand in the way of giving Ireland local governing bodies like those lately established in England and Scotland, and would obviate all necessity for special restrictive and penal conditions, especially as the remaining taxation on owners could not be increased beyond the average of recent charges. The promises contained in Mr. Balfour's statement were hailed with satisfaction

by all parties in the house, and by Irishmen of all shades of opinion, by Conservatives, Liberal Unionists, and Gladstonian home rulers, by Ulster landlords and Ulster tenants, Dillonites, Healyites, and Redmondites. The Irish landlords were willing to abandon their control, which was already doomed, of the local authorities in view of the clear gift of £250,000 a year which they pay in poor rates, which also relieved them of all apprehension regarding the misapplication by the new local authorities of any funds contributed by them; the Nationalists saw in the scheme the promise of a large measure of popular local government capable of expansion in the direction of their aims; and the tenants, beyond gaining control of their local affairs, received a bonus of £400,000 a year, the amount of half the county cess. The Irish landlords obtained the appointment of a commission, presided over by Sir Edward Fry, to inquire into the administration of the land-commission courts, and they brought before the House of Lords their complaints of rent reductions and of the fixing of tithe rent charges out of proportion to the existing value of the land, but they met with no satisfactory response from the Government. When the Nationalists urged the question of a Catholic university for Ireland, Mr. Balfour declared that it was impossible to deal with it during this session, and that the next would be taken up with the Irish local-government measure. The bill for reducing the number of Irish judges was not introduced till late in July, when it was passed, the Irish members on both sides who had threatened to oppose it having been conciliated by the promised concessions, and by a pledge that the economies to be realized by the abolition of three judgeships and the consolidation of courts, amounting to £15,000 a year, would be applied to Irish purposes.

In the middle of July the leader of the House made his calculations as to what part of the uncompleted legislation could be saved and what bills would have to be sacrificed. The fisheries bill and the criminal-evidence bill were abandoned. This latter, a measure for enabling an accused person to be a witness, while it was supported by Sir Edward Clarke and many legal experts, encountered the opposition of other professional authorities. A bill to model the procedure in Scotch private bills on that adopted for provisional orders, which would be cheaper and would afford facilities for local inquiries, was postponed till another year in order to give time for criticism and discussion. The land transfer bill was rescued after it had undergone considerable amendment. There have been many bills introduced that had for their object the registration of titles and the simplification of sales of land, but the landowning class have a prejudice against the easy transfer of land, and the solicitors have always fought against measures reducing the difficulties and costs of conveyancing. The act of 1897 is a tentative one intended to give the system of compulsory registration an experimental trial, at first in a single county, to see if it can be adapted to the social and business conditions of England. The bill relating to limited companies was sacrificed. The promised London water bill was not introduced because the Government had decided that further inquiry ought to precede comprehensive legislation on this subject. At the instance of the London County Council eight bills had been brought in for the purchase of water companies' works by a private member. Three fourths of the county boroughs of England already had the water supply in their own hands. The County Council desired to buy out all the companies supplying the metropolis with water so as to secure uniformity in charges, in quality, and in the supply of water as soon as possible. The Government declined to support these

bills, holding the proposed plan to be impracticable. A royal commission would be appointed to inquire into the subject, and in the meanwhile the Government introduced and carried a bill giving increased facilities to an aggrieved consumer to obtain redress from a water company that fails to provide an adequate supply. A Scotch congested-districts bill and a public-health bill for Scotland were finally enacted.

The Duke of Devonshire had in his hands a bill for the conversion of the University of London into a teaching university. It was a compromise measure, dealing with a matter that has been long the subject of public discussion and of negotiations between the various interests involved and the advocates of educational reform in the metropolis. The influence of the defenders of the existing system of examinations was still strong enough to cause the postponement of the measure. The Duke of Devonshire expected also to bring in a bill to promote the organization of secondary education, a subject of still wider discussion, as it is of more general interest; but this bill was not produced. The foreign prison-made-goods bill, prohibiting the importation of goods made in foreign prisons that compete with any products of British industry, was placed on the statute book to please the trade unionists, who had demanded such a measure.

The house affirmed the principle of female suffrage by its division on the second reading of the bill for the extension of the parliamentary franchise to women possessing the same qualifications as men, which obtained a majority of 71. The bill got no further, and later in the session a petition signed by many ladies was presented, setting forth that the petitioners viewed with indignation and alarm the existing procedure that reduced legislation to a game of chance and permitted the repeated and insulting postponement of the consideration and satisfaction of the just claims of women to citizenship, and praying that the house would reform its procedure so as to secure in future the fair consideration of all public questions with some regard to their relative importance. The cause of this indignant outburst, so different from the customary humble petitions to strike aghast the sticklers for the dignity of Parliament, was that the opponents of woman suffrage in the House of Commons, alarmed at the ease with which the bill reached the second reading, no one on the front benches venturing to oppose it, prevented it from proceeding further by deliberately prolonging discussion on the verminous-persons bill, which provides for washing unclean tramps at the public expense. Parliament was prorogued on Aug. 5.

Labor Questions.—In the early part of the year a local trade dispute was going on in Wales that was of national importance in its political bearings. There was a protracted strike in the slate quarries of Lord Penrhyn, who refused to recognize the trade union. The President of the Board of Trade finally attempted to mediate between the parties to the dispute, acting on the authority conferred by the conciliation act. For this he was fiercely assailed by Tories in Parliament, who were applauded by the majority of their party, while the Opposition sat silent.

The trade unionists found much fault with the Government for its failure to carry out in the naval and military workshops the fair-wages resolution of Feb. 13, 1891, and for retaining on the list of contractors for Government work persons who employed blackleg labor. The use in public offices of American typewriting paper, Bavarian pencils, and similar foreign goods was also objectionable to the unionists, who asked that only goods of British manufacture or production should

be supplied. The fair-wages resolution prescribed that Government and Government contractors should pay the wages current in the trade. The officials were inclined to dispute the contention that the trade-union scale determined the current rates in all localities. A select committee was appointed in 1896 by the House of Commons to report on the manner in which the fair-wages resolution was observed in Government contract work. The committee made its report in July, 1897. It recommended that a common form of contract be used by all the Government departments. As regards the administration of the resolution, it reached the conclusion that the departments had, as a whole, loyally endeavored to carry out its provisions, though in the case of some of them there was a lack of confidence in their ability or desire to enforce the spirit and letter of the resolution, and it was alleged that there was no uniformity of interpretation or of administration. The departments generally interpreted it as meaning the rate of wages generally accepted as current in the district where the work is carried on, and in this the committee upheld them, believing that in no trade is there a general current rate of wages prevailing throughout the country. In regard to other points complained of, such as the undue employment of women, boys, apprentices, and improvers, walking time, etc., the committee stated that the decision must depend on whether the contractor is enforcing conditions not recognized in the trade or departing from the usual conditions of employment. Subcontracting is held to be legitimate where the form of contract is customary in the trade, or where the contractor in the ordinary course of his business sublets that particular part of the work. The committee thought that it would be advantageous if a list of the Government contractors, together with the nature of their contracts, were laid before Parliament from time to time and published, so that the public would know the names of firms doing Government work.

One of the most determined trials of strength between workmen and capitalists ever known in England began early in July. The masters in the engineering trade had formed an Employers' Federation for the purpose of emancipating themselves from the conditions imposed by the Amalgamated Engineers, one of the strongest and richest of the trades unions, having a membership of 90,000 and a fund of £350,000 available for fighting purposes. A contest was inevitable, and the men chose a time when the employing firms had many orders to fill and a prospect of brisk trade ahead. The engineers of London made a demand for an eight-hours day, raising a popular issue which the Employers' Federation could not meet with good grace, especially in that particular locality, for in London a number of them had already granted the eight-hours day without detriment to their business. The employers were aware that the demand for London was the prelude to a general movement, and they took prompt and strong measures. They posted not only in London, but on the northeast coast, and at Glasgow and Greenock, and on the whole west coast, notices for the discharge of 25 per cent. of the men, hoping thus to cut off the supply for the maintenance of the strikers in London. The unions soon retaliated by calling out the remaining 75 per cent. The strike embraced the whole country, stopping the building of ships and most of the dependent trades. The boilermakers, however, refused to take part in the struggle. Both men and employers were confident of victory. The strike and lockout lasted till the close of the year, with disastrous effects on the commercial and industrial business of the country. At first 80,000 men were thrown out

of employment, but in the course of the dispute other trades were involved and many thousands more were affected. The funds of the union and money contributed from other quarters, though well husbanded, at length ran low. Then offers of mediation, previously rejected, were received with favor by the men, but the employers were not disposed to accept any compromise either in substance or in form. The struggle gave new force to the political demand for the compulsory and universal enforcement by law of the eight-hours system, which was upheld by the Trade Union Congress, sitting in Birmingham in September, by the representatives of 923,000 workers against 141,000. The trade unionists confessed to no fears of the power of federations of capital against them, for their own powers of federation were unlimited.

The Trade Union Congress, besides the legal eight-hours day, put forth demands for the payment of jurors and the inclusion of workmen in jury panels, the payment of members of Parliament, the removal of civil disabilities consequent on the receipt of poor relief, the special taxation of ground values, the limitation of the time during which shops are kept open, regulation of the hours of labor for girls and women employed as domestic servants, the abolition of child labor under the age of fifteen and of night labor under the age of eighteen, the prohibition of repairs in paper and textile mills on Saturday afternoon and Sunday, an amendment of the conspiracy acts setting forth the rights of workers in terms that it would be impossible to misconstrue, the insertion of the fair-wages clause in all Government contracts, a bill for the regular inspection of steam boilers by qualified experts, the recognition of waiters as members of a regular trade, a measure empowering school boards to supply food to starving and underfed children, the abolition of half time, and the raising of the school age to sixteen, the provision by the state of such maintenance as will bring secondary education within the reach of all, better training for teachers, the democratic administration of educational grants and endowments, a graduated income tax on all incomes above £300 a year, and graduated death duties.

Colonies and Dependencies.—The British Empire has a total area of 11,334,391 square miles and a total population of 383,488,469. Notices of the minor colonies and naval stations not elsewhere described are given below.

Gibraltar has an area of 2 square miles, with 20,528 inhabitants; revenue, £61,928; expenditures, £55,411; registered tonnage, 5,512; tonnage entered and cleared, 9,078,256.

The area of Malta and Gozo is 119 square miles, and the population 176,231, excluding the military. The imports in 1896 amounted to £885,315, consisting mainly of articles of food. The revenue, which is derived largely from customs, was £313,681 in 1897, the largest ever collected. The expenditure was £308,903. The language of the courts is Italian, but in 1896 an exception was made for British subjects, not native or naturalized Maltese, who on application may be tried in English. The public debt is £79,168. The registered tonnage is 9,365. The tonnage entered and cleared in 1896 was 7,034,207. There is a railroad in Malta 8 miles long. Cyprus is nominally a Turkish island, and is administered by Great Britain under a convention concluded with the Sultan on June 4, 1878. The area is 3,580 square miles; population, 209,286. Over a fifth of the inhabitants are Mohammedans and the rest belong to the Greek Church. The revenue in 1896 was £167,777; expenditure, £113,851. Revenue is derived mainly from tithes, which are paid in kind, and taxes on buildings, trade

profits, military exemption, domestic animals, customs, and the salt monopoly. The sum of £92,000 is paid annually to the Porte. The imports in 1895 were £276,318; exports, £308,716; shipping entered and cleared, 598,295 tons. The chief exports are wheat, barley, carobs, wine, cotton, raisins, silk, cocoons, hides and skins, wool, cheese, live animals, fruit, and vegetables. Under British administration some progress has been made in reforestation. The British Government has contributed £30,000 or £40,000 a year toward the Turkish tribute. The silk culture was carried on successfully till 1894, when the silkworms were affected by a fatal disease. Irrigation works are in contemplation, which will promote the growth of cotton, linseed, and anise, for which the soil is peculiarly adapted.

For British Guiana is claimed an area of 100,000 square miles, with 276,233 inhabitants. The revenue in 1896 was £567,749, and the expenditure £596,493. The debt is £932,704. The imports in 1895 amounted to £1,443,553, and the exports to £1,769,500. The registered tonnage of the colony is 6,339. The vessels entered and cleared during 1895 had an aggregate tonnage of 539,155. There are 23 miles of railroad.

The area of British Honduras is 7,562 square miles, and the population 33,353. The revenue is £52,389, and the expenditure £56,535. The public debt is £34,736. The imports in 1895 were valued at £151,266, and the exports at £244,335. The tonnage registered in the colony is 5,304. The tonnage entered and cleared in 1895 was 315,186.

The area of the Falkland Islands and South Georgia is 7,500 square miles, with a population of 1,953. The revenue is £12,519; expenditure, £13,159. Imports in 1895 were £71,826; exports, £123,988; registered tonnage, 248; tonnage entered and cleared, 70,212.

Mauritius has an area of 705 square miles, with 378,041 population. The revenue in 1895 was £827,362; expenditure, £848,874. The debt is £1,278,535. The imports in 1896 amounted to £1,111,190, and exports to £1,504,300. The registered tonnage is 7,614. The tonnage entered and cleared in 1896 was 687,014. There are 105 miles of railroad. This colony has suffered like the West Indies from the depression of the sugar industry.

St. Helena is 47 square miles in extent, with 3,921 inhabitants. The revenue is £9,762, and expenditure £8,063. The imports in 1896 were £33,744, and exports £4,313. The tonnage entered and cleared in 1896 was 73,888.

Ascension has an area of 35 square miles, with 140 inhabitants.

Aden and Perim have an area of 80 square miles and 41,910 inhabitants. The imports were valued at £27,895,861 in 1895, and exports at £7,147,787. The vessels entered and cleared had a tonnage of 2,682,693.

Ceylon has an area of 25,365 square miles, and a population of 3,298,342. The revenue in 1895 was £1,158,426, and the expenditure £1,187,877. The debt amounts to £3,723,522. The imports were £4,668,213 in value, and the exports £4,278,401. There are 297 miles of railway. The registered tonnage is 13,239. The tonnage entered and cleared in 1895 was 6,543,197. The military contributions from Ceylon has been fixed at 7½ per cent. of the gross revenue. Trade and revenue have steadily increased. Tea exports have risen to nearly 1,000,000 hundredweight, and coffee is recovering an important position among the exports.

The Straits Settlements have an area of 1,472 square miles and 550,145 population. The revenue in 1895 was \$4,266,064, and expenditure \$3,957,262. The imports were valued at \$21,060,695, and ex-

ports at £18,378,500. The registered vessels have a tonnage of 45,032; tonnage entered and cleared, 11,610,444. The native states occupying the greater part of the Malay peninsula are under British protection. The exports of tin, gambier, and pepper have lately declined, while those of gutta-percha, copra, rattan, and timber have increased. The production of tin is likely to decline further, surface mining being no longer possible.

Hong-Kong has an area of 29 square miles, with 263,514 population. The revenue in 1895 was £517,964; expenditure, £580,292. The debt is £940,375. The registered tonnage is 24,228. The vessels entered and cleared in 1896 numbered 80,463, of 16,515,963 tons, of which 6,454, of 8,758,294 tons, were British, 2,893, of 3,575,102 tons, were foreign, and the rest were junks. The Imperial Government proposes to levy a tax of 17½ per cent. on the gross revenue of the colony for military defense.

Labuan has an area of 30 square miles, with 5,853 inhabitants. The revenue is £4,791; expenditure, £7,032; imports, £68,589; exports, £56,662; tonnage entered and cleared, 141,411 tons. The colony is under the administration of the British North Borneo Company. Coal is mined and exported.

North Borneo is administered by a chartered company under British protection. The area is 31,106 square miles, and the population is about 175,000, consisting of Mohammedan settlers on the coast and native tribes in the mountainous interior, with some Chinese traders and artisans. Tobacco is cultivated extensively, and the coffee culture is increasing. Other products are copra, pepper, sago, rice, gums, gambier, gutta-percha, dried fish, and woods. The imports in 1895 amounted to \$1,962,350, and exports to \$1,663,906. The revenue was \$348,947 and expenditure \$324,206. The neighboring territories of Brunei and Sarawak are under British protection. Brunei has an area of 3,000 square miles. Sarawak, ruled by the Rajah Sir Charles Johnson Brooke, has an area of about 50,000 square miles, and a population of 300,000. The revenue in 1895 was \$453,800; expenditure, \$462,382. The imports in 1895 amounted to \$3,089,393; exports, \$3,141,932.

The natives of North Borneo have been turbulent of late. On July 10, 1897, the rebels, under Mat Salleh, burned the town of Gaja, after which the rebellion spread among other tribes.

GREECE, a kingdom in southeastern Europe. The Constitution of 1864 vests the legislative power in the Boule, a single chamber of 207 members, elected by universal male suffrage for four years. The reigning King is Georgios I, born Dec. 24, 1845, son of King Christian of Denmark, elected by the National Assembly in 1863. He married, in 1867, the Princess Olga, daughter of the Russian Grand-Duke Constantine. The heir apparent is Prince Konstantinos, Duke of Sparta, married to Princess Sophia of Prussia, sister of the German Emperor.

The ministry constituted on June 10, 1895, was composed as follows: President of the Council and Minister of Finance, Theodore Delyannis; Minister of the Interior, Kyriakoulis Mavromichalis; Minister of Foreign Affairs, Alexander Skouzes; Minister of Justice, Philip Varvoglis; Minister of Marine, Nicholas Levides; Minister of War, Col. Smolenski; Minister of Public Instruction, Demetrius Petrides.

Area and Population.—The area of Greece is 25,041 square miles, including 5,073 miles, consisting of a large part of Thessaly and a part of Epirus, ceded to Greece by a treaty extracted from Turkey by the powers and concluded on June 14, 1881. The population of the annexed provinces in 1889 was

344,067, and the population of the whole Hellenic Kingdom 2,187,298. A census taken in 1886 makes the total population 2,439,807. The people are a mixture of races, Hellenes, Romans, Greeks, Slavs, and Albanians, but their language is Hellenic. The Greeks in the Turkish dominions are much more numerous than those in the kingdom, 400,000 in the islands, 3,500,000 in European Turkey, and 2,000,000 in Asia Minor. The capital of Greece is Athens, with a population of 128,000.

Finance.—The estimated revenue for 1896 was 90,894,541 drachmai, or francs, of which 19,491,974 drachmai came from direct taxes, 31,924,895 drachmai from customs and excise, 15,872,464 drachmai from stamps and dues, 11,760,378 drachmai from monopolies, 3,624,750 drachmai from state property, 972,400 drachmai from sales, 1,044,600 drachmai from repayments, 2,355,000 drachmai from arrears of taxes, and 1,750,000 drachmai from other sources. There are four state monopolies, of which salt yielded 2,454,221 drachmai, petroleum 5,488,380 drachmai, matches 1,035,743 drachmai, and playing cards 274,213 drachmai. The disbursements were estimated at 90,222,347 drachmai, of which 21,892,058 drachmai were for the public debt, 5,491,700 drachmai for pensions, etc., 1,325,000 drachmai for the civil list, 862,920 drachmai for the Boule, 2,129,140 drachmai for foreign affairs, 5,341,960 drachmai for justice, 13,147,385 drachmai for the interior, 5,963,245 drachmai for instruction, 15,999,585 drachmai for the army, 5,599,390 drachmai for the navy, 1,494,017 drachmai for the costs of collection, and 2,885,380 drachmai for various purposes. For 1897 the revenue was estimated at 95,343,939 drachmai, and expenditure at 93,752,569 drachmai, not including 650,000 drachmai of supplementary credits.

The national debt on Jan. 1, 1896, amounted to 635,128,897 drachmai in gold and 167,988,781 drachmai in paper. Negotiations with the foreign creditors for a resettlement of the gold debt were carried on, with many interruptions. Meanwhile the Greek Government, acting under the financial law of March 19, 1894, had suspended the sinking fund and refused to pay more than 30 per cent. of the interest. For 1896 the interest on this basis was 9,411,700 drachmai in gold, while on the paper debt it was 12,280,359 drachmai.

The National Bank had 106,800,000 drachmai of notes in circulation on Sept. 1, 1896, with a reserve in gold and silver of only 1,800,000 drachmai. There was a premium of 7 per cent. or more on coin. Small notes began to be issued in June, 1896. In December, 1884, the Government called in the forced paper currency, but owing to the military preparations against Turkey the notes were reissued in September, 1885, and have never been redeemed.

Commerce and Production.—Agriculture and horticulture are almost the only occupations of the people. It is carried on in a primitive fashion, but the soil is very productive. There are about 350,000,000 pounds of dried currants produced annually, with 16,000,000 pounds of tobacco, 66,000,000 gallons of wine, 15,000,000 pounds of olives, 20,000,000 bushels of wheat and other grain, and 60,000,000 pounds of figs and other fruit. Sheep raising, the silk culture, soap making from olive oil, weaving, and lead mining are considerable industries. Not half enough grain is raised to feed the population. The imports in 1895 were valued at 106,777,050 drachmai in gold, and the exports at 69,054,775 drachmai. The values of the chief exports were as follows: Currants, 21,906,600 drachmai; ones, 18,626,900 drachmai; wine, 4,475,925 drachmai; olive oil, 3,182,775 drachmai; fruit, 3,861,175 drachmai; tobacco, 2,010,925 drachmai. Other exports are silk and cocoons, sponges, olives, cognac, soap, and

hides. The imports, consisting of wheat, textiles, coal, timber, metals, hides, sugar, coffee, rice, etc., come mainly from Great Britain, Turkey, Egypt, Russia, Austria, Germany, and France. Great Britain, the principal market for dried currants, receives nearly a third of the exports, and the rest go to France, Egypt, Turkey, Austria, Belgium, Russia, Italy, Holland, and the United States. There were 3,123,400 drachmai of imports from the United States in 1894, and 2,104,500 drachmai of exports to the United States. The exports of Greece to her nine principal customers have steadily fallen from 110,443,501 drachmai in 1891 to 62,761,981 drachmai in 1895. Exports to Great Britain declined from 49,800,487 to 16,833,009 drachmai. The exports to Germany increased from 2,801,210 to 5,068,449 drachmai, the increase being in wine, cognac, and silk. In 1895 the merchants prospered, although there was little increase in the total value of the exports and imports. Exports of currants, fruits, and wine increased, while those of silk, olives, oil, and cognac decreased. Imports of machinery, hardware, glass, chinaware, and other articles that formerly came from Great Britain are now furnished by Germany, France, and Belgium.

Navigation.—In the mercantile navy of Greece there were 613 sailing vessels on Jan. 1, 1895, of the aggregate tonnage of 167,015, and 107 steamers, of 87,620 tons. Including vessels below 100 tons, there were 6,303 in all, of 320,917 tons.

The total number of vessels entered at Greek ports during 1895 was 5,444, of 2,590,101 tons; the number cleared was 4,888, of 2,541,627 tons. Of those entered, 2,645, of 501,083 tons, were Greek. The trade of the Levantine ports and of the Black Sea is, to a considerable extent, carried on under the Hellenic flag.

Communications.—The railroads in operation in 1896 had a length of 578 miles, and there were 310 miles building, including the line from Athens to Larissa, which was intended to join the European system at Salonica. There were 4,781 miles of telegraphs in 1895, with 5,836 miles of wire. During 1894 there were dispatched 365,870 internal and 197,569 international telegrams. The post-office traffic consisted of 4,124,000 internal and 4,776,000 international letters and postal cards, and 5,031,000 internal and 2,823,000 international newspapers, samples, etc.

The Army.—Every able-bodied Greek is liable to be called into military service from the age of twenty-one till he is fifty years old. The period of active service is supposed to be two years, but after eight months or a year the recruits are allowed to return home on leave of absence. For seven or eight years the men are attached to the reserve after they have completed their time of service with the colors, and after that they belong to the *Landwehr*. The nominal strength of the army in 1896 was 1,880 officers and 23,453 men, with 3,294 horses and mules and 180 field guns. The strength of the different branches of the service was as follows: War Office, 204 officers and 36 noncommissioned officers and men; infantry, 857 officers and 15,182 men; cavalry, 93 officers and 1,509 men; artillery, 222 officers and 2,065 men; engineers, 101 officers and 1,112 men; departmental services, 206 officers and 295 men; military schools, 54 officers and 168 men; gendarmerie, 143 officers and 3,086 men. The effective peace strength was 15 or 20 per cent. lower than that given in the estimates. The strength of the army mobilized for war with the reserves was estimated at 82,000, and that of the *Landwehr*, or territorial militia, at 96,000 men; but the territorial army and its reserve exist only on paper, and the war strength of the army never exceeded 66,250 trained men. The infantry company

is 250 men; 4 companies make up a battalion, and 2 battalions form a regiment. On mobilization 15 battalions are added to the 15 existing ones. There are in addition 6 battalions of *euzonoï*, rifles or light infantry. The infantry are armed with the single-loading Gras rifle of 0.433-inch caliber, sighted up to 1,300 yards, with the sword bayonet. The cavalry is organized in squadrons of 150 men, 4 squadrons forming a regiment, of which there are 3 in peace; on mobilization 3 squadrons more are raised. The cavalymen are armed with swords and the Gras carbine. The artillery batteries are of 6 guns. There are 3 regiments, 2 of them composed of 4 field and 3 mountain batteries, the third having a field battery less. The artillery is armed with Krupp guns, 2 batteries with 12-pounders, the rest with 9-pounders. The guns for the artillery reserves are of old pattern. The engineers include a regiment of 2 field battalions, each of 4 companies, 1 railroad and telegraph company, and 1 pyrotechnic company. A third battalion is formed on mobilization. The war organization was intended to be in 3 corps, each of equal strength. The corps is composed of 5 regiments of infantry in 2 brigades, 5 squadrons of cavalry, 7 field and 3 mountain batteries, a battalion of engineers, a train battalion, and a medical-service company. In 1895 the financial condition of the Government led to a decision to abolish 1 cavalry and 1 artillery regiment. The horses are Hungarian and Algerian, and for the full war footing there was a deficiency of 4,000. The law provides a period of forty days' training for the reserves, but it has never been strictly enforced. Nearly two thirds of the reserve had no training. The kingdom is divided into 3 military districts—Larissa, Missolonghi, and Athens. Four infantry battalions, 1 cavalry regiment, and the bulk of the artillery were stationed at Athens, and there was an equally strong garrison at Larissa, while the rest of the regiments were usually quartered singly in different stations. There were not more than 160,000 Gras and Chassepot rifles in store and in the hands of the troops at the end of 1896. The army was therefore deficient in armament, and was equally so in mobility, as well as weak in its untrained reserve. In December, 1896, when the warlike ambition fomented among the people rendered imminent a war against Turkey, the King proposed the formation of a permanent camp at Thebes and the calling out of the reserves, so that a force of 12,000 men, efficient in all particulars, might be ready to take the field instantly.

The Navy.—The "Basileus Georgios," of 1,770 tons, is an old-fashioned ironclad, built in 1867, armed with 2 10-ton Krupp guns, 4 small cannon, and 2 machine guns, and having a speed of 12 knots. The "Basilissa Olga," an armored wooden vessel of 2,060 tons, built in 1869, is also suitable only for port defense, having a speed of 10 knots, with an armament consisting of 4 54-ton and 2 34-ton Krupp guns. Of comparatively modern type are the armored steel cruisers "Hydra," "Spetsai," and "Psara," built in France in 1889 and 1890, each protected by a belt of 11.8-inch steel armor at the water line and a thinner belt above, and armed with 3 10.6-inch and 4 5.9-inch Canet cannon, 7 quickfiring 6-pounders, and 18 lighter cannon and machine guns. Still more modern is the fleet of torpedo boats, of which there are 17 over 86 feet in length, 10 of smaller size, and 2 Nordenfeldt submarine boats, with the torpedo depot and school-ship "Kanaris." Two unprotected cruisers, of 1,000 tons were launched in 1884 and 1885. There are also 2 corvettes, the "Nauarchos Miaulis," of 1,800, and the "Sfaktirea," of 1,300 tons, and 12 gunboats, of which 6, the English-built "Acheloo," "Alphios," "Eurotas," and "Pinios," carrying 2

guns, and the single-gun "Ambrakia" and "Aktion," were built between 1881 and 1884, and the others earlier, besides 3 revenue cutters, a steel yacht, an iron transport steamer, and other craft. The navy was manned in 1896 by 3,165 men, including 185 officers. The men are raised partly by conscription and partly by enlistment.

War with Turkey.—Ever since the war of independence, when Greece was delivered after three centuries of Turkish rule and the kingdom of the Hellenes was established by the London protocol of Feb. 3, 1830, under the protection of England, France, and Russia, the statesmen and people of Greece have aspired to the deliverance of the millions of people of Greek language, religion, and nationality still subject to the Sultan, the overthrow of Ottoman rule in Constantinople, and the restoration of Greek power and civilization throughout the extent of the old Eastern Empire. Military and naval armaments disproportionate to the resources of the nation have been kept up in rivalry with the Balkan states, since whose rise and expansion the Greeks have seen their hopes fading. Overwhelmed by financial embarrassments in consequence of these armaments, forbidden by the powers to strike when the Roumelian revolution reopened the Eastern question and shifted the balance of power in the Balkans, the Greeks concluded that they must take a bold initiative and display a heroic spirit if they would reawaken the sympathy of Europe for their aspirations. The Armenian massacres had roused the indignation of the Christian world, especially the Mediterranean powers, England, France, and Italy, on whose good will Greece chiefly relied, when the political conflict in Crete started anew the movement for the annexation of that island. The patriotic fever inflamed the whole country and excited the old hopes of expansion. The Greeks considered that the whole of Thessaly and Epirus had been promised them, and that the clause in the Treaty of Berlin had not been fairly carried out. The national enthusiasm had been fomented and directed by a powerful patriotic secret society, the *Ethnike Hetairia*, which for years had been collecting large sums of money from Greeks in all parts of the world, and which was recruited from the wealthy and official classes as well as the peasantry, and was able to exercise a dominating influence over the Cabinet and the royal court and finally to combine the Government, the King, and the people in a common policy that led inevitably to war with Turkey. King George, who had long resisted the demand for the dispatch of a fleet and troops to Crete, was in the end compelled to place himself at the head of the national movement for fear of losing his crown.

The *Ethnike Hetairia*, or National Society, was formed at Athens by men of position there in 1895 with the avowed object of promoting and protecting Greek interests in the Hellenic provinces of Turkey and of disseminating literature on the subject. Agents were appointed at various places in Turkey, and large subscriptions were obtained. Military officers and Government officials at Athens joined the society, the secret object of which was to foster an insurrectionary movement among the Greeks of Turkey. In 1896 the leaders of the society determined upon active operations, believing that the time had come for a vigorous attempt to restore to Greece her unredeemed provinces. A secret inner ring was formed and amply provided with pecuniary means by special subscriptions. The society attained such importance that by the end of 1896 neither the King nor his ministers ventured longer to oppose its designs. An irregular force of 1,500 to 2,000 men was formed and equipped, insurrection was organized in the Hellenic provinces,

and a policy of coercing the Government to go to war with Turkey was adopted.

When the powers formally condemned the Greek policy and course of action in Crete and blockaded the coasts of the island, yet still aid was Greek forces to land and organize the rebellion, and when the proposals of the central powers for coercive measures were vetoed by England, France, and Italy, the Greeks had grounds for believing that they would not lack moral support in a military enterprise against Turkey, that in no case would the powers permit the Turks to invade Greece, still less to seize any portion of Greek territory or exact an indemnity. The dissensions among the powers led them to hope that, with the existing feeling in regard to Turkish rule over Christians, a political combination might take form that would compel the Porte to hand over to Greece the territories that she expected to get after the Russo-Turkish War and England virtually promised that she should have. As soon as the powers interdicted, in February, the intervention of Greece in Crete (see CRETE) the Government began to call out the reserves. The Turkish Government summoned the active reserves to arms and prepared to mobilize the *redifs*. The Turks began to construct fortifications at Arta, contrary to the stipulations of the Berlin Treaty, and Greece protested to the powers. The Greek fleet was used to transport troops to the frontier, and simultaneously Turkish forces were moved up to strengthen the garrisons in the frontier provinces. A Turkish army corps was stationed at Salonica. The bands of the *Ethnike Hetairia* crossed the frontier, and in conjunction with insurgent Epirotes and Macedonians skirmished with the Turkish *redifs*. Col. Smolenski, the Minister of War, whose advice to send re-enforcements to Crete had been rejected by the Cabinet, resigned, to take an active command in the army, and on March 3 M. Metaxas was appointed in his stead. The remaining classes of the Greek reserves were called out, which was calculated to give a total force of 129,500 men, including 25,000 in the standing army. The Greek war ships sailed in two squadrons to cruise in the Gulf of Arta and among the islands. The torpedo fleet, under the command of Prince Georgios, was ordered to cruise between Milo and Crete. The vessels in Cretan waters departed when the blockade of the powers was put into force on March 16. A Turkish transport was attacked by a revenue cutter while landing troops and stores at Douro. The Turkish army of precaution concentrated in Monastir was placed under the command of Edhem Pasha, who completed arrangements that would enable him to move 75,000 men over the frontier within a few weeks, including 21 batteries of artillery and 10 squadrons of cavalry. Ricciotti Garibaldi raised 3 regiments of Italian volunteers for service in the Greek army, and English and other foreigners offered their services, while Greek volunteers flocked home from distant countries. A bill was passed by the Boule on March 16 to permit the enrollment of Greek volunteers and the formation of a foreign legion. Two bands of Thessalians, one of 1,000 and the other of 300 men, entered Macedonia from the Larissa and Volo districts, while the Greek forces continued massing on the line within sight of the Turkish blockhouses. The Porte complained to the powers that there were Greek regulars in these bands. The first collision took place between the band of Alexis Takia and the advanced post of Turkish troops at Grevena on March 28. The German Emperor proposed to the powers a joint blockade of the Piræus and Volo, but Great Britain and France declined to take part. The Turkish army, 55,000 strong, moved up to the border, with headquarters at Ellassona. On March 30 the Crown

Priam Konstantinos at Larissa formally assumed command of the Greek army in Thessaly. There were then 50,000 Turkish troops massed at Salonica and on the frontier. The staff, railroad and transport arrangements, medical and ambulance service, and commissariat were organized on European lines, owing to the instruction of Gen. von der Goltz and other German officers. The artillery was abundant, consisting of new Krupp guns, with plenty of ammunition. The mobilization of so large an army within the space of three weeks was itself an achievement that few nations were capable of. The Turkish fleet had been ordered at the same time to be mantered, equipped, and made ready for sea, but scarcely one of the vessels could be put into efficient fighting condition, though large sums of money had from time to time been expended upon them. The attempted uprising of the Greek population in the frontier provinces was speedily suppressed after a great many Mohammedan families had been robbed by freebooters. The Christian peasants who had been supplied with weapons by the Ethniké Hetairia were disarmed, and many prominent members of the Greek community were arrested. Turkish and Albanian brigands were also arrested and tried. Some correspondence passed between the Greek and Turkish governments relative to the mobilization of the Greek troops, against which the Turkish minister at Athens, Assim Bey, raised a protest. The Greek Government urged that Turkey take the first step by withdrawing her troops, and, neither party being willing to take the initial step, the negotiations came to an end. After the concentration of troops on the frontier the powers again discussed the question of a blockade of the Piræus, to which Great Britain was still opposed. A final warning was sent to both Greece and Turkey at the suggestion of Count Muravieff, in the form of a collective note, declaring that in the event of an armed conflict on the frontier all the responsibility would rest on the aggressor, and the powers, firmly resolved to maintain the general peace, were determined that the aggressor should not be allowed to reap any advantage from eventual victory. The war spirit in Greece became more and more unmanageable. Bands of volunteers arrived at Athens daily from every part of Greece, adding to the embarrassments of the military authorities, which had not the means to provide them with arms, uniforms, and transport to the frontier, and found difficulty in feeding them. Several thousand Albanian volunteers were enrolled in the Turkish army. The Turks fortified all their positions on the frontier; the Greeks erected no fortifications, but acted as if their plan was to march into Turkish territory, though they lacked all the essentials for long column marches, and had not even taken effective measures to arm and organize the Christian peasantry for a rising in the rear of the Turkish army.

On April 9 a force of 2,600 Greek irregulars equipped by the Ethniké Hetairia crossed the frontier from Kalambaka with artillery and advanced in the direction of Grevena, firing with their guns upon the Turkish blockhouses, from which the garrisons retired to Baltino. The Porte addressed a protest to the powers, declaring that the acts of hostility committed by a regular military force with artillery, commanded by bugle call, virtually constituted a declaration of war, and denouncing Greece as the aggressor. M. Delvannis disavowed all responsibility for the acts of the Ethniké Hetairia. The powers had already come to an agreement for the pacific blockade of the Greek ports, but the admirals of the international fleet at Crete were still discussing the particulars regarding the naval force to be furnished by each power when the incursion of the Greek irregulars changed the situa-

tion. Nothing now could restrain the Greek army. Although the Government had practiced economies and hoarded gold for two years to provide against such an emergency, the expenses of keeping 80,000 men under arms was already a severe tax on its resources, these expenses amounting to 500,000 drachmai a day. The Turkish Government declared that there were Greek regular soldiers in uniform among the raiders and Greek army officers in command. Edhem Pasha had received orders to advance as soon as he found such to be the case; but Turkey, which had a *casus belli* against Greece from the time that Greek gunboats were dispatched to Crete, had no desire to relieve Greece from her critical situation so long as the military positions on the frontier were not in danger. The Greek regulars crossed the frontier at different points in small parties, but would not fire on the Turks, nor would the Turks fire on them, neither side being willing to fire the first shot, lest the other should point to them as the aggressors. The Greek raiders, after capturing three outposts near the border, finally attacked and captured the town of Baltino, which the Turkish garrison had stoutly defended. The main body reached Krania, where it was nearly surrounded by a strong Turkish detachment, which compelled it to retreat and recross the frontier, having lost more than 200 men. Among the filibusters were Italian volunteers led by the Socialist Deputy Cipriani, who bore their part in the first fighting, but many of them could not stand the cold and the hard marching, and therefore decamped at the first opportunity. The Greek frontier outposts were strongly re-enforced. When the Boule reassembled on April 14 M. Delvannis asked for credits amounting to 23,330,000 drachmai for the army and navy, and received instead credits for four months and authority to issue 6-per-cent. bonds for 20,000,000 drachmai in addition to 10,000,000 drachmai already issued. The Premier said in regard to the frontier question: "It owes its origin to the singular conduct of a neighboring state, which brought about the existing complications. We found it our duty therefore to concern ourselves principally with military affairs and to prepare an army which can enter upon a campaign in order to defend the honor and protect the interests of the nation. We can assure the Chamber that we have been able to make good the defects due to the hasty mobilization of the army, and we hope within a few days to remedy them completely, so that our army will be able to fulfill its mission."

The invading bands that were not driven out by the Turks continued their activity in the forests and mountains near Krania, and enlisted many of the inhabitants, who were supplied from the depot at Baltino, for the Turks had not yet reoccupied this part of their frontier. A strong force of Turks from Metsovo advanced on Krania, and attacked a force of 400 intrenched there, driving it into the mountains. They then reoccupied Baltino and the other frontier posts. The failure to stir up a general insurrection in Macedonia was disheartening to the Greeks, who were not less bent on war, deeming it a point of national honor to fight though disaster were certain. The confident hope of victory began to vanish when they confronted the impregnable line of defense for 30 miles on either side of Larissa, and the routes held by the Turks by which they could concentrate their battalions upon the Thessalian capital from several directions.

Both armies were brought up to the front as rapidly as possible. The Greeks constructed blockhouses and earthworks facing the Turkish works. The Turkish general with difficulty restrained the junior officers and soldiers from precipitating a

conflict, which the Greeks tried by every means to provoke, so that the onus of attacking first should rest on the Turks, and they themselves should not be cut off from the territorial advantages to be secured by victory. The *redifs* had been mobilized four times in as many years, and the Turkish military authorities were even more anxious than the Greek army men that there should be a campaign, fearing that they could not preserve the discipline that compelled the peasants of distant Anatolia to leave their occupations and families to fight for the Padishah if they found again that there was no fighting to do.

The troops had left the camp at Elassona and taken their positions on the mountain line of defense, where it was wet and cold. Edhem Pasha was not ready to attack until he brought up his artillery, for he relied most on this arm to force the mountain passes. Some of the Albanian volunteers, who had been recruited to match the *euzoni* in mountain warfare had been disbanded and sent to their homes, because their fighting instincts could not be kept in control. The Turkish frontier was much more favorable for attack or defense than the line on the Greek side, and the dispositions made by Edhem Pasha were such as to utilize his topographical advantages to the utmost. The country was peculiarly adapted for artillery, and in this arm the Turkish army was particularly strong and the Turkish generals well versed. The passes of the Khassia mountains are deep gullies traversed by rushing streams and dominated by rocky heights. The gore in the frontier formed by the valley of the Xeria is the strategic key of the line. Riza Pasha, commanding the Turkish artillery, placed his guns on the ridges commanding the slopes where the Greeks lay encamped, so that they could be moved in the direction of Trikhala on one side or of Turnavo and Larissa on the other, and could rake the flat plain in either direction. There were 180 field pieces in position within this wedge of territory, and behind the guns were 50,000 troops, so that if the Greeks struck from either Larissa or Trikhala they would at once find themselves engaged on either flank. Echeloned along the frontier at other points, from Krania to Arta, were single divisions, averaging 12,000 combatants each, bringing up the total of the Turkish forces now in the field to about 140,000 men, while there were reserves at Salonica and Monastir.

The Turkish transport facilities were very imperfect, but the rapidity with which the Turkish troops were brought to the front and provision routes established dismayed the Greek commanders, whose whole plan of campaign depended on their gaining initial successes and breaking through the Turkish frontier defenses. The extraordinary martial and patriotic enthusiasm of the Greek army led them to expect victories at the start, and this they hoped would encourage the Macedonian population to rise. They planned naval attacks on the Turkish seaports and landings for the purpose of cutting the railroad and other lines of communication, while preventing any transport by sea. If the Turks had to detach large forces to suppress a revolt in their rear and to keep open communications they would no longer be able to oppose the Greek field army with superior forces. The incursion of the irregulars from Kalambaka was a part of the Greek strategic plan, and it partially succeeded, for Macedonian insurgents raised the standard of revolt in the mountains of that section, Turkish telegraphic communications with Arta were severed, and the Epirotes were encouraged to rebel. The Ethniko Hetairia had purchased 150,000 rifles to distribute among Greek rebels in Albania, Epirus, and Mace-

donia, and the Greeks planned a vigorous campaign at Arta, in order to establish communications with the Greek populations of Turkey in the rear of the Turkish army and organize a revolt among them. The Greek forces in Thessaly and Epirus were estimated at 80,000 regulars and 20,000 volunteers, but the recruits drawn from the plains and towns were no match for the seasoned Turkish troops either in stamina and endurance or in military training and knowledge, while they betrayed a singular incapacity for obedience and discipline. At the eastern end of the line, where the main armies confronted each other, the Greeks held in force their end of every pass: Rapaeni, through which the roads from Krania and Nezero pass; the southern end of the Maluna pass, through which leads the direct road from Elassona; Turnavo, the terminus of this road, and the Reveni pass, in the gorge of the Xeria, affording an alternative passage; Zarkos, where they had their artillery posted and where a branch of the high road through the Xeria gorge terminates; Trikhala, which is west of the roads that are practicable for considerable movements of troops; and Kalambaka, at the western end of this line of defense, which covered a front of from 50 to 60 miles, and the terminus of the railroad from Volo. Their headquarters and reserves were at Larissa.

On the evening of April 15 the Greeks moved forward to occupy the height of Analipsis, which dominates the pass leading into Macedonia at Nezero, which lies at the foot of Mount Olympus, about 12 miles from the seacoast at Platamona. They suspected that the Turks were about to seize the summit, which is disputed territory, and since 1886 has by agreement been regarded as neutral ground. The Greek and the Turkish reports differ as to which first crossed the frontier. The Turks tried to repel the Greeks, but the latter were in greater force, and were able to capture the summit and plant mountain guns there, by the aid of which they captured the Turkish posts at Katroni.

On April 16 the Council of Ministers at Constantinople decided on war and telegraphed to Edhem Pasha instructions to assume the offensive. The Turkish Government presented his passports to Prince Mavrocordato, Hellenic minister at Constantinople, and Assim Bey, the Turkish minister at Athens, took his leave, delivering a note, which said that in consequence of hostilities having been begun by Greece diplomatic relations were broken. Hellenic merchants and subjects in Ottoman territories were warned to leave Turkey within fifteen days, but this decree was not stringently enforced. In a circular dispatch to Turkish diplomatic representatives abroad the Turkish Minister of Foreign Affairs referred to the passing over of the previous frontier incident as a proof of the efforts of the Ottoman Government to maintain peace and a justification of defensive measures, for which Greece, as the aggressor, must be held responsible, having by her action in Crete and great military preparations on the frontier compelled the Ottoman Government to call under arms a large proportion of its *redifs*, imposing upon itself heavy sacrifices for their mobilization, and dealing a severe blow to its agriculture and trade. Now Greek regular troops in considerable numbers had crossed the frontier in the direction of Bairakdar, Godoman, and Predika, and had begun hostilities. The minister reiterated the assurance that the Turkish Government cherished no idea of conquest against Greece; it found itself in the position of legitimate defense, owing to the opening of hostilities by the Hellenes. It accepted the war only for the protection of its most sacred rights and its integrity, but would cease its military movements in order to give the world a fresh proof of its pacific intentions if the Hellenic Government

would at once withdraw its troops from the frontiers and from Crete. A part of the Greek population in Turkey placed themselves under French protection, the rest under American. The German representative at Athens assumed charge of the interests of subjects of the Sultan in the Hellenic kingdom. The Bulgarian Government declined to dismiss the Greek consuls at the demand of the suzerain power. The Greek note, delivered on April 18, said that Greece, far from proceeding to acts of hostility, had suffered repeated acts of aggression on the part of the Turkish army at several points of the frontier; that the Turkish army had without provocation marched forward on April 16 to take possession of the frontier post of Analipsis, and had failed in this attempt to violate neutral territory only because of the resistance which it encountered there. M. Delyannus, in his statement to the Boule, asserted that the Turks had in reality begun hostilities; that war was not an object in itself, but a means of arriving at an object in view, and Greece, having exhausted all means and lost all hope of arriving at the desired object by peaceful means, had prepared for war, and, since the neighboring state had declared war, must accept it, relying on Greeks in all parts of the world to come to the aid of the nation that had instructed the Eastern and the Western world in the principle of truth and justice, and on the army to do its duty, and gladly to face death before allowing this sacred land to be dishonored. The Greek Government requested the powers to withdraw their forces from Crete, in order not to hamper the action of the Hellenic troops in Turkish territory. The powers decided to continue the blockade and their joint occupation of the Cretan ports.

The fighting at Analipsis continued all night and all the next day, and when war was declared it extended along the line as far as Damasi. The Greeks advanced in force through the Maluna pass, which was held by a Turkish division, while another division prepared to enter the pass of Reveni. The Maluna pass became the center of the struggle, and there 20,000 men were engaged on the morning of April 18. Riza Pasha did splendid execution with the artillery. The Greeks who first entered the pass and surrounded the Turkish blockhouse were driven back at the point of the bayonet, and the Greek blockhouses, which were obstinately defended, were finally carried by assault after several charges. They were retaken by the Greeks, captured again, and once more retaken. The Turkish infantry held the Greeks in check by an incessant fire from behind sheltering rocks. In the night the *euzoni* had four times descended the slopes toward the plain of Ellassona, but as the Turkish battalions gradually came up they were driven back over the ridges, so that the summit of the pass and the blockhouses standing there marked the line of the battle front. The capture of Skumpa early in the day, but few troops being engaged, enabled the Turks to plant field guns there, which silenced the Greek batteries and covered the Turkish infantry struggling for the possession of the crest. The fight for the summit of the pass was for a long time uncertain, one side and the other alternately gaining possession. Masses of infantry fought along the tops of the hills all the way to Skumpa. It was not until the Turkish batteries in the plain below found the range of their intrenchments that the Greeks finally began to retire. The particular battery that was directed by Riza Pasha at a range of 3,000 yards dropped shells into the Greek positions only 50 yards in front of the Turkish troops. The shrapnel fire from the Turkish batteries at a range of nearly two miles was irresistible. Though the

Greeks defended their positions with the greatest courage, they could not stand up against the slow but steady advance of the Turks, and before evening they asked them to cease their shell fire and surrendered three of their outworks. The whole of the upper pass, except one position, was then in the possession of the Turks. The principal fighting done by the Turkish infantry was at Skumpa and Dumenie, to the right of the pass. The Greeks had made small fortifications of earth and stone, and, as they were superior in numbers, the Turks had great difficulty in capturing the positions. The largest of the Greek blockhouses, being in an exposed position, fell early. The next one, farther up, was defended with magnificent courage, as were all the principal positions of the Greeks. The charges of the Turkish infantry were also splendid feats of courage. The advance of the Turks in skirmishing order to within 40 yards of the earthworks, regardless of their comrades falling at their sides, demonstrated the insensibility to fear and scorn of death that struck foreign newspaper correspondents as a peculiarity of the Turkish soldiery. One of the slain was Hafiz Pasha, eighty years old, who, never having dismounted in the war with Russia, insisted on riding to the assault at the head of his command. The Turkish artillery was handled with the utmost effectiveness. The shells exploded at exactly the right moment. The Turkish troops engaged at the battle of Maluna pass were nearly 24,000 infantry, or 30 battalions, besides 14 field batteries. At Karya and in the neighborhood of Damasi an equal number were fighting at the same time. The Turkish commanders at Maluna were Nechat, Memdough, and Haidar Pashas, under the chief command of Edhem Pasha. He directed the operations with the utmost coolness, and had a numerous staff, composed of the *élite* of the army. The service of ammunition was prompt and plentiful, as there was an unlimited supply of mules. The ambulance service between the field and the hospitals at Ellassona was remarkably expeditious. The infantry, as soon as they got under fire, extended and advanced in skirmishing order, keeping their line well while making good use of cover and taking aim before firing. The Turkish discipline was exemplary. At six o'clock the fire slackened, a shell bursting in one of the Greek blockhouses having driven the last detachment off the ridge. The height of Livadho, above Skumpa, was taken earlier, and the Turkish infantry between the two passes gradually drove the Greeks down the slopes beyond Liguria and back toward Turnavo. Marshal Edhem Pasha then ordered a heavy fire from all the artillery engaged, which had the effect of rolling back the Greek right, leaving the Turks in possession of the entire line of hills. During the night the Turks fortified the positions they had taken, and when morning broke they found that the Greeks had retreated to the plain, with the exception of the rear guard, which was posted on a hill. The troops had fought for thirty-six hours without rest or nourishment, but in the night seven fresh battalions and several batteries of horse artillery came up to relieve the tired Turks. During the morning the Turkish artillery shelled with deadly execution the retreating columns on the plain below, scattering their formations when they made feeble attempts to reply to the harassing fire. At noon Hairi Pasha sent four battalions to drive the rear guard from its position. The Greeks made but a feeble resistance, and many of them surrendered. Toward evening the Turks began to bombard Turnavo. They camped at night on the plain in the tents abandoned by the Greeks. The Greeks established themselves on the last height near Turnavo, where

they planted several pieces of artillery that had been brought up, but these were speedily put out of action when the Turkish batteries opened fire on the morning of April 20. Riza Pasha had not been able to bring into play more than half his artillery. The horse artillery could not be brought up during the battle for the heights and defiles of the pass. Afterward the guns were dragged over the mountains. The Greek rear guard was forced back slowly, taking a stand wherever the ground was adapted for defense. The inhabitants of Turnavo fled on April 19, while the Greeks still held Mount Kritiri. The village of Mati, on the north, they did not evacuate till the evening of April 23, after a hard-fought engagement.

Another desperate battle was fought in the Reveni pass. The first Turkish attack, on April 18, was easily repelled by the superior Greek force. On the following day Edhem Pasha brought up more than 10,000 men. Col. Smolenski was also re-enforced by the division of Col. Mavromichali. The Greeks finally repelled the Turkish attack, and began an advance upon Damasi, supported by Col. Demopoulos's division, which crossed the frontier five miles northeast at Bogazi. The Turks crossed the frontier at five different points. They occupied Gritzovali, which Col. Mastrapas had abandoned, believing that a general retreat had been ordered. The Greeks rallied at Mati, after suffering severe losses in the retreat, and, being re-enforced, drove back the pursuing Turks. Velitchko, which had been surprised and captured by Greek bands on April 16, was retaken by the Turks. At Karya the Greeks were forced back only a short distance, and the Turks maintained a position on the frontier line. On the extreme right the Greeks still held their own at Kranis and Nezero, but they were forced to retire after Turnavo fell into the hands of the Turks. They checked the Turkish advance at Kalambaka also, at the extreme left, where fighting took place on April 22, but it did not affect the main issue. At Karya, near Nezero, the Greeks advanced on April 17 in great force against the four Turkish battalions at that point, which were quickly doubled; and with the support of the artillery the Turks held their position. Greek re-enforcements were hurried to the spot, which was an important position, commanding the line of communication between Ellassona and the Turkish town of Platamona on the coast, and was in the rear of the forces fighting at Maluna. The Turks continued to bring up fresh troops, and assumed the offensive. The Greeks held their ground, though their losses were five times as great as those of the enemy, until after Maluna was lost, when they retired. After some minor successes in the direction of Damasi, the Greek forces, which threatened to turn the right flank of the Turks, were effectually stopped. On April 20 the Turkish batteries engaged the Greek artillery manned at Zarkos. The Greek successes on both wings were valueless after the center was pierced. After a gallant defense of Kritiri, where the earthworks were entirely demolished by the well-directed Turkish artillery fire, the Greeks abandoned Turnavo. They fell back into the center of the plain of Larissa after their batteries at Zarkos were silenced. It was expected that they would attempt to hold Larissa, where they intrenched themselves on the north and west sides. There were 60,000 Greek troops engaged in the defense of the frontier, and their effective reserves were exhausted. At Karya the issue of the battle was long in doubt, each side in turn advancing and retreating across the frontier, until re-enforcements arrived for Hamdi Pasha's division that forced the Greeks to retire. Greek bands were landed from ships on the Macedonian coast west of Kavala and, with the object of

cutting the railroad from Constantinople near Deagatch, marched as far as Gojrat, where they were overtaken by a Turkish detachment, which with the aid of the peasants compelled them to retreat. Bombardments of undefended places on the western shore of Macedonia were undertaken, and by this means the Greeks inflicted some damage to Turkish supplies. With the Greek fleet hovering on the shores the Turks could no longer transport troops by sea, but with no available troops to land in sufficient force the Greeks were unable to strike at the land communications. The eastern squadron bombarded and destroyed Platamona and Katerina.

In the Gulf of Arta hostilities were begun on the morning of April 18 by the batteries of the new fortress of Prevesa firing on the steamer "Macedonia," which was only saved from sinking by being run ashore, and bombarding Actium, on the opposite shore. The Greek gunboats at Arta were joined by the "Nauarchos Miaulis," the "Basileus Georgios," and the "Spetsai." The ships co-operated with the Greek shore batteries, destroying the Skafadiki battery and damaging others. Arms were distributed among the townsmen of Arta and non-combatants were sent away before an artillery duel began on April 18 between the fort formerly erected by the Turks and the Turkish batteries across the river, two miles away. The Greeks had more guns and made the best practice. The bombardment of Prevesa was begun on April 20, while Greek irregulars crossed the Aracthos at Bani and occupied several villages, threatening communications between Prevesa and Janina. Col. Manos had 25,000 men. About 4,000 advanced into Epirus with the object of capturing Janina, the capital, and bringing about the expected insurrection in the Turkish rear. They penetrated as far as Philippia, which they found deserted by the Albanian garrison of 7,500 men, these having mutinied and returned to Janina because they did not like their commander. The Greeks crossed the Luros river, and intrenched themselves at Pentepigadia. The troops of Ahmed Hafsi Pasha encountered them there and captured their fortifications. Subsequently they recaptured the position and held it until April 24, when the Turks with superior forces took their fortress for the second time, inflicting a loss of 319 killed and wounded, while they lost only 54 themselves.

The Greek forces that carried the Reveni pass advanced as far as Viglia and threatened Damasi, when they were ordered to retire by the Crown Prince. Kritiri was evacuated on April 24, after the neighboring villages had been taken by the Turks. The bombardment of the positions still held by the Greeks was continued, and the advance of the Turks was very slow and cautious. There was much hard fighting before the Greeks were dislodged from the positions that they still held in the mountains and on the foothills. The Greeks retreated from Nezero and Karya, but west of Maluna the positions were still obstinately disputed. After the battle of Mati a remarkable change came over the spirit of the Greek troops, who had advanced upon the impregnable position of Menaxe, guarding the Maluna pass with a dash and intrepidity worthy of high praise, had contested every inch of ground in the defiles and on the ridges without loss of morale even under defeat, and had rallied quickly and continued the contest in their new positions, though exposed more than ever to the deadly fire of the Turkish guns. Thus they had fought all day long at Mati while their earthworks were being knocked to pieces by the exploding shells. They had gained ground on the left, while their center remained stationary, and on the right the Turks had advanced two miles to the village of Kutavi. The

Greek position was, however, compromised, for the Turkish forces from Nezero and Raptani had joined hands and outflanked the Greek right, while the Greek left had already been turned as a result of operations at Kourtsiovali, and nothing but immediate withdrawal could save the army from being surrounded and forced to surrender. The command to retreat was accordingly given in the early evening. All order and discipline vanished as the various arms withdrew and concentrated on the roads leading to Larissa, where soldiers and civilians were huddled together. A few miles from Larissa a cry was raised that the Turkish cavalry was coming, and as it went along the columns the soldiers, irregulars, and peasants were seized with insane fright, turning at intervals to fire their rifles at whoever followed behind and rushing in headlong flight over those who were in front. Col. Mayromichali and some of the other officers did their best to stop the stampede, but many were as terror-maddened as the men. The horses were taken from the guns and ammunition wagons to enable soldiers and irregulars to flee the faster. Several hundred persons were shot or trampled to death. There was no rear guard nor any screen of cavalry, but in the morning the Greek artillery in the direction of Turnavo endeavored to cover the retreat. The insane terror infected the troops stationed in the vicinity of Larissa, until they began to break up and flee in disorder, the civil population being the first to stampede. Some sort of order was restored by the officers, when it was seen that the Turks were not in immediate pursuit. The Greek troops at Mati and Dereli, at first about 7,000, were re-enforced during the day till they were 12,000, about equal to the Turks. The panic spread among the troops at Larissa and grew till there was no holding them as soon as the Turkish columns began to pour through the passes into the Thessalian plain. The Turkish advance was a tactical success, the columns arriving so that their heads were all in line. The natural defenses of Larissa were slight, consisting only of the protection afforded by the Peneios, but the defensive works erected there were very strong. It was impossible, however, to make a stand when the army was so demoralized by fear. A council was held at Athens, the result of which was an order from the Government for a general retreat to Phersala, 25 miles away.

The Crown Prince divided the army into three columns, and departed at the head of one of them. While the troops were still withdrawing from Larissa the Turkish cavalry were at the outskirts of the town. The retreat then degenerated into a disorderly flight. The stores of ammunition and provisions in Larissa were abandoned, and many of the Greek guns were captured. Hakki Pasha entered Larissa with his cavalry on the morning of April 25. The Turkish commanders effectually prevented any looting, though the fleeing Greek soldiers had been guilty of it, by shooting some of their men who disobeyed the order to respect private property. In their march through Thessaly the Turks did not take even forage for their horses or provisions of any kind without paying the full value. The Turkish engineers had made a good military road through Maluna pass, while 40,000 reserves were sent on from Salonica. Ghazi Osman Pasha was appointed to the supreme command of the Turkish army, but he did not supplant Edhem Pasha in the active command of the forces in Thessaly.

The Greek forces concentrated at Phersala numbered about 40,000 men. The Crown Prince's staff, which was blamed for the hasty evacuation of strong positions and the disorderly retreat of the Greek army, was reorganized. Col. Smolenski, who had safely brought back his column from Reveni

after being left far in the rear by the rest of the army, was appointed chief of staff, with power to select the other officers. Athens was on the verge of revolution after the retreat of the army from the frontier. The dismissal of the officers of the general staff helped to allay the excitement, but the people still demanded the recall of the Crown Prince and Prince Nicholas.

The Minister of Marine resigned because the eastern squadron had been inactive during the recent fighting. On April 27 the King called for the resignation of the Cabinet. M. Delyannis refused to resign, and the King dismissed the Cabinet after consulting with the leaders of the other parties. The populace had broken into gunsmiths' shops to arm themselves, and stoned the King's palace, shouting for a republic. An extra session of the Boule was called. On April 29 M. Ralli, the Opposition leader, formed a Cabinet, as follows: Prime Minister, Demetrius Ralli; Minister of Marine, M. Eutaxias; Minister of Foreign Affairs, M. Skouloudi; Minister of War, Col. Tsamado; Minister of Finance, Anargyros Simopoulo; Minister of the Interior, Georgios Theotoki; Minister of Justice, M. Triantaphyllako; Minister of Public Instruction, Konstantinos Carapanos. The powers consulted as to the advisability of either offering mediation. They decided that they would not interpose as mediators until their good offices should be invoked by Greece. M. Ralli, who had incited the popular indignation by declaring that the retreat from Mati and the abandonment of Larissa were entirely needless and due to ignorance and cowardice on the part of the staff and some of the brigade commanders, said that his policy would consist in the reorganization of the army, whose recuperative forces were inexhaustible, and the re-establishment of order, together with a satisfactory solution of the foreign relations of the kingdom.

Osman Pasha started for Epirus with an army of 30,000 men, as it was desired to expel the Greeks quickly, so that no Turkish territory should be found in their possession if an armistice or peace were declared. The campaign was vigorously carried on by the Albanian garrison and the first reinforcements that arrived. On April 28 they attacked the Greek positions, which were obstinately defended at first. As soon as the *euzonoï* were dislodged from their advanced position in the mountain, the whole Greek line abandoned their strongly fortified positions in the pass and in a disorderly mass took to flight, not stopping till they reached Arta, the garrisons on the way joining in the terror-maddened throng. Before dawn not a man of the army of 11,000 men that had successfully invaded Turkey and established itself in strong positions with 40 guns was left on the farther side of the Arachthos.

The Greek army retreating from the frontier left behind them three practicable lines of defense and fell back on the line 35 miles in length, covering the railroad and extending from Karditza through Phersala and Velesfino to Volo. Karditza was abandoned as soon as the Turks appeared at Trikhala, reducing the line of defense to 20 miles. Edhem Pasha turned his attention first to Velesfino, intending to turn the Greek right. Having occupied northern Thessaly and brought their guns over the mountains, the Turks advanced their lines until they again came in contact with the Greeks, who had reorganized their forces as well as they could on the new line of defense. In Volo, which was thronged with 10,000 fugitives from Larissa, the people were in constant dread of a Turkish attack, and were hardly reassured when the Government promised to protect them with the fleet. On the land side the troops fortified the town of Veles-

tino, where a skirmish took place with a reconnoitering force of Turkish cavalry on April 27. This the volatile Greeks magnified into a victory. On April 29 the Turkish advanced guard having moved up, an attack in force was begun on the Greek position at Pherála. The Turks occupied Trikhála, the Greek troops falling back on Pherála without offering any resistance. Zarkos was also occupied and large stores of ammunition were found there. The Turks renewed the attack upon Velesino on April 29. Col. Smolenski on the right repelled several vigorous cavalry charges, but on the left Col. Mavromichali was compelled to retire. The railroad between Volo and Trikhála had been restored, and the Turks threatened the Greek position from the east and the west as well as in front. The extreme slowness of Edhem Pasha's advance arose from political rather than military considerations. He displayed remarkable skill in his strategic movements. The four divisions from Trikhála and Larissa were concentrated simultaneously on Pherála, so as to attack the main body of the enemy and break through the center, according to the Napoleonic tactics that had been successful at Malina. On May 4 the Greek Government recalled Col. Vassos from Crete, announcing at the same time a determination to continue the war.

On May 5 the Turks attacked the position at Velesino held by Col. Smolenski. The Turkish batteries took position on a ridge that jutted out between Velesino and the mountains of Cynoscephalæ, on which a part of the Greek infantry was deployed. Another battery was behind Konári. The Greeks had only three mountain batteries to answer the Turkish guns raking their positions at a range of 3,000 yards, but with these they kept the Turkish infantry from advancing until the shells from the Turkish battery on the ridge drove one battery from the hilltop. The *andartoi*, or insurgents, on this hill retired, and the Greek riflemen on a neighboring ridge fell back, allowing the Turkish right flank to advance in a turning movement, which soon rendered the Greek position on the right of Cynoscephalæ untenable. After fighting from early morning till afternoon, their batteries having been silenced, the Greek infantry retreated in good order, abandoning their second line of intrenchments after the Turks had carried the first, and falling back on Almyro. The Greek infantry stood their ground well under heavy fire with shells bursting round them, but the Turks found their weak wing, and the defense collapsed. As soon as the Turks began to double up the left flank of the Velesino division at Cynoscephalæ the rest of the army at Pherála received orders to retire to Domoko, 15 miles in the rear. The Turks were advancing to the attack of Pherála at the same time that Velesino was attacked, and had driven back the outposts on the hills north of the river and begun to bring their guns into action, intending to attack in force on the following morning. In the meantime the defenders hastily evacuated the place. During the afternoon and the night the retreat was carried out, and when the Turks, after a short fight with the rear guard, entered Pherála on the morning of May 6 they found that the Greek army of over 30,000 men had fled, abandoning guns and a large quantity of war material and provisions. The Turks advanced their lines to Vryssa and Tchatma, halfway to Domoko, establishing their new base and headquarters at Pherála, while the Greeks erected defensive works at Domoko. Col. Smolenski's division, after more severe fighting with the Turkish advance guard, retreated from Almyro to Sourpi. Foreign war ships proceeded to Volo and landed marines. On May 8, Edhem Pasha having promised to protect

private property, a Turkish detachment occupied the town, the Greek squadron having previously departed. After the precipitate flight from their fortified positions on the farther side of the pass of Pentepigadia the Greek forces in Epirus, recovering their courage and discipline, crossed the Aracthos once more and advanced to the pass, at the entrance of which the Turks were found strongly intrenched. To prevent an attack in the rear by the Turkish garrison in Prevesa, Col. Marko Botzari's corps of volunteers, supported by the gunboats, occupied the isthmus north of Prevesa. Two divisions of Greek regulars occupied the Turkish fortresses of Imaret and Salagora, and on May 12 and the two succeeding days assaulted the Turkish positions with great gallantry, losing 700 killed and wounded. The Turks were strongly re-enforced on May 14, and the advanced positions that the Greeks had won with such heavy cost were seen to be in danger. They therefore fell back in the night to a lower position under cover of the fort at Arta. The Turks reoccupied the ridge abandoned by the Greeks, and could not be dislodged by the guns of the Greek fort, while their own artillery menaced the position on the mount of Imaret. Before this danger became apparent the Greek troops received orders to retire, and on May 15 the entire force recrossed the river into Greek territory. Col. Botzari's irregular troops, which had successfully repelled several sorties of the Turkish garrison of Prevesa, retired on May 16, and the Turks, witnessing the retreat, pursued them vigorously, converting the retreat into a rout in which about 300 Greeks were killed or drowned in attempting the Luros river. The attempt to reinvade Epirus had practically failed, and a speedy retreat was necessary before the order for a withdrawal came from Athens, the representatives of the powers having persuaded the Government to cease hostilities in order to prepare the way for European intervention.

The position at Domoko the Crown Prince stated in general orders to be impregnable, and the army unconquered and invincible. Nevertheless, he headed another retreat when the Turks, on May 17, while the negotiations for an armistice were still going on, appeared with 40,000 men before the fortifications defended by 35,000 Greeks. For the third time the Greek commanders evaded a pitched battle by a strategic movement to the rear, falling back upon the line of the Othrys mountains. On the same day a Turkish division advanced on Almyros, which Gen. Smolenski evacuated, retreating upon Kephalei. The Greek expedition into Epirus gave the Turks an excuse for resuming the offensive and delivering the attack on Domoko, for which they had made all preparations, although negotiations for an armistice had been begun through the intermediation of the powers. The advance was directed against both wings, especially the right wing, which Edhem Pasha wished to cut off from the line of retreat to the Phourka pass and Lamia, at the same time preventing a junction with Col. Smolenski's division from Sourpi. The cannonade began soon after noon, and toward evening the Turkish infantry advanced against both flanks and the center. On the Greek left and in the center the attacking regiments were three times stopped and repelled, but on the right the Greek line was forced back to Boussi and the wing was turned. After the intrenchments at Kitiki were taken by storm the whole Greek army retreated in great haste and disorder. The Greek troops fought with admirable courage, and withstood the boldest and most impetuous attacks that the Turkish infantry had yet made. In the numbers engaged and in the fierceness of the contest this last battle of the

war was the most important. Repeatedly the Turks charged across the level ground in a hail of shrapnel and up the steep inclines against volleying musketry in a desperate endeavor to rush the Greek intrenchments. They attacked the Greek position at almost every point along a line of over 12 miles. Except that the brigade of Col. Mastropas had fallen back and the Turks had gone partly round the right flank, the Greeks held all their positions and had inflicted far heavier losses than they had sustained—nearly 3,000 killed or wounded, against 220 on their side. The order to retreat given by the Crown Prince, who had declared that he might surrender but would never evacuate, came therefore as a surprise, and threw the army into a state of demoralization and anarchy like that which ensued after Mati. Here again the commander-in-chief and his staff were the first to leave the field, and the cavalry, instead of covering the retreat, went on ahead. The Turks for the first time followed up their victory, and on May 18 attacked the Greek army at Phourka and other positions in the Othrys mountains, compelling it to retreat toward Mount Eta and Thermopylae. The Crown Prince established his headquarters at Lamia. All the troops in Athens left the Piræus for Thermopylae under Col. Vassos, and the King was about to issue a proclamation calling on the entire population of Greece to take up arms for the defense of hearth and altar, when the Turkish Government declared a truce.

Peace Negotiations.—The Greek Government on May 10, at the time when the withdrawal of the troops from Crete was informally announced, let it be known that it would accept the mediation of the powers, not by an official request, but by an informal verbal note addressed by the Cabinet to the diplomatic representatives at Athens. The terms demanded by the Turkish Government, according to the first intimation, were understood to include a war indemnity of £3,000,000 sterling, the cession of Actium, giving with Prevesa on the opposite point complete command of the entrance to the Gulf of Arta, a rectification of the frontier at Nezero that would give the summits of the mountains to Turkey, and the abolition of the capitulations in Turkey as applied to Greek subjects. The German Government insisted as conditions of European intervention upon the recall of the Greek troops from Crete and a declaration on the part of Greece that she would formally consent to the autonomy of Crete. These terms were accepted by the Greek Government. M. Onou, the Russian minister, as dean of the diplomatic corps, presented a note offering the mediation, with a view of obtaining an armistice and of smoothing the difficulties existing between Greece and Turkey, of France, Italy, Great Britain, Germany, Austria-Hungary, and Russia, on condition that the Hellenic Government should declare that it would proceed to the recall of its troops from Crete, adhere formally to Cretan autonomy, and accept without reserve the advice that the powers would give in the interest of peace. The reply of the Hellenic Government declared that it was proceeding to the recall of the troops in Crete, that it formally adhered to autonomy for Crete, and that it placed the interests of Greece in the hands of the powers. On May 12 a collective memorandum of the powers was handed to Tewfik Pasha, the Turkish Minister of Foreign Affairs, by Baron Calice, the Austrian ambassador, informing the Porte that the powers had undertaken the office of mediators on the agreement of Greece to the conditions named above, and begging the Ottoman Government to suspend advance of the imperial troops and agree to a cessation of hostilities with a view to negotiations for peace. The Greek Min-

ister of Foreign Affairs, annoyed at the delay in the arrangement of an armistice after Greece had made the desired concessions, declared that the Government could accept no responsibility should further bloodshed take place, which might be attended by serious complications. The Porte sent an acknowledgment of the communication, and on May 15 a supplementary note, in which were specified certain terms which must be accepted as a basis of the negotiations for peace before an armistice could be granted. These were an indemnity of £10,000,000, the annexation of Thessaly to Turkey, a revision of the treaties by which Greece enjoys extraterritorial rights in the Ottoman Empire, and the signing of a cartel of extradition between the two states. The note went on to declare that if these terms were not accepted the Ottoman army would continue its advance. The demand for the annexation of Thessaly was based on the fact that that province was ceded to Greece on the advice of the powers with the object of putting an end to brigandage and Greek incursions into Ottoman territory, but the appearance of Greek bands in Macedonia for some time past and the incursions immediately preceding the war had proved that the cession had failed to terminate that state of things. After the battle of Domoko the Greek Government protested in a circular note that, while it had adhered to all the conditions imposed by the powers and refrained from offensive operations, the Turks had taken advantage of the period of inaction to prepare for a fresh attack, which had found the Greek army in a position for which the Government would not accept the responsibility, since it was due to the obligations that it had undertaken not to sanction further offensive movements. On the evening when the Turkish army occupied the abandoned Greek encampment at Domoko the Sultan sent orders to Edem Pasha to cease operations. The Porte agreed to a suspension of hostilities for seventeen days after receiving a telegram from the Czar, which said: "Encouraged by the evidence of sincere friendship and neighborly feeling which exist between us, I take upon myself the task of addressing to your august sensibility the wish that you will crown the heroic successes of your soldiers by a suspension of hostilities." In his answer the Sultan asked the Czar to take into consideration that he wished for "the friendly intervention of the powers to assure the re-establishment of peace, resulting in the safeguarding of the rights and prestige of my Government and the maintenance of general peace by the subsequent continual security of my frontier."

The enormous mobilization of the Turkish army, far out of proportion to the necessities of the campaign, was still going on when the truce was concluded, so that the army of occupation in Thessaly was eventually increased to over 200,000 men. This demonstration to Europe of the military power of Turkey encouraged the war party in Constantinople in the determination that no territory purchased with Moslem blood should again be surrendered to the unbeliever. Premier Ralli said that the Greek Government, since the richest provinces of Greece had been devastated and the harvest spoiled by war and there were 180,000 refugees to provide for, could pay no indemnity. Germany objected to the fixing of the terms of peace by the European concert without their previous acceptance by Greece, being anxious to safeguard the interest of German bondholders and to introduce the principle of an international control of Greek finances. England resisted the proposal that the Turks be allowed to remain in Thessaly until Greece paid the indemnity. An identical note was presented to the Porte on May 25, in which the

representatives of the powers recognized only the right of Turkey to a strategic rectification of the frontier and to a war indemnity proportionate to the financial resources of Greece. The Porte had proposed a peace conference at Pheraia, but the ambassadors said that they were prepared to discuss the terms of peace with the Turkish foreign minister or any other representative of the Ottoman Government in Constantinople. The Porte was willing to treat with the ambassadors after a definite armistice had been concluded with the Greek commander, but desired that the peace to be agreed on should be signed at Pheraia. A new armistice of two weeks and afterward renewable was declared preferable to one of indefinite duration, but after some discussion the Porte agreed to a continuance until the conclusion of peace negotiations. The six ambassadors and Tewfik Pasha held their first conference on June 3. Greece objected to raising the blockade of the coasts of Macedonia and Epirus without receiving an engagement that no Turkish troops or munitions should be landed nor the garrisons in the archipelago re-enforced. The British, French, and Italian ambassadors joined in a formal declaration against the retrocession of Thessaly. The ambassadors decided to get the opinion of a military commission on the strategical delimitation of the frontier, of jurists on the question of the capitulations, and of financial experts as to the amount of indemnity that Greece could pay. Enver Pasha, the Turkish Governor of Thessaly, proceeded to collect the sheep tax and tithes and in a proclamation threatened to confiscate the lands and effects of refugees who did not return to their homes. The international financial commission was informed by the Greek Government authorities that the crop of Thessaly, estimated for the year at 73,000,000 drachmai, was entirely lost, and consequently the Government revenue of 10,000,000 drachmai from that province, while the expenditure of 4,000,000 drachmai for administration went on; that the expenses of the Greek Government for the war amounted to 36,000,000 drachmai, and that the cost of maintaining 135,000 refugees from Thessaly, 15,000 from Epirus, and 30,000 from Crete was 3,000,000 drachmai; that, moreover, the mobilization of the army had produced a great disturbance in the country's finances, so that the revenue for 1897 would not amount to over 65,000,000 drachmai, showing a falling off of 40 per cent., while the expenses of the Government would foot up 135,000,000 drachmai. An internal loan would reduce the deficit to 40,000,000 drachmai, not counting 10,000,000 drachmai required for reinstalling the Thessalians in their homes.

The financial experts reported that Greece could not afford more than an annuity sufficient to cover an indemnity of £ T. 4,000,000, or 152,000,000 drachmai. The military commission reported in favor of giving Turkey all the crests of the mountains which would not involve the transfer of any inhabited district. Tewfik Pasha proposed the Peneios, or Salambria, as the boundary, which met with as strong opposition from the ambassadors as the claim to the whole of Thessaly, which the Turkish Council of Ministers reaffirmed as the indefeasible right of the conqueror on July 1 by a unanimous declaration, followed and amended on July 5 by a resolution that the Porte would not consider the frontier proposed by the powers nor any other line north of the Peneios, the natural boundary. On this point Tewfik Pasha interrupted the negotiations on July 4, drawing from Russia, of all the powers except Germany the most favorable to Turkey, a circular suggesting that steps be taken to expedite the conclusion of peace. The German ambassador insisted

on the strategic frontier finally proposed by the ambassadors, which included some small Greek villages, whose inhabitants would be repatriated in other parts of Thessaly. The Porte in a circular and the Sultan in telegrams to the five sovereigns and President Faure made a fresh appeal in favor of the Peneios line, to which the powers answered in a collective note, insisting on the strategic boundary and warning the Ottoman Government that they were resolved to put an end to obstruction preventing the conclusion of peace, which was eminently a European necessity. The Porte then accepted in principle the proposals of the powers, and negotiations were to be resumed on July 18, but Tewfik Pasha still objected to the strategic frontier. He finally accepted it on July 22, subject to a modification, which would transfer to Turkey certain Wallachian villages, the inhabitants of which had petitioned for the restoration of Turkish rule and whose request was supported by the Roumanian Government. England had in the beginning urged the immediate evacuation of Thessaly, even threatening to withdraw from the European concert if this were not insisted upon. Germany and some of the other powers, on the other hand, contended that evacuation could not be required before the indemnity was settled and the payment guaranteed. Germany insisted that guarantees for the payment of the older creditors of Greece be considered in connection with the indemnity. The German ambassador proposed to insert in the treaty a provision for the establishment of a financial control in Greece. Russia was opposed to such control, but acquiesced when the other powers agreed. With the support of Germany and at her suggestion the Porte proposed that the evacuation of Thessaly should be effected gradually as the successive installments of the indemnity should be paid. Tewfik Pasha proposed, when the ambassadors objected to the continued occupation of the plain of Thessaly as rendering the payment of the indemnity more difficult and remote, that the occupation should be confined to a zone including Volo, Larissa, and Trikhala. He demanded the immediate payment of a first installment of £ T. 1,000,000, which was needed for the expenses of evacuation, the Turkish treasury being empty. The Greek Government was unable to provide such a sum. Efforts were made to raise the whole indemnity among the privileged banks and Greek financial houses at home and abroad, in order to escape international financial control, but with no success.

There was a movement in favor of resuming the war by means of a forced loan imposed on the rich, rather than admitting foreign control. The German, Russian, Austrian, French, and Italian governments accepted Tewfik Pasha's compromise proposal for the retention of Volo, Larissa, and Trikhala as pledges, and their progressive evacuation when the installments of the indemnity were paid. Lord Salisbury refused positively to sanction such a plan, fearing that, with or without a control, Greece would be unable to pay the indemnity, and a practically permanent occupation would result. England had already recognized the justice of Turkey's occupying some territory as a guarantee, but the English ambassador now held that the occupation should be confined to certain strategic points north of the Peneios, involving no civil or military administration over the population. The Greek Government took advantage of the deadlock to urge its inability to pay more than £ T. 1,500,000, and this the English, French, and Russian governments were inclined to believe. Lord Salisbury suggested that these three governments, the original sponsors for the Hellenic Kingdom, should guarantee a loan of £ T. 4,000,000, the other powers

being invited to join in the guarantee if they wished. The three protecting powers requested the Greek Government to specify the revenues that it could set apart for the service of the new loan and what kind of supervision it was prepared to accept over the hypothecated revenues.

Germany steadfastly refused her assent to the proposal of a guarantee of the indemnity loan by the three protecting or the six signatory powers on the ground that the rights of the prior creditors would be prejudiced, and Austria and Russia supported the objection. The Greek Government was willing to concede the stamp tax, yielding 11,000,000 drachmai annually, the collection to be supervised by representatives of the creditors, whose appointment should be confirmed by the three powers. To compensate the older creditors for the withdrawal of the stamp tax from their guarantees, the Government proposed to the German ministers to add the tax on cut tobacco to the monopolies already assigned to them, and, should further security be required, the surplus of the stamp tax or the duty on exported currants. An association composed of three representatives of the bondholders and two Greek representatives should be created to supervise the collection of the assigned revenues. Germany, however, insisted on a thorough investigation of the Greek finances and the establishment of a general control. An English guarantee and financial control was proposed in Greece, the export duty on currants, which was fixed by the Chamber at 15 per cent, in kind, and the export dues of the Ionian Islands being sufficient security. Count Muravieff, the Russian Minister of Foreign Affairs, having in a note implied that the responsibility for the incalculable evils suffered by Greece and Turkey through the delay in the conclusion of peace rested upon England, Lord Salisbury, on Sept. 5, sent a new proposition, namely, the constitution of an international commission of six members, one for each of the powers, under whose control Greece should place revenues sufficient for the service of the indemnity and the old loans, to be accompanied by the prompt evacuation of Thessaly. The Greek Government acceded to this measure of international control. This solution of the difficulty was accepted in principle by all the powers. The following revenues were offered by Greece as guarantee for payment of the indemnity: Currant duties, 4,526,000 drachmai; special duties levied in the Ionian Islands, 1,729,000 drachmai; the duty on figs, 50,000 drachmai; stamp and post-card duties, 1,570,000 drachmai; customs duties from the Laurium mines, 1,392,000 drachmai; total, 10,240,000 drachmai. Germany, holding that the Turkish occupation of Thessaly was the only security that Greece would fulfill her financial obligations, was not willing to relinquish this security without arriving at a settlement of the partly repudiated debts. The German ambassador suggested that the interest to be paid to the original bondholders should be determined. The other powers were not ready to assent to Lord Salisbury's proposal that the evacuation should take place within a month of the signature of the preliminaries of peace, and thought that the dates for the payment of the installments should be fixed in the preliminaries. The British ambassador proposed that the evacuation should follow within a month after the Boule should vote the assignment of the revenues necessary for the service of the old debt as well as the indemnity loan. This did not remove the objections of Germany. It was finally decided that the evacuation of Thessaly should begin a month after the indemnity loan had been negotiated. The difference between England and Germany having been arranged, the chief obstacle disappeared, and on Sept. 18 the

preliminary articles of peace were signed by the ambassadors and the Turkish plenipotentiary.

The first article provided for the rectification of the frontier according to a line drawn on a map, which should be fixed on the spot by a delimitation commission meeting within fifteen days, consisting of delegates of Greece and Turkey and military delegates of the mediating powers, and was subject to slight modifications from a strategic point of view in favor of Turkey. Whereas the former line followed the water parting, the new line follows, as a rule, the southern base of the mountains, and transfers to Turkey the Maluna and all the other important passes. A little west of Larissa the line leaves the mountains and crosses the Peneios, giving both banks to Turkey from Gounitza to Koutzocheron. The strategic frontier includes the village of Kontzofliani, whence the insurgents employed by the Ethniké Hetairia made the raid into Macedonia that precipitated the war. Turkey laid claim to the village and lake of Nezero, and this point was left to the delimitation commission to decide. All the heights round Zarkos, Gounitza, Koutzocheron, Kritiri, Maluna, and Nodoman and those near Rapsani pass over to Turkey.

The second article of the treaty provided that an International Commission of Control, composed of six members representing the mediating powers, shall be empowered to make the necessary arrangements to secure the rapid payment of the indemnity and to prevent any injury being done to the rights of former creditors. The Greek Government promised to submit to the Boule a law, to be previously approved by the powers, defining the rights of the commission, according to which the collection and employment of revenues sufficient for the service of the new and old loans will be subjected to the absolute control of the commission.

The third article provided that, without tampering with the privileges and immunities enjoyed by Hellenic subjects before the war on the same footing as subjects of other states, special arrangements be concluded between Turkey and Greece with a view to guarding against the abuse of consular immunities to prevent the hindering of the regular course of justice, assure the execution of sentences pronounced, and safeguard the interests of Ottoman and foreign subjects in differences with Hellenic subjects, including cases of bankruptcy.

Article IV provided for the meeting of Greek and Ottoman plenipotentiaries at Constantinople within fifteen days to draw up and sign a definitive treaty of peace, to be concluded on the basis of the stipulations of the preliminary treaty, and to contain besides clauses for exchange of prisoners of war, free emigration of the inhabitants of the retroceded territories, and compensation to private persons for losses caused by the Greek forces, also re-establishment of postal and telegraphic relations.

The fifth article provided for the negotiation of the following arrangements: A convention settling the questions of contested nationalities on the basis of the plan negotiated in 1876 between Turkey and Greece, a consular convention in accordance with the third article, an extradition convention for the reciprocal surrender of common-law offenders, and a convention for the repression of brigandage on the common frontier.

Article VI provided that the state of war should cease from the date of the signature of the preliminary treaty, and that the evacuation of Thessaly should take place within a month from the date when the powers should have recognized that the provisions of the second article had been fulfilled, and when the time for the issue of the indemnity loan had been fixed by the International Commission. Article X reaffirmed the stipulations of

the convention of May 24, 1881, for the cession of Thessaly to Greece, except so far as they are modified by the present act, the Sublime Porte reserving the right to submit questions as to the interpretation of the convention to the arbitration of the powers, whose decisions shall be accepted by Greece.

Change of Government.—The preliminary treaty was approved by the Sultan, and was officially communicated to the Hellenic Government on Sept. 27, with a collective note stating that it was definite. There was intense popular opposition to the treaty, especially the arrangement for an international control, which was considered an invasion of the sovereignty of the nation and a matter not confided to the decision of the powers. The Russian minister at Athens intimated that if Greece did not accept the treaty, she would be left to her fate. Premier Ralli declined to present the treaty for the approval of the Boule, declaring that this was unnecessary, as it was executory, and that such a vote by the Chamber would be contrary to the sovereign rights of the state. M. Delyannis, who led the Opposition and controlled a majority of the Chamber, had urged the rejection of the treaty. The vote of confidence asked by M. Ralli on Sept. 30 was rejected by 93 votes to 71, with 41 abstentions. On the following morning the Cabinet resigned, and M. Zaimis, President of the Chamber, was called upon by the King to form a new Cabinet, which was constituted on Oct. 3, as follows: President of the Council and Minister of Foreign Affairs, M. Zaimis; Minister of the Interior, M. Colkorporis; Minister of Public Instruction, M. Panagiotopoulos; Minister of War, Gen. Smolenski; Minister of Marine, Capt. Hadji Kyriako; Minister of Justice, M. Toman; Minister of Finance, M. Streit. The new Cabinet announced that it would take steps to deliver Greek territory from the invader as early as possible, and afterward proceed to the reorganization of the army and navy. Prince Mavrocordato was sent to Constantinople as Greek plenipotentiary to negotiate a definitive treaty of peace, which was concluded in December on the basis laid down by the powers.

GUATEMALA, a republic in Central America. The legislative power is vested in a Congress composed of a National Assembly of 69 members, 1 to 20,000 of population, elected for four years by direct universal suffrage, and Council of State of 13 members, part elected by the National Assembly and part nominated by the President. The President is elected for six years, and is not re-eligible for the next ensuing term. José M. Reyna Barrios was elected for the term beginning March 15, 1892, and by the vote of the National Assembly on Aug. 30, 1897, his term was extended to March 15, 1902. The Cabinet in the beginning of 1897 was composed as follows: Secretary of Government and Justice, M. E. Cabrera; Secretary of War, P. Morales; Secretary of Public Welfare, M. Morales-Tovar; Secretary of Foreign Affairs, M. Cabral; Secretary of Finance, J. M. Gonzalez.

Area and Population.—The estimated area is 63,400 square miles. The population according to the census of 1893 was 1,364,678, divided into 677,472 males and 687,206 females, and containing 481,945 whites, besides 11,331 foreigners. The rest are Indians and mestizos. Guatemala, the capital, had 71,327 inhabitants. The number of marriages in 1896 was 5,504; of births, 63,248; of deaths, 31,308; excess of births, 31,940.

Finances.—The receipts of the Government, according to the budget of 1898, amount to 15,250,000 pesos, of which 9,050,000 pesos are derived from customs, 2,100,000 pesos from taxation, 3,800,000 pesos from monopolies, and 300,000 pesos from other sources. The expenditures are estimated at 12,415,-

107 pesos, of which 1,412,769 pesos are for the interior and justice, 179,000 pesos for foreign affairs, 5,934,001 pesos for finance, 1,005,500 pesos for agriculture, public works, posts, telegraphs, bridges, and highways, 2,096,173 pesos for war, 1,436,739 pesos for public instruction, and 287,895 pesos for miscellaneous expenses. The foreign debt on Jan. 1, 1897, amounted to £2,909,815 sterling, and the internal debt to 7,319,955 pesos.

Commerce and Production.—The soil is very fertile, and adapted to most of the products of the temperate zone as well as to tropical plants. There are 125,000 acres planted to coffee, yielding over 75,000,000 pounds a year. Gold, silver, lead, tin, copper, and other minerals exist, but are not mined to any extent. The value of the imports in 1895 was 2,782,326 pesos, including specie and bullion; exports, 26,534,394 pesos. In 1896 the imports were valued at 11,429,000 pesos, and the exports at 23,086,000 pesos, the value of the coffee exported being 22,349,624 pesos. The number of steamers entered in 1896 was 573, of 1,927,500 tons.

Communications.—The length of railroad in operation in 1896 was 272 miles, and 98 miles were not yet finished. The post office dispatched 4,949,570 letters, etc., and received 4,463,692. The telegraphs have a total length of 2,985 miles. There were 755,687 messages sent in 1896, of which 161,970 were official, 15,789 were service dispatches, and 577,928 were private paid dispatches.

The Army.—By virtue of the law of May 23, 1888, every able-bodied man of white or mixed blood paying less than 50 pesos of yearly taxes, unless he is a single son or a public functionary, is obliged to serve in the active army from the age of eighteen till he is twenty-five, and in the militia till he is fifty years of age. Under the law of Oct. 23, 1893, the army is composed of an effective force, numbering 56,915 men, and a reserve force, numbering 29,439. The effective force includes 242 superior and 1,903 other commissioned officers.

Insurrection.—There were several candidates for the succession to the presidency in March, 1898, when the constitutional term of Barrios would expire. The most active in his antagonism to Barrios was Prospero Morales, who advocated keeping Guatemala for the Guatemalans. He had been Minister of War, and had great influence in the army. José Leon Castillo was another candidate who had strong military support. Juentez, Amado, and Ubico were other aspirants of less importance. The movement in favor of Morales attained dangerous magnitude, and the Opposition in the National Assembly was gaining such strength that the President saw his power threatened. At his behest the majority of the Deputies retired from the Assembly, leaving only the hostile minority, who refused to take their seats at the appointed time. Early in June he caused his troops to march through the streets of the capital, dissolved the National Assembly, ordered the arrest of the most prominent of his opponents, obtained a loan from the bank by intimidation, and proclaimed himself dictator, issuing a decree justifying this act. The troubles that had come upon the country he attributed to the factious and unpatriotic conduct of the National Assembly, which had acted in a way unprecedented in the history of Guatemala and detrimental to the interests of the Government. The Deputies, he said, were inspired by personal ambition; they had committed irregularities, enacted laws that were inexpedient and contradictory, and in an impolitic manner had sought to break the ties of harmony, threatening the public security. At the time when the President assumed the dictatorship the country was perfectly tranquil, and, although some of the more obnoxious of Bar-

rios's enemies were reported to have been shot, no disturbance occurred till the beginning of September. He had given notice that, while striving to promote the happiness of Guatemala, he would maintain order at whatever cost. On June 15 a treaty was signed at Guatemala by the plenipotentiaries of Honduras, Nicaragua, and Salvador on the one part, and those of Costa Rica and Guatemala on the other, in accordance with which the five States would constitute a single republic of Central America in respect to their relations with foreign countries if the treaty were ratified by the legislatures of the individual republics before Sept. 15.

The power of Barrios as dictator went without challenge or protest, save by a few sporadic malcontents who were soon quieted, until after the newly elected National Assembly had unanimously voted to prolong his term as President for four years. In the second week in September a revolution was started by the adherents of Gen. Prospero Morales near the Pacific coast. At San José the revolutionists killed the President's brother, Gen. Morales had the backing of all the other candidates for the presidency. At San Marcos, close to the border of Honduras, a band of insurgents gained possession of the plaza. Revolutionary agitation pervaded the republic, though in the capital, where Barrios had a large body of troops, there was no manifestation. The whole of Guatemala was placed by proclamation under martial law. The insurrectionary movement first became formidable in the west. The rebels took possession of the seaport of Ocos, which was thereupon declared closed by the dictator. A revolutionary force of about 2,000 men marched upon the strongly fortified and wealthy old city of Quezaltenango. The rebel leaders attempted first to buy over the garrison to their side with money. Failing in this, they attacked the place. They fought through one whole day and until noon of the next, when the soldiers struck their colors, surrendered in a body, cheered the name of Gen. Prospero Morales, and joined the revolt. The enlarged force of insurgents moved then upon the garrisoned port of Champerico, capturing San Felipe on the way. After taking Champerico they were in possession of two ports for the entry of arms and ammunition, and were prepared to advance upon Guatemala city.

President Barrios, alarmed at the growing strength of the insurrection, proceeded to drastic measures of precaution and repression. All prominent men suspected of sympathy with the revolution were imprisoned, and some of them were shot. The wives of revolutionists were arrested. The police usurped civil and judicial functions. There were more than 600 political suspects in the prisons. Loans were raised by force, death being the penalty for refusing financial assistance to the dictator.

One of his victims was Juan Aparicio, a public-spirited planter and merchant who never had mingled in politics. Barrios was constantly attended by a bodyguard because he was in fear of assassination. He dismissed his entire Cabinet, and formed a new one, as follows: Minister of War, Gen. Gregorio Solares; Minister of Fomento, or Public Works, Feliciano Garcia; Minister of Foreign Affairs, J. Muñoz; Minister of Public Instruction, Mariano Cruz.

President Gutierrez of Salvador sent a force to guard the borders of the departments of Jutiapa and Chiquimula and to prevent an invasion, for a revolutionary movement was on foot in the east of Guatemala. Gen. Domingo Vasquez, with a force of 1,000 insurgents, occupied the town of Chiquimula. Gen. Morales established his headquarters at Quezaltenango. An attack on Totonicapan was at first repelled, and the attacking force retired to Quezaltenango. Ocos was recaptured by the Government troops. The Government concentrated its forces at Totonicapan, where Gen. Mendizabal was in command. On Sept. 29 the insurgents fired on this town of 26,000 inhabitants from their position in the hills, but their shells went wide. The Government succeeded in mobilizing 24,000 men, with 38 pieces of artillery. Ex-President Barillas raised a force of 3,000 men, and also aided the President with money. The rebels had 8,342 men under arms, with 80 generals, 105 colonels, and 240 lieutenant colonels. They were equipped with 10,000 modern rifles, 15 pieces of heavy artillery, and 18 Hotchkiss guns. On Oct. 2 the Government forces, 16,000 strong, attacked the rebels in the vicinity of Totonicapan. After bombarding their position on the summit of Tierra Blanca, from which they returned the fire with 3 guns, Gen. Ovalle carried the height by assault, driving the insurgents back to Coxon. Their other positions in the mountains having been carried by detachments of the Government army, they retreated to Quezaltenango, where they were shut in by the superior forces of Gen. Mendizabal and Gen. Francisco Vilela. Meantime Gen. José L. Castillo had evaded the Salvadorean frontier guard, marched into Guatemala with a large force, and captured Jerez, Yupilteque, Jutiapa, and Cuajiniquilapa, meeting but little resistance from the garrisons. The rising in the eastern departments quickly subsided after it was known that Gen. Morales and his army were closely invested by an overwhelming force. Quezaltenango was recaptured by the Government troops after a brief struggle. The rebels were allowed to depart, except the officers, who were made prisoners. All the arms and ammunition were captured. In the middle of October it was announced that the revolution had been completely subdued, order restored all over the country, and peace definitely re-established throughout the republic.

II

HAWAII, a republic occupying the Hawaiian Islands in the Pacific Ocean, proclaimed on July 4, 1894, in succession to the Provisional Government that was constituted on Jan. 3, 1893, when Queen Liliuokalani conditionally abdicated the throne. The legislative power is vested in a Senate and a House of Representatives, the former consisting of 15 members elected by indirect suffrage for the term of six years, one third being renewed every two years, the latter of 15 members elected by indirect suffrage every two years. The President is elected for six years by the two houses in joint

session. Sanford B. Dole was elected President for the term ending Dec. 31, 1900. The Cabinet at the beginning of 1897 was composed of the following members: Minister of Foreign Affairs and Minister of Public Instruction, H. E. Cooper; Minister of the Interior, J. A. King; Minister of Finance, S. M. Damon; Attorney-General, W. O. Smith.

Area and Population.—The area of the inhabited islands is as follows: Hawaii, 4,210; Maui, 760; Oahu, 600; Kani, 590; Molokai, 270; Lanai, 150; Niihau, 97; Kahoolawe, 63; total, 6,740 square

miles. The native population was estimated at 150,000 in 1820, when the first American missionaries appeared in the islands. In 1890 there were only 34,436 pure Hawaiians left, and in the next six years there was a further diminution of over 10 per cent. A census taken on Sept. 27, 1896, revealed a population of 72,517 males and 36,503 females, a total of 109,020, of whom 31,019 were Hawaiians, 8,485 part Hawaiians, 24,497 Japanese, 21,616 Chinese, 15,191 Portuguese, 5,290 Americans, 2,257 British, 1,432 Germans, 101 French, 378 Norwegians, 455 South Sea Islanders, and 600 of other nationalities. The foreign-born population was 55,783, to which may be added 13,733 born of foreign parents in Hawaii. In the American and British population, as given above, are included those born of American and British parents in Hawaii. The Americans born in the United States number 3,086. There were 16,399 males and 14,620 females in the pure Hawaiian population, 4,249 males and 4,236 females among the half-breeds, 19,212 males and 5,195 females among the Japanese, 19,167 males and 5,195 females among the Chinese, 8,202 males and 6,898 females among the Portuguese, 1,975 males and 1,111 females among the Americans, and 1,406 males and 844 females among the British. The Americans formed 2.73 per cent. of the total population. Honolulu, the capital, situated on the island of Oahu, had 29,920 inhabitants. Chinese immigration is now restricted, and the Government has sought to place limitations on the immigration of Japanese under contract, who form the bulk of recent immigration. The bulk of the Japanese immigrants consists of laborers engaged for a term of years, but the immigration of a superior class of Japanese increased from 5 per cent. of the whole in 1890 to 20 per cent. in 1896. The number of arrivals in 1893 was 5,672, and of departures 3,926; of arrivals in 1894, 8,114, and of departures, 5,477; of arrivals in 1895, 8,000, and of departures, 4,636; of arrivals in 1896, 13,984, and departures, 6,857. The population in 1896 was divided in respect to occupation as follows: Agriculture, 7,570; fishing and navigation, 2,100; industry, 2,265; commerce and transportation, 2,031; liberal professions, 2,580; laborers, 34,438; miscellaneous pursuits, 4,310; without profession, 53,726. The division as to creed was as follows: Roman Catholics, 26,363; Protestants, 23,773; Mormons, 4,886; Buddhists and other cults, 44,306; without indication, 10,192. (For map, see "Annual Cyclopædia for 1892," page 334.)

Finances.—The receipts of the Government in 1896 were \$1,997,818, of which \$656,896 came from customs, \$706,542 from taxes, \$168,384 from the Interior Department, \$59,900 from the courts, \$77,480 from the post office, \$29,363 from stamps, \$62,820 from water supply, \$96,549 from state domains, \$61,048 from sales of Government property, \$56,331 from various sources, and \$22,496 from the surplus of the preceding year. The total expenditures amounted to \$1,904,191, of which \$43,045 were for the civil list and legislation, \$91,607 for justice, \$56,784 for foreign affairs, \$175,472 for public works, \$293,397 for sanitary measures, \$194,401 for the Finance Department, \$252,560 for the public debt, \$251,633 for the Attorney-General's office, \$227,695 for public instruction, \$92,957 for the army, and \$314,640 for various purposes. The amount of the public debt on Dec. 31, 1896, was \$4,136,174. The army consists of a regiment of 8 companies, numbering 476 officers and men.

Commerce.—The total value of the imports in 1896 was \$7,165,000, of which \$5,464,000 came from the United States, \$756,000 from Great Britain, \$299,000 from China, \$276,000 from Japan, \$114,000 from Australia, \$148,000 from Germany, and

\$108,000 from other countries. The exports of domestic produce were \$15,436,000 in value, of which \$15,408,000 went to the United States. The principal exports were sugar for \$14,972,000; rice for \$195,000, and bananas for \$125,000.

Navigation.—There were 386 vessels, of 447,967 tons, entered, and 373, of 465,198 tons, cleared in 1896. The merchant marine consisted of 39 vessels, of 29,024 tons, 26 of the vessels being steamers.

Communications.—The lines of railroad in operation are 25 miles in the island of Hawaii, 7 miles in Maui, and in Oahu 25 miles in the vicinity of Pearl Harbor and 15 miles at Waianae; total length, 72 miles.

The post office in 1895 forwarded 3,957,600 internal and 921,280 external letters, etc. Telegraphs and telephones connect all points in the islands. The telegraphs have a length of 250 miles.

Treaty of Annexation.—William O. Smith, the Attorney-General, went to Washington in February, 1897, to open negotiations, in conjunction with the Hawaiian minister, for a new treaty of annexation. Subsequently Lorin A. Thurston and William A. Kinney were associated with the Hawaiian minister, Francis M. Hatch, and on June 16 Secretary Sherman signed for the United States a treaty with these plenipotentiaries. In his message submitting the treaty to the Senate President McKinley said: "This is not really annexation, but a continuance of the existing relations with closer bonds between people closely related by blood and kindred ties. At the time a tripartite agreement was made for Samoa Great Britain and Germany wanted to include the Hawaiian group, but the United States rejected the suggestion because it held that there already existed relations between Hawaii and the United States, placing the former under the especial care of the United States, which will not allow any other country to interfere in the annexation of Hawaii and the making of the islands part of the United States in accordance with its established policy." The preamble of the treaty states that the United States and the Republic of Hawaii, in view of the natural dependence of the Hawaiian Islands upon the United States, of their geographical proximity thereto, of the preponderant share acquired by the United States and its citizens in the industries and trade of said islands, and of the expressed desire of the Government of Hawaii that those islands should be incorporated into the United States as an integral part thereof and under its sovereignty, have determined to accomplish by treaty an object so important to their mutual and permanent welfare. By the first article the Republic of Hawaii cedes, absolutely and without reserve, to the United States all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies; and it is agreed that all the territory of and appertaining to the Republic of Hawaii is hereby annexed to the United States of America under the name of the Territory of Hawaii. In the second article the Republic of Hawaii cedes and transfers to the United States the absolute fee and ownership of all public Government, and crown lands, public buildings or edifices, ports, harbors, military equipments, and all other public property, with the proviso that the existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands, but the Congress of the United States shall enact special laws for their management and disposition, all revenue from or proceeds of the same (except such part thereof as may be used for the civil, military, or naval purposes of the United States) to be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes. In the third

article it is stipulated that until Congress shall provide for the government of the islands all the civil, judicial, and military powers exercised by the officers of the existing Government shall be vested in such persons and exercised in such manner as the President of the United States shall direct, and the President shall have power to remove said officers and fill the vacancies so occasioned; also that the existing treaties of the Hawaiian Islands with foreign nations shall cease and determine, being replaced by such treaties as may exist or may hereafter be concluded between the United States and such foreign nations, but that the municipal legislation of the Hawaiian Islands, not enacted for the fulfillment of the treaties so extinguished and not inconsistent with this treaty nor contrary to the Constitution of the United States nor any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine, and until legislation shall be enacted extending the United States custom laws and regulations to the Hawaiian Islands, the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged. By Article IV the public debt of the Republic of Hawaii lawfully existing at the date of the exchange of ratifications, including the amounts due to depositors in the postal savings bank, is assumed by the Government of the United States, but the liability of the United States in this regard shall in no case exceed \$4,000,000, and the existing Government, so long as it is maintained and the present commercial relations of the Hawaiian Islands remain unchanged, shall continue to pay interest on the debt. In Article V it is provided that there shall be no further immigration of Chinese into the Hawaiian Islands, except upon such conditions as are now or may hereafter be allowed by the laws of the United States, and no Chinese by reason of anything contained in the treaty shall be allowed to enter the United States from the Hawaiian Islands. The sixth article provides that the President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall as soon as is reasonable and practicable recommend to Congress such legislation concerning the Territory of Hawaii as they shall deem necessary or proper. The seventh article provides for the ratification of the treaty by the President, by and with the advice and consent of the Senate, and by President Dole, with the consent of the Hawaiian Senate, in accordance with the Constitution, and for the exchange of ratifications at Washington as soon as possible.

The Hawaiian annexationists believed that the country would have a stable government if incorporated in the American Union, under which it would become more prosperous than in any past period and the people would be more contented; that the United States would share in this prosperity, and would secure a naval station of inestimable strategic value; that, in short, it is the manifest destiny of the Hawaiian Islands to become a part of the United States. The opponents of annexation in Hawaii believed that the Hawaiian natives never would submit to the extinction of their national existence, and that they still look forward to the restoration of the monarchy or a native government; that after annexation they would have no voice whatever in the government; that the prosperity of the islands would be doomed, because contract labor will not be available under the laws of the United States, and the sugar plantations can not be profitably worked by free labor; and that, as the Territorial governments of the United States, which would be the form imposed on Hawaii, have invariably been incompe-

tent, corrupt, and unjust, the people would be plundered and harassed by political adventurers and carpetbaggers in the event of annexation.

The Hawaiian Legislature, which met on Sept. 8 in extra session for the purpose, ratified the treaty by a unanimous vote on Sept. 10, but not without a protest from the anti-annexationists, who called a mass meeting on Sept. 6 and adopted resolutions asserting that the native Hawaiians and a large majority of the people of the islands were in direct opposition to annexation, and fully believed in the independence and full autonomy of the islands and in the continuation of the Government of Hawaii as of a free and independent country governed by and under its own laws.

British Annexation of Pacific Islands.—Great Britain in recent years has established a protectorate over a number of outlying islands over which Hawaii has claims. The occupation of Johnson island was controverted, and the island was acknowledged to belong to Hawaii on condition that the right to land a cable is conceded, if desired. The British flag has been raised over the Phoenix group, composing the islands of Phoenix, Birnie, Gardner, and Sydney. Jarvis island has also been declared a British protectorate. The uninhabited guano island of Palmyra, situated 1,000 miles southwest of Hawaii, has been claimed as a British possession since 1888, and in May, 1897, a British gunboat visited it and hoisted the British flag. The Hawaiian Government has claimed the same island as a dependency by virtue of its discovery and colonization by its citizens in 1862.

Diplomatic Disputes with Japan.—The treaty made between Japan and Hawaii in 1871 contains the favored-nation clause, and under its provisions Hawaii can not prevent Japanese from coming to the islands as free immigrants. A law was passed to exclude lunatics, paupers, and persons liable to become a burden on the community, and the manner in which it was enforced led to a controversy with the Japanese Government. Another law restricted the importation of contract laborers in a manner which the Japanese held to be contrary to existing engagements. Although but few of the Japanese now in the islands are able to read and write either English or Hawaiian, which constitutes the qualification for the franchise, the Americans feared that the continued settlement of Japanese in the Hawaiian Islands and the influx of educated Japanese would result in the transfer of the political power to them and the adoption of such laws as would make Hawaii a Japanese colony. The first measure to restrict the influx of Japanese was a regulation of the immigration commissioner issued in 1895 requiring planters to import two thirds of their contract laborers from China or from other countries than Japan. The Japanese Government asked an explanation. The free immigration of Japanese not under contract and not of the laboring class, but many of them of the student class, reached enormous proportions early in 1897, when in one week as many as 1,500 arrived, and the regular increase was at the rate of from 1,800 to 2,000 a month. Finally the Hawaiian authorities refused to allow 587 immigrants to land from the steamer "Shinshiu Maru," which arrived on Feb. 22. At first they were held in quarantine on the complaint that there was smallpox on board. In the end the steamer was compelled to take more than 400 of them back to Japan. The same course of action was taken in regard to the immigrant passengers on the "Sakura Maru" and the "Kinai Maru," the latter of which arrived in port on April 17. About 1,200 immigrants on the three vessels were ordered to be taken back by the ships that brought them after a period of detention in the quarantine station,

an island in the harbor. The Supreme Court refused to issue a writ of *habeas corpus* on the ground that the immigrants, not having been landed on Hawaiian soil, were not within the jurisdiction of the court. Hawaii based her right to exclude these people on the laws regulating immigration framed with special reference to contract laborers. These 1,199 immigrants from Japan were prevented from landing on the ground that they were without the prescribed qualifications or had broken the immigration laws. These laws require that the contract laborers shall have a contract to work in the service of some Hawaiian citizen for at least two years. These contract laborers must have their agreements previously indorsed by the Hawaiian Board of Immigration. Japanese contract laborers first went to Hawaii in response to the demand for labor in the islands under a convention concluded in 1886 at the request of the Hawaiian Government, in which the Japanese inserted clauses for the protection of the laborers more stringent than are usually included in arrangements for the importation of coolie labor, for the Japanese Government was not eager to obtain this outlet for labor, and was, above all, anxious that its citizens should not be reduced to the position of coolies. To these conditions, which were not applied to Chinese and other contract laborers, the Hawaiian planters eventually raised objections, thinking that they could obtain labor more cheaply if the restrictions were removed. Free laborers are entitled to enter Hawaii without any preliminary consent of the authorities, but not unless they have \$50 in their possession. Of the total number excluded, nearly 1,000 had a written agreement with the Japanese Immigration Company, whereby, in consideration of the prepayment of 12 yen, the company agreed to return the immigrants to their homes in Japan in case it was unable to procure work for them after landing. They had come as free laborers, but the Hawaiian authorities held that this agreement made them contract laborers in the view of the law, and that it was a contract that had not received the approval of the Hawaiian immigration commissioners, such as the law requires. These immigrants and others showed \$50 in cash, but the authorities demanded proof that it was their own, not lent by the immigration societies to the immigrants to be returned to their agents after landing for the purpose of evading the law. The Japanese consular authorities brought *habeas corpus* proceedings in the case of the immigrants who were detained on board ship pending their deportation, but the Hawaiian courts refused to issue writs of *habeas corpus*. The Japanese Government decided to stop free emigration for a time and to send a war ship to Hawaii. The United States Government at the same time dispatched the cruiser "Philadelphia," which was in Honolulu harbor when the "Naniwa" arrived, on May 3. The Japanese cruiser brought a commissioner to forestigate the immigration question. The Japanese Government alleged violations of the treaty on the part of the Hawaiian authorities in refusing to permit the immigrants to land, thus placing it out of the power of the Japanese consul to protect them; in preventing them from placing the matter in the hands of legal advisers; and in the refusal of the judiciary to entertain a suit at law instituted by the Japanese whose landing had been prevented. Money damages in their behalf to the amount of nearly \$100,000 were demanded. The sudden prohibition from landing applied to Japanese free immigrants was denounced as arbitrary and an infraction of the treaty of 1871, which secures to Japanese subjects the right to enter Hawaiian ports with ships and cargoes of all sorts, to trade, travel, reside, and exercise every profession in Hawaiian

ports, to have complete protection to persons, property, and civil rights, and to have free access to courts of justice and liberty to choose and employ lawyers. The Hawaiian Government took the position that the immigration laws are a reasonable exercise of the police power of the state, and in answer to the Japanese complaint at the sudden stringency with which they were applied, said that they had been laxly enforced as long as the immigration and transportation companies did not attempt fraud; but when these companies made an attempt by evasions of the law to flood the country with pauper immigrants it was necessary to enforce the immigration acts to the letter. The Japanese Government complained also of a discriminating duty imposed on *sake*, the national beverage of the Japanese. The duty had been fixed at 15 cents a gallon, but the Legislature passed, over the veto of President Dole, a bill imposing a duty of \$1 a gallon, which was held by Japan to be a breach of the treaty between the two countries. In February, 1897, the Hawaiian Government requested that the Japanese emigration laws be changed so as to restrict free immigration into Hawaii.

At the time of the signature of the annexation treaty the Japanese minister at Washington demanded the recognition by the United States of all the rights of Japan and her subjects under subsisting treaties with Hawaii. He protested against depriving the Japanese residents in Hawaii, who possess large property rights, of the right which they enjoy under present conditions to become citizens and to vote, and against subjecting them to any measures which the United States may adopt in derogation of their existing treaty rights. The Japanese note, while disclaiming all designs against the integrity and sovereignty of Hawaii on the part of Japan, urged that maintenance of the *status quo* of Hawaii was essential to the good understanding of the powers which have interests in the Pacific. It was further suggested that annexation might lead to the postponement by Hawaii of claims and liabilities already existing in favor of Japan under treaty stipulations. Mr. Sherman, in his reply of June 25, met the general protest with the statement that the influence of the United States in Hawaii has always been paramount, that annexation has long been recognized as a necessary contingency, always probable and steadily drawing nearer, and was proposed four years before without eliciting any objection from Japan, and that the United States Government would not admit that the projected more perfect union of Hawaii to the United States can injure any legitimate interests of other powers in the Pacific. With reference to the rights and claims of Japanese subjects, he pointed out that, although treaties would be extinguished by annexation, rights that have already accrued to Japan or to Japanese subjects under the treaty between Japan and Hawaii would remain. Toru Hoshi, the Japanese minister, replying on July 10 to Mr. Sherman's note, acknowledged the predominant and paramount influence of the United States on Hawaii, which he considered a guarantee against anything inimical to either the United States or Hawaii, and therefore an argument against any change injuriously affecting the interests of others in the *status quo*. The Japanese Government could not view with unconcern and in a spirit of acquiescence the consequences which would probably follow the extinction of Hawaiian sovereignty, nor anticipate without apprehension the consequences, direct and indirect, that would follow the practical consummation of the theory that annexation means the immediate termination of the treaties and conventions with Hawaii and the consequent cessation for the future of the privileges granted thereunder; and it would not admit

that the treaty of 1858 with the United States, which is wholly nonreciprocal, could be extended to Hawaii without its consent.

Hawaii proposed to arbitrate the immigration question and other differences, and Japan, after first declining, before the end of July accepted arbitration in principle and expressed a willingness to discuss the basis, the subject-matter, and the procedure of the arbitration. The Chinese consul raised objections in behalf of his countrymen, against whom the Hawaiian Government was beginning to apply the exclusion act in force in the United States. The Hawaiian minister assured him that Chinese residing in Hawaii would be free to visit their native country and return. In the autumn the immigration of free laborers from Japan was resumed. The Japanese authorities took pains to see that every one of the immigrants complied with the immigration regulations, and the Hawaiian Government, which had given the assurance when the dispute first arose that there would be no interference with *bona fide* immigrants, was helpless to stop this further immigration.

Hawaii accepted Japan's proposal that each party to the controversy should prepare a statement of the facts on which it rests its case. Japan admitted the right of both parties to present testimony regarding facts on which they were not agreed.

HAYTI, a republic in the West Indies occupying the western part of the island of Hayti. The legislative body is the National Assembly, consisting of a Senate of 39 members and a House of Commons of 95 members, the latter elected for three years by universal male suffrage, while the Senators are elected by them from a list supplied in part by the President and in part by the electors. The two houses in joint session elect the President, whose term of office is seven years. Gen. L. M. F. Hippolyte, like most of his predecessors, became President as the result of a revolution. His term would have expired in May, 1897, but he died in 1896, and in his place Gen. Tiresias Augustin Simon Sam was elected for the term ending in May, 1902. The Cabinet was composed in the beginning of 1897 of the following members: Secretary of State for Foreign Affairs and Justice, P. Faïne; Secretary of War and Marine, M. Montpain; Secretary of the Interior, M. Buteau; Secretary of Public Instruction, M. Chanzy; Secretary of Public Works, M. Arteau; Secretary of Finance, C. Fouchard.

Area and Population.—The republic has an area of about 11,070 square miles, comprising the most fertile part of the island. The population in 1894 was 1,210,625, nine tenths of whom are of pure negro blood.

Finances.—The budget for 1897 makes the total disbursements of the treasury 8,984,539 pesos of the nominal value of 5 francs, of which 158,210 pesos are for foreign affairs, 823,818 pesos for finance and commerce, 1,870,745 pesos for war and marine, 1,593,394 pesos for the interior, 731,322 pesos for public works, 297,222 pesos for agriculture, 1,204,190 pesos for public instruction, 519,008 pesos for justice, 96,945 pesos for worship, 266,000 pesos for the national bank, and 1,423,685 pesos for the public debt.

The foreign debt amounted on April 30, 1897, to 13,476,113 pesos in gold, consisting of a 5-per-cent. loan of 4,176,113 pesos issued in 1875 and one of 9,300,000 pesos raised in 1896 and paying 6 per cent. interest. The total debts amounted to 17,913,218 pesos in gold and 10,812,574 pesos in currency.

The Army and Navy.—The army, recruited partly by conscription for seven years and partly by voluntary enlistment for four years, is composed of

the Government guard of 100 artilleryists, 300 infantry, 150 sharpshooters, and 100 cavalry, 4 batteries of artillery numbering 1,000 men, 6 regiments of infantry of the line numbering 3,200 men, and 1,978 gendarmes; total, 6,828 men.

The navy consists of 5 screw steamers carrying 32 guns, and a steel gunboat armed with 5 guns.

Commerce.—The total value of the imports in 1896 was 6,053,835 pesos, and of the exports 9,463,903 pesos. Of the imports 4,134,000 pesos came from the United States, 1,340,000 pesos from France, 304,000 pesos from Germany, 206,000 pesos from England, and 70,000 pesos from other countries.

The number of vessels entered at Port au Prince during 1896 was 260, of 352,142 tons, of which 191, of 332,526 tons, were steamers and 69, of 19,616 tons, were sailing vessels.

Internal Affairs.—President Sam, lacking the prestige and vigorous authority of his predecessor, had to contend with difficult economic conditions as well as the usual political instability of the country. The low price of coffee and the high rates of exchange produced a state of depression and distress that roused the anger of the populace against the Government and also against the foreign merchants, who were supposed to benefit by the sufferings of the people. Constant disagreements arose between the President and his ministers. Revolutionary plots were hatched at Jacmel and other places. Merchants refused to lend money to the Government, and as the treasury was empty, the soldiers were unpaid and insufficiently fed. The premium on gold rose to 90 per cent. On Oct. 1 President Sam proposed a bill partially to retire the paper and silver currencies and establish the gold standard. To insure the regularity and stability of transactions and cause, as far as possible, the perturbations of the exchanges to cease, so as to give the best encouragement to the national commerce, he believed that the paper money should eventually be wholly retired and the silver and copper money partially withdrawn from circulation. The bank notes in circulation are issued by the Government under the control of the National Bank. As the gourde, or peso, has hitherto exchanged with United States dollars at an average premium on the latter of 17 per cent., the high rates prevailing in 1897 created a critical commercial situation. There were 2,900,000 gourdes in silver and 75,000 gourdes in copper issued during the ten years ending in 1890. In 1895 silver and copper coin was issued to the amount of 1,600,000 gourdes. More than 4,000,000 paper gourdes were in circulation in 1896. The President's project of law was adopted by the National Assembly. The leading provision is for a loan of \$2,800,000 of United States gold at par, the interest not to exceed 12 per cent. per annum, the proceeds of which are to be applied to the withdrawal of the paper money from circulation at the rate of 50 per cent. a year. The bill establishes a surtax of 25 per cent. *ad valorem* on all importations, 15 per cent. payable in United States gold, the remaining 10 per cent. in silver, which shall be withdrawn from circulation and demonetized as soon as it is taken in. From the beginning of the withdrawal of the paper notes American gold coins shall be the legal tender in the republic, and the customs dues, except the proportion payable in silver, and all other state revenues shall be collected in that money or in bills at two thirds of their face value.

A new Cabinet was appointed by President Sam, with which he worked more harmoniously than with his previous ministers. It was composed of the following members: Secretary of Foreign Affairs, Finance, and Commerce, Solon Ménos; Secretary of War and Marine, S. Marius; Secretary of

the Interior and Police, Luxembourg Cauvin; Secretary of Justice and Worship, A. Dyer; Secretary of Public Instruction, M. Chanzy; Secretary of Public Works, M. Arteaud.

Dispute with Germany.—The habitual jealousy of the Haytians toward foreigners and the assumption of superiority of race and civilization and contempt for the laws and customs of the country which the foreign residents are apt to betray was quickened by the commercial crisis, which the natives attributed to the speculations of bankers and traders. Various acts of the local authorities toward American citizens and others indicated a revival of the intense suspicion of the Haytians in regard to foreign political intrigue or dictation. There was in Port au Prince a merchant who had rendered himself obnoxious to the police because he assumed liberties and immunities usually accorded to foreigners, being under German law a German subject and inscribed as one at the German legation, for his father was a German, and he had elected that nationality and served in the German army. Under Haytian law, however, this Lueders was a citizen of Hayti, having been born in Hayti of a Haytian mother. Lueders got into a more serious difficulty with the police than he ever had before by resisting their entry into his stable to arrest his negro coachman for some crime or misdemeanor. When a dozen of them finally forced a passage and took the coachman into custody Lueders went to the police headquarters to complain of a violation of his domicile. There he was himself placed under arrest on a charge of assailing and attempting to murder police officers in the discharge of their duty. He was promptly condemned to pay a fine of \$48 and to undergo one month's imprisonment, and was immediately taken to jail. He demanded and obtained a retrial of the case, claiming that it was not sufficiently proved that he had assailed any of the policemen and that, if he had done so, he had a right to defend his domicile against illegal invasion. The result of the second trial was that he was sentenced to pay a fine of \$500 and to one year's imprisonment. Count Schwerin, the German *chargé d'affaires*, wrote to the Ministry of Foreign Affairs in reference to the case. Not receiving an immediate answer, he sought an audience with President Sam, to whom he addressed verbal representations that assumed the tone of an *ultimatum*, challenging the verdict as unjust and influenced by a hatred of foreigners, declaring it invalid, and demanding the liberation of Lueders. In this interview Count Schwerin, who had received telegraph instructions from his Government to demand the release of Lueders, a money indemnity, and the punishment of the police officers and judges concerned in the arrest and condemnation, demanded an indemnity of \$1,000 in gold for every one of the twenty-three days that Lueders had been confined, and added that for every additional day that he was kept a prisoner the German Government would exact an indemnity of \$5,000. President Sam told him that he had not granted an interview for the purpose of discussing such a question, and that the German representative must address his communications to the Secretary of Foreign Affairs. In a circular addressed to the members of the diplomatic corps the President of the republic gave an account of the interview, of the irregular manner in which it had been obtained, and of the demands which the German representative had made, but of which he had not even furnished a written copy, adding that he had replied to Count Schwerin "in terms within the rights of the head of an independent state that is not minded to accept the suzerainty of any foreign power whatever." Gen. Sam had intimated that he had not ex-

pected a business interview, else he would not have granted the audience, and said that he could give no answer to Count Schwerin, who must apply to the proper quarter. The Secretary of Foreign Affairs wrote to Count Schwerin, offering to discuss any communications that he might make in regular form with reference to Emil Lueders and to procure for him a private audience with the President if he desired. To this communication Count Schwerin replied by a formal acknowledgment of its receipt, which was interpreted by the Foreign Secretary as a definitive refusal to enter into relations with his department. This attitude he considered to be one offering no prospect of a compromise and entirely devoid of justification. He therefore informed the representatives of other powers that he considered it desirable that they should advise their governments of what had occurred. The country had been wrought into a fever of excitement by this incident. Threats of mobbing foreigners and lynching Germans were uttered in various towns. The Secretary of State alluded to the national excitement and reminded the foreign diplomatic representatives that the Republic of Hayti had been established at the cost of great sacrifices, "which his countrymen were prepared to repeat in order to maintain their independence and the majesty of their legal administration." The Haytians are an exceedingly proud people and boastful of their national spirit and military prowess and of having possessed the only army that was not beaten by Napoleon I.

On Oct. 21, four days after his interview with the President, the German *chargé d'affaires* hauled down the flag of the legation and sent the archives to the legation of the United States, thus breaking off all relations with the Haytian Government. The German colony, consisting of 70 persons, was placed under American protection. Three German training ships that were in West Indian waters were ordered by telegraph from Berlin to repair to Port au Prince. The colonial circles in Germany and the advocates of the Kaiser's plan for an increase in the navy made much of the Lueders incident, ridiculing the negro and mulatto republics as a piece of exported Africa, a satire on the idea of the modern state, which should be abolished by international agreement as hostile to civilization, and saying that if Germany had the fleet that she ought to have here would be an admirable opportunity to obtain a foothold in these waters such as she has obtained for others. They clamored for the dispatch of a cruiser or a battle ship to Hayti.

The incident entered upon a new phase when W. F. Powell, the American minister, interposed with a letter addressed to the Haytian Foreign Secretary asking for the release of Lueders. Mr. Powell stated that in taking this initiative he had no intention of interfering with the native laws nor of intervening in the difficult complications in which the Government of Hayti and that of the German Empire were involved, nor was it his intention to implicate his Government in the affair. His only object was to mitigate the present difficulties and to avoid all bloodshed and every kind of disturbance such as would damage the interests of American citizens living on the island and engaged in trade. In a subsequent letter he gave it as his opinion that the Haytian Government could set Herr Lueders at liberty without prejudicial consequences. The Government of the United States would regard this proceeding as an act of courtesy. He further reassured the Foreign Secretary that if Lueders were liberated he would leave the island on a Dutch steamer that sailed the next day for New York, and he expressed the hope that the immediate liberation of Lueders would mitigate the

existing strained relations without any humiliation of the Government of Hayti. The Haytian Secretary of State replied in cordial and grateful terms, saying: "In view of the relations of sincere friendship between the Republic of Hayti and the noble and great American republic, my Government has resolved to fulfill your loyal request, and I give you the assurance that the President will to-day decree the pardon of Herr Lueders. While taking note of the prisoner's promise to leave the island at once, I must not leave you unaware that my Government reserves the right, under all the circumstances, to proceed to the measure of expulsion and to forbid Herr Lueders for the future to set foot on the soil of this country which he has renounced."

Lueders was liberated on Oct. 22, and departed for New York and thence for Berlin. He had been kept in confinement six days after the time when Count Schwan demanded his instant release. Negotiations for indemnification and reparation were conducted in Berlin. The Haytian Government was reluctant to pay the sum demanded, which was \$50,000. The population became more excited when the German war vessels arrived, and the Government prepared to take drastic measures to prevent an outbreak. In Jacmel an attempt was made to seize the Government offices by rioters, of whom 7 were killed and 15 wounded by the troops. A rumor had reached that port that the German fleet was bombarding the capital. To escape the rage of the populace all the foreign residents of Jacmel took refuge on vessels anchored in the harbor. In the interior, where there was much discontent, the situation was particularly critical.

Finally an *ultimatum* was sent to President Sam by the German naval commander. After consulting his Cabinet the President decided to comply, and before the time expired the Minister of War paid over on board the German flagship the sum demanded.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic in Central America. The Congress is a single chamber, containing 46 members, who are elected by direct universal male suffrage for four years. The President is elected for the same term by the vote of the nation. Dr. Policarpo Bonilla, who became chief of the executive as the result of a revolution in 1893, and was elected President by the Constituent Assembly, was afterward elected in the regular way for the term ending Dec. 31, 1898. The Vice-President is Gen. Manuel Bonilla. The ministers at the beginning of 1897 were as follow: Minister of Foreign Affairs and Acting Minister of Justice and Public Instruction, Dr. C. Bonilla; Minister of Public Works, Dr. E. C. Fiallos; Minister of the Interior, Dr. J. A. Arias; Minister of Finance, Dr. M. R. Davila; Minister of War, Gen. M. Bonilla.

Area and Population.—The area of Honduras is estimated at 45,250 square miles. The population is about 400,000, consisting almost entirely of Indians, with a few white settlers scattered among them. Tegucigalpa, the capital, has about 18,000 inhabitants.

Finances.—The receipts in 1895 were 2,172,760 pesos. The foreign debt on July 30, 1896, was £16,444,799 sterling, including the capital sum of £5,398,570, and £11,046,229 of unpaid interest accruing since 1872.

Commerce.—The imports in 1896 amounted to 1,322,418. The exports were as follow: Precious metals, 1,150,000 pesos; coffee, 750,000 pesos; cattle, 400,000 pesos; bananas, 400,000 pesos; tobacco, 2,000,000 pesos; coconuts, 125,000 pesos; other products, 100,000 pesos; total, 3,125,000 pesos.

Communications.—There is a line of railroad from Puerto Cortez to La Pimienta, 57 miles. The post office in 1896 forwarded 370,456 letters, etc., besides 12,451 registered letters. The telegraphs had 2,680 miles of wire in July, 1896.

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, Frank Steunenberg; Lieutenant Governor, George F. Moore; Secretary of State, George J. Lewis; Treasurer, George H. Stover; Auditor, James H. Anderson; Attorney-General, R. E. McFarland; Superintendent of Public Instruction, L. N. B. Anderson; Inspector of Mines, B. F. Hastings—all Democratic-Populist fusion. Supreme Court—Chief Justice, L. N. Sullivan, Republican; Associate Justices, J. W. Huston, Republican and Ralph P. Quarles, Democratic Populist; Clerk of the Court, Solomon Hasbrouck, Republican.

Finances. In his message to the Legislature, which convened in January, 1897, the Governor called attention to the fact that the bonded interest-bearing debt of Idaho had almost doubled since the attainment of Statehood (1890), while the assessed valuation of property was decreasing. "We are thus," he remarked, "confronted by the difficulty of doing an increasing business on a decreasing Capital." The report of the State Auditor for 1893 and 1894 shows that the bonded debt of the State on Jan. 1, 1895, aggregated \$178,000, since which time there has been paid: Asylum bonds, \$5,000; Capitol-building bonds, \$40,000; total, \$45,000; leaving balance of debt, \$293,000. The preceding session

of the Legislature provided for the issuance of: Asylum-improvement bonds, \$25,000; normal-school bonds, \$75,000; total, \$100,000; making a total bonded indebtedness of \$303,000, classified as follows: Refunding bonds, drawing 6 per cent., \$108,000; wagon-road bonds, 1889, 6 per cent., \$50,000; wagon-road bonds, 1893, 5 per cent., \$135,000; asylum-improvement bonds, 5 per cent., \$25,000; normal-school bonds, 5 per cent., \$75,000; total, \$393,000; outstanding warrants Jan. 4, 1897, \$243,638.82; leaving total indebtedness, bonded and warrant, \$636,638.82.

Accounts against the State for which no appropriation has been made or claims where the regular appropriation has been exhausted are examined and certified as correct by the board of examiners, and are so certified to the next session of the Legislature, and such certified account constitutes a deficiency warrant. These warrants collectively amounted in January to \$44,298.59.

The semiannual report of the Auditor, covering the period from Jan. 1 to July 31, 1897, showed: General-fund warrants, series 1895 and 1896, outstanding Jan. 1, 1897, \$224,270; redeemed Jan. 1 to July 31, 1897, \$131,253; balance outstanding series 1895 and 1896, \$93,253. Collections reported by the Treasurer for the period amounted to \$276,500, the principal items being: Revenue, \$190,631; poll taxes, \$8,048; insurance licenses and filing fees, \$3,603; State proportion of State and county license, \$8,193; wagon-road tax, \$10,061; principal account

school-land sales, \$2,273; 5-per-cent. Federal land sales, \$2,501; principal account school-fund loans, \$4,605; interest and rental account school-land sales, \$9,115; Soldiers' Home endowment fund, \$3,128; national endowment, Morrill act, \$25,000. The Auditor's report shows that the total amount of general-fund warrants issued during the seven months was \$180,968.

There was a saving at the Soldiers' Home of \$18,000 through changed methods adopted there.

The preceding Legislature provided for the building of normal schools, the outlay for building and maintenance being \$81,521. This year's appropriation for the schools was only \$28,000, a difference of \$53,521. The deficiency claims paid by the 1895 session aggregated \$60,443; those paid by the 1897 session \$27,700, a difference of \$32,743. These three items of difference foot as follow: Soldiers' Home, \$18,000; normal schools, \$53,521; deficiencies, \$32,743; total, \$104,264.

Banks.—The report of the United States Comptroller of the Currency, in October, on the condition of the 10 national banks in the State showed: The average reserve held was 40.48 per cent. The total resources of the 10 banks had increased from \$3,360,739 in July to \$3,505,448. Increase in the amount of loans and discounts was from \$1,036,214 to \$1,066,609. Individual deposits had increased from \$2,108,100 to \$2,393,314. The lawful money reserve in the banks was \$276,092, of which \$214,634 was specie. There was a falling off in the amount of gold coin held in reserve in the banks, and a corresponding increase in the amount of silver coin. In July the 10 banks had on hand in gold coin \$30,497; in October they had but \$85,409. The Idaho banks had due them from other national banks, not reserve agents, \$259,160; from State banks and bankers, \$176,953; and from approved reserve agents, \$644,733. They owed to other national banks \$12,744, and to State banks and bankers \$22,994.

The banking house of C. Bunting & Co., in business at Blackfoot and Dubois, was closed, Feb. 15, under an attachment of the First National Bank of Pocatello, of which Bunting is president. The liabilities were placed at about \$200,000. In the attached bank was \$53,000 of the county funds and \$9,000 of State money. The withdrawal of \$22,000 of State funds was the immediate cause of the collapse. The assets were said to be large.

Assessment.—The total valuation of property by counties aggregated \$29,951,920, as follows: Ada, \$3,373,493; Bannock, \$1,769,348; Bear Lake, \$1,006,409; Bingham, \$1,345,230; Boise, \$471,383; Canyon, \$2,037,331; Cassia, \$751,960; Custer, \$482,306; Elmore, \$1,183,517; Fremont, \$1,470,479; Idaho, \$921,283; Kootenai, \$2,235,774; Latah, \$2,756,238; Lemhi, \$871,777; Nez Percés, \$1,578,277; Oneida, \$1,353,116; Owyhee, \$1,000,725; Shoshone, \$1,866,164; Washington, \$1,200,643; Lincoln, \$1,030,376; Blaine, \$1,246,072. The aggregate amount the counties were taxed to pay the State was \$233,000.

Of the special land grants to the State by the National Government, aggregating over 600,000 acres, only one sixth yet remain to be settled.

Education.—The biennial report of the Superintendent of Public Instruction showed that in 1869 there were but 24 school districts in the State and 15 schoolhouses; in 1894 there were 626 districts and 559 schoolhouses; in 1897, 671 districts and 658 schoolhouses. The growth of population is reflected in the number of school children. In 1894 there were 35,606 children between the ages of five and twenty-one; in 1896 the number had grown to 43,745, showing a growth of school population of more than 8,000 in two years, or nearly 25 per cent.

The report of the United States Indian Commissioner, made in November, showed that 440 young Indians were attending school at the three Government Indian boarding schools in the State. Of these, 150 were going to the Fort Hall school, 250 to that at Fort Lapwai, and 40 to that at the Lemhi reservation. There is also a contract school maintained on the Coeur d'Alene reservation where 55 pupils are taught, for whom tuition is paid at the rate of \$108 a year.

Insane Asylum.—The records of this institution show a marked increase of patients from year to year. In 1890 the number of patients was 64, while in 1896 it was 158. The *per capita* cost of maintenance per day was 85½ cents in 1891, 91 cents in 1892, 70 cents in 1893, 64 cents in 1894, 59 cents in 1895, and 54 52 cents in 1896. This institution is by law for the indigent insane, but patients of all conditions are admitted, and while due effort is made to collect from non-indigents, there is no provision of law whereby such efforts can be made effective.

Mining.—According to the report of the Superintendent of the Boise Assay Office, Idaho's production of gold, silver, and lead in 1896 had a total value of \$11,751,845, an increase of \$1,641,260 over 1895. The values were: Gold, \$2,323,700; silver, \$6,474,765; lead, \$2,953,380. There was an increase of \$652,059 in the value of lead mined. The production of gold by counties was: Owyhee, \$681,065; Shoshone, \$359,049; Boise, \$325,965; Custer, \$106,791; Idaho, \$155,349; Blaine, \$66,894; Elmore, \$63,731; Cassia, \$18,522; Ada, \$27,349; Bingham, \$15,628; Canyon, \$10,791; Lincoln, \$17,426; Lemhi, \$451,411; Oneida, \$13,844; Nez Percés, \$3,824; and Washington, \$6,801. The principal production of silver by counties was: Shoshone, \$1,000,292; Owyhee, \$1,846,568; Blaine, \$337,350; Custer, \$186,648; Boise, \$6,006; Elmore, \$2,106; and Lemhi, \$2,463.

Decisions.—Through the adoption of a constitutional amendment by the people, Idaho women have been admitted to the right of franchise. At the election 12,126 votes were cast in favor of the amendment and 6,282 against it. While this was a majority of those voting on the subject, the State Board of Canvassers held that a majority of all those participating in the general election was necessary for the success of the amendment. The matter was taken into the Supreme Court of the State, which decided against the Board of Canvassers.

The decision on the suffrage amendment carries the others that were voted on at the same time. These are the amendments to abolish the office of district attorney, substituting county attorneys and segregating the office of probate judge and county school superintendent.

In the case of F. M. Conger vs. the Board of Commissioners of Latah County, the Supreme Court decided that a board of county commissioners can not employ counsel to assist the district attorney in criminal cases.

Horticulture.—The Horticultural Inspector reported that the fruit acreage had increased from 10,000 acres in 1890 to 20,000 in 1896. Besides the various wagon loads of fruit distributed 116 car loads were shipped from the State. One shipper received \$1,076 for a car of Hungarian prunes sold in the New York market. This car netted the shipper \$300 after freight and commission charges were paid. The lowest freight rate obtained was \$2.00 per car by a shipper who iced his cars at Pocatello. The rate for other shippers, who iced at Boise and Nampa, was from \$3.50 to \$3.85 to points as far west as Chicago. To New York the rate was \$4.25 to \$6.75. The common pests found in the State are, in the order of their destructiveness, as follows: San

Jose scale, codlin moth, woolly aphis, green aphis, pear-leaf-blister mite, oyster-shell bark louse, apple scab, peach blight, and dieback.

Irrigation.—The State engineer reported 315,000 acres of land under cultivation by irrigation and 1,250,000 acres that can be irrigated. Thirty-two thousand acres are irrigated with water from the Bois river, 1,062 feet a second being used. Four acts providing for irrigation were passed by the Legislature.

Legislative Session.—Henry Heitfeld, Populist, was elected United States Senator over Fred T. Dubois, Silver Republican, by a vote of 39 to 30.

Among the bills passed were the following:

Abolishing the office of assistant State engineer.

Fixing the legal rate of interest at 7 per cent.

Establishing a sheep-quarantine system.

Defining the manner of locating placer claims.

Allowing any school district with taxable property amounting to \$150,000 to organize an independent district.

To prohibit gambling.

Providing for a State board of arbitration for settling labor troubles. This act provides that whenever the State board shall be advised that a strike or lockout is threatened in a business employing not fewer than 25 persons "it shall be the duty of the State board to put itself into communication as soon as may be with such employer and employees, and endeavor by mediation to effect an amicable settlement between them or endeavor to persuade them." If a strike has actually occurred, it may investigate it and publish a report giving the causes and assigning the responsibility or blame.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The State officers during the year were: Governor, John R. Tanner; Lieutenant Governor, W. A. Northcott; Secretary of State, James A. Rose; Treasurer, Henry L. Hertz; Auditor, J. S. McCullough; Attorney-General, E. C. Aiken; Adjutant General, J. N. Reece; Superintendent of Insurance, J. R. B. Van Cleave; Superintendent of Education, S. M. Inglis—all Republicans.

Finances.—The total amount of funds in the treasury Oct. 1, 1894, was \$1,923,462.07. The receipts from all sources from Oct. 1, 1894, to Oct. 1, 1896, were \$13,442,055.16. The disbursements from Oct. 1, 1894, to Oct. 1, 1896, were \$12,555,709.03. The balance of all funds in the treasury Oct. 1, 1896, was \$886,346.13. The principal of the bonded debt of the State outstanding Oct. 1, 1896, was \$18,500. These bonds, called in, have ceased to draw interest, but have not been surrendered.

Valuation.—A statement of the equalized assessment of all taxable property in the State for the year 1896 gives the total valuation as \$816,679,620. A later statement of the Board of Equalization, made in October, 1897, shows a decrease in the general assessment and an increase of \$12,000,000 in that on corporations. One hundred and ten railroads are assessed at \$78,621,936, a reduction of about $\frac{1}{2}$ of 1 per cent. from 1896. A reduction of \$12,059,295 in the taxes on Cook County's unclassified property is shown. In Sangamon, Morgan, Menard, Christian, Cass, Macoupin, Logan, Macon, Shelby, Champaign, De Witt, Greene, Jersey, Piatt, and Pike Counties a decrease of valuation ranging from 40 per cent. on lots in Morgan County to 5 per cent. on lands in Christian County is shown. The total assessment on the capital stock of 315

corporations other than railroads, added to the equalized value of the tangible property, is \$15,908,424. This is an increase of 35 companies, and a total increase in the assessment of \$1,113,764. Of this, Cook County furnishes 22 companies and \$725,000.

Banks.—The report of the State Auditor gives the number of State banks in operation on Sept. 1 as 138. The capital stock of these banks was \$18,919,500; the total resources amounted to \$127,291,996.62; amount of United States bonds, including premiums, \$572,796.50; other bonds and stocks, \$10,248,139.09; cash on hand, \$14,782,628.79; loans and discounts, \$83,256,291.79; surplus fund, \$7,547,135.04; undivided profits, \$3,467,637.41; savings profits subject to notice, \$37,665,012.19; individual deposits subject to check, \$39,720,414.17.

The Auditor issued a statement in August showing the comparative increase and decrease from May 11 to Aug. 2, 1897. The number of State banks had increased to 141. The amount of loans and discounts increased \$1,840,502.78; cash on hand shows a decrease of \$706,819.20; due from other banks, an increase of \$1,873,816.26; current expenses, a decrease of \$743,893; checks and other cash items, a decrease of \$131,873.45; collections, a decrease of \$1,138,065.01; capital stock, a decrease of \$35,000; surplus fund, an increase of \$23,713.05; dividends unpaid, an increase of \$18,056.66; saving deposits subject to notice, an increase of \$12,908,881.50; individual deposits subject to check, an increase of \$2,863,566.78; time certificates of deposits, a decrease of \$1,110,058.94.

Railroads.—The State Auditor's report for 1896 shows that there are 105 railway systems operating in the State, with 10,611 miles of main track, 1,113 miles of which are second main track. There are 3,528 miles of side track.

The report issued in August, 1897, gives 110 railroads, with 10,989 miles of main track. The annual report of the Illinois Central Railroad for the year ending June 30 showed the gross receipts from traffic to be \$22,110,937; the expenses of operation and taxes, \$15,735,884; leaving the net receipts from traffic, \$6,375,053. The income from all other sources swelled the total net receipts to \$8,539,248. The total fixed charges and rentals of the road were \$5,760,698. During the year \$2,625,000 were paid out in dividends, and \$924,461 has been carried forward and set apart as applicable to future dividends. The net receipts from traffic for the year showed a decrease of \$665,514, and the total net receipts from all sources showed a decrease of \$419,781 from the year ending June 30, 1896.

For July, 1897, the freight earnings of the Burlington road were \$2,004,478, an increase of \$332,000 over the same month last year. The net earnings of the road for the month were \$196,435, an increase of \$99,314 over the same month last year.

Agriculture.—On Aug. 1, 1897, the State Board of Agriculture reported that 1,938,442 acres, or 53 per cent. of the total area seeded in wheat, was winter killed or destroyed by floods, leaving but 898,755 acres for harvest. The greatest loss was in the central part of the State, where but 23 per cent. of the fall planting was harvested. The quality of the yield was good and averaged 14 bushels to the acre all over the State. The total yield was 10,225,525 bushels. The average price paid to farmers, Aug. 1, was 67 cents, and the total value of the crop was \$6,924,013.

Oats produced an average yield of 35 bushels to the acre—greater than for the two previous years; 3,540,231 acres were planted, and the average price realized by the farmer was only 15 cents a bushel. The total yield was 126,959,997 bushels; estimated value, \$19,547,410.

An estimate issued Sept. 10 gives the area planted in corn during 1897 as 7,059,527 acres. The average yield is 32 bushels 'an acre; total yield, 225,648,864 bushels; value, 25 cents a bushel. The Government estimate of the Illinois corn crop for 1897 was given on Oct. 1 as 203,024,000 bushels. On Sept. 3 the State Board of Agriculture estimated the yield from 126,411 bushels of rye at 1,964,189 bushels, valued at \$667,139, an average yield of 15 bushels to the acre, at 34 cents a bushel. There were 18,170 acres of barley, 3,000 more than last year. The average yield was 27 bushels an acre, the total yield 491,083 bushels, and the total value \$149,939; price per bushel, 30 cents.

One particular in which a great advance has been made the past year is in the laying of drain tile, nearly 7,000,000 feet having been laid. The average number of feet laid to the acre of cultivated land is 28.

Education.—The report of the Superintendent of Public Instruction for the period between July 1, 1894, and June 30, 1896, shows a total enrollment in the graded schools of 541,231 pupils for the year of 1895-'96, an increase of 48,153 above the year 1894-'95. The ungraded schools show a total enrollment of 357,388 pupils, a decrease of 5,472 in two years. The total enrollment in graded and ungraded schools in 1896 was 898,619, an increase of 42,081 over 1894. The total number of schools in 1896 was 12,623, and the cost to the people of maintaining them was \$15,906,854.57. In this expenditure are included the support of the Illinois Institution for the Deaf and Dumb, the Illinois Institution for the Blind, the Illinois Asylum for Feeble-Minded Children, and the Soldiers' Orphans' Home. The income derived from the bonds and funds held by the various institutions, together with that from fines and forfeitures, is applied to the general fund, making the grand total of public moneys expended for public schools for 1896 \$18,196,669.11. The average cost of tuition per pupil, calculated on the enrollment, is \$13.29 for graded schools and \$7.73 for ungraded schools. The monthly wages paid to teachers range from \$200 to \$12. The average monthly wages paid to teachers is \$51.45 for males and \$37.65 for females. The number of children in the State between the ages of twelve and twenty-one who are unable to read and write is given as 868, but this number is believed by the board to be too small. There are 947 private schools in the State, with an enrollment of 117,235 pupils and 3,159 teachers.

Charities.—The biennial report of the State Board of Charities for the two years ending July 1, 1896, shows that the total expense of maintaining an average number of 8,129 inmates of the charitable institutions was \$1,262,459.81 for 1894-'95, and \$1,238,149.22 for 1895-'96. The average cost per annum for each inmate was \$155.30 for 1894-'95, and \$148.20 for 1895-'96, making an average for the two years of \$151.75. A report for the last quarter of 1896 gives the average number of inmates as 8,956; average cost *per capita* (gross), \$41.58; net, \$39.12. Present at the beginning of the quarter, 8,692; admitted, new, 832; readmitted, 155; number of inmates returned, 320; discharged or absent, 808; died, 112; present at the end of the quarter, males, 4,216; females, 4,863. The total cost to the State for the quarter of the 13 institutions was \$350,393.19.

Military.—The number of men in the State fit for military duty in 1896 was estimated to be 700,000. Out of this number 5,829 men and 415 officers were actually enrolled in the militia, and 400 men with 49 officers in the naval militia. A gain of 990 members in 1896 is shown. The amount expended by the State for the maintenance of these

troops for the year ending Oct. 1, 1896, was \$213,535, or \$31.06 per man. This includes the national appropriation of \$20,100,000 per annum for the National Guard and of \$2,000,000 per annum for the militia. No armories are owned by the State, all are rented, at an annual cost exceeding \$50,000. The only active service required of the troops during 1895-'96 was at East St. Louis, where two companies of infantry under Major Bennett were on duty for about ten days after the cyclone, assisting the civil authorities in guarding property and preserving the peace.

Prisons.—An amendment to the Constitution in 1896 made it unlawful to let by contract the labor of any convict confined in any of the penal institutions. The State Auditor's report gives the amount of warrants drawn on the State treasury from Oct. 1, 1894, to Sept. 30, 1896, for maintenance of the penal institutions as follows: The penitentiary at Joliet, \$180,975.28; Southern, \$200,730.81; Pontiac Reformatory, \$381,378.50.

Board of Pardon.—A State Board of Pardon was created by the fortieth General Assembly. Under the act as approved the duty of passing upon the applications of convicts for release under the provisions of the parole law is imposed upon this board, instead of upon the commissioners and wardens of the penitentiaries as heretofore. In addition, the board is required to consider applications for pardon and commutation of sentence. The methods of investigation followed are similar to the regular procedure followed by the courts, and all parties interested are given an opportunity to be heard in opposition to any applications presented. The office of the board is purely advisory.

Board of Arbitration.—The annual report of the State Board of Arbitration, made in March, states that but few strikes were had during the year which called for the attention of the commission. This is accounted for by the presidential campaign, when all such differences were held in abeyance. Thorough organization of workmen and contractors in the building trades also kept down the desire to enter upon strikes.

Decisions.—The State Supreme Court in May sustained the inheritance tax, thereby reversing the decision of the county court at Chicago. In sustaining this measure, the Supreme Court holds that in this State the right to devise and inherit property is derived only from existing statutory enactments. This being a tax upon the right of succession instead of upon the property itself, the court holds that it was competent for the Legislature to create the new classes established by the inheritance-tax law and is not inconsistent with the principles fixed by the State Constitution.

The same court filed two opinions at Ottawa which sustain the constitutionality of the indeterminate-sentence law passed two years ago.

A ruling of the same court decides that a physician must give expert testimony without additional fee.

It was decided that the Governor of Illinois is not required to work on Sunday in the performance of his official duties, and that Sundays shall not be counted in figuring up the time allowed him by the Constitution in which to act upon bills after adjournment of the General Assembly.

Legislative Session.—At the regular session of the fortieth General Assembly, which closed June 6, 1897, the following-named bills were the most important that were passed and were signed by the Governor:

To prohibit fusion. This act amends the election law by providing that the names of candidates shall not be placed upon a ballot more than once for the same office or under more than one party appellation.

Amending the law regulating the administration of trusts by trust companies.

To enable corporations in other States and countries to lend money in Illinois, to enforce their securities, and acquire title to real estate as security the same as provided for corporations organized under the State law.

Providing for the appointment of police matrons in cities of 16,000 inhabitants and over.

Providing that fire escapes shall be placed on all buildings which are four or more stories in height, excepting such as are used for private residences exclusively, but including flats and apartment buildings, and on all buildings more than two stories high used for manufacturing purposes, hotels, dormitories, schools, seminaries, hospitals, or asylums. One fire escape shall be provided for every 50 persons.

Placing fraternal beneficiary societies under the supervision of the insurance department the same as other assessment societies.

Increasing the salaries of the Supreme Court justices to \$7,000 a year.

Creating a State Board of Pardons.

Prohibiting the employment of children under fourteen years of age in factories, workshops, laundries, offices, and stores.

Requiring the effects of alcoholic stimulants upon the human system to be taught in the public schools.

Amending the parole and indeterminate-sentence act and placing the release of prisoners under its provisions in the hands of the new Board of Pardons.

Amending the act against trusts by providing that in the mining, manufacture, or production of articles of merchandise, the cost of which is mainly made up of wages, it shall not be unlawful for persons, firms, or corporations doing business in this State to enter into joint arrangements of any sort, the principal object or effect of which is to maintain or increase wages.

Making it unlawful to manufacture butterine that is colored in imitation of butter.

Repealing the libel act of 1895.

Authorizing city councils to grant franchises for fifty years, instead of twenty, and legalizing the operation of such railways by electricity.

Political.—William E. Mason was elected United States Senator at the joint session of the General Assembly on Jan. 22, 1897, for a term of six years, beginning March 4, 1897. On the final ballot Mason received 125 votes and John P. Altgeld 77.

Local elections for county and municipal offices were held on April 6, April 20, and Nov. 2.

INDIA, an empire in southern Asia, subject to Great Britain and governed under general acts of the British Parliament by a Governor General in consultation with and under instructions from the Secretary of State for India, a member of the British Cabinet. The Governor General is advised by a Council, which frames the laws for the government of the empire. The Secretary of State also has a Council, consisting of retired Indian functionaries, whose duties are to conduct the business transacted in the United Kingdom in relation to the government of India and to examine the expenditures of the Indian administration. The Earl of Elgin succeeded the Marquis of Lansdowne as Governor General in October, 1893. The ordinary members of the Council of the Governor General are Sir James Westland, Sir J. Woodburn, M. D. Chalmers, Major-Gen. Sir E. H. H. Collett, and A. C. Trevor, with Sir W. S. A. Lockhart, the commander in chief of the forces. These members are re-enforced by additional members appointed by the Governor General, part of them on the recom-

mendation of provincial councils, to form the Legislative Council, which frames regulations to be submitted to the Governor General and drafts of laws that he forwards to the Government in London, to be laid before Parliament. The Secretary of State for India in the Cabinet of Lord Salisbury is Lord George Hamilton.

Area and Population.—The Indian Empire, with the protected states, has an aggregate area of 1,987,427 square miles. The area under the direct administration of the Governor General is 965,005 square miles. The area and population of the British provinces, according to the census of 1891, are given in the following table:

BRITISH PROVINCES.	Square miles.	Males.	Females.	Total population.
Bengal	151,543	35,563,290	35,783,688	71,346,978
Northwest Provinces and Oudh	107,503	24,303,601	22,601,484	46,905,085
Punjab	110,067	11,255,586	9,610,861	20,866,447
Assam	49,004	2,819,575	2,057,258	5,476,833
Ajmere and Merwara	2,711	288,825	254,033	542,858
Madras and Lacadives	141,180	17,619,395	18,011,045	35,630,440
Bombay and Sind	125,064	9,763,067	9,093,977	18,857,044
Aden and Perim	80	30,914	13,165	44,079
Central Provinces	86,501	5,397,304	5,386,000	10,783,304
Berar	17,718	1,491,826	1,405,065	2,897,491
Coorg	1,583	95,907	77,148	173,055
Lower Burma	87,557	2,402,296	2,193,331	4,658,927
Upper Burma	83,473	1,414,005	1,532,928	2,946,933
Andaman	12	13,375	2,234	15,609
District of Quetta		23,664	8,406	27,370
Total	965,005	112,542,759	108,630,213	221,172,952

The area and population of the tributary and protected states are shown in the following table:

NATIVE STATES.	Square miles.	Males.	Females.	Total population.
Bengal states	35,834	1,673,186	1,623,193	3,296,379
Northwest Provinces	13,232	409,470	383,021	792,491
Punjab states	99,190	2,324,091	1,939,189	4,263,280
Madras states	24,886	1,853,976	1,846,646	3,700,622
Bombay states	178,819	4,120,125	3,939,173	8,059,298
Central Provinces	76,234	1,089,011	1,071,500	2,160,511
Rajputana states	337,380	6,330,732	5,641,654	11,972,386
Central India	201,514	5,395,536	4,923,276	10,318,812
Baroda	21,304	1,252,983	1,162,413	2,415,396
Hyderabad	82,698	5,878,129	5,663,911	11,537,040
Mysore	27,936	2,483,451	2,460,153	4,943,604
Cashmere	80,900	1,353,229	1,190,723	2,543,952
Sikkim	3,090	30,485
Manipur	8,300	221,000
Tribes east of Assam	11,235	120,000
Lujai and Kachin	46,823	300,000
Shan states	77,223	1,700,000
Andaman and Nicobar tribes	3,180	12,000
Beluchistan	121,627	400,000
British Beluchistan	13,514	145,417
Afghan border tribes	31,663	500,000
Chitral and Dardistan	27,100	480,000
Aden dependencies	83,500	295,800
Arah protectorates	8,000	130,000
Somali coast	74,100	153,800
Socotra	1,382	12,000
Total	1,022,422	70,308,000

Finances.—The final accounts for the year 1895-'96 make the total receipts Rx 98,370,167, including Rx 393,162 in England, and the total expenditures Rx 96,836,169, including Rx 27,453,388 in England. Of the receipts, the land tax furnished Rx 26,200,955; the opium impost, Rx 7,123,922; the salt monopoly, Rx 8,861,845; stamps, Rx 4,727,055; excise, Rx 5,722,417; provincial rates, Rx 3,707,005; customs, Rx 5,017,278; licenses, Rx 1,835,189; forests, Rx 1,660,504; registration, Rx 424,870; tributes, Rx 792,301; interest, Rx 825,052; posts, telegraphs, and mint, Rx 2,840,358; legisla-

tion and justice, Rx 690,172; police, Rx 417,892; navigation, Rx 169,374; public instruction, Rx 407,084; public works, Rx 24,872,974; military department, Rx 978,011; miscellaneous receipts, Rx 1,093,914.

Of the total expenditures, Rx 4,044,799 were for interest on the debt, Rx 1,854,768 for repayments, Rx 8,496,489 for costs of collection, of which Rx 4,097,117 were in connection with the land tax, Rx 2,068,941 with the opium duty, Rx 521,044 with the salt monopoly, Rx 911,161 with forest administration, and Rx 898,226 with the other revenues, Rx 2,594,880 for the posts, telegraphs, and mint, Rx 2,033,294 for administration, Rx 4,047,569 for legislation and justice, Rx 4,040,817 for police, Rx 743,112 for navigation, Rx 1,062,183 for foreign affairs, Rx 2,032,460 for public instruction, Rx 1,223,325 for ecclesiastical and medical affairs, Rx 5,016,118 for pensions and charity, Rx 917,214 for printing, etc., Rx 586,485 for famine relief, Rx 32,273,941 for public works, Rx 25,499,506 for the army, and Rx 379,109 for provincial deficits. Notwithstanding the extraordinary expenditure of Rx 1,670,000 connected with the Chitral campaign, to which were added a considerable increase in famine insurance, a remission of taxation, and a larger grant toward provincial expenditure, the whole amounting to Rx 1,900,000 more, a surplus was realized amounting to Rx 1,533,998.

The estimates of 1896-'97 were affected by the famine and plague, entailing a loss to the treasury estimated for that and the succeeding year at Rx 12,000,000. The frontier-war expenditure and the losses consequent on the earthquake in Assam and Bengal came later. The revised estimates made the Indian Government budget of revenue Rx 58,004,200 and the expenditure in India Rx 58,034,200, with a resulting deficit of Rx 1,986,900 instead of an expected surplus of Rx 463,100. There was a decrease of Rx 3,029,500 and an increase of Rx 3,045,600 that were due to the famine, but of this expenditure the provincial treasuries bore Rx 1,651,000, making the net cost to the Indian Government Rx 5,024,000, to which was added a loss of Rx 420,100, while against these losses was offset a benefit of Rx 1,728,000 in exchange, the rate of the rupee having been 1s. 2½d. instead of the budget estimate of 1s. 1½d., also a reduction of Rx 1,143,500 in the net expenditure and an improvement in the revenue of Rx 1,498,200. When the accounts were closed the actual deficit was found to be Rx 1,503,500.

The budget estimates for 1897-'98 made the Indian Government revenue Rx 59,629,700 and expenditure in India Rx 62,093,700, leaving a deficit of Rx 2,464,000. The land and salt taxes and other sources were expected to yield more revenue, other sources less, the net result being an estimated improvement of Rx 1,595,500 in revenue. The increase in expenditure on account of the famine is Rx 1,653,300, and other charges showed an excess of Rx 477,100. Subsequently the estimates of expenditure were increased by Rx 400,000 more for famine charges, Rx 168,000 for discounts on loans, Rx 330,000 for the Techi expedition, Rx 400,000 for the Malacand expeditionary force, and other items, making a total increase of Rx 1,460,000. A rise in exchange and more promising harvest prospects indicated better revenue returns to offset a part of the deficiency.

In the quinquennial settlement of the provincial balances that took place in 1897 the provincial governments were allowed for the coming period an expenditure of Rx 14,355,900, instead of Rx 13,066,500 as fixed in 1892. Including Upper Burma, which shares for the first time in the grant, the total amount is Rx 15,628,900.

The consolidated debt in 1897 amounted to Rx 217,692,600, of which Rx 103,588,328 were payable in India and Rx 113,903,732 in England; the unfunded debt was Rx 14,646,398; making the total debt Rx 232,339,028. To meet extraordinary famine expenditure and to carry out its railroad programme the Indian Government proposed to raise in 1897 a loan of Rx 4,000,000 in India at 3 per cent., and English loans to the amount of £4,500,000. As it was not found possible to raise more than Rx 3,000,000 at 3½ per cent., the English gold loans were increased to make good the difference.

The Army.—The European troops on the Indian establishment in 1897 comprised 17 cavalry and 50 infantry officers on the general list, 37 general officers unemployed, 9 officers and 13 men on the invalid and veteran establishment, 489 officers and 12,817 men of the royal artillery, 261 officers and 5,418 men of the cavalry, 285 officers and 74 men of the royal engineers, and 1,508 officers and 52,238 men of the infantry; total, 3,476 officers and 70,560 men. The native Indian army numbered 33 European and 27 native officers and 4,463 men in the artillery, 362 European and 621 native officers and 22,312 men in the cavalry, 58 European and 63 native and 4,085 men (including 84 European non-commissioned officers) in the sappers and miners, and 1,129 European and 2,752 native officers and 110,371 men in the infantry; total, 1,582 European and 2,752 native officers and 141,231 men. The total strength of the European and native army was 5,058 European officers, 2,752 native officers, and 2,111,791 noncommissioned officers and privates, making 219,601 officers and men. The number of volunteers enrolled was 29,039 in 1895, of whom 25,895 were counted as efficient. The native army reserves numbered 13,862. The imperial service troops maintained by the native princes number 19,266. The armies of the native states numbered 349,000 in 1884, but they are badly equipped and without training or discipline, with the exception of these imperial service troops taught and commanded by British officers.

The British and native troops composing the Indian army are divided into four corps. The Bengal corps in 1897 consisted of 63,628 troops, comprising 4,862 artillery, 8,565 cavalry, 1,629 engineers, 48,206 infantry, and 366 miscellaneous officers; the Punjab corps, of 65,143 troops, comprising 6,051 artillery, 11,893 cavalry, 104 engineers, 46,863 infantry, and 232 miscellaneous officers; the Bombay corps, of 44,047 troops, comprising 3,980 artillery, 5,254 cavalry, 1,035 engineers, 33,599 infantry, and 159 miscellaneous officers; and the Madras corps, of 46,761 troops, comprising 2,936 artillery, 3,262 cavalry, 1,777 engineers, 38,619 infantry, and 167 miscellaneous officers.

In 1895, out of 68,331 men in cantonments, the admissions into hospital for venereal diseases were no less than 36,681, or 53.69 per cent. Among all the troops the rate rose from 25.80 per cent. in the ten years ending in 1885 to 44.30 per cent. in the following decade, and in 1895 to 52.23 per cent. Not only in the frequency, but also in a marked degree in the virulence of syphilis, there has been a rapid increase. In 1894 it was found that 28 per cent. of the British troops in India had been treated for this constitutional disease. The ratio for primary syphilis has increased 187 per cent. since 1887, and secondary disease was four times more prevalent in 1895 than it was in 1873. About 13,000 soldiers return to England every year, and of these who returned in 1894 63 per cent. had suffered from venereal disease. The system of medical examination and isolation that was in existence in 1884 was modified in subsequent years, and in 1888 abolished in obedience to the sentiments of moral-

ists in England, expressed in a resolution of the House of Commons, though against the judgment prevailing among military officers and surgeons. An army sanitary committee having established by statistics a direct connection between the increase of disease and the relaxation and abolition of the restrictive and protective measures, Lord George Hamilton, in a dispatch sent on March 26, 1897, recommended that the cantonment rules applicable to cholera, smallpox, diphtheria, etc., should be applied to all contagious and infectious diseases, including venereal disease, and that, while there should be no registration or licensing of prostitutes nor any periodical and compulsory examination, women who refused to attend hospital should be required to leave the cantonment. The new regulations stop short of compulsory inspection, although this is the remedy most strongly recommended by the medical faculty and official authorities. When the medical officer in charge of a cantonment hospital has reason to believe that any person in the cantonment is suffering from contagious disease he may summon such person to be examined, may detain the case till there is no danger of spreading infection, and may treat refusal to attend on summons as an admission that disease exists. Any person refusing to submit to the summons or ignoring it may be expelled from the cantonment and not permitted to return without the medical officer's leave. The Secretary of State for India approved, further, a medical inspection of soldiers who have been in hospital for these diseases, and punishment of such men as conceal the fact of their contagion. A bill giving effect to the new policy of the Government in the matter of contagious diseases affecting the British garrison was passed on July 22 by the Legislative Council.

Commerce and Production.—The total imports in 1896 amounted to Rx 86,304,739, including Rx 69,316,395 of merchandise, Rx 3,620,358 of Government stores, and Rx 13,367,986 of precious metals. The total exports were Rx 118,594,549, comprising Rx 109,545,161 of domestic merchandise, Rx 71,598 of Government merchandise, Rx 4,717,979 of foreign merchandise, and Rx 4,259,811 of precious metals. Of the merchandise imports Rx 47,161,484 came from Great Britain, Rx 6,441,988 from British possessions, and Rx 15,712,923 from foreign countries. Of the domestic exports Rx 35,000,899 went to Great Britain, Rx 21,182,258 to British possessions, and Rx 53,362,004 to foreign countries. The values of the principal imports for domestic consumption were: Cotton cloth, Rx 22,785,000; machinery and railroad material, Rx 4,816,000; iron and steel goods, Rx 4,780,000; sugar, Rx 3,106,000; cotton yarns, Rx 2,971,000; petroleum, Rx 2,967,000; copper goods, Rx 1,809,000; silk fabrics, Rx 1,704,000; clothing, etc., Rx 1,456,000; woolen cloth, Rx 1,446,000; coal, Rx 1,403,000; hosiery, etc., Rx 1,364,000; raw silk, Rx 1,233,000; liquors, Rx 1,665,828; drugs, Rx 846,210; dyeing and tanning substances, Rx 858,893; glass, Rx 741,078; salt, Rx 653,226; spices, Rx 659,329; paper, Rx 469,983; umbrellas, Rx 344,218; grain and pulse, Rx 114,911.

The largest exports and their values were as follows: Raw cotton, Rx 14,090,192; rice, Rx 13,537,289; raw jute, Rx 9,717,432; opium, Rx 8,459,336; cotton manufactures, Rx 8,344,587; tea, Rx 7,664,889; seeds, Rx 9,717,432; hides and skins, Rx 7,639,478; indigo, Rx 5,354,511; jute manufactures, Rx 4,747,443; wheat, Rx 3,913,896; coffee, Rx 2,198,192; lac, Rx 1,893,601; dyes and tans, Rx 872,683; wool, Rx 1,355,198; provisions, Rx 894,794; wood, Rx 891,897; oils, Rx 738,707; saltpeter, Rx 535,945; raw silk and cocoons, Rx 642,169; sugar, Rx 574,745; spices, Rx 489,509; silk manu-

factures, Rx 183,399; woolen manufactures, Rx 182,885.

The trade of 1896-'97 was injuriously affected in the latter part of the year by famine and plague. The imports for the year were Rx 2,990,000 more than in the previous year; the exports, Rx 9,670,000 less. The total quantity of wheat exported was 96,000 tons, against 500,000 tons in the preceding year. The exports of tea, cotton, yarn, and jute were larger. In spite of the famine and the pestilence, India absorbed Rx 2,990,000 of gold and Rx 5,850,000 of silver in 1896-'97. The total value of the imports was Rx 84,990,050, and the exports amounted to Rx 108,840,188.

Out of 539,848,840 acres in British India which is dealt with in Government reports, 151,033,160 are waste lands not available for cultivation, 99,326,526 are culturable waste, 62,065,046 are forest, 30,336,208 are fallow, and 196,600,688 were under cultivation in 1895. There were 69,280,303 acres under rice, 22,761,308 under wheat, 89,534,098 under other food grains, 5,567,007 under other food crops, 2,764,656 under sugar cane, 13,929,969 under tea, 9,717,415 under cotton, 2,275,340 under jute, 1,705,977 under indigo, 1,174,581 under tobacco, and 414,398 under oil seeds. The area cropped more than once during the year was 27,160,672 acres. There were nearly 74,300 square miles of forest demarcated and reserved by the Government.

The average annual cotton crop was 2,070,000 bales, of 400 pounds, from 1863 to 1883; in the last four years it has been 2,987,000 bales, and in 1897 it was about 3,000,000 bales. The quantity shipped to Europe was 898,500 bales, of which 820,000 were sent to the Continent. While the Chinese demand dwindled for many years and has practically ceased, Japan took 373,000 bales in 1897, and 1,255,000 bales were used in the Indian spinning mills, besides which 413,000 bales were taken for local consumption. The plague enabled Japan to sell yarns in the Chinese markets formerly supplied by the Bombay mills. Notwithstanding a decrease of 8 per cent. in the production of cotton yarn in 1897 in Bombay, where 71 per cent. of the Indian yarns were produced, the total production of India was 417,398,935 pounds, against 435,116,545 pounds in 1896.

The area irrigated in 1895 was 8,473,205 acres, yielding a revenue of Rx 3,216,591. Major works irrigated 6,259,870, and minor works 2,213,335 acres.

There were 1,204 joint-stock companies in 1895 engaged in banking, insurance, manufacturing, trading, planting, mining, brewing, etc., with a paid-up capital of Rx 27,668,773. Over Rx 12,500,000 were invested in 144 cotton mills, with 34,161 looms and 3,711,669 spindles, employing 139,578 persons; 28 jute mills and 1 hemp mill, with 10,948 looms and 201,217 spindles, employed 75,157 persons; and there were 6 woolen mills, with 531 looms and 17,244 spindles. The coal raised in 293 mines was 4,371,734 tons, valued at Rx 1,452,084.

Navigation.—The number of vessels entered at Indian ports during 1896 was 5,226, of 4,128,039 tons, of which 2,115, of 3,314,415 tons, were British; 868, of 131,049 tons, British Indian; 693, of 601,607 tons, foreign; and 1,550, of 80,968 tons, native. The number cleared was 5,071, of 4,098,561 tons, of which 2,128, of 3,323,827 tons, were British; 884, of 130,804 tons, British Indian; 605, of 568,093 tons, foreign; and 1,454, of 75,837 tons, native.

Railroads.—The railroads in operation on March 31, 1896, had a total length of 19,678 miles, of which 8,979 miles were state lines worked by companies, 5,742 miles state lines worked by the state, 2,587 miles lines of guaranteed companies, 408 miles lines of assisted companies, 146 miles lines of native

states worked by the Indian Government, 850 miles lines owned by native states and worked by companies, 898 miles lines owned and worked by native states, and 59 miles foreign lines. On March 31, 1897, the total mileage was 20,390. The total cost of all the railroads up to the end of 1895 was Rs 202,344,287, of which Rs 159,477,488 represent the Indian state railroads, Rs 32,450,332 the state railroads leased to companies, Rs 50,022,300 the guaranteed railroads, Rs 6,878,026 lines of assisted companies, Rs 11,001,194 those of the native states, Rs 1,690,527 foreign lines, Rs 514,897 new surveys, and Rs 300,623 coal mines. The gross receipts of all the railroads in 1895 were Rs 26,236,000, of which Rs 9,139,494 came from passenger and Rs 16,369,300 from freight traffic. The number of passengers carried was 133,081,477; tons of freight, 34,628,030. The working expenses amounted to Rs 12,119,896, being 46.19 per cent. of the gross receipts. The net earnings were Rs 14,117,020, giving an average return of 5.38 per cent. on the capital invested. The state and guaranteed lines during the ten years ending with 1897 have been worked at an average profit of 5½ per cent.; but, owing to the fall in exchange, a total net loss of Rs 7,781,914 on the state and Rs 8,679,557 on the guaranteed lines has accrued during that period. The net loss for 1897 was estimated at Rs 2,665,800. In 1896 the Government decided to construct in the next three years 5,000 miles of state railroads, costing Rs 29,665,000, and to sanction the construction of 2,626 miles by private companies at a cost of Rs 16,189,000. It was subsequently decided to postpone this programme of construction so as to reduce the outlay for 1897-'98 by Rs 10,000,000.

Posts and Telegraphs.—The post office in 1896 forwarded 374,223,042 letters and postal cards and 28,928,022 newspapers. The receipts were Rs 1,712,962 and expenses Rs 1,643,317.

The telegraphs in 1896 had a length of 46,374 miles, with 142,923 miles of wires. The number of dispatches was 4,766,399. The receipts were Rs 1,085,940, and expenses Rs 897,853.

The Famine.—The famine of 1897 was more extensive than that of twenty years ago, affecting an area of 322,000 square miles, inhabited by 68,000,000 persons, compared with 257,000 square miles and 58,000,000 people in 1877. The highest number receiving relief in 1877 was 3,178,000; in 1897, 4,224,000. Including the native states, more than 4,500,000 persons were receiving relief during the month of June. The peculiarity of the famine of 1897 was an almost universal shortness of rain. There was a complete failure of crops in only a few districts, in Bundelund and in the Central Provinces; but almost everywhere there was a partial failure. Out of the 250 administrative districts into which India is divided, no fewer than 115 were classified as famine districts, although none is so classified unless 10,000 persons at least are employed on relief works. Of the districts outside few, except those in Burmah, had any surplus of food to spare. Yet no large imports of food came from abroad, nor were the shipments of supplies into the famine districts such as the experience of previous famines would lead one to expect. On the contrary, there was a falling off in railroad receipts. At the beginning of the scarcity a large shipment of wheat arrived from America at Calcutta and Bombay, but ultimately a large part of it was re-shipped to England, where better prices and a better market were found. High prices according to the Indian standard prevailed over an enormous area, but they were not relatively high when compared with the prices in other countries, and even at the worst period of the famine they were too low to encourage imports of food except at very low

prices. The area of total failure was much smaller than in 1877, when the death rate was terribly high. In 1897 a high death rate prevailed in the North-west Provinces and in the Central Provinces, while in the famine districts of Bengal, Madras and the Punjab the rate was generally not above the normal, and in those districts where it was exceptionally high this was almost entirely due to the reluctance of the people to come into the relief works until it was too late, or to constant and severe outbreaks of cholera. Great distress and suffering, however, prevailed over an enormous area. There was an immediate improvement in the working of the system of famine relief. A subsistence allowance was given to every man and to every member of his family who applied for relief, and this allowance in the aggregate not infrequently exceeded the wages that the man alone could obtain for his labor in ordinary employment. Hence it was that there was great difficulty in obtaining the requisite amount of labor for carrying on the work of construction in the greatly enlarged Government railroad programme.

The appeal made at the beginning of the year for subscriptions in Great Britain and the rest of the British Empire met with a generous response and resulted in the collection in England, India, and elsewhere of the largest sum ever raised for any Indian object. A fund of £550,000 was collected in Great Britain by the Mansion House Committee, besides which Lancashire contributed £158,000. Other sums were raised in the British colonies, the United States, France, and Germany, and India also contributed a large sum, so that the total amount placed to the credit of the relief committee in India was Rs 1,650,000. Grain and clothing were sent from the United States, and money was collected to be disbursed by various benevolent agencies in India, bringing the total contributions up to Rs 2,000,000. The cost of the direct relief was estimated at Rs 6,000,000, the remissions of taxation and of revenue to an equal sum, and advances to the landowning classes to Rs 2,000,000, making Rs 14,000,000 given by the Government, or Rs 16,000,000 altogether, including the private contributions. Of these contributions about half went toward supplying cattle, seed, and implements to enable the cultivators to resuscitate themselves after the famine.

The Indian Government declined to accept any interference or co-operation from charitable organizations in the direct relief of the famine-stricken population or to have anything to do with an appeal for private subscriptions, declaring that its own means were ample.

The inability of the Indian people to tide over a single failure of crops was attributed by many to their impoverishment and debt. In one or two of the native states agricultural banks founded by the Government had lifted the people out of this helpless condition. In the British provinces nine tenths of the ryots were in the hands of the village usurers, who often charged 6 per cent. a month and were clothed with powers of oppression under the English laws that they did not formerly possess under the ancient Indian system, when payment was made by a share of the crops and their claims were subject to review before the village *punchayet*, or court of arbitration. The great native capitalists who discount bills of exchange average 4 per cent. a month. Excessive taxation is believed by native Indians to be the chief cause of the poverty of the Indian cultivator, who is on the verge of starvation even in ordinary times. The tax on salt is twenty times its cost. They regard the expenditure on railroads as beyond the resources of the people, and that on the Afghan and Burmese wars and the

many little wars for extending the northern and northwestern frontiers, as well as the utilization of Indian troops for imperial purposes, as a use of money that ought to go for education and domestic improvement of the people. The parliamentary committee that inquired into the causes of famine in 1878 found that agriculture in many parts of India must depend on irrigation. Yet the irrigation system then begun has never been completed. Under pressure of English interests the famine fund was diverted to the construction of railroads, which give entrance to foreign manufactured goods, thus displacing native industries. The annual grant for irrigation has been increased to Rs 750,000, but Rs 10,000,000 are annually allotted to railroads. The famine insurance fund of Rs 1,500,000 a year was raised by taxes specially imposed for the purpose of protection against and relief from famine. Owing to the Russian scare and border wars it was practically suspended after a few years. The Government advanced the specious theory that the payment of debt out of this fund or the avoidance of the creation of new debt was the most effective protection against famine. Meanwhile the cost of the Egyptian expedition of 1882 and of the Suakin expedition of 1885, the cost of entertaining the Shah of Persia in England, etc., were charged upon the Indian taxpayers. Although the famine insurance fund was suspended on account of the financial difficulties of the Government the burden of English rule was vastly increased by giving compensation allowances to the great body of civil and military officials in India whose fixed salaries have suffered by the depreciation of the rupee. The higher classes of civilians and the military officers have had their salaries doubled, while in the lower ranks of the civil service half the salaries are paid at the old rate of 10 rupees to the pound. During the past eighteen years Rs 71,400,000 rupees have been expended on frontier expeditions, while the home charges, pensions, and interest, which have risen in inverse proportion to the fall of silver, require a yearly drain of Indian produce to Europe of a value of £20,000,000 in gold without any commercial return whatever. The Indian National Congress, which met on Dec. 28, 1896, in addition to the usual resolutions relating to the injustice of the system of taxation and the way in which the revenues are spent, the inequality of the treatment of natives and Englishmen in the matter of civil-service examinations and the scheme of education for the civil service by which Indians are excluded from the higher posts in direct violation of the Empress's proclamations, the necessity for the separation of the judicial from the executive, and the iniquitous salt tax, passed one declaring that the famine was due to impoverishment of the people resulting from the drain of wealth to England and the excessive taxation and overassessment followed by the Government both in the civil and the military departments, which has so far impoverished the people that at the first touch of scarcity they are rendered helpless and must perish unless fed by the state or helped by private charity. In the opinion of the Congress the true remedy against the recurrence of famine lies in the adoption of a policy that would enforce economy, husband the resources of the state, and foster the development of indigenous and local arts and industries, which have practically been extinguished, and help the introduction of modern arts and industries. The provisions of the existing famine code were pronounced inadequate as regards wages, rations, and oppressive task work. Reminding the Government of the duty, to which it was pledged by the words of successive viceroys, of saving human life and mitigating suffering, the Congress made an appeal

for the restoration of the famine insurance fund to its original footing, asking that a separate account be kept of it and that it should be applied more largely to its original purpose—namely, the immediate relief of famine-stricken people. The attention of the Government was called to the deplorable condition of the poorer classes in India, full 40,000,000 of whom, according to high official authority, drag out a miserable existence on the verge of starvation even in normal years, and the suggestion was made that they should be exempted from the payment of the taxes that specially oppress them. The main safeguard against famine is the movement of the people from the congested centers and the sterile tracts to the large unoccupied tracts within the Indian Empire, of which 100,000,000 acres are found available for cultivation in the British provinces alone, according to official reports, exclusive of the vast districts of lower Bengal. Less than half of the soil of British India is under cultivation, while, within a few hundred miles tens of millions of peasants are crowded together at the rate of over 700 to the square mile. In Behar 40 per cent. of the population of 15,300,000 are reported to be in a state of agricultural degradation. There are 50,000,000 cultivators suffering from want of land in Bengal, Behar, Orissa, and the Northwest Provinces and Oudh. In former ages the Indian population could expand over the jungle tracts without restraint, and none suffered from lack of land, as they now do under the land laws of the Anglo-Indian Government.

Rains in November and December, 1896, wrought, an improvement in certain districts where the *rabi*, or spring harvest, had been despaired of. Prices of food fell in consequence, but only temporarily. There were food stocks in districts where the dearth was extreme, but they were in the hands of the grain merchants and usurers. The Government, however, refused to interfere with the course of trade by importing food to sell in competition with them, although some private benevolent organizations of native merchants did so. According to official reports in January, the stock of food was adequate in Madras, ample in Burmah, sufficient for a year in Bombay, and sufficient for immediate needs in the Punjab, the Northwest and Central Provinces, and Bengal. The railroad rates for the conveyance of grain were reduced, and arrangements were then complete for supplying the relief camps. The work of relief was conducted on the well-defined system of the Indian famine codes. Every district is divided into circles, in each one of which the machinery of relief is kept in a constant state of readiness in years of plenty as well as in years of scarcity, and its efficiency is reported on by inspectors every year. The head of the district, who is held responsible for the working of the system, is enabled to gauge the approach of scarcity by test relief works, and when the scarcity deepens into famine he provides food for the able-bodied in return for local labor, and supplies those who are unable to work with doles of grain. As the need becomes more intense and widespread the system of relief expands, until it reaches the full development of local relief works, central famine camps, and state kitchens and famine hospitals. This system of local relief counteracts the tendency of the Indian people to wander in time of famine from their own districts in the vain hope of finding employment and food elsewhere. The failure of the rainfall in the autumn of 1896 came after three short crops in the Northwest and Central Provinces. Already in October food was dearer than ever was known before over an area embracing a great part of India. The natives have a belief, founded on ages of experience, that wherever the monsoon fails twice the people perish. The situa-

tion was much relieved by the showers that fell in Madras and Mysore, and later in central and northern India, securing the spring harvest in many sections and fodder enough to save the cattle in others. Still there was a great extent of territory where everything was sere and parched. The number of persons receiving relief increased from 1,200,000 in January, when the system was first put into full operation, to 2,750,000 in the following month, and reached the maximum in May and June. No system of public charity has ever existed in India, and hence, although the public funds drawn from taxation were applied to the purpose, only the low castes, the coolies, and landless laborers were willing to accept relief. The respectable families of the Hindu villages slowly starved to death, though relief was at hand. Great nobles remitted rents and spent millions on relief works. Native asylums in which distinctions of caste were respected fed the people sufficiently at a monthly cost of a rupee a head, a quarter of the dole paid in money at the Government relief works, but of this latter half was often kept back by the dishonest native officials who paid out the wages and sold the grain.

In September abundant rains began to fall over a wide area in India, securing in the famine-stricken regions, particularly in the northwest, a bounteous *kharrif* or autumn harvest, and making the prospect of the *rabi* assured. The final reports showed that the cost of the famine to the Government was Rs 8,000,000, while loans and suspensions of revenue amounted to Rs 4,000,000. The charitable contributions from all sources were nearly £1,750,000 sterling.

Earthquakes.—On June 12 the province of Assam and the whole of northeastern Bengal felt severe earthquake shocks. In Assam every European residence was leveled to the ground, and every public building, bridge, and work of masonry was destroyed. The roads and railroads were badly damaged. The loss fell mostly on planters and manufacturers. Tea cultivation in India and Ceylon is a commercial enterprise in which £35,000,000 of English capital is invested. Large factories in Assam and northeastern Bengal were totally destroyed with their machinery, and the villages erected by the tea companies laid in ruins. The costly Assam railroad, which the Indian Government guaranteed for the development of this industry against the protests of the friends and representatives of the native Indians, was seriously damaged. The tea companies have earned an average net profit of 7½ per cent. per annum. The catastrophe left many of the highly cultivated plantations with their matured crop entirely isolated from the outside world.

The Plague.—The bubonic plague, which raged in Canton and swept away the population of whole quarters in Hong-Kong in 1894, appeared in Bombay, and was officially recognized in September, 1896. On Oct. 2 wide powers for dealing with it were conferred upon the chief executive officer of the city. A large sum was voted by the corporation, and a staff of workers was engaged to care for the sick. In December it appeared in Karachi, the other chief port on the west coast. Fugitives carried the infection to Poona, where it broke out later, and, owing to the neglected sanitation of the town, was exceedingly hard to extirpate. The vehicle by which the germs were brought into Bombay is not known. It was first attributed to dates from Syria, then to corn from the interior, and both were destroyed. Before it spread among the people great numbers of rats died, and afterward it attacked pigeons and poultry. The bubonic plague is identical with the epidemic that ravaged London in

1665, and probably with the black death that carried off a large proportion of the population of Europe in the fourteenth century. From one of its homes in China, the highlands of Yunnan, it extended in 1894 to Canton, where it produced appalling mortality; about 50,000 are believed to have died there, and 10,000 later in Hong-Kong. A high fever, accompanied by a swelling of the glands in the groin or under the arms, characterizes the disease, which runs its course in forty-eight hours from the appearance of the symptoms. The period of incubation is five days. When the system is predisposed the infection easily finds lodgment through the skin, or the respiratory organs, especially when they are affected by a cold, or the tonsils. The microbe recognized by bacteriologists as the cause of the plague dies at a temperature of 140° C., and is quickly destroyed by all the antiseptics.

Dr. Yersin, of the Pasteur Institute of Paris, discovered a preventive serum, which inoculates the subject with a mild form of the plague. Dr. Haffkin introduced a curative serum to be used on patients in the early stages. Both methods were tried with apparent success in some cases, though neither furnishes complete immunity. The sanitary authorities in Bombay labored under the greatest difficulties in their efforts to segregate and to treat cases of plague. All Hindus had a horror of hospitals, and none of any pretensions to caste would allow any one connected with him to go into one if by any deceit or concealment it could be avoided. The Mohammedans were not much more tractable, for they had no faith in European medicine, but believed the plague to be a visitation of Providence invited by the sins of Bombay; hence they gathered in monster prayer meetings to supplicate the Deity to lift the scourge from their city. The Parsees, too, were reluctant to enter the hospitals, where their family deathbed and funeral ceremonies would not be permitted.

The commerce of Bombay was completely stopped. The cotton mills were closed, and business men left the city. In January, although only 325,000 people remained in the city, the weekly mortality was 1,750. In the summer, when the plague had been brought under control by the burning of the worst houses and all contaminated household articles, the thorough disinfection and fumigation of all buildings that could be freed from germs in this way, and a complete sanitary cleansing of the city, cholera was added to the plague, and the deaths still numbered 1,000 a week. In September it spread among many towns and hamlets of the Bombay presidency where it had not yet appeared. Outbreaks occurred in the Punjab. The troops began to be affected. It reappeared also at Karachi, and at Poona took on a more virulent form and attacked European officials.

Poona is the focus of Hindu disaffection against British rule. In that city, where are many of the descendants of the Mahratta warrior caste that in the beginning of the century held a great part of India in subjection, the authorities had great difficulty in combating the plague. In this ancient center of Brahman culture and caste traditions to have search parties of British soldiers, even though they were accompanied by Indian gentlemen and English ladies, invade their houses, intrude on the privacy of women and the sanctity of domestic shrines, and forcibly carry off their wives and daughters to a public hospital, seemed worse than death to the orthodox Hindus. Nevertheless a system of house-to-house visitation was organized, and the sick were forcibly removed to hospitals, and the probably infected to segregation camps, from the time that the plague first broke out. Sol-

diers were employed because there was no other European agency obtainable on a large scale. False tales and exaggerations found full credence among the Hindus of the Deccan, and the result was that Mr. Rand, the chief officer in charge of the plague operations, and Lieut. Ayerst were murdered on June 22.

The plague became worse again as cold weather approached, and in Poona and Surat continued with unabated malignity. It broke out in November at Belgaum and at Ahmadnagar, two thirds of whose inhabitants fled. During the autumn it spread to many minor places in Bombay and the native states, and to some of the towns of the Punjab. In the city of Bombay the mortality rose in the winter almost to the figures of the preceding year.

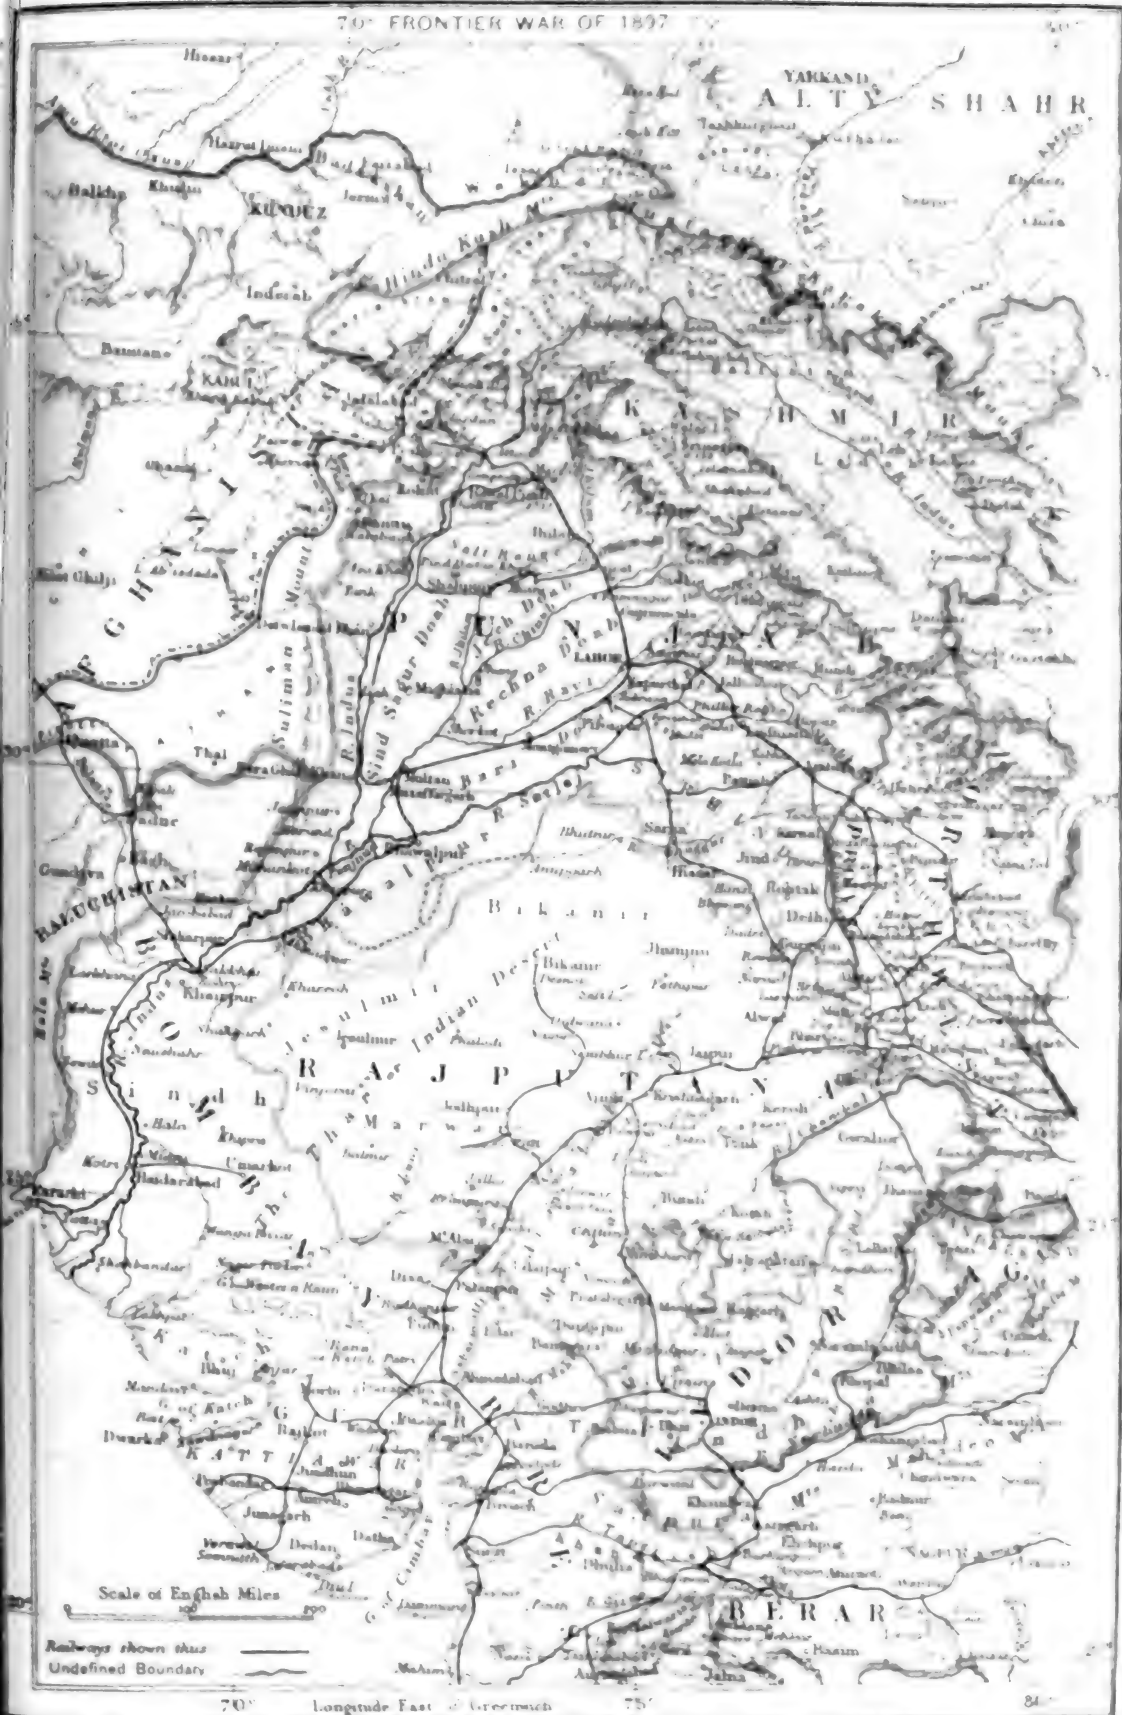

Sedition Trials.—The agitations of the Congress party, complaining of misgovernment and demanding representative institutions, the excitement caused among Hindus by the violations of caste rules in the plague operations, the general dissatisfaction with a Government that had promised to avert famine and had not prevented the most extensive famine ever known, the elation of the Mohammedans over the victories of the Sultan, coupled with their indignation over the attitude of the English Government and the feeling of the English people in regard to the Armenian revolutionary movement and the Greco-Turkish War, and the disturbed condition of the Afghan border furnished a multiplicity of causes for political unrest and disaffection in all parts of the Indian Empire. The Central Government determined to strike terror into the disaffected and crush out the spirit of political criticism and native patriotism that had been countenanced by Lord Ripon and only partially held in check by his successors, though with increasing severity of late years. The law regarding disaffection in India had been considered a dead letter, and no convictions had been obtained under it. It is stringent enough in its terms, declaring that whoever by words, either spoken or intended to be read, or by signs, or by visible representation or otherwise, excites or attempts to excite feelings of disaffection to the Government established by law in British India shall be punished with transportation for life or for any term of imprisonment up to three years or with a fine alone or in addition to imprisonment or transportation. The force is taken out of this section of the penal code by the appended explanation that such disapprobation of the measures of the Government as is compatible with a disposition to render obedience to the lawful authority of the Government against unlawful attempts to subvert or resist that authority is not disaffection; therefore the making of comments on the measures of the Government with the intention of exciting only this species of disapprobation is not disaffection. Under this law political writers and orators have been accustomed to censure the Government and its measures very freely, interspersing or adding some formal expressions of devotion to the Queen-Empress or loyalty to the Government. The Indian Government under the present régime is not bound by codes of law if it chooses to act despotically, even if it has to go to the musty annals of the East India Company for precedents. When Dhuleep Singh was returning to the Punjab he was arrested at Aden under a law that gave the executive power in the last century to send back home English adventurers who were caught intriguing with the native princes. Among the leaders of the Mahratta Brahmans were the brothers Natu. The elder brother, Balwantrao Natu, who is a wealthy sirdar of the Deccan, had been summarily carried off to the hospital after he had deceived the authorities when his child died by say-

ing that it was the child of a servant. As they were in consequence of this regarded as martyrs and the disaffection at Poona centered about them, the Governor General issued under this antiquated law a *lettre de cachet* and had both brothers deported and incarcerated at Ahmedabad and Thana without trial. The intellectual chief of the Brahmanical discontent in the Deccan was the editor Gangadhar Tilak, a member of the Bombay Legislative Council, who published a eulogium of Shivaji, the liberator of the Mahrattas from a foreign yoke, and a rhapsodical poem in which that national hero was adjured to awake and witness various vaguely indicated oppressions and indignities that an alien rule now imposed on Hindustan. The poem was symbolical and figurative in the extreme, and yet from that and the patriotic editorial a case was made under the press law mentioned above against Tilak, and under the instructions of a judge who charged that want of affection for the Government was disaffection he was found guilty and sentenced to serve eighteen months in prison. With this precedent there was no further difficulty in obtaining convictions under the law of disaffection. In Lucknow and other Mohammedan centers of northern India the people were holding meetings to congratulate the Ottoman Sultan on his victories. The Deputy Commissioner of Oudh warned the leaders of the community against expressing disloyal sentiments, and when, nevertheless, a Maulvi of Lucknow, Hidayat Rasul, made a speech belittling the power of Great Britain and arraigning the Government of India he was promptly arrested, tried, and sentenced to a year's imprisonment. Tilak had great difficulty in obtaining counsel, and those who were afterward arrested could get no reputable barristers, either European or native, to defend them. Shunker Viswanath Kelkar, another Poona editor, was tried for writing articles in which he described the reign of terror established by the Government; Editor Lele, who published a native journal at Wai, for articles criticising the plague measures. The editor of the "Moslem Deccan," published at Bombay, was banished from the country by executive decree. The arrest of Tilak and the brothers Natu and the threat of a new press act wrought a great change in the native press of Bengal as well as Bombay. Political editorials and cartoons almost ceased to appear. Still arrests continued to be made on account of what had already appeared, for the Anglo-Indian official world has been clamoring for years to have liberty of the press suppressed in India. The editor Keshalkar of the "Protad," published at Islampur, was sentenced to transportation for life for an article in which he urged Indians to follow the footsteps of the Canadians in their efforts to obtain autonomy.

The Legislative Council, rejecting a proposal to re-enact the vernacular press act of 1878, amended the general law relating to sedition and cognate offenses so as to make it more efficient for the purpose. To the section relating to disaffection the following explanation was added: "Comments on measures of government with a view to obtain their alteration by lawful means without exciting or attempting to excite hatred, contempt, or disaffection do not constitute an offense. It was declared to be an offense amounting to sedition to promote or attempt to promote enmity or ill-will between different classes of British subjects. The section of the penal code dealing with the dissemination of false statements, which in its previously existing form required the prosecution to show that the accused person knew the statements to be false, was re-enacted in terms making obnoxious statements punishable, but allowing the accused to show that the mischievous statement or rumor to which he

NORTHWESTERN INDIA

70° FRONTIER WAR OF 1897

had given circulation was true in fact and was not published or circulated with criminal intent. Another section provides that persons who either orally or in writing disseminate or attempt to disseminate obscene, seditious, or defamatory matter may be bound over and required to find sureties to be of good behavior for twelve months. The law was further amended so as to make cases of sedition and cognate offenses triable, not only in a court of sessions before a jury, as before, but also by magistrates with summary jurisdiction. Native members of the Legislative Council vigorously objected to the enactment of these new laws without a full discussion. The separation of judicial and executive functions was again asserted to be the only means of securing the efficient administration of justice in criminal cases.

Mohammedan Disturbances.—The unusual excitement in the world of Islam led to fresh outbreaks of the smoldering religious animosity always existing between the Mohammedan and Hindu communities. The Hindu Pandit Lekhi Ram, who had written a pamphlet violently attacking the Mohammedan religion and also Christianity, was murdered early in March at Lahore by a pretended convert from Mohammedanism. Some Hindus were assaulted at Peshawar, and notices were posted in different towns threatening the lives of Hindu and Sikh leaders. Mohammedan anger had been wrought up by English denunciations of the Sultan as an assassin, and when the commander of the faithful, whom the English people seemed bent on destroying because he represented the might of Islam, achieved a victory over Christian arms the spirit of unrest and disorder spread among the Mohammedans, from the usually loyal, but now sullenly resentful communities in Bombay and Calcutta to the untamed Pathan tribes on the Afghan border. On July 1 and 2 one third of the city of Calcutta was in possession of 5,000 determined anti-European Mohammedan rioters who had the passive sympathy of their Hindu fellow-citizens. The rioting arose in the suburb of Chitpur out of the demolition by the authorities of a building that the Mohammedans claimed was a mosque. In the night 150 workmen rebuilt the edifice, protected by 2,000 Mohammedans, who fought off the police. The troops were called out to disperse the mob, which quickly reassembled and was re-enforced from all quarters of Calcutta. The rioters, exasperated by being fired upon by the police patrols, who killed 11 and wounded a great many, attacked Europeans wherever they were found in the streets, stoning their carriages and dragging them from their horses. After the military had once cleared the streets the rioting broke out afresh, and when it was finally put down it was necessary to patrol the city constantly with cavalry until the original dispute was settled.

Frontier Wars.—The rising passions of the Indian Mussulmans and the triumphs of Mussulman arms in the West communicated a warlike spirit to the mountain tribes on the northwestern border, over whom the British have attempted gradually to extend a military control, partly with the object of absorbing as much as possible of Afghanistan and occupying the country in the northeast up to the very limit of the British sphere acknowledged in the Anglo-Russian agreement, partly in the hope of eventually converting these fierce and intrepid Pathans into material for the Indian army. After the last Afghan war the British retired from the frontier chosen by Lord Lytton's government, involving the retention of Kandahar and Jelalabad in Afghanistan, to the scientific frontier marked by the Khaibar and Kuram passes of the Hindu-Kush and the advanced fortified post of Quetta in

Beluchistan, covering the railroad that preserved the strategic command of Kandahar and Kabul, and, before the last Russian advance of Herat. The new forward policy was begun by the operations of Sir Robert Sandeman in 1886 and 1887 among the Beluchis. On the whole, it seemed to be more profitable in this quarter to reduce the tribes to military control and civilizing forces than to conduct periodical punitive expeditions against them when they tore up the railroad or attacked outposts. The Kuram pass was left in charge of the tribes of that region, who, being Sunnite Mohammedans, begged for British protection against the Shiite Afghans. By subsidizing one of the Mohmand chiefs and paying liberal allowances to the Afridis the British secured an agreement by which these tribes undertook to protect and keep open the two outlets of the Khaibar pass, while the Orakzais, dwelling south of the pass, were paid heavily to abstain from raids and outrages. The agreements made with these tribes acknowledged their full sovereignty over their country and the passes of the mountains. The Durand agreement of 1893 with the Ameer of Afghanistan drew a line through the country west of the Khaibar, placing a part of the Mohmand tribes in the British sphere, and even dividing individual clans in such a way that chiefs whose seats were in Afghanistan ruled over tribes whose country lay mostly within the new Indian frontier. Little has yet been done to give effect to this arrangement, but the rapid encroachments on Afghanistan left no doubt in the minds of these people of what their fate would be. The Indian Government has contemplated demarcating the new frontier, and has only been deterred by the hostile attitude of the Mohmands. The Pamir scared to political activity of the British in Chitral, in the extreme northeast, beyond the independent states of Swat, Dir, and Bajaur.

When the Government decided on the Chitral expedition in 1895 it issued a proclamation giving notice to the usurping chief to withdraw from Chitral, and stating that its sole object was to put an end to the present, and to prevent any future unlawful aggression on Chitral territory; that as soon as that object had been attained the force would be withdrawn; that the Government had no intention of permanently occupying any territory through which the troops passed or of interfering with the independence of the tribes; and that it would scrupulously avoid any acts of hostility toward the tribesmen so long as they on their part refrained from attacking or impeding in any way the march of the troops. On the strength of this pledge the Government obtained the permission and aid of the tribes of the Swat valley and other intervening tribes to open the road from Peshawar to Chitral, and was thus enabled to rescue the beleaguered English garrison and drive out the invaders. The Conservative Government that succeeded in England decided to perpetuate the occupation of Chitral, and consequently to establish a control over the intervening tribes whose independence their predecessors had promised to respect in order to keep open and maintain the road. The Liberal Government had been partly influenced in their intention of evacuating Chitral by a desire not to break faith with the people among whom the campaign had taken place. The Conservative Government eventually made agreements with the Sultan Khel and Pinda Khel, two of the five tribes of Dir, for the construction of a permanent road over the Malakand pass and its defense by their levies, subsidizing the chief of these tribes, the Khan of Dir, who in addition to liberal money payments thus secured protection against a more powerful claimant for the throne.

Umra Khan, of Jandaul, who had dispossessed him, so that he only recovered his country in 1895, when the British drove Umra Khan out of Bajaur. No definite arrangement was made with the other clans of the Panjkora and Swat valleys, but large subsidies were paid to some of their chiefs to secure their quiescence. In May, 1897, the Ameer of Afghanistan, in ostensible loyalty to his treaty engagements, withdrew the officials and irregular troops that had been in occupation of the Mittai valley in Bajaur for more than a year in contravention of the Durand agreement, but the departure of the Afghans seemed to inflame the Mohmands, who feared that it would be followed by the occupation of their country by the British, to whom the Ameer had abandoned them.

The existing political conditions in India, the revival of the militant spirit of Islam everywhere, and not least in Afghanistan, whose ruler aspired to succeed the ruler of Bokhara as the political head of the Sunni Mohammedans of Central Asia, and the timorous and vacillating policy of Great Britain toward Turkey indicating in the mind of the Asiatics inability to cope with the military power of the Ottoman Empire, the secret influences also emanating from Kabul, all tended to kindle the fires of fanatic Ghaziism and political patriotism among the warlike tribesmen of the border, who were incapable of any organized common political or military action, but who along the whole Afghan frontier felt the same impulse to put it to the test, at this favorable juncture, whether they could preserve their free and democratic institutions or were to pass under the yoke of the despotic Indian Government.

These tribes on the northwest were bound together by a sort of sympathetic freemasonry, so that those who were too remote from the scene of the British expedition to join in opposing them, nevertheless felt a jealous interest when they heard that the troops had permanently occupied any new tract. They had seen Hunza, Nagar, and Chitral one after another pass into the hands of the British, the Beluchis and Waziris reduced to subjection, and new military posts established all along the frontier, and they anticipated the absorption of the territories recently conceded by the Ameer of Afghanistan.

The advanced positions established among the mountain tribes beyond the settled frontier of the Punjab to overawe the surrounding country were held by about 12,000 British troops, not enough at any single point to deal with a rising of the tribes, and too remote from each other and from their military base for rapid concentration, scattered in detachments which, if surrounded, must be destroyed unless there is time to relieve them. The mullahs, or religious teachers among the hill tribes, had for some time been preaching that the British Raj was doomed, and appealing to the people to drive the invaders from their country. The head men and secular leaders, especially those who were in receipt of large gifts from the Indian Government, attempted in vain to stem the torrent, but were finally compelled to take part in the hostilities already begun under the lead of fanatical mullahs.

On June 10 the Waziris attacked a British fortress in Waziristan. Mr. Geo. the political officer, was engaged in establishing a new outpost in the Tochi valley at Maizar and in collecting a fine from a turbulent village, when his force of 312 men were suddenly assailed by 500 Waziris incited by a fanatical priest, the mullah of Powindah, losing 7 officers and 54 men killed and wounded before re-enforcements arrived from Datta Khel. The mullah had before attempted to stir up a re-

bellion, and was therefore banished by the English, and had since been plotting in Afghanistan. The Waziris, whose country lies between the Kurram valley and Beluchistan, are industriously engaged in agriculture and transport when not stirred by religious or political excitement to warlike acts, in which case they can muster 40,000 fighting men. Waziristan was first incorporated in India in 1894, and the annexation was little more than nominal. Lieut.-Col. Gray was at once dispatched to the Tochi valley to succeed Col. Bunney, who was killed, taking large re-enforcements, sufficient to overawe the Waziris before the rebellion spread beyond the Darwesh Khels, the clan that made the attack, which had been so successful because the troops were surprised while resting. Later Major-Gen. Corrie Bird followed with a punitive expedition of 6,000 men and devastated the country, destroying villages and property by wholesale.

In the latter part of July the whole population of the Swat valley rose in arms against the British. The construction of military forts and the presence of large bodies of troops in their own and neighboring districts filled them with a passionate fear of annexation, and they denied that the British had any right to maintain a road through their country. They attacked a fortified post on the road. The extent and character of this attack were of such a nature that two brigades, one containing four and the other three regiments, with three mountain batteries, were sent forward to support the garrison. After five days of fighting Sir Bindon Blood's force of 5,000 men effectually defeated the Swatis. By this rapid march and successful action the loss of the Malakand fort, the principal fort on the road, was averted, the besieging army of 6,000 Swatis withdrawing. The rising was started by the preaching of a priest known as the Mad Mullah, who appeared at the head of a band of 300 men at the village of Thana, in the lower Swat valley, where his following was rapidly increased by his proclamation of a religious war against the English. On July 26 he led his followers toward Malakand, attacking the fortified post at Chakdara on the way, and in the evening attempted to surprise the garrison of 3,000 men at Malakand, which, however, had been informed of the intended attack by the tribal levies, who fled before the Mad Mullah. Resolute attacks on the fort were made again on the three following nights. Re-enforcements had meanwhile begun to arrive, but these night assaults, prolonged till dawn, so exhausted the garrison that they were unable to take the offensive during the day. The disproportionate number of British officers killed by the Pathans gave proof of their marksmanship. The troops in the Swat valley numbered 3,000 men, but Col. Meiklejohn, who had been forced to abandon his camp and retire to the protection of his guns on the heights when first attacked, remained entirely on the defensive, the garrison being, moreover, short of ammunition, till Gen. Sir Bindon Blood brought up large re-enforcements. He then relieved Chakdara, which the Pathans could not take, having no artillery. The Mad Mullah mustered a force of 40,000 warriors, practically the whole fighting strength of the valley. The Swatis had offered a formidable resistance to the British force that stormed the Malakand pass two years before, and had then subsided into peaceful habits, though the sons of the old Akhund, who formerly exercised a remarkable religious influence over them, had endeavored to stir up rebellion. The British punitive operations in the Tochi valley now roused them to a final effort to preserve their independence. The Bonerwals joined with the Swatis in the rising, and large numbers of British

subjects living near the border crossed over and took part in the fighting. The Swatis lost 700 killed in their attacks on Malakand, 2,000 in the siege of Chakdara, and 500 when that fort was relieved. The British lost 230 killed and wounded. Sir Bindon Blood advanced later toward the upper Swat valley, dispersing with shell and mountain batteries 3,000 tribesmen at Landikai on Aug. 17. He disarmed the inhabitants of the upper Swat valley, and then turned his attention to the Bonerwala.

A mullah of Hadda possessing a great influence over the Mohmands in Afghanistan, and also in Bajaur and the Utman Khel country, and standing in intimate relations with the Ameer Abdurrahman, began preaching against the British Government, as he had before during the Chitral campaign. He collected several thousand men, and crossed over into the British sphere to join in the attack upon Malakand fort, but was too late. Early in August he attacked Shabkadr fort, a small post 18 miles north of Peshawar, and burned a village. When a force of infantry, cavalry, and artillery marched out from Peshawar a party of Afghan raiders recrossed the frontier. The rest, numbering 6,000, were engaged by Col. Woon with 1,200 men on Aug. 9. When the Mohmands threatened to outflank the Indian troops the latter began to retreat, but rallied when Gen. Elles appeared with re-enforcements, and by a hot fire of artillery, followed by a cavalry charge, drove the Afghans from the field, killing over 300. The force led by the Hadda mullah was mainly composed of Afghans from Jalalabad and the Kunar valley and Mohmands of Lalpura. Gen. Gholam Haidar, the Ameer's commander in chief at Asmar, was believed to be in constant communication with the Hadda mullah, who raised the invading force without any effort being made by the Afghan officials to restrain him. Regular Afghan soldiers were recognized among the raiders. The Governor General addressed a serious remonstrance to the Ameer, who in his character of King of Islam had issued proclamations couched in a fanatical Mussulman spirit, and written a book on the duties of Mohammedans when engaged in a holy war, but had left it to mullahs to declare a *jehad* against unbelievers, not wishing to risk his throne in a struggle against the power of Great Britain. He read in public the Viceroy's letter, and swore that he had never induced his subjects or sepoys to take hostile action against the British. He issued orders forbidding the Afghans to have any share in the disturbances. Abdurrahman was in a difficult position between the Afghans, who were everywhere in sympathy with their brothers in their struggle for independence, and the British, whose railroad has pierced the Kofjak pass like a sword thrust into his entrails, as he expressed it, and whose subsidy of 16 lakhs a year was indispensable. He went as far as he dared, and the Indian Government dreaded a rupture as much as he did, taking no action when he recalled his agents from Simla, Calcutta, and Bombay. The rumors published about Turkish emissaries in India and Afghanistan drew from the Sublime Porte a denial that any understanding existed between the Sultan and the Ameer of Afghanistan for the purpose of fomenting insurrection in India and preaching a *jehad* against the English. Signs of unrest next appeared among the Orakzais, whose country is north of Kohat and south of the Khaibar, and is overlooked by Fort Lockhart in the Samana range. This powerful tribe numbers 29,500 fighting men, while the neighboring Mohmands can turn out 16,000, and the Afridis, occupying the mountains and valleys to the south of the Kabul river, have a strength of 27,000 men. The Indian Government

poured troops into the country, until by the middle of August the forces had increased to 37,000 men. The whole border seemed to be in a ferment, and through the mountain district, 600 miles long by 200 miles broad, the tribes were all up against the British, or were ready to rise. The Afridis, to whom the guardianship of the Khaibar pass had been intrusted for sixteen years, and who were supposed to be thoroughly devoted to the Government, next caught the infection. They entered into an alliance with the Orakzais and agreed to attack Jamrud if the latter would attack the Kohat border. As the hostile Afridis advanced to the Khaibar pass Fort Maude and Jehangera were evacuated. They captured Ali Mesjid, a small post at the entrance of the pass, which was held by Khaibar rifles or tribal levies, who still formed the bulk of the armed force in this region, although the British had long since departed from their agreement not to station Indian troops there. The Afridi levies soon began to desert to the rebels, taking their Martini rifles and plenty of ammunition with them. The Afridis had indeed been already supplied with a large number of rifles stolen from the Government. The Orakzais advanced through the Kuram valley, where the British abandoned their outposts and fell back on Fort Lockhart and Parachinar. The Tochi valley became again the scene of disturbances, the Powindah mullah having incited the Mahsuds to invade the district. The Afridis captured the fort of Landi Kotal, after a sharp fight with those who remained loyal of the garrison of 500 men. They now held the whole Khaibar pass, and the Indian troops would not venture to attack them in their positions in the hills. They proposed terms on which they would return to their homes, which were the withdrawal of British troops from Swat and the Samana range, the giving up of Afridi women living within the Indian border, and the revision of the salt regulations. The alarm of the authorities at the conflagration that now seemed to envelop the whole frontier was so great that they arrested three of the principal chiefs of Beluchistan. The Khaibar rifles in the garrison at Jamrud were disarmed. The Daulatzai Afridis raided the country about Kohat, and attacked posts in the Samana mountains. Beluchi tribesmen began to assemble on the hills overlooking the Bolan Railroad. The people of Pishin began to migrate into Afghanistan. The Orakzais appeared in great force at Gulistan, which was evacuated. They advanced to attack Shinawari, which also was evacuated. They blockaded Kohat pass. The garrisons at Jamrud and other posts were subject to the "sniping" of the stealthy Pathans, who crept close up to the walls in the dark and picked off the officers with their rifles or stabbed the sentinels.

The English were not ready to assume the offensive before September. When the Hadda mullah gathered 4,000 tribesmen, with the intention of attacking the Khan of Dir and cutting the Chitral road, it was decided to send Gen. Elles from Peshawar with a large field force into the Mohmand country. The Kuram valley was cleared of Orakzai raiders by a flying column under Col. Richardson. There were still 17,000 tribesmen threatening Samana. An expedition was prepared to ascend the Khanki river from Kohat, for the invasion of Tirah, the district north of the Samana range, where the Afridis pasture their flocks. Sir William Lockhart went from England to assume the chief command on the frontier and to direct the Afridi campaign. Imperial service troops of the Punjab were engaged for the campaign. The Mohmand gathering dissolved on seeing the fresh prospect of a British invasion. Gen. Blood moved forward from the Panjkora river to Nawagai, in Bajaur. The

Khan of Nawagai, like the Khan of Dir, had professed fidelity to the English. Gen. Elles advanced simultaneously into the Mohmand country from Shabbadr, so that the tribesmen should be caught between the two forces. The Ameer Abdurrahman now took effective steps to check the incursions of his subjects, which in a letter to the Governor General he ascribed to the preaching of the mullahs. He removed his troops from the border in order to withdraw them from such influences, and he had them disperse Laghmani and Shinwari tribesmen, who meant to join the Hadda mullah. The Government of India addressed a letter to the Ameer, saying there was no intention of occupying Afghan territory or of suppressing the independence of the Mohmands, but that the operations were solely intended to punish the followers of the Hadda mullah. Orakzais and Afridis continued to harass the posts on the Samana range and in the Khanki valley, where Gen. Biggs operated with a flying column. On Sept. 13 they captured and destroyed Saragari, one of the Samana outworks. Fort Lockhart and Fort Cavagnari, at Gulistan, were heavily attacked, but were relieved by Gen. Biggs. The raiders were estimated to number nearly 40,000. The means of fighting the Pathans are much more perfect than in former campaigns, when they were able to rush into close quarters, and it was often necessary to carry their stone breastworks on the hills at the point of the bayonet. Now the magazine rifle prevents them from ever charging, and it is easy with mountain guns to shell them out of their *sangars* and enable the infantry to take the heights and drive them into the next valley, where they can be intercepted by the cavalry before they gain the hills beyond.

While Sir Bindon Blood advanced to Nawagai his rear guard, under Gen. Jeffreys, was attacked on Sept. 14 at the foot of Rambat pass by the Mohmands and Salarzais of south Bajaur. The brigade turned back to punish these tribesmen, and on Sept. 16 fought an engagement with 6,000 of them, who defeated the British and Indian troops, killing and wounding 138. The Bonerwals gathered, 5,000 strong, at the Shakot and Mora passes. On Sept. 18 Gen. Jeffreys again attacked the enemy, destroyed a village, and carried off large stores of grain, which the Mohmands attempted to recover. Gen. Blood's force advanced into the Mohmand plateau without encountering opposition till Sept. 17, when it came in touch with the Mohmands, 10,000 strong, between Jarobi and Mittai. In an attack on the camp at Nawagai on Sept. 19 the Mohmand swordsmen charged in the face of withering volleys to within 50 yards of the English soldiers. The unexpected attack of the Khan of Nawagai's people compelled Sir Bindon Blood to give his whole attention to them, leaving Gen. Elles to deal alone with the upper Mohmands. The enemy in Bajaur was largely re-enforced from neighboring tribes. The lower Mohmands remained quiet, and agreed to deliver up their breechloading and other rifles. After destroying the villages and crops in the valley, Gen. Blood received the submission of the Mohmands, and of the Salarzais, who feared that their villages would be punished also. This having been accomplished, he marched against the Hadda mullah, who had 3,000 men in the Badmeni pass. These fiercely attacked the British camp at Lake-rai on Sept. 20. Gen. Elles's division came up shortly, upon which the enemy retired into the hills. On Sept. 23 the British captured Badmeni, dispersing the Hadda mullah's forces with the Maxim guns, and then occupied the Hadda mullah's village of Jarobi, which they burned. Gen. Westmacott on Sept. 27 destroyed the citadel of the Kuda Khels after a severe fight. The Alma Khels were likewise

punished. Some of the Mohmands still held out, refusing to give up their rifles, and against these Sir Bindon Blood continued his operations. The British had lost in the fighting 22 officers and 245 men and the Mohmands 500, while 26 of their villages had been destroyed. On Sept. 30 in attacking the villages of Agra and Gat the British lost 30 men. On Oct. 3 they lost 16 when returning from the destruction of villages, and frequently when retiring to camp after these punitive operations they were subjected to a harassing fire from the Mohmands perched on the tops of the hills, for these were wonderful rifle shots, killing at 1,000 yards and more. Owing to the rising of the Mohmands and the resulting punitive operations, Sir William Lockhart postponed the general advance against the Afridis in Tirah till Oct. 9. The Afridi and Orakzais had decided at a *jirgah* to resist the British advance, being persuaded by the mullah Said Akbar. They hoped to receive aid from Gholam Haidar, who is himself an Orakzai. The Afridis were to concentrate at Chinari, in the Bazar valley, while the Orakzais defended Sempagha pass. A deputation was sent to the Ameer, who stopped it at Jelalabad. The strength of the Tirah field force was 10,092 British and 22,622 native officers and men, besides 20,000 camp followers, with 3,200 reserves at Rawalpindi. Including the troops in Malakand and Bajaur, the garrisons at Peshawar, Rawalpindi, Kohat, Parachinar, and other places, and the Tochi field force, with its supports at Bannu, there were 70,000 men under arms, and these included the best regiments in the British and native armies. No such concentration of troops had ever before taken place in the north-western frontier. During October 10 additional batteries of artillery were sent out from England. All Afridis serving in the regiments marching out against their fellow-tribesmen were sent back to perform garrison duty. The Orakzais and Afridis determined to take the initiative if the British would not accept the proposals they offered for a settlement, and in order to insure combined action they threatened with excommunication from Islam any clans that should make separate terms. The Indian Government announced in a proclamation its intention to punish the Afridis in their own country because they had broken their alliance with the British Government and attacked and destroyed forts that their tribe had engaged to guard, and had made war on British garrisons, killing soldiers and destroying property. The Afghan Ameer likewise issued a proclamation condemning the tribesmen for raising disturbances and rebellions without cause after taking British pay, declaring the religious pretext hollow, because the Mohammedans of India and most of the khans were on the side of the English, and telling them that they knew of the Durand agreement at the time it was made and silently acquiesced, and hence must carry on their necks what they had done with their hands. He declared that he had nothing to do with them, as they had always asserted their independence of him and would acknowledge no king. On Oct. 17 he received a second deputation of Afridis and Orakzais, who begged him to mediate with the Indian Government. He accordingly wrote to inquire if orders for their punishment had been given or if there was room for negotiation, adding that they richly deserved punishment, and warmly asserting his undeviating friendship for the British Government.

The Pathans were already concentrating their strength in the upper Khanki valley and observing the preparations of the enormous British expedition from dominating points in the western Samana range. There were about 2,000 Afridis in the

British ranks who were counted among the best soldiers in the army, but whenever they found an opportunity they now deserted with their rifles to join their countrymen. The Afridis gathered on both sides of the Sempagha pass, prepared to offer a desperate resistance to the British attack, which began on Oct. 18, when, after a stiff fight, Gen. Bigger's division cleared the enemy from the Dargai ridge and destroyed the fortifications. After they had returned to camp the enemy reoccupied the ridge with an increased force, taking a strong position near the top of the Nasik Suk hill, which dominates the flank of any force descending the Chagru valley. On Oct. 20 the division, consisting of Gurkhas, Sikhs, English, and Scottish Highlanders, advanced to capture the position, which was shelled by three batteries. The tribesmen, of whom there were several thousands, reserved their fire till the British were in an exposed position, then delivered their volleys with telling effect, checking the advance, which was difficult, owing to the precipitous nature of the hill. First the Gurkhas, and then the Gordon Highlanders and the Sikhs rushed through the zone of fire, many of them dropping, till they reached a point so close below the enemy's position that the tribesmen could not see them, and when the British rushed the position, after a fierce hand-to-hand fight, the tribesmen fled to the heights, a large number being shot as they were fleeing. The British lost 195 officers and men in this action. On Oct. 21 the advance into the Khanki valley was accomplished and the fortified village of Khangarbur was occupied after a short conflict. While the British halted there over a week for supplies the enemy concentrated in the pass and improved the fortifications, and they fusilladed the British camp nightly, coming within 30 yards of the lines, and harassed foraging parties by day. The skill with which they skirmished and the judgment and accuracy with which they delivered their fire showed a great improvement and the training imparted to the Afridis by their fellows who had served in the Indian army, and this was shown more unmistakably by their altered tactics in battle. Instead of coming on in a wild, undisciplined rush, as formerly, the attacking line advanced in successive rushes, covered by the fire of the main body. Many of the fighting men were furnished with Lee-Metfords, as well as Martinis, revealing to the British commanders the meaning of the thefts of service rifles and ammunition that had been continually reported from the frontier stations. Men were seen directing the movements of the enemy who wore the uniform of the Indian army. In the night of Oct. 25 there were 27 men shot by the Afridi marksmen, and on Oct. 27 a foraging party lost 17. The Sempagha pass was taken on Oct. 30. There were 6 batteries massed in the center. Sir William Lockhart feigned an attack upon the enemy's right, which was immediately re-enforced by the commanders of the tribesmen, who by so doing weakened their center. Acting with great quickness, the British commander, whose experience and reputation in frontier fighting surpassed those of any other Indian general, threw the main column against the enemy's center. The tribesmen were thus taken by surprise, and their leaders did not have time to recall the forces sent to re-enforce their right. As a hurricane of shells from 36 guns swept intrenchment after intrenchment, these were immediately occupied by British soldiers, of whom only 24 were killed or wounded during the engagement. In the rich Mastura valley the Afridis set fire to their villages and grain stores before retreating. The British had to reconnoiter the country and also wait again for supplies to be brought up before assailing the Arhanga pass, which the tribesmen scarcely at-

tempted to defend. Only 1,000 men met the British, while the rest were busy removing their wives and children from the valley. This pass was captured with little difficulty on Oct. 31, one of the British brigades having turned the left flank of the Afridis, who will never continue fighting if their line of retreat is in danger. The force then entered the Maidan valley, the heart of the Afridi district of Tirah, whence Sir William Lockhart had announced that he would dictate the terms of peace. Signs of industry and expert agriculture and of prosperity abounded, the people having evacuated the country in haste, leaving the place full of grain, fodder, poultry, walnuts, etc. The retreat of the tribesmen eastward or through the Khaibar pass was cut off by Brig-Gen. Hammond's column of 5,000 men, which had moved out from Peshawar to the fort on the Bara river, which is formed by the junction of the Mastura and the Maidan, and near the entrance of the pass. The Kuram column had been engaged in fighting the Masozais and neighboring clans that blockaded the Kuram pass, replying to the proclamation of Sir William Lockhart by protesting against the occupation of Khaibar, Samana, and Swat, and declaring that they would oppose further inroads. A party of 36 Sikh soldiers during a reconnaissance to Esor, on the Khurmana river, were cut off and destroyed.

The terms demanded of the Afridis by Gen. Lockhart were not severe, for the Afridis were still far from subjugated, and their complete subjugation in this difficult country, far from the base of supplies, would exhaust the financial resources of the Indian Government. Furthermore, the English were unwilling to make confirmed enemies of their former pets, who formed as good fighting material as there was in the northwest, and had proved themselves hitherto very faithful to their salt, abstaining from levying blackmail on the caravans in the Khaibar pass after they had accepted the liberal compensation paid by the Indian Government. The British commander demanded from the Orakzai clans that had joined in the revolt the surrender of 500 rifles, besides those that they had captured during the war, and the payment of a fine of 35,000 rupees, the forfeiture of all subsidies formerly agreed upon, and a formal submission of the tribes in full *darbar* within a fortnight. These terms were announced from Maidan on Nov. 12, when both sides had ceased their main operations. The Afridis, ignorant of the power of modern artillery, had failed to defend their supposed impregnable positions; but, on the other hand, they had escaped the crushing military disaster that the English hoped to inflict as a lasting lesson.

A part of the Orakzais had already sued for peace. The Afridis made another appeal for the intervention of the Ameer, into whose arms the British were anxious that they should not be driven, and on this account the terms were made lighter. While encamped in Tirah the troops collected all the supplies they could find to eke out their commissariat and save the costly transport over the mountains. The sappers and miners improved the transport facilities, making camel roads where there had been mule paths. But the tribesmen, expert in guerrilla warfare, were not idle. They captured several convoys, fell upon foraging parties, and continued their harassing night attacks and "sniping" of bivouacs. On Nov. 6 an escort of Sikhs was cut off, and only escaped annihilation by the arrival of supports. On Nov. 9 Gen. Westmacott made a reconnaissance in force, reaching the top of Saran Sar mountain in the range west of the valley, where he found a deserted camp. During the retirement the force was followed up and heavily attacked on

difficult ground. An English regiment was saved from a difficult situation by the gallantry of the Sikhs. Lieut. Macintire and a dozen men were lost through the efforts of the sound to rescue the wounded of the party. The total casualties were 67, including 20 killed. The Governor General ordered an investigation of this disaster, which but for the gallant stand of the rear guard would have been worse. The enemy in their efforts to cut off the rear guard exposed themselves freely, contrary to their wont, and made one fierce rush, which was stopped almost at the bayonet's point by the steady fire of the soldiers, whose strength was all but exhausted and ammunition pouches nearly empty. Through the moonlit night the Afridis kept up their harassing pursuit, though they had suffered severely, losing 400 men. On Nov. 13 Gen. Kempter's brigade marched through the Kandao pass as far as Waran, encountering no opposition; but on retiring on the next day this force also was heavily attacked by Afridis swarming down from Saran Sar, and, after the main body had gone through, a Sikh regiment was seriously pressed on the farther side of the pass, but was saved by the other Sikhs, the same regiment that had rescued the English troops in the previous battle. The casualties were 30 killed and 50 wounded. Throughout the campaign the native troops displayed greater endurance and fortitude and better military instinct and alertness than the British regiments. The gallantry of the two Sikh regiments averted serious disaster in both these rear-guard actions. The troops suffered extremely, especially these Sikhs from the plains of India, from the cold on the mountains, for there were no villages to afford shelter, and the thermometer fell to 19° F. The losses of the British troops were already, before the opening of the Tirah campaign, heavier than had ever been experienced in frontier warfare. From June 10 to Oct. 28 the casualties were 247 killed and 843 wounded, including 24 British officers killed and 52 wounded, a heavy proportion of officers, considering how few of them there were in the native regiments. The number of British soldiers killed was 34 and of wounded 151; among the native ranks 177 were killed and 593 wounded. Sir William Lockhart's generalship had won the two passes with trifling loss, but now the damaging guerrilla tactics of the Afridis were gradually decimating his troops, so that they had to be re-enforced. Sir William Lockhart warned his officers against detaching small parties beyond support, saying that the Afridis were perhaps the best skirmishers and best natural rifle shots in the world, whose strength lies in intimate knowledge of the ground, which is the most difficult on the face of the globe, enabling them to watch the movements of the British unperceived and to take advantage of every height and every ravine. The troops were compelled by the cold to move into the Bara valley, thus changing the base from Kohat to Peshawar. Punitive and foraging expeditions were continued in the Maidan valley. The Orakzais in the Mastura valley began to make their submission and pay the fines demanded. The terms announced to the Afridis on Nov. 21 were the restitution of all stolen and captured rifles and other property, the surrender of 800 breechloaders, and the payment of a fine of 50,000 rupees. The Afridis were required to accept any arrangement that the Government might decide upon relative to the reopening of the Khaibar pass, to forfeit meanwhile all their tribal allowances, the renewal of these depending on the restoration of satisfactory relations with the Government, and to rebuild the forts in the pass that they had destroyed. Hostages were demanded, and a week's grace was allowed for compliance.

The headquarters were removed to Bagh, the site of the principal mosque in Tirah. In their devastating excursions among the surrounding hills the troops suffered severely from the sharpshooters, who, from their unseen coigns on the heights, had the exact range of all the exposed paths and defiles. The troops had soon to be withdrawn from these mountains, and the campaign was abandoned for the winter. As soon as it could be done the march was continued into the Bara valley. The mullah Said Akbar raised a *lashkar* of the still rebellious Orakzai clans for the purpose of cutting off the foraging parties and convoys still in Tirah. To extricate the troops from the labyrinth into which they had been led was a greater task than to win battles with shell and machine guns when the Afridis made a stand. On Nov. 22 Gen. Westmacott's brigade advanced to Dwatoi, at the confluence of the rivers, through a difficult gorge, with flanking columns moving along the precipitous hills. The enemy opposed the advance, and when the troops retired on the next day they engaged the rear guard all the way through the defile. The casualties during the campaign were 433 killed and 1,321 wounded, of whom 36 killed and 81 wounded were British officers. The transport service for this expedition was on an enormous scale, requiring 16,000 camels, 45,000 mules, and 12,000 bullocks. The two divisions forming the expeditionary force numbered 9,500 men each, the rest of the force being detailed for the line of communication. The main camp at Maidan was broken up on Nov. 18. All the heavy baggage and surplus stores were sent back to Shinwari, while the troops, with rations to last till Dec. 14, made their way down the Bara valley. While one of the divisions was engaged in clearing the road for the general retreat, detached columns visited the adjacent valleys to punish the tribesmen by destroying their houses and property. On Nov. 26 a large force entered Masozoi country through the Lozaka pass and encountered strong opposition, but they joined hands with a part of the Kuram column at Esor on Nov. 30. The Kuram force fought a hard battle on Dec. 1 at Thabi, in the Chamkani country, where many villages were destroyed. The difficulties of the Dwatoi defile were not surmounted till Dec. 9, when the main body began its retirement from Bagh into the Bara valley. A junction was effected with Gen. Hammond's force on Dec. 14 at Mamani. The tribesmen grew constantly bolder and more aggressive. The retreat down the Bara valley, where the troops marched through ravines, over boulders, and often knee-deep in icy waters, involved a continuous rear-guard action during the five days of the march, with losses of 33 killed and 183 wounded.

To counteract the moral effect of the retreat, Gen. Lockhart determined at once to open the Khaibar pass and to operate among the winter settlements of the Afridis in the Baza valley, where several villages were razed to the ground, after which one of the divisions concentrated in the Khaibar. Sir Bindon Blood led a division against the Bonerwals, who had refused to make the reparation demanded of them.

The cost of the frontier operations in 1897 was estimated to amount to £10,000,000. Already within the past twenty years the Government has spent £50,000,000 in frontier wars. The Indian Congress condemned the frontier policy of the Government in strong terms, and called upon the English Government to pay a substantial part of the expenditure. A petition was sent to Parliament praying that, pending the settlement of the question of adjustment between the British and Indian treasuries of frontier war expenses, the cost of the present war should be borne largely by Great Britain.

Burmah.—In April, 1887, Burmah was converted by royal proclamation into a British province, of which Sir Frederick Fryer was made Lieutenant Governor. The Legislative Council consists of 5 official and 4 nonofficial members, all nominated. The guerrilla warfare which the British combated under the name of dacoity or gang robbery after the annexation of the country by Lord Dufferin in 1886 ceased entirely, under the rule of Sir Alexander Mackenzie as Chief Commissioner in 1890-'95, and the frontier raids which succeeded the internal disturbances have given place to friendly durbars between the British officers and the Shan chiefs, whose tribesmen have been enrolled into a frontier police. The pacification of Burmah may be considered complete, and the military occupation has passed into a civil administration. Railroads, roads, irrigation schemes, the introduction of new agricultural staples, the extension of medical relief and vaccination, the provision of veterinary aid, cadastral surveys, public instruction, the cultivation of waste lands, the development of mines and quarries, the rice trade, forest conservation, increased facilities for obtaining judicial redress, the fair adjustment of public burdens, and the settlement of rural rights and obligations are the problems that now take up the attention of the administrators. A railroad is to be built into the center of the southern Shan States. On the northern border the Mandalay and Salween Railroad has been carried beyond Maymyo. The trade across the frontiers of Upper Burmah was Rx 1,860,000 in 1897, against Rx 1,300,000 in 1896. The trade with western China increased from Rx 280,000 to Rx 300,000, with the northern Shan States from Rx 470,000 to Rx 530,000, with the southern Shan States from Rx 600,000 to Rx 930,000, with Zimme from Rx 240,000 to Rx 390,000. There was a decline in the trade with Karen and Siam. In Lower Burmah the overland trade increased from Rx 750,000 to Rx 820,000. A Burmo-Chinese frontier commission began on Dec. 1 the delimitation of the frontier of Yunnan, which has been altered recently in favor of Great Britain by an arrangement with the Chinese Government (see CHINA).

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; and 2,192,404 in 1890. Capital, Indianapolis.

Government.—The following were the State officers during the year: Governor, James A. Mount; Lieutenant Governor, W. S. Haggard; Secretary of State, William D. Owen; Treasurer, F. J. Scholz; Auditor, Americus C. Daily; Attorney-General, W. A. Ketcham; Superintendent of Instruction, David M. Geeting; State Statistician, S. J. Thompson, resigned in April and succeeded by John B. Conner; Geologist, W. S. Blatchley; Adjutant General, Gen. Gore; Tax Commissioners, Ivan N. Walker and Thomas B. Buskirk; Fish Commissioner, Z. T. Sweeney; Factory Inspector, D. H. McAbee—all Republicans; Chief Justice of the Supreme Court, James H. Jordan, Republican; Associate Justices, L. J. Monks, Republican, and Timothy E. Howard, Leonard J. Hackney, and James McCabe, Democrats; Clerk, Alexander Hess, Republican; Justices of the Appellate Court, W. D. Robinson, W. J. Henley, James B. Black, D. W. Comstock, and C. Z. Wiley, all Republicans.

Finances.—The debt of the State at the beginning of the year stood: Domestic debt, \$484,000; foreign debt, \$6,436,615; total, \$6,920,615.

For the year ending Oct. 31, 1896, the net receipts were \$2,413,100.10. The expenses of the State gov-

ernment, exclusive of any payment on debt principal from the general fund, were \$2,174,544.78.

The State-tax levies were not changed in 1897, and remain as made two years before as follows: General fund, 9 cents on the \$100; tax on mill institutions, 5 cents on the \$100; State Normal School fund, 3 cents on the \$100; school fund, 11 cents on

JAMES A. MOUNT, GOVERNOR OF INDIANA.

the \$100; for higher education, 1½ cent on the \$100. The total taxable property on tax duplicate of 1895 was \$1,286,050,531.

The bonded debts of the counties amount to \$6,014,703, and the floating debts to \$829,163.

The Treasurer's report for the year ending Oct. 31 gives the following general statement: Balance in treasury Nov. 1, 1896, \$525,694.69; receipts from all sources, \$7,679,964.34; total, \$8,205,659.03; disbursements, \$7,808,964.52; balance, \$396,724.51.

Education.—The Legislature appropriated to educational institutions, for special purposes, the following sums: Purdue University, \$18,500; State University, \$5,000; State Normal School, \$10,000. The income of each from the special tax for higher education under the law of 1895 was computed in July as follows: Indiana University, \$46,280.72; Purdue University, \$35,085.53; State Normal University, \$35,085.53; total, \$116,951.78.

The Normal School graduated a class of 78 in June, and granted diplomas to 34 graduates of 1895 who had taught successfully in the public schools for two years. The biennial report shows that in 1895 there were 1,535 students in attendance at various times, and in 1896 there were 1,570. The average attendance for each term was 800. During the first year covered by the report the faculty cost \$32,334.96, and during the second year \$29,027.98. The total receipts were \$87,309.57, and the disbursements \$62,881.49.

Earlham College graduated 25 students in June, and Butler 34. Coates College for Women, which has been running down for a number of years from lack of patronage, made an assignment. Mount Vernon was founded by the late Jane C. Coates of Coates

castle, and had about 50 students at the time of the assignment. At the December meeting of the trustees of Wabash College a petition was presented asking that arrangements be made to educate women at the college. There were 278 alumni who signed this petition, and 128 alumni opposed the plan. The number that have been graduated is 753, of whom 149 are dead, 27 whose address is unknown, 24 not approachable, and 143 failed to reply.

The Vincennes Presbytery passed a resolution in April which expresses the feeling of the friends of the denominational colleges as follows: "The Presbytery of Vincennes desires to record its disapprobation of the attempt in the late Legislature to displace the denominational college in the school system in our State, giving the preference to teachers who have taken a course of instruction in the State institutions, thus discriminating against the graduates of the non-State schools, discounting merit, and practically confiscating the valuable property and splendid equipment of the non-State schools. It is with deep regret that we learn this movement is to be continued in favor of State colleges, and we call upon good citizens who value merit, who believe in fairness, and who understand the debt, past and present, of our public-school system to the non-State schools, to oppose the encroachments."

The school enumeration for 1897 shows a total of 749,860, an increase of 16,134 over 1896. The following summary shows the condition of the common-school revenues as computed for apportionment in June: Amount collected from counties, \$1,073,576.07; amount in treasury from all other sources, \$17,837.94; total on hand, \$1,091,414.01; amount apportioned, \$1,072,299.80; balance now remaining in treasury, \$19,114.21; *per capita*, \$1.43.

The State Board of Medical Registration and Examination has adopted rules defining what colleges are qualified to give diplomas that will be recognized by the board. These rules will bar out graduates of certain medical colleges.

Charities and Corrections.—An abstract of the report of the State Board of Charities gives the following statistics: "The number of inmates of the State charitable and correctional institutions upon the last day of the fiscal year five years ago was 6,264. Of this number 4,106 were in the charitable institutions and 2,158 in the correctional institutions. At the close of the past fiscal year the number of inmates of the State charitable and correctional institutions was 7,136, of which 4,654 were in charitable and 2,482 in correctional institutions. From these figures it is seen that the total population of both charitable and correctional institutions has increased 872 in the past five years. The increase in the charitable institutions has been 548 and in the correctional 324. While the population of the charitable and correctional institutions has thus increased, there has not been a corresponding increase in the cost of maintenance. The total cost of maintaining the institutions in the year just closed was smaller by \$6,830.17 than in the year which ended five years ago.

In an address before the State Conference of Charities and Corrections in November the Governor said, urging economy in the administration of State institutions: "The State annually expends \$1,236,736.92 to maintain its benevolent and charitable institutions. It is a matter of congratulation that at the close of the last fiscal year, Oct. 31, 1897, some of the State institutions turned unexpended balances back into the treasury." The Governor had already in June made a move toward reducing the expenses of the institutions by suggesting the abolition of useless offices and more careful scrutiny of the prices paid for supplies.

The report of the trustees of the State Soldiers' Home in December gives the population: Veterans, 312; widows, 36; married women with their husbands, 120. The home is crowded and the number of applications for admission is increasing. The report says that the veterans who receive over \$8 a month pension willingly give up the excess to be sent to their wives or minor children.

The last Legislature appropriated \$8,000 for a new chapel, \$15,000 for an "old men's home," and \$10,000 for a dining room and "widows' home." The old men's home is in course of erection, and the other two are finished and furnished. During the year 11 counties made appropriations for cottages. The cost is about \$150 a year for each inmate, of which the Government pays \$100.

The trustees of the Sailors' and Sailors' Orphans' Home, at Knightstown, submitted their annual report in December. During the year 122 children left the home. There are now in the home 639 children, of whom 363 are boys and 276 girls.

The financial statement shows the expenditure of all the appropriation of \$90,000.

The report of the Central Hospital for the Insane gives: Patients at beginning of year, 1,543; received, 483; discharged, 306; died, 134; treated, 2,026; enrolled at close of year, 1,586; daily average, 1,478.4. The institution is overcrowded. The actual *per capita* cost is \$138.63.

At the Southern Hospital for the Insane, at Evansville, the cost of maintenance during 1895-'96 was \$138,324.71, averaging 48 cents a day for each patient.

The printing office and laundry at the State Reformatory School for Boys, at Plainfield, were burned June 1, with a loss of about \$7,500.

The Legislature this year passed a law making the Prison South, at Jeffersonville, a reformatory, and providing that all prisoners under thirty years of age, serving their first sentence, should be taken there, while the Prison North, at Michigan City, should be the State penitentiary for older criminals. Transference of prisoners took place April 12, when 291 prisoners were taken from Michigan City to Jeffersonville, and 368 from Jeffersonville to Michigan City. Great precautions were taken, special trains starting simultaneously from the two prisons. The men were shackled in pairs immediately after being fed at breakfast and marched on board trains that had been backed into the prison yards. A company of militia accompanied each train, and in each coach of convicts were three guards.

After the exchange the penitentiary contained 980, while the reformatory had fewer than 800. In December there were in round numbers 900 at the reformatory and 840 at the penitentiary. Already the reformatory is badly overcrowded. The night school is attended by 225 inmates. All illiterates are compelled to attend this school. The wage-earning system is now in full operation, and there is plenty of work for all prisoners under the existing contracts.

The State Prison has been put into order, new buildings including a chapel and an administration building, have been erected, a waterworks plant put in, and shower baths provided.

The following are the amounts appropriated by the Legislature for maintenance and special purposes at the State institutions: Central Insane Hospital, maintenance \$225,000, special \$38,200; Northern Insane Hospital, maintenance \$90,000, special \$7,000; Eastern Hospital for the Insane, maintenance \$90,000, special \$5,000; Southern Hospital, maintenance \$82,000, special \$9,800; Education of the Blind, maintenance \$27,000, special \$3,500; of the Deaf and Dumb, maintenance \$58,000, special \$14,560; Soldiers' Orphans' Home, maintenance

\$90,000, special \$5,300; School for the Feeble-Minded, maintenance \$75,000, special \$12,213; State Prison North, maintenance \$90,000, special \$40,500; Indiana Reformatory, formerly Prison South, maintenance \$56,100, special \$55,000; Reform School for Boys, maintenance \$56,500, special \$6,000; Reformatory and Women's Prison, maintenance \$40,500; State Soldiers' Home, special \$61,355.

Militia.—The report of the adjutant general in November shows that the Indiana National Guard contains 2,822 officers and men, divided into 41 companies of infantry and 3 batteries of artillery.

Insurance.—The report of the Insurance Department shows that 280 insurance companies do business in the State. Of these, 42 are Indiana companies, 3 are Canadian, and 36 are European. The others have their corporate homes in various States, 33 being in New York.

Banks.—The report of the Banking Department shows an improvement in State banks, Oct. 30, 1897, over their condition a year before and a steady improvement during the year. The resources, Oct. 30, 1896, were \$14,711,472.25, and Oct. 30, 1897, they were \$17,325,534.28. During the year the State bank at Ambia became a private bank, the Kewanee Bank went out of existence, and one bank at Sullivan was discontinued, while another took its place, leaving 95 in operation.

The reports of the five savings banks of the State show that their deposits have increased about \$400,000 during the year.

The State has 4 trust companies, 3 in Indianapolis and 1 at Terre Haute. The reports of these concerns show that the resources increased during the year from \$2,742,724.33 to \$3,647,220.79.

The Logansport State National Bank failed May 20, and its failure caused that of the State Bank of Monticello, which was under the same president. The failure was due to the president, John F. Johnson, who had taken about \$300,000 of its funds, and had borrowed on his personal paper \$200,000 more. He was convicted and sentenced to ten years in the Ohio Penitentiary. The banks were reorganized in July.

On Nov. 13 Crawford County was thrown into a high state of excitement by the failure of the Leavenworth Bank and the banks at English and Marengo. These institutions have been under the management of R. H. Willett, who disappeared before the condition of the bank was known. The deposits in each of the banks were heavy, including county and township funds.

Loan Associations.—Fourteen building and loan associations went into liquidation during the year. The report compiled for the whole State by the land department of the Auditor's office, as of Oct. 31, shows that \$6,635,708 of pass books and mortgage loans were repaid during the year, being \$1,014,118.02 more than during the previous year. The withdrawals were \$8,375,462.97, being \$1,006,236.74 more than the previous year, the bulk of this being in Marion County. There were 101,775 investing members in 1896 and 82,449 in 1897; 55,489 borrowing members in 1896 and 55,061 in 1897.

An important decision in a suit brought against a nonresident association was handed down at Anderson in December. Judge McClure sustained a plea of abatement, holding that the building and loan association was an outlaw and had no standing in court, inasmuch as it had failed to file the necessary \$100,000 bond with the State Auditor as required of all building and loan associations that are nonresidents. This relieves the borrower from all liability and payment can not be forced.

Industries and Products.—The official report of the traffic manager of the Indianapolis Belt road and live-stock yards shows that in 1897 there were

received at the yards 1,352,561 hogs, 147,740 head of cattle, 97,269 head of sheep, and 29,247 head of horses and mules. The deliveries to local packing houses in 1897 were the largest since the yards were established, in 1877, being 788,265 hogs, 90,402 cattle, and 4,107 horses to the same stations.

The report of the statistician for 1897-98 rendered in February, gives statistics covering 40 industries, with 968 establishments in 128 cities and towns. The reports of the proprietors of these factories, shops, and mines show a capital of \$42,707,737. The past year the value of materials used was \$83,202,319, and the gross value of the merchandise manufactured was \$132,788,421. Labor was paid \$28,062,683. The number of persons employed was 80,184, of whom 9,735 were boys and 8,894 were women and girls. The State geologist shows that no State possesses clay deposits superior to those of Indiana, and that, instead of importing vitrified brick from other States, this State should supply the entire home demand and become an exporter as well. During the past year one large brick concern has begun operations near Montezuma, and another new plant has been erected at Martinsville. A large pottery establishment has been constructed at Brazil. The geologist has discovered some new deposits of marl, and at Syracuse a plant costing \$75,000 has been put in for the manufacture of Portland cement.

Waste of Natural Gas.—There is as yet no indication of the giving out of the gas supply, which has been in constant use for ten years. Besides the great amount consumed in the gas area proper, 26 pipe lines are transporting it to other places, much of it going to Ohio and Chicago. The pipe lines aggregate more than 1,000 miles, not including tributaries and feeders. The fuel is flowing from 2,000 wells, each well producing an average of 2,000,000 feet of gas a day.

But the waste of the gas by oil companies and prospectors, who allow it to escape in order to get the oil beneath, has aroused apprehension, and the courts have been applied to for injunctions upon the oil operators. There is a State law which, if enforced will put a stop to the practice.

Mob Violence.—Five men were taken from jail at Versailles on the morning of Sept. 15, and hanged by a mob. The men constituted a gang of desperadoes who had long been the terror of the county as robbers and burglars.

At Decatur, on the night of Oct. 2, whitesaps dragged Constable James Parrish from his home and lashed him nearly to death with a cat o' nine tails. Officers made four arrests of suspects, and the grand jury returned indictments in December against them and two others who had fled.

Labor Interests.—Reports that the miners in the State were suffering, and many were on the verge of starvation, led the Governor to appoint two commissioners—J. B. Conner and T. H. Terhune—to investigate their condition in July after the general strike began. One of the commissioners said on his return: "The treasury of the miners was depleted by the strike of last year, and they had not yet got out of debt when this one came. In most places they have had but three days' work per week, at 47 cents, the lowest price ever known, and thus they had no chance to pull out. Some of the operators with whom we talked admitted that the present state of affairs is all their own fault. During the past three years they have been cutting each others' throats by taking contracts at various prices and then reducing wages to meet them."

Legislative Sessions.—The session of the General Assembly began Jan. 8, and ended March 8. Lieut.-Gov. Haggard presided over the Senate, and Henry C. Pettit was Speaker of the House. The

Governor and Lieutenant Governor were inaugurated Jan. 11.

Charles W. Fairbanks was chosen by the Republican caucus as candidate for the office of United States Senator to succeed Daniel W. Voorhees. Other names before the caucus were those of Gen. Lew Wallace, W. R. McKeen, R. S. Taylor, John H. Baker, Benjamin Harrison, and Frank Posey. Mr. Voorhees was the Democratic candidate, and Leroy Templeton the Populist. The vote stood: Fairbanks, 85; Voorhees, 58; Templeton, 6.

The number of acts passed and signed was 190, besides which were two joint and two concurrent resolutions. Seven measures were vetoed by the Governor, only one of which was passed over the veto. This was for dividing a court circuit.

The apportionment law of 1885, which is the only one that has not been ruled unconstitutional by the Supreme Court, was repealed, and a new apportionment of senatorial and representative districts was enacted; it was drawn on the lines indicated by the decisions of the court.

The ballot law was amended so as to prevent fusion of parties. It is provided that no candidate's name shall be placed on the ballot more than once, and requires that any candidate nominated by more than one political party shall make and file with the proper election commissioners his choice in writing, properly signed and acknowledged, stating which nomination he accepts. Unless he files this choice before the time arrives for printing the ballots, the election commissioners shall choose for him on which ticket his name shall be placed.

The voter is to use a blue pencil furnished by the election officers, instead of a rubber stamp and ink, in marking his ballot, and a circle instead of a square is to be placed around the party device.

Another political act relates to the business of taking a poll. It requires a person questioned to answer truthfully as to how many male persons inhabit the premises, whether they are of voting age, and how long they have resided in that particular place. The law does not require them to answer as to the politics of these persons.

The metropolitan police boards in eleven cities are to be reorganized under an act requiring the Governor to appoint new boards with no more than two from the same political party; it applies to Elkhart, South Bend, Muncie, Anderson, Terre Haute, Richmond, New Albany, Jeffersonville, Lafayette, Logansport, and Michigan City.

A general street-car law was made which terminates all existing street-railroad charters in Indianapolis in 1901, provides a method for appraisement of the property of the existing company and its sale at such appraised value to its successor company, and gives the city authorities power to regulate fares in the franchise contracts.

A three-cent-fare law was passed to reduce the limit of fares permitted to be charged in cities of 100,000 inhabitants to three cents.

An important law affecting business interests is that on building and loan associations. The first section changes the cost of incorporating building and loan associations, making the fee to be collected by the Secretary of State \$5 on every \$50,000 of capital stock. Section 2 abolishes the expense fund and withdrawal fees. This section limits membership fees to 50 cents on \$100, and gives the association the right to set aside a contingent fund not to exceed 5 per cent. of the assets.

Next in importance in the way of business legislation is the antitrust law. It provides that all arrangements, contracts, agreements, trusts, or combinations between persons or corporations, who control the output of any article of merchandise, made with a view to lessen, or which tends to lessen,

full, free competition in the importation or sale of articles imported into this State, and all arrangements, contracts, agreements, trusts, or combinations between persons who control the output of said articles of merchandise to control the cost of such articles to the producer, shall be unlawful and void. A violation of the act by a corporation shall operate as a forfeiture of its charter and right to do business.

Several laws were passed in the interests of labor, of which three were of great importance—the arbitration law, the child-labor law, and the law abolishing prison-contract systems.

The arbitration law creates a nonpartisan board of arbitration or conciliation, composed of two labor commissioners and the judge of the circuit court where the dispute arises. The labor commissioners are appointed by the Governor and hold office two years. One of the commissioners must, for at least ten years of his life, have worked for wages, and shall be at the time he is appointed affiliated with the labor interests. The other shall have been at least ten years an employer of labor in some similar department of industry, and shall be when appointed affiliated with the interests of employers. The commissioners are to offer their services as mediators in case of any labor complication, and with the judge of the circuit court of the county where the difficulty arises are to form a board of arbitration. If the parties refuse to submit to arbitration the commissioners shall investigate the trouble, and make a report thereon, which shall be published for general distribution.

The child-labor law, or factory-inspection law, provides for the appointment by the Governor of a factory inspector, at a salary of \$1,500 a year. This inspector has charge of all manufacturing establishments in the State, which term is declared to include all establishments for manufacturing that employ ten persons or more. He may issue permits to carry on business without complying with the regulations of the act as to fire escapes or size of room in which a given number of persons are employed; may require a manufacturer to paint or whitewash his ceiling, and in various other ways exercise a discretionary power over the employers' affairs. The act forbids the employment of any boy under sixteen or any woman under eighteen in any factory for more than sixty hours in any one week. It also forbids the employment about a manufacturing establishment of any child under the age of fourteen. And children between the ages of fourteen and sixteen can only be employed during the vacation of the public schools or after they have learned to read and write. The law forbids the manufacture of garments or cigars in "sweat shops."

The prison-labor law provides that "the contract prison labor in the State prisons and reformatories be abolished, and authorizes the board of directors of the State penal and reformatory institutions to establish the public-accounts system, to institute in said prisons an industrial and labor system by which the convicts shall be employed at such trades and vocations as will be required to supply the institution as nearly as possible with all necessary articles of prison consumption, or as will, in the judgment of the directors, be expedient and wise."

A law in the interest of miners makes it unlawful for any one to serve as mine boss, hoister, engineer, or fire boss without a certificate of competency from the State mine inspector.

Another act provides for the construction of exits after mines have been worked a certain distance and for keeping these exits clear.

The law on garnishment was amended, making the amount of exemption of wages \$25; but to en-

title the householder to the \$25 as exempt, he is to remain in the employ of the corporation or person garnished.

It is provided that there shall be appointed by the Governor a State board of medical registration and examination of five members, upon which no school of medicine shall have a majority representation and not more than three shall be of the same political party, but all shall be graduates of medical colleges within this State and reputable physicians.

The dependent-children law provides for the establishment of children's asylums by the commissioners of a county or of several counties joining together, and the making of arrangements with charitable societies for conducting these asylums.

Another measure makes it incumbent upon each township to care for its own paupers.

The only temperance legislation was the "anti-quart-shop" law, including drug stores as well as quart shops. It provides that section 5312 of the Revised Statutes of 1881 be amended to read as follows: "It shall be unlawful for any person, directly or indirectly, to sell, barter, or give away, for any purpose of gain, any spirituous, vinous, or malt liquors, without first procuring from the board of commissioners of the county in which such liquor is to be sold a license. If said applicant desire to sell spirituous, vinous, and malt liquors he shall pay the treasurer of said county \$100 as a license fee for one year before license shall issue to him. Such fees shall be paid into the school fund of the county in which such licenses are obtained." The act does not apply to any dealer who does not sell in less quantities than five gallons at a time.

The life of the appellate court was extended four years.

A compulsory education act requires that every child physically and mentally able shall attend school at least twelve weeks each year, and provides for the employment of truant officers in cities and towns.

Five bills were passed for the purpose of securing better treatment of prisoners. The most important of these is the law converting what was formerly the Prison South into a Reformatory.

Another important measure for prison reform is the indeterminate-sentence law, applying to all crimes except treason and taking of human life.

A third measure with a like purpose is one establishing the grading already in use with good results at the Prison South.

The power of appointment of the directors of the State Prison is restored to the Governor.

The method of selecting boards for the State benevolent institutions was changed by an act which provides for their government by boards of three, appointed by the Governor, no more than two members of any one board being of the same political party. Another bill relating to State institutions provides that the Governor shall appoint a non-partisan committee of three members-elect of the Legislature at least forty-five days before the meeting of each General Assembly to visit the penal, benevolent, and educational institutions of the State, and make a report to the Legislature of their condition and needs.

Many measures affecting insurance were enacted, of which the most important probably was that repealing the section of the old law which imposed a penalty of 10 per cent. upon home fire insurance companies for failure to adjust and pay losses within sixty days. Another provides for the organization and regulation of assessment life and accident insurance companies.

An anticigarette law forbids the sale or gift of cigarettes to minors. A pure-food law declares unlawful all adulterations of food products or drugs.

An impeachment law was enacted, which provides for impeachment and trial of State officers by the Legislature. For county officers the method is through the grand jury or by affidavit and trial by the circuit or criminal court.

The special verdict law of 1895, which made it almost impossible for a plaintiff to secure a verdict in a damage suit against a corporation, was repealed.

Another act declares that the standard half-bushel measure shall be the only measure used in testing wheat in less than car-load lots. Another was passed declaring the number of pounds to the barrel, bushel, ton, etc., of the principal articles of produce, and making it a misdemeanor, punishable by a fine of from \$1 to \$25, for any one to buy or sell any of these articles by weight at a measure differing in weight from the standard.

Two acts were passed for the protection of fish, and one to prevent the slaughter of quail or grouse by any other method than that of dog and gun. Another measure prevents the killing of Mongolian pheasants for two years.

Among other measures passed were the following:

Appropriating \$5,000 for a statue of Oliver P. Morton in the Capitol at Washington.

Broadening the scope of surety companies so that they may serve where freehold surety has heretofore been required.

Taxing transient merchants.

Requiring certain county officials to execute pension papers free of charge.

Giving to cities and incorporated towns power to tax and regulate clairvoyants, street fakirs, itinerant dealers, vehicles, branch stores, and trolley and telegraph poles.

Authorizing the Attorney-General to institute suit to recover the claim of the State against the Vandalia Railroad Company for \$1,000,000.

A joint resolution declared "The Story of Liberty" an improper book for school children. It is a book put out for use in the schools, a story of the Inquisition, and is regarded by Catholics as slanderous toward their Church.

Contested Laws.—The constitutionality of the law passed this year limiting street-car fares in Indianapolis to three cents was disputed on the grounds that it impaired the validity of contracts and was special legislation; but the State Supreme Court sustained the law.

The General Assembly of 1895 passed an act providing for relocation of county seats under certain conditions. The only county coming under the conditions was Jackson County, and the law made necessary a special election to determine the question of removing the county seat from Brownstown to Seymour. This was resisted on the ground that the law was special legislation. The Supreme Court upheld the law because the entire power over the removal of county seats is vested in the Legislature.

The Indiana and Ohio laws enabling the local State authorities to tax all the property of railroad, telegraph, and express companies were sustained in all their parts by the United States Supreme Court Feb. 1. This decision gives the State \$100,000 from the express companies and \$125,000 in the case of the telegraph company. The latter appealed only on the ground of the 50-per-cent. penalty which the State sought to collect for the company's failure to pay the tax when it was due. The law imposing the tax was declared valid in 1896; the company then tendered the tax without the penalty; the Treasurer refused to receive it, and the court decided this year sustained the Treasurer in collecting the 50-per-cent. penalty.

The right of the tax commissioners to tax paid-up life insurance policies and policies that have a cash surrender value was tested in the Marion circuit court, and it was declared that there was no law authorizing such a tax.

The city of Muncie passed an ordinance for the purpose of excluding saloons from the residence portions of the city, which was to be operative even in the case of persons already holding licenses. A saloon keeper who held city and county licenses continued to keep his saloon in a location coming under the terms of the ordinance and was prosecuted. On appeal, the Supreme Court sustained the city, holding that a license is a mere permit, revokable at the need of the public welfare.

Decisions have been given in several courts against the garnishee law, declaring it unconstitutional.

Political.—The question of the right of women to vote in this State was settled against them by the Supreme Court in a decision, March 2, in the case of a woman who appealed a suit against the election officers of her precinct in Lafayette. The opinion said, in closing: "Whatever the personal views of the justices upon the advisability of extending the franchise to women, all are agreed that under the present Constitution it can not be extended to them."

A special election was held in the Fourth District, Aug. 10, for a member of Congress to succeed the late W. G. Holman. The Democratic candidate, Francis M. Griffith, was elected by a majority of 1,152, over Rev. C. W. Lee, Republican, and Rev. M. W. Broader, Populist.

INGELOW, JEAN, an English author, born in Boston, England, in 1820; died in London, July 19, 1897. Few people in this stirring time have passed seventy-seven years that were as little touched by outward changes of circumstance as did Miss Ingelow. She was so successfully averse to publicity that even the events of her life (if there were

contemporary poets. Miss Ingelow was always a dispenser of unostentatious charity—that which gave herself as well as her worldly goods. One of her stated acts of kindness consisted in the giving, three times a week, of what she called "copyright dinners." To these she invited twelve needy persons, generally selecting those who had just been discharged from a hospital.

England has given to the world during this century three woman poets of wide fame and of apparently enduring reputation. One was an Englishwoman who gave back in her poetry the thought and spirit she imbibed during a life in Italy; another of them wrote, during a life in England, the fervor and mysticism that was the blossom of Italian heritage; the third was of English and Scottish ancestry, and passed her days in her native atmosphere. But in one thing these writers were singularly alike—in the quality of womanliness. The "Sonnets from the Portuguese" of Mrs. Browning are perhaps the finest love poems in our language, unless we except Shakespeare's sonnets. His are masculine, hers feminine. Christina Rossetti set devotion in a niche where it appears half saint, half woman. Jean Ingelow gives both emotions free play in the clear sense of her sturdy race. She is at all times sane and reasonable, which is not true of either of the others. The dictum "There is no sex in brain" is as unfortunate as it is uncomplimentary and untrue. Man should be able to give to the world of thought something that woman can not, something that will appeal to the well-constituted womanly mind as the work of woman does not. Woman should be able to give to the world something that man can not, something that in like manner awakes a response in his mind, because it is a way of believing or judging not native to himself. This has nothing to do with the question which is superior. The judgment passed upon woman's work is now uninfluenced by considerations of sex; but if that work shall to any large degree lose the quality that sex environment can give to mental processes, the world will be poorer for the change.

The three poets just mentioned have dwelt almost continuously upon love and faith. It has been woman's work to present the living ideals of these two supreme passions from the beginning—true love and true faith, or evil love and erroneous faith. Jean Ingelow's teaching is wholesome, pure, and attractive. She has nothing of the mystic, nothing of the cynic. Her poems are sweet at their source and steady in their flow. In closing the poetic philosophy of her poem entitled "Honors," she says in regard to the so-called conflict between science and religion:

Then all goes wrong: the old foundations rock;
One scorns at him of old who gazed unshod;
One striking with a pickaxe thinks the shock
Shall move the seat of God.

A little way, a very little way
(Life is so short, they dig into the rind,
And they are very sorry, so they say—
Sorry for what they find.

But truth is sacred—aye, and must be told:
There is a story long beloved of man;
We must forego it, for it will not hold—
Nature had no such plan.

And then, if "God hath said it," some should cry,
We have the story from the fountain head:
Why, then, what better than the old reply,
The first "Yea hath God said"?

The garden, oh, the garden, must it go,
Source of our hope and our most dear regret!
The ancient story, must it no more show
How man may win it yet?

JEAN INGELOW

any) never have come to the public ear. Her father was a wealthy banker; her mother was from Scotland. They were people of cultivation, the father being especially a student and lover of the best literature. Jean was bashful and quiet. She published a volume of poems anonymously, in 1850, with the title "A Rhyming Chronicle of Incidents and Feelings." Her first acknowledged volume of poems appeared in 1862. It found hearty recognition at once, and placed her high in the ranks of

Oh, marvelous credulity of man!

If God indeed kept secret, couldst thou know,
Or follow up the mighty Artisan
Unless he willed it so?

And canst thou of the Maker think in sooth
That of the Made he shall be found at fault,
And dream of wresting from him hidden truth
By force or by assault?

But if he keeps not secret—if thine eyes
He openeth to his wondrous work of late—
Think how in soberness thy wisdom lies,
And have the grace to wait.

Wait, nor against the half-learned lesson fret,
Nor chide at old belief as if it erred,
Because thou canst not reconcile as yet
The worker and the word.

Jean Ingelow is a wonderful preacher of righteousness. She has sounded the depths of Christian experience, and, in true imagination, can put herself in the place of those whose lives are unlike her own, except in the one great need of our common humanity—the need of escape from sin. The most remarkable example of this power of religious sympathy, and of its ability to touch the mind and move the heart, is seen in her long poem in blank verse entitled "Brothers and a Sermon." Two young men of the upper class had accidentally strayed into vesper service in a fishing village. At the close of the simple but touching discourse the aged minister questions:

"And is this all:

Trouble, old age and simpleness, and sin?
This all: it might be all some other night.
But this night, if a voice said 'Give account
Whom hast thou with thee?' then must I reply,
'Young manhood have I, beautiful youth and strength,
Rich with all treasure drawn up from the crypt,
Where lies the learning of the ancient world—
Brave with all thoughts that poets fling upon
The strand of life—as driftwood after storms:
Doubtless familiar with thy mountain heads,
And the dread purity of Alpine snows,
Doubtless familiar with thy works concealed
For ages from mankind—outlying worlds,
And many mooned spheres—and thy great store
Of stars, more thick than mealy dust which here
Powers the pale leaves of auriculas.
This do I know, but, Lord, I know not more.
Not more concerning them—concerning thee,
I know thy bounty: where thou givest much
Standing without, if any call thee in
Thou givest more'—speak, then, O rich and strong:
Open, O happy young, ere yet the hand
Of him that knocks, wearied at last, forbear;
The patient foot, its thankless quest refrain,
The wounded heart for evermore withdraw."

I have heard many speak, but this one man—
So anxious not to go to heaven alone—
This one man I remember, and his look,
Till twilight overshadowed him. He ceased,
And out in darkness with the fisherfolk
We passed and stumbled over mounds of moss,
And heard, but did not see the passing beck.
Ah, graceless heart, would that it could regain
From the dim storehouse of sensations past
The impress full of tender awe, that night,
Which fell on me. It was as if the Christ
Had been drawn down from heaven to track us home,
And any of the footsteps following us
Might have been his.

Jean Ingelow was singularly unfortunate in the matter of titles. Nothing could be worse or less inviting than "Brothers and a Sermon," "Scholar and Carpenter," "An Afternoon at the Parsonage," "Supper at the Mill," or "The Star's Monument." "Divided" is a beautiful and characteristic poem. The following are the opening and the closing sections:

An empty sky, a world of heather,
Purple of foxglove, yellow of broom;

We two among them wading together,
Shaking out honey, treading perfume.

Crowds of bees are giddy with clover,
Crowds of grasshoppers skip at our feet,
Crowds of larks at their matins hang over,
Thanking the Lord for a life so sweet.

Flusheth the rise with her purple favor,
Gloweth the cleft with her golden ring,
Twist the two brown butterflies waver,
Lightly settle, and sleepily swing.

We two walk till the purple dieth
And short dry grass under foot is brown,
But one little streak at a distance lieth
Green like a ribbon to prank the down.

After the long parting that grew out of apparently accidental and trivial hindrances to meeting, at the end of a life-long separation, the affection of faith says:

And yet I know past all doubting, truly—
A knowledge greater than grief can dim—
I know, as he loved, he will love me duly—
Yea better—'e'en better than I love him.

And as I walk by the vast calm river,
The awful river so dread to see,
I say, "Thy breadth and thy depth forever
Are bridged by his thoughts that cross to me."

One of the most charming of her poems is weighted with the cumbrous title "A Mother showing a Portrait of her Child." Here is a pleasant picture:

Is it warm in that green valley,
Vale of childhood, where you dwell?
Is it calm in that green valley,
Round whose bournes such great hills swell?
Are there giants in the valley—
Giants leaving footprints yet?
Are there angels in the valley?
Tell me—I forget.

Answer, answer, for the lilies,
Little one, o'er top you much,
And the mealy gold within them
You can scarcely reach to touch.
Oh, how far their aspect differs,
Looking up and looking down!
You look up in that green valley—
Valley of renown!

Among the best-known and loved of Miss Ingelow's poems are those published collectively under the title "Songs of Seven," in which the seven ages of woman are told most musically from seven to seventy-seven. Her lyrical genius is perhaps best realized in the songs interspersed in "Brothers and a Sermon." Here is one:

Coo, dove, to thy married mate,
She has two warm eggs in her nest,
Tell her the hours are few to wait;
Ere life shall dawn on their rest;
And thy young shall peck at the shells, elate
With a dream of her brooding breast.

Coo, dove, for she counts the hours,
Her fair wings ache for flight;
By day the apple has grown in the flowers,
And the moon has grown by night;
And the white drift settled from hawthorn bowers,
Yet they will not seek the light.

Coo, dove; but what of the sky?
And what if the storm-wind swell,
And the reeling branch come down from on high
To the grass where daisies dwell,
And the brood beloved should with them lie,
Or ever they break the shell?

Coo, dove; and yet black clouds lower,
Like fate, on the far-off sea.
Thunder and wind they bear to thy bower,
As on wings of destiny.
Ah, what if they break in an evil hour,
As they broke over mine and me!

Miss Ingelow's most famous poem is "The High Tide on the Coast of Lincolnshire," which has been so widely copied in the popular anthologies that it need not be quoted here.

Besides the books already mentioned, she has published two other volumes of poems and several prose works, among which are: "Stories for Stories" (1864); "Poor Matt" (1866); "Stories told to a Child" (two series, 1866 and 1872); "A Sister's Bye-Hours" (1868); "Mopsy the Fairy" (1869); "Off the Skellings" (1872); "Lured to be Free" (1875); "Then John" (1876); and "Sarah de Berenger" (1880).

IOWA, a Western State, admitted to the Union Dec. 28, 1846, an area 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,913 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; and 1,911,896 in 1890. By the State census of 1895 it was 2,058,069. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Francis M. Drake; Lieutenant Governor, Matt Parrott; Sec-

redeemed warrants amounting to \$4,358,213.85, and paid as interest \$19,347.44, or a total of \$4,377,561.29, leaving balance cash on hand of \$36,672.96. There are warrants outstanding amounting to \$447,500.73, leaving a net deficit of \$410,827.77. The total estimated revenues of the next biennial period are \$4,047,672.96. The causes assigned for the deficit by the Auditor were the decrease in the assessed valuation of the State, which fell from \$566,529,971 in 1893 to \$555,061,274 in 1897; the increasing delinquency of some counties in the collection of taxes and in the remittance of dues to the State, the balances overdue on account of general revenue having risen from \$654,056.84 in 1893 to \$971,644.08 in 1897, while the amounts overdue from counties on account of State institutions have also increased more than half in the same time; the increasing needs of the State institutions for support and contingent expenses; the large appropriations to the institutions for buildings and improvements; and the cost of the special session of the Legislature and printing of the new code.

The State Treasurer made a statement to the Assembly showing by comparison with expenditures of other States that the finances of Iowa have not been extravagantly managed.

Education.—By the biennial report for 1896-'97 it is shown that the enumeration of persons between the ages of five and twenty-one is 727,694, an increase of 14,553. The enrollment is 546,836, a gain of 13,012; and the average attendance reported is 347,620. The number of schoolhouses is 13,744, of which 241 were built during the past year. The value of the schoolhouses is \$16,355,842, or \$710,299 more than in 1895.

The enrollment of the Normal School in 1897 was 1,441, a gain of more than 25 per cent. in two years. A new building was erected in 1895, yet the demands of the school for more room are as urgent as before it was built.

The report of the State University in November showed 1,331 students enrolled, an increase of 40 per cent. since 1892. In June the library was burned, with an estimated loss of \$82,000. The income of the university for its support for the biennial period amounted to \$264,525.85, of which \$113,775.83 was from tuition and fees and \$32,249.97 from investments. The remainder was from the State treasury. The expenditures for the same period amounted to \$270,262.16, of which \$104,091.22 was the cost of the collegiate department.

The Agricultural College graduated 55 seniors in November and conferred the degree of Master of Agriculture on United States Secretary of Agriculture Wilson. During the biennial term 105 were graduated in 8 courses; \$132,879 was expended in the operation of the college, \$30,292.14 on account of the experiment station, and \$74,128.72 in repairs and improvements.

A Baptist educational conference was held at Marshalltown, Dec. 21, to consolidate the Pella and Des Moines colleges. A vote was taken on the location of the institution, which resulted in 85 for Des Moines against 26 for Pella and 10 for other places.

The College of Law graduated 39 this year.

Pharmacy.—By the annual report of the Board of Commissioners of Pharmacy it is shown that there are 1,500 drug stores in Iowa; that at no time have there been so few complaints of the violation of the pharmacy law; that there have been assessed in fines for violations of the law \$8,850, of which \$6,069 has been paid into the county school funds; and that while the board has raised the standard of the pharmaceutical examinations, the percentage of successful applicants has not decreased. Notwithstanding this fact, at no time since the passage of the law placing the sale of liquors in the hands of

FRANCIS MARION DRAKE, GOVERNOR OF IOWA.

retary of State, George L. Dobson; Treasurer, John Harriott; Auditor, C. G. McCarthy; Attorney-General, Milton Rendley; Railroad Commissioners, G. W. Fickens, C. L. Davidson, and E. A. Dawson; Superintendent of Instruction, H. H. Sabin; Adjutant General, H. H. Wright; State Chemist, S. R. Maey; Mine Inspectors, J. A. Campbell, J. W. Miller, and Morgan Thomas; Bacteriologist, Eli Grimes; Labor Commissioner, W. E. O'Brien; Dairy Commissioner, W. K. B. Ardman; Fish Commissioner, G. E. Delevant; Chief Justice of the Supreme Court, L. G. Kimball; Associate Justices, Scott M. Ladd, C. T. Grainger, H. E. Decker, Josiah Given. All are Republicans, except Judge Kimball, who is a Democrat.

Finances.—According to the biennial report of the Auditor, on July 1, 1896, there was a cash balance of general revenue in the treasury amounting to \$312,857.41. During the biennial term ending June 30, 1897, there was paid into the treasury, on account of general revenue, \$4,101,376.84, which made a total of \$4,414,234.25 available for current expenses. During the same period the Treasurer

the pharmacists has there been so little complaint of violation of the law by pharmacists as at present.

State Institutions.—The following table shows the number of inmates in the State institutions during the biennial periods ending with 1895 and 1897:

INSTITUTIONS.	1895.	1897.
Hospitals for the insane	2,392	2,526
Feeble-Minded Children Institution	570	672
Industrial schools	593	651
Soldiers' Orphans' Home	496	498
Soldiers' Home	545	644
School for deaf	301	304
Anamosa penitentiary	550	613
Fort Madison penitentiary	441	526
College for Blind	158	118
Agricultural College	545	520
Normal School	1,049	1,414
State University	1,194	1,331
Totals	8,734	9,857

The number in 1880 was 5,703, so that the increase in attendance has been 72.8 per cent. The net cost of maintenance, exclusive of buildings and improvements, in 1888-'89 was \$798,721.90, and in 1896-'97 it was \$1,236,827.01, showing an increase in cost of 55 per cent. The appropriations for the institutions for 1895-'97, including those for buildings and improvements, amounted to \$882,648.53 over those for 1893-'95.

The report of the trustees of the hospital for the insane at Independence shows that in the past two years 131 patients have been discharged as incurable. During the period the population has increased 40, and it is now 986. The number of patients cured was more than one third of the whole number received.

The hospital for the insane at Clarinda has admitted 288 men and 193 women. Of these 450 have been supported by counties and 31 by the State.

The receipts for the period are \$241,761.58; disbursements, \$241,037.76.

There have been 1,587 patients in the Mount Pleasant Hospital during the last biennial period, 43 more than has ever been in the institution before.

The commissioners of the new Iowa Hospital for the Insane at Cherokee report that \$400,000 has been spent in putting in the foundations and completing the superstructure, and ask for an appropriation of \$270,000.

The number of insane persons who have no legal settlement in the State, or whose legal settlement can not be ascertained, during the biennial term cost the State \$117,344.04.

There were 698 children in the Institution for the Feeble-Minded in September. The \$112,000 granted by the Legislature to replace the building burned in 1896 has been used for a new fireproof building.

The industrial schools had 651 inmates at the close of the biennial period; the Orphans' Home, 498; the School for the Deaf, 304; and the College for the Blind, 118. There were 644 at the Soldiers' Home. The amount received by the home during the year was \$145,639.71; the total amount expended was \$136,050.78. The new hospital cost during the year \$40,583.33 for building and \$4,891.39 for furnishing. The action of the authorities of the home in retaining a part of the pensions of the inmates who have no relatives dependent upon them caused suits to be brought against them. A decision was rendered in the Supreme Court affirming the right of the commissioners to take the money. Then an action was brought in the Federal court on a charge of violating a Federal statute. The commissioners, commandant, and adjutant were arrested, but the cases against them were dismissed. A statement covering the year May 1, 1896, to May 1, 1897, shows that the whole amount paid for pen-

sions was \$43,339.10; the amount handed over to pensioners, \$27,858.93; to dependent relatives, \$10,214.04; to the State, \$5,266.13.

The penitentiary at Anamosa had 625 inmates at the close of the biennial period, and the one at Fort Madison 526. Both institutions have returned to the State treasury parts of the allowances of appropriations made for their support.

Fish.—The Fish Commissioner's report states that during the biennial period more than 500 poachers have been arrested, and fines aggregating \$6,458 have been collected. He calls attention to the fact that the fines collected by the department have aggregated \$458 more than the entire sum paid by the State during the two years for maintenance of the department. A large number of public and private bodies of water in the State have been stocked with fish, and many millions of fish have been gathered from the bayous of the Mississippi river at Sabula, carted over the State in the commission's car and dumped into the rivers and lakes.

Banks.—The quarterly report on the condition of the 205 State banks and 168 savings banks at the close of business Oct. 5, 1897, showed that since the report made at the close of business June 30, 1897, there was a wonderful increase in business and a general betterment of conditions. As compared with the last report there was an increase of deposits of \$5,048,631.91. The cash increased \$529,566.51. The bills receivable increased \$2,066,234.31. The net increase of assets was \$4,735,088.42. Following is the statement including both State and savings banks: Assets—bills receivable, \$51,557,821.90; cash and cash items, \$3,920,486.60; credits subject to sight draft, \$10,698,387.85; overdrafts, \$763,028.08; real and personal property, \$3,594,804.95; total, \$70,534,529.38. Liabilities—capital stock, \$16,212,200; due depositors, \$50,491,525.60; due banks and others, \$274,213.58; surplus, \$1,814,083.49; undivided profits, \$1,742,506.71; total, \$70,534,529.38. During the year ending June 30, 1897, five savings banks and one State bank were placed in the hands of receivers.

For receiving \$200 for deposit in the Bank of Waukon after it was insolvent the owner of the institution will have to serve five years in the penitentiary. The Supreme Court in October affirmed the decision of the lower tribunal and held that his guilt was very clear from the evidence.

Railroads.—The assessment of railroads, given out in April by the executive council, shows the number of miles to be 8,495, and the valuation \$44,494,431, which is a little more than \$113,000 above the valuation of 1896.

By the annual report of the Railroad Commissioners in June it appears that the earnings of the Iowa roads during the year amounted to \$41,841,292.55. The biennial report, in December, says: "In the opinion of the board one of the most important decisions relating to transportation that has been rendered was made by the Supreme Court of this State in the case of *Barris et al. vs. the Chicago, Burlington and Quincy Railroad Company*. The opinion refers to a railroad company making what was alleged to be an unreasonable freight charge, the court holding that the company is not relieved from liability to the shipper in treble damages therefor, although the rate charged was that fixed by the Railroad Commissioners. One of the cogent reasons, among others, for the enactment of the law giving the Board of Railroad Commissioners the right to establish reasonable maximum rates undoubtedly was to establish uniformity in rates and to prevent railway companies from discriminating against places or persons. In the opinion of this board this decision destroys and abrogates that element of the law.

Loan Associations.—In a decision rendered by the Supreme Court in October it is held that in winding up the affairs of a building and loan association a *pro rata* payment must be made to all stockholders regardless of notices of withdrawals.

Insurance.—The insurance report issued by the Auditor in July covers the year 1896. It shows that the premiums collected by all kinds of insurance companies amounted to \$7,128,680.28. The losses paid during the same period amounted to \$2,581,179.05. The per cent. of premiums returned to insured, therefore, in payment of losses was 37.3, leaving a gross profit to the companies of 62.7 per cent.

There has been a net increase of nine fire insurance companies and eight fire insurance associations over the number during the previous year.

Of the companies doing business in 1896 116 were fire, 38 life, 57 mutual benefit assessment, and 149 mutual fire, hail, tornado, etc.

Thirteen Iowa companies were barred this year from carrying on business in Minnesota.

In July the Minnesota commissioner withdrew the bar to the Iowa companies, and the trouble was at an end.

In reference to the law regarding taxation of premium incomes of foreign insurance companies (see under "Legislative Session," this article) Secretary of State Sherman wrote to the Governor: "It has been represented to this department by the minister of Switzerland at this capital that Iowa has laid a tax upon the premium income of European insurance companies greater than the tax imposed upon the premium income of American. As this operates to the disadvantage of Swiss insurance companies doing business in Iowa, the minister submits that it is a violation of the treaty rights of Swiss citizens as set forth in Article XI of the treaty concluded Nov. 25, 1850, between the United States and Switzerland. I have the honor to quote the pertinent provision of said Article XI, 'No higher impost, under whatever name, shall be exacted from the citizens of one of the two countries residing or established in the other, than shall be levied upon the citizens of the country in which they reside nor any contribution whatever to which the latter shall not be liable.'"

Products and Industries.—The Chief of the State Weather and Crop Service gave in July a report on farm statistics. The acreage was: Winter wheat, 194,466; spring wheat, 1,076,837; corn, 8,610,145; oats, 4,405,782; barley, 551,867; rye, 226,198; tame hay, 2,159,334; wild hay, 1,156,638; flax, 249,882; potatoes, 163,248. The number of cattle was 3,008,024; of horses, 1,220,068; of sheep, 464,791; of hogs, 5,598,691. The loss of hogs by cholera in 1896 was 2,192,592.

The value of the dairy products of the State in 1896 was \$41,573,000.

The biennial report of the mine inspectors shows the following totals of the coal-mining business in 1896 and 1897: Total expense of tracking, props, etc., at mines, \$681,993; average selling price per ton at mines, \$1.39; total value of product at mines, \$9,534,677; total amount paid miners, \$5,642,342; total amount paid all other employees, \$2,161,754; average price per ton paid for mining, 77 cents; average number of miners employed, 8,483; average number of all other employees, 2,987; number of tons of coal produced, 7,325,224; average number of mines in operation, 358.

The number of business failures in Iowa during 1897 was 308, with assets of \$1,774,588 and liabilities of \$2,688,441. In 1896 the Iowa failures were 391, with assets of \$4,470,547 and liabilities of \$5,392,576.

The Mulet Law.—This law, which was designed to reduce liquor selling to a minimum in counties

where the prohibition law had failed to work satisfactorily, seems to be successful, according to the answers given by county auditors to questions sent out from the office of the Traer "Star-Clipper." The questions were, in brief: 1. Is the mulet law in force in your county? 2. What financial benefits? 3. Is the experiment successful? The returns sent to the "Star-Clipper" show that the mulet penalty law is in force in 40 out of the 99 counties. The collection by counties aggregated last year \$878,441.84, to which must be added amounts collected by cities, making the total probably \$1,500,000 a year. Of the 40 auditors, 32 pronounce the mulet law an unqualified success. Only one auditor answers unqualifiedly "No" to the third question, and that is the auditor of Appanoose County, where there has been considerable friction on this question. The Supreme Court decided in February that the law does not apply to cities organized under special charters.

Semicentennial Celebration.—The fiftieth anniversary of the settlement of Pella was appropriately celebrated Sept. 1. The first settlers were from Holland, and were among the first foreigners to come into the State. It is estimated that the Dutch and their descendants in Iowa occupy an area about one fifteenth as large as Holland.

India Relief.—The final report of the India Relief Commission shows that a total of 79 cars containing 2,650,310 pounds of grain was given by the people of Iowa for the relief of the starving and plague-stricken inhabitants of India. The expenses of the commission have been almost nothing, and what has been spent was for postage, stationery, printing, and for drying corn. Not one cent was used for clerical or other personal work.

Legislative Session.—An extraordinary session of the Legislature was called to meet Jan. 19, in accordance with a concurrent resolution passed at the regular session in 1896. The subjects for consideration mentioned in the call were the report on the revision and codification of the laws and provision for repairing the damage to many of the buildings of State institutions. The work of the session virtually closed May 11, when a recess was taken to July 1, and the final adjournment took place July 2. This was done in order to postpone the time when the new code was to go into effect, a constitutional provision making it ninety days after the adjournment. The cost of the special session, including the printing, was \$170,497.53. Lieut.-Gov. Parrott presided over the Senate, and H. W. Byers was Speaker of the House.

Many salaries and allowances for expenses of State officers were reduced, and provision was made for increase of revenue. The total net gain to the State treasury was declared by the Speaker to be about \$165,000 a year.

The mulet law was passed with an amendment allowing the manufacture of liquor in the State. There was much opposition to this bill, and many petitions against it were sent to the Legislature. The manufacture of liquor may not be carried on in any city of less than 5,000 unless 50 per cent. of the voters at the preceding election have signed a statement of consent, and it is permitted only in towns that have the mulet saloon. The mulet law is made applicable to cities of over 2,500 and under 5,000 when a petition is signed by 80 per cent. of voters.

The sum of \$112,000 was appropriated for rebuilding the Institution for Feeble-Minded Children, at Glenwood.

Among other changes in the laws the more important are summed up by the "State Register" as below:

Revenue laws: All property is to be listed at its

actual cash value and assessed at 25 per cent. of such value. Professional libraries are exempt only to the amount of \$300. The homestead of a Union veteran is exempt to the amount of \$800 if he is dependent upon his labor and becomes unable to work; and also that of a widow of such soldier if she owns no other real property. The amount of tax that can be levied is limited to the amount that might have been produced on the average of assessed valuation for the years 1896 and 1897. The assessed value of property may be increased, but there can be no increase of taxes. Private bankers and all corporations must make itemized statements to the assessors of their assets and liabilities, so that the stock may be assessed at its actual cash value. Stocks of State and savings banks are to be assessed to the banks, and the tax paid by them. Shares in building and loan associations are to be taxed to the individual stockholder in the county of his residence. Telegraph and telephone companies are required to make a much fuller statement than under the old law. Each taxpayer is required to make a sworn statement of his moneys, credits, and debts, and penalties are prescribed for failure of officials to assess justly. All insurance companies organized outside the United States are to pay 3½ per cent. on gross premiums. Stock insurance companies organized in the United States outside of Iowa pay 3½ per cent. on gross premiums. Iowa companies and all mutual assessment companies pay 1 per cent. on their gross premiums. In addition to this Iowa stock companies pay tax as other corporations on their stock.

Other laws concerning insurance companies are as follow: Natural premium companies are forbidden to use that term and must be known as "stipulated premium" companies. Fire insurance companies can not rebuild when the loss is total. No agent not a resident of Iowa may write insurance in the State.

Laws concerning banks: Savings banks are authorized to rediscount—that is, to borrow money to pay depositors. A reserve fund is required in savings banks of 15 per cent. of the commercial and 8 per cent. of the savings deposits in towns of less than 3,000. In other cities the cash reserve shall equal 20 per cent. of the time and 8 per cent. of the savings deposits. State bank reserves in towns of less than 3,000 must be 10 per cent.; in other cities or towns it must be 15 per cent. of the deposits. It is made embezzlement for any officer of a bank to use its funds or borrow except on order of the board of directors. Fraudulent banking is to be punished by fine of \$10,000 and ten years in the penitentiary.

Building and loan associations may not charge more than 12 per cent. interest on foreclosure of mortgages.

Several laws were made affecting the powers of the executive council. The expenditures of the State institutions are to be strictly supervised, and annual reports published. The taking of the State census is reduced to the enumeration of the males and females, voters and militia. The law giving the executive council the right to expend money under emergencies is repealed.

Counties are authorized to issue bonds payable at a time stated, not exceeding twenty years. The right to payment for animals killed by dogs is repealed.

Laws for regulating the practice of medicine prohibited osteopaths from practicing, and required Christian Scientists to pass examination for certificates from the State Board of Health. Itinerant physicians must pass the examination and pay annual license fees of \$250 each. State certificates are required of dentists unless they have practiced seven years in one place.

Several changes were made in the prescribed forms of election ballots. No candidate's name may appear more than once on any ballot.

Wills executed in other States in accordance with their laws are to be admitted to probate in this State.

Administration may be granted upon the estate of one whose whereabouts is unknown for seven years.

The husband or wife is made a competent witness in an action by one against a third party for alienating the affections of the other. Witnesses may be compelled to give incriminating testimony in gambling cases or illegal sales of liquors, but such testimony can not be used against the witness. Common-law arbitrations are made of the same force and effect as contracts.

The formation of school libraries is encouraged by the authorization of an expenditure not to exceed \$25 annually for each schoolroom, to be paid out of the contingent fund.

To be ranked as first class, cities must have 15,000 or more inhabitants; second class, 2,000 to 15,000. Municipal corporations of less than 2,000 shall be deemed towns, and unincorporated towns shall be called villages. Town officers are to be elected for two years instead of one. The powers of cities and towns as to taxation have been revised, and the amount of tax that may be levied for each purpose is prescribed—as 3 mills for a curbing fund, 5 mills for a city improvement fund, 5 mills for operating waterworks, 2 mills for constructing or purchasing waterworks, 5 mills for lighting, etc.

Some changes were made in the fish and game laws. All harmless birds are specially named in a list of birds that are not to be killed at any season. Blue jays and English sparrows are not included in the list. October and November constitute the open season for the killing of quail. A closed season is provided for timber squirrels between Jan. 1 and July 1.

Directors and officers of a corporation are held personally liable for all debts of the corporation if it exceeds its limit of indebtedness, or if they pay dividends which deplete its capital stock, or commit any other fraud forbidden by law. All foreign corporations other than manufacturing or mercantile are required to file their articles and become domesticated and pay a State incorporation fee. This is retroactive back to 1886.

Among miscellaneous enactments were these:

Making Washington's Birthday and all general election days legal holidays.

Abolishing the Soldiers' and Sailors' Monument Commission.

Fishing is permissible on Sunday.

Baseball and football on Sunday are permissible so long as no private family or place of worship is disturbed.

The wild rose is made the official State flower.

An amendment to the Constitution regarding the basis of representation in the Legislature was passed and referred to the next General Assembly for action.

There were charges that dishonesty and extravagance in the management of certain State departments and institutions were largely responsible for the deficit in the State finances, and investigations were ordered. The chief scandal was in connection with the taking of the State census. The investigating committee found that it cost over \$128,000. Of this, \$64,030.44 was expended after it reached the office of Secretary of State. The clerical work in the office of the Secretary of State cost \$37,000. The committee estimated that it could have been done for \$12,000. The committee made two charges:

First, that some of the clerks were carried on two pay rolls at the same time, receiving \$3 or \$4 a day from the census fund, while drawing pay as clerks in the office of the Secretary of State in sums ranging from \$25 to \$65 a month; and, second, that "a larger number of clerks employed on the census, on one pretext or another, through fear of dismissal, were compelled to contribute of their earnings sums varying from \$10 to \$30 a month to the then Secretary of State.

Investigation was also made of charges against the State printer and binder. The report of the majority of the committee said, in part: "The prices charged for both composition and press work on various kinds of blanks has been exorbitant in the extreme, varying from two to twenty times as much as expert printers have testified that the work could be done for in open competition, and in the opinion of your committee there are more than a hundred instances where these charges have been unwarranted under the law and the bills should not have been paid." The minority report expressed belief that the investigation had been "limited in scope, partial and unfair in its manner of conduct," and asked for another more complete and thorough.

A bill was prepared by the committee and passed which fixes the prices the State printer and State binder shall receive for their work, after the terms of the present officers shall have expired.

Hon. Rudolph Lehfeldt, a State Senator for the past four years, returned his salary for the extra session of the Legislature to the State. The sum returned was \$678, the amount paid to the members for their labors in revising the code.

Publication of the Code.—The Legislature elected Chancellor Emlin McClain annotator of the revised code. He had made annotations to the former code which had been published under the title "McClain's Annotated Code and Statutes of Iowa," by a firm in Chicago. This firm now applied to the Federal court for injunctions against him and against the State printer to restrain them from publishing the new code with his annotations, on the ground that the notes had been clipped from the work published by them and formed the greater part of those used in the new, and that in a clause in the contract made with them in 1886 the editor had agreed not to "prepare, edit, or cause to be published in his name or otherwise, anything which may injure or interfere with the sale of the aforesaid book," the last two words referring to McClain's annotated code. The injunction was refused on the ground, apparently, that the damage to the Chicago publication was done by the revision of the code.

Political.—An election was held Nov. 2 to fill the offices of Governor, Lieutenant Governor, Judge of the Supreme Court, Superintendent of Public Instruction, Railroad Commissioner, and members of the State Legislature. There were six tickets in the field, a fusion ticket on which the free-silver forces were united, and Republican, National Democratic, People's, Prohibition, and Socialist-Labor tickets.

A free-silver conference was held in May, and, according to an agreement made there, the Democrats, Republicans, and Populists who were in favor of free coinage held conventions at the same time, June 23, in Des Moines. All nominated the same ticket, on which each party was represented. Each convention adopted its own platform, all agreeing in demanding free coinage of silver; also in arraighing the Republican party for extravagance and mismanagement in State affairs, and for legislation favoring corporations. The "antifusion law" passed by the last Legislature was denounced in the Populist platform. The Democratic and Populist resolu-

tions contained the following on the so-called "Temple amendment":

"We demand that the statute in operation in Iowa for more than a generation, holding every railroad corporation to strict liability for negligent injury to employees through the acts of agents or other employees, shall be restored according to its original beneficent spirit."

Fred. E. White was nominated for Governor, B. A. Plummer for Lieutenant Governor, L. G. Kinne for Justice of the Supreme Court, G. F. Rhinehart for State Superintendent, and S. B. Crane for Railroad Commissioner. A delegation of "Middle-of-the-Road" Populists withdrew from the convention.

The National Democrats held a State convention at Des Moines, July 7. The resolutions called for economy in public expenditures, and a board of control for the State institutions, and condemned the prohibitory and mulct laws. Following was also among the declarations of the platform:

"The doctrines of paternalism, class legislation, and debased coinage, to which each of the three contracting parties making up the free-silver, populist triple alliance in this State have recently pledged themselves in their several platforms, are as abhorrent to every true Democrat when advocated by Populists under the name of Democracy as when taught by Republicans. Democracy is a necessary foe of each, and we repudiate them as unworthy of the support of every true Democrat."

The ticket follows: For Governor, John Cliggitt; Lieutenant Governor, S. H. Mallory; Supreme Judge, W. I. Babb; Railroad Commissioner, Peter A. Dey; State Superintendent, J. B. Knoefler.

The Prohibitionists met in convention at Des Moines, July 27, with about 300 delegates. The following were among the resolutions:

"We declare that the so-called regulation by license, mulct, or taxation whereby a revenue is derived from this traffic is contrary to good government, is complicity with the liquor crime, and corrupting the public conscience.

"Experience teaches us that any political party not openly opposing this traffic will court the power of the liquor interests, and will shape legislation to secure or retain this support.

"We demand that every citizen of the United States shall be allowed to cast a free and unrestricted ballot at all public elections, and that such ballots shall be returned as cast, and that this sovereign right shall be denied to no citizen on account of sex."

The ticket nominated was: For Governor, Dr. E. L. Eaton; Lieutenant Governor, M. W. Atwood; State Superintendent, Mrs. M. H. Dunham; Supreme Judge, N. T. Hellyer; Railroad Commissioner, A. U. Coates.

It was discovered that Dr. Eaton had not been a resident of the State long enough to be eligible under the law, and the name of S. P. Leland was substituted.

The Republican convention met at Cedar Rapids, Aug. 18. The resolutions reaffirmed the principles of the party, and praised the national and State administrations. On the railroad question, the Temple amendment, the following declaration was adopted:

"We believe in the justice of those laws heretofore enacted by Republican legislatures securing to employees of railways the right to indemnity for personal injuries resulting from negligence, and we favor such legislation as may be found necessary to perfect such right and prevent its impairment or nullification in letter or spirit."

The ticket was as follows: For Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Supreme Judge, Charles M. Waterman; Railroad Com-

missioner, C. L. Davidson; Superintendent of Public Instruction, Richard C. Barrett.

The Socialist-Labor party nominated J. M. Klemmer for Governor.

The "Middle-of-the-Road" Populists held their State convention in Des Moines, Aug. 19. The platform declared in favor of the principles of the national platforms of the party adopted at Omaha and St. Louis, and contained also the following:

"We declare that through direct legislation as embodied in the principles of the initiative and referendum, the people will find relief from wicked laws which now distress them, and until they can so vote directly trusts and monopolies will continue to unduly influence our legislation and courts."

The ticket nominated was: For Governor, Charles A. Lloyd; Lieutenant Governor, D. L. Perkins; Judge Supreme Court, J. A. Lonsburg; Superintendent of Instruction, William Blain; Railroad Commissioner, L. H. Griffith.

The election resulted in the success of the Republican ticket. The vote for Governor stood: Shaw, Republican, 224,501; White, Fusion, 194,514; Leland, Prohibitionist, 8,327; Lloyd, Populist, 5,269; Cliggitt, National Democrat, 4,268; Kremmer, 881. In the Legislature of 1898 the House will be made up of 62 Republicans and 39 Democrats, and the Senate 39 Republicans and 11 Democrats.

ITALY. a constitutional monarchy in southern Europe. The throne is hereditary in the line of Savoy by male descent in the order of primogeniture. The reigning King is Umberto I, born March 14, 1844, the eldest son of Vittorio Emanuele II, of Sardinia, the first King of united Italy. The heir apparent is Vittorio Emanuele, Prince of Naples, born Nov. 11, 1869. The legislative power is vested in a Parliament consisting of a Senate and a House of Deputies. The Senate is composed of the princes of the blood royal and 300 members nominated for life from among men who have rendered eminent services to the nation, or have filled certain positions, or pay 3,000 lire annual taxes. The Chamber consists of 508 members, elected by the direct suffrage of all citizens able to read and write and paying 20 lire a year of direct taxes. The Council of Ministers constituted on July 14, 1896, was composed as follows: President of the Council and Minister of the Interior, Marchese Antonio Starrabba di Rudini; Minister of Foreign Affairs, Marchese E. Visconti Venosta; Minister of the Treasury, Prof. Luigi Luzzatti; Minister of Finance, Ascanio Branca; Minister of Justice and of Ecclesiastical Affairs, Giacomo Costa; Minister of War, Lieut.-Gen. Luigi Pelloux; Minister of Marine, Benedetto Brin; Minister of Commerce, Industry, and Agriculture, Conte Francesco Guicciardini; Minister of Public Instruction, Prof. Luca Emmanuele Giannone; Minister of Public Works, Giulio Prinetti; Minister of Posts and Telegraphs, Emilio Sinesio.

Finances.—The receipts of the treasury for the year ending June 30, 1896, were 1,839,753,509 lire, and the expenditures were 1,841,386,659 lire, leaving a deficit of 1,633,150 lire. For the year ending June 30, 1897, the ordinary receipts were estimated at 1,649,871,782 lire, the extraordinary receipts at 35,401,970 lire; total, 1,685,273,752 lire. The ordinary expenditures were estimated at 1,571,079,216 lire, the extraordinary expenditures at 103,575,131 lire; total, 1,674,654,347 lire. The revenue from railroads and other property is 90,869,222 lire; from direct taxation, 482,821,800 lire, including 287,706,800 lire from the income tax, 106,615,000 lire from the land tax, and 88,500,000 lire from the tax on buildings; from taxes on transactions, 214,892,900 lire, including 68,500,000 lire from stamps, 58,000,000 lire from registration, 19,617,900 lire from railroad receipts, 10,500,000 lire from commercial companies

and banks, 37,500,000 lire from succession duties, 6,300,000 lire from mortuaries and sales, 7,300,000 lire from a duty on mortgages, 6,500,000 lire from various concessions, and 675,000 lire from consular fees; from customs, monopolies, and excise, 668,565,000 lire, including 188,000,000 lire from the tobacco monopoly, 73,700,000 lire from the salt monopoly, 45,500,000 lire from duties on the manufacture of beer, alcohol, mineral waters, gunpowder, and sugar, 65,500,000 lire from the lottery, 51,865,000 lire from excise duties, and 244,000,000 lire from customs duties; from public services, 86,805,700 lire, including 53,200,000 lire from the post office, 13,100,000 lire from telegraphs, 1,300,000 lire from the cadastral survey, 3,020,000 lire from assay stamps, 7,000,000 lire from scholastic fees, 5,405,200 lire from prisons, 1,560,000 lire from fines, and 2,160,500 lire from various services; from repayments, 22,261,523 lire; from various departments, 18,267,000 lire; from the rent of domains, 15,510,555 lire; from interest on invested funds, 19,093,634 lire; communal contributions of Rome and Naples, 27,960,937 lire; miscellaneous receipts, 2,823,681 lire; from railroad construction account, 419,941 lire; effective extraordinary receipts, 9,253,467 lire; from sales of domains, 2,418,000 lire; from sales of ecclesiastical lands, 2,810,000 lire; from redemption of lands, etc., 9,617,274 lire; from recovery of debts, 4,000,000 lire; miscellaneous extraordinary receipts, 6,883,288 lire. The expenditures are: Interest on the consolidated debt, 473,638,387 lire; interest on extinguishable debt, 62,655,634 lire; annuity for the purchase of the railroads of upper Italy, 26,964,857 lire; floating debt, 116,313,459 lire, including 18,062,197 lire for interest on treasury warrants, 15,525,807 lire due to railroad companies, 78,972,995 lire on railroad guarantees, and 3,753,000 lire on accounts current; pensions, 80,850,000 lire; civil list and appanages, 16,050,000 lire; Senate and Chamber of Deputies, 2,155,000 lire; general expenses of the Ministry of the Treasury, 9,766,210 lire; various services, 1,021,260 lire; reserve for unforeseen expenses, 3,500,000 lire; service of the amortizable debt, interest, and domains, 21,726,542 lire; amortization and other extraordinary expenditures, 38,479,982 lire; administration of the Ministry of Finance and the cadastral survey, 16,415,645 lire; cost of collecting revenues and of monopolies and lottery, etc., 145,952,225 lire; extraordinary expenditures of the Ministry of Finance, 3,682,571 lire; Ministry of Foreign Affairs, 9,392,100 lire for ordinary and 23,000 lire for extraordinary purposes; Ministry of Grace and Justice, 33,061,030 lire for ordinary and 27,000 lire for extraordinary purposes; Ministry of Public Instruction, 41,774,307 lire for ordinary and 623,891 lire for extraordinary purposes; Ministry of the Interior, 56,767,743 lire for ordinary and 2,368,701 lire for extraordinary purposes; Ministry of Public Works, 25,982,524 lire for ordinary and 50,974,473 lire for extraordinary purposes; Ministry of Posts and Telegraphs, 56,404,679 lire for ordinary and 60,016 lire for extraordinary purposes; Ministry of War, 235,598,283 lire for ordinary and 980,000 lire for extraordinary purposes; Ministry of Marine, 96,899,646 lire for ordinary and 4,275,000 lire for extraordinary purposes; Ministry of Agriculture, Commerce, and Industry, 8,446,348 lire for ordinary and 2,080,497 lire for extraordinary purposes. The total expenditure on account of the debt was 590,974,378 lire for interest and 5,248,420 lire for amortization.

The Minister of Finance stated on Dec. 1, 1897, that the returns for the financial year 1897 showed a net surplus of 3,800,000 lire, of which 2,000,000 lire were devoted to naval construction. For 1898 he anticipated a surplus of 7,160,000 lire after providing for an increase of nearly 14,000,000 lire in military and 4,000,000 lire in naval expenditure.

In 1899 there would probably be a surplus of 12,000,000 lire, possibly 21,000,000 lire, which could be devoted to the reduction of the paper currency, an operation calculated to diminish the gold premium. The equilibrium of the budget in these three years had been attained without new imposts, notwithstanding the losses involved in the revision of the land tax, and to consolidate this situation Signor Luzzati thought it necessary to check the increase of pensions, which otherwise would soon reach 100,000,000 lire a year, and gradually reduce them to 62,000,000 lire, to reduce African expenses, on which 2,300,000 lire would be saved by the transfer of Kassala, to 5,000,000 lire, and to transform and diminish the treasury debt, substituting registered bonds for 100,000,000 lire of the 4-per-cent. treasury bills, which amounted at the end of 1897 to 265,000,000 lire, and gradually paying off 90,000,000 lire more.

The Army.—The obligation to serve in the army begins at the age of twenty and lasts nineteen years, two or three years with the colors, or six years in the reserve of the permanent army, three or four years in the mobile militia, and seven years in the territorial militia. The present peace effective was fixed for 1897 at 205,000 men. By the law of July 12, 1896, the contingent called to serve with the colors was fixed at 98,000 men, and all others capable of bearing arms and not required for the support of families were placed in the second category, which receives from two to six months of military instruction. By the law of June 28, 1897, there are in time of peace 12 *corps d'armée*, each comprising 2 divisions, except one corps of 3 divisions, distributed in 88 military districts. The effective strength of the army in 1897 was as follows: General staff, 290 officers; 340 battalions of infantry and 98 district companies, 8,017 officers and 143,750 men; 144 squadrons and 24 cavalry depots, 960 officers and 23,590 men; 207 field batteries, 76 companies of fortress artillery, and 40 companies of train, 1,739 officers and 34,980 men; 64 companies of engineers and 10 companies of train, 597 officers and 8,969 men; 12 sanitary companies, 585 officers and 2,593 men; 12 commissariat companies, 325 officers and 2,036 men; administrative officers, 1,185; 12 legions of carabinieri, 551 officers and 23,945 men; military schools, 1,388 men; veterinary corps, 191 officers; total, 14,438 officers and 241,151 men, not including the African troops. The number of horses and mules was 49,304. In case of war armies will be formed, each consisting of 3 or 4 army corps and 1 division of cavalry. Each *corps d'armée* comprises 32 officers and 209 men at headquarters, 2 or 3 divisions of infantry, 1 regiment of *bersaglieri*, 2 divisions of artillery, with 48 guns, 1 regiment of cavalry, 1 artillery park, 1 park of engineers, 1 park of telegraph troops, 1 section of sanitary troops, 1 section of commissariat troops, several columns of provisions, and a reserve commissariat park. The total war effective of the army consists of 14,438 officers with the colors, 9,890 officers on leave from the permanent army or with the mobile militia, 4,732 officers of the territorial militia, 1,279 officers in the auxiliary services, and 6,086 officers of the reserve, making the total of officers 36,425; 241,151 rank and file serving with the colors in the permanent army and 501,527 in the permanent army on leave of absence; 349,204 rank and file of the mobile militia; and 296,386 in the territorial army; total war strength, 1,424,633 officers and men, not including 368,898 in the second category, who have received a partial military training, and the third category, consisting of 1,506,775 men with scarcely any military instruction, who are inscribed in the territorial militia.

Gen. Pelloux's army-reorganization bill was

adopted by the Chamber by 163 votes against 83 and passed the Senate on June 27 by 68 votes to 27. The chief feature is the retention of 12 army corps as against the proposal made by Gen. Ricotti in 1896 to reduce them to 10. Under Gen. Pelloux's scheme the average peace strength of each company will be raised from 83 men to 88, whereas Gen. Ricotti proposed to fix the minimum peace strength at 110 men in order to improve the quality of the troops in case of mobilization. The ordinary army estimates for the financial year 1898 are 230,000,000 lire. The extraordinary estimates are 15,750,000 lire, of which 9,500,000 lire are for 100,000 new small-bore rifles needed to complete the armament of the regular infantry and the mobile militia, and, 1,500,000 lire are devoted to the improvement of the frontier defenses.

The Navy.—The Italian navy contains the barbettes ships "Lepanto" and "Italia," of 15,900 and 15,654 tons displacement, 19 inches of armor on the sides, each carrying 4 17-inch guns, besides smaller ones, the former having a speed of 18.4 and the latter of 17.8 knots; the "Re Umberto," "Sardegna," and "Sicilia," of 13,893, 13,860, and 13,298 tons, with 14-inch armor, carrying 13.4-inch guns in their barbettes, with a powerful secondary battery, and capable of making from 18½ to 20 knots; the "Lauria," "Andrea Doria," and "Francesco Morosini," of over 11,000 tons, having 18-inch plates and a similar armament, with a speed of 16 to 17½ knots; the turret ships "Dandolo" and "Duilio," 15-knot vessels, with 22-inch armor, carrying the one 4 10-inch and the other 4 17.7-inch guns in the central citadel; the old ironclads "Palestro" and "Affondatore"; and, in process of construction, the "Ammiraglio di Saint-Bon" and "Emmanuele Filiberto," of 9,800 tons, with 10-inch armor, carrying 4 10-inch guns in barbettes, and designed to steam 18 knots. Of cruisers there are 4 of 6,500 and 6,840 tons, armed with 10-inch and 6-inch guns, and engaged for a speed of 20 knots, and 5 more between 4,000 and 5,000 tons, with a speed of 13 knots and a strong armament of 6-inch and lesser guns. The torpedo fleet consists of 6 first-class and 94 second-class torpedo boats, each armed with 2 guns, 38 of the third class, and 6 of the fourth class. In the new battle ships now building the protection is better than in the monster ironclads. The 10-inch belt of steel armor extends all the way round, and the heavy guns are coupled at each end of the armored redoubt containing the secondary armament. It is intended to replace the 120-ton guns in the earlier battle ships with lighter ones. The *personnel* of the Italian navy in 1896 consisted of 1,549 officers, 18,822 noncommissioned officers, marines, gunners, stokers, pilots, and seamen, and 4,189 marines and gunners on shore; total, 24,560.

The vessels in course of construction in 1897 were, in addition to the 2 first-class battle ships, 4 of the second class, 2 small cruisers, and a number of torpedo boats and torpedo catchers. The organic law of 1887 contemplated a navy of 28 new battle ships, supplemented by 61 torpedo boats, to be built in eight years at a cost of 105,000,000 lire. The financial condition of the Government has prevented this programme from being carried out. The ordinary naval estimates for the financial year 1898 amounted to 88,300,000 lire. Admiral Brin asked for an extraordinary credit of 7,000,000 lire, making up a total sum of 26,000,000 lire to be spent on new construction. The Chambers approved the proposals for the resumption of new construction and for restoring the efficiency of the existing fleet, which had suffered much during the period of financial depression from the reduction of the *personnel*, economy in fuel, and the decrease of expenditure on maintenance. The increase voted for 1898 was

7,500,000 lire, making the total expenditure 101,000,000 lire. In succeeding years the Government intended spending 10,000,000 lire more on the navy than the average annual naval budget of the past few years. Some of the Deputies proposed an internal loan to enable the Government to carry out as speedily as possible the whole programme of 1887, but the Minister of Marine rejected this plan. There was a pressing need of swift torpedo-boat destroyers, some of which were already under construction. The country was generally pleased with the increased credit for construction, hailing it as a sign that the decadence of the navy would be arrested. The hope then inspired was strengthened by the launch of the cruiser "Varesse" at Leghorn in July and of the "Garibaldi" at Genoa in September. The "Garibaldi," belonging to the new type of warships of medium size in the construction of which the Italians excel, has a displacement of 6,840 tons, an extreme length of 326 feet, a breadth of 60 feet, and an average draught of 23 feet. She is protected by a 7-inch belt, 34 inches wide at the prow and 47 inches at the stern. Her armament will consist of 2 9.75-inch 80-ton guns, 6 4.75-inch and 10 12-ton or 5.75-inch quick-firers, and the usual complement of Maxims, mitrailleuses, and torpedo tubes. The engines, of 13,000 horse power, will give a normal speed of 19 knots. The cost of the vessel is 14,000,000 lire. On Sept. 29 the "Emmanuele Filiberto," the first example of the new Italian type of battle ship, was launched at Castellamare. Her dimensions are 342 feet over all, with an extreme breadth of 68½ feet and a mean draught of 24½ feet. The hull is of steel throughout, with a double bottom rising to the level of the deck in the vital parts, while from stem to stern extends an armored deck varying from 1.5 to 2.7 inches in thickness. Harveyized steel armor protects the guns, while the turrets fore and aft are covered with 7-inch armor. The armament consists of 4 9.9-inch guns, 2 in each turret, 8 5.9-inch quick-firers in a central citadel, and 10 small-bore quick-firing guns distributed fore and aft, with 4 torpedo ejectors.

Commerce and Production.—The land of Italy is very much subdivided, and the system of peasant proprietorship is rapidly gaining ground. In some places cultivation on shares is prevalent. Rented lands are taken on nine-year leases in upper Italy and in southern Italy for two, four, or six years. Agriculture is carried on in a primitive fashion, and the severe competition of foreign wheat has caused distress among the peasantry and a deterioration of the land, which is not properly fertilized after being cropped year after year with corn and hemp. The wholesale deforesting of the country, especially in southern Italy, renders the rainfall deficient and deprives the farmer of the protection of birds against the common insect pests. The wholesale trapping of the migratory birds to supply the dinner tables of London and Paris has caused a serious diminution in these varieties in several countries besides Italy. Silk culture is carried on in all parts of Italy, employing 550,048 persons in 1895, while 172,000 were employed in the manufacture of silk. The wool product in 1894 was valued at 16,683,000 lire. The yield of the forests, the most important of which are subject to Government regulations, is worth 88,000,000 lire a year; production of cereals, fibers, wine, fruit, etc., is valued at 2,805,500,000 lire per annum; that of animals, wool, milk, cocoons, etc., at 1,424,000,000 lire. The exports of minor agricultural products, such as vegetables, mushrooms, poultry, and eggs, amount to 80,000,000 lire a year. The mineral products include sulphur, zinc ore, lead, iron, copper, and manganese ores, anthracite coal, mercury,

silver, gold, antimony, salt, graphite, and boric acid, and their total value is 52,000,000 lire a year, nearly half of which represents sulphur. There are 22,000 boats engaged in the fisheries, which employ over 70,000 men. The value of the fishery products is over 16,000,000 lire a year, including tunny, anchovies, coral, sponges, etc.

The commerce with the different foreign countries in 1896 is shown in the following table, which gives in lire the values of the imports of merchandise from, and of the exports of domestic produce and manufactures to each one:

COUNTRIES.	Imports.	Exports.
England	255,200,000	105,000,000
France	183,700,000	153,100,000
Germany	144,800,000	100,000,000
Austria-Hungary	131,500,000	121,400,000
Switzerland	44,500,000	170,300,000
Russia	118,800,000	12,800,000
Belgium	27,900,000	18,500,000
Turkey in Europe	22,600,000	10,500,000
Spain	9,500,000	12,500,000
Netherlands	5,500,000	11,200,000
Roumania	3,000,000	1,300,000
Greece	3,500,000	5,500,000
Sweden and Norway	7,400,000	4,300,000
Malta	6,000,000	8,500,000
Rest of Europe	3,100,000	6,400,000
Turkey in Asia	3,000,000	3,000,000
British India	66,700,000	25,500,000
Rest of Asia	17,300,000	1,500,000
Egypt	5,500,000	14,300,000
Rest of Africa	9,000,000	14,000,000
United States and Canada	121,000,000	86,500,000
Brazil	5,000,000	13,500,000
Argentine Republic	27,400,000	57,400,000
Rest of America	10,400,000	19,800,000
Australasia	2,300,000	2,000,000
Total	1,173,200,000	1,052,100,000

In the special commerce for 1896 the importations of merchandise were valued at 1,173,200,000 lire, and of precious metals at 10,300,000 lire; special exports of merchandise, 1,052,100,000 lire; exports of precious metals, 19,900,000 lire; transit trade, 100,200,000 lire. The principal imports were cereals for 137,000,000 lire, cotton for 112,900,000 lire, silk for 91,500,000 lire, coal for 85,700,000 lire, hides and skins for 48,500,000 lire, iron for 44,400,000 lire, machinery for 36,800,000 lire, cattle for 35,000,000 lire, timber for 34,500,000 lire, chemical products for 34,200,000 lire, wool for 31,900,000 lire, woolen tissues for 29,700,000 lire, fish for 29,300,000 lire, coffee for 27,700,000 lire, colors for 27,500,000 lire, tobacco for 22,500,000 lire, silk tissues for 21,800,000 lire, sugar for 20,800,000 lire, seeds for 17,600,000 lire, jewelry and precious stones for 17,200,000 lire, cotton tissues for 16,600,000 lire, petroleum for 11,000,000 lire, and linen yarn for 11,000,000 lire. The principal articles of exportation were silk for 288,700,000 lire, olive oil for 54,900,000 lire, wine for 51,500,000 lire, wood and straw manufactures for 47,000,000 lire, hemp for 37,400,000 lire, lemons for 33,100,000 lire, silk tissues for 33,100,000 lire, eggs for 29,000,000 lire, coral goods for 27,600,000 lire, sulphur for 27,300,000 lire, cotton tissues for 25,400,000 lire, fruits for 23,400,000 lire, hides and skins for 21,100,000 lire, cattle for 20,000,000 lire, almonds for 20,700,000 lire, marble and alabaster for 14,600,000 lire, tartar for 14,000,000 lire, colors for 13,900,000 lire, cheese for 12,400,000 lire, poultry for 12,100,000 lire, rice for 10,800,000 lire, butter for 10,600,000 lire, and zinc for 9,500,000 lire. The export of silk has increased in ten years more than 25 per cent., and that of wine about 12 per cent. The foreign trade received a severe shock from the tariff war with France, the exports to which fell off nearly two thirds between 1887 and 1894, and the total trade suffered for four years a loss of 12½ per cent.; but this loss in the past four

years has more than been made up, the exports in 1896 amounting to over $7\frac{1}{2}$ per cent. more than in 1887. The wine exports to France, which amounted to 42,000,000 lire in 1887, have ceased, but Austria, South America, and Switzerland now take the wine. The loss of the olive-oil trade with France has been a real gain, as Italy now ships the oil direct to the former customers of France. The export trade in cotton goods has grown up in ten years. The home trade is steadily increasing, as is shown by the fact that with a large increase in the population the imports of agricultural produce do not sensibly increase, while those of manufactured articles have decreased 50 per cent. in ten years, and the imports of raw materials have increased in the same ratio.

Navigation.—The number of vessels entered at Italian ports during 1896 was 100,615, of 26,794,395 tons, of which 85,187, of 18,403,319 tons, were engaged in the coasting trade; the number cleared was 100,158, of 26,677,952 tons, of which 84,561, of 18,063,669 tons, were coasting vessels. Of 15,428, of 8,391,004 tons, entered from distant ports, 8,874, of 2,076,219 were Italian, and 6,554, of 6,314,785 tons, were foreign vessels. The number entered with cargoes in ocean commerce was 12,805, of 7,770,865 tons, and the number cleared with cargoes was 11,106, of 5,789,850 tons. The total number of steam vessels entered was 33,940, of 23,817,051 tons, of which there were engaged in ocean commerce 1,546 Italian steamers, of 1,539,806 tons, 5,226, of 6,166,733 tons, were foreign steamers in the ocean trade, 23,144, of 11,963,828 tons, were Italian coasting steamers, and 4,024, of 4,146,684 tons, were foreign coasting steamers.

The Italian merchant fleet in 1896 numbered 6,166 sailing vessels, of 555,569 tons, and 345 steamers, of 220,508 tons; total, 6,511 vessels, of 776,077 tons.

Communications.—The total length of railroads in operation Jan. 1, 1896, was 9,655 miles.

The postal traffic in 1895 comprised 161,881,000 internal, 37,997,000 foreign, and 2,376,000 transit letters; 63,644,000 internal, 5,733,000 foreign, and 296,000 transit post cards; 234,835,000 internal, 21,227,000 foreign, and 2,000 transit printed inclosures and circulars; and 11,324,000 money letters and post-office orders in the internal service, amounting to 1,645,491,000 lire in value, 92,905,000 in the international service, amounting to 92,905,000 lire, and 2,000, amounting to 776,000 lire, in transit.

The telegraphs in July, 1895, had a total length of 26,105 miles, with 75,095 miles of wire. There were 7,322,703 internal, 1,741,517 international, 324,489 service, and 122,430 transit dispatches sent in 1895; total number, 9,511,139. The telegraph receipts, were 17,275,109 lire; post-office receipts, 50,700,687 lire; expenses common to the two services, 51,099,589 lire; special telegraph expenses, 3,776,078 lire.

Attempted Regicide.—While King Umberto was driving on April 22 to the race course an anarchistic ironworker of Artegna made a rush for the carriage and, leaping upon the step, struck at the King with a dagger that he had concealed in a handkerchief. The King, partly rising, turned the blow by striking the man's wrist with his elbow, and the man was seized by the escort. "These are our little professional perquisites," Umberto quietly remarked. At the trial the assassin said that he had acted alone and in despair, as men do when they commit suicide; that if the deed had been premeditated he would have thrown a bomb; the object of his attempt upon the life of the King was to strike the chief representative of the class living in comfort. When sentenced to the galleys for life, on May 29, he shouted for anarchy and the revolution and said that the turn of the

bourgeois Government would come. A lax condition of the Italian police was revealed by the circumstances attending this case. The police had taken no extraordinary precautions, although the father of the criminal had forewarned them of the intended assassination. A man named Romeo Frezzi was arrested on suspicion of complicity in the crime, and a week later his family learned that he was dead. The police reported that he had committed suicide, but an autopsy showed that he had been murdered in his cell.

General Elections.—After the meeting of Parliament on Feb. 25, 1897, the attitude of the various groups in the Chamber was such that no mere reconstruction of the ministry without a dissolution was likely to give a working majority of any duration. When Signor Crispi fell in consequence of the Abyssinian disaster the Marquis di Rudini obtained an overwhelming majority in the Chamber that had been elected under the Government of his predecessor and opponent, to whom previously it had been entirely subservient. The Radicals who follow Signor Cavallotti and the Rudinist Conservatives were bound together before by their common opposition to Crispi, and when the enemy was overthrown the conditions of the alliance had to be fulfilled, for the Conservatives in the Chamber were not numerous enough to form a majority by themselves, and the help of the Radicals was indispensable. The Rudini Cabinet, in framing its foreign and home policies and in carrying them out, made large concessions to the Radicals. The Conservative Premier held views on the foreign relations of Italy that were singularly like those of the Radicals, but he was restrained, as they would be to a great extent if they were responsible for the government of the country, from making any sudden revolutionary break from the policy established by Crispi. The triple alliance he was firmly committed to and bound to uphold by the general force of public opinion, but he was not equally committed to the close friendship with England established by Crispi, though his Conservative colleagues were in favor of preserving it with all its obligations. The Rudinists were as anxious as the Radicals to restore friendly relations with France, but they were not willing to sacrifice the alliance with the central powers and re-establish the military alliance with France. When public opinion seemed to favor the abandonment of Erythrea the Marquis di Rudini favored this solution of the African difficulty, not alone on financial and military grounds, but as a means of escaping from the entanglement with England and of gaining the good will of the dual alliance. His design to evacuate the African possessions he was afterward constrained to give up when the public, recovering from the first shock of defeat, evinced a strong desire to preserve the colony for which so much blood and treasure had been spent. The Radicals were disappointed on receiving this and other checks to the policy that they endeavored to impose on the ministry. They desired a dissolution, believing that the electorate would strengthen them in the Chamber and perhaps enable them to demand a controlling voice in the ministry or to form one of their own. The decree of dissolution was issued on March 4. The elections were held on March 21, the second ballots a week later. The new Chamber was composed of about 150 members of the Right and 350 members of the Left, including with the Constitutional Radicals the Republicans and Socialists. These latter groups profited most at the polls, and formed a large element in the new Parliament. The wing of the Constitutional party that was identified with the policy of the late Premier Crispi was defeated with heavy loss, but what the Crispini lost was not gained by the Constitutional adherents of

the Marquis di Rudini. By the exercise of official pressure and influence the Prime Minister drove out the Crispini only to let in the Socialists in their place. No fewer than 85 of the Extremists were elected, of whom 28 were avowed Republicans. It was the first time since Italy became a kingdom that candidates came forward to canvass openly as Republicans. The Constitutional Opposition numbered only 170. The Ministerial majority was composed of 180 members of the Right and Center and 135 members of the Giolitti and Zanardelli groups; the Opposition of 90 followers of Baron Sonnino, the 85 members of the Extreme Left, and a few irreconcilable Conservatives who refused to countenance the Marquis di Rudini's alliance with the Left. About 15 Deputies were attached to no party.

The Parliamentary Session.—The first session of the twentieth Italian Parliament was opened at Montecitorio April 5. The speech from the throne invited the attention of Parliament to measures that for a long time had awaited settlement, such as educational, judicial, administrative, and social reforms and projects tending to give stability to the military organization, the Government desiring to complete the programme of army reorganization once for all. The events going on in the Mediterranean and the increase of emigration suggested the duty of strengthening the navy, which was rendered possible by the budget equilibrium, which had at last been attained, marking the close of the era of sacrifices. This equilibrium the Government was certain of maintaining, and by putting an end to expenditure that was not indispensable it would be possible to favor the productive development of the country. In future budgets would be consolidated for the development of national economy by freeing the latter from severe fiscal burdens through an equitable revision of taxation and by an administration aiming honestly to repair the country's credit. The principal project in social legislation was a bill for promoting the welfare of workmen. A project contained in the Conservative electoral manifesto for modifying the system of local suffrage by the introduction of plural voting was left out of the legislative programme, for the Marquis di Rudini was now more than ever a prisoner of the Left and could not afford to break with the Radicals in order to follow a Conservative policy. The majority of the important portfolios in the Cabinet were held by Conservatives. As the result of the elections Signor Cavallotti had it in his power either to control the policy of the Cabinet or to attack it and secure the substitution of Radical for the Conservative elements. Instead of drawing any advantage from its concessions, the Government had only strengthened the influence of the Extreme Left. Signor Zanardelli, the leader of the old Left, was elected president of the new Chamber by 303 votes to 128 given for other candidates.

The Marquis Visconti Venosta, in replying to criticisms on the foreign policy of the Government, repeated the words of the King's speech: "We shall remain faithful to our alliances." While co-operating in the maintenance of peace, which is the great permanent interest of the country, the Government would cultivate with other nations friendly relations inspired by feelings of concord and of reciprocal confidence; and, in regard to France in particular, would follow a policy in harmony with the dispositions of the Italian nation, which only desired to live on good terms with its neighbor. The Government was always disposed to examine with the French Government the totality of commercial relations between the two countries with a view to the substitution of an equitable compromise of interest for the present condition of those relations. The minister defended the abandonment of Italian

claims in Tunis and the cessation of an embittered dispute that might entail an embarrassing division of strength. The intentions of the Government in regard to Africa were to cease the occupation of Kassala, in accordance with the proposal of April 15, 1891, as soon as Egyptian power was sufficiently re-established in the Soudan; to create a state of things that would permit the reduction of the military occupation to Massowah alone and render possible the abandonment of the high plateau; but to maintain the occupation of that port and Italian suzerainty on the Red Sea coast district, as any change effected there might raise international questions such as it was in the interests of Italian policy not to provoke. The King persistently refused to sign a decree appointing Signor Bonfadini, a politician, to the governorship of Erythrea.

The question of annulling the election by the constituency of Forlì of the revolutionary Socialist Amilcare Cipriani, who for his connection with the Sicilian riots had been deprived of civil rights, was the last thing discussed before the Chamber, on July 15, adjourned till Nov. 30. Cipriani had won distinction by leading the band of Garibaldian volunteers in Greece, and was wounded in the battle of Domoko, where the Socialist Deputy Antonio Fratti, to whose vacant seat he was elected, met his death.

Ministerial Crisis.—The difficulties of governing with a ministry mainly Conservative and a majority mainly Liberal taxed Premier di Rudini's political art to the utmost, and before the reassembling of Parliament he tried to form a ministerial combination that would correspond more nearly with the parliamentary situation. After the death of Giacomo Costa, in August, the Ministry of Justice remained vacant for some time. Senator Canonico refused it, saying that in the present political and parliamentary atmosphere he would waste his energies without being able to accomplish anything for the good of his country. On Sept. 19 Signor Gianturco was transferred to the Ministry of Justice and the Conte Codronchi, a Senator, took his place as Minister of Public Instruction. Foiled by unforeseen occurrences in his efforts to provide a Radical successor to Signor Costa, the Marquis di Rudini welcomed an occasion for repressive action against the Catholic party, which had been in local elections, while still obstinately abstaining from all participation in national politics, to carry on a violent agitation against the dynasty and the existing system of government. The Prime Minister has himself been held chiefly responsible for the rise of the Clerical party and had connived in its successes, but he was willing to renounce his past and to break with the Right, of which he was the accredited chief, if he could form a strong ministry from the predominant political elements. An open alliance with the Left would necessarily provoke the resignations of the more Conservative members of the Cabinet, such as Signor Prinetti and the Marquis Visconti Venosta. If Signor Zanardelli, and perhaps Baron Sonnino, could be induced to take portfolios in his Cabinet, the Marquis di Rudini would establish himself as leader of the Left and one of the line of indispensable Italian Premiers. His skill in political balancing was wittily characterized in the saying that he never performed a political act without previously having taken the precaution of denouncing it as ruinous to the country. About the beginning of October circulars were issued by the Marquis di Rudini to the provincial prefects with a view to the prevention of the use of churches for political meetings by the Clerical party. The ground was taken that, churches being public property, any political meetings held therein came within the scope of the police regulations re-

lating to public gatherings, and further, that since the object of the Clerical party is the overthrow of the state by the re-establishment of the temporal power of the Pope, Clerical meetings are open to the same treatment as those of socialist, anarchist, and other subversive associations. These pronouncements from a minister of the Clerical antecedents of the Marquis di Rudini produced lively indignation and dismay in militant Catholic circles. The position taken in the circulars was regarded as proper by the majority of the Liberals throughout the country, but they blamed the ministry for having permitted the Clerical excesses more than they did the Clericals for having made use of the license accorded them. The circulars themselves were regarded by Liberals and Clericals alike as a mere move in the parliamentary game and, when Signor Zanardelli did not enter the ministry after all, as a failure in tactics. Cardinal Rampolla, the papal Secretary of State, made use of the circulars as material for an indictment of the Italian Government in a letter to the nuncios, denouncing them as "sacrificing the Catholic party to the bitterest enemies of the Church, not because it has offended against the law or against the so-called institution of the state, but because it is hated by the Freemasons."

The ministry was discredited by the course it took in regard to a riotous demonstration in Rome. The periodical revision of taxation on incomes and personal property was expected to produce a larger revenue from this source. The tax assessors were first instructed not to be rigorous in their assessments, but these were revoked. In Rome, where the trading and working classes had not yet recovered from the effects of the building crisis, the increase in the assessments was regarded as extremely unjust, and was an undoubted hardship to many. The existence of a large floating population in that city ready to profit by disturbance and of strong revolutionary and Clerical elements anxious to fan popular discontent should have suggested either the avoidance of any cause for disorder or preparation to repress disorder with a strong hand, but in both respects the Government failed. The Roman Chamber of Commerce organized an imposing popular demonstration on Oct. 11. All shops were closed, and about 20,000 persons escorted a committee to the Ministry of the Interior. While the Marquis di Rudini was giving vague and unsatisfactory assurances to the committee, a small force of carabinieri endeavored to prevent the great crowd from pressing into the building. When another detachment arrived and proceeded to clear the Piazza Navona with fixed bayonets some roughs began to throw stones. Other soldiers were sent for, and finally the crowd was driven from the square, but the stone-throwing increased until some of the soldiers were provoked into firing, and before the streets were finally cleared orders were given to fire again at the principal group of stone-throwers. About 30 of the soldiers and people were badly wounded and 2 killed. The Minister of Finance afterward instructed the assessors to amend their assessments and to abstain from increasing any assessments until they have ascertained that the taxpayer's income has increased. The charges of corruption brought against ex-Premier Francesco Crispi on information received from the convicted director of the Banca Romana were quashed Nov. 8 by the Court of Cassation on the ground that the ordinary tribunals are incompetent to try ex-ministers for acts performed when they were in office.

Sanitary Conference.—A conference of plenipotentiaries of the European powers met at Venice in February to discuss sanitary precautions against the introduction of the bubonic plague into Europe.

The object of the conference was to apply in regard to the bubonic pest the principles affirmed at the Dresden and Paris conferences in reference to the prevention of cholera, and to induce Turkey, if possible, to join in these international conferences and to ratify the agreement. The Paris agreement had not been ratified by Great Britain. The present congress was called at the suggestion of Austria, Italy concurring. It was proposed by Austria and Italy, supported by Germany, Russia, and Turkey, to construct a large international quarantine station and hospital in the Red Sea somewhere near Suez, at which it would be obligatory for all ships coming from suspected countries to stop for examination. Whether a further quarantine was necessary at the port of destination for vessels arriving with a clean bill of health from this station was a question on which the governments favoring the quarantine at Suez suggested no conclusion. Another question to be considered was, whether the Sultan should not be requested to forbid pilgrimages to Mecca in years of pestilence, and other governments be asked to prevent the departure of pilgrims from their territories. England, which sent the largest delegation of sanitary experts, wanted her ships coming from infected ports to be quarantined only at ports of destination, claiming that, with sanitary departments organized as well as the English, this would be entirely effectual. The question of stopping pilgrimages to Mecca was brought up immediately by a French delegate, who was seconded by the Austro-Hungarian and Russian representatives, but the English delegates had no power to discuss or vote on the question without instructions. Later the English delegates announced that the Indian Government had stopped pilgrimages to Mecca. The Austrian and Russian governments had taken similar action, and France and Italy announced their intention of doing so. It was voted to complete the quarantine station on the island of Camaran, in the Red Sea. The Technical Committee approved of the methods of disinfection adopted at the last conference—saturation by steam at 100° C. maintained for fifteen minutes. A sublimate solution, in which salt may be substituted for hydrochloric acid, was approved, also an alkali solution and *savoneuse* of carbolic acid. Papers of value were exempted from disinfection. The extreme period of incubation of the bubonic plague was taken to be ten days.

At the beginning of the winter session the Chamber annulled Amilcare Cipriani's election. Signor Crispi, having established the point that the ordinary courts are incompetent to deal with the charges against him, demanded an investigation by the Parliament. A commission of five Deputies was appointed to conduct the inquiry. The charges were based on the confession of one Favilla, an ex-director of the Bologna branch of the Bank of Naples, who was prosecuted for embezzlement and convicted. The examining magistrate at Bologna, on information obtained during the judicial inquiry, issued an order for the arrest of Signor Crispi on March 20, 1897. He was re-elected a Deputy on the day following, and thus obtained parliamentary immunity, but nevertheless he voluntarily made a deposition before the magistrate at Naples on March 25. Two months later, however, he took exception to the competence of the courts to try the charges, on the ground that, according to the Italian Constitution, a minister is answerable to the Senate alone for acts done while in office. He admitted having borrowed 300,000 lire of Favilla for state purposes, but declared that he had repaid a part of this sum while still minister, and the remainder with interest and commission after his fall from power.

On Dec. 6 the ministry resigned, the Marquis of Rudini taking advantage of a chance minority of two votes on a technical military question, which impelled Gen. Pelloux to insist upon retiring, to bring about a reconstitution of the Cabinet. After long negotiations a Cabinet including Signor Zanardelli, and corresponding more nearly to the actual political forces, was constituted on Dec. 14 as follows: President of the Council and Minister of the Interior, Marchese di Rudini; Minister of Foreign Affairs, Marchese Visconti Venosta; Minister of Justice, Signor Zanardelli; Minister of War, Gen. di San Marzano; Minister of Marine, Signor Brin; Minister of Finance, Signor Branca; Minister of Public Works, Signor Pavoncelli; Minister of Public Instruction, Signor Gallo; Minister of Agriculture and Commerce, Signor Cocchi-Ortu; Minister of Posts and Telegraphs, Signor Sisco. Of the new ministers Signore Gallo and Cocchi-Ortu were Zanardellian Liberals, Signor Pavoncelli a Conservative, and Gen. di San Marzano nonpartisan. The Chamber, which had adjourned during the crisis, on coming together again on Dec. 20 rejected a motion of want of confidence coming from the Right by the narrow majority of 16 in a house of 394 Deputies. The followers of the Marquis Vis-

conti Venosta censured him for entering into such a combination by voting against the Government, which was only saved from defeat by the votes of the ministers themselves and of the ambasciatori of state. After approving a new monetary convention of the Latin Union and two other nonpartisan measures the Chamber adjourned on Dec. 21 till Jan. 25.

The Transfer of Kassala.—On Dec. 25 the Italian commandant formally evacuated Kassala, which was occupied by 900 Egyptian troops under Col. Parsons. Nearly 500 Mohammedan regulars and 150 irregulars in the Italian service enlisted for the same pay for service under the Egyptian flag. The frontier line runs 20 kilometres to the east of Kassala, leaving the post of Zabdavat to Italy. The British commander had already led his new troops against the dervish position on the Athara, capturing El Fasher and besieging the fort of Osobri, which fell on Dec. 29 after a stout defense. The English, when they had thus succeeded in expelling the dervishes, restored Sidi Ah, the former chief of the district. On Dec. 29 Ferdinando Martini, the new Governor of Erythra, who was believed to be capable of organizing the colony on a civil and commercial basis, embarked for Massowah.

J

JAPAN, an island empire in Asia and a long and narrow archipelago eastward of the continent in the Pacific Ocean. Of the known islands, exceeding 4,000 in number, about 500 are inhabited. The total area is 169,140 square miles, and the coast line, including Formosa, is 186,679 miles long. The Emperor Mutsuhito ("peaceful man") was born Nov. 3, 1852. The Empress Haruko, born May 28, 1850, was married Feb. 3, 1869. The Emperor has no family name, and is traditionally the one hundred and twenty-second in the line of the oldest political dynasty in the world. The Empress has had no children. Thirteen children have been born of the ladies in the harem, Madame Sono being the mother of five, one of whom, a son, Yoshito, born Aug. 31, 1877, is the heir apparent. Article II of the Constitution of 1889 declares that the imperial throne shall be succeeded to by imperial male descendants. The Emperor's person is sacred and inviolable. He combines in himself the rights of sovereignty, exercising legislative power with the consent of the Imperial Diet, composed of an upper house of 316 peers and imperial nominees and a lower house of 300 members elected by male voters paying national taxes to the value of 15 yen annually. His Cabinet consists of the heads of departments moderated by a Minister President of State. The Privy Council is composed of 20 statesmen of wide experience. The eleventh session of the Diet was called to order Dec. 21, 1897, but on the next day the House of Representatives was dissolved by imperial command. The Government has power to take all necessary financial measures in times of emergency by means of an imperial ordinance. The ministers are responsible to the Emperor, and not to the Diet. The movement of Japanese politics is toward curtailment of imperial prerogative and in the direction of democracy.

Population.—A careful and minute census is taken annually by the Home Department and published in the "Official Gazette." In 1895 there were, exclusive of Formosa, 42,270,620 people, dwelling in 7,935,969 houses. Of these, 3,518 were nobles, 1,617,686 of the gentry, and 32,368,288 of the people. The cities having more than 100,000 people

were Tokio, Osaka, Kyoto, Nagoya, Yokohama, Kobe, and Hiroshima. The proportion of male to female births is 105:16 to 100. There were 22,111 natives given passports to travel abroad, of whom 4,378 were women, the larger numbers going to Korea, Russian countries, Hawaii, China, and the United States respectively. On Dec. 31, 1896, the total population of the whole Japanese Empire was 45,279,628, of whom 21,345,750 were males and 20,924,878 were females.

Finances.—The annual budget submitted to the Diet forms an octavo volume of more than 1,000 pages, carefully printed in Japanese, with elaborate explanations. After being discussed and voted, it is officially reprinted. The digest of the budgets during the past ten years will be found in the annual "Résumé Statistique l'Empire de Japon," published by the secretary of the imperial Cabinet in June of each year. The chief items of revenue for the thirtieth fiscal year of Meiji (1897-'98) are: yen Taxes, 90,084,459, of which those on land furnished 38,668,491; sake, 29,823,852; tobacco, 2,334,146; soy, 1,479,994; trades and professions, 5,874,168; customs, 6,626,829; stamp duties and registration, 7,525,616; Government industries and properties, 21,280,598; posts and telegraph, 12,132,137; railway profits, 5,425,733; which, with other taxes and miscellaneous receipts, gave a total of 121,410,245 yen of ordinary revenue. Extraordinary revenue, such as money raised by public loan, cash brought over from last year, and appropriation from the war indemnity, gave a total of 119,189,237 yen, or a grand total of 240,599,482 yen. In ordinary expenditures there were disbursed (in yen) to the Crown, 3,000,000; foreign affairs, 1,494,816; home affairs, 6,490,983; Treasury Department (17 bureaus), 41,670,441; war, 9,870,389; justice, 3,552,037,287; education, 2,005,375; agriculture and commerce, 1,424,295; communications, 11,671,748; colonization, 2,020,914,776; making a total of ordinary expenses of 112,530,280 yen. In the extraordinary expenses the chief items were: Home affairs, 10,821,699; war, 30,088,797; navy, 66,094,126; communications, 6,726,950; making, with other items, a total of extraordinary expenditures of 127,344,178, or a grand total of 240,-

505,926 yen. The budget for 1898-'99 calls for an expenditure of 234,170,000 yen. Japan's national debt stands thus (in bonds): Consolidated, 172; war, 120; naval, 15; railway, 6; capitalized pension, 30; old, 5; making a total of nearly 350,000,000 yen; adding to this the public-undertaking loan of 135,000,000, we have a total of 485,121,382 yen.

The Army.—On Dec. 31, 1895, there were in the military organization of the empire 965 generals and superior officers, 5,729 officers, 21,140 subordinate officers, 2,307 cadets, and 225,273 soldiers, making a total of 255,504, which, with 1,713 functionaries in the War Department, gave a grand total of 257,217. Besides the central organization in Tokio and the military schools, there are the six great military divisions of Tokio, Sendai, Nagoya, Osaka, Hiroshima, and Kumamoto, in each of which are large garrisons containing a division of from 8,000 to 10,000, though at Sendai there are two divisions of over 20,000 troops. With the Imperial Guard of 8,000 men in Tokio, there is also a body of drilled gendarmes, the military police of Yezo, the reserves, and the territorial army, the two latter bodies numbering altogether 165,905. In the recruiting service during 1894 436,246 young men were brought under Government notice, of whom 22,354 were placed in active service, 98,247 assigned to the reserves, and the remainder had service postponed, were exempted, allowed to resign, excused, or were condemned criminals.

The Navy.—In 1895 Japan had 45 vessels of war, of which 11 were in active service, 12 at Yokosuka, 10 at Kure, and 12 at Sasebo (the chief navy yards), of 82,994 tonnage, with engines of 128,591 horse power, and armed with 458 guns, besides non-equipped war vessels, and 30 torpedo boats of 1,898 tonnage and 19,227 horse power. The *personnel* consisted of 65 superior officers, 512 subordinates, and 6,268 noncommissioned officers and sailors. On July 1, 1897, besides 27 torpedo boats and 26 vessels sunk or fallen into disuse, there were 43 effective war vessels, of which 3 were steel-armored battle ships, including the "Fuji," of 12,649, and the "Yashima," of 12,517 tons, each mounting 38 guns, and the "Chin-yen," of 7,335 tons and 20 guns. Of the other vessels, mostly cruisers, 5 have a tonnage of over 4,000, 4 over 3,000, 6 over 2,000, and 9 over 1,000, the others being gunboats—6 of wood and the rest of steel and iron. The "Kasagi," a steel cruiser of 4,978 tons, was launched at Philadelphia, Jan. 20. Eleven other war ships are now under construction, and most of them launched. The battle ships "Shikishima" and "Asahi," to be completed in October, 1899, the largest in the world, are of 15,937 tons and 50 guns each.

Administration.—On Dec. 31, 1895, there were in the employ of the National Government 46,698 salaried officers, whose stipends amounted to 11,405,425 yen. In the diplomatic and consular corps there were 41 ministers and 129 consuls, a total of 170, the countries having the largest number being, in their order, Korea, 85; China, 21; Russia, 12; United States, 11; England, 7.

There were 467,887 national electors, compared with 452,156 in 1891, and 49,243 persons who paid 15 yen national taxes, but were without the electoral right, the number of national voters to every 1,000 inhabitants being 11. In the 45 local assemblies of the empire there were 2,115 members. In the communal councils of great cities, villages, and assembled cities and villages, numbering in all 14,344, the numbers of electors were 4,186,767. An elector in the commune must be a free native twenty-five years old, domiciled, and having paid taxes for two years.

Railways.—In 1896 there were 261 miles of private and 792 miles of Government railways, of which

1,697 private and 593 Government lines were open to traffic—an increase of 171 miles over 1895. The railway budget for 1897-'98 shows a net profit to the Government of more than \$2,500,000. About 30 companies, with a capital of \$68,467,550, have obtained charters, and the total length of road already surveyed and to be constructed is 2,931 miles. The Tokaido Railway is to be changed from single to double track. Construction of railways in Formosa is to be left to private enterprise. Only nine engines have been built in the Kobe shops.

Resources.—Experts calculate the total wealth of the empire at 10,000,000,000 yen. The chief item of revenue is the land tax. Of all the ground occupied, it is roughly estimated that one fifth is in rice fields, one sixth in arable land, one fortieth in house lots, one half in forests, and one thirteenth in other lands. The revenue has grown from 62,000,000 yen in 1878 to 120,000,000 in 1897. This increase leaves the agricultural population untouched, the land tax remaining the same that it was twenty years ago—viz., $2\frac{1}{2}$ per cent. of the officially assessed value of the land, which is about one third of the market value. The increase of agricultural products in 1895, compared with 1878, was in rice as 8 to 5, in barley as 19 to 9, in raw silk as 52 to 19, in tea as 8 to 2. In minerals the increase between 1893 and 1895 was of gold, threefold; of silver, sevenfold; of copper, fivefold; of iron, twofold; and of coal, sixfold. In textiles, cotton yarn has increased over threefold, the number of spindles having much more than doubled between 1890 and 1895; silk fabrics have more than doubled in quantity, but cotton fabrics somewhat less. In maritime enterprise the tonnage of coasting vessels in 1895, compared with 1868, is nearly five times as great, and in vessels sailing abroad fourfold. From 65,500,000 yen in 1879, foreign trade has grown to 290,500,000 in 1896. The total receipts of the Government in 1896-'97 were 179,720,380 yen. In 1880 the Mitsubishi firm, by investing 1,000,000 yen in the Takashima coal mine, astounded the commercial public. A few years later the Mitsui house paid 4,000,000 yen for the Miike coal mine. Recently this same house purchased from the imperial household the Sado and Ikuno gold and silver mines and the Osaka melting works for 3,000,000 yen. Recently the Third Bank invested 17,000,000 yen in Osaka Harbor Works bonds. In 1895 the paid-up capital of the banks of the empire amounted to 127,807,715 yen, and the reserve fund to 34,623,518 yen, while in 1896 the figures reached 245,134,544 yen as capital. In July, 1897, there were 1,487 banks in Japan, their capital amounting to 292,885,514 yen.

Foreign Trade.—The "Official Gazette" shows that the total value of foreign trade in 1896 was 289,517,234 yen, of which the exports amounted to 117,842,760 yen; and of this, 116,575,578 yen stood for home products. The total of imports was 171,674,474 yen. The movement in coin and bullion showed an export of 11,598,883, and an import of 39,142,208 yen. Of the countries trading with Japan, Asiatic took 106,819,274 yen of exports; European, 125,755,774; American, 49,558,574 (of which 47,905,760 yen were with the United States); and Australia and Oceania 4,156,634. The customs revenue amounted to 211,661 yen. American competition with Great Britain and Germany is noticed in the supply of machinery, rails, nails, and pig iron. German nails have been driven out of the Japanese market, and 30,000 tons of American rails were sold at lower prices than British makers were willing to accept. The total demand for rails in Japan is about 200,000 tons annually, and four railways, to be completed in 1898 or 1899, have decided to adopt the American rail. As British makers were not

able to supply Japan's requirements within the specified time, orders for 60 or 70 locomotives have gone to firms in the United States. By means of the American system of through rates of freight and bills of lading, goods are conveyed across the continent and by steamer to Japan for less money than by the sea route from Liverpool or Glasgow. Great increase is noticed (60 per cent.) in the imports of spinning machinery, raw cotton, certain kinds of cotton manufactures, in all metals except tin, in machinery, and in petroleum. The oil wells of Echigo are being worked with American machinery. The Tokio Kisen Kaisha has been formed, with a capital of 7,500,000 yen, for the establishment of a line of steamships across the Pacific, and to keep tank steamers plying between Batoum and Japan for petroleum. In 1896 the cotton-spinning companies produced 165,806,084 pounds of yarn, compared with 150,000,000 in 1895. From Jan. 1 to Aug. 1, 1897, the total imports were valued at 139,089,603 yen, and the total exports at 100,314,726 yen.

Insurance.—There are 1,828 life insurance societies, whose receipts in 1895 were 1,674,353 and expenses 906,614 yen. There are also 683 fire insurance companies and 427 marine insurance companies.

Education.—In 1894 there were 25,000,640 public schools, of which 24,046 were primary, with a total of 70,358 teachers, of whom 64,784 were males, and in which were 3,623,725 pupils. Of special and technical schools there were 59, with 778 teachers and 11,792 pupils. Apart from the Imperial University, there were 25 libraries with 374,193 volumes of Japanese and Chinese, and 41,331 volumes in the European languages. The local and communal taxes to sustain these educational facilities amounted to 7,500,493 yen, which, with various other receipts, amounted to 11,904,602 yen, or 27.79 yen to every 100 inhabitants. The total valuation of accumulated funds, land and buildings, furniture and instruments, amounted to 24,548,426 yen. There were published 814 periodicals, which issued 357,735,426 copies; 518 serial publications appeared and 506 disappeared during the year; 8,962 works printed in single volumes and 18,831 numbers of serial works were published.

Events.—The Empress Dowager died Jan. 11. The official funeral, which took place Feb. 8, with amazing pomp and close adherence to ancient customs, cost 700,000 yen, which was voted by the Imperial Diet. The burial was in Kioto. One hour was consumed in lowering the coffin into the grave. In celebration of the event, an imperial gift of 400,000 yen was distributed to the people, 63,485 convicts had their terms of service commuted, and 15,782 were released. The bill changing the national standard from silver to gold was introduced Feb. 3, and passed March 23. After ninety days' existence, in which the peers sat twenty-six and the House thirty-two days, the Imperial Diet adjourned. Of 103 Government bills, 88, and of 57 private bills, 17 were passed. The severe press regulations were so modified that the suspension of a newspaper can now take place only after an action in court. On March 22 "The Japan Times," a first-class newspaper in English, conducted by Japanese, was established in Tokio. Count Itagaki resigned the leadership of the Liberal party.

In Formosa all inhabitants had been compelled to declare their citizenship by the 8th of May. The civil government had been badly mismanaged, and the immorality and cruelty of the Japanese officials resulted in many scandals, against which Judge Takano vainly protested, but on determining to remain in office was removed from his official residence by force. The strikes and other labor troubles, which now occur frequently, show the changed con-

dition of the industrial problem in Japan. The rise in wages, great as it is, does not keep pace with the rise in prices, which since 1887 has been more than 50 per cent. A great fire at Hankow destroyed 3,700 houses and 50 lives. From Oct. 1, when the new gold coin was to be issued and the standard changed from silver to gold, the terms of exchange of the old silver coin was ordered to be nine months instead of five years, and no silver yen were to circulate after March 31. In one transaction the Government sold 10,000,000 yen worth of Japanese silver to Hong-Kong. On the Kansai Railway, six locomotives, at \$8,540 each, were ordered from the United States. Count Okuma resigned the portfolio of Foreign Affairs, and Baron Nishi, educated in Russia, succeeded him, Mr. Hamano entering as Minister of Education. The Akashi, a third-class man-of-war of 2,800 tons, was launched at Yokosuka, Nov. 8. Several new treaties or conventions were made with other nations during the year, and a new legation was established in Siam. The estimates of the rice crop show a yield of 170,000,000 bushels, compared with 180,000,000 in 1896.

Formosa.—Tai-Wan, or the main island, and Hokoto, or the Pescadores, are included in the new possessions of Japan, ceded from China in 1895, the former with its 29 islands and the latter with 47. The total area under settled government is about 2,000 square miles. The population is 2,041,809, of whom 44,820 are in the Pescadores. The islands are rich in resources of coal, iron, gold, rice, camphor, indigo, spices, fruit, grain, with an astonishing variety of forest products. The two chief ports are Tamsui and Kelung, the foreign trade of which, in 1896, amounted to \$7,013,645, and an increase of \$238,105 over 1895, the exports being slightly in excess. Of American products, flour shows an increase of 50 per cent. over 1895, and 1,150,000 gallons of American petroleum were imported. Camphor and tea are the chief articles of export. Chinese junks import pigs, poles, and paper. Taipei is the capital of the island.

JEWS. The chief event of the year was the Zionist Conference, at Basel, Aug. 29. It was an outcome of the plan suggested by Dr. Theodor Herzl, of Vienna, in a pamphlet entitled "A Jewish State," and in various addresses for the establishment of a Jewish state in Palestine. After a three days' session a programme was adopted and an executive central committee elected. The programme declares that "the aim of Zionism is to create for the Jewish people a public, legally assured home in Palestine," and that the means to be adopted are the promotion of the settlement in Palestine of individual Jews, "the centralization of the entire Jewish people," and the strengthening of Jewish sentiments and national self-consciousness. The Executive Committee consists of 9 representatives from Austro-Hungary, 4 from Russia, 3 from the Balkan states, 2 from Germany, and 1 each from France and "the Jews of the East." That England, the United States, Italy, Holland, and other countries are not represented, and the disproportion between the importance of the various Jewish communities of the world and the number of representatives on the committee are to be explained by the fact that it is only in Russia or parts of Austro-Hungary and in Roumania that Zionism in its pronounced form has aroused special attention. In other lands it has awakened opposition or indifference. In Germany the Union of German Rabbis issued an appeal calling on Jews, in the name of religion and patriotism, to hold aloof from the movement. The chief rabbi of the land called Zionism "an egregious superstition," and the chief rabbis of France and Belgium have condemned it. In fact, so general was the agitation

against the movement for a Jewish state that the congress paid more attention to the subject of colonization than to the establishment of an independent Judean commonwealth. Less objection was felt to a movement that would aid existing Jewish colonies in Palestine and promote agricultural effort. The prevalent wretchedness of the Jews in countries abroad due to harsh laws and restrictions was fully revealed at the Basel congress, and an effective impetus was given to the movement to divert them from inhospitable lands and settle them, wherever possible, under new and more favorable conditions. Dr. Theodor Herzl and Dr. Max Nordau were the leaders of the congress, which was attended by about 200 persons. Among the more prominent were Dr. K. Lippe, the educator of Jassy; Dr. J. Bodenheimer, of Cologne; Prof. Mandelstamm, of Kieff; Prof. Schapira, the mathematician of Heidelberg University; Dr. N. Birnbaum, of Berlin; and Dr. Kaminka, of Prague.

The growth of anti-Semitism within the past few decades has had much to do with the Zionistic movement, for it is only in countries where civil and religious liberty is denied to the Jew that there is a desire to colonize in Palestine under any form. During the year there has been a gratifying lull in the storm and a hopeful improvement in quarters that were thought to be hopeless. It is true that Jewish hatred has been felt in Russia, Germany, Bohemia, Austria, Algeria, Tripoli, and Persia. But these were sporadic outbreaks, readily quelled. The conditions in Russia have certainly improved, and there is a strong likelihood of further legislative reforms under the new Minister of the Interior. The volume of Jewish emigration from Russia has notably declined, and this is the best indication of improved conditions. In Vienna the administration of the anti-Semite Dr. Lueger has aroused much dissatisfaction; the breach has widened between two opposing sections of his party. The riots in Bohemia in November were not directed against the Jews alone, although they are always the first victims of political and social disorder. In Germany notable anti-Semites like Stoecker and Sedlatzeck have suffered at the hands of the law. In France it is thought that anti-Semitism is responsible for the Dreyfus case, and there was some agitation in the latter part of the year, Zola championing the cause of the exiled officer and refuting the charges of the anti-Semites. Prof. Monod also joined in the vindication of Dreyfus.

The condition of the Jewish colonies in the Argentine Republic was so unsatisfactory that it was determined to found no further settlements, but to maintain those existing. Different opinions are held as to the value of these colonies. It is feared that many of the immigrants are hardly adapted for agricultural work. Yet some of the settlements show fair results, despite a plague of locusts and other drawbacks. In Palestine there are now 22 villages, with an area of 92,000 acres, under cultivation. An agricultural school of 593 acres, serving as an experimental station and model farm, makes earnings sufficient to support all the teachers and the 100 pupils. The colonists raise vegetables, wine grapes, and fruit trees, and are engaged also in bee culture. Mulberry trees are being planted, with a view to silkworm culture. The village of Rishon l'Zion, with an area of 22,239 acres, possesses 1,500,000 vine stocks, 20,000 mulberry trees, 10,000 fruit, almond, walnut, fig, and other trees. An exhibition of the products of the Palestine colonies was held in Berlin, and a company has been organized to promote their sale in Europe and America.

Mr. Schechter, reader of rabbinic at Cambridge, returned to England from Egypt and Palestine

with a great mass of Hebrew manuscripts, some of rare value, which he rescued from secret hiding places. Prof. Sternthal's fiftieth year as a teacher was celebrated in Berlin in November. M. Sylvain Levi, professor at the Collège de France, received a subvention of 8,000 francs from the Paris Academy of Inscriptions, to enable him to continue his researches into Buddhism in the lower Himalayan regions. At the International Russian Medical Congress there were 13 Jewish delegates from Germany alone, while other countries were fairly represented. Statistics for the year estimate the Jewish mechanics in Jerusalem as 2,019, divided as follow: Joiners, 367; tailors, 290; shoemakers, 288; blacksmiths, 50; coppersmiths, 20; tinsmiths, 89; goldsmiths, 71; watchmakers, 22; bookbinders, 32; olive-wood workers, 72; wood carvers, 18; masons, 112; stone cutters, 92; quarrymen, 28; painters, 31; upholsterers, 65; stocking knitters, 35; millers, 30; printers, 44; scribes, 67; parchment makers, 13; weavers, 20; bakers, 64; gardeners, 17; brushmakers, 20; jacks-of-all-trades, 62. Thirty-five technical and industrial schools, with 5,439 pupils, are now carried on by the Baron de Hirsch fund in Galicia and the Bukowina. These are open to non-Israelites, who are provided with religious instruction from teachers of their own faith at the cost of the fund. During the year 245 pupils were apprenticed to trades, and 14 are being educated in the Agricultural School near Hanover. The Jewish Congregation Universia Israelitica of Rome concluded an agreement with the municipality of Rome to surrender a prominent part of the Ghetto to the city authorities, for the purpose of erecting an imposing structure. In exchange for this the city gave to the Jewish congregation a plot of ground, which is valued at 100,000 lire, and is situated on the bank of the Tiber, for the erection of a synagogue.

Oswald J. Simon, of London, proposed in January a plan to make Judaism a missionary religion, and elicited interesting opinions from English Jews and Christians. Baroness de Hirsch made many lavish benefactions, Jewish and general. The banker D. Flicke, of Düsseldorf, bequeathed in January 500,000 marks for needy widows and orphans, without distinction of creed, and 300,000 marks for a Jewish hospital open to all creeds. The eightieth birthday of Dr. Max Ring, the novelist, was celebrated in Silesia. The seventieth birthday of Frederick D. Mocatta, the London philanthropist, was duly observed, as well as a similar jubilee of the writer Herzberg-Fränkell in Teplitz, near Berlin. Hon. W. E. Cohen was appointed a judge of the Supreme Court of New South Wales. The Montefiore College, at Ramsgate, England, was reopened.

At home the chief trend of the year's activity has been along educational lines. Further effort was made to reach the people and establish more intelligent methods. In Baltimore and Philadelphia classes for normal instruction were opened, with a view to improving the training of Jewish Sabbath-school teachers. In New York the Religious School Union arranged an admirable series of conferences and teachers' meetings, showing marked advance. The issues of the Jewish Publication Society and the American Jewish Historical Society are educational and stimulating. The successful summer assembly of the Jewish Chautauqua at Atlantic City in July was enthusiastic and varied in its meetings, many rabbis and teachers participating, and a gratifying impetus was given to systematic Bible study. The English translation of the Talmud by Mr. Rodkinson made further progress, as did Dr. Jastrow's Talmudic dictionary. The project of an encyclopædia Judaica was favored at the Montreal Conference of American Rabbis, while the new translation

of the Old Testament, under the auspices of the Jewish Publication Society, is slowly progressing. The establishment of the National Farm School at Doylestown, Pa., due to the Rev. Dr. Joseph Krauskopf, of Philadelphia, is an experiment which its friends regard hopefully as a new departure in education—the training of Israelites as agriculturists. Fresh benefactions of Baroness de Hirsch have given new life and increased efficiency to technical and industrial education among the children of Russian and Roumanian immigrants in New York and elsewhere, under the auspices of the Baron de Hirsch fund. The faculty of the Gratz College, at Philadelphia, was appointed in November. Its special work at first is to be the training of teachers for Sabbath religious schools. The Young Men's Hebrew Association of New York received large gifts from Jacob H. Schiff and Mrs. Esther Herrman. The Jewish Orphans' Home of Chicago obtained a donation of \$25,000 from Abraham Shimmer, of Waverly, Iowa. By the death of Mrs. Lucien Moss, of Philadelphia, in November, the Jewish Hospital of that city came into possession of her husband's bequest of nearly \$200,000, to be used for a Home for Incurables. At the Montreal Conference of American Rabbis papers were read and discussed on the following themes: "The Rabbi as Teacher," "The Origin and Aim of Reform Judaism," "The Theology of the Old Prayer Book," "The Messianic Idea in Judaism." The Zionist movement aroused some interest, but with few exceptions it was confined to a small number of Russian-American Jews. At the meetings in New York, attended by representative rabbis and laymen, it was resolved to show no sympathy for Dr. Herzl's project so far as it contemplated a Jewish state, it being held that Judaism was not dependent on Palestine but had a universal character.

Commendable progress was made by the Woodbine Agricultural Colony, managed by the Hirsch fund. It was started in 1891 and has 25 miles of well-graded, tree-bordered streets, 2 public and 2 night schools, an agricultural college, hotel, brick synagogue, public bath house, several stores, 4 factories, a machine shop, 150 houses, 3 beneficial societies, and 2 educational clubs. The existing colonies may be thus summarized: In Canada, 85 farms, covering 18,000 acres, and with \$100,000 invested

capital; in New Jersey, 420 farms, with 100,000 acres, and \$500,000 invested capital; in Connecticut, 418 farms, covering 30,000 acres, and \$200,000 invested capital. Besides these there are 100 agricultural farmers on Long Island and near New York City, Chicago, and St. Paul engaged in growing poultry and vegetables to make the total exceed 1,000 families, with 80,000 acres, and \$1,250,000 of capital.

At the county fair at Woodbine, N. J., on Sept. 15, the Russian colony received the highest prices for field and greenhouse products, beekeeping, and collections of flowers, and poultry. The United Hebrew Charities of New York secured \$25,000 for permanent membership—a new feature in the organization. At its annual meeting, Nov. 10, the disbursements were shown to be \$132,000. There were 16,420 Jewish immigrants during the year; a marked decrease; \$16,000 was spent in monthly stipends and \$28,000 in occasional money relief; 5,462 new cases were treated and 25,626 recurrent applications; 6,594 secured employment out of 8,569 registered applications.

William N. Cohen, of New York, was appointed by Gov. Black to fill the vacancy caused by death of Judge Sedgwick. President Julius Bien, of the Order of B'nai B'rith, returned from Europe and expressed himself highly gratified at the remarkable growth of the order in Europe and the East. Temporary quarters of the Clara de Hirsch Working Girls' Home were opened in November in New York. The Montefiore Home for Chronic Invalids in New York opened a country home at Bedford Station. During the year 493 patients were treated, at the expense of \$221.51 *per capita*. Two gifts of \$10,000 and \$5,000 each were made to the Gusky Orphanage, of Pittsburg, by Aaron Cohen and L. L. Aaron. E. Demard's plan of colonization met an untimely death in San Francisco, as was predicted. The Anshi Maariv Temple, in Chicago, celebrated its fiftieth anniversary in November. New temples were erected in Toronto, St. Louis, New York, Paterson, Philadelphia, San Francisco, Chicago, and Brooklyn. Some excitement was created in New York by Judge Prior's refusal, in January, to grant a charter to a Jewish society because its annual meeting was to be held on Sunday. Four rabbis were graduated at the Hebrew Union College, Cincinnati, in June.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,306 in 1860; 364,399 in 1870; 990,096 in 1880; and 1,427,036 in 1890. By the State census of 1895 it was 1,934,668. Capital, Topeka.

Government.—The following were the State officers during the year: Governor, J. W. Leedy; Lieutenant Governor, A. M. Harvey; Secretary of State, W. E. Bush; Treasurer, D. H. Heflebower; Attorney-General, L. C. Boyle; Auditor, W. H. Morris; Superintendent of Education, William M. Stryker—all Democrat-Populists; Secretary of the Board of Agriculture, F. D. Coburn, Republican; Railroad Commissioners, William M. Campbell, W. P. Dillard, and L. D. Lewelling; Oil Inspector, E. V. Wharton; Bank Commissioner, J. W. Breidenthal, Populist; Insurance Commissioner, Webb McCall; Grain Inspector, W. W. Culver; Labor Commissioner, W. L. A. Johnson; State Printer, J. K. Hudson; Librarian, James L. King; Chief Justice of the Supreme Court, Frank Foster, Populist; Asso-

ciate Justices, S. H. Allen, Populist, and W. A. Johnston, Republican.

Population.—Figures compiled by the Secretary of the State Department of Agriculture in August show a net increase in the population of Kansas in 1896-'97 of 30,130. The total is 1,966,789. There are 100 cities and towns having 1,000 inhabitants or more, an increase of 4 in the year; 8 have more than 10,000. They are: Kansas City, 41,150; Topeka, 31,842; Leavenworth, 21,526; Wichita, 20,160; Atchison, 15,501; Pittsburg, 12,195; Fort Scott, 11,309; Lawrence, 10,914.

Finances.—The general-revenue bill passed by the Legislature placed the levy at 4 mills. It will give the State \$2,526,000 for the next two years. An additional 0.1-mill levy was made for the payment of interest on the bonded indebtedness. Provision was made by which the State Treasurer may pay out of the general-revenue fund \$500,000 of the \$200,000 of 7-per-cent. bonds issued in 1867. The remaining \$150,000 are to be refunded at 4 per cent. and sold to the School Fund Commission.

Bonds issued in March, 1868, to the amount of \$220,000, and due June 1 and July 1, 1898, and \$159,000 of the issue of February, 1869, were to be paid from the general-revenue fund. The State debt at the beginning of the year was \$682,000. On July 1 \$50,000 of the State debt was paid and \$150,000 refunded.

In October it was announced that the general-revenue fund was exhausted, and warrants were returned marked "unpaid for want of funds"—for the first time in fifteen years. The deficit is explained by the facts that the tax levy has been reduced by each Legislature, that the valuations decreased down to 1896, that the counties are \$367,000 behind on their dues to the State, and that bonds to the amount of \$50,000 have been taken up during the year.

The aggregate valuations of property of all kinds increased from 1896 to 1897 by \$4,024,285.

JOHN W. LEEDY, GOVERNOR OF KANSAS.

Education.—The school population, as reported this year, is 493,820. The apportionment in August gave 43 cents *per capita*. A circular issued by the Superintendent in November says: "The greatest injustice is in the present method of school taxation. The reports show that 833 districts levy less than 6 mills for school purposes, 3,679 districts levy from 6 to 10 mills, 2,777 districts levy from 11 to 15 mills, 546 districts levy from 16 to 19 mills, while 879 districts levy the full 20 mills allowed by law. District bonds can only be voted to build a schoolhouse."

Much trouble and loss have arisen through the investment of school funds in county and municipal bonds. Some of these were bought in violation of the law, which forbids the buying of bonds from corporations whose indebtedness exceeds 10 per cent. of their valuations. Others were bought at a time when the debt of the corporations was less than 10 per cent.; but later, other bonds have been issued until the amount has become excessive and interest payments upon all the issues have been stopped.

The School Fund Commissioners bought bonds this year issued by Graham County. The State

Treasurer refused to register them and pay for them. The bank where the bonds were deposited brought suit to compel him to do so. The Supreme Court declared that the sale was invalid, but did not base the decision on the same ground that the Treasurer had taken.

Some of the county boards of education made contracts for schoolbooks before the new law for uniformity of text-books and a State text-book commission came into operation; but the courts decided that the new boards which came in after the elections were not bound by those contracts. The validity of the text-book law was assailed, and an injunction applied for; but the court upheld the law and dissolved the restraining order.

There was some trouble with the text-book on civil government adopted for the schools. The Superintendent found in it statements which he deemed at war with true principles of finance. The book defined greenbacks as promises to pay money. These, it recites, circulated from 1862 to 1879 without being redeemed by the Government, and were consequently at a discount. Now that they are redeemed in gold and silver they are as good as money. The Superintendent ordered this and other sentences omitted, and the following inserted in its place: "The power to coin money conferred upon Congress by the Constitution carries with it the power to select the monetary material upon which to coin or stamp the seal of sovereignty. Money, strictly speaking, is not a material thing. It is a function or quality created by law, and it may be attached to any appropriate material by the sovereign authority. When the monetary quality has been attached to the chosen material that material becomes tangible money. Various valuable commodities have been used as money, but have not been entirely satisfactory, on account of their weight and bulk, and because of their great fluctuations in value and frequent scarcity. A proper monetary material should (1) be cheap and easily procured, so that society may at all times be able to supply itself with money; (2) easily concealed, that its possession and transportation may not be difficult and hazardous; (3) it should be convenient to handle and count in large and small amounts; (4) the tangible money should be well executed and difficult to counterfeit, otherwise the counterfeiters will inflate its value to the point of worthlessness, as in the case of American continental currency, the French assignats, and the currency of Argentina. Most of the great paper-money inflations of history have been by counterfeiters and speculators, and not by the legislation of responsible governments. In order to maintain the monetary value of paper notes, they should be receivable in the revenues of the issuing government, and lawful money in all payments; and the volume must be restricted in reasonable proportion to the annual public revenues. The volume of such paper money does not depend upon the accidents of Nature nor the exigencies of commerce, but it may be definitely controlled by law, in accordance with the public interest and general welfare."

The State Normal School, at Emporia, graduated a class of over 100 at its thirty-third commencement, in June.

The enrollment at the State University in October was 1,000; a class of 150 was graduated in June. The department of electrical engineering has a four years' course.

Kansas has 15 denominational colleges, and the number of students attending them this year averages 200.

The thirtieth commencement of the Agricultural College, at Manhattan, was held June 6, and 55 were

graduated. A dairy school has been organized with the money received from the sale of the college herd.

The Board of Regents of the Agricultural College held a meeting in April, at which they virtually deposed the greater part of the faculty and employees of the institution, of whom there were nearly 50. The two Republican regents opposed the changes; the other five are Populists. In an address to the students one of them said: "The board feels that it is impracticable to conduct the institution with President Fairchild at the head of it and the present faculty as instructors, who differ so radically from the board on fundamental principles. However, they were not dismissed because of inefficiency, nor because they are not good teachers, nor because they have not done their part well, but because they differ with the board." Later, a different statement was published.

Penal Institutions.—By the last report at hand the State Penitentiary had 891 inmates, and the Hutchinson Reformatory 107.

June 4 a fire destroyed the tobacco house of the Penitentiary and the tailoring buildings. The loss is estimated at \$6,500.

The action of the Leavenworth police officials in June in setting woman prisoners at work breaking stone in the jail yard has drawn out criticism and protest from all quarters. The practice was followed by the police commissioners of Kansas City, Kan., who ordered that women in the city prison who were unable to pay their fines should be dressed in overalls and sent out on the streets, or the rock pile, the same as men; but they rescinded the order on account of the opposition made to it.

The National Soldiers' Home.—A special committee of Congress has been investigating alleged abuses at the Soldiers' Home at Leavenworth. The committee's report, given in February, recommended the removal of the governor, A. J. Smith, and a general reorganization of the force. It was held that several charges against the governor had been sustained, namely: Using public funds and property for his private benefit, tyrannical and overbearing conduct, and general unfitness and mismanagement. In regard to the sale of beer on the grounds, the report says: "There seems to be a glaring inconsistency that the sale of beer and the administration of the Keeley cure should both be found running in the same Government institution, and both at a profit and under authority of the Government."

In April the Board of Managers of the National Soldiers' Homes transferred Col. Smith to the Pacific branch home at Santa Monica, Cal., and elected Col. J. G. Rowland, then governor of that branch, commandant of the Leavenworth home.

On June 11 an attempt was made on the lives of the governor and his family by an explosion of dynamite under his residence. A veteran of bad reputation was tried for the crime. Col. Rowland took charge of the institution July 20.

Militia.—The appropriation for the National Guard having been reduced, changes were made in order to make the Guard as efficient as possible; several companies were mustered out, and some independent companies were admitted.

Banks.—There are in the State 100 private and 283 State banks. In October the Bank Commissioner called for statements showing their condition. A summary of the reports showed deposits aggregating \$21,695,718.15. A year ago the deposits were \$15,220,107.39. In June this year the deposits were \$18,050,430. The banks report cash and sight exchange of \$10,952,981.24. In 1896 the cash and sight exchange aggregated \$6,439,656.93. The law requires the banks to have a reserve of 20 per cent.

The August report showed a reserve of 44 per cent. The October figures showed the reserve to be 50 1/2 per cent. A year ago the reserve was 38 per cent. The loans were \$16,945,921.90. This is an increase of \$1,408,796.46 over the loans of a year before.

The Bank of Hutchinson failed in April. The president was arrested, charged with receiving money when he knew the bank to be insolvent. The bookkeeper also was arrested.

Insurance.—The receipts of this department for 1897, to be turned into the State treasury, were: School fund, \$4,900; charter fees, \$286; filing annual statements, \$5,010; taxes (reciprocal), \$17,005.39; local agents' licenses, \$13,817; court and miscellaneous fees, \$204.07; total receipts for the State treasury, \$41,221. For the firemen's fund: Firemen's fund of 1896, \$16,450.12; firemen's fund of 1894, \$5,839.87; appropriation of 1897, \$11,420; total, \$33,700.89; total amount collected and disbursed, \$74,922.45.

The report on insurance companies for 1896, published in 1897, showed that there were in the State 10 mutual fire companies, which insured property of the value of \$4,362,351.78. Their total income was \$83,767.08; they paid losses amounting to \$45,764.06, and had 15,734 members.

One joint-stock fire company insured property worth \$10,112,533.97, received \$167,064.73, and paid losses amounting to \$59,720.60. There were 60 fire insurance companies of other States and countries doing business in Kansas in 1896. There were 15 miscellaneous companies from other States and countries. There was one domestic life insurance company doing business in this State in 1896. The insurance written amounted to \$457,780.82; premiums received, \$151,353.97; and losses paid, \$58,500. Amount of insurance in force Dec. 31, 1896, \$6,285,874.95.

The 27 foreign life companies wrote insurance amounting to \$5,973,563.85; collected in premiums \$1,208,211.22, and their losses paid during the year amounted to \$354,990.17. Amount of insurance in force Dec. 31, 1896, \$39,123,079.78.

The "insurance war" that has been going on in the State this year has attracted much attention. In March the State Superintendent of Insurance wrote to the Mutual Life Insurance Company of New York that it could not have a license to do business in the State for the ensuing year, because, in his opinion, the company had not dealt fairly by Mrs. Hillmon. The Hillmon case is a suit to recover \$10,000 insurance on the life of John W. Hillmon, which has been pending since 1880, and has been tried five times with varying results. The company contest the claim on the ground that the suit was fraudulent and was based on murder; that the dead body was not the body of Mrs. Hillmon's husband, but was the dead body of one Adolph Walters, of Fort Madison, Iowa, who had been killed by said John W. Hillmon for the purpose of defrauding the insurance company.

Other companies have received a similar notice from the Superintendent, and have sued him for damages and have sworn out injunctions to restrain him from interfering with their business.

In regard to the fire insurance companies the Superintendent believed there was evidence of a secret pool to maintain uniform rates, which is contrary to the antitrust law. These rates were published in Harrison Clarkson's rate book, and Superintendent McNall sent letters to the companies asking whether they subscribed for the book. He furnished it to their agents, and instructed them to make charges according to it, and when a penalty was imposed on an agent who had written at a lower rate or placed property in a different class of risk than that laid down in the book.

Clarkson brought suit against the Superintendent, which was decided in November for the plaintiff.

Railroads.—The total railroad mileage operated in Kansas, according to the reports of the Railroad Commissioners, is 8,942.79; exclusive of trackage rights, 8,774.99; total for 1896, 8,812.90; decrease for the year, 37.91. The following were the earnings and expenses of all the roads: Gross earnings from operation, \$25,331,768.77; total operating expenses, \$19,120,255.68; income from operation, \$6,211,513.09.

The assessors in June increased the assessments of some roads and lowered others, the net increase being \$717,200.

The Railroad Commissioners, claiming the right to regulate rates, asked the companies to make certain reductions which it deemed reasonable, but the companies protested that their earnings in the State would not admit of the reductions.

Later there was a disagreement in reference to the basis of charges for cattle shipments. The Attorney-General asked an injunction to prevent the roads from charging by weight instead of by car load. The injunction was granted.

A charter was granted in July to the Superior, Hutchinson and Little Rock Railroad Company. The capital stock of the company is \$10,000,000, and its principal office is in Hutchinson.

Industries and Products.—An agreement between the executive committee of the miners of the Pittsburg district and the coal operators was made, Aug. 6. It was agreed that the miners could select any grade of powder they desired and it would be furnished them at \$2 a keg. The operators also promised semimonthly payments, which was the strongest demand made by the miners. But on Sept. 1 some of the Pittsburg miners went out in consequence of the failure of the company to provide such screens as had been promised, the miners complaining that the screens were so coarse as to take too great a proportion of their coal. On the same day there was a strike at Weir City because 76 miners were each docked a car of coal for sending up sulphur. The total amount taken was over 72 tons. This strike was ended Sept. 9 on the agreement of the company to dock them for only the actual amount of sulphur loaded that day, amounting to 20 tons.

The product of the lead and zinc district for the year is given as: Zinc, 350,408,364 tons; lead, 59,669,140 tons; value, \$4,627,881.

It was announced in March that an inexhaustible bed of sand such as is used in the manufacture of glass had been found along the river bank near Atchison.

Tables prepared by the Board of Agriculture give the yield and values of farm products for the past ten years and the aggregate value of all except live stock on hand. The total value for the ten years was \$1,362,951,818; and the value for 1897 was somewhat above the average, \$136,335,268. Following are the largest items for 1897: Winter wheat, 50,040,374 bushels, \$33,798,612; corn, 152,140,993 bushels, \$28,555,293; live-stock products, \$16,983,923; prairie grass under fence, \$4,365,688; Kaffir corn, 1,358,379 tons, \$4,076,217; oats, 23,431,273 bushels, \$3,828,192; Irish potatoes, 4,130,021 bushels, \$2,529,082; alfalfa, \$3,048,934; dairy products, \$5,259,752.

The net increase in value of this year's agricultural productions over that of 1896 is \$20,045,246, and of live stock \$20,508,985.

Attention has been drawn this year to the remarkable showing the State has made in the matter of paying up its mortgage indebtedness. The Topeka "Capital" published a table indicating that this indebtedness has been reduced nearly \$106,-

000,000 during the past seven years, a decrease of 45 per cent.

Status of a Receiver.—In the case of the State vs. A. D. Hubbard, in whose account as a receiver there was a shortage of more than \$7,000 the Supreme Court in December rendered a decision that a receiver could not be prosecuted under the crimes act, as a receiver is not an agent, and receivers are not mentioned in the statute with executors, guardians, and others vested with functions somewhat similar to those of receivers. The defendant had been sentenced to three years in the Penitentiary.

The Liquor Law.—A citizens' mass meeting was held May 7, in Topeka, to protest against the open violation of the prohibition liquor law and to arraign the city, county, and State authorities for aiding or permitting a return to the saloon system. Vigorous resolutions were adopted and a strong organization was perfected for prosecuting violators of the law and bringing about the removal of derelict officials. The strongest statement was made by G. L. Williams, which seemed to reflect the feelings of the large audience. "If it be conclusively shown," he said, "that there is a failure of execution because the courts and the Governor and other sworn officers of the law refuse to do their duty, then, and so long as such condition exists, government does not exist, and the people are resolved once more into other elements where the law of might and not of right prevails, and if the people of this city overwhelmingly oppose the saloons, which we had reason to believe were forever banished from our midst, and are denied the arm of the law in abating and destroying this crime, then we should meet force with force, and, during the temporary suspension of the law, by our own might utterly destroy the saloons and all other institutions being run in violation of the voted laws of this State."

Legislative Session.—The Legislature met Jan. 12 and adjourned March 13. On joint ballot there were 92 Populists, 59 regular Republicans, 3 silver Republicans, and 11 Democrats. The new State officers were inaugurated Jan. 11. Lieut.-Gov. Harvey presided over the Senate, and M. A. Householder was president *pro tem*. W. D. Street was Speaker of the House, and E. C. Wellep Speaker *pro tem*.

A successor to United States Senator William A. Pepper was to be chosen. Senator Pepper was a candidate for the nomination of his party. Other candidates were William A. Harris, Judge Dennison, John W. Breidenthal, State chairman of the People's party, E. C. Little, L. P. King, and John Madden. Mr. Harris was chosen, and was elected by the following vote: Harris, Populist, 101; J. R. Burton, Republican, 53; J. C. Caldwell, Republican, 2; King, Populist, 1.

The message of Gov. Leedy was read to the Legislature, Jan. 12. One paragraph was as follows:

"With a cheerful audacity that almost challenges admiration, Grub Street scribbles on a venal press, which panders to the most vicious instincts of semicivilized foreign colonies like New York city and Chicago, with semibarbaric splendor at the apex and semibarbaric squalor at the base of their social life, have offered their puny and presumptuous criticism of those whose shoestrings they are not worthy to unloose. The dogs of Egypt have barked at the pyramids unanswered for fifty centuries. When the accused Doge stood before the Venetian Council, he said: 'My defense is your accusation.' Let Grub Street rail on. They well know that Kansas was a pillar of cloud by day and a pillar of fire by night before an oppressed people in the nation's darkest hour."

In all, 1,833 bills were introduced, and fewer than 400 became laws. An antitrust act which became

a law defines trusts, provides heavy penalties, including forfeiture of charter, and makes contracts violating terms of the act null and void.

Another act requires a tax to be assessed on all money judgments rendered in the State courts. It is aimed at deficiency judgments where real estate has been sold under mortgage or deed of trust and fails to bring the face value of the mortgage.

One of the laws that was made requires holders of mortgages to record them in counties where the security is located within six months.

An "antiscrip" law requires miners' wages to be paid in lawful money. The coal operators pay in scrip redeemable in goods at the company stores. It was provided that finer screens than those in use should be furnished to the coal miners.

The State Irrigation Board, created two years ago, was not continued. The Legislature of 1895 appropriated \$30,000 for the work of the board. The irrigation and forestry stations are to be combined under the jurisdiction of the Forestry Commissioner.

Cities of the first, second, and third classes are authorized to acquire waterworks and electric-light plants by a vote of the people upon a petition signed by two fifths of the resident taxpayers, and corporations furnishing such cities light and water must surrender all over 6 per cent. on the investment to the cities as rent for streets and benefits of franchises.

A State grain department was created, and the appointment of a grain inspector was provided for.

A new congressional apportionment makes slight changes in the districts, placing Shawnee County in the first, and Pottawatomie County in the fourth.

A bill for uniform text-books and providing for the appointment of eight text-book commissioners, not more than three to be of the same political party, became a law.

A so-called "anti-Pinkerton" bill was passed at the close of the session. It makes unlawful the bringing into the State of any person or persons or association of persons for the purpose of discharging the duties devolving upon sheriffs, deputy sheriffs, policemen, constables, or peace officers in the protection or preservation of public or private property, and provides as a penalty imprisonment for a period of not less than three months nor more than one year for each violation, or, in case of a corporation, a fine of \$10,000.

The Australian ballot law was so amended as to increase the pay of judges and clerks of elections, fix a maximum rate for the printing of ballots, and increase the number of names necessary on a petition from 500 to 2,500.

Other enactments were:

Authorizing graduates of the university law school to practice without further examination.

Repealing the act for the encouragement of silk culture.

To prevent the blacklisting of employees.

To permit public corporations and quasi and private corporations to become members of mutual insurance companies.

To prevent discrimination by corporations or individuals against labor organizations.

To regulate the sale and inspection of oil.

To grant licenses to ex-Union soldiers to sell goods in Kansas.

To provide for the listing and taxation of mineral reserves.

To compel street-railway companies to place vestibules on cars for protection of motormen.

To transfer the State Grand Army of the Republic reunion grounds and buildings to the Women's Relief Corps, for a home and hospital.

To regulate the mining of coal at the State Penitentiary, and abolish the contract system.

Empowering the Board of Education in cities of the first class to levy a tax of 12 mills for the support of common schools.

Making competent the testimony of husband and wife against each other in divorce cases.

Requiring every employer of more than 10 men to pay weekly wages.

To provide for the safety and health of employees of coal mines.

Providing for the assessment of taxes on the property of all telegraph and telephone companies.

The appropriations amounted to about \$3,150,000. For legislative purposes \$77,000 was appropriated. For public institutions, etc., the amounts for the two years 1898-'99 were: State University, \$185,000; Agricultural College, \$14,170; State Normal School, \$60,000; Topeka Insane Asylum (maintenance), \$233,580; Topeka Insane Asylum building, \$60,000; Osawatomie Insane Asylum, \$313,528; School for the Blind, \$40,000; School for the Deaf, \$91,740; Topeka Reform School, \$64,770; Industrial School for Girls, \$49,050; Industrial Reformatory at Hutchinson, \$125,940; State Penitentiary, 308,000; Soldiers' Home, Dodge City, \$91,700; Soldiers' Orphans' Home, \$60,324; Soldiers' Orphans' Home (water supply), \$5,000; Horticultural Society, \$3,950; *per diem* and mileage of State board, \$30,600; conveying prisoners to Penitentiary, \$16,000; maintenance of destitute insane, \$45,000; Board of Agriculture, \$1,800; Kansas Children's Home Society, \$1,400; State printing deficiencies, \$55,000; State printing, \$140,000; compiling statutes of 1897, \$19,000; deficiencies in salary of district judges, \$7,603; forestry and irrigation, \$6,640; executive and judicial departments, \$593,290; Statehouse and grounds, \$16,600; Agricultural College building, \$16,000; bust of ex-Gov. Charles Robinson for the State University, \$1,000; geological survey, \$3,500.

Many salaries were reduced, most of these being of clerks and stenographers; but the chancellor of the university was cut from \$5,000 to \$4,000, and other salaries at the institution above \$1,000 were reduced 12 1/2 per cent.

A bill regulating the fees and salaries of county officers will in some counties increase their compensation, but in the greater part will make a reduction of 10 to 25 per cent.

Some of the bills were passed in different form from that in which they were signed by the Governor.

One bill that was introduced proposed to make the Ten Commandments into a statute, with penalties attached.

Another bill introduced was to prohibit the wearing of hats, bonnets, or other head apparel at public entertainments.

A bill to provide for a constitutional convention failed.

One of the things that the Legislature was bound by party pledges to do was to pass a maximum freight-rate bill. A bill embodying the desired provisions, the Brown bill, was presented, but did not pass. Another bill was passed, but a protest was signed by nearly all the strong supporters of the Brown bill. This bill was vetoed by the Governor.

New Laws In Court.—The Legislature fixed new and lower rates to be charged by the Kansas City stock yards. The company protested in the form of an application by two heavy stockholders for an injunction to prevent the company from putting the law into effect. A restraining order was issued while a hearing was held to decide whether the stock could earn a fair dividend at the rates pro-

posed. This lasted several months, and in October United States Judge Foster decided against the stock-yards company, denying the application for an injunction and revoking the restraining order.

The "scrip" and "screen" laws were resisted by the coal companies on the ground that they were unconstitutional, because the text was not properly indicated by the title, and because they applied only to mine owners and not to other employers, and were therefore class legislation. Test cases were brought, and the law sustained by a decision in December. An appeal was taken.

The "antidockage" law was in May declared unconstitutional on the ground that it interfered with the right of private contracts.

The "general repeal" act, which would have taken 300 pages of redundant and inoperative statutes out of the books, was declared unconstitutional.

Political.—Municipal elections were held April 5 and 6. The Republicans elected their ticket in four of the six first-class cities. A large percentage of the vote was polled by women. In the larger cities, where enforcement of the prohibitory laws is under the direction of the metropolitan police officers, they divided on party lines; in some of the second-class cities they made the enforcement of the law a vital issue; but in many of these, where a determined fight was made, the prohibition cause was defeated. In a majority of these cities the Populists and Democrats combined on citizens tickets, and in many they were successful.

Most of the county and district elections in November were carried by the Republicans. The vote was estimated as follows: Republican, 138,470; Fusion, 129,351.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 40,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; and 1,858,635 in 1890. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, William O. Bradley; Lieutenant Governor, W. J. Worthington; Secretary of State, Charles Finley; Treasurer, G. W. Long; Auditor, Samuel H. Stone; Superintendent of Public Instruction, W. J. Davidson; Attorney-General, W. S. Taylor; Commissioner of Agriculture, Lucas Moore—all Republicans; Chief Justice of the Court of Appeals, Joseph H. Lewis, Democrat; Associate Justices, James A. Hazelrigg, Democrat, Thomas H. Paynter, Democrat, J. D. White, Democrat, B. L. D. Guffy, Republican, George Du Relle, Republican, and A. Rollins Burman, Republican.

Finances.—The report of the Treasurer for the year ending June 30, 1897, shows the total receipts to have been \$3,828,163.24. The balance on hand at the beginning of that year was \$201,829.02. The total amount paid was \$4,018,030.36, leaving a balance of \$11,961.90.

The Legislature ordered an issue of \$500,000 in bonds, to be applied on the warrant indebtedness. They were sold at a premium of 7.47 per cent. The total bonded indebtedness Nov. 30, 1897, was \$3,483,990.86, and the floating debt past due \$1,562,125.33. The resources of the sinking fund were \$586,612.72, making the total net indebtedness \$4,459,503.47. The educational bonds, amounting to \$2,312,596.86, are not subject to redemption, but constitute a perpetual debt, the interest on which is payable semiannually.

In September a judgment was given in the circuit court in favor of the Commonwealth in the

case against the Louisville Street Railway Company for \$27,408.

Charities.—The total expenses of the three asylums during six months of 1896 were \$23,616.95 less than in the corresponding months of 1895, and the average *per capita* expense was \$11.35 less. They were: Western Asylum, \$43,773.54; Central, \$77,785.52; Eastern, \$53,656.92. Salaries had been reduced at the Eastern, but not at the others.

WILLIAM O. BRADLEY, GOVERNOR OF KENTUCKY.

The management of the Blind Asylum has saved \$17,000, which is being used in the construction of new buildings and remodeling the old. The institution received \$23,275 from the State treasury during the year.

A new building has been erected for the Institute for the Feeble-Minded, to take the place of the one that was burned. The sum of \$22,765 was paid to the institution by the State in 1896-'97.

Prisons.—The Governor's message says of the prisons: "The chair contract at the Frankfort Penitentiary has not realized the money which it was thought it would, and there is now a controversy between the State and Mr. Martin, in which the former claims that the latter owes the additional sum of \$23,000."

"Following closely upon the termination of the contract with the Frankfort Chair Company came the destruction of the workshops at Eddyville by fire. This threw out of employment a large number of convicts. After the completion of the shops at Eddyville, the State will have 1,350 convicts at work, leaving unemployed only those unable to labor."

Pardons.—During the term of the present Governor there have been 1,572 applications for pardons, remissions, and respites, exclusive of those for restoration of the rights of citizenship. Of this number, 302 were granted; 26 were for children under eighteen. Of 329 applications for restoration to citizenship, 159 were refused.

Banks.—The Court of Appeals rendered a decision, March 24, reversing a previous one in regard to

taxation of banks. Hereafter banks will have to pay county and city taxes as individuals do, instead of paying 75 cents on the hundred to the State as heretofore. Under this decision the State will have to refund to the banks more than \$400,000 that has been paid into the State treasury, and the banks in turn will have to pay city and county taxes amounting to more than \$750,000.

In January the failures were reported of the First National Bank of Newport and the German National Bank of Louisville. Arrests were made in connection with the latter.

Loan Associations.—A decision was given June 19 by the Appellate Court which is expected to force out or seriously cripple all the associations in the State. The court held that the remedial law of 1893, which authorized these associations to charge not exceeding 12 per cent. interest, including dues and the legal rate, is unconstitutional. It holds that all interest and dues in excess of 6 per cent. is usurious and can not be charged. It is also held that even the dues are "interest," and that the borrowers who have been paying from 12 to 17 per cent. in dues and interest are entitled to recover or be credited by all in excess of a 6 per cent. interest.

Gold.—Gold has been discovered in Hardin County. An assay of the ore showed \$33.07 pure gold to the ton, and \$1.28 silver. The shaft was sunk about 18 feet deep in the rock, and the quartz taken out continues to increase in richness the deeper it goes in the rock. The vein is about an inch and a quarter in diameter, and is found in white granite. Ten dollars a ton will cover the expenses of extracting the gold. At another point the gold yielded \$58 to the ton.

Local Option.—In a case before the Court of Appeals it was decided, Oct. 15, that the special "local-option" acts under which liquor selling was voted out of certain counties and towns in the State do not stand repealed by the Constitution, and that where no license has been voted the people must reverse their action before license can be granted.

Lawlessness.—The destruction of toll gates was continued this year, accompanied in some instances by violence to the keepers and officers who attempted to protect the property. The State held turnpike stock in the sinking fund amounting to \$400,000, but its value has been reduced by the action of the raiders to \$100,000. The Governor said in his message that he was satisfied "that in numerous instances many of those who pose as good citizens have winked at this outlawry, because they supposed the result would be the depreciation in value of turnpikes, thus enabling the counties to purchase them at nominal prices, and thereby preventing in a large degree the levying of taxes. Advantage has been taken by some of the fiscal courts of this condition of affairs, and counties have become beneficiaries of crime which would not have been committed but for the worthlessness and cowardice of officials and the corruption of citizens who openly countenanced the lawbreakers. Frequently counties have voted for free turnpikes and at the same time voted against the issuance of bonds to pay for them. In other words, they declare they will have free roads without making compensation."

The message says further that the raiders, encouraged by their immunity from punishment, "have undertaken to regulate the quantity of tobacco the farmer should cultivate, destroying his plants if he dared to disobey; have notified the miller that he should charge no more for flour than the price fixed by them; threatened with the shotgun and the torch farmers who had posted their lands if the boards were not taken down and they allowed to hunt without hindrance." A negro was

lynched in Hancock County in open day, and without masks or even pretenses of secrecy on the part of the lynchers.

Legislative Session.—The Legislature having failed to elect a successor to United States Senator Blackburn at its regular session in 1896 the Governor appointed Andrew T. Wood, Jr. March 2, to fill the place until a Senator should be regularly chosen. He called a special session to begin March 13, one of the purposes named being the election of a Senator. Other objects named were a new apportionment of the legislative, senatorial, and court districts; a law against mob violence; penitentiary reforms; revision of the election laws; and an inspection of trust companies and banks.

The balloting for United States Senator began March 23. The Republicans had a majority, and their caucus nominee was Dr. W. Godfrey Hunter; but six of the party refused to support him, giving their votes to St. John Boyle. This aroused indignation in the party, and the bolters were denounced by conventions held by their constituents and in other districts. Ex-Senator Blackburn was the candidate of the free-silver Democrats, and Henry L. Martin was during a part of the canvass voted for by the gold Democrats. Dr. Hunter at times came within one or two votes of election, and twice had a majority of those present when there was a quorum; but the presiding officer ruled that the ballot should not be announced until after the absentees had been permitted to cast their votes, the so-called absentees being those who, in order to prevent a quorum, would not vote at first. During the canvass, April 10, a charge was made against Dr. Hunter and others that they had tried to secure his election by bribery; and an indictment was found against him and four others by the Franklin County grand jury April 18, charging them with conspiracy to bribe. After a long trial they were acquitted Sept. 21. On the one hundred and twelfth ballot, April 28, William J. Debow received the support of all the Republicans, Dr. Hunter having withdrawn, and was elected by the following vote: Debow, 71; Blackburn, 50; Martin, 13; Stone, 1.

A bill concerning fusion, which was introduced by the gold Democrats, was vigorously opposed.

The Legislature passed a bill allowing the State to issue bonds to the extent of \$500,000, to bear interest at the rate of 4 per cent. In June a case was brought to test the validity of the law, and it was declared void, on the ground that the outstanding bonded indebtedness of the State now is more than \$2,000,000; but the case was appealed and the decision reversed. The bonds were issued July 1.

A bill to substitute electrocution for hanging in executions was lost, and one was passed providing that executions shall hereafter take place within the walls of the Penitentiary.

The \$29,000 interest due from the State since 1894 on bonds of the Agricultural and Mechanical College was appropriated to the college, and it was provided that new bonds to the amount of \$165,000 be issued to replace the expired bonds, and that the interest on these bonds be appropriated, 85 per cent. to the Agricultural and Mechanical College and 14 per cent. to the Colored Normal School in Frankfort.

A bill to reduce and regulate the salaries of certain officers and appointees of the State fixed the principal salaries as follows: Of the Governor, \$5,000; Auditor, \$3,000; Treasurer, \$3,000; Attorney-General, \$3,500; Commissioner of Law, Agriculture, and Statistics, \$1,000; Secretary of State, \$2,500; Superintendent of Instruction, \$2,000; Registrar of the Land Office, \$1,500; Adjutant-General, \$1,200; State Inspector and Examiner, \$1,000; and traveling expenses; Insurance, 100,000,000.

\$3,000; Inspector of Mines, \$1,800 and traveling expenses; Railroad Commissioners, \$1,500 and traveling expenses.

Other acts were: Declaring combinations, confederacies, and conspiracies to intimidate crimes.

Allowing the city of Louisville to buy property sold for taxes, and hold it for one year, to allow owners to redeem it.

Imposing a penalty for interrupting public speakers.

Providing that all cars bringing into the State coal mined by convict labor must be so labeled.

Authorizing the organization of trust companies in counties with less than 100,000 population and permitting them to do both a banking and trust business.

Political.—Elections were held Nov. 2. The only State officer to be chosen was clerk of the Court of Appeals.

The People's party held a convention at Louisville, April 7. The platform favored the initiative and referendum; an income and an inheritance tax; the furnishing of schoolbooks at cost; the operating of "all turnpike and other transfer systems of public utility" by the public; reduction of salaries of public officials; a law to prevent discrimination against any legal-tender money of the country; legislation against trusts and combinations; and the receiving of unpaid warrants upon the State treasury for taxes and other dues to the State. Joseph A. Parker was nominated for clerk of the Court of Appeals.

The Democrats met in convention at Frankfort, June 2. The resolutions, which were adopted with but one dissenting vote, declared in favor of the Chicago platform and urged all true Democrats to stand by it. It condemned the "dishonesty, corruption, and incompetency" of the State administration.

Samuel J. Shackelford was the nominee.

The National Democrats held a convention, July 14, at Louisville. The resolutions reaffirmed the principles of the party as declared by the Indianapolis platform, pledged the party when in power to enact tax laws for revenue only, to pay all debts without bounties, and to reform the currency laws so as to maintain the standard of the world; they denounced the movement for free coinage of silver and all attempts to fix the ratio between the metals arbitrarily by law; condemned lawlessness; and pledged themselves to use every effort to restore the supremacy of law and to punish lawbreakers.

James R. Hindman was made the nominee.

On Aug. 10 the Republican State Convention was held at Louisville. The resolutions, after declaring allegiance to the principles of the party and commending the national and State administrations, continued:

"We are opposed to a system of civil service that builds up an official class, practically a life tenure, in almost all branches of the public service, and we demand that the civil service be so amended as to limit the terms of service to four years, with the privilege of reappointment or promotion subject to such restrictions as will secure competent officials and to every section of the country its proper portion of them.

"We favor the passage of a law that will protect the laborers of Kentucky from the competition of convict labor, and, if necessary to accomplish such results, an amendment to the Constitution permitting such legislation."

James G. Bailey was nominated.

The Prohibitionists nominated O. T. Wallace.

The campaign was very spirited and in some places violent. The question of free coinage was the chief topic of discussion in the State at large.

In some of the local contests the Republicans and National Democrats united.

On election day a bloody encounter took place in Frankfort, resulting in the death of 3 men and the wounding of 2 more. There was also a disturbance at Mount Vernon, and a shooting affray between the rioters and the sheriff and his deputies. Three of the deputies were killed.

The vote stood: Shackelford, Democrat, 187,482; Bailey, Republican, 169,678; Parker, Populist, 7,274; Hindman, National Democrat, 9,562; Wallace, Prohibitionist, 1,734; Democratic plurality, 17,804. The Legislature for 1898 stands on joint ballot: Democrats, 99; Republicans, 38; Populists, 1; National Democrats, 2.

KINETOSCOPIC PICTURES. In 1894 Thomas A. Edison brought out his kinetograph and kinetoscope, and a year later he gave out some description of his kineto-phonograph and phono-kinetoscope. The two first-named mechanisms have to do with the reproduction of moving scenes, and the two last-named with the simultaneous production of moving scenes and accompanying sounds. The kinetograph and kinetoscope had been introduced to the public but a short time, when other inventors brought out the biograph, cinematograph, eidoscope, eidoloscope, mutoscope, vitascope, and numerous other mechanisms similarly named, each adapted for the display of kinetoscopic pictures to be viewed through a peephole, or to be thrown on a screen in enlarged form by a magic lantern, so as to be visible by a large number of people, as in a public hall. These productions have been termed biographic pictures, cinematographs, etc., until in many cases the fact has been lost sight of that they are all kinetoscopic pictures, presented by slightly different mechanism.

The kinematic idea, as devised by Mr. Edison and perfected with the assistance and under the immediate direction of W. K. L. Dickson, was borrowed from two old toys, the phenakistoscope and the zoetrope. In each of these a series of coarse pictures representing continuous phases of motion was presented in rapid routine, in the effort to reproduce to the eye the effects of continuous movement. When instantaneous photography became known through the discoveries of Maddox, and Muybridge, Marey, and others gave to the world continuous pictures of the motion of the horse, the dog, etc., it occurred to Mr. Edison that it would be interesting to produce a better apparatus for properly exhibiting these modern photographs. After six years of patient labor the mechanism was perfected and the manufacture of kinetoscopic films was placed on a commercial basis. In order to deceive the human eye into an impression of continuity, it was found necessary to present to view 46 separate, distinct, and perfect pictures every second, and to keep each of these stationary for nine tenths of that forty-sixth of a second, while the entire set of pictures was advanced in position one degree during the remaining four hundred and sixtieth part of a second; and this intensely rapid alternation of stops and starts had to be carried on with almost perfect absence of vibration. Nor was this all. In order to reproduce the pictures at this speed and in this manner, it was essential that they should be photographed in the same manner, in order that the motions reproduced should be given in the proper time. None of the methods of photography then in use were available. Previous takers of instantaneous photographs had used batteries of at least 24 cameras, but here the conditions permitted the use of but a single camera. Bromide-of-silver haloids were tried, but produced coarse effects at every effort to enlarge the views. Success was at last attained with sensitized celluloid

films made in strips about an inch and a half wide, and bearing a row of holes on each edge, through which the teeth of wheels were projected for moving the strip at the required speed, with requisite stops. All kinetoscopic pictures are now taken on such films, and their manufacture has become a considerable industry. The photographic films sell for about 13½ cents a foot, and are the most expensive portion of an outfit for exhibiting the pictures. From 50,000 to 165,600 pictures are required on a film to supply an hour's exhibition, the latter figure being the number for pictures one inch in width. Although the pictures have to be stopped in transit 46 times a second, yet the speed with which they are moved on the drum is actually 26 miles an hour, exclusive of the stops.

Kinetoscopic pictures were first exhibited in the familiar nickel-in-the-slot kinetoscopes, and kinetoscope parlors were established in many large cities, where a variety of scenes was kept on exhibition in different machines. At this time no method was provided for exhibiting the pictures in an enlarged form on a screen. The kinetograph served to take the pictures and make the record for exhibition. It is a form of photographic apparatus having a camera capable of taking 46 views a second, and it makes the record or series of pictures on the kinetoscopic films, these being afterward finished like other photographs, and often colored by hand. The kinetograph is not, however, in any sense an exhibiting machine. As a consequence, no sooner were the machines marketed and declared a popular success than a small army of inventors set to work to devise means for exhibiting the pictures in enlarged form on a screen. One of the first to come before the public was the eidoscope, devised by Woodville Latham, and exhibited on Broadway, New York, in 1895. The kinetoscopic pictures were passed through the front of a magic lantern, which projected them on a white screen. The pictures thus obtained were interesting, but so shaky and irregular as to give a continually blurred effect to the views. A little later the eidoscope came out, and was placed on exhibition in a New York theater. The films for this machine are made continuous, and are wound on two spools, one giving off the film as the other winds it on, provision being made for a regular and even speed of the traveling film. It was regarded as a great success when this machine produced a satisfactory reproduction of a drill of Troop A of the National Guard, in Van Cortland Park, in the summer of 1896.

Another machine that has come prominently before the public for exhibiting enlarged kinetoscopic pictures is the vitascope. This is Edison's machine, the name chosen meaning, literally, the exhibition of life. The cost of perfecting it is stated to have been about \$20,000, and it was reconstructed several times before it assumed its present form. In the first model a shutter was used, as in the kinetoscope; but it was found that the action of the shutter had much to do with producing the blurred effects observed in the enlarged reproductions. The shutter was therefore abandoned, and an arrangement of an arc light and lenses was provided, which operated satisfactorily. The vitascope as perfected has a small camera lens in front for projecting the view on a screen. Just behind the lens is a rectangular frame of the size of the pictures to be reproduced, serving to confine the margins of the picture on the screen to the proper limits. The prepared film is passed directly in front of this frame, mechanism being provided for carrying it along with the required 46 stops a second. Behind is a large lens, and immediately behind this an arc light of about 2,000-candle power. An electric motor is employed to carry the

film with its train of pictures, and as each picture passes the frame, behind the small camera lens, the light from the arc lamp, passing through the large lens, projects the picture through the smaller lens upon the screen with a magnifying power as great as 600 diameters. One of the most serious difficulties overcome in the construction of the vitascope was the protection of the film of pictures from melting under the great heat encountered in the focus of the powerful arc light. The problem was solved by placing an electro-magnet in front of the frame over which the film traveled, so suspended near a small dynamo that the magnet is active whenever the film is stopped, and draws it out of focus; but when the current is turned on to start the film in motion the same movement withdraws the current from the magnet, and the film returns to its place in the focus, where it is not in danger of being melted as long as it is in motion.

The biograph is a machine similar to the vitascope, and has been used in numerous theaters in the United States in giving a variety of short views of moving scenes. An express train running at sixty miles an hour, fire engines on their way to a fire, children in a pillow fight, a pickaninny's bath, and a great variety of similar scenes involving rapid action have been successfully introduced, and have proved very popular. The cinematograph is another similar machine, which achieved considerable notoriety in 1897, as being the medium used to display the kinematic pictures illustrating a prize fight. This was the longest series of pictures ever exhibited continuously, their display occupying an hour and a half, and the results were fairly satisfactory, though it was found necessary to stop the exhibition when about half concluded, in order to afford opportunity to the observers to rest their eyes, which were unpleasantly affected by the vibration of the views on the screen. This vibration is present with all the machines used to exhibit enlarged kinetoscopic pictures. It is the result of the magnifying of the minute vibrations set up in stopping and starting the travel of the films 46 times a second. The vibration is not so serious when the films are new as it becomes after a little time, when the holes in the edges of the films become a little worn through repeated travel over the teeth of the carrying wheels. A very little wear in these holes allows the films to shake in proportion to the amount of play or lost motion in the holes, and this shake is exaggerated on the screen several hundred times.

One of the most singular results producible with kinetoscopic pictures is obtained by exhibiting them in reversed order from that in which they were taken. In other words, the films bearing the pictures are run backward through the vitascope or other exhibiting machine. Take, for instance, a view of a man eating a plate of chicken, with vegetables, gravy, etc. When it is presented backward, the observer sees a man seat himself at a table, wipe his mouth, and pick his teeth. Before him is a plate empty but for a few chicken bones. He begins with a fork to extract portions of meat from his mouth, and with the aid of his knife to build these up on the chicken bones. In the same way the vegetables, etc., are removed from his mouth to the plate, until a well-filled dish stands before him, covered with chicken gravy, which he removes to a special dish by the aid of a large spoon into which the gravy jumps from the plate in the most astonishing manner. A variety of other scenes are rendered equally peculiar and ridiculous by this reversing process, as horses running backward with a fire engine or a reversal of the process of a barber shaving a customer.

The mutoscope is an instrument similar to the

kinetoscope for exhibiting the pictures on a small scale for observation through a peephole. A number of other machines have been devised and employed for exhibiting the views through a peephole or in enlarged form on a screen, but none of them differ essentially from those described; they are practically either kinetoscopes or vitascopes.

Mr. Edison's inventions in the display of his kinetoscopic pictures did not cease with the kinetoscope and the vitascope. With the active aid and co-operation of W. G. L. Dickson, he developed the kinetograph and phonokinetscope, crowning triumphs of ingenuity in this field, which have not been generally exhibited. These mechanisms, as the names imply, are designed to reproduce sounds with sights, so as to preserve all the physical impressions received by an individual who observes a scene of life and action. The kinetograph records, and the kinetoscope exhibits to the eye, the movements of living or other active objects; the phonokinetscope records both the sounds and motions, while the phonokinetscope exhibits a duplication of both the sounds and motions originally given. The principle of the phonograph is of course the one applied to and associated with the kinetograph and kinetoscope in accomplishing this result. The chief difficulty to be overcome in bringing them into operation as one machine was the harmonizing or synchronizing of all the mechanism, so that the sights and sounds recorded and reproduced were absolutely sure to be given in unison. The system is peculiarly suited to the reproduction of events occurring on the stage of a theater, and a special kinetographic theater was set up for making the experiments. Here it was found necessary to group the actors close together and expose them to a very strong light. A kinetograph and a phonograph are then placed so as to bear upon the group, and are electrically connected, so that the cylinder of the phonograph and the spools of the kinetoscopic films may travel in exact unison. The continuous action of the players is caught by the kinetograph readily enough, but it is necessary that their utterances be directed toward the phonograph to secure a good record of the sounds.

KITE FLYING. Within half a dozen years kite flying has developed from an amusement suited to boys to a scientific pursuit eagerly followed by researchers in the fields of aeronautics, meteorology, and military tactics. The student of aeronautics has found the kite even more worthy of study and experiment than the balloon; the United States Weather Bureau has devoted time and money to the development of kite flying in order to obtain observations with meteorographs at high altitudes; the military tactician has been interested in them as furnishing means of signaling and making observations; and the photographer has recognized in them a new field for his efforts. Lawrence Hargrave, of New South Wales, deserves the greater part of the credit for transforming the kite from a toy to an instrument of science. To his investigations the world is indebted for the cellular or box kite, whose lifting power is much greater than that of any flat-plane kite, and which may be made in a great variety of forms. Knowledge of the laws that govern the wind and the action of aeroplanes has been much increased by his development of cellular kites. Hargrave, in originating forms of kites, was obliged to proceed almost wholly on the plan of guess and try. At that time the writings of Langley, Chanute, Maxim, and Lilienthal, describing their investigations in the work and action of the wind, were not available, and Hargrave was obliged to jump at conclusions of his own and test them by practice, under all the uncertainties arising from having to do with conditions little known

and in some respects erroneously treated by early authorities. He contrived an almost endless variety of cellular forms, being convinced that two surfaces, slightly separated, increased the lifting power for a given area, while the side surfaces added stability. He obtained the best results with what has become known as the two-celled Hargrave kite, shown in Fig. 1.

The older form of kite—the cross-stick kite of Benjamin Franklin's time, made both in X form and with sticks arranged in the shape of a Latin cross, with a tail of twine and paper—has also a modern development in the Malay kite, especially as improved by W. A. Eddy, of Bayonne, N. J. The Malay kite, as built by him, and shown in Fig. 2, has the cross-stick very near the top and made with an outbow or curve. It is tailless, as are most of the recent forms of kites. A tail simply serves to give balance to a kite, which is better obtained by a more perfect construction. The reason for the extreme shortness of top shown in the Eddy Malay kite is that the wind pressure on the under surface of an inclined kite plane is much greater at the top or forward end, because this first

catches the wind and sustains the effort of turning it in a downward course.

FIG. 2.—EDDY MALAY KITE.

Variant forms of the kite have been devised by Octave Chanute, J. B. Millet, C. F. Lamson, C. W. Marvin, J. Woodbridge Davis, Dr. A. B. Johnson, Alexander McAdie, and other investigators, many

of the designs approaching air ships in their imposing size and construction. The experiments of Chanute, Millet, and Lamson have been with a view toward constructing a successful aeroplane

FIG. 3.—TRAPEZOID KITE.

flying machine, while Marvin's experiments were made in his capacity as meteorologist for the Weather Bureau. His trapezoid kite is shown in Fig. 3. All these experimenters make use of cellu-

lar, double-plane, or multiplane forms, which they arrange in a variety of ways. The first cellular kite was probably the Japanese single-cell toy kite shown in Fig. 4, consisting of four sides arranged rectangularly, with the bridle drawing from two corners, so that a V surface was presented to the supporting

FIG. 4.
JAPANESE
SINGLE-
CELLED
KITE.

air. This form has a modern representative in a two-celled kite made by the Weather Bureau, which was tolerably efficient. But the V under surface, while convenient of construction, is not generally regarded with as much favor as those having flat or slightly curved planes. The tubular form of cell has been experimented with, and has been proved to be decidedly inferior. The rectangular two-celled form is most generally approved, though three and four celled designs have shown considerable efficiency. While much variety of detail is found admissible in construction, the later designers appear to keep in mind the necessity of using several planes so separated as to secure lifting effect without interference with each other—that is, without making it possible for one plane to receive the wind useful to another plane, or to turn the wind so as to lessen the lift of another plane.

Experiments with parakites, or kites flown in tandem, several being attached one after another to a single cord or cable, have developed possibilities in high flying, and in lifting heavy bodies, which were previously found impossible, owing to the restraining weight of the cord and the lack of stability in a single kite. G. T. Woglom, a jeweler of New York city, Messrs. S. P. Fergusson and H. H. Clayton, of Blue Hill Observatory, Milton, Mass., and Mr. Eddy are among the most persistent experimenters with parakites, and Woglom has published a book detailing his methods and experiments. He makes use principally of the Malay kite, as does also Eddy. The others named use both Malay and Hargrave kites on the one line. Lieut. H. D. Wise, in a series of experiments near New York in 1896 and 1897, also used both forms, preferring the Hargrave for lifting.

In flying a train of Malay parakites, a leading kite is selected capable of being raised perhaps 700 feet in a moderate breeze. When this is up 200 or 300 feet, a second kite is started, the method of attaching differing with the strength of the wind at the time. If the wind is light, the second kite is elevated separately on a line about 75 feet long, which is then attached to the main line. If the wind is strong, the second kite may be tied by the tail end to the main cable, the first kite furnishing the lifting power. After the second kite has dangled an instant, its surface comes to the wind, and it is thrown up into correct position, and begins to sustain the line. Other kites are attached in the same fashion, stronger cord being used with each additional kite; and in this way as many as a dozen are sent up. Woglom asserts that there is no limit (barring accident) to the number of kites that may be sent up in this way. The kites—or parakites as they are usually called when flown in tandem—exercise the ordinary kite function only in being elevated; when in place in the line, they exercise the

functions of aéroplanes in maintaining themselves in the air. The arrangement of Malay kites as parakites is given in Fig. 5.

Lieut. Wise found the cellular kites of a slightly modified Hargrave pattern best adapted for use as parakites for lifting a considerable weight, as a man. He placed the smaller ones first in his line, gradually increasing the area. He first experimented with a dummy, weighing 30 pounds. This was easily carried up by two large kites, in a 17-mile breeze, the lifting surface of the kites being 112 square feet. The dummy was elevated about 800 feet, but it was shown that the parakite was too unstable for elevating a man, as the dummy was shaken about in a most violent manner, being sometimes swung entirely over the main cable. Three Hargrave kites were used by Wise in his first endeavor to raise himself with a parakite. The surface area of the kites was 202 square feet, and the wind was blowing 22 miles an hour. The cord was wrapped on a windlass, firmly pegged to the ground, and about 300 feet of seven-sixteenths manilla rope, with a breaking strain of 1,250 pounds, was run out on the ground and tied to the largest kite, which was to be the lowest in the series, bearing the direct strain of the weight. Sixty feet of lighter rope, of a breaking strain of 750 pounds, was used to connect the second kite, tying it to the back of the first. The third and smallest kite was then launched in the air as a leader, and tied to the back of the second kite. Wise occupied the seat attached to the large kite, and signaled the men at the two lower kites to present them to the breeze for launching. The initial strain was so great that the lower frame of the large kite was pulled out, and the other two kites broke loose and flew away, but were caught and hauled down, and were broken by contact with buildings. This experiment taught Wise that, while he had plenty of lifting power, he lacked control of his apparatus. On Jan. 22, 1897, he made his first successful ascension, using four large Hargrave kites with a total lifting area of 312 square feet in a 17-mile breeze. This time the kites were raised in two separate pairs, and were united after being elevated. He readily attained an elevation of 42 feet, and might have gone higher, but deemed it best not to court accident. The total weight lifted from the ground was 229 pounds, 59 pounds being the weight of the kites, 20 pounds of ropes, and the remainder the dead weight of the man and the chair. Half-inch manilla rope was used to retain the kites.

On May 4, 1895, Woglom raised an American flag about 2,000 feet above the Washington Arsenal, New York city, with a parakite composed of six large Malay kites. In November, 1894, he raised a parakite to a height of 1,500 feet in a gale blowing 50

FIG. 5.—A PARAKITE OF MALAY.

miles an hour. This is about the limit of wind pressure in which it has thus far been found possible to send up a parakite with safety.

Eddy introduced his kites at Blue Hill Observatory in 1894, and many attempts were there made to reach high altitudes for the purpose of securing meteorological records. Previous to this, the best record at Blue Hill was 1,500 feet. In August, 1895, 9 Malay kites were sent up to a height of 1,900 feet which was a very unsatisfactory result to the observers, as the kites had a lifting surface of 220 feet and the wind was strong. When it reached 30 miles an hour many of the kites, which were of paper, were torn to pieces. The strongest pull shown on the line was 112 pounds. A systematic attempt was then made to improve every part of the mechanism and apparatus; and this work was so successful that by 1896 a record of 7,500 feet was recorded, the distance being calculated from the meteorograph to the surface of the ground on the hill. This record was increased to 8,740 feet in October, 1896, with 7 Malay and 2 Hargrave kites, having an area of 170 square feet. On Sept. 19, 1897, the record was again broken, and a height of 9,386 feet above the hill was recorded, the elevation above sea level being 10,016 feet. Seven Hargrave kites were used, and 4 miles of wire run out. The ascent was begun at noon, the highest point being attained at 4.17 p. m. A large part of this success was due to the substitution of steel piano wire for cord as kite string. The wire has two or three times the strength for the same weight as has the cord, and presents but one sixth as much surface to the air, so that the sag is greatly reduced.

Both Hargrave and Lamson made personal kite ascensions before Wise. Hargrave used a tandem of 5 of his 2-celled kites, and Lamson used a multiplane kite of his own peculiar construction. Hargrave ascended only 15 feet, but Lamson ascended 100 feet, June 20, 1896, at Portland, Me. He had previously elevated a 150-pound dummy, on which occasion something broke and the apparatus fell to the ground, but it came down so gently as to give confidence that the danger in a personal ascent was slight. Within the past year or two others have made similar ascents, among them being Lieut. Baden-Powell, of the Scots Guards, Great Britain.

As a means of signaling, Octave Chanute's multiplane kite has been tested by J. E. Maxfield, of the United States Signal Service, and tests for the War Department were made by Lieut. Wise at Governor's Island.

By an arrangement of red, white, and green lanterns, suspended on either end of a bamboo rod, with cords and pulleys for reversing the position of the rod, Wise made signals with the regular army code at a height of 500 feet. In the daytime a similar feat was accomplished with signal flags. For operating the international code, flags tied to a halyard in the proper order were simply run up to a pulley below the kite, one set being displayed, while another was being tied on. For night signaling with the international code, a long bamboo rod was run up, having fixed to it sticks of different colored combustible substances, arranged in a predetermined order. These signals were arranged so that they would burn five minutes after hoisting, and were visible to a distance of fifteen miles. Wise is now experimenting with incandescent electric lights for night signaling, sending the current up on the inside of a cable and down on the outside, and employing a telegraph key to flash the messages, on the principle of a heliograph.

Eddy has given more attention to photography from kites than any other investigator. He has taken numerous photographs in New York city,

Boston, and Bayonne, and succeeded in overcoming the numerous difficulties incident to operating a camera from a distance of several hundred feet, where it is subject to vibrations and shocks from a variety of causes. By arranging 8 or 10 cameras in a circle, with the backs inside, and suspending them in midair, he has obtained complete views of the horizon. He suggests that such an apparatus would be valuable in naval service, enabling the detection of an enemy below the horizon at a distance of 20 miles. In following out this idea of using the kite as a means of discovering that which is beyond the natural vision, Eddy devised what he terms a vistascope, a form of camera obscura, in which the image is thrown on a screen suspended from the kite, and viewed from below with a spyglass. In this manner he has viewed objects 2 miles distant beyond intervening hills.

Eddy, in association with Dr. William H. Mitchell and Henry L. Allen, in December, 1896, succeeded in sending both telegraphic and telephonic messages over a kite line, without using electric batteries of any sort. Three kites, each from 6 to 7 feet in length, were sent up on one line to a height of about 1,000 feet. The cord was fixed to the ground with iron pins, and about seven in the evening a thin conducting wire and lantern were drawn up by a pulley suspended from the main kite line. The lantern, being used as a weight, was allowed to descend after a time by letting out the wire, and Dr. Mitchell, going to the lantern end and attaching telephonic instruments to the wire, was able to talk to Mr. Eddy over the line, no artificial electricity being supplied, the source being entirely the static electricity encountered in the higher atmosphere.

Since the introduction of steel piano wire for kite lines, by Archibald, of England, in 1884, numerous electric shocks have been experienced by kite flyers. Steel is not a very good conductor, and Eddy, in 1892, tried a copper wire connected with a rectangular affair of tinfoil, which he sent up by his kites as a collector of electricity. He succeeded in producing numerous sparks. At the Blue Hill Observatory, in 1885, large silk-covered kites were tried, surfaced with tinfoil, and when they were sent up 1,500 feet, sparks were obtainable at the ground end at all times, under a cloudless sky. The experiments demonstrated that the electric voltage on the wire rose with the ascension of the kites, and diminished as they descended. During experiments made from the top of the Washington Monument, in Washington, D. C., potentials as high as 4,000 volts were obtained during thunderstorms, at periods just previous to lightning strokes. One operator, who handled the kite wire at the instant that a flash of lightning occurred nearly a mile away, was dangerously shocked. These and other experiments demonstrate that the upper air may be tapped at any time for electricity, which is probably generated by the stronger air currents circulating at the higher levels.

Almost every experimenter with modern kites has found it necessary to manufacture his own kites, and experiment and try until the best proportions were found. Steel is perhaps the best material for the frames of large kites, but wood is so much more convenient that it is ordinarily used. Paper is generally discarded in favor of cambric or silk cloth for the planes. Pine or spruce sticks are commonly preferred, and for making a Hargrave box kite the following dimensions and directions are given: Sticks, $\frac{1}{2}$ inch square and 72 inches long, set 6 feet apart in one direction and 21 inches in the other; the stiffening and bracing are of fine steel wire, piano wire being the best, and the point of attachment for the bracing wires being about 10

0 20 40 60 80 100 120 140
SCALE OF STATUTE MILES

6410010

inches from the ends of the sticks; two pieces of cambric cloth 20½ inches wide and 181 inches long, which is reduced to 20×180 by hemming, can be stretched for the covering. The cloth is fastened to the wood with tacks. In making Malay kites it is essential that the two halves be made to balance perfectly, else the weak side will turn in the wind and the kite will come down. The lower portion requires to be made somewhat loose, so that it bags in the breeze, and this permits the tail to be dispensed with. The amount of slack must be very nicely adjusted, however, to avoid a loss of lifting power. The strings are tied at the crossing of the sticks and at the lower end, so as to determine the angle to be presented by the kite plane to the wind. If the angle is made too near the horizontal the kite is liable to dive, and if it is too near the perpendicular it will not rise advantageously. The proper angle is about 70° to the earth's surface. Mr. Eddy and, later, Messrs. Fergusson and Clayton, have brought this form of kite very near to perfection. The directions given for making are to use cross sticks of the same length, and to cross them at a point 18 to 21 per cent. from the top; the sticks are tied, not nailed; the cross stick is bowed by attaching a cord to its ends, and the bow must be equally bent on each side, which may be accomplished by trimming down and weakening the wood at any point where it bends too little. The proper amount of bow is 1 to 10. Steel wire is used to join the ends of the stick, which are notched to receive it.

Chanute, Millet, and Lamson have given much study to odd forms of kites, having a bearing upon problems connected with aerial navigation. Chanute built a six-celled kite, having the lower surfaces divided centrally at obtuse angles, the whole being connected by a lazy-tongs frame, which admitted of changes of form and position of the cells and planes. Millet built a ladder kite with nine planes, the spaces between the planes being calculated to allow proper clearance for the wind. It is so arranged that the angles of the planes may be adjusted with reference to the force of the wind. Millet has also designed a mammoth observation kite, which is in truth a great air ship, only restrained by its cables. It has four planes, the two

multiplanes, some of them weighing 100 pounds and being constructed of spruce sticks, Berkeley cambric, and piano wire. The one shown in Fig. 6 he used to elevate a dummy before essaying to go up himself.

Kites may be flown in the rain and snow by using paraffin paper, which resists the moisture. When the snow accumulates on the kite so as to weigh it down it may be partially shaken off by agitating the kite string. Night flying is not at all difficult, and if lanterns are attached to the kites, they can be watched as readily as in the daytime. The kite may be said to be now thoroughly established as an instrument for scientific research, and the number of kite fliers constantly increases.

KLONDIKE, THE, a river in the Northwest Territories, Canada, about which gold has been discovered. This stream is a tributary of Alaska's largest river, the Yukon, and was called by the Indians *Thondok*, which means "river full of fish." It is a small, shallow stream about 40 yards wide at the mouth, with clear blue water, in which salmon is abundant. The Indian name has been corrupted by the miners into Klondike, which is now the accepted name of the river and the region around it. The basin of the Yukon has about 192,000 square miles, or nearly three times the size of the New England States. Discoveries of gold have been made in many parts of the basin of the Yukon, which lies partly in Alaska and partly in Canada, though the richest finds have been on British ground.

The first white people who made their way into the interior of Alaska went there in the interest of the Hudson Bay Company. It is believed that they knew of the existence of gold in that country, though they did not suspect the richness of the deposits, and, because miners would have disturbed the animals from whose furs the Hudson Bay Company received a large revenue, they said nothing about the precious metal. In 1840 Mr. Campbell began exploration of the upper Liard and Pelly rivers, but, being told that farther on he would encounter cannibals, he turned home again.

Fort Yukon, a post of the Hudson Bay Company, was established in 1847 at the head of Porcupine river; but it had to be moved, as it was found to be Russian (now United States) soil. Another post—Fort Selkirk—was established a year later at the confluence of the Pelly and Lewis rivers, but it was demolished by the Indians in 1852.

In 1867 a steamer of the Hudson Bay Company picked up a wounded man who was drifting in a canoe near Stockade Point. He said his name was Culver, that he had had two partners, one of whom had been killed by the Indians, and that he had discovered gold, and he showed some in proof of his assertion. A party of people at Port Townsend set out in a steamer, the "Louisa Downs," with Culver to guide them to the place of his discovery; but when they reached Taku his wits seemed to have deserted him, and when he was threatened with death he quite lost his reason. Returning to Sitka, he died there a few years later, and before dying said to his friends that there was gold where he had been, and some day it would be found again.

Gold was discovered in British Columbia, in the Cassiar districts, in 1873. The Yukon region was entered by miners in 1882, the entrance being made by the Taiya pass. Several explorers entered central Alaska in the early '80's, and placer mining was carried on with much success on the Stikine, Lewis, Pelly, Hootalinga, and upper Yukon rivers. On the Stewart in 1886 about 40 miners were washing gold, the highest earning of one man being \$6,000. The first real excitement in the Yukon country

FIG. 6.—LAMSON'S TRIPLE PLANE KITE.

rear ones being of nearly twice the area of the forward ones, in order that they may have the same lifting power, as they receive less wind. The basket for containing the observer is so hung on a pulley that it may be drawn forward, when the kite will descend, or backward, when the kite will rise, as a result of the change of angles of the planes. Lamson has built peculiar forms of large kites with

took place in 1887, when Forty-mile creek was discovered and coarse gold was first found. News of this was brought out by Tom Williams, a messenger, who brought letters for the post trader, and who lost his life as a consequence of the hardships of the journey. In the spring of 1888 mining on Forty-mile creek began, and now nearly all accessible gold has been got out, but rich bars remain to be worked when there are greater facilities.

Birch creek has, next to the Klondike, the richest placer diggings yet found in that region, and consequently the second richest in the world. These were first worked in 1894; and Mastodon, Greenhorn, Independence, Deadwood, and Eagle creeks, all tributaries of the Birch, promise rich rewards to the explorer. In fact, the whole valley of the Yukon and its affluents is a gold-bestrewed region.

Gen. Duffield, of the United States Coast and Geodetic Survey, says: "The gold has been ground out of the quartz by the pressure of glaciers, which lie and move along the courses of the streams, exerting at all times a tremendous pressure. The force is present to a more appreciable extent in Alaska than elsewhere; and I believe that, as a consequence, more placer gold will be found in that region than in any other part of the world. When gold is precipitated it sinks; it does not float far downstream. It is therefore to be looked for along the small creeks and about the head waters of the larger tributaries of the Yukon. There is no reason why as rich finds may not be made on the American side of the line as in the Klondike region."

It is true that the small streams are the ones found to be rich in gold, which is generally at the bottom of thick gravel deposits. But the ground is not of equal richness, and the gold of this northern region has in combination more of the baser metals—iron, silver, and lead—than the gold of California, Yukon gold being worth \$17 to \$18 to the ounce, while that of California is worth \$1 more.

After Williams's news there was a rush made for Gastinaux channel. Claims were staked out on Gold creek, and a town was established which was named Juneau—after one of the men who first explored the region.

Cook's inlet, 600 miles west of Sitka, was rumored to be a gold region, and in 1895 many persons searched there in vain for wealth. Later, rock and gold placers were reported to be in the same vicinity, and Cook's inlet became again the resort of miners. Few of these work for wages, and some claims yield \$10 to \$40 daily.

The Klondike district consists of the valley of the river of that name, which flows westward into the Yukon, and extends 30 miles south to Indian river, also flowing into the Yukon. Midway between Klondike and Indian rivers is a hill called the Dome, and streams flow into them from the height of land between. Bonanza, 23 miles long, Bear, and Hunker creeks are tributaries of the Klondike, Eldorado of Bonanza, and Gold Bottom of Hunker. Quartz creek, No Name, and Dominion flow into Indian river. More than 500 locations have been made on this river, but it has been found very difficult to take provisions up to it.

The head waters of the Klondike are unknown, though explorers have ascended it 150 miles, and find it there still larger than a brook. The region is mountainous and very rugged, and is covered with a heavy growth of spruce, birch, and poplar.

The earliest reports of the wealth of the Klondike were from Indians, and a white man, George W. Carmack, located the first claim in August, 1896, on Bonanza creek. Here three men washed out \$14,200 in eight days. Later one claim yielded \$65.30 to the pan. On Eldorado \$100, and then

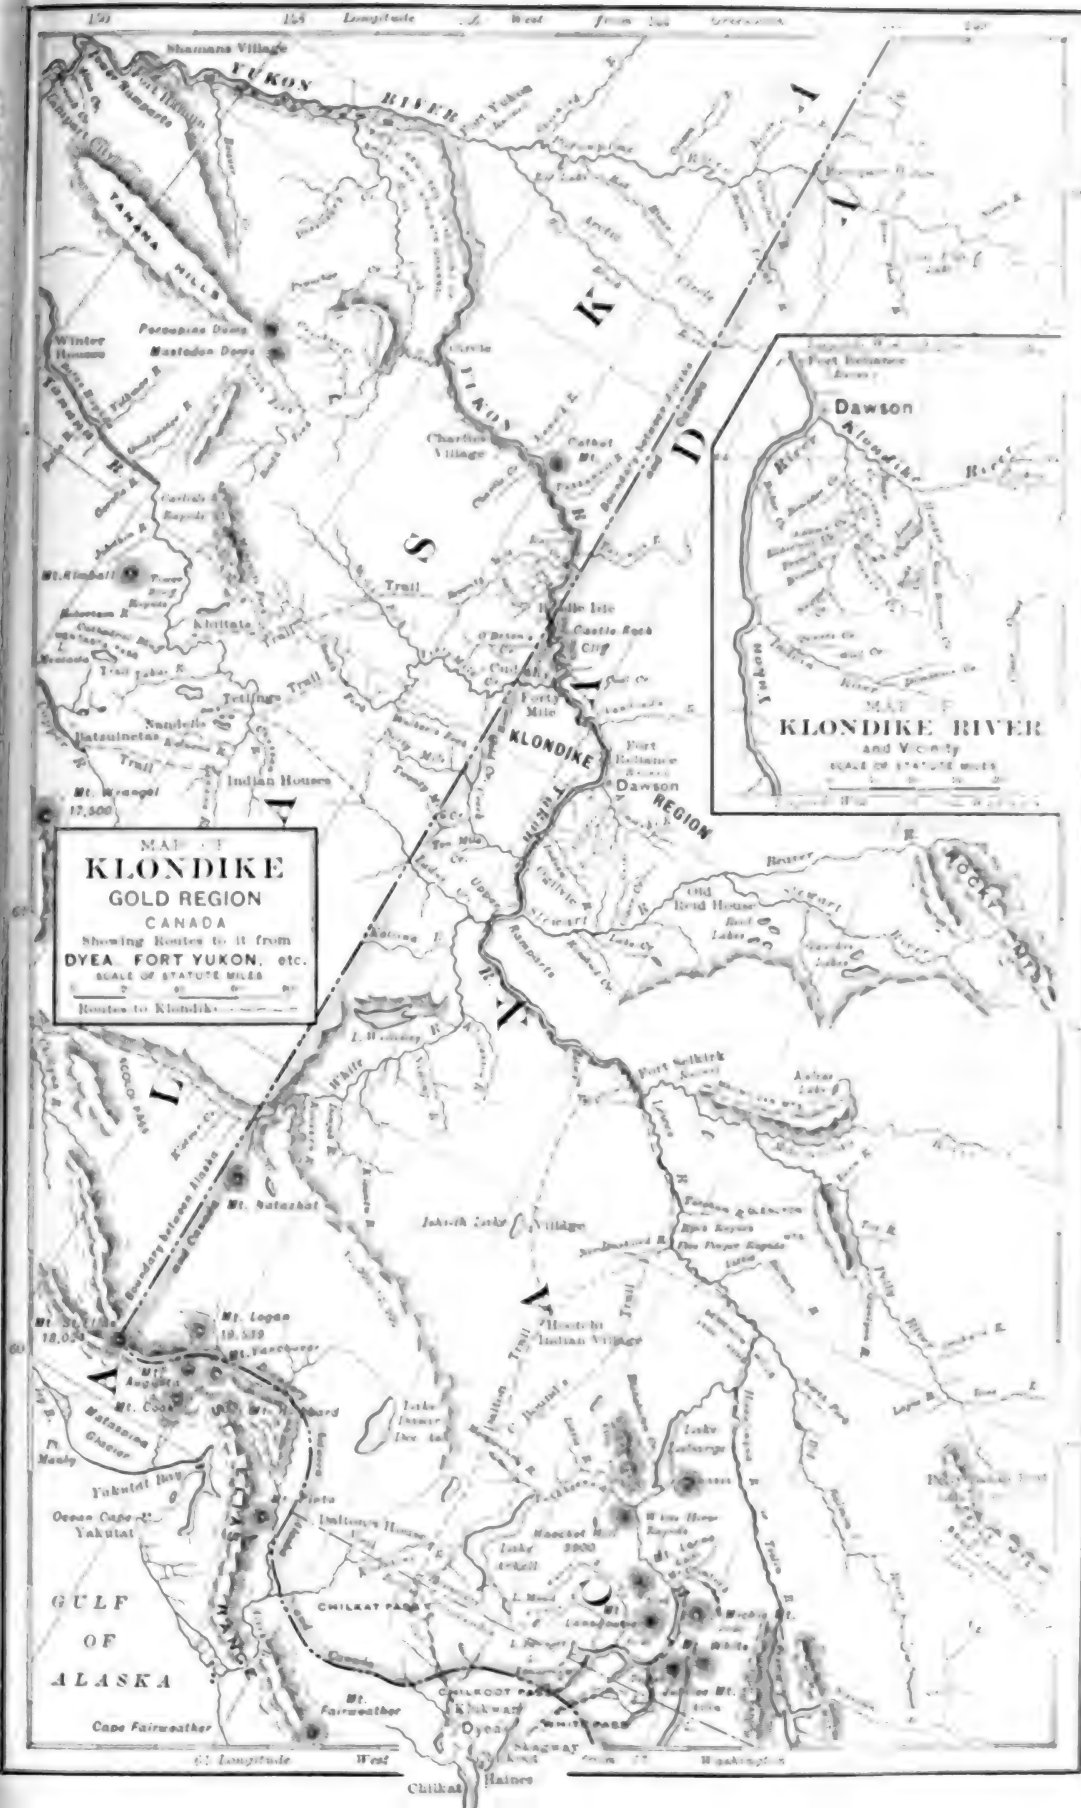

\$280, to the pan was taken. A pan is two shovelfuls, and while miners consider dirt containing 5 cents to the shovelful, if three feet deep, is rich soil, in these creeks \$1 to the pan is thought small. A nugget worth \$583.25 was found on Eldorado.

William Ogilvie, Dominion land surveyor, has been making a topographical survey of the British possessions on the Klondike. A census made by him of the production shows that 23 claims yielded \$826,000. He estimates that \$79,000,000 will be produced by Bonanza, Eldorado, and Hunker creeks in three years.

After Carmack's discovery many left the Forty-mile creek and Circle City diggings for the new fields. Mining was apparently not so good there, for there are few diggings on the Klondike that can be worked by sluicing, as the gold-bearing strata lie from 5 to 20 feet under ground. One of the first miners, dissatisfied with his claim, which appeared to him unprofitable, sold it for \$85. It was again sold for \$31,000, and when worked by the third owner it yielded \$130,000 in six weeks. A claim on the Eldorado was sold for \$45,000, \$5,000 to be paid on the day of sale, \$15,000 a month later, and the remainder to be due six weeks after the second payment. The second payment was made four days early, and the third ten days. One miner, who considered that he had done "pretty well," had drifted a plat 24 by 14 feet, making \$8,000 as the result of two months and a half of labor. Claim No. 9 on Eldorado has immediately above bed rock 3 or 4 inches of almost pure gold. An offer of \$1,000,000 was made for 10 adjoining claims on this creek, but was declined. A claim is 500 feet long, measured in a straight line in the direction of the valley, and is the width of the bottom. Bench claims on Eldorado run 200 to 300 feet up the mountain. One of these paid \$600 a day, with one man taking out material and one rocking. Good prospects have been found 400 and 500 feet above the bar.

The ground here freezes solid, and only two feet of it thaws in summer. The miners build fires over the area where they wish to excavate, and when these have burned about twenty-four hours remove the softened muck, and then light fires again. In this way they sink a shaft to bed rock, and then tunnel by the same process. This method of mining is expensive, and not all claims are rich enough to pay the cost. Where the bed rock is smooth there is no gold, but where it is rough the gold is lodged. Often the shafts do not strike a pay streak. Unless the ground yields \$15 a day to a man it is not profitable to work it, miners' wages being \$1.25 an hour, and the day six or seven hours long. When a shaft yields not more than 10 cents to the pan it is abandoned. About Dawson City the bed rock is a soft shale, and this is often worked to a depth of 2 or 3 feet. The material taken out is left in a heap until spring, when the torrents are flowing, and it is then panned and cradled.

In the summer of 1897 there were only two traveled routes into the gold regions—one by Lynn Canal, Taiya pass, and descending the Yukon; the other by St. Michael, Alaska, and ascending the Yukon. There are now six principal routes by which to reach the Klondike: The second already mentioned; the Dalton trail from Haines's Mission to Fort Selkirk; the Dyea, via Dyea to Lake Lindemann; the Skagway, via Skagway to Lake Lindemann, or Lake Bennett; the Taku river from Juneau to Lake Teslin; and the Stickeen to Lake Teslin, by way of Fort Wrangel. The Dalton is a fair trail for horses and cattle. The Dyea or Chil-koot pass has always been used by the Chilkat Indians, and all the early explorers entered the Northwest Territories by this pass. It is very hard to get

supplies over Chilkoot pass, but after leaving Lake Lindemann, where the prospector builds or buys his boat, the journey is comparatively easy. The Chilkoot Railroad and Transportation Company has nine miles or more of horse tramway from Dyea. The rails used are of wood, topped with strap iron. The intention is ultimately to make the line a railroad. There is an overhead bucket-and-cable system, and this line has a telephone between Dyea and Sheep Camp. Last winter Archie Burns operated a wire cable from the Scales to the summit by means of a windlass, and he has improved his arrangement this year. A detailed account of the route tells of hard passes, lakes where strong winds are encountered, and rapids whose descent is very perilous. When the miner reaches Fort Selkirk he thinks the hardships of the journey are over.

From Dawson City to Stewart river, about 66 miles, the Yukon is half a mile to a mile wide, and is studded with small islands. White Pass, on the Skagway route, is very dangerous. In many places the mire is so deep that pack animals have had to be relieved of their burdens and lifted out, and often the trail skirts a precipice, or is so narrow that large things can not be taken through. Some men and many horses and mules have lost their lives on this pass. Men have worked here as packers for \$6 to \$10 a day, and carried 100-pound loads. Work is begun on a wagon road to connect Skagway with Lake Bennett. The ascent is not steep, and the road, which is to be 16 feet wide, will have a rock bed most of the way, the rest to be corduroyed. By March 1, 1898, a tramway is to be ready for operation between Skagway and Lake Bennett.

Skagway has sprung up since the rush to the Klondike. Before that it was nothing more than a stretch of beach. Now there are 600 frame houses, some of them several stories high, 150 log cabins and many tents, 6 hotels, 15 lodging houses, a newspaper, a sawmill, a hall, a post office, 15 restaurants, 13 general stores, 4 tobacco stores, 4 news stands, 24 saloons, 3 drug stores, 3 tinsmiths, 5 meat markets, 9 laundries, 6 blacksmiths, 4 bath-houses, 6 barber shops, 1 bank, 11 hay, grain, and feed companies, 6 real-estate offices, 1 bowling alley, 10 groceries, 3 furniture stores, 3 employment bureaus, 6 lumber yards, 3 jewelers, and 6 bakeries; also carpenters, shoemakers, contractors, lawyers, physicians, and Government officials.

A survey is being made for a railroad from Pyramid Harbor over Dalton trail to Carinack's post on the Yukon.

The Stickeen river is another way that may prove a good route; but it is only navigable for canoes, and those who have taken this route have met with many accidents, especially that of having their boats overturned in the swift currents of the river. One man has been drowned. The Canadian Pacific Company projects building a railroad between Telegraph creek and Lake Teslin, and intends to operate it in connection with a line of steamers running between Victoria and Fort Wrangel. A Delaware company proposes to construct a railroad from the mouth of the Taku to Lake Teslin. There is canoe navigation of the Taku, and a light-draught steamer could run on Lake Teslin and the Hootalinqua river, which is free from dangerous rapids.

Neither reindeer nor cows, it is said, can travel on ice trails, but horses and dogs can. In January, 1898, 105 dogs—Newfoundlands, St. Bernards, collies, and mastiffs—were shipped from Seattle for the Klondike. They had been collected and trained to draw sleds by Julius L. Beet, an animal trainer.

The Canadian Government is establishing custom-houses on all routes to the Klondike and making efforts to get the trade for Canada. Most of the things that the miners must have are taxed.

Mounted police, under Major J. M. Walsh, have set out for the gold region, and by the spring of 1898 there will be 300 of these and soldiers there. The United States and Canada have made an agreement to exchange mails once a month between Dyea, Alaska, and Dawson City, only letters and postal cards to be carried.

Dawson City was begun in September, 1896, when Joseph Ladue, one of the Klondike prospectors, built a house at the confluence of the Yukon and Klondike rivers and named the place after the explorer, Dr. Dawson. Less than a year later the place had 5,000 population. It occupies about a mile along the river, and is laid out in streets and avenues, which are numbered, all the streets running in one direction, and the avenues across. There are stores of all kinds, sawmills, Presbyterian, Methodist, Baptist, and Catholic churches, and a sisters' hospital. In November, 1897, the opera house and two saloons were burned.

In this desolate northern region the winter lasts nine months, when the sun shines only a few hours every day, the thermometer goes as low as 60 below zero, and the Yukon is closed by ice from November to the last of May. During the coldest weather candles are useless, as the tallow is so hard that only the wick burns. In the short summer the days are very long and it is warm enough to make tent life comfortable. The rainy season occurs in August. Cattle can be kept if well fed and housed in winter, and the hardy vegetables can be raised. Game is very scarce, but berries of many kinds flourish in summer, and fine grass near the rivers, and it is said that roses and many other beautiful wild flowers abound, though even then the ground is frozen six inches below the surface. The ground about Dawson is low and flat and the drinking water is very bad, so that sickness and often typhoid fever is prevalent. The region about Dawson is rich with copper, silver, and coal, which are neglected in the eagerness to get the more precious metal that has been found here in greater quantities than ever elsewhere. To get food over the pass to Dawson costs on an average one dollar a pound.

KOREA, a country of continental Asia, between Russia and China; area, 80,000 square miles. The Tumen river divides it from Russia. The Tumen and Yalu rivers and the Long White mountains separate it from Manchuria and China.

Korea has a rich fauna, including tigers and leopards in great numbers, bears, antelopes, seven species of deer, foxes, beavers, otters, tiger cats, pigs, martens, sables, and striped squirrels. The ornithology is varied, vast numbers of edible and other birds making the peninsula their halting place in the annual migration or living and breeding in it. In the neighborhood of Seoul and the large cities, along the coast, the treaty ports, and the main roads the hills are denuded of timber and give an unfavorable impression of the country; but in the northern and eastern provinces there are vast forests but slightly invaded by the wood cutters. The oak, lime, ash, birch, maple, juniper, mountain ash, hazel, willow, hornbeam, plum, peach, and other trees abound.

The population is estimated by careful travelers to be from 12,000,000 to 15,000,000, little reliance being placed upon the so-called official census taken in 1897, which gives a population of less than 7,000,000. Socially the population is divided into nobles, the *yang ban* (civil and military class who pay no taxes or tolls and live or prey upon the people, and the people. Slavery still exists, but is passing away.

Government.—The ruling dynasty was founded in 1392. Succession to the throne is hereditary. The edict of the sovereign constitutes law. In

January, 1895, the King formally renounced the suzerainty of China, which acknowledged the complete independence of Korea in the Shimonoseki treaty. On Oct. 14, 1897, the name of the empire was changed to Dai Han, and the King assumed the title of Emperor. The name Dai Han, or Great Han, is in contradistinction to the San Han, or three ancient kingdoms of the peninsula. The Council of State, created by decree of September, 1896, which declared the absolutism of the King, is composed of a Chancellor, five councilors, six ministers, and a chief secretary. There are nine ministers—the Premier and Minister of the Royal Household, of Finance, Home Affairs, Foreign Affairs, War, Justice, Agriculture, and Education. The empire is divided into 13 provinces, over each of which is a governor, and 360 districts, in each of which there is a magistrate. The Korean army consists of 6,000 men—4,800 men in Seoul drilled by Russians and 1,200 in the provinces—and the navy of two small merchant steamers.

Finance.—The revenue, which, when collected, is sufficient for all legitimate expenses, is derived from the customs duties, now managed by able and honest foreign officers; a land tax of \$6 on every fertile *kyel* (64 acres) and \$5 on every mountain *kyel*; a household tax of 60 cents to each house, except in Seoul; and a duty of \$16 per *cattie* (1.33 pounds) on red or manufactured ginseng. The modern coinage is in silver (20 cent), nickel (5 cent), copper (5 cash), and brass (1 cash), of good appearance. This new money is steadily displacing the old perforated "cash" (500 to the dollar). The Japanese silver yen circulates everywhere. In July, 1896, J. McLeavy Brown, LL. D., Chief Commissioner of Customs, received by royal decree the absolute control of all payments out of the treasury, and began the regulation of abuses, with the happiest results. The financial year to April, 1897, closed with every account paid and 1,500,000 yen in the treasury, out of which Korea paid 1,000,000 yen of the loan of 3,000,000 owing to Japan. The customs revenue, which is steadily increasing, is collected at a cost of only 10 per cent.

Railways.—Messrs. Collbran and James, who are at the head of the Oriental Construction Company, which is an American firm having its headquarters in Denver and Chattanooga, have charge of the Seoul-Chemulpo Railway. They have contracted with the Government for a completely equipped railroad. It will be of standard gauge, 25 miles long, following closely the public road between seaport and capital. In Seoul the station building will be a handsome frame edifice with brick foundation, outside the city wall, near the little West Gate. In August, 1897, 10 miles of rail and 100 tip cars were in use, and the roadbed was graded, sloped, and ditched from Chemulpo to Pujon. The chief difficulty is at the river Han, which is to be crossed by an 8-span steel-truss bridge built in the United States. It is 1,650 feet long, approached at either end by wooden trestling, which gives the bridge a total length of 2,450 feet. The northern terminus is the King's ferry, about four miles from the capital. The Japanese have surveyed the route for a railway between Seoul and Fusan. The route from Seoul to Wiju, on the Yalu river, has also been surveyed. Telegraph lines run from the capital northward overland through China, and southwestwardly by land and submarine cable to Japan. In the Lobonaw-Yamagata treaty of June 9, 1896, the right of building telegraph lines between Seoul and Siberia was reserved to Russia, which lines are to be repurchased by the Korean Government when it is able.

Education.—Until 1894 the royal examinations, which were regarded as stepping stones to official

places, the great object of Korean ambition, were held in Seoul, to which young and old men, whose sole education was in the Chinese classics, came from all parts of the kingdom. Under the old ideas and routine all education was in archaic Chinese. Now, largely through the work of the American missionaries, the *En-mun*, or simple and efficient native alphabet, is used, not only for religious and educational publications, but even for Government proclamations. Besides the vernacular and mission schools, there are Government schools for the study of Korean, Chinese, and foreign languages. In the Royal English School are 100 students in uniform, drilled by a British sergeant of marines. In the Japanese, French, and Russian schools, which are chiefly linguistic, military drill is the rule. Prominent and very useful is the Pai-Chai College (hall for the rearing of useful men), under charge during the past eleven years of the Rev. H. G. Appenzeller. This, besides its own departments, educates 200 students appointed by the Government, and has an industrial section, which includes a trilingual press and a book-binding establishment. In the various Protestant and Catholic schools, as well as in the Christian Japanese schools, the *En-mun* is used. In Seoul there are more than 1,000 students. Under the reformed system of education is the Normal College, placed in May, 1897, under the Rev. H. B. Hulbert, for the training of native teachers for the intermediate and primary schools. The text-books are to be in *En-mun* and the vernacular. Already there are primary schools with more than 1,000 pupils. Besides 77 young men studying in Japan at Government expense, there are others, probably 100, in various countries studying at private expense. In Seoul the sight of newsboys passing through the streets with bundles of newspapers in *En-mun* is no longer rare. Besides the "Independent," edited by Dr. Jaisohn, a Korean educated in the United States, there are two weeklies, the "Korean Christian Advocate" and the "Christian News." The "Seoul News," in mixed Japanese and Korean script is triweekly, and there are newspapers in the Japanese language at Fusan and Chemulpo. The Korean Independence Club publishes a vernacular monthly magazine, giving the politics, science, and foreign news, and the "Korean Repository," in English, is a monthly of high value. The list of publications by the missionaries in *En-mun* is large, and the Rev. James S. Gale's large Korean-English dictionary, several works of linguistic importance, and the magnificent "Bibliographie Coreene" of Maurice Courant, were completed in 1897.

Events.—The year opened with a conservative Cabinet in office. On Feb. 20, after a sojourn of one year and nine days in the Russian legation, the King took up his residence in the new palace of Kyeng-Wun, built in 1896, in the western part of Seoul, where are gathered the foreign legations and residences, some of them very handsome and substantial.

On Feb. 22 the railway connecting the capital with the seaport was begun in presence of Governor Ye-Cha-Yun, formerly of Washington, and Dr. H. N. Allen, now United States minister; Mr. Carley, the American engineer in charge, and Mr. Townsend, with 50 laborers equipped with American barrows, shovels, and pickaxes, and the Korean officers filling each a spade.

The royal ambassador to the European courts, Min-Yong-Whan, took his departure, and after visiting the European capitals settled in St. Petersburg. The treaty between Prince Lobonaw and Marquis Yamagata, signed at Moscow June 9, 1896, was published in February.

The census of Seoul shows a population of 144,626 in 27,257 houses, and in the suburbs 75,189 in 18,093 houses, or a total of 219,815, and of houses 45,350, in which district are 36 Buddhist temples with 442 priests and 204 nuns. The cleansing of the city, once the filthiest in the world, has made of Seoul one of the attractive places in the far East. The original width of 55 feet, as laid out in 1892, has been largely regained for more than seven miles of streets.

Korea sent a delegate to the International Postal Union that met in Washington, and a postal system, with stamps of four kinds, has been established and is in good working order.

Dr. Horace Newton Allen, born in Delaware, Ohio, in 1868, and resident in Korea since the summer of 1884, was appointed United States minister July 15, and on Sept. 13 began his duties.

On July 3, 1897, a royal rescript declared that on Oct. 1, 1898, two new ports should be open to foreign trade. These are Chinnampo, on the northern shore of Ping-Yang inlet, and Mokpo, in the southwestern part of Chullado.

On Oct. 12, at 3 A. M., before the altars of the spirits of the land, the King assumed the title of Emperor.

A Russian military commission, consisting of Col. Putiat, 3 officers, and 10 drill instructors, began the work of drilling the Korean army and the instruction, in a two years' course, of 37 young men of good families, with 7 officers, to be future commanders. The city police has been uniformed in modern style and put under foreign discipline.

The Korean Minister of Foreign Affairs and A. de Speyer, the Russian *chargé d'affaires*, signed an agreement, Nov. 5, by which Mr. Kuril Alexieff should be placed in control of Korean finances. But Dr. Brown, the English officer, refused to vacate his place, his contract not having expired. As all the Government deposits were under his control in the Hong-Kong and Shanghai Bank, which has a branch at Chemulpo, he was able to keep his post, especially after the appearance of the large British and Japanese fleet off Chemulpo. By agreement entered into by Russia, Great Britain, and Japan, Mr. Brown is to continue in his office, but one Russian and one Japanese commissioner of customs are to share in the collection of revenue at the ports.

On Nov. 21, with amazing pomp and spectacular display, the funeral of the late Queen, murdered Oct. 8, 1895, was held in Seoul. The funeral cost 700,000 yen. At daybreak the coffin was laid away in the new and expensive mausoleum.

The Independence Club, which meets in the pavilion standing near the old stone gateway, at which the King of Korea formerly acknowledged vassalage to China, has built Independence Arch. This is of stone, 42 feet high, 33 feet wide, and 21 feet deep, with winding staircases inside leading to the top of the arch, and is one of the finest pieces of masonry in the kingdom.

A debate was held in the pavilion in November on the subject "Resolved, that slavery is a crime, morally and politically, and should not be tolerated." Many facts concerning slavery in Korea and the influence of the American proclamation of emancipation were developed, and a native gentleman who had just manumitted 31 slaves took part.

Foreign Trade.—Little or no incentive to exertion, industry, or traffic beyond what was necessary to bare subsistence has hitherto existed. Poverty has been a protection, since the *yang-ban* or civil and military classes have preyed upon the people, compelling forced loans, with no prospect of payment. Now even the farmers of remote districts are stimulated to greater activity through the de-

mands for their products. In 1886 the foreign trade amounted to \$2,978,410, and in 1896 to \$11,260,104, of which \$6,531,224 were imports and \$4,728,700 were exports. The Japanese have a monopoly of the carrying trade. In 1896 the tonnage of 1,720 ships in Korean ports reached a total of 439,100, of which 424,984 were Japanese, 25,750 Korean, 22,817 Russian, 14,651 British, 1,082 Norwegian, and 158 American. On Jan. 1, 1897, in the three open ports, the number of Japanese residents was about 10,000; Chinese, 500; British, 27; and American, 22. Korean exports consist mainly of beans, dried fish (for manure), cowhides, ginseng, paper, rice, and seaweed, the largest items being, in order, rice, ginseng, and beans. Considerable trade is carried on at the Chinese and Russian frontier. The Japanese, by a close attention to Korean tastes, habits, and needs, have pushed the sale of their cotton goods in the peninsula. The net duties and dues collected at the three ports in 1896 was \$691,784. In 1896 the value of Japanese cotton goods imported was \$1,156,199, and of British and other foreign cotton goods \$2,172,346; a total of \$3,328,545.

LITERATURE, AMERICAN, IN 1897. Fewer books were published in this year than in 1895 or 1896, the total number recorded being 4,928, a falling off of 775 books. Of these, 4,171 were new books and 757 new editions, as compared with 5,189 new books and 514 new editions the year previous; 3,318 were by American authors; 495 were by English and other foreign authors, but were manufactured in this country, and 1,115 were by English authors, imported bound or in sheets. As regards the production of new books, the most marked falling off was in the department of literary history and miscellany, in fiction, in poetry, and in books of sports and amusements, while the only increase was in works on theology and religion, in juvenile books, in books of mental and moral as well as physical and mathematical science, and in biography. By far the greater part of the work of the publishing houses was done in the latter half of the year, and many of the books announced failed to make their appearance and will doubtless swell the record of next year. More books of permanent value were produced than in many previous years, and especially to be commended was the interest shown in the Revolutionary period of our history.

Biography.—Quite at the close of the year appeared "Audubon and his Journals," the first accurate biography of the great ornithologist, which has the advantage also of being chiefly in his own words. It is edited by his granddaughter, Maria R. Audubon, and the two volumes contain a long-lost portion of his Missouri River Journal and three hitherto unpublished bird drawings, and are supplied with zoological and other notes by Elliott Coues. Vols. VII and VIII of the "Writings of Thomas Jefferson," edited by Paul Leicester Ford, appeared, as did Vol. IV of "The Life and Correspondence of Rufus King," edited by his grandson, completing the work. "Beside Old Hearthstones," by Abram English Brown, supplements his former work, "Beneath Old Roosters," bringing the early patriot fathers before us in narratives traditional with their descendants, a theme which is also followed in "Some Colonial Homesteads and their Stories," by Marion Harland. "The Founders of the Massachusetts Bay Colony," a careful research of the earliest records of many of the foremost settlers of the New England colony, was compiled by Sarah Saunders Smith, while "Samuel Sewall and the world he lived in," were presented by the Rev. N. H. Chamberlain, largely in extracts from Sewall's diaries. "Southern Statesmen of the Old Régime" were dealt with in six volumes by Washington, Jefferson, Randolph, Calhoun, Stoe-

phens, Toombs, and Jefferson Davis, by William Peterfield Trent, collected in a volume of "Crowell's Library of Economics and Politics," and Marshall de Lancey Haywood gave an account of the official administrations of "Governor George Burrington," twice Governor of the colony of North Carolina. In the series of "Women of Colonial and Revolutionary Times" we have "Martha Washington," by Anne Hollingsworth Wharton, and "Catherine Schuyler," by Mary Gay Humphreys, the last an historic daughter of New York. "True Stories of New England Captives carried to Canada during the Old French and Indian Wars" were told by Charlotte Alice Baker, and Henry Johnson (Muirhead Robertson) recounted "The Exploits of Miles Standish." "The Life and Adventures of Nat Foster, Trapper and Hunter of the Adirondacks," by A. C. Byron Curtiss, introduce us to the original of Natty Bumppo, while still to the early period of our history belongs "John Eliot's First Indian Teacher and Interpreter, Cockenoe-de-Long Island," by William Wallace Tooker, in an edition limited to 215 copies. No less than six volumes were given to Gen. Grant: "Ulysses S. Grant and the Period of National Preservation and Reconstruction" was written by William Conant Church for the "Heroes of the Nations Series," a companion volume in which series was "Robert E. Lee and the Southern Confederacy, 1807-1870," by Henry Alexander White, D. D.; "Gen. Grant's Letters to a Friend, 1861-1880" were supplied with an introduction and notes by James Grant Wilson, who also contributed "General Grant" to the "Great Commanders Series"; "Conversations and Unpublished Letters" of Ulysses S. Grant were published by M. J. Cramer; Gen. Horace Porter described "Campaigning with Grant"; and "The True Story of U. S. Grant, the American Soldier," was told for boys and girls by Elbridge Streeter Brooks in the series of "Children's Lives of Great Men." "Forty-six Years in the Army," by Gen. John M. Schofield, was a military autobiography of unusual interest, which came out near the end of the year; Richard Meade Bache contributed a "Life of General George Gordon Meade," and "Personal Recollections of General Nelson A. Miles" were illustrated by Frederic Remington and other artists. "Commodore Bainbridge" was followed by James Barnes from the gunroom to the quarter-deck, and Molly Elliot Seawell's "Twelve Naval Captains" commemorated certain Americans who made themselves immortal. "1861 to 1865, by an Old Johnnie," contained the personal recollections and experiences of James Dinkins in the Confederate army, and J. Harvey Mathes gave the title of "The Old Guard in Gray" to lives of men who were in the Confederate service. "The Life of Nelson, the Embodiment of the Sea Power of Great Britain," in two volumes, was from the able pen of Capt. Alfred Thayer Mahan; Vols. II and III appeared of William Milligan Sloane's "Life of Napoleon Bonaparte"; "Bertrand du Guesclin, Constable of France," was the subject of a study by Enoch Vine Stoddart, M. D.; Mrs. Mary Hartwell Catherwood revived "The Days of Jeanne D'Arc"; and Anna L. Bicknell, the author of "Life in the Tuileries under the Second Empire," retold "The Story of Marie Antoinette." "The Life of Philip Melancthon," by Rev. Joseph Stump, had an introduction by G. T. Spieker, D. D., and was prepared in view of the approaching anniversary of the birth of the great reformer. "The Sacrifice of a Throne," being an account of the life of Amadeus, Duke of Aosta, sometime King of Spain, was by H. Remsen Whitehouse. "Heroes' Statues" was the title given to five addresses of Nathan Sheppard upon the lives and times of eminent theologians and reformers.

"A Chat about Celebrities: or, the Story of a Book," was by Curtis Guild; "An Epistle to Posterity," by Mrs. Mary Elizabeth Sherwood; and "A Society Woman on Two Continents," by Mrs. James Mackin. "A Correspondence between John Sterling and Ralph Waldo Emerson" was published by Edward Waldo Emerson, with a sketch of Sterling's life; Mrs. Rose Hawthorne Lathrop gave to the world delightful "Memories of Hawthorne"; and "Hawthorne's First Diary" saw the light through the instrumentality of Samuel T. Pickard. The "Life and Letters of Harriet Beecher Stowe" were fortunate in their editor, Mrs. Annie Fields, and from Mary E. Phillips we have "Reminiscences of William Wetmore Story." "Calamus," by R. Maurice Bucke, M. D., gives letters of Walt Whitman. The "Life of Abby Hopper Gibbons" was edited by Sarah Hopper Emerson and "Reminiscences and Letters of Caroline C. Briggs," by George S. Merriam. "Oberlin Thursday Lectures" were by James Monroe. "On Two Continents," by Hezekiah Brake, describes pioneer and war times in Kansas, while from Dr. Louis Albert Banks we have the story of "An Oregon Boyhood." "Journals of John Lincklaen," the records of travels in the years 1791 and 1792 in Pennsylvania, New York, and Vermont, were published with a biographical sketch and notes by Helen Lincklaen Fairchild. "Thirty Years a Slave," was by Louis Hughes. To educational biography belong the "Life and Letters of William Barton Rogers," edited by his wife, and "Memorials of William Cranch Bond and George Phillips Bond," by Edward Singleton Holden. Vol. II of "Biographical Sketches of the Graduates of Yale College," by Franklin Bowditch Dexter, covered the period from 1745 to 1763. "The Life of Philip Schaff" was written by his son, Dr. David S. Schaff, and from Dr. Charles Force Deems we have an "Autobiography," with memoir by his sons. "Life Reminiscences of an Old Lutheran Minister" were by Dr. John G. Morris, and "The Life Story of Dr. Franklin Wilson, as written by himself in his Journals," appeared in small compass. The "Life and Times of Edward Bass, First Bishop of Massachusetts (1726-1803)," came from Daniel Dulany Addison. "From Different Points of View" was the title of a study of Benjamin Fiske Barrett, by the author of "The Republic," John Robert Ireland; "Brother Azarias" was written by Rev. John Talbot Smith, and "A Life for Africa: Rev. Adolphus Clemens Good" was commemorated by Ellen C. Parsons. "In Journeyings Oft" was a sketch of the life and travels of Mary C. Nind, by Georgiana Baucus, and "A Group of French Critics," by Mrs. Mary Fisher, and "Hours with Famous Parisians," by Stuart Henry. "Marchesi and Music" was by Mathilde Marchesi. Christopher W. Knauff devoted a volume to "Doctor Tucker, Priest-Musician," about the rise and progress of church music in America. Lippincott's "Pronouncing Dictionary of Biography and Mythology" went through a new revised and enlarged edition, and Vol. II appeared of "America's Successful Men of Affairs," an encyclopædia of contemporaneous biography, edited by Henry Hall.

Criticism and General Literature.—"The Literary History of the American Revolution, 1763-1783," by Rev. Moses Coit Tyler, in two volumes, exhibits the condition of mind alike of Whig and Tory during that trying period, and is a companion work to the same author's "History of American Literature during the Colonial Time." "Varia," by Agnes Repplier, and "Patris," by Louise Imogen Guiney, represent some of the work of the female essayists who have come so markedly to the front of late years, while from Arlo Bates we had "Talks on the Study of Literature," and from Thomas

Wentworth Higginson "Book and Heart: Essays on Literature and Life" and "The Procession of the Flowers and Kindred Papers," with an index of plants and animals mentioned. Donald Grant Mitchell (Ik Marvel) was equally at home with "English Lands, Letters, and Kings," the volume for the year covering the period of "The Later Georges to Queen Victoria," and with "American Lands and Letters," treating in the latter, with his usual pleasing style, of "The Mayflower to Rip Van Winkle." James Freeman propounded "Nineteenth Century Questions" on various themes; Theodore Roosevelt examined "American Ideals"; William Norman Guthrie published "Modern Poet Prophets" and a study of "Walt Whitman (the Camden Sage) as Religious and Moral Teacher"; Henry Cabot Lodge presented new theories as to "Certain Accepted Heroes," with other essays in literature and politics; and Elbert Hubbard collected into the compass of a book his series of "Little Journeys to the Homes of Famous Women." J. D. Buck, M. D., wrote on "Browning's Parables and Other Essays" and a volume was issued of "Papers" selected to represent the work of the Boston Browning Society from 1886 to 1897. Charles Dudley Warner was delightful as ever in his portrayal of "The People for whom Shakespeare Wrote," while "The Genesis of Shakespeare's Art" was the title of a study of his sonnets and poems by Edwin James Dunning. "Gleanings in Buddha Fields," by Lafcadio Hearn, consisted of studies of hand and soul in the far East. From Denton Jacques Snider we had a commentary on "Homer's Iliad," with a preliminary survey of the four literary Bibles, and "National Epics" were examined by Kate Milner Rabb. "Modern English Prose Writers" were examined by Frank Preston Stearns. "How to tell a Story, and Other Essays," by Mark Twain (Samuel Langhorne Clemens), appeared in the series of "Harper's Contemporary Essayists," and Charles M. Skinner was interesting in his rambling dissertations upon "Nature in a City Yard" and in his suggestive essays entitled "With Feet to Earth." "The Colonial Tavern," by Edward Field, gave a glimpse of New England town life in the seventeenth and eighteenth centuries. Sydney George Fisher devoted two volumes to "Men, Women, and Manners in Colonial Times," which were illustrated with photogravures and with decorations by Edward Stratton Holloway, and Thomas Nelson Page was an authority upon "Social Life in Old Virginia before the War." "Curiosities of Popular Customs, and of Rites, Ceremonies, Observances, and Miscellaneous Antiquities" were the theme of William Shepard Walsh, the author of "The Handbook of Literary Curiosities." Louis Lombard was responsible for "Observations of a Bachelor"; "Ars Recte Vivendi" was the title given to essays contributed to "The Easy Chair" by George W. Curtis; Bishop John Lancaster Spalding embodied in a volume six papers containing "Thoughts and Theories of Life and Education"; and Orison Swett Marden set forth ideals, helps, and examples for all desiring "Success." Bishop Henry Coleman Potter published "The Scholar and the State, and Other Orations and Addresses," and Charles W. Eliot "American Contributions to Civilization, and Other Essays and Addresses." Henry Thurston Peck made a study of "The Personal Equation"; Charles B. Newcomb asserted "All's Right with the World"; Charles F. Goss proclaimed himself "The Optimist" in 68 "secular sermons"; "The Chate-laine," by G. E. X., touched happily on numerous subjects; Julia H. Johnston wove "Bright Threads" together; and Lillian Bell explained how things look "From a Girl's Point of View." Mrs. Margaret E. M. Sangster's familiar talks on the conduct

of "Life on High Levels" will prove helpful to many of the rising generation. "The Smart Set" of America had its correspondence and conversations reported by Clyde Fitch, and "Men in Epigram," compiled by Frederick W. Morton, gave views of maids, wives, widows, and other amateurs and professionals, and was designed as a companion to his "Woman in Epigram." "The Story of Language" was told by Charles Woodward Hutson. George Herbert Palmer wrote briefly on "Self-cultivation in English," and Ralph Olmstead Williams placed before the public "Some Questions of Good English examined in Controversies with Dr. Fitzedward Hall" during the past five years. The "Elements and Science of English Versification" were thoroughly treated by William C. Jones, and Lorenzo Sears considered "The Occasional Address: Its Composition and Literature." The first of three volumes of "Specimens of Pre-Shakespearean Drama," with an introduction, notes, and a glossary by John Matthews Manly, appeared in the "Athenaeum Press Series," and Charles Langley Crow edited "Maldon and Brunnanturgh: Two Old English Songs of Battle." "A Dictionary of American Authors," by Oscar Fay Adams, is an outgrowth of his "Handbook of American Authors," first published in 1884; Truman J. Backus traced "The Outlines of Literature, English and American, based upon Shaw's Manual of English Literature"; and Edward L. Pattee suggested "Reading Courses in American Literature" in a small booklet. Vols. I and II appeared of "A Library of the World's Best Literature, Ancient and Modern," edited by Charles Dudley Warner, as did Vol. II of George Haven Putnam's exhaustive work upon "Books and their Makers during the Middle Ages," covering the period 1500-1700, and a seventh edition, rewritten, with additional material, of "Authors and Publishers," by the same author and John Bishop Putnam. "English Synonyms and Antonyms," by Rev. James C. Fernald, contained also notes on the correct use of prepositions, and was designed as a companion for the study and as a text-book for the use of schools, appearing in the "Standard Educational Series"; "A Manual of Esop's Fable Literature," by George C. Keidel, is intended as "a first book of reference for the period ending A. D. 1500; first fascicule"; "American Authors, 1795-1895," a bibliography of first and notable additions chronologically arranged with notes, by P. K. Foley, had an introduction by Walter Leon Sawyer; A. Gro-woll traced the beginnings and history of "American Book Clubs," giving also a bibliography of their publications, in an edition limited to 300 copies; and Frederic Lawrence Knowles was the author of "Practical Hints for Young Writers, Readers, and Book Buyers."

Education.—"The American College in American Life" was ably discussed by Dr. Charles Franklin Thwing, and Kate Holladay Claghorne dwelt upon "College Training for Women." In the "International Education Series" "Froebel's Educational Laws for All Teachers" were set forth by James L. Hughes, Joseph Baldwin wrote on "School Management and School Methods," and a "Bibliography of Education" was prepared by Will S. Munroe. In the "Columbia University Studies" William Clarence Webster treated of "Recent Centralizing Tendencies in State Educational Administration"; Maximilian P. E. Groszmann, late superintendent of the schools of ethical culture in New York, wrote briefly of "The Common School and the New Education," and also proposed "A Working System of Child Study for Schools"; "Coeducation of the Sexes" was considered by Mabel Hawtrey; and Isabel Maddison compiled the supplement for 1897 to the "Handbook of the

Courses open to Women in British, Continental, and Canadian Universities." Jessie A. Fowler proffered "Childhood: Its Character and Culture." Harriet M. Scott, assisted by Gertrude Buck, prepared a manual of "Organic Education." A second edition appeared of Dr. William T. Harris's essay upon "Art Education the True Industrial Education"; William W. Murray was the author of a "Handbook for Teachers"; and William H. Mace, of "Method in History for Teachers and Students." Mrs. Irene M. Mead treated of "The English Language and its Grammar," and Lucy Tappan prepared "Topical Notes on American Authors." Henry Carr Pearson discoursed of "Greek Prose Composition," and Thomas L. Stedman, M. D., in "Modern Greek Mastery" offered a short road to ancient Greek. "Latin Manuscripts," by Harold W. Johnston, was an elementary introduction to the use of critical editions for high schools and college classes. From Charles F. Kroeh we had a "Three-Year Preparatory Course in French"; from Francis Wayland Parker and Nellie Lathrop Helm, Vol. II of "Uncle Robert's Geography"; from Henry W. Keigwin, "The Elements of Geometry," inductive in plan. Emerson E. White published a "Key to 'School Algebra,'" in "White's Series of Mathematics"; Emily E. Benton suggested "The Happy Methods in Numbers for Little People"; "School Gymnastics; Free Hand: A System of Physical Exercises for Schools" emanated from Jessie H. Bancroft; the first of "Nature Study Readers," in "Appletons' Home Reading Books," was "Harold's First Discoveries," by J. W. Troeger. James Baldwin arranged "School Reading by Grades" for the seventh and eighth years; H. A. Guerber contributed "The Story of the Chosen People" to the "Eclectic School Readings"; Russell B. Smith, M. D., and Everett C. Willard were the joint authors of a "Standard School Physiology, Hygiene, Anatomy"; and Albert F. Blaisdell, M. D., sent out "A Practical Physiology," intended as a text-book for higher schools. "Physical Experiments," by Alfred P. Gage, was a manual and note book adapted to accompany any text-book of physics. "Asia," by Frank G. Carpenter, came out in "Carpenter's Geographic Readers." To Lois Bates we were indebted for a "Kindergarten Guide." An American view of "Schoolboy Life in England" was given by John Corbin; and "On a Western Campus" was a collection of stories and sketches typical of life in a coeducational college in the West, written by undergraduates, and with drawings by Frank Wing.

Fiction.—Only 869 novels were recorded as printed or imported into this country during 1897, a falling off of 245 from the 1,114 of 1896. Of this number 358 were by American authors, while the English and Continental works of fiction manufactured in the United States numbered but 352 against 690 the year previous, showing a growing preference for native talent in this department of literature. Of the total number of novels issued from publishing houses during the year, 713 were new books, as compared with 1,012 in 1896, while new editions showed an increase, there being 156 as against 102. The most marked feature in the character of the novels was the return in many to Revolutionary days and scenes. Perhaps the most successful novel of the year was "The Choir Invisible," by James Lane Allen, the author of "A Kentucky Cardinal," the scene of which is also laid in Kentucky in 1795. From F. Marion Crawford we had two novels, "Corleone: A Tale of Sicily," in two volumes, and "A Rose of Yesterday," the characters in which last are American, although the scene is laid in Lucerne. "His Grace of Osmonde,"

by Mrs. Frances Hodgson Burnett, embraced the portions of that nobleman's life omitted from "A Lady of Quality," and from Rudyard Kipling, now, we suppose, to be classed among American novelists, we had "Captain Courageous," a story of the Grand Banks. William Dean Howells was represented by "The Landlord at Lion's Head" and "An Opened-Eyed Conspiracy," and he also wrote "A Previous Engagement: Comedy." Henry James told "What Maisie knew," and also of "The Spoils of Poynton"; Francis Brete Hart described "Three Partners; or, The Big Strike on Heavy Tree Hill"; and from Richard Harding Davis we had "Soldiers of Fortune." "The Story of an Untold Love" and "The Great K. and A. Robbery," the latter considerably lighter in theme, came from Paul Leicester Ford, whose "Hon. Peter Stirling" has grown constantly and deservedly in popularity since it was published in 1894, and entitles its author to a place in the front rank of American novelists. Full of the feeling and fire of the olden time was "Hugh Wynne, Free Quaker, Sometime Brevet Lieutenant Colonel on the Staff of His Excellency General Washington," in two volumes, by Dr. Silas Weir Mitchell, and to the same period belong "A Colonial Free-Lance," by Chauncey C. Hotchkiss; "A Daughter of Two Nations," by Ellen Gale McClelland; "The Sun of Saratoga," by Joseph A. Altscheler, who wrote "A Soldier of Manhattan"; "King Washington," by Adelaide Skeel and William H. Brearley; "An Unwilling Maid," by Mrs. Jennie Gould Lincoln; and "A Son of the Old Dominion," by Mrs. Burton Harrison. "Free to Serve," by E. Rayner, and Mrs. Watson's "Beyond the City Gates" are colonial. "Vivian of Virginia," by Hurlbert Fuller, a story of Bacon's Rebellion of 1676. "Captain Shays, a Populist of 1786," was by George R. R. Rivers, the author of "The Governor's Garden." "The Latimers" was by Henry Christopher McCook, D. D.; "A Loyal Traitor," came from James Barnes; and "Chalmette" from Clinton Ross (R.), who published also "Zuleka." Other historical novels were "The Forge in the Forest," by Charles G. D. Roberts, which relates to the period anticipating the expulsion of the Acadians from Nova Scotia; "Pontiac, Chief of the Ottawas," by H. R. Gordon; "A Colonial Witch," by Frank S. Child; "The Romance of a Jesuit Mission," by M. Bouchier Sanford; "Sweet Revenge," by F. A. Mitchell; "A Hero in Homespun," a tale of the loyal South, by William E. Barton; and "Brokenburne: A Southern Auntie's War Tale," by Virginia Frazer Boyle. "An Enemy to the King," by R. N. Stephens dealt with France in the time of Henry III; and "The Falcon of Langéac," by Isabel Whiteley, with the early part of the reign of Francis I. "On the Red Staircase" and "An Imperial Lover" were tales of Russia by M. Inlay Taylor, while "Prisoners of the Sea," by Florence Morse Kingsley, centered around the Man in the Iron Mask. Two novels which aroused considerable comment were "The Gadfly," a strong but bitter story of Italy in the first half of the present century, by Mrs. E. L. Voynich, who was for some time believed to be a man, and "The Descendant," written to demonstrate the impossibility of living contrary to existing social laws, published anonymously, by Ellen Glasgow. "In the Crucible" was by Grace Denio Litchfield, and Anna Katharine Green gave full particulars of "That Affair Next Door." "Jerome, a Poor Man," was one of Mary E. Wilkins's stories of New England life. "The Third Violet" figured in a romance by Stephen Crane, and "The General's Double," a story of the Army of the Potomac, was by Capt. Charles King, who published also "Warrior Gap," a story of the Sioux outbreak of '68. "The Missionary Sheriff" was by Alice French

(Octave Thanet), and from Molly Elliot Seawell we had "The History of the Lady Betty Stair." Charles Egbert Cradock (Mary Noailles Murfree) sent out "The Juggler" and a volume of short stories entitled "The Young Mountaineers"; Mrs. Amelia E. Barr wrote "The King's Highway" and "Prisoners of Conscience," the last a strong story of the Shetland Islands; Frank R. Stockton's sole contribution was "The Great Stone of Sardinia"; while from John Kendrick Bangs there came "The Pursuit of the House-Boat" and "Paste Jewels." "Eat not thy Heart" was by Julien Gordon (Mrs. Julia Storrow Cruger) and "A Damsel Errant," by Amélie Rives (now Princess Troubetzkoy). Two stories of Illinois at different periods, by Mary Hartwell Catherwood, which were included in one volume, were "The Spirit of an Illinois Town" and "Little Renault." Harriet Prescott Spofford traced the evils of "An Inheritance"; Herbert Ward told of "The Burglar who Moved Paradise"; and "Susan's Escort, and Others," by Edward Everett Hale, were collected into a volume from various periodicals and illustrated by W. T. Smedley. Dr. Charles C. Abbott had two novels, "The Hermit of Nottingham" and "When the Century was New"; outdoor life is portrayed in "Uncle Lisha's Outing," by Rowland E. Robinson; "A Question of Damages" was settled by J. T. Trowbridge; Elizabeth Phipps Train wrote "A Queen of Hearts" and "A Marital Liability"; Mrs. Ruth McEnery Stuart, "In Simpsville," a series of character tales; Alice Brown, the author of "Meadow-Grass," "The Days of his Youth"; Mrs. Eva Wilder Brodhead (formerly Eva Wilder McGlasson), "Bound in Shallows"; and Mrs. Ellen Olney Kirk (Henry Hayes), "The Revolt of a Daughter." "An Old-Field School-Girl," by Marion Harland (Mrs. M. V. H. Terhune), pleased young and old readers, and two other familiar authors were represented, Amanda M. Douglas by "Her Place in the World," and Christian Reid (Mrs. Frances C. F. Tiernan) by "The Man of the Family." "Miss Archer Archer" was a novel by Mrs. Clara Louise Root Burnham, and "Boss and Other Dogs" was a collection of stories by Maria Louise Pool. Stories of a distinctly local flavor were "The Old Gentleman of the Black Stock," by Thomas Nelson Page; Opie P. Read's "Bolanyo," "Old Folks," and "An Arkansas Planter"; "Old Times in Middle Georgia," by Richard Malcolm Johnston (Philemon Perch); "Sketches from Old Virginia," by A. G. Bradley; "The Kentuckians," and "Hell for Sartain, and Other Stories," by John Fox, Jr.; "Chronicles of a Kentucky Settlement," by William Courtney Watts; "Down our Way," stories of Southern and Western character, by Mary Jameson Judah; "Jasper Fairfax," by Margaret Holmes; "The Regeneration," by Herbert Baird Stimpson; "Middleway," tales of a New England village, by Kate Whiting Patch; "The Secret of the Black Butte," by William Shattuck; and "The King of the Bronces" and "The Enchanted Burro," by Charles Fletcher Lummis. "Lin McLean," was by Owen Wister. "From the Land of the Snow Pearls" was the title of tales from Puget Sound by Mrs. Ella Higginson. Charles Fleming Embree wrote "For the Love of Tonita, and Other Tales of the Mesas," and Frederick Thickstun Clark (Frederick Thickstun) "The Mistress of the Ranch." Ellen Hodges Cooley described "The Boom of a Western City," and Annette Lucile Noble "The Professor's Dilemma." "Yellow Pine Basin" was the story of a prospector, told by Henry G. Catlin; "Wolfville," by Alfred H. Lewis ("Dan Quin") was illustrated by Frederick Remington. Oregon was the scene of "Leonora of the Yawmish," by Francis Dana, and Nebraska of "Like a Gallant Lady," by Kate M. Cleary. "The Golden Croco-

dile" was a mining story by F. Mortimer Trimmer, and "The Big Horn Treasure" a tale of Rocky mountain adventure by John F. Cargill. "The Voyage of the 'Rattletrap,'" by Hayden Carruth, traces the path of a prairie schooler across Dakota twenty years ago; lynch law is the theme of "Smoking Flax," by Hallie Erminie Rives, a sister of Amélie Rives and "Mr. Peters," by Riccardo Stephens. Countess Cora Slocomb di Brazza-Savorgnan was responsible for "An American Idyll," the scene of which is laid among the Pima Indians of northern Mexico. "My Spanish Sweetheart" was the title of a short international romance by Frederick Albion Ober, who told at greater length of what transpired "Under the Cuban Flag," and from Lillian Hinman Shuey we had another romance of the West Indies, entitled "Don Luis' Wife." "Lorraine," by Robert W. Chambers, belonged to the days of the Franco-Prussian War; "Arnaud's Masterpiece" was a mediæval romance of the Pyrenees, by Walter Cranston Larned; and "A Modern Corsair," a story of the Levant, by Richard Henry Savage, who also published "For her Life," a story of St. Petersburg. "An Emperor's Doom; or, The Patriots of Mexico" was by Herbert Hayens, and the same country is the scene of "Tales of the Sun-Land," by Verner Z. Reed. The trilogy of Katharine Pearson Woods, begun with "John: A Tale of the Messiah," was continued with "The Son of Ingar," which carries on the study of the social message of Christianity in the first century. "The First Christmas Tree" was the theme of Henry Jackson Van Dyke, Jr., and to religious fiction belong "The Lowly Nazarene," a story of Christ, by J. Leroy Nixon, and "Lazarus," a tale of the world's great miracle, by Lucas Cleeve, while "Fabius the Roman" came from Enoch Fitch Burr, D. D. "Two Noble Women" were described by Susan Parkman, and Annie E. Wilson told the "True Story of a Jewish Maiden." "His First Charge" was by Mrs. Isabella H. Foster (Faye Huntington), and from Marie E. Richard came suggestions under the title of "The Country Charge." "The Daughters of the Parsonage" was by Belle V. Chisholm, and "The King's Daughter, and the King's Son; A Fairy Tale of To-day," by Agatha Archer. "Dead Selves" was Julia Magruder's latest novel, and from Clara Sherwood Rollins, the author of "A Burne-Jones Head, and Other Sketches," we had "Threads of Life"; Helen Davies confided "The Reveries of a Spinster" to print, and Max Pemberton gave us two books, "Christine of the Hills" and "Queen of the Jesters." In the "Hearthstone Series" we had the story of a French family "Exiled from Two Lands," told by Everett T. Tomlinson, and that of "The Champion Diamonds," by Rebecca Sophia Clarke (Sophie May). "The Pride of the Mercers," with all its consequences, was portrayed by Thomas Cooper De Leon, the author of a clever travesty of "The Quick and the Dead" entitled "The Rock and the Rye," and Charles Peale Didier, the author of "Twixt Cupid and Cursus," illustrated his own novelette, "R. S. V. P." Fashionable New York life is the theme of "A Fiancé on Trial," by Francis Tillou Buck, and Washington life of "The Vice of Fools," by Hobart C. Chatfield Taylor. "A Transatlantic Chatelaine" was chronicled by Mrs. Helen Choate Prince; "Up the Matterhorn in a Boat" was a humorous extravaganza by Mrs. Marion Manville Pope; Louis Tracy in "An American Emperor" told the story of the fourth empire of France; while "Perfection City" was amusingly described by Mrs. Adela E. Orpen. "On Lone-man's Island" was from the pen of Mary Hubbard Howell; "Bubbles" and "A Son's Victory," from that of Fanny E. Newberry; "Rich Enough," by

Leigh Webster; "Peg Bunson," by John W. Spear; "Not in It," by Mrs. Anna Oleott Commelin; "The Man who was Good," by Leonard Merriek; "Lost Lineage," by Carrie Goldsmith Childs; "John Leighton, Jr.," by Katrina Trask; "Paul Ralston," by Mrs. Mary J. Holmes; "The Evolution of Dadd's Sister," by Charlotte Whitney Eastman; "Horace Everett," by Marquise Clara Lanza; and "The Copy-maker," by William Farquhar Payson found interested readers, as did "A Romance in Transit," by Francis Lynde, and "The Right Side of the Car," by J. Uri Lloyd, the author of "Etidorpha," but in no wise following the lines of that work. "Stephen Hardee" was by Katharine Neely Festetics, and "On Many Seas" by Herbert E. Hamblen (Frederick Benton Williams). "The Federal Judge," by Charles K. Lush, broaches the question of the influence of corporations, and "Henry Cadavere," by Henry Wentworth Bell-smith, was a study of life and work from the standpoint of co-operation. "The New Man" declares in favor of existing social conditions. "The Daughter of a Hundred Millions" was by Virginia Miles Leeds, and "The Stand-by," by Edmund P. Dole. "Evangelica," by Katherine Russell (Apollo Belvedere), opposes the theory of the inheritance of vice. "In Plain Air" was by Mrs. Elizabeth Lyman Cabot; "Scarlet, or White?" by Willis Mills, M. D.; and "The Tragedy of Ages," by Mrs. Isabella M. Witherspoon. "The Philosopher of Driftwood" is by Mrs. Anna Jenness Miller. Mrs. Maud Wilder Goodwin left colonial themes to tell of "Flint: His Faults, his Friends, and his Fortunes"; "A Capital Courtship" was by Alexander Black; Florence Converse laid the scene of her novel "Diana Vietrix" in New Orleans among Creoles of the French quarter; "Gloria Vietis" was by John A. Mitchell; and "The Man of Last Resort," by Melville Davidson Post. "Bob Covington" was from Archibald Claverling Gunter. From Mrs. Gertrude Franklin Atherton (Frank Lin) we had "His Fortunate Grace" and "Patience Sparhawk and Her Times." "His Foster-Sister," by Linn Boyd Porter, appeared in the "Albatross Novels," and "Montresor" was an English-American love story, 1854-'94, by "Loota." "The Eye of the Sun" was by Edward S. Ellis; "Koheloth" was by Louis Austin Storrs; Arthur H. Veysey wrote "A Cheque for Three Thousand"; Robert Herrick, "The Man who Wins"; Fannie E. Ostrander, "When Hearts are True"; and James Knapp Reeve, "The Three Richard Whalens," a story of adventure. "The Invisible Man" was a grotesque romance by Henry G. Wells, and B. West Clinedinst illustrated "The Last Three Soldiers," by William Henry Shelton. "Spanish Castles by the Rhine" was by David Skaats Foster. To the realm of the improbable belong also "The Fourth Napoleon" by Charles Benham; "The Day of Resis," by Lillian Francis Mentor; "Yermah the Dorado," by Frona Eunice Wait; "At the Queen's Mercy," by Mabel Fuller Blodgett; "Kings in Adversity," by Edward S. Van Zile; "Loma: A Citizen of Venus," by William Windsor; "A Journey to Venus," by Gustavus W. Pope, M. D., the author of "A Journey to Mars"; "Keef: A Life Story in Nine Phases," by Timothy W. Conkley; and "John Harvey," a tale of the twentieth century, by "Anon Moore." "Through the Invisible" was a theosophical love story by Paul Tyner, and "The Touch of a Vanished Hand," by Annie Russell Dyer, suggests spiritualism. "The Story of Ab," by Stanley Waterloo, was a scientific novel of the time of the cave men, and "Nirvana," a story of Buddhist philosophy by Paul Carus. "Tim and Mrs. Tim," a story for the club and society man and the new woman was by Richard T. Lancefield;

"The Lady of the Violets," by Frank West Rollins; "The End of the Journey," by Marie Florence Giles; "A Questionable Marriage," by Mrs. A. Shackleford Sullivan; "Then, and not till then," by Clara Nevada McLeod; "The Invasion of New York; or, How Hawaii was Annexed," by J. H. Palmer; "True Detective Stories," culled from the archives of the Pinkertons by Cleveland Moffett; and "When Desire cometh," by G. Embe. A new edition was printed, from new plates, with the original plates of "Georgia Scenes," by "A Native Georgian," originally published in 1840, and the "Autobiography of a Pocket-handkerchief," by James Fenimore Cooper, which has been out of print since 1843, and which, though published in that year in serial form, was never included in a collected edition of his works, was issued in book form. The memorial edition of "Uncle Tom's Cabin" contained a sketch of the life of Mrs. Stowe and was profusely and handsomely illustrated from original drawings by celebrated artists, and the Tacoma edition of Washington Irving's "Astoria," in two superb, illustrated volumes deserves mention.

Among collections of short stories not included above are to be recorded "Outlines in Local Color," by Brander Matthews; "Seven on the Highway," by Blanche Willis Howard; "Harvard Episodes," by Charles Macomb Flandrau, histories of college life, which possess unusual merit; "Mrs. Knollys, and Other Stories," by F. J. Stimson; "A Willing Transgressor, and Other Stories," by A. G. Plympton; "The Mystery of Choice," by Robert W. Chambers; "A Browning Courtship, and Other Stories," by Eliza Orne White; "Literary Love-Letters, and Other Stories," by Robert Herrick; "Near a Whole City-Full," by Edward W. Townsend; "Bobbo," and Other Fancies," some of which are in verse, by Thomas Wharton, which had an introduction by Owen Wister; "Camp and Lamp," rambles in realms of sport, story, and song, by Samuel Mathewson Baylis; "Pippins and Cheese," by Mrs. Elia W. Peattie; "A Book of True Lovers," collected short stories of Octave Thanet (Alice French); "Chimes from a Jester's Bells," by Robert Jones Burdette; "Wayside Courtships," by Hamlin Garland; "Tales of the Real Gypsy," by Paul Kester; "Jimty and Others," by Margaret Sutton Briscoe; "The Merry Maid of Acready, His Lordship, and Other Stories," by Mrs. Burton Harrison; "Reminiscences of an Old Westchester Homestead," by Charles Pryer; "Pine Valley," by Louis B. France (Bourgeois), descriptive of life in Colorado; "Ocean Sketches," tales of transatlantic travel, by Frederick W. Wendt; "A Night in Acadie," by Kate Chopin, being stories of Creole life in Louisiana; "The Wisdom of Fools," by Mrs. Margaret Wade Campbell Deland; "One Man who was Content; Mary; The Lustigs; Corinna's Fiammetta," four short stories in one volume, by Mrs. Marianna Griswold Van Rensselaer (Mrs. Schuyler Van Rensselaer); "The Ape, the Idiot, and Other People," by W. C. Morrow; "An Itinerant House, and Other Stories," by Emma Frances Dawson; "The Express Messenger, and Other Tales of the Rail," by Cyrus Warman. "Lo-To-Kah" was the title of six stories of Indian folklore, chiefly of the Ute and Navajo Indians, by Verner Z. Reed; "In Indian Tents," stories told by Penobscot, Passamaquoddy, and Micmac Indians to Abby Langdon Alger, are not to be forgotten; and in conclusion we have "The Comprehensive Subject Index to Universal Prose Fiction," compiled and arranged by Zella Allen Dixon.

Fine Art.—Among the books that are creations of art are to be numbered "A History of Dancing from the Earliest Age to our own Times," by Gaston Vuillier, superbly illustrated, with 25 full-page photogravure plates and over 400 illustrations in the

text, reproducing the most famous pictures, statues, drawings, etc., by the foremost artists. Although the author is not a native of the United States, but of France, the work is essentially American, in the form of its presentation, and is one of the most striking contributions of the year to the department of the fine arts. "Tuscan Songs," collected, translated, and illustrated by Francesca Alexander, made another sumptuous volume, and from Anne Hollingsworth Wharton we had "Heirlooms in Miniature," embracing more than 125 reproductions of these charming "portraits in little" of colonial, Revolutionary, and modern date. Charles Dana Gibson gave us six plates of "People of Dickens," and a fine collection was made of his magazine articles upon "London as seen by C. D. Gibson," elaborately illustrated. "Drawings" of Frederic Remington were published illustrating wild life in America, while "All Hands!" is the title given to pictures by Rufus H. Ziegbaum illustrating life aboard a war ship of the United States navy which stir the heart. "The Madonna in Art," by Estelle M. Hurl, was intended as a companion volume to "Child-life in Art," and contained 31 full-page reproductions from celebrated paintings. William Wallace Martin was the author of a "Manual of Ecclesiastical Architecture"; James Mason Hoppin, D. D., made a study of "Greek Art on Greek Soil"; while "The Mycenaean Age," a study of the monuments and culture of pre-Homeric Greece, was written by Prof. J. Irving Munnatt upon the basis of a work by Chrestos Tsountas, bringing the Mycenaean discoveries up to date and popularizing them by means of copious illustrations. "The Beginnings of Art" were traced by Ernest Grosse in "Appletons' Anthropological Series," and Dr. Washington Gladden discussed briefly "The Relations of Art and Morality." Charles M. Stuart told "The Story of the Masterpieces," and Bernhard Berenson discoursed of "The Central Italian Painters of the Renaissance," also went through a new illustrated holiday edition. "The Decoration of Houses" was the theme of Edith Wharton and Ogden Codman, Jr., and Anson K. Cross wrote on "Light and Shade" for the series of "National Drawing Books." "Some Masters of Lithography," by Atherton Curtis, was illustrated with 22 photogravure plates after representative lithographs, and contained appendices giving technical explanations and a bibliography, the edition being limited to 750 copies. "Ex Libris," by Charles Dexter Allen, was the title given to essays of a collector, accompanied with 21 copper-plate prints. Parts VII to XXV appeared of "The Music of the Modern World," explained and illustrated for American readers, edited by Anton Seidl, assisted by Fanny Morris Smith, Henry E. Krehbiel, and others; William B. Chamberlain laid down "Principles of Vocal Expression"; and Edmund J. Meyer discoursed of "Position and Action in Singing." Russell Sturgis and Henry E. Krehbiel were the joint editors for the American Library Association of an "Annotated Bibliography of Fine Art," which had a preface by George Fies. Among illustrated volumes are to be noted "In Memoriam," the drawings for which were by Harry Fenn, and which had a preface by H. Van Dyke; "A Book of Old English Love-Songs," with an introduction by Hamilton Wright Mabie, and an accompaniment of decorative drawings by George Wharton Edwards; and "Evangeline," in a new holiday edition, illustrated by Violet Oakley and Jessie Wilcox Smith. Two series of "Life's Comedy" were also issued.

History.—Several important contributions were made to historical literature. "The Evolution of the Constitution of the United States" was traced by Sydney George Fisher, showing that it is a de-

velopment of progressive history and not an isolated document struck off at a given time or an imitation of English or Dutch forms of government. James Schouler also published "Constitutional Studies, State and Federal." "The Middle Period," treated by Prof. John W. Burgess in the "American History Series," lay between 1817 and 1850, and from Edward Payson Powell we had "Secession and Secession in the United States," a history of the six attempts during the first century of the republic. George Barnett Smith opened a new series with "The Romance of Colonization; The United States from the Earliest Times to the Landing of the Pilgrim Fathers." Vol. I of "American History told by Contemporaries," edited by Albert Bushnell Hart, was devoted to the "Era of Colonization, 1493-1690," and will be followed by three more volumes. Edward Arber edited from the original texts "The Story of the Pilgrim Fathers, 1602-1624 A. D., as told by themselves, their Friends, and their Enemies"; "The Voyage of the Mayflower" was penned and pictured by Blanche McManus for the series of "Colonial Monographs," of which it was the first; "The Story of the Palatines" was told by Sanford H. Cobb; "Old Virginia and her Neighbors" was by John Fiske, in two volumes; and "The Border Wars of New England, commonly called King William's and Queen Anne's Wars," by Samuel Adams Drake. Vols. II to IX, inclusive, were issued of the 60 which are to contain "The Jesuit Relations and Allied Documents," edited by Reuben Gold Thwaites, covering the travels and explorations of the Jesuit missionaries in New France, 1610-1791, in an edition limited to 750 sets; "Cabel's Discovery of North America" was discussed by G. E. Wear; Justin Winsor completed with "The Westward Movement, the Colonies and the Republic West of the Alleghanies, 1763-1788," his work of illustrating American history in its geographical relations from the time of Columbus to the beginning of the present century, undertaken in "Cartier to Frontenac" (1534-1700) and continued in "The Mississippi Basin" (1697-1763); "New Governments West of the Alleghanies before 1780" was the theme of a thesis by George H. Alden; and "New Light on the Early History of the Greater Northwest" was thrown by the manuscript journals of Alexander Henry, fur trader of the Northwest Company, and of David Thompson, official surveyor and explorer of the same company 1799-1814, edited with copious critical commentary by Elliott Cones, M. D., in three volumes. "A History of the United States of America, its People and its Institutions" was written by Charles Morris; "A School History of the United States," by John Bach McMaster; "A Grammar School History of the United States," by L. A. Field; and "The Student's American History," by David H. Montgomery, the last for the "Leading Facts of History Series." Charles G. D. Roberts wrote "A History of Canada," and W. A. Calnek a "History of the County of Annapolis," which was edited and completed by A. W. Savary. "Louisbourg in 1745" was the title given to the anonymous *lettre d'un Habitant de Louisbourg* (Cape Breton), containing a narrative, by an eyewitness, of the siege in 1745, edited with an English translation by George M. Wrong. "The Battle of Harlem Heights, September 16, 1776," reviewed by Henry P. Johnston in the "Columbia University Press Series"; Elbridge Streeter Brooks drew up "The Century Book of the American Revolution," to which Chauncey M. Depew contributed an introduction; "Soul Liberty—Rhode Island's Gift to the Nation," and "The Forgeries connected with the Original Deed given to Roger Williams by the Sachens," were both from the pen of Sidney S. Rider; "The History of South Carolina under the Proprietary Government,

1670-1719" was written by Edward McCrady; "Pennsylvania Colony and Commonwealth," by Sydney George Fisher, continued the work begun in his previous volume, "The Making of Pennsylvania"; Vol. III of the four which are to contain a "History of California," by Theodore H. Hittell, was published; and "Stories of Ohio" were written by William Dean Howells, as were "Stories of Missouri," by John R. Musick. Albert J. Pickett's "History of Alabama" was reprinted, and a series of "American Colonial Tracts," issued monthly, was begun. In the series of "Harvard Historical Studies" appeared "Nominations for Elective Office in the United States," by Frederic W. Dallinger; in the "Columbia University Studies in History" "The Struggle between President Johnson and Congress over Reconstruction," by Charles Ernest Chadsey, and "The Abolition of Privateering and the Declaration of Paris," by Francis R. Stark; in the "Columbia College Studies," "The Commercial Policy of England toward the American Colonies," by G. L. Beers; and in the "Johns Hopkins University Studies," a "History of the Tobacco Industry in Virginia from 1680 to 1894," by Benjamin W. Arnold, Jr. "The Army of the United States," a collection of historical sketches of staff and line, edited by Theophilus Rodenbough and William L. Haskin, contained 17 portraits of famous American generals. "The Battle of Franklin, Tennessee, Nov. 30, 1864," was the subject of a monograph by Jacob Dolson Cox; Augustus Choate Hamlin wrote on the "Battle of Chancellorsville—Jackson's Attack, May 2, 1863"; "Shelby and his Men; or, The War in the West" came from John N. Edwards and a "History of the Fourth Regiment, South Carolina Vols.," a narrative of four years' service in the Confederate Army, from J. W. Reid. "The Home Squadron under Commodore Conner in the War with Mexico" was chronicled by Philip Syng Physick Conner. Among historical works not relating to our own country are to be mentioned "National Movement in the Reign of Henry III, and its Culmination in the Barons' War," by Oliver H. Richardson, "A Short History of Medieval Europe," by Oliver J. Thatcher; "The Growth of the French Nation," by George Burton Adams; "France under Louis XV.," by James Breck Perkins, in two volumes; "Spain in the Nineteenth Century," by Mrs. Mary Elizabeth Wormeley Latimer; "Annals of Switzerland," by Julia M. Cotton; "The War of Greek Independence, 1821-1833," by W. Alison Phillips; "Imperial Germany," a critical study of fact and character, by Charles Sydney Whitman; "The Campaign of Marengo," by Herbert H. Sargent; "Historic Bubbles," by Frederick Leake; "Germany," by Kate Freiligrath Kroeker, and "England," by Frances E. Cooke, both in the series of "Appletons' History for Young Readers"; and a "History of Ancient Peoples," by Willis Broughton. To Sophia V. Bonpland we are indebted for "A Short History of the Italian Waldenses," and "The Covenanters, the Cavalier, and the Puritan" were the subject of a study by Oliver Perry Temple. Charles Foster Kent was the author of "A History of the Hebrew People from the Division of the Kingdom to the Fall of Jerusalem in 586 B. C."; and Alexander Wheelock Thayer, of "The Hebrews in Egypt and their Exodus." "The Story of Japan" was written for children by R. Van Bergen. To local history belong "Brookline: The History of a Favored Town," by C. Knowles Bolton; "A History of the Town of East Hampton, N. Y.," by Henry P. Hedges; "A History of Monmouth and Ocean Counties, New Jersey," by Edwin Salter; a "History of Trenton, N. J.," by F. B. Lee; "Old Newbury," by John J. Currier; "Historical Sketches of New Haven," by Ellen Strong Bartlett; "Somerville, Past and Present," by Edward A. Samuels

and Henry H. Kimball; "Historic New York," the first series of the "Half-Moon Papers"; "Colonial Mobile," by Peter J. Hamilton; and last, but not least, by any means, in point of interest, "Chronicles of Tarrytown and Sleepy Hollow," by Edgar Mayhew Bacon. Vol. IV completed the new revised edition of "American Orations," edited by Alexander Johnston as studies in American political history. An interesting reprint in photo-facsimile was that of "Public Acts of the State of Tennessee passed at the First Session of the Thirty-fourth General Assembly for the Years 1861-'62," of which only three or four copies in the original are known to exist, the session having been hurriedly adjourned from Nashville to Memphis upon the fall of Fort Donelson, Feb. 16, 1862.

Jurisprudence.—Books in this department were numerous during the year. The "Encyclopædia of Pleading and Practice under the Codes and Practice Acts," edited by William M. McKinney, was continued, Vols. VII, VIII, and IX bringing the work down to "Habeas Corpus"; and two volumes also appeared of a new "Encyclopædia of Forms and Precedents for Pleading and Practice," edited by W. H. Michael and William Mack, under the supervision of James D. Cockcroft. The history and principles of "Common Law Pleading" were set forth by R. Ross Perry, and "The Historical Development of Code Pleading in America and England" was traced by Charles M. Hepburn. "Munson's Manual of Elementary Practice," by C. La Rue Munson, contained practical suggestions on the beginnings of legal practice; Edward P. Buffet prepared "A Digest of Elementary Law and that of Personal Property"; Vol. I was issued of the third revised and enlarged edition of John Prentiss Poe's "Pleading and Practice in Courts of Common Law," was given to "Pleading"; Louis Hochheimer set forth "The Law of Crimes and Criminal Procedure," including forms and precedents; and Part I appeared of James Paige's "Illustrative Cases in Criminal Law," with analysis and citations in the "Pattee Series"; John H. Gillett wrote "A Treatise on the Law of Indirect and Collateral Evidence"; a third edition was published of "The Theory of the Law of Evidence," by William Reynolds; Benjamin J. Shipman prepared "A Handbook of the Law of Equity Pleading"; Vol. III was issued of "A Selection of Cases on Equity Jurisdiction," by William A. Keener; and Vols. II and III of the annual (first series) of "American and English Decisions in Equity," annotated by Ardenus Stewart. Two volumes contained "Commentaries on the Law of Trusts and Trustees," as administered in England and the United States, by Charles F. Beach; Stewart Chaplin wrote "A Treatise on Express Trusts and Powers, under the New York Revised Statutes and the Real Property Law of 1896"; the fourth volume of "The Annual on the Law of Real Property," edited by Tilghman E. and Emerson E. Ballard, for 1895, appeared; as did "Selected Cases on Real Property," selected and arranged for use in connection with the author's treatise on real property, by Christopher G. Tiedeman; a "Treatise on the Modern Law of Property, as expounded by our Courts of Last Resort," by Frank S. Rice; and "Selected Cases on Real Property," by William C. Sprague. John W. Smith gave his attention to "The Law of Receiverships"; Philip T. Van Zile supplied "Illustrative Cases in Sales"; and Francis M. Burdick, "The Law of Sales of Personal Property." "A Treatise on the Law and Practice of Foreclosing Mortgages on Real Property and of Remedies Collateral thereto, with Forms," by Charles Hastings Wiltzie, in two volumes, had a

supplement bringing the work down to March, 1897, and additional chapters on mortgage redemptions, by James M. Kerr. "Chattel Mortgage" was the title of a treatise on the use of personal property as security in the State of Michigan, by William A. Bahlke; in the "Hornbook Series" appeared a "Handbook on the Law of Executors and Administrators," by Simon Greenleaf Crosswell; "The Law of Decedents' Estates" in Pennsylvania was set forth by William Hardcastle Brown; J. G. Woerner was the author of "A Treatise on the American Law of Guardianship of Minors and Persons of Unsound Mind"; and "Probate Reports annotated," by Frank S. Rice, contained recent cases of general value decided in the courts of the several States, or points of the probate law, with notes and references. Another issue of the "Hornbook Series" was a "Handbook on the Law of Private Corporations," by William L. Clark, Jr., and Jeremiah Smith contributed "A Selection of Cases on Private Corporations," in two volumes. Reuben A. Reese expounded "The True Doctrine of *Ultra Vires* in the Law of Corporations"; "A Treatise on the Law in Relation to Promoters and the Promotion of Corporations" came from Arthur M. Alger; Malcolm Lloyd set forth "The Principles of the Law relating to Corporate Liability for Acts of Promoters," in the Sharswood prize thesis in the law department of the University of Pennsylvania for the year 1897; a third edition was issued of "White, on Corporations," by Frank White; Charles L. Borgmeyer edited Vol. V (1897) of the "American Corporation Legal Manual"; and Vols. I to VI, inclusive, of "American and English Corporation Cases" (new series) close this subdivision; while on contracts we had "A Synopsis of the Law of Contract," prepared for the St. Louis Law School by Amos M. Thayer, and "Selected Cases on Contracts," by William C. Sprague. John M. Gardner edited Vol. I of "American Negligence Reports," and T. F. Hamilton Vols. V and VI of "American Negligence Cases," while William W. Morrill performed a similar service for Vol. VI (1895-'97) of "American Electrical Cases." Two volumes contained "A Treatise on the Law of Carriers," by Norman Fetter; Vol. IV of "A Treatise on the Law of Railroads," by Byron K. and William F. Elliott, was sent out; as were Vol. VI of "A Digest of Railway Decisions," by Stewart Rapalje and William Mack, and Vols. IV, V, and VI of the new series of "American and English Railroad Cases." "The Law of Railway Accidents in Massachusetts" was set forth by Gustavus Hay, Jr. "The Law of Railway Bonds and Mortgages in the United States," by Edward Lyman Short, contained illustrative cases from English and colonial courts. Edwin F. Glenn's "Handbook of International Law" appeared in the "Hornbook Series"; "The Federal Courts: Their Organization, Jurisdiction, and Procedure" were the theme of lectures delivered before the Richmond law school, Richmond College, Virginia, by Charles H. Simonton; and "Elements of Law as Introductory to the Study of the Constitutional and Military Law of the United States" were the theme of G. B. Davis. W. W. Phelps compiled a "Chronology of American Case Law," covering all reported cases, State and Federal, from the earliest period to 1897. "A Treatise on the American Law of Elections," by George W. McCrary, went through a fourth edition, edited by Henry L. McCune, and "The Revised Village Charter," by John N. Drake, was a digest of village law, Part I of which covered "The Village Law," and Part II "All Other Statutes applicable to Villages." William E. Bullock was the author of "A Treatise on the Law of Husband and Wife in the State of New York," including chapters on divorce and dower;

Edwin H. Woodruff, of "A Selection of Cases on Domestic Relations and the Law of Persons"; and William C. Sprague was heard from yet again in "Illustrative Cases on the Law of Domestic Relations." "Principles of the Law of Attorney and Client" emanated from W. B. Hale; W. E. Bailey devoted two volumes to "The Law of Personal Injuries relating to Master and Servant"; while four contained "A Treatise on Marine, Fire, Life, Accident, and all Other Insurances," by Joseph A. Joyce. A second edition, revised and enlarged, was issued of "A Treatise on the Law of Fire Insurance," by D. Ostrander, with a philosophical and analytical discussion of leading cases. "Patent Office Practice," by William A. Luby, was an abridgment of the law of patents together with the rules, forms, and precedents for preparing and prosecuting applications for patents, trade-marks, prints, labels, and copyrights; and from J. T. Newton we had also "Newton's Digest of Patent Office Trade-Mark Decisions." Two volumes contain "A Treatise on the American Law relating to Mines and Mineral Lands," by Curtis H. Lindley. Daniel Moreau Barringer and John Stokes Adams were the joint authors of "The Law of Mines and Mining in the United States," and Horace F. Clark, Charles C. Heltman, and Charles E. Consul of a "Mineral Law Digest." "A Manual of Legal Medicine," for the use of practitioners and students of medicine and law, was the work of Justin Herold, M. D.; and "The Powers, Duties, and Liabilities of Coroners and Constables," as set forth by Borden D. Smith, were revised by Charles H. Mills; while John H. Simpson drew up a "Notary Public's Guide." Edgar B. Kinkaid vouchsafed "Forms of Instruction to Juries and Judgment Entries," covering civil and criminal cases in all courts of record in Ohio, and Samuel D. Aulls was the author of "Aulls's Quizzier on the New York Code of Civil Procedure." "Celebrated Trials," by Henry Laurens Clinton, supplements admirably his previous volume of "Extraordinary Cases," and to Moses Field we owe a collection of "Famous Legal Arguments." "Law Latin," by E. Hilton Jackson, was a treatise in Latin, with legal maxims and phrases, as a basis of instruction. Vol. I of "A Complete Digest of all Reported American Cases from the Earliest Times to 1896" covered "Abandonment-Advocate," and inaugurated the "Century Edition of the American Digest"; Vol. I of the "General Digest of the Decisions of the Principal Courts of the United States, England, and Canada" (new series) appeared at the beginning of the year. James H. Monroe edited "Monroe's Digest of Standard Decisions of the Courts of Last Resort of the United States, Canada, England, Scotland, and Ireland upon Questions in Law and Equity relating to Banks, Banking and Commerce, Trade and Manufacturing"; Vols. III, IV, and V of the second edition of the "American and English Encyclopaedia of Law," edited by David S. Garland and Lucius P. McGeehee, under the supervision of James Cockcroft, were sent out, as were Vols. LII, LIII, LIV, LV, and LVI of "American State Reports," selected, reported, and annotated by A. C. Freeman, a brief digest, covering Vols. XLIX to LIV, of which was made by E. D. Smith; and there yet remain for mention also Vols. XX-XXV of "United States Circuit Courts of Appeal Reports," with a "Digest of Decisions" reported in the same, covering Vols. XI to XX; several volumes of "United States Courts of Appeal Reports" and a "Digest" comprising the "Supreme Court Reports," Vols. CLXIII to CLXIII, inclusive, from October, 1891, to October, 1895, and the "Circuit Court of Appeals Reports," Vols. I to XXIII, inclusive, Vol. XXVII and advance parts to June 15,

1896, by William Draper Lewis; Vols. XXVIII, XXIX, and XXX of "United States Federal Cases"; Vols. I, II, and III of "United States Federal and State Criminal Reporter"; and Vols. LXXV to LXXXI of the "United States Federal Reporter." A "United States Digest of Decisions and Opinions relating to Pensions and Bounty Land" was prepared under the direction and supervision of John M. Reynolds by William M. Chitty and John W. Bixler, and a "United States Supreme Court Index Digest to the Decisions in Patent Cases" was also sent out, including those adjudged during October term, 1896. The "Reports" and "Reporters" of the several States it is impossible to enumerate. "Affirmed and Reversed Cases, from the Earliest State Report down to January, 1896," by William H. Silvernail was a complete table of affirmed and reversed cases of the State of New York, with duplicate references to all current reports; and from the same author we had an "Index to the Session Laws of the State from 1775 down to 1897." "The Greater New York Charter" as enacted in 1897 contained notes indicating the derivatory statutes, etc., by Mark Ash, and another volume, "The Greater New York Charter: Being an Act to unite into One Municipality, under the Corporate Name of the City of New York, the Various Communities lying in and about New York Harbor, including the City and County of New York, the City of Brooklyn, the County of Kings, the County of Richmond, and part of the County of Queens, and to provide for the Government thereof," contained a report of the committee which drafted the same by Clarence F. Birdseye.

Juveniles.—Still do the numbers increase of books written for young people. "Midshipman Jack," by Charles Ledyard Norton, belonged to the "Fighting for the Flag Series," and yet another sea story was "The Rock of the Lion," by Molly Elliot Seagwell. William Osborn Stoddard contributed "The Red Patriot," "The Lost Gold of the Montezumas," and "Walled in," a true story of Randall's Island. Kirk Munroe gave "With Crockett and Bowie," and "The Painted Desert" was a story of northern Arizona. He also wrote "The Ready Rangers." "Trif and Trixy" was by the ever-delightful John Habberton; James Otis Kaler gave four books, "The Boys at Fort Schuyler," "The Signal Boys of '75," "At the Siege of Quebec," and "The Wreck of the Circus"; "In the Days of the Pioneers" was a sequel to "The Phantom of the River," by Edward S. Ellis, who also wrote "True to his Trust" and "A Strange Craft, and its Wonderful Voyage"; "The Resolute Mr. Pansy" was an electrical story for boys by John T. Trowbridge; "The Great Island; or, Cast away in Papua" was Willis Boyd Allen's contribution to the "Camp and Tramp Series"; while the "Frank and Fearless Series" was enriched with "Frank and Fearless; or, The Fortunes of Jasper Kent," by Horatio Alger, Jr. The "All-over-the-World-Library" (third series) contained "Pacific Shores; or, Adventures in Eastern Seas," by the late lamented William Taylor Adams (Oliver Optic), and his "At the Front" appeared in the "Blue and the Gray Series—on Land." "Guarding the Border," by Everett T. Tomlinson, belonged to the "War of 1812 Series," and his "Washington's Young Aids" to the "War of the Revolution Series." "True to his Home," by Hazzekiah Butterworth, was a tale of the boyhood of Franklin, and from the same pen we had "Over the Andes," in the "Travel and Adventure Series." "A Little House in Pimlico," by Marguerite Bouvet, "Three Margarets," and "Hildegard's Harvest," by Mrs. Laura E. Richards, and "Wanolasset, the Little One Who Laughs," by A. G. Plympton, recalled three favorite authors for

children, and from Mrs. Elizabeth W. Champney came "Witch Winnie in Venice and the Alchemist's Story" and "Pierre and his Poodle." "Aaron in the Wilderness," by Joel Chandler Harris (Uncle Remus), carried on the "Thimblefinger Series"; the "Brain and Brawn Series" contained "The Beach Patrol," a story of the life-saving service, by William Drysdale; "Three Boys in the Northland: Summer," came from Egerton Ryerson Young; and "The Last Cruise of the 'Mohawk,'" a boy's adventures in the navy in the war of the rebellion, from William J. Henderson. Contributions to the "Bound to Win Series" were "Shorthand Tom; or, The Exploits of a Young Reporter," "Young Auctioneers," and "Bound to be an Electrician," by Edward Stratemeyer; "The Missing Tin Box," by Arthur M. Winfield; and "Gun and Sled," by Ralph Bonehill. "Camp and Trail" came from Isabel Hornbrook, and "A Bunker-Hill Failure," from Anna F. Burnham. Lucy Cecil White Lillie described "A Girl's Ordeal." Amanda M. Douglas published "The Children at Sherburne House" and "Hannah Ann," a sequel to "A Little Girl in Old New York," while Ellen Douglas Deland was represented by "In the Old Herriek House, and Other Stories," "A Successful Venture," and "Alan Ransford." Linnie S. Harris told the story of "The Young Capitalist," and Frank M. Bicknell that of "The Apprentice Boy." "Paul Travers's Adventures" were detailed by Sam T. Clover, and Sophie Swett narrated the experiences and perplexities of "Tom Pickering of Seutney." "Stoney Cardington's Ideal" was by Mrs. Mary Anderson Hawkins; "Kent Fielding's Ventures" and "A Genuine Lady," by Mrs. I. T. Thurston; "Dorothy Draycott's To-morrows," a sequel to "Dorothy Draycott's To-days; or, Sirs, only Seventeen," by Virginia Frances Townsend; "Toinette, and Other Stories," by Lydia F. Krause (Barbara Yechton); "The First Temptation," by Mary Lee Stark; "The Story of Mollie," by Marian Bower; "Links of Gold," by Mrs. Harriet A. Cheever; "The Young Puritans of Old Hadley," by Mary Prudence Wells Smith; "The King of the Park," by Marshall Saunders; and "The Angel of the Tenebment," by George Madden Martin. "Phronsie Pepper, the Last of the 'Five Little Peppers,'" by Margaret Sidney (Mrs. Harriet Mulford Lothrop), was illustrated by Jessie McDermott; "Little Homespun," by Ruth Ogden (Mrs. Charles W. Ide), was a continuation of her former story of "Courage"; "Nan in the City," by Mrs. Myra Sawyer Hamlin, was a sequel to "Nan at Camp Chicopee"; "The Happy Six" was by Penn Shirley (Sarah Clarke); and "A Thoughtless Seven" was written by the author of "Probable Sons." "Miss Belladonna" was by Caroline Ticknor, and "Miss Wildfire" by Julie M. Lippmann; and among other books which found interested readers may be mentioned "Castle Daffodil," by Martha Barr Banks; "Ten Little Comedies," tales of the troubles of ten little girls whose tears were turned into smiles, by Gertrude Smith; "The Outstretched Hand," by Annie Maria Barnes (Cousin Annie), and "Cicely's Little Minute," by Harvey Gobel. "Sue Orcutt" was a sequel to "The Orcutt Girls," by Charlotte M. Vaile; and other books for girls were "Miss Nina Barrow," by Frances Courtenay Baylor; "A Candid Critic, and Other Stories for Girls," by Maude Rittenhouse Mayne; "The Taming of Polly," by Ella Lorraine Dorsey; "Three Brave Girls," by Mrs. Jeannette R. H. Walworth; "Three Pretty Maids," by Amy Ella Blanchard; and "Three Girls and especially One," by Marion Ames Taggart, who wrote also "The Blyssvania Post Office." For very little people there were various dainty volumes, "Little Grown-Ups," by Maud

Humphrey and Elizabeth S. Tucker; "A Mince-Pie Dream," a book of children's verse, by Emily Elton, D. D.; "A Book of Nursery Rhymes," illustrated by Francis D. Bedford; "The Dear Old Nursery Rhymes," by Constance Haslewood; "Mother Goose in Prose," by L. Frank Baum; and "Childhood's Songs of Long Ago," by Dr. Isaac Watts, with picturings by Blanche McManus. "The Muses up to Date" was the title of a series of plays for children from eight to eighteen, by Henrietta D. and Roswell M. Field. "Uncle Sam's Secrets," by Oscar Phelps Austin, was a story of national affairs for youth. Anna Alice Chapin told "The Story of the Rhinegold" for young people, and Samuel Adams Drake recalled the landing of the Pilgrim Fathers "On Plymouth Rock."

Medicine and Surgery.—The first of four volumes to contain an "American System of Practical Medicine," in contributions by representative Americans, edited by Alfred Lecheus Loomis, M. D., and W. Gilman Thompson, M. D., appeared during the year, as did the fourth and last volume of "A System of Practical Therapeutics, by American and Foreign Authors," edited by Hobart Amory Hare, M. D., who published also a work of his own upon "Practical Diagnosis." Vol. III of "A System of Medicine by Many Writers," edited by Thomas Clifford Allbutt, M. D., was devoted to "Diseases of Obscure Causation, Alimentation, and Secretion," and Vol. IV to "Diseases of Ductless Glands—Respiratory and Circulatory Systems." James Tyson, M. D., was the author of "The Practice of Medicine," a text-book for practitioners and students, with special reference to diagnosis and treatment, and Horatio C. Wood, M. D., collaborated with Reginald H. Fitz, M. D., on "The Practice of Medicine." Roswell Park, M. D., gave "An Epitome of the History of Medicine," based upon a course of lectures delivered in the University of Buffalo, and edited a "Treatise on Surgery by American Authors," in two volumes. A fourth edition, revised and enlarged, was issued of "A Manual of the Practice of Medicine prepared especially for Students" by A. A. Stevens, M. D.; and Vols. VII to XI, inclusive, were published of "Twentieth Century Practice," edited by Thomas L. Stedman, M. D. A new second revised edition of "A Practical Treatise on Medical Diagnosis," by John H. Musser, M. D., was made for the use of students and practitioners; "Pathological Technique" was a practical manual for the pathological laboratory, by Frank Burr Mallory, M. D., and James Homer Wright, M. D.; "Practical Pathology for Students and Physicians" was a manual of laboratory and *post-mortem* technic, designed especially for the use of junior and senior students in pathology at the University of Michigan, by Alfred Scott Warthin, M. D.; Charles E. Simon, M. D., prepared "A Manual of Clinical Diagnosis by Microscopical and Chemical Methods"; while Robert Hutchinson, M. D., and Harry Rainy gave their attention entirely to "Chemical Methods." Arthur V. Meigs, M. D., inquired into "The Origin of Disease," especially of disease resulting from intrinsic, as opposed to extrinsic causes; "Hysteria and Certain Allied Conditions" were the theme of George J. Preston, M. D.; while H. Iloway was an authority upon "Constipation in Adults and Children," with special reference to habitual constipation and its most successful treatment by the mechanical methods. G. H. Ellwanger wrote upon "Gout"; A. W. Mayo Robson upon "Diseases of the Gall, Bladder, and Bile Ducts"; and W. Soltan Fenwick, M. D., upon "Disorders of Digestion in Infancy and Childhood"; while "Stryngomyelia" was the title of the Aboarenga Prize Essay of the College of Physicians of Philadelphia for 1895, by Guy Hinsdale,

M. D. "Lectures on Angina Pectoris and Allied States," by William Osler, M. D., were reprinted from the "New York Medical Journal," for 1896; Richard C. Cabot, M. D., offered "A Guide to the Clinical Examination of the Base of the Diagnostic Purposes"; while Nestor I. C. Tinsard, M. D., was heard from on "Diphtheria and Antitoxin." "Principles or Guides for a Better Selection or Classification of Consumptives Amenable to High Altitude Treatment" were suggested by A. Edgar Tussy, M. D. Charles Phelps, M. D., wrote on "Traumatic Injuries of the Brain and its Membranes," with a special study of pistol-shot wounds of the head in their medico-legal and surgical relations; Silas Weir Mitchell, M. D., gave "Clinical Lessons on Nervous Diseases"; and Thomas Smith Clouston's "Clinical Lectures on Mental Disorders" went through a fourth revised edition. "Wounds in War," by W. F. Stevenson, covered the mechanism of their production and their treatment; George H. Quay, M. D., was the author of a "Monograph of Diseases of the Nose and Throat"; and Seth Scott Bishop, M. D., supplied a condensed text-book of "Diseases of the Ear, Nose, and Throat, and their Accessory Cavities." The first of four volumes, which will contain a "System of Diseases of the Eye by American, British, Dutch, French, German, and Spanish Authors," edited by William F. and Oliver C. A. Norris, was devoted to "Embryology, Anatomy, and Physiology of the Eye"; "A Handbook of the Refraction of the Eye, its Anomalies and their Correction" came from Charles D'A. Wright, M. D.; "Retinoscopy, or Shadow Test, in the Determination of Refraction at One-Metre Distance, with the Plane Mirror" was by James Thorington, M. D.; and "Eye Strain in Health and Disease," by Ambrose L. Ranney, M. D. Alexander Duane proposed "A New Classification of the Motor Anomalies of the Eye," based on physiological principles, with the symptoms, diagnosis, and treatment. George G. Van Mater, M. D., was the author of "A Text-book of Veterinary Ophthalmology," and Clarence A. Vasey, M. D., of "A Manual of Ophthalmic Operations as practiced on Animals' Eyes." A fourth edition was sent out of "A Practical Treatise on Diseases of the Skin," by James Nevins Hyde, M. D., and Frank H. Montgomery, and a new edition of "The Ready Reference Handbook of Diseases of the Skin," by George T. Jackson, M. D. In Saunders's "New And Series" appeared a handbook of "The Diseases of Women," by John Bland Sutton, M. D., and Arthur E. Giles, M. D. Oscar Schaeffer supplied a "Hand Atlas and Essentials of Gynecology"; Charles B. Penrose, a "Text-book of Diseases of Women"; J. Compton Burnett, M. D., a work on "Organic Diseases of Women, notably Enlargements and Displacements of the Uterus and Sterility, considered as Curable by Medicine"; a second revised edition of "A Text-book of the Diseases of Women," by Henry Jacques Garrigues, M. D., was published; Andrew F. Currier, M. D., made a special study of "The Menopause"; Charles Jewett, M. D., supplied "The Essentials of Obstetrics"; W. R. Dakin, M. D., "A Handbook of Midwifery"; and Edward P. Davis, M. D., "A Treatise on Obstetrics for Students and Practitioners." "Functional Disorders of the Nervous System in Women" were studied by T. J. McGillicuddy, M. D.; "A Practical Treatise on Sexual Disorders of the Male and Female," came from Robert Taylor, M. D.; and "A Practical Working Handbook in the Diagnosis and Treatment of Diseases of the Genito-Urinary System and Syphilis," from F. E. Doughty, M. D. Dr. Nicholas Sonn wrote on "Tuberculosis of the Genito-Urinary Organs, Male and Female." "The History and Technique of the Vaginal Radical Operation" were set

forth by Leopold Landau, M. D., and Theodor Landau, M. D.; A. C. Butler Smythe published "A First Series of Fifty-four Consecutive Ovariotomies, with Fifty-three Recoveries"; Franklin H. Martin, M. D., "Lectures on the Treatment of Fibroid Tumors of the Uterus: Medical, Electrical, and Surgical"; to W. J. Stewart McKay we were indebted for "Lawson Tait's Perineal Operations, and An Essay on Curettage of the Uterus." J. W. White, M. D., and Edward Martin, M. D., were the joint authors of "A Text-book of Genito-Urinary Surgery." "A Treatise on the Surgery of the Alimentary Canal" was written by A. Ernest Maylard, and "A Clinical Text-book of Surgical Diagnosis and Treatment," by J. W. Macdonald, M. D. A seventh edition was made of "Elementary Bandaging and Surgical Dressing," by Walter Pye, M. D., revised and in part rewritten by G. Bellingham Smith. The first two out of three volumes of "Outlines of Veterinary Anatomy," by O. Charnock Bradley, were devoted respectively to "The Limbs" and "The Trunk." A "Manual of Static Electricity in X-Ray and Therapeutic Uses" was contributed by S. H. Monnell, M. D.; a third edition, revised and enlarged, appeared of "Ptolemaeus, Leucoma, Toxins, and Antitoxins," by Victor C. Vaughan, M. D., and F. G. Novy, M. D.; as did a fourth enlarged and revised edition of "Principles of Bacteriology," by A. C. Abbott, M. D. William Tebb and Edward Perry Vollu, M. D., discussed "Premature Burial and how it may be prevented," with special reference to trance, catalepsy, and other forms of suspended animation; "Anomalies and Curiosities of Medicine," being an encyclopaedic collection of rare and extraordinary cases, by George Mead Gould, M. D., and Walter L. Pyle, M. D., was a work of rare interest; A. D. Waller, M. D., delivered the first series of "Lectures on Physiology" upon "Animal Electricity"; and from G. N. Stewart, M. D., we had "A Manual of Physiology with Practical Exercises." "Fads of an Old Physician," by George S. Keith, M. D., was intended as a sequel to "A Plea for a Simpler Life"; J. R. Hayes, M. D., told "How to Live Longer and why we do not Live Longer"; "A Physician in the House for Family and Individual Consultation" was supplied by J. H. Greer, M. D.; and "Practical Domestic Hygiene" was suggested by J. Lane Motter, M. D., and R. H. Firth. "Accidents and Emergencies," by Charles Winslow Dulles, M. D., a manual for the treatment of surgical and medical emergencies in the absence of a physician, went through a fifth revised and enlarged edition; S. Edwin Solly, M. D., published "Solly's Medical Gynaecology"; the "Year Book of Treatment for 1897" was issued; Rev. Charles Coppens declared "Moral Principles and Medical Practice" the basis of medical jurisprudence; William C. Alpeus described "The Pharmacist at Work"; and W. D. Woodburn wrote "On Extraction" of the teeth, with notes on their anatomy and physiology. "The Development of the Frog's Egg," by Thomas Hunt Morgan, was an introduction to experimental embryology; Charles Sedgwick Minot wrote on "Human Embryology"; and Martin L. Holbrook, M. D., on "Sterilization." "Infancy and Childhood" were the theme of Frances F. Wool in a practical manual for mothers; "The Human Flower," by Ellis Eitelmeier, was a simple statement of the physiology of birth and the relation of the sexes; "What a Young Boy ought to know" was written for the "Self and Sex Series" by Sylvanus Stall, D. D.; and similar information for young girls was conveyed briefly in "Almost a Woman," by Mary Wood Allen, M. D. Vol. II of the second series of the "Index Catalogue of the Library of the Surgeon-General's Office, U. S. A.," covered B-Bywater.

Poetry.—No book of poems of commanding merit was sent out during 1897. From Harriet Prescott Spofford we had "In Titian's Garden, and Other Poems"; and from John B. Tabb, "Lyrics"; from Henry Jackson Van Dyke, Jr., "The Builders and Other Poems"; and from Bliss Carman, "Ballads of Lost Haven: A Book of the Sea." "Out of the Silence," was by John Vance Cheney; "The Rabaiyat of Doe Sisters," by James Whitcomb Riley, was illustrated by C. M. Relyea; and Robert Underwood Johnson published "Songs of Liberty and Other Poems." "In which Hearts lead" was a book of rhymes by John Leonard Merrill, Jr.; "Songs Ysane" were sung by Annie Fellows Johnson and Albion Fellows Bacon; O. C. Auringer published "The Book of the Hills"; and James Buckham, "The Heart of Life." Poems by Margaret E. Sangster were entitled "Easter Bells," and from M. Elizabeth Crouse we had "Vigilance." M. A. De Wolfe Howe contributed "Shadows"; W. Clayton Hopkins, "Rose Leaves"; and Ednah Proctor Clarke, "An Opal." "Once upon a Time, and Other Child Verses" were written by Mary E. Wilkins. "Poems now First Collected" of Edmund Clarence Stedman received a welcome, and Lew Wallace's two poems, "The Wooing of Malkatoon" and "Commodus," bound in one volume and illustrated by Du Mond and Weguelin, made one of the handsome holiday books. "The Island Lily" was an idyl of the Isles of Shoals, by Lillian Blanche Fearing; "The Dreamers, and Other Poems" came from Edward S. Van Zile; "Folly's Bells," a German legend, was put in verse by Anne Gardner Hale; "Way Songs and Wanderings," by Claiborne Addison Young, were illustrated by Ethelred B. Barry; and "The Old House, and Other Poems and Sketches" were written by Grace Duffie Boylan. "Echoes," by Josephine Curtis Woodbury, were decorated by Eric Pape; Clarence Umy gathered "A Vintage of Verse"; Maximus A. Lesser caught "Echoes of Halcyon Days"; and Samuel Walter Foss related "Dreams in Homespun." Poems by Edward A. Jenks were entitled "The Spinning Wheel at Rest"; Robert W. Chambers published a book of ballads entitled "With the Band"; "The Death of Falstaff, and Other Poems" were by L. Bruce Moore; "Bells at Evening, and Other Verses" of Mrs. Frances Jane Crosby Van Alstyne were accompanied by a biographical sketch by Robert Lowry; "Lady Vere, and Other Narratives" and "Om: Mammon: A Spirit Song" were poetic contributions by L. M. Elshemus; "Chilhowee: A Legend of the Great Smoky Mountains," by Henry V. Maxwell, was illustrated from original drawings by Clara T. Gresham; while from William H. Drummond, M. D., we had "The Habitant, and Other French Canadian Poems," with an introduction by Louis Frechette, and from Charles G. D. Roberts "The Book of the Native"; and Richard Watson Gilder's "For the Country."

Political, Social, and Moral Science.—"This Country of Ours," by ex-President Benjamin Harrison, presents a view of the machinery of our National Government in motion. "Equality," by Edward Bellamy, was perhaps one of the most talked of books of the year, and its theories were met and answered in "Inequality and Progress," by George Harris; "Industrial Freedom," by David Macgregor Means, had an introduction by David A. Wells; and from Freeman Otis Willey we had a study of the vexed question of "The Laborer and the Capitalist." "The Workers: An Experiment in Reality—The East" was the record of the experiences of Prof. Walter A. Wyckoff in an attempt to support himself for two years as an unskilled workingman. "State Control of Trade and

Commerce by National or State Authority" was discussed by Albert Stickney; "The Study of City Government," by Delos F. Wilcox, was an outline of the problems of municipal functions, control, and organization; Frank Johnson Goodnow suggested "Municipal Problems"; and "A Bibliography of Municipal Administration and City Conditions" came from Robert C. Brooks. "A Political Primer of New York State and City (the City under the Greater New York Charter)" was written by Adèle M. Fielde. A commentary by Jesse Macy on the nature and growth of "The English Constitution" was the result of study and residence in London, and in the "Columbia University Studies" "English Local Government of To-day" was discussed by Milo Roy Maltbie. The "History of Economics" was written by Henry Dunning Macleod; "Outlines of Elementary Economics" were offered by Herbert J. Davenport; "Value and an Invariable Unit of Value" purported to be an important discovery in economics by William A. Whittick; William C. Cornwell published "Sound Money Monographs"; and the history of the "Great Sound Money Parade in New York" was written and designed as a permanent record. Henry Crosby Emery wrote on "Speculation on the Stock and Produce Exchanges of the United States" for the "Columbia University Studies in History, Economics, and Public Law"; Thomas L. Greene discussed "Corporation Finance"; Vols. III and IV completed "A History of Banking in All Leading Nations," compiled by thirteen authors and edited by William Dodsworth; William Matthews Handy gave an impartial statement of "Banking Systems of the World"; and "Financial New York" was by William Ten Eyck Hardenbrook. "Double Taxation in the United States," by Francis Walker, was another of the "Columbia University Studies in History, Economics, and Public Law"; and "State Tax Commissions in the United States" were chronicled by James W. Chapman, Jr., in the "Johns Hopkins University Studies," another issue of which was "Daniel Raymond: An Early Chapter in the History of Economic Theory in the United States," by Charles Patrick Neill. "Economics and Jurisprudence" was by Henry Carter Adams; John J. Merrill was the author of "Merrill's Manual of the Taxation of Corporations by the State of New York for State Purposes"; "Prisons and Convicts," by Michael J. Cassidy, contained the observation and experience gained during thirty-seven years of continuous service in the administration of the Eastern State Penitentiary of Pennsylvania; William Dwight Porter Bliss edited "The Encyclopedia of Social Reform," including political economy, political science, sociology, and statistics, covering anarchism, charities, civil service, currency, land and legislation, reform, penology, socialism, social purity, trades unions, woman's suffrage, etc. Franklin H. Giddings was the author of "The Theory of Socialization," a syllabus of sociological principles for the use of college and university classes, while C. R. Henderson, D. D., discussed "The Social Spirit in America" for the "Chautauqua Reading Circle Literature." "Our Rival the Rascal," by Benjamin P. Aldridge and William B. Watts, claimed to be a faithful portrayal of the conflict between the criminals of this age and the defenders of society, the police, and "Crime and Criminals," by John Sanderson Christison, M. D., described various types of degenerates. "Woman and the Republic," by Mrs. Helen Kendrick Johnson, was an admirable presentation of the arguments against woman suffrage. Charles Fletcher Dole prophesied of "The Coming People" with inspiring optimism; Frederic Howard Wines and John Koren made an investigation of "The

Liquor Problem in its Legislative Aspects" under the direction of Charles W. Elliot, Seth Low, and James C. Carter; while "The Saloon Question in Chicago" was the theme of John E. Goetz in "Economic Studies." "Girls who answer: Personals" was the title given to a second enlarged edition of Dr. Arthur MacDonald's sociologic and scientific study of young women entitled "Abnormal Woman" in its first imprint. "Anarchism," by E. V. Zenker, was at once a criticism and history of the anarchist theory; and from J. Wilson we had "Self Control, or, Life Without a Master." "Revolutionary Tendencies of the Age" were reviewed anonymously as to their cause and ultimate aim. "The Hawaiian Incident," by J. A. Gillis, assumed to be an examination of Mr. Cleveland's attitude toward the revolution of 1893; Richard Harding Davis stated the case of "Dr. Jameson's Raiders vs. The Johannesburg Reformers"; and Mrs. John Hays Hammond wrote "A Woman's Part in a Revolution." Frederick Palmer described the "Going to War in Greece"; and Stephen Bonsal, Jr., set forth from observation "The Real Condition of Cuba To-day." The "Handbook of the American Economic Association, 1897" was issued, and among the publications of the American Academy of Political and Social Science must be mentioned "A Comparative Study of the State Constitutions of the American Revolution," by William Clarence Webster; "The Formation of the Greater New York Charter," by James W. Pryor; "The Philosophical Basis of Economics," a word to the sociologists, by Sidney Sherwood; "Silver in China and its Relation to Chinese Copper Coinage," by Talcott Williams; "Over-Nutrition and its Social Consequences," by Simon Nelson Patten; "The Shiftless and Floating City Population," by Dr. Edward T. Devine; "Political and Municipal Legislation in 1896," by Edward Dana Durand; "Crime and the Census," by Roland P. Falkner; "The George Junior Republic," by William I. Hull; "Concentration of Industry and Machinery in the United States," by E. Levasseur; "Problems of Political Science," by L. S. Rowe; "The Immigration Question," by Joseph H. Senner; "Administrative Centralization and Decentralization in England," by James T. Young; "Utility and Cost as Determinants of Value," by Charles Stroeve; "Values Positive and Relative," by W. G. L. Taylor; "Silver Free Coinage and the Legal Tender Decisions," by C. G. Tiedeman; "The First Apportionment of Federal Representatives in the United States," by Edmund James James; "Current Transportation Topics," and No. 2 of the same, embracing recent Supreme Court decisions, by Emory R. Johnson; "The Administration of Prussian Railroads," by B. H. Meyer; "Rousseau and the French Revolution," by Charles H. Lincoln; "The Political Philosophy of Aristotle," by Isaac Loos; "The Quantity Theory," by Prof. William Amasa Scott; "The High School System," by L. R. Harley; "New Academic Degrees at Paris," by C. W. Veditz; and "Genius, Fame, and the Comparison of Races," by Charles H. Cooley. Nos. 1 and 2 of "Occasional Papers of the American Negro Academy" were "A Review of Hoffman's 'Race Traits and Tendencies of the American Negro,'" by Kelly Miller, and "The Conservation of Races," by W. E. Burghardt Du Bois.

Science.—The popularizing of science goes on at a rapid rate, and many books of interest to the general reader were published during the year. "Volcanoes of North America" and "Glaciers of North America," by Israel Cook Russell, were intended as reading lessons for students of geography and geology; "A Handbook of Rocks for Use without the Microscope," by James Furman Kemp, contained a glossary of the names of rocks and of other

lithological terms; and Albert Huntington Chester prepared a "Catalogue of Minerals alphabetically arranged." "The History of Mount Mica and its Matchless Colored Tourmalines" was written by Augustus Choate Hamlin; "The Missouri River and its Utmost Source," by J. V. Brower, was a curtailed narration of geologic, primitive, and geographic distinctions descriptive of the evolution and discovery of the river and its head waters; and a second, revised edition was issued of Gates P. Thurston's work upon "The Antiquities of Tennessee and the Adjacent States," which had new chapters and illustrations. "The Story of the Earth's Atmosphere" was written for the "Library of Useful Stories" by Douglas Archibald. Herbert A. Howe followed his "Study of the Sky" of last year with "Elements of Descriptive Astronomy," and we owe a "Star Atlas" to Winslow Upton. Vols. IX and X of Charles Sprague Sargent's work upon "The Silva of North America" appeared; "Familiar Features of the Roadside," by Ferdinand Schuyler Mathews, described the flowers, shrubs, birds, and insects so encountered, and contained 160 drawings by the author, as well as many of the songs of our common birds and insects; Caroline A. Creevey's "Flowers of Field, Hill, and Swamp" were illustrated by Benjamin Lander; William Whitman Bailey wrote on "New England Wild Flowers and their Seasons"; and Vol. II was published of "An Illustrated Flora of the Northern United States, Canada, and the British Possessions," by Nathaniel Lord Britton and Addison Brown, covering "Portulaca to Gentian." Charles Steadman Newhall illustrated fully "The Vines of Northeastern America" from original sketches. Frank Vincent compiled and edited "The Plant World: Its Romances and Realities" as a reading book of botany; Sadie F. Price prepared "The Fern Collector's Handbook and Herbarium," as an aid in the study and preservation of the ferns of Northern United States, including the district east of the Mississippi and north of North Carolina and Tennessee; Charles Reid Barnes's "Analytic Keys to the Genera and Species of North American Mosses," revised and extended by Frederic De Forest Heald, appeared in the "Bulletins of the University of Wisconsin, Science Series"; and from Margaret Warner Morley we had elementary lessons on "Flowers and their Friends" and "A Few Familiar Flowers." "Chapters on the Natural History of the United States" were written by R. W. Shufeldt, M. D.; John Sterling Kingsley was the author of "Elements of Comparative Zoology"; while an "Elementary Zoology and Laboratory Guide" was the work of Henry E. Chapin, assisted by Louis J. Rettger. Parts XV and XVI of Vol. II of H. Nehrling's "North American Birds" appeared, also a second, revised edition of Robert Ridgway's "Manual of North American Birds." H. E. Parkhurst, the author of the "Birds' Calendar," gave us "Song Birds and Waterfowl"; Daniel Giraud Elliot devoted a sumptuous volume to "The Gallinaceous Game Birds of North America," including the partridges, grouse, ptarmigan, and wild turkeys; Charles B. Cory told us "How to know the Shore Birds (Limnology of North America (South of Greenland and Alaska)," all the species being grouped according to size and color, and "How to know the Ducks, Geese, and Swans." "The Story of the Birds" was written by James Newton Baskett for "Appletons' Home Reading Books," edited by Hon. W. T. Harris, other issues of which were "Curious Homes and their Tenants," by James Carter Beard, and "The Halls of Shells," by Mrs. A. S. Hardy. John Burroughs contributed an introduction to "Bird Neighbors," by Neltje Blanchan, which makes us acquainted with 150 birds commonly found in the gardens, meadows,

and woods about our homes; "Upon the Tree Tops," by Olive Thorn Miller (Mrs. Harriet Mann Miller), was illustrated by J. Carter Beard; "Bird-Craft," by Mabel Osgood Wright, went through a new cheaper edition; "Bird Life," by Frank M. Chapman, was intended as a guide to the study of our common birds; it contained 75 full-page plates and numerous text drawings by Ernest Seton Thompson, and appeared also in an edition in colors; "Citizen Bird" was the title given to scenes from bird life in plain English for beginners, by Mabel Osgood Wright and Elliott Cones; Charles Dixon wrote at length on "Curiosities of Bird Life"; and among the many delightful volumes which bring us near to Nature and her mysteries are especially to be noted "The Freedom of the Fields," by Dr. Charles Conrad Abbott, whose "Travels in a Tree Top" went through a new edition, the two forming "Abbott's Fireside and Forest Library"; "My Studio Neighbors" and "Eye Spy," by William Hamilton Gibson, both illustrated by the author; Ernest Ingersoll's "Wild Neighbors"; Cora Dillingham Pierson's "Among the Meadow People"; William Sloane Kennedy's "In Portia's Garden"; Clara Kern Bayless's "In Brook and Bayou; or, Life in the Still Waters"; and Clarence Moores Weed's "Stories of Insect Life" and "Life Histories of American Insects." "Insect Life," by John Henry Comstock, was intended as an introduction to Nature study and a guide for teachers, students, and others interested in out-of-door life, and Edward Knobel wrote of "Mosquitoes, Gnats, Crane Flies, Midges, and Flies of the Northern States" for the series of "Illustrated Guides in Natural History." Part XVII completed the third series of W. H. Edwards's work on "The Butterflies of North America." Samuel Hubbard Seudder prepared a "Guide to the Genera and Classification of the North American Orthoptera found North of Mexico." "Matka and Kotik: A Tale of the Mist Islands," by Dr. David Starr Jordan, made an eloquent plea for the fur seal; "The Story of Germ Life" was written by Herbert W. Conn for "Appletons' Library of Useful Stories"; Harriet Randolph offered "Laboratory Directions in General Biology"; and Robert Payne Bigelow prepared a "Syllabus of Lectures in Theoretical Biology" for the use of students in the Massachusetts Institute of Technology. "Life and Immortality; or, Soul in Plants and Animals" was discussed by Thomas G. Gentry, and "The Place of Death in Evolution," by Rev. Newman Smyth. The "Religions of Primitive Peoples" were the theme of Dr. Daniel Garrison Brinton in the series of "American Lectures on the History of Religions," and Clifford Howard made a study of "Sex Worship" in the same connection. "Totem Tales: Indian Stories Indian told" gathered in the great Northwest were compiled by W. S. Phillips, and Washington Matthews, M. D., collected and translated "Navaho Legends," accompanying them with an introduction, notes, illustrations, texts, interlinear translations, and melodies. "Some Unrecognized Laws of Nature," by Ignatius Singer and Lewis H. Berens, made an inquiry into the causes of physical phenomena with special reference to gravitation, and "Modes of Motion" were considered by Amos Emerson Dolbear, who also published "First Principles of Natural Philosophy." "The Argentaurium Papers, No. 1," by Stephen H. Emmens, contained some remarks concerning gravitation addressed to the Smithsonian Institution, the Académie des Sciences, the Royal Society, and all other learned bodies. "Telepathy and the Subliminal," by R. Osgood Mason, was an account of recent investigations regarding hypnotism, dreams, phantasms, and related phenomena, an explanation of which is

found by Dr. Louis Waldstein in "The Sub-Conscious Self." Alexander Melville Bell was an authority on "The Science of Speech." "The Theory of Electricity and Magnetism" was set forth in lectures on mathematical physics by Arthur Gordon Webster; Ludwig Boltzmann supplied a preface to Charles Emerson Curry's "Theory of Electricity and Magnetism"; Eric Gerard wrote also on "Electricity and Magnetism"; Charles A. Perkins drew up "Outlines of Electricity and Magnetism"; and Frederic W. Sanderson, "Electricity and Magnetism for Beginners." Charles Proteus Steinmetz and Ernest J. Berg were joint authors of "Theory and Calculation of Alternating Current Phenomena," and from Louis Bell we had "Electric Power Transmission," a practical treatise for practical men. Joseph S. Ames presented a "Theory of Physics"; Cargill G. Knott's "Physics" was an elementary text-book for university classes, more especially in medicine; and "Physics," by Le Roy C. Cooley, proved a student's manual for the study room and laboratory. William Abbott Stone wrote on "Experimental Physics," and Vol. III appeared of "The Elements of Physics," a college text-book, by Edward L. Nichols and William S. Franklin, being devoted to "Light and Sound." The former of the two authors also published "The Outlines of Physics," "Physical Problems and their Solution" were supplied by A. Bourgoignon. William A. Noyes wrote an "Organic Chemistry for the Laboratory"; Peter T. Austen made "Notes for Chemical Students"; a third edition was issued of Arthur A. Noyes's work on "Qualitative Chemical Analysis"; and C. J. T. Haussen discussed the "Reform of Chemical and Physical Calculations." In mathematics we had "Differential Calculus," by E. W. Bass, and "Plane and Solid Analytic Geometry," by Frederic H. Bailey and Frederic S. Woods.

To intellectual philosophy belong Prof. George Trumbull Ladd's "Philosophy of Knowledge," an inquiry into the nature, limits, and validity of human cognitive faculty; Prof. Borden Parker Bowne's "Theory of Thought and Knowledge"; "Psychology and the Psychosis: Intellect," by Denton Jaques Snider; and "Memory and its Cultivation," by F. W. Edridge Green, M. D., the last in the "International Scientific Series."

Sports and Pastimes.—To this department belong "Men I have Fished with," sketches of character and incident with rod and gun, by Fred Mathew (Kegoe-kay) and "Diomed: The Life, Travels, and Observations of a Dog," by John Sergeant Wise, who makes his English setter detail many sporting adventures. "Canoe Cruising and Camping," by Perry D. Frazer, appeared in the "Forest and Stream Library," while to the "Outing Library of Sport" belonged "Practical Training for Athletics, Health, and Pleasure," by Randolph Fairies, M. D., and "Athletic Sports" were discussed by D. A. Sargent, M. D., H. J. Whigman, Robert D. Wrenn, and others, in the "Out-of-Door Library." "The American Cricket Annual for 1897" completed the eighth year of this publication, and was compiled and edited by Jerome Flannery. "Sphinx Lore" was a collection of literary ingenuities and historical recreations, interspersed with charades, anagrams, and diagram and jingle puzzles, by Charlotte Brewster Jordan. "Evening Entertainments for Young People" were also contributed anonymously.

Theology.—It is a notable fact that two important books of the year falling under this department were written by women, "The Story of Jesus Christ: An Interpretation," by Elizabeth Stuart Phelps, and "The Open Mystery: A Reading of the Mosaic Story," by Mrs. A. D. T. Whitney. "Bases of Religious Belief, Historic and Ideal," an

outline of religious study, came from Charles Melven Tyler, D. D., and a philosophical discussion concerning the nature of the divine idea as a demonstrable reality, by Jeanne Royce. Joseph Le Conte, M. D., G. H. Howison, and others, critiqued "The Conception of God," appeared in the "Publications of the Philosophical Union of the University of California." Prof. George F. Wright set forth "Scientific Aspects of Christian Evidences," and "The New Apologetic" was the title given to five lectures on true and false methods of meeting modern philosophical and critical attacks upon the Christian religion, by Milton Spencer Terry, D. D. Prof. R. M. Wenley wrote on "Contemporary Theology and Theism"; George H. Trever, D. D., delivered six lectures entitled "Studies in Comparative Theology" before the students of Lawrence University, Appleton, Wisconsin, which were collected into a volume; "Immortality and the New Theodicy" was the theme of G. A. Gordon, D. D., in the Ingersoll Lectures before Harvard University, recently given; and Rev. J. W. Reynolds contributed an introduction to "The Supernatural," a rational view of the divine word and of the dual nature of man, by Katholikos. "The Claims of the Old Testament" were the theme of lectures delivered by Stanley Leathes, D. D., in connection with the sesquicentennial celebration of Princeton University, and Andrew Seth also delivered "Two Lectures on Theism" on the same occasion. John H. Barrows, D. D., delivered lectures on "Christianity the World-Religion" in India and Japan during 1896-97, and John Bascom discussed "Evolution and Religion; or, Faith as a Part of a Complete Cosmic System." "The Will to Believe, and Other Essays in Popular Philosophy," came from William James. Lyman Abbott, D. D., published "The Theology of an Evolutionist," a companion volume to his "Christianity and Social Problems," and "The Evolution of Christianity"; George S. Merriam defined "The Chief End of Man" from the standpoint of an evolutionist; and Minot J. Savage, D. D., prescribed "Religion for To-day," in a series of collected sermons. "Reasons for the Higher Criticism of the Hexateuch" were given by Rev. Isaac Gibson; "The Old Testament under Fire" was upheld by Adolphus J. F. Behrends, D. D.; "Seven Puzzling Bible Books," by Dr. Washington Gladden, was a supplement to his former work, "Who wrote the Bible?" and from the same author we have a study of "Social Facts and Forces" and "The Christian Way: Whither it goeth, and how to go on." "Genesis and Modern Science" were shown to be nowise at variance by Warren R. Perce; "Primal Revelation: Studies in Genesis I-VIII," were the theme of the Davies Lectures for 1896, by J. Cynddylan Jones; "The Divine Library," by Rev. John Paterson Smyth, gave suggestions how to read the Bible; while "Hints on Bible Study" were offered by Henry Clay Trumbull, Austin Phelps, Robert Ellis Thompson, and others. "The Prophetic Books of the Old Testament" were considered by John B. Gough Page, D. D., in the series of "Bible Handbooks for Young People"; Luther Tracy Townsend, D. D., examined "The Story of Jonah in the Light of Higher Criticism"; "Isaiah: A Study of Chapters I-XII" came from Rev. Hinkley Gilbert Mitchell; Dr. Edwin Wilbur Rice's "Commentary on the Gospel according to Matthew," in a new, enlarged edition, formed No. 4 of the "Green Fund Books"; and Marvin R. Vincent, D. D., contributed "A Critical and Exegetical Commentary on the Epistles to the Philippians and to Philemon" to the "International Critical Commentary Series," another issue of which was "A Critical and Exegetical Commentary on the Epistles to the Ephesians and Colossians," by Rev.

Thomas Kingsmill Abbott. "In Search of a Soul" was a series of essays in interpretation of the higher nature of man by Horatio W. Dresser; Eliza Burt Gamble wrote on "The God Idea of the Ancients; or, Sex in Religion." Goldwin Smith published "Guesses at the Riddle of Existence and Other Essays on Kindred Subjects," and Amos Kidder Fiske examined "The Myths of Israel." In this connection may be mentioned also "The Lord's Day—or Man's?" a public discussion between Byron Sunderland, D. D., and W. A. Croffut, Ph. D., at Washington, D. C., reprinted from the columns of the Washington "Post." "The Christ of God: The Rationale of the Deity of Jesus Christ" was the subject of seven sermons by Charles H. Mann; "The Facts and the Faith" was a study in the rationalism of the Apostles' Creed, by Beverley Ellison Warner, D. D.; and "Forty Dollars and the Boots; or, Shall we not abolish our Apostles' Creed" was the somewhat striking title of a work on the same subject by Charles A. Pidcock. "An Introduction to the Life of Jesus," by Alfred Williams Anthony, made an investigation of the historical sources. "Christ's Temptation and Ours" was the subject of the Baldwin Lectures for 1896, by Bishop Arthur C. A. Hall; "Cochem's Life of Christ," written two hundred years ago, was adapted by the Rev. Bonaventure Hammer; "Christianity an Idealism," by Rev. John Watson, examined the Christian ideal of life in its relations to the Greek and Jewish ideals and to modern philosophy, and formed one of the "Publications of the Philosophical Union of the University of California," going, however, through a second, enlarged edition before the close of the year. From Dr. Louis Albert Banks we had a volume on "The Christ Brotherhood"; from Dr. Theodore Thornton Munger, "Character through Inspiration, and Other Papers"; from Bishop William E. McLaren, "The Practice of the Interior Life"; and from Ralph Waldo Trine, "In Tune with the Infinite; or, Fullness of Peace, Power, and Plenty." "Personal Friendships of Jesus" were the theme of James Russell Miller, D. D.; James Morris Whiton offered "Reconsiderations and Re-enforcements"; Lenten readings were selected chiefly from unpublished manuscripts of Phillips Brooks, by William M. L. Jay, and entitled "The More Abundant Life"; Bishop Hugh Miller Thompson sent out "More 'Copy,' a second series of essays from an editor's drawer on religion, literature, and life; Milton Valentine, D. D., propounded "Theoretical Ethics"; "Faith and Fellowship" was the title of a volume of sermons by John Cuckson; and from William Carlos Martyn we had a manual of "Christian Citizenship." A second series of "Herald Sermons" was received from Rev. George Hughes Hepworth; "The Golden Passion and Other Sermons" were by Dr. James Burrell; "In this Present World" was yet another volume by Dr. George Hodges; "Great Moments in the Life of Paul" were the theme of a series of lectures-sermons by Edgar Whittaker Work; and William H. Sallmon edited "The Culture of Christian Manhood; Sunday Mornings in Battell Chapel, Yale University." Ten lectures on "Christian Worship" were delivered in the Union Theological Seminary, New York, in the autumn of 1896, by Charles Cuthbert Hall, D. D., Alexander Viets Griswold Allen, D. D., Egbert Coffin Smith, D. D., and others, and "Common-Sense Christianity" consisted of many of "The Congregationalist" articles of Alonzo Hall Quint, D. D., selected and arranged by Wilder D. Quint. Dr. Ezra Hoyt Bvington, the author of "The Puritan in England and New England," published 19 sermons upon "The Christ of Yesterday, To-day, and Forever" and other texts;

from Edward W. Worthington we had "Ember Days and Other Papers"; and Archibald Campbell Knowles made an argument for the observance of "A Layman's Lent." "Mischievous Goodness and Other Papers" were by Dr. Charles A. Berry. Vol. III of "Miscellanies of Rev. Thomas E. Peck, D. D., contained "Notes on the Acts of the Apostles, and Briefs and Sermons," selected and arranged by T. C. Johnson, D. D., with a biographical sketch of Dr. Peck, by C. R. Vaughan, D. D. Vol. I of "A History of the Christian Church," by George H. Dryer, D. D., covered the period "Founding of the New World, 1-600 A. D.," and Vol. II, "The Preparation for Modern Times, 600-1517"; a "History of the Christian Church," in two volumes, was written by John Fletcher Hurst for the "Library of Biblical and Theological Literature"; "A History of Christianity in the Apostolic Age," by Arthur Cushman McGiffert, appeared in the "International Theological Library," another issue of which was "Christian Institutions," by Dr. A. V. G. Allen. "The Age of the Renaissance," by Paul Van Dyke, and "The Anglican Reformation," by William Clark, belonged to the "Ten Epochs of Church History Series," while in the "American Church History Series" we had "A History of American Christianity," by Leonard Woolsey Bacon. "Two Studies in the History of Doctrine," by Benjamin B. Warfield, D. D., were respectively devoted to Augustine and the Pelagian controversy, and the development of the doctrine of infant salvation; and Dr. Albert H. Hall wrote "A History of Anti-Pedobaptism from the Rise of Pedobaptism to A. D. 1609." "Leo XIII at the Bar of History," by Dr. Randolph Harrison-McKim, was a discussion of the papal plan for Christian unity; "Leo XIII and Anglican Orders" were the theme of Dr. Thomas Richey; and John Bleecker Miller discoursed of "Leo XIII and Modern Civilization." "Papers, Addresses, and Discussions at the Seventeenth Church Congress (Protestant Episcopal Church) in the United States," held in Norfolk, Va., in November, 1896, were collected into a volume; and a "Memorial Volume of the Westminster Assembly, 1647-1897" was also issued. "A History of Methodism in the United States" was written by James Munroe Buckley in two volumes, and a "Larger Catechism of the Doctrines, History, and Polity of the Methodist Protestant Church" was framed by John Scott, D. D. A new issue was made of "Congregationalists in America," by Dr. Albert E. Dunning, first published in 1894; "The Roman Catholic Church in the United States," by T. O'Gorman, D. D., appeared in the "American Church History Series"; Justin A. Smith, D. D., wrote "A History of the Baptists in the Western States East of the Mississippi"; and Daniel Berger, a "History of the Church of the United Brethren in Christ." Frederick W. Conrad, D. D., prepared a "Lutheran Manual and Guide," containing a historic sketch of the Evangelical Lutheran Church. A "Sequel to 'Our Liberal Movement'" came from the Unitarian divine Joseph H. Allen. "The Message and the Messengers" was the title of lessons from the history of preaching by Fleming James, D. D.; "The Ministry to the Congregation" of lectures on homiletics, by John A. Kern, D. D.; "Cardinal James Gibbons gave an eloquent pen portrait of "The Ambassador of Christ"; "In Pulpit and Parish" consisted of the Yale lectures on preaching by Nathaniel J. Burton, D. D.; Nehemiah Boynton, D. D., delivered three addresses on "Real Preaching" to the students of Oberlin; Rev. Hames Mann presented twenty different "Clerical Types"; and William Stang, D. D., outlined "Pastoral Theology." An "Illustrated Explanation of the Prayers and Ceremonies of the Mass," by D. I. Lan-

slots, had a preface by F. Janssens, D. D.; "The Story of the Prayer-Book" was written by William A. Leonard; "Prayers Ancient and Modern" were selected and arranged for daily reading by Mrs. Mary Wilder Tileston, the editor of "Daily Strength for Daily Needs"; J. Aspinwall Hodge, D. D., described "The Ruling Elder at Work"; and "Modern Methods in Church Work" were reviewed by Rev. George Whitfield Mead. Richard T. Ely wrote on "The Social Law of Service" for the "Epworth League Reading Course"; Archbishop John Ireland delivered lectures and addresses on "The Church and Modern Society"; and William Bayard Hale made a plea for social submission to Christ, entitled "The New Obedience." Edwin Munsell Bliss, D. D., vouchsafed "A Concise History of Missions"; Vol. I was issued of two which will contain a sociological study of foreign "Christian Missions," by James Shepard Dennis, D. D.; and "After Fifty Years" was an historical sketch of the Guntur mission of the Evangelical Lutheran Church, by Rev. L. B. Wolf. "New England's Struggles for Religious Liberty" were gone over by David Barnes Ford, and Henry Melville King attempted to refute the argument of Dr. William H. Whitsitt concerning "The Baptism of Roger Williams." Mary E. Mixer edited a "History of Trinity Church (Buffalo)," and Vol. II appeared of "Annals of King's Chapel, from the Puritan Age of New England to the Present Time," by Henry Wilder Foote. "The Bible and Islam; or, The Influence of the Old and New Testaments on the Religion of Mahomet" were the theme of the Ely Lectures for 1897, by Dr. Henry Preserved Smith; and in the little "What is Worth While Series" we had "The Soul's Quest after God," by Dr. Lyman Abbott; "The Christ-Filled Life," by Dr. Charles Cuthbert Hall; "Ships and Havens," by Dr. Henry Jackson Van Dyke; "By the Still Waters," a meditation on the Twenty-third Psalm, by Dr. James Russell Miller; "Heavenly Recognition," by Rev. Thomas De Witt Talmage; and "Giving what we Have," by Anna Robertson Brown Lindsay. "The Great Poets and their Theology" were examined by Augustus Hopkins Strong, D. D., and "The Conservative Principle in our Literature," an address delivered and printed fifty years ago by William R. Williams, D. D., was refused as bearing on present-day conditions. "Thoughts from the Mount of Blessing" were published by Mrs. Ellen G. White (formerly Ellen Harmon); Ida C. Craddock dwelt upon "The Heaven of the Bible"; Rev. William P. Patterson spoke "A Heartening Word for Mr. Fearing"; Rev. Davis Waggatt Clark compiled 309 tributes to the Bible "From a Cloud of Witnesses"; Silas Framer marshaled "Champions of Christendom"; "Voices of Doubt and Trust" were selected by Volney Streamer; and Rose Porter compiled "The Pilgrim's Staff; or, Daily Steps Heavenward by the Pathway of Faith," a yearbook. "The House of Dreams" was an anonymous allegory; "John and I and the Church" was, of course, by Elizabeth Grinnell; "Sermon Stories for Boys and Girls," by Dr. Louis Albert Banks, had initial illustrations by Freeland A. Carter; Richard Green Moulton edited Vols. XI to XVI, inclusive, of "The Modern Reader's Bible"; "Torch Bearers of Christendom" were chronicled in the "Epworth League Reading Course," by Dr. Robert R. Doherty; and "Select Notes," a commentary on the International Sunday School Lessons for 1898, being the twenty-fourth volume, came from F. N. Peloubet, D. D., and M. A. Peloubet. Elizabeth Louisa Foote prepared a brief manual for "The Librarian of the Sunday School." The "Proceedings of the First National Council of Jewish Women," held Nov. 15-19, 1896, were also given to the world.

Unclassified.—"The History of our Navy," from its origin to the present day (1775-1897), by John R. Spears, filled four profusely illustrated volumes. Eight papers by Alfred Thayer Mahan, on "The Interest of America in Sea Power, Present and Future," were collected from the magazines in which they originally appeared. "The Steam Navy of the United States," a history of the growth of steam vessels of war in the United States navy and of the Naval Engineer Corps, came from Frank M. Bennett. Edmund L. Bates was the author of a "Manual of Physical Drill United States Army," and William D. Beach of "Military Map-Reading, Field, Outpost, and Road Sketching" for noncommissioned officers. The official history of "The Cotton States and International Exposition and South" was written by Walter G. Cooper and indorsed by the president and director general of the Exposition. "Getting Gold" was a practical treatise for prospectors, miners, and students, by J. C. F. Johnson, which appeared opportunely; Edward Hull examined "Our Coal Resources at the Close of the Nineteenth Century"; John A. Allen supplied "Tables for Iron Analysis"; Herbert Lang devoted a volume to "Matte Smelting"; and N. W. Lord another to "Notes on Metallurgical Analysis." "Elements of Mechanics," including kinematics, kinetics, and statics, by Thomas Wallace Wright, contained applications also; Stillman Williams Robinson set forth "Principles of Mechanism"; William Barnet Le Van treated of "The Practical Management of Engines and Boilers"; Cecil Hobart Peabody and Edward F. Miller were the joint authors of a work on "Steam Boilers"; "Slide Valves" occupied the attention of C. W. MacCord, Jr.; Bryan C. Bartley was the author of the "Marine Engineer's Record Book—Engines"; and a second revised and enlarged edition was issued of Bryan Donkin's "Gas, Oil, and Air Engines." "Shop and Road Testing of Dynamoes and Motors" came from John C. Sheld and Eugene C. Parham. William E. Langdon treated of "The Application of Electricity to Railway Working"; Philip Dawson, of "Electric Railways and Tramways"; and E. Tremlett Carter of "Motive Power and Gearing for Electrical Machinery"; W. J. Johnson's "Electrical and Street Railway Directory for 1897" contained lists of electric-light central stations, isolated plants, street railways (electric, horse, and cable), telegraph companies, etc.; E. E. Russell Tratman published "Railway Track and Track Work"; a fifth revised and enlarged edition appeared of William Jasper Nicholls's book "The Railway Builder"; James Glover drew up "Formulas for Railway Crossings and Switches"; and William L. Derr offered a practical manual of "Block Signal Operation." In the "Bulletins of the University of Wisconsin, Engineering Series," we had "Topographical Surveys: Their Methods and Value," by J. L. Van Ornum, and "Comparative tests of Steam Injectors," by George H. Trautmann. "The Materials of Construction" was a treatise for engineers on the strength of engineering materials, by John B. Johnson; Harry Huse Campbell wrote on "The Manufacture and Properties of Structural Steel"; Charles W. Wright and Charles B. Wing prepared "A Manual of Bridge Drafting"; and Charles H. Wright was heard from on "The Designing of Draw Spans." "Hydraulic Cement" had its properties, testing, and use examined by Frederic P. Spalding; "Specifications," a practical system for writing specifications for buildings, by William F. Bower, was excellent in conception and execution; and I. P. Hicks supplied a comprehensive treatise on "Architectural Drawing for Mechanics." Mansfield Merriman wrote a text-book on "The Strength of Materials"

for manual-training schools; Francis C. Moore told "How to Build a Home: The House Practical"; the first of five parts which will contain "The Universal Carpenter and Joiner and Wood Worker's Assistant," compiled and edited by Frederick T. Hodgson was issued; "One Hundred and Fifteen Experiments on the Carrying Capacity of Large Riveted Metal Conduits up to Six Feet per Second of Velocity of Flow" were recorded by Clemens Herschel; and Freeman C. Collin offered "The Graphical Solution of Hydraulic Problems treating of the Flow of Water through Pipes, in Channels and Sewers, over Weirs, etc." The principles and practice of "Sanitary House Drainage" came from T. E. Coleman, and "Sewer Flushing Diagrams" from S. H. Adams. "Water and Public Health," by James H. Fuertes, examined the relative purity of waters from different sources; D. B. Dixon compiled "The Mechanical Arts simplified," a work of reference; Thomas B. Stillman wrote on "Engineering Chemistry"; and Guilford L. Spencer was the author of "A Handbook for Chemists of Beet-Sugar Houses and Seed-Culture Farms." Three volumes of "Principles and Practice of Agricultural Chemical Analysis," by Harvey W. Wiley, were devoted respectively to "Soils," "Fertilizers," and "Agricultural Products"; a seventh revised and enlarged edition was issued of Francis Humphreys Storer's "Agriculture in Some of its Relations with Chemistry"; Isaac Phillips Roberts wrote on "The Fertility of the Land"; and Liberty Hyde Bailey on "The Principles of Fruit Growing" for the "Rural Science Series"; and the latter author also contributed "The Forcing Book," a manual of the cultivation of vegetables in glass houses to the "Garden Craft Series." The twentieth edition of "The American Fruit Culturist," by John J. Thomas, was revised and enlarged by William H. S. Wood, and illustrated with nearly 800 accurate figures; "Tobacco Leaf: Its Culture and Cure, Marketing and Manufacture" was a practical handbook by J. B. Killebrew and Herbert Myrick; and John B. Smith sent out an "Economic Entomology." Mrs. Lizzie Page Hillhouse told of "House Plants and how to Succeed with them"; William Tricker gave directions for "The Water Garden"; and N. Jönsson Rose illustrated his own work on "Lawns and Gardens." Herbert Myrick edited "Turkeys and how to Grow them." Harry Snyder investigated "The Chemistry of Dairying," while "Testing Milk and its Products" was a manual for dairy students, creamery and cheese-factory operators, and dairy farmers, by Edward H. Farrington and Frederic W. Woll. George Perkins Merrill published "Rocks, Rock Gathering, and Soils," and a second edition was sent out of his "Stones for Building and Decoration." "The Chemistry of Pottery" was a useful contribution by K. Langenbeck. "The Story of the Cowboy," by E. Hough, continued the "Story of the West Series" and was illustrated by W. L. Wells and C. M. Russell; and "The Squirrel Hunters of Ohio; or, Glimpses of Pioneer Life" came from N. E. Jones, M. D. Z. W. Pease told of the rescue of the Irish Fenian prisoners by means of "The Catalpa Expedition," and "An American Transport in the Crimean War," by John Codman, had an introduction by John C. Ropes. William Starling gave a brief account of "The Floods of the Mississippi River," their causes and effects, and also of the levee system and other means proposed and tried for the control of the river, with a particular account of the great flood of 1897; "Notes on the Nicaragua Canal" were made by Henry L. Sheldon; and "Fighting a Fire," the spirited description of the technique of the fire department, by Charles T. Hill, was illustrated from drawings made by the author. "A Century of Lotteries in

Rhode Island, 1744-1844," with 41 facsimile illustrations of tickets and sundry documents, by John H. Stiness, formed No. 3 of the second series of "Historical Tracts" of that State. "Crucifixion," by John H. Osborne, gave an historical account of that method of punishment by the Romans, with special reference to that of Christ. Books of practical use include: "Punctuation," by F. Horace Teall; "Why we Punctuate; or, Reason vs. Rule in the Use of Marks," by an anonymous journalist; "Modern Bookkeeping: Single and Double Entry," by James L. Montgomery; "The Self-Proving Accounting System," by A. O. Kittredge and J. F. Brown; and "An Elementary Treatise on the Metric System of Weights and Measures," by James Hamlin Smith. Vol. II of "Cotton Spinning," by William Scott Taggart, was issued; C. F. Seymour Rothwell was an authority on "The Printing of Textile Fabrics"; and "Bleaching and Calico Printing" were handled by George D. Duerr and William Turnbull. "The Polarizing Photochronograph" was an account of experiments at the United States Artillery School, Fort Monroe, Va., in developing this instrument, by Albert Cushing Crehore and George Owen Squier; and W. I. Lincoln Adams edited "Sunlight and Shadow," a book for photographers, amateur and professional. "Incompatibilities in Prescriptions" were exposed by E. A. Ruddiman, and A. Emil Hiss was the author of the "Standard Manual of Soda and Other Beverages," a treatise especially adapted to the requirements of druggists and confectioners. For housekeepers there was a course of lectures on "Household Economics," given before the School of Economics of the University of Wisconsin, by Mrs. Helen Campbell; "Instruction in Cooking," with selected receipts, by Mrs. John W. Cringan; and a special edition of "The Century Cook Book and Home Physician," by Jennie N. Hensey and N. T. Oliver, M. D. "The Cook Book of 'Oscar' of the Waldorf" was an expensive volume. "Beauty and Hygiene" were the subject of an anonymous volume; Dorothy Quigley explained "The Way to keep Young," and told "What Dress makes of us"; and Jessica Ortner gave hints on "Practical Millinery." "The Army Mule and Other War Sketches," by Henry A. Castle, contained also James Whitcomb Riley's stories of the humorist Bill Nye, as reported in an interview by Russell M. Seeds; "The Teacup Club," by Eliza Armstrong, satirized the overrapid progress of woman; and among the minor types of wit are to be mentioned "Mr. and Mrs. Hannibal Hawkins," by Belle C. Greene, and "Betsey Jane on the New Woman," by Herbert E. Brown. "Street Types of Great American Cities" consisted of reproductions of 46 photographs, with descriptions by well-known authors, for which we are indebted to Sigmund Krausz. "The Art of Conversing" came from the author of "Manners and Rules of Good Society," and Mrs. Humphry (Madge) suggested "Manners for Men." Frank Podmore made "Studies in Psychical Research"; Anna W. Mills published "Practical Metaphysics for Healing and Self-Culture"; and Harriet B. Bradbury set forth "The Philosophy of Health," a study of the science of spiritual healing and the philosophy of life. H. Martyn Hart, D. D., in "A Way that seemeth Right" made an examination of Christian Science; Horace Fletcher contributed to the "Menticulture Series" "Happiness as found in Forethought Minus Fearthought"; and Ursula N. Gestefeld told "How we Master our Fate." "Hours with the Ghosts; or, Nineteenth Century Witchcraft" consisted of illustrated investigations into the phenomena of spiritualism and theosophy, by Henry Ridgely Evans. "A Catechism of Palmistry" came from Ida Ellis; "Human Magnetism," by James Coates, told how to hypnotize; and Albert

A. Hopkins compiled and edited "Magic Stage Illusions and Scientific Diversions." Lulu Hurst, the Georgia wonder, now Mrs. Paul Atkinson, wrote her "Autobiography," and for the first time explained and demonstrated the great secret of her marvelous powers. Vol. II appeared of "The Commercial Yearbook," edited by Walter A. Doleworth; "Commercial Precedents" selected from the columns of replies and decisions of the New York "Journal of Commerce," with selected decisions from other sources, were the work of Charles Putzel and H. A. Bähr; and "Fowler's PubliCity" was an encyclopædia of advertising and printing and all that pertains to the public-facing side of business, by Nathaniel C. Fowler, Jr. The "Handbook of the New Library of Congress" was compiled by Herbert Small, and contained essays on the architecture, sculpture, and painting, by Charles Coffin, and on the function of a national library, by Amosworth R. Spofford. Works of reference published during the year included Part V of the "American Catalogue, 1890-'95," completing that work, originally founded by Frederick Leypoldt, and compiled under the editorial direction of R. R. Bowker; "The Annual Literary Index, 1896," by William I. Fletcher and R. R. Bowker; the third supplement to "Poole's Index to Periodical Literature," compiled by William I. Fletcher and Franklin O. Poole, covering from Jan. 1, 1892, to Dec. 31, 1896; "American Book Prices Current for 1897," compiled by Luther S. Livingston, a record of books, manuscripts, and autographs sold at auction in New York, Boston, Philadelphia, Chicago, Cincinnati, and other cities in a limited edition; the "New American Supplement to the Latest Edition of the 'Encyclopædia Britannica,'" in 5 volumes, edited by Day Otis Kellogg; and Vol. XX of "Appletons' Annual Cyclopædia, 1895."

Voyages and Travels.—Several Americans who traveled in Europe during 1897 made a pleasing record of their experience. F. Hopkinson Smith described "Gondola Days," passed in Venice, of course, which he also illustrated; William Agnew Paton spent three months in "Picturesque Sicily," while John A. Logan, Jr., saw things in a promising light "In Joyful Russia." Laura D. Nichols spent "A Norway Summer"; William Beiment Lent took a journey "Across the Country of the Little King"; and Mary F. Nixon also spent an entertaining time "With a Pessimist in Spain." Fanny B. and William H. Workman took "Sketches Awheel in Modern Iberia," and Adelaide S. Hall and Mrs. L. P. Miller were "Two Women Abroad with Notebook and Camera." Tighe Hopkins explored "The Dungeons of Old Paris." "Hired Furnished: Being Certain Economical Housekeeping Adventures in England," by Margaret B. Wright, was suggestive to those wishing to see much on a limited amount for expenditure, somewhat in line with which was "Going Abroad? Some Advice," by Robert Luce. From D. O. Russell we had "Beauties and Antiquities of Ireland," a tourist's guide. "The Ruins and Excavations of Ancient Rome" was an indispensable companion book for students and travelers, and was from the pen of Rodolfo Amédée Lanciani, while from Laurence Hutton we had "Literary Landmarks of Rome," as well as "Literary Landmarks of Florence." Paul Eve Stevenson chronicled "A Deep-Water Voyage" from New York around the Cape of Good Hope to Calcutta. "An Artist's Letters from Japan," by John La Farge, gave charming pictures of that attractive land, and from R. B. Peery we had "The Gist of Japan." Lucia A. Palmer described "Oriental Days," and Mrs. Margaret Pennington supplied "A Key to the Orient." Two volumes contained "Nippur; or, Explorations and Adventures

on the Euphrates," by John Punnett Peters, D. D., the narrative of the University of Pennsylvania expedition to Babylon in the years 1888-'90, divided into two campaigns. "The City of the Caliphs," a popular study of Cairo and its environments and the Nile and its antiquities, by Eustace A. Reynolds Ball, was illustrated from photographs, and fiction combined pleasantly with description in "A Dog of Constantinople," by Mrs. Izora C. Chandler. From William Edgar Geil we had a volume upon "The Isle that is called Patmos," Eliza Ruhamah Sedmore visited "Java, the Garden of the East"; Maxwell Sommerville, "Siam on the Meimam"; and Poultney Bigelow, "White Man's Africa," which R. Caton Woodville illustrated with the aid of photographs. John R. Musick anticipated the treaty of annexation with "Hawaii: Our New Possessions," an expensive volume, and Michael Myers Shoemaker described "Islands of the Southern Seas: Hawaii, Samoa, New Zealand, Tasmania, Australia, and Java." Mary Eleanor Barrows edited "A World Pilgrimage," made in 1896-'97 by John H. Barrows, D. D. In quite another vein Mark Twain (Samuel Langhorne Clemens) told of his adventures in "Following the Equator: A Journey around the World." "The Romance of Discovery," by William Elliot Griffis, D. D., recording a thousand years of exploration and the unveiling of continents, was illustrated by Frank T. Merrill. "The Land of the Montezumas" came from Cora Haywood Crawford. "The Old Santa Fé Trail," by Henry Inman, had eight full-page illustrations by Frederic Remington, and was full of tales of Indian life and adventure, and of the days of the Mexican War. Ira Nelson Morris went "With the Trade Winds" on a jaunt in Venezuela and the West Indies, and from Richard Harding Davis we had "A Year from a Reporter's Notebook" and "Cuba in War Time." George Bronson Rea supplied "Facts and Fakes about Cuba." "On the Indian Trail" was the title of stories of missionary work among the Cree and Saulteaux Indians, by Egerton Ryerson Young. The Klondike excitement gave rise to numerous books on Alaska, most of them slight in form and containing not too much in the way of information for prospectors. Among them are to be noted "Golden Alaska," by Ernest Ingersoll; "Klondike: A Manual for Gold Seekers," by Charles A. Bramble; "The Gold Fields of the Klondike," by John W. Leonard; "Klondike Facts," by Joseph Ladue; "The Little Klondike

Nugget," compiled by Max Maury; "Klondike, the Land of Gold," by Charles F. Stansbury; "Klondike and all about it," and the "Official Guide to the Klondyke Country and the Gold Fields of Alaska," both last anonymous. In conclusion we have "Romance and Reality of the Puritan Coast," by Edmund H. Garrett, with many little pictures, authentic or fanciful, and "Walks and Rides in the Country round about Boston," by Edwin Munroe Bacon, covering thirty-six cities and towns, parks, and public reservations within a radius of twelve miles from the Statehouse.

The table on p. 465 gives the figures of book production during 1897, as compared with that of 1896, from the columns of the "Publishers' Weekly."

LITERATURE, BRITISH, IN 1897. In this year 7,926 books were published in England, an increase of 1,353 over the 6,573 recorded in 1896; and of this number 6,244 were new books and 1,682 new editions.

Theological works showed a marked increase in numbers, as did educational works, works of history and biography, poetry and the drama, as well as yearbooks and volumes of *belles-lettres*, but the greatest increase by far was in the department of fiction, 300 more new novels having been published than in 1896, so that on an average 38 a week were sent from the press, while 200 more new editions were also published than saw the light the preceding year. In our own country 657 volumes represented the total output of works of fiction, including new editions, by American authors. These figures in both countries cover juvenile books. In the department of biography, in particular, notable additions were made to the lasting literature of Great Britain.

Biography.—The jubilee year gave rise to numerous biographies of the Queen, who both in her regal office and in her womanhood occupies the most commanding position at the close of the century. Among them may be noted "Sixty Years a Queen," by Sir Herbert Maxwell, illustrated; "The Personal Life of Queen Victoria," by Mrs. Sarah A. Tooley, and "The Private Life of the Queen," by "one of her Majesty's servants," C. Arthur Pearson; "Queen Victoria: Her Sixty Years' Reign and Diamond Jubilee," by Charles Morris; "Queen Victoria," by R. R. Holmes, illustrated, and a new edition of "The Life of Queen Victoria," by Mrs. M. G. Fawcett. Perhaps the most important book published in England during the year, certainly the most eagerly expected and warmly welcomed, was "Alfred Tennyson: A Memoir," by his son, Lord Hallam Tennyson, in two volumes, with photogravure portraits, facsimiles of portions of poems, and illustrations by Mrs. Allingham, Richard Doyle, Bisscombe Gardner, etc. Written by the desire of the poet, and with the fullest sympathetic insight, it is a filial tribute of an unusual order. To literary biography belong also "The Letters of Elizabeth Barrett Browning," edited, with biographical additions, by Frederick G. Kenyon, in two volumes, full of the subtlest charm, and "The Life of Ernest Renan," by Madame James Darmesteter, which received the highest encomiums. Yet another of the books which make the year a red-letter one was the posthumous "Annals of a Publishing House: William Blackwood and his Sons, their Magazine and Friends," of which only the first two volumes were completed, by Mrs. Margaret O. W. Oliphant. "The Romance of Isabel Lady Burton" was the title given to the story of her life told in part by herself and in part by W. H. Wilkins, in connection with which must be mentioned "The True Life of Captain Sir Richard F. Burton," by his niece, Georgiana M. Stisted, with the authority and approval of the Burton family. "William Morris:

His Art, his Writings, and his Public Life," by Aylmer Vallance, contained 40 half-tone reproductions of designs by Morris, and from Temple Scott we had "A Bibliography of the Works of William Morris." William Carew Hazlitt gave new particulars and new material concerning "The Lambs: Their Lives, their Friends, and their Correspondence," and Stephen Wheeler edited "Letters and Unpublished Writings of Walter Savage Landor." "The Brontës in Fact and Fiction" contained further information on that remarkable family, vouchsafed by Angus Mackay, while from Sir William Wilson Hunter we had "The Thackerays in India, and Some Calcutta Graves," which derives its interest chiefly from the "culminating genius" of the family, the distinguished novelist. "Letters of Dante Gabriel Rossetti to William Allingham, 1854-1870" were edited by George Birkbeck Hill, who also arranged and edited "Johnsonian Miscellanies," in two volumes. An event of the deepest interest to scholars was the final issue of "The Unpublished Works of Edward Gibbon," printed *verbatim* from manuscripts in the possession of the Earl of Sheffield, who contributed a preface to the three volumes, which contained respectively "The Six Autobiographies" (from which the well-known autobiography of Gibbon was largely compiled), edited by John Murray, and "Gibbon's Private Letters to his Father, his Stepmother, Lord Sheffield, and Others, from 1735 to 1794," edited with notes, etc., by Rowland E. Prothero. "Recollections of Aubrey de Vere," going back some sixty years, were filled with delightful details of the literary life and men of the period, while the personality of the author was revealed by suggestion only; "Notes from a Diary, 1851-1872," of Sir Mountstuart Elphinstone Grant Duff, in two volumes, was another of the attractive autobiographies published during the year, full of anecdote, as was "A Passing World," by Bessie Rayner Parkes (Mme. Belloc), a granddaughter of Dr. Priestley and the author of "Vignettes" and "In a Walled Garden." "Men I have known," by Dean Frederick W. Farrar, brought before us the great men of the Victorian era, who are again encountered in W. Robertson Nicoll's life of "James Macdonell, Journalist." "Four Generations of a Literary Family: The Hazlitts in England, Ireland, and America, 1725-1896" came to us from a member of the family, W. Carew Hazlitt; David Christie Murray described "My Contemporaries in Fiction"; Emily Soldene published "My Theatrical and Musical Recollections"; and Alice Mangold Diehl, "Musical Memories" of illustrious names in the musical world. "The Wheel of Life" was the title of "a few memories and recollections" of Clement Scott, and "Literary Statesman, and Other Essays on Men seen from a Distance" came from Norman Hapgood. Two volumes contain "The Story of Gladstone's Life," by Justin McCarthy, and Vols. II and III also appeared of "The Political Life of the Right Hon. W. E. Gladstone," illustrated from "Punch," completing the work which comprises more than 150 cartoons and 400 sketches in the text. "The Yoke of Empire: Sketches of the Queen's Prime Ministers" was by Reginald Baliol Brett; Charles E. Lyne contributed a "Life of Sir Henry Parkes, G. C. M. G., Australian Statesman"; and "Cecil Rhodes: A Biography and Appreciation," by "an Imperialist," contained personal reminiscences by Dr. Jameson. "Rulers of India and the Chiefs of Rajputana" was by Brigade-Surgeon Lieut.-Col. Hendley, and Dr. George Smith selected "Twelve Indian Statesmen" as subjects for his pen. The "Life of Lord Cromer" was written by H. D. Traill; Robert Eadon Leader edited the "Life and Letters of John Arthur Roebuck," with chapters of autobiography, and "Lord

Cochrane's Trial before Lord Ellenborough, in 1814," was reviewed by J. B. Atlay. The "Standard Series" received important additions: "Hannibal—Soldier, Statesman, Patriot," by William O'Connor Morris; "Robert the Bruce and the Struggle for Scottish Independence," by Sir Herbert Eustace Maxwell; and "The Cid Campesador and the Waning of the Crescent in the West," by H. Butler Clarke, appeared in the "Heroes of the Nations." In the series of "Foreign Statesmen" we had "Joseph II.," by J. Franck Bright; "William the Silent," by Frederic Harrison; "Charles the Great," by Thomas Hodgkin; and "Philip II of Spain," by Martin A. S. Hume, who also contributed "Sir Walter Raleigh: The British Dominion of the West," to the "Builders of Greater Britain Series"; and in the "Series of Famous Scots" "Kirkcaldy of Grange" was by Lewis A. Barrie; "Fletcher of Saltoun," by G. W. T. Omond; "Thomas Chalmers," by W. Garden Baikie; "Richard Cameron," by John Herkless; "Sir Walter Scott," by G. E. B. Saintsbury; "The Blackwood Group: John Wilson, John Galt, D. M. Moir, Miss Ferrier, Michael Scott, Thomas Hamilton," by George Douglas; "Tobias Smollett," by Olyphant Smeaton; and "James Boswell," by W. K. Leask. "Thomas and Matthew Arnold" were added by Sir Joshua Girling Fitch to the "Great Educators Series." "Sir Walter Raleigh" was the subject of the "Stanhope Essay" by John Buchan, and "Machiavelli" of the Romanes Lecture delivered in the Sheldon Theater, June 2, 1897, by John Morley. From Edith Siebel we had "The Household of the Lafayettees." David Hay Fleming wrote yet another life of "Mary, Queen of Scots"; "Falklands," by the author of "The Life of Sir Kenelm Digby," was superbly illustrated; "Cromwell's Place in History" was defined in six lectures delivered in the University of Oxford by Samuel Rawson Gardiner; "Waylen's House of Cromwell" was edited anew by J. G. Cromwell; Dorothea Townshend contributed the "Life and Letters of Mr. Endymion Porter," the well-known Caroline courtier; and Lady Newdegate-Newdegate transcribed and edited "Gossip from a Muniment Room: Being Passages in the Lives of Anne and Mary Fytton," in the days of Queen Elizabeth. "Letters of Sir Thomas Copley," edited by R. Copley Christie, with an introduction and notes, belong to the same period. "Pickle the Spy; or, The Incognito of Prince Charles," by Andrew Lang, was a curious and interesting historical study. St. Clair Baddely made a study of the times of "Robert the Wise and his Heirs," carrying on the work begun in his earlier sketch of Joanna I, Queen of Naples. To military biography belong "Wellington: His Comrades and Contemporaries," by Major Arthur Griffiths; "The Crimean Diary and Letters of Lieut.-Gen. Sir Charles Ash Windham," edited by Major Hugh Pearse; "Letters from the Black Sea during the Crimean War, 1854-55," of Admiral Sir Leopold George Heath; "Old Memories" (of the Mutiny), of Gen. Sir Hugh Gough; and "An Old Soldier's Memories," by S. H. Jones-Parry, of service in Burmah, in the Crimea, and during the mutiny in India. "Richard Baird Smith: The Leader of the Delhi Heroes in 1857" found an enthusiastic admirer in Col. H. M. Vibart, and "Richard Henry Vivian, First Baron Vivian: A Memoir," by Hon. Claud Vivian, gave a portrait of a brave cavalry officer in the first half of the century. "Forty-one Years in India: From Subaltern to Commander-in-Chief" was the record of Field-Marshal Lord Roberts of Candahar, and "Twelve Years of a Soldier's Life" were edited by his widow from the letters of Major W. T. Johnson of the native Irregular Cavalry. "Roddy Owen: A Mem-

oir" came from that officer's sister (Mrs. Bayliff) and G. R. Askwith, while "Under the Red Crescent" was the title of adventures of an English surgeon with the Turkish army at Plevna and Erzeroum, related by Charles S. Ryan, in association with his friend John Sands. "The Life of Sir Stamford Raffles, Founder of Singapore and the Zoo" was written by Demetrius C. Boulger; "The Life of Vice-Admiral Sir George Tryon, K. C. B.," by Rear-Admiral C. C. Penrose Fitzgerald; and "The Life of Sir John Hawley Glover, R. N.," by Lady Glover. "The Journal of Sir George Rooke" was edited by Oscar Browning. "Pictures from the Life of Nelson" were drawn by the able pen of W. Clark Russell, and a new edition, condensed and revised, and with much new material, was issued of "Lady Hamilton and Lord Nelson," by John Cordy Jeaffreson. "Recollections of Fenians and Fenianism," by John Leary, filled two volumes. "The Life and Letters of Benjamin Jowett, M. A., Master of Balliol College, Oxford," by Dr. Evelyn Abbott and Prof. Lewis Campbell, was pronounced "a revelation of one of the most fascinating and probably one of the most potent personalities of the century," and from L. V. Lester we had "A Memoir of Hugo Daniel Harper, D. D., Late Principal of Jesus College, Oxford, and for Many Years Head Master of Sherborne School, Dorset." "Arnold of Rugby," by J. J. Findlay, had an introduction by the Bishop of Hereford. "A Memoir of Anne Jemima Clough" was written by her niece Blanche Athena Clough, Vice-Principal of Newnham College, Cambridge, and from W. H. Woodward we had "Vittorino da Feltre, and Other Humanist Educators," "The Life and Times of Thomas Wakley, Founder and First Editor of the Lancet," by S. Squire Spriggs, was full of interest to the medical profession, as was "Vita Medica: Chapters of Medical Life and Work," by Sir Benjamin Ward Richardson, F. R. S. A new series of "Masters of Medicine," edited by Ernest Hart, was inaugurated with "John Hunter: Man of Science and Surgeon (1728-1793)," by Stephen Paget, who also wrote "Ambrose Paré and his Times, 1510-1590." "The Founders of Geology" were the theme of Sir Archibald Geikie in a series of lectures delivered before John Hopkins University, Baltimore, inaugurating the George Huntington Williams memorial lectureship, and "Pioneers of Evolution from Thales to Huxley," by Edward Clodd, had an intermediate chapter on the causes of arrest of the movement. "Philosophical Lectures and Remains of Richard Lewis Nettleship" were edited with a biographical sketch by A. C. Bradley and G. R. Benson in two volumes, and an "Autobiographical Sketch of James Croll, LL. D., F. R. S.," was accompanied with a memoir of his life and work by James Campbell Iryns. "A Memoir of William Pengelly, F. R. S., Geologist," contained a selection from his correspondence edited by his daughter, Hester Pengelly, with a summary of his scientific work by Prof. Bonney. "The Work of Charles Keene," the famous artist of "Punch," had an introduction by Joseph Pennell and a bibliography by W. H. Chesson, and also contained some of Keene's unpublished drawings. "Verdi: Man and Musician" came from Frederick J. Crowest. "Records and Reminiscences of Goodwood and the Dukes of Richmond" were by John Kent, the author of "The Racing Life of Lord George Bentinck," and a unique volume was entitled "Lives of Twelve Bad Women," illustrations and reviews of feminine turpitude set forth by impartial hands, and edited by Arthur Vincent. In religious biography appeared Vol. IV, concluding the "Life of E. B. Pusey, D. D.," by Canon H. P. Liddon, edited by Rev. J. O. Johnston, Rev. R. J. Wilson, and

Canon Newbolt, completing the work, and "The Life and Times of Cardinal Wiseman," by the competent hand of Wilfrid Ward. "Private Papers of William Wilberforce" were collected and edited by A. M. Wilberforce, and "Might have been" was the title of some life notes by Joseph Parker, D. D. "The Life and Letters of William John Butler, late Dean of Lincoln, and Sometime Vicar of Wantage" was anonymous. "Chauncey Maples," pioneer missionary in East Central Africa for nineteen years and Bishop of Likoma, Lake Nyassa, found a biographer in his sister, Ellen Maples, and from Rev. A. N. Malan we had "Solomon Caesar Malan, D. D.: Memorials of his Life and Writings." Rev. J. T. Fowler edited the "Life and Letters of the Rev. John Baechus Dykes," the popular composer of hymn tunes, to whom we owe the music of Cardinal Newman's "Lead, Kindly Light." Dr. Augustus Jessopp wrote of "John Donne, Sometime Dean of St. Paul's, A. D. 1621-1631," and "The Life, Letters, and Writings of John Davenant, D. D. (1572-1641), Lord Bishop of Salisbury," we owe to Morris Fuller. To an earlier period belong "The Mission of St. Augustine to England according to the Original Documents," a handbook for the thirteenth centenary, edited by Arthur James Mason, D. D., at the suggestion of the late Archbishop Benson as a permanent record of the commemoration; "St. Francis of Assisi: His Times, Life, and Work," by Canon William J. Knox-Little; and "Cyprian: His Life, his Times, his Work," by Archbishop Edward White Benson, which had an introduction by Bishop Henry C. Potter. "St. Anselm of Canterbury" was commemorated by J. M. Riggs, and "The Life and Miracles of St. William of Norwich," by Thomas of Monmouth, were for the first time edited from the unique manuscript, with an introduction, translation, and notes by Dr. Augustus Jessopp and Montague Rhodes James. "Twelve Years in a Monastery" of modern days in England were described by Joseph McCabe, lately Father Antony, O. S. F. "Oliver Cromwell's Letters and Speeches" appeared in the "Centenary Edition of Thomas Carlyle's Works," edited by H. D. Traill, as did "Letters, 1804-1813" of Lord Byron in the edition of the poet's works edited by William E. Henley. W. E. H. Lecky contributed a biographical introduction to "The Prose Works of Jonathan Swift," Vol. I of which was edited by Temple Scott, and Vol. II, containing Swift's "Journal to Stella, 1710-1713," by Frederick Ryland. "Lord Bowen: A Biographical Sketch," by Sir Henry Stewart Cunningham, included a selection from the verses of the poet, and Wilfrid Austin Gill was the author of a sympathetic study of "Edward Cracroft Leffroy: His Life and Poems," which contained a critical estimate of the sonnets by the late John Addington Symonds. "James Clarence Mangan: His Selected Poems" contained a study by the editor, Louise Imogen Guiney. Vols. I, II, III, and IV were issued of the "Dictionary of National Biography," edited by Sidney Lee, reaching "Shearman-Smirke."

Essays.—Under this head many volumes of a literary character are to be included. Of essays, properly speaking, there were several collections. "Essays from the 'Guardian'" represent some of the best journalistic work of Walter Pater; John Mackinnon Robertson offered "New Essays toward a Critical Method"; and Charles Whibley, "Studies in Frankness." R. A. Wrenley contributed a volume of essays, entitled "Aspects of Pessimism," and "Platitudes of a Pessimist" came from the author of "The Life of a Prig." "The Quest of Happiness," left unfinished by Philip Gilbert Hamerton, was given to the public; a collection of "Essays and Speeches" was welcomed from W. S. Lilly;

"Occasional Papers" of Dean Church, written between 1846 and 1890, were put together in book form, as were "Essays and Addresses" of Sir J. Russell Reynolds, M. D., and "Common Thoughts on Serious Subjects," a series of addresses delivered by the late Chester Macnaghten, Principal of Rajkumar College, Kathiawar, India, to older Kumars of that institution. "An Essay on Comedy" and the uses of the comic spirit proved George Meredith a critic of no mean order, and from Walter Raleigh we had a scholarly discourse on "Style." "Epic and Romance" were the theme of essays on mediæval literature, by Prof. W. P. Ker; J. St. Loe Strachey ranged "From Grave to Gay" in the choice of themes; and from Vernon Lee (Violet Page) we had "Limbo, and Other Essays." "History in Fact and Fiction" was a literary sketch by Hon. A. S. G. Canning; "A Student's Pastime" was the title of a select series of articles by Rev. Walter W. Skeat, reprinted from "Notes and Queries"; "The Savage Club Papers" were edited by J. E. Muddock; "At Random: Essays and Stories" came from L. F. Austin; "Border Essays" of John Veitch were reprinted from magazines; and from the late Lady Camilla Gordon we had "Memories and Fancies." "Early Essays of John Stuart Mill" were selected by J. W. M. Gibbs. Vol. II of "A History of English Poetry," by William J. Courthope, published during the year, covered "The Renaissance and the Reformation: Influence of the Court and the Universities." From Clement Shorter we had a review of "Victorian Literature: Sixty Years of Books and Bookmen"; and from Richard D. Graham, "The Masters of Victorian Literature (1837-1897)." Edmund W. Gosse wrote "A Short History of Modern English Literature," and also "Seventeenth Century Studies," a contribution to the history of English poetry; Arthur Symonds vouchsafed "Studies in Two Literatures," and George Saintsbury contributed "The Flourishing of Romance and the Rise of Allegory" to the "Periods of European Literature Series." "The Age of Tennyson," by Hugh Walker, belonged to the "Series of Handbooks of English Literature." "Landscape in Poetry from Homer to Tennyson" was the theme of lectures at Oxford by Prof. Francis T. Palgrave; "The Old English Bible, and Other Essays" came from Francis Aidan Gasquet, D. D., and from Edward Dowden we had "A History of French Literature" and "The French Revolution and English Literature," the last a series of lectures delivered in connection with the sesquicentennial of Princeton University. Gilbert Murray contributed "A History of Ancient Greek Literature" to the "Series of Short Histories of the Literatures of the World," edited by Edmund Gosse, and from J. P. Mahaffy, D. D., came "A Survey of Greek Civilization." John Stuart Stuart-Glennie edited, with essays, annotated translations by Lucy M. J. Garnett of "Greek Folk-Poetry" in two volumes, the second of which was given to "Folk Prose." Vol. II was also published of "The Voyage of Bran," being a study of the Celtic doctrine of re-birth, by Alfred Nutt. "Gleanings from Ibsen" were selected and edited by E. A. Keddell and Percy C. Standing, with a preface on "Ibsenism," and Samuel Butler attempted to prove a woman of Sicily "The Authoress of the Odyssey." "The New Fiction, and Other Essays on Literary Subjects" proved charming reading from the pen of Henry Duff Traill, and from Elizabeth R. Chapman we had "Marriage Questions in Modern Fiction, and Other Essays." "Essays on the Novel as illustrated by Scott and Miss Austen" came from Adolphus Alfred Jack, while "Women Novelists of Queen Victoria's Reign: A Book of Appreciations" was the work of Mrs. M. O. W. Oliphant,

Mrs. Lynn Lynton, Mrs. Alexander, and others. "The Making of Abbotsford" was described by the Hon. Mrs. Maxwell Scott, and "The Homes and Haunts of Sir Walter Scott" by George S. Napier. Rev. J. Wood Brown made "An Inquiry into the Life and Legend of Michael Scott." Frederick G. Kitton prepared a bibliography and sketch of "The Novels of Charles Dickens" for the "Book-Lovers' Library," and J. O. Mitchell wrote of "Burns and his Times, as gathered from his Poems." "The Diary of Master William Silence" was the title of a study of Shakespeare and of Elizabethan sport, by the Right Hon. D. H. Madden, and Rev. T. Carter presented the father of the poet as "Shakespeare, Puritan and Recusant." "Natural History in Shakespeare's Time" consisted of extracts illustrative of the subject as he knew it made by H. W. Senger, and accompanied with pictures belonging thereto. Books appreciative of Nature came from many hands. "Memories of the Months" were by Sir Herbert Maxwell; "In Russet Mantle clad: Scenes of Rural Life," by George Morley; "The Woodland Father," a diary in English fields and woods, came from Edward Thomas; "In Garden, Orchard, and Spinney," from Phil Robinson; and "The Clock of Nature," from Hugh Macmillan, D. D., who contributed an introduction to "Lessons from Life (Animal and Human)," a compendium of moral teachings illustrated by curious and interesting habits, relations, instincts, peculiarities, and ministries of living creatures, compiled by T. R. Laurie Magnus supplied "A Primer of Wordsworth"; William Knight edited "Journals of Dorothy Wordsworth"; and W. Hale White (Mark Rutherford) edited, with notes, "A Description of the Wordsworth and Coleridge MSS. in the Possession of Mr. T. Norton Longman," with three facsimile reproductions. "The Love Affairs of Some Famous Men" were revived by E. J. Hardy, and "Stories of Famous Songs" were told by S. J. Adair Fitzgerald. Two volumes contained "The Romance of the Irish Stage," with pictures of the Irish capital in the eighteenth century, by J. Fitzgerald Molloy, and "In Praise of Music" was an anthology prepared by Charles Sayle. "The Epic of Sounds" was an elementary interpretation of Wagner's "Nibelungen Ring," by Freda Winworth, and "Wagner's Ring of the Nibelung and the Conditions of Ideal Manhood" was published anonymously. "Voices Academicæ," by C. Grant Robertson, reported humors of Oxford; "The House of Dreams," anonymous, and "Gods and their Makers," by Laurence Housman, belong to the school of mysticism and allegory. A welcome reprint was made of William Canton's two little books, "The Invisible Playmate" and "W. V.: Her Book," in one volume, which will be dear to all who love children. A cheap edition was offered of Alexander Pulling's study of "The Order of the Coif," being the head covering of the sergeant of the law; Charles William Heckethorn wrote of "The Secret Societies of all Ages and Countries"; and John Ashton, of "The Devil in Britain and America." Philip Norman devoted a volume to "London Signs and Inscriptions," and H. B. Wheatley supplied an introduction and descriptive notes to "Reliques of Old London," lithographed by T. R. Way. "English Epigrams and Epitaphs" were selected by Aubrey Stewart, and "Welsh Folk-Lore" was a collection of the folk tales and legends of North Wales, by Rev. Elias Owen. In the "Pamphlet Library," "Literary Pamphlets" were edited by Ernest Rhys, and "English Essays" were edited, with an introduction, by J. H. Lobban, for the "Warwick Library." "A Dictionary of English Authors" was supplied by R. F. Sharp; Arthur L. Humphreys

wrote of "The Private Library"; and the history and present condition of "The Free Library" was traced by John J. Ogle. F. G. Affalo edited "The Literary Yearbook" for 1897, and Temple Scott made a record of "Book Sales of 1896." Part IV was reached of "The English Dialect Dictionary," edited by Joseph Wright, covering "Caddles-Chuck"; Henry Sweet was responsible for "The Student's Dictionary of Anglo-Saxon"; and Edward E. Morris contributed an "Austral-English Dictionary," of Australian words, phrases, usages, etc.

Fiction.—When we consider that 1,660 new books of fiction were written in 1897 in the United Kingdom, it seems hardly possible to attempt more than a mere summary of the more important. "The Christian," by Hall Caine, was decidedly the most successful, though the hero would by no means be conceded the type of what the name suggests. Another of Robert Louis Stevenson's posthumous novels was "St. Ives," which, left unfinished by the author, was completed by Arthur Quiller-Couch ("Q"); "The Well Beloved," by Thomas Hardy, belongs to the period of that writer's adolescence; and from R. D. Blackmore came "Daniel," a romance of Surrey and the Caucasus. "The Water of the Wondrous Isles" was another of William Morris's prose poems, and "Trooper Peter Halket of Mashonaland," by Olive Schreiner, was also a parable of the highest literary merit rather than a work of fiction, which dealt with present-day conditions in South Africa. "In Kedar's Tent," by Henry Seton Merriman, led among the novels of adventure, of which many were written during the year, and among which may be mentioned "Loch-Invar," by S. R. Crockett, who also published "Lad's Love" and "The Surprising Adventures of Sir Toady Lion," the last for children; "John Marmaduke," a romance of the English invasion of Ireland in 1649, by Samuel Harden Church; "Spanish John," by William McLennan; "In the Days of Drake," by J. S. Fletcher; "The King with Two Faces," by M. E. Coleridge; "The Clash of Arms," by J. Bloundelle Burton; "The Last Recruit of Clare's," by S. R. Keightley; "Fierceheart the Soldier," a romance of 1745, by J. C. Snaith; "His Majesty's Greatest Subject," by S. S. Thorburn; and "The Fascination of the King," by Guy Boothby, who wrote also an Australian story, "Sheila McLeod." "The Chevalier d'Aurillac" and "A Galahad of the Creeks" came from S. Levett Yeats; Conan Doyle was represented by "Uncle Bernac"; William Clark Russell by "A Tale of Two Tunnels," "The Last Entry," "The Two Captains," and "A Noble Haul"; Sir Walter Besant, by "A Fountain sealed"; S. Baring-Gould wrote "Guavas the Tinner" and "Bladys of the Steeponey"; "The Beth Book," by Madame Sarah Grand, was one of the sensations of the year; Du Maurier's "The Martian" hardly sustained the level of his other novels; George MacDonald published one story, "Salted with Fire"; Mrs. Margaret O. W. Oliphant's two last stories published in one volume were entitled "The Ways of Life"; and from John Oliver Hobbes (Mrs. Mary Craigie) we had "The School for Saints." Benjamin Swift (William R. Paterson) followed his striking novel of last year, "Nancy Noon," with "The Tormentor," and from Jerome K. Jerome we had "Sketches in Lavender, Blue, and Green." Beatrice Harraden published "Hilda Strafford: A California Story" and "Untold Tales of the Past"; Marie Clothilde Balfour described "The Fall of a Sparrow"; and Violet Hunt was heard from in "Unkind, Unkind." Ernest W. Hornung wrote two novels, "The Bride from the Bush" and "My Lord Duke," both having the scene laid in Australia; Dorothea Gerard (Madame Longard de

Longarde) wrote two also, "A Spotless Reputation" and "Miss Providence"; W. E. Norris described "Marietta's Marriage," and George Paston chronicled "The Career of Candida." "Mifanwy: A Welsh Singer" was by Allen Raine; "Deborah of Tod's," by Mrs. Henry de la Pasture; "The Wise and the Wayward," by G. S. Street; "Dracula," by Bram Stoker; "The Adventure of the Broad Arrow" and "Maurice Quain," by Morley Roberts; "A Nineteenth Century Miracle" and "The Beautiful Miss Brooke," by Z. Z. (Louis Zangwill); and "Iva Kildare: A Matrimonial Problem," by Mrs. L. B. Walford. W. J. Dawson looked "Thro' Lattice Windows" and outlined the education of "God's Foundling"; Hannah Lynch tried "An Odd Experiment"; and Julian Sturgis dwelt upon "The Folly of Pen Harrington." "A Spanish Maid" was found by L. Quiller-Couch, a sister of Arthur Quiller-Couch, among the fishermen of the English coast, and from Frances Montresor came "At the Cross Roads." Anthony Hope (Anthony Hope Hawkins) sent out "Phroso"; Grant Allen, "An African Millionaire"; Joseph Hutton, "The Dagger and the Cross"; Maxwell Gray (Mrs. M. G. Tuttielt) told the tale of "Sweethearts and Friends"; and Shan F. Bullock that of "The Charmer." W. Pett Ridge wrote "Secretary to Bayne, M. P." and Eden Phillpotts, "Lying Prophets"; Evelyn Sharp described "The Making of a Prig," and J. H. Crawford, "A Girl's Awakening." "The Crime and the Criminal" was by Richard Marsh; "Margot," by Sidney Pickering; Gilbert Parker gave us another Canadian Story, "The Pomp of the Lavillettes"; and John Strange Winter (Mrs. H. E. V. Stannard) led us "Into an Unknown World." "The Mutable Many" was by Robert Barr; "The Jessamy Bride," by Frank Frankfort Moore, who wrote also "The Impudent Comedian, and Others"; "Nulma," an Anglo-Australian romance, came from Mrs. Rose Murray Campbell-Praed, and she also wrote "The Romance of a Chalet." "Barbara: Lady's Maid and Peeress" and "Mrs. Crichton's Creditor" were the two novels by Mrs. Alexander (Mrs. A. F. Hector); "They that sit in Darkness," by John Mackie, belonged to the young literature of Australia; "A Daughter of Strife" was by Jane Helen Findlater; while Mary Findlater wrote "Over the Hills"; Rhoda Broughton, "Dear Faustina"; George Gissing, "The Whirlpool" and "Human Odds and Ends"; Mrs. M. J. Fleming, "A Pinchbeck Goddess"; and T. Gallon, "Tatterley" and "A Prince of Mischance." Books that found interested readers were "Fortune's Footballs," by G. B. Burgin; "The Touchstone of Life," by Ella MacMahon; "In Golden Shackles," by Alien; "MacLeod of the Camerons" and "The Freedom of Henry Meredyth," by M. Hamilton; "Arrested," by Esmé Stuart; "A Bachelor's Bridal," by Mrs. H. Lovett Cameron; "Ripple and Flood," by James Prior; "Broken Away," by Beatrice Ethel Grimshaw; and "Beyond the Pale," by Mrs. Bertha M. Croker, who was also at home in "The Kingdom of Kerry." E. A. Rowlands contributed "The Fault of One," "The Massacres" was in Ouida's most caustic vein, and her prolific pen sent out also "Muriella; or, Le Selve" and "An Altruist." Marie Corelli was responsible for "Ziska: The Problem of a Wicked Soul"; when the half-gods of ambition go for woman, according to Annie E. Holdsworth, "The Gods Arrive," and Francis Gribble also made a plea for domestic life in "Only an Angel." Scotland was the scene of "God's Winepress," by Arthur Jenkins; George Manville Fenn narrated the distresses of a girl "Cursed by a Fortune"; Adeline Sergeant chose "The Lady Charlotte" for a heroine, and also wrote "In the Wilderness" and "In Vallombrosa"; from Charlotte M. Yonge we

had "Founded on Paper; or, Uphill and Downhill between the Two Jubilees" and "The Pilgrimage of the Ben Beriah," the last a story of the wanderings of Israel in the desert; Rosa Nouchette Carey also had two books, "Doctor Luttrell's First Patient" and "Other People's Lives"; "Daughters of Thespis" was the only one of John Bickerdyke; as "The Royal Christopher" was that of Justin Huntly McCarthy; "Tracked by a Tattoo," suggested Fergus W. Hume; "In the Tideway" and "In the Permanent Way," by Mrs. Flora Annie Steel, were sufficiently remote in scene, the Hebrides being the theater of the one, while native and English life in India was the theme of the second volume of short stories; Frances Mary Peard was heard from again in "The Career of Claudia"; and William Westall exhausted all the resources of incident in "With the Red Eagle," "The Queen of the Moor," by Frederic Ayle, brought a refreshing breath with her, while from Florence Marryat we had "A Passing Madness" and "In the Name of Liberty." Among volumes of short stories, "Symphonies" of George Egerton and "In a Dozen Ways of Love," by Lily Dougall, deserve mention, as do also "The Dominant Note, and Other Stories," by Mrs. Lucy Lane Clifford (Mrs. W. K. Clifford); "Methodist Idyls," by Harry Lindsay; "While the Billy Boils," sketches and stories of Australian life, as "The Outspan" was the title of tales of South Africa by J. P. Fitzpatrick, "A Creel of Irish Stories" came from Jane Barlow, the author of "Irish Idyls." Three books for children must not be omitted, "Will Shakespeare's Little Lad," by Imogen Clark, illustrated by Reginald Birch; "The Knights of the Round Table," stories of King Arthur and the Holy Grail, by William H. Frost, illustrated by Sydney Richmond Burleigh; and "The Laughter of Peterkin," by Fiona Macleod, who has thrown into this form of a fairy tale for children the ancient masterpieces of the Gael, "The Three Sorrows of Story-telling." The Gadshill edition of Dickens in 32 volumes was inaugurated during the year, edited by Andrew Lang, and an Edinburgh edition of "The Works of Robert Louis Stevenson" was also issued.

Fine Arts.—Two art books called forth by the jubilee were "The Art of Painting in the Queen's Reign," by A. G. Temple, with 77 reproductions from the works of the chief artists of the period, and "English Illustrations in the Sixties," by Gleeson White, containing illustrations in etchings, photography, and line by Lord Leighton, Millais, Du Maurier, and many others. W. J. Anderson gave a general view of "The Architecture of the Renaissance in Italy" and Reginald Blomfield wrote "A History of Renaissance Architecture in England, 1500-1800." "Historic Ornament" was considered by James Ward, author of "The Principles of Ornament"; and "The Connoisseur," by Frederick S. Robinson, consisted of essays on the romantic and picturesque associations of art and artists. "Art and Life, and the Building and Decoration of Cities" was the title of a series of lectures by members of the Arts and Crafts Exhibition Society, delivered at the fifth exhibition of the society in 1896; and "The Art of the House," by Rosamund Marriott Watson, was supplemented by many illustrations from the loan collection at Bethnal Green, the South Kensington Museum, and elsewhere. "Potters: Their Arts and Crafts" came from J. C. L. Sparks and Walter Gandy; and "A Text-book dealing with Ornamental Designs" from C. Stephenson and F. Suddards. "Old English Glasses," by Albert Hartshorne, was an account of glass drinking vessels in England from early times to the end of the eighteenth century, illustrated by about 70 tinted plates and several

hundred illustrations in the text; and yet another handsome volume was "The Chippendale Period in English Furniture," by K. Warren Clouston, with 200 illustrations by the author. "Memorials of Christie's," a record of art sales from 1766 to 1896, by W. Roberts, filled two volumes. In the "Connoisseur Series" appeared "Historical Portraits," by Henry B. Wheatley, with 71 illustrations taken direct from the originals at the National Portrait Gallery and elsewhere, and "Portrait Miniatures, from the Time of Holbein (1631) to that of Sir William Ross (1800)," by G. C. Williamson, from whom we had also "Richard Cosway, R.A.," both finely illustrated. "The Collection of Miniatures in Montagu House" was catalogued by Andrew McKay and privately printed; "White Athenian Vases in the British Museum" were reproduced in plates by A. S. Murray and A. H. Smith; and "Pictures from Greek Vases: The White Athenian Lekythi" were drawn in color from the originals by Henry Wallis. From Mrs. Arthur Bell (N. D'Anvers) we had "Thomas Gainsborough: His Life and Works," and Claude Phillips discussed "The Earlier Work of Titian." "Early Portraits of Queen Victoria were reproduced and collected into a volume. "The Confessions of a Collector" came from William G. Hazlitt, and in the "Collector's Series" we had "Fine Prints," by Frederick Wedmore. Walter Crane wrote "Of the Decorative Illustrations of Books Old and New" for the "Ex-Libris Series," another issue of which was "Decorative Heraldry," by G. W. Eve. "The Artists and Engravers of Bookplates" were treated by H. W. Fincham. "Foreign Bookbindings in the British Museum" consisted of illustrations of 63 examples selected on account of their beauty or historical interest, with an introduction and descriptions by W. Y. Fletcher. "An Illustrated Record of the Retrospective Art Exhibitions held at South Kensington, 1896" contained 256 reproductions of exhibits compiled and edited by John Fisher; W. J. Stillman edited a superb volume, "Venus and Apollo in Painting and Sculpture," and other costly illustrated books were "A Legend of Camelot: Pictures and Poems," by George Du Maurier; "The Deer Forests of Scotland," by Augustus Grimbly, illustrated by Archibald Thorburn; "British Deer and their Horns," by John Guille Millais, with 185 text and full-page illustrations, mostly by the author; "The Horse in Art and Nature," by Cecil Brown; "Medals and Decorations of the British Army and Navy," by John Horsley Mayo, in two volumes; "Christ and his Mother in Italian Art," by Mrs. Julia Cartwright Ayl; "Cathedral Cities: York, Lincoln, and Beverley," drawn and etched by Robert Farren, with an introduction by E. A. Freeman; and "A Book of Fifty Drawings," by Aubrey Beardsley. "The Blazon of Episcopacy," being the arms borne by or attributed to the archbishops and bishops of England and Wales, with an ordinary of the coats described and of other episcopal arms, came from Rev. W. K. Riland Bedford. Books on music included "The Orchestra and how to write for it," by F. Corder; "Symphonies and their Meaning," by Philip H. Goeppe; "Chats to Violin Students on how to study the Violin," by J. T. Carolsus; "Techniques of Violin Playing on Joachim's Method," by C. Courvoisier; and "The Violin Bow: Its History, Manufacture, and Use," by Henry Saint George, who illustrated his own work.

History.—Vol. V of "A History of Our Own Times," by Justin McCarthy, carried us "From 1880 to the Diamond Jubilee," and from P. Anderson Graham we had a review of "The Victorian Era." "Sixty Years of Empire, 1837-1897" consisted of con-

tributions by Sir Charles Dike, John Burtis, Joseph Pennell, Lionel Johnson, and others. "Sixty Years of the Queen's Reign" were reviewed by Sir Richard Temple, and "Victoria, Queen and Empress: The Sixty Years," by Sir Edwin Arnold, outlined briefly the scientific and historical achievements of the period. In addition, Sir Walter Besant inaugurated the "Stories of the Empire Series" with "The Rise of the Empire"; Edgar Sanders treated of "The British Empire in the Nineteenth Century"; and "Deeds that won the Empire" were chronicled by Rev. W. H. Fitchett. "The Last Empires of the Modern World: Essays in Imperial History," by Walter Frewen Lord, gave some account of the last territories of Portugal, Spain, France, and Holland, supplementary to his former work, "The Last Possessions of England." Rev. Alfred J. Church told "Stories from English History, from the Lord Protector to Victoria"; "Domesday Book and Beyond" was the title of three essays in the early history of England, by Prof. Frederic William Maitland; Henry Hartwright reviewed "The Story of the House of Lancaster"; Vol. XV was issued of "Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII," arranged and catalogued by James Gairdner and R. H. Brodie; Alfred Kingston treated of "East Anglia and the Great Civil War"; and to Allan Fen we owe "The Flight of the King: Being a Full, True, and Particular Account of the Miraculous Escape of his Most Sacred Majesty King Charles II. after the Battle of Worcester." Vol. II of Samuel R. Gardiner's "History of the Commonwealth and Protectorate, 1649-60," covered the period 1651-54, and the same historian defined "Cromwell's Place in History," besides answering "What Gunpowder Plot was" to the question propounded by John Gerard, S. J., last year, "What was the Gunpowder Plot?" "The Early History of the Scottish Union Question" was written by G. W. T. Omond; from Mrs. Oliphant we had "A History of Scotland for the Young"; the first three volumes were issued of "The History of Scotland from Agricola's Invasion to the Extinction of the last Jacobite Insurrection," by Dr. J. Hill Burton, Historiographer-Royal of Scotland; and in the series of "County Histories of Scotland" appeared "A History of Dumfries and Galloway," by Sir Herbert Maxwell, and "Moray and Nairn," by Charles Rampant. "Byways of History," by Dr. James Colville, was the title of studies in the social life and rural economy of the olden time in Scotland. The first of five volumes which will contain a history of the "The Royal Navy," from the earliest times to the present, by William Laird Clowes, came from the press, and David Hannay also wrote "A Short History of the British Navy, 1217-1688." Vol. I appeared of "A History of the Administration of the Royal Navy and of Merchant Shipping in Relation to the Navy," covering the period 1509-1660, by M. Oppenheim, who also edited "Naval Accounts and Inventories of the Reign of Henry VII. 1485-8 and 1495-7." "The Navy and the Nation" came from Lieut.-Col. Sir George S. Clarke and James R. Thursfield; "Naval Administrations, 1827-1892," were reviewed by the late Sir J. H. Briggs; Lieut.-Col. Cooper King wrote "The Story of the British Army," and "Historical Records of the Maltese Corps of the British Army" were compiled by Major A. G. Chesney. Col. Turse discoursed of "Military Expeditions beyond the Seas," Vol. VI of "Social England," edited by H. D. Traill, carried us from the battle of Waterloo to the general election of 1885, and Thomas Hay Sweet Escott, in "Social Transformations of the Victorian Era," made a survey of the court and country. The two volumes entitled "The Court of England under George IV" were founded

on a diary, interspersed with letters, written by Queen Caroline and various other distinguished persons, and from W. W. Tomlinson we had a description of "Life in Northumberland during the Sixteenth Century." William White's history of "The Inner Life of the House of Commons, 1860-1870," was edited, in two volumes, by Justin McCarthy, who also contributed a preface. "Heroic Japan," a history of the war between China and Japan, was written by F. W. Eastlake and Yōshi-Aki Yamada, and Rev. J. McGowan was the author of "A History of China." "British India," by Rev. Robert W. Frazer, was the only addition to the "Story of the Nations Series"; and from Demetrius Boulger we had "The Story of India." "The Story of the Indian Mutiny" was told yet again by Ascott Robert Hope Moncrieff, and from Lieut.-Gen. McLeod Innes, V. C., came "The Sepoy Revolt." "The Benin Massacre," by Capt. Alan Boisrager, was supplemented by "Benin, the City of Blood," by Commander R. H. Bacon, and Gen. Sir John Adye gave an historical sketch of "Indian Frontier Policy." "The Northwestern Provinces of India" were the theme of W. Crooke. Vol. I of "Letters received by the East India Company from its Servants in the East," covering the years 1602-13, had an introduction by Frederick Charles Danvers, and Gen. Sir Charles Gough collaborated with Arthur D. Innes upon "The Sikhs and the Sikh Wars," tracing the rise, conquest, and annexation of the Punjab state. Sidney Langford Hinde chronicled "The Fall of the Congo Arabs"; Frank W. Sykes described the campaign in the Matoppos in "With Plumer in Matabeleland"; Lieut.-Col. Plumer wrote "An Irregular Corps in Matabeleland"; and from Col. R. S. S. Baden-Powell we had "The Matabele Campaign, 1896." Arthur Glynn Leonard told "How we made Rhodesia," and "The Story of an African Crisis," by Edmund Garrett and E. J. Edwards, claimed to be the truth about the Jameson raid and Johannesburg revolt of 1896, told with the assistance of the leading actors in the drama. "The Story of Australia" was written for "The Story of the Empire Series" by Miss Flora Shaw, and "Stories of Australia in the Early Days" came from Marcus Clarke. W. W. How and H. D. Leigh were the joint authors of "A History of Rome to the Death of Caesar," and Alice Gardner proclaimed "Rome the Middle of the World." "Sources of Greek History (B. C. 480-35)" were arranged by G. F. Hill, and "Greece in the Nineteenth Century," by Lewis Sergeant, was a record of Hellenic emancipation and progress from 1821 to 1897. "Europe in the Sixteenth Century, 1494-1598," by A. H. Johnson, was the fourth volume, in order of time, in the series of eight volumes dealing with "Periods of European History" edited by A. Hassall. Vols. III and IV completed Justin H. McCarthy's history of "The French Revolution," and Gen. Meredith Read devoted two illustrated volumes to "Historic Studies in Vaud, Berne, and Savoy, from Roman Times to Voltaire, Rousseau, and Gibbon." George Hooper made a study of "The Campaign of Sedan," "Lectures on Ecclesiastical History," delivered in Norwich Cathedral by Dean Frederick W. Farrar, Rev. J. Armitage Robinson, Canon Frederick Meyrick, and others, were accompanied with a preface by the Dean of Norwich; Rev. William Holden Hutton delivered the Birbeck Lectures on "The Church of the Sixth Century," and Henry Odley Wakeman wrote "An Introduction to the History of the Church of England, from the Earliest Times to the Present Day." "The Story of our English Towns," by P. H. Ditchfield, had an introduction by Dr. Augustus Jessopp; Dean Charles W. Stubbs published "Historical Memorials of Ely Cathedral," and Robert B. Holt

dwelt upon "Whitby, Past and Present." "A History of Pembroke College, Oxford," was written by Douglas Maclean; "The Church of St. Mary the Virgin, Oxford," came from T. G. Jackson; and "Cambridge described and illustrated" from T. D. Atkinson. Rev. T. D. Raikes contributed "Fifty Years of St. Peter's College, Radley." "A Cornish Parish," by Canon Joseph Hammond, gave an account of St. Austell—town, church, district, and people. Three clan histories written during the year were "The Clan Donald," by Rev. A. MacDonald, Minister of Killearnan, and Rev. A. MacDonald, Minister of Kiltarlity; a "History of the Frasers of Lovat," by Alexander Mackenzie; and "Records of the Clan and Name of Fergusson or Ferguson," by James and Robert Menzies Fergusson. "The Story of an Irish Sept," their character and struggle to maintain their lands in Clare, was written by N. C. Macnamara.

Physical, Moral, and Intellectual Science.—"The Ancient Volcanoes of Great Britain," by Sir Archibald Geikie, in two volumes, with seven maps and numerous illustrations, was a monumental work of lasting value, in that it involves practically the volcanic history of the globe. It has been pronounced the crowning work of the chief of the English survey and a stepping stone in the science of geology which no subsequent discoveries can displace. Vols. XXIII, XXV, and XXVI of "Memoirs of the Geological Survey of India" were issued, the first covering the "Geology of the Central Himalayas," by C. L. Griesbach, the next "The Geology of the Bellary District, Madras Presidency," by R. B. Foote, and the last "The Geology of Hazara and the Black Mountain," by C. S. Middlemiss. W. W. Howard attempted to trace "The Evolution of the Universe"; "Man's Place in the Cosmos, and Other Essays" came from Prof. Andrew Seth; and Karl Pearson filled two volumes with "The Chances of Death, and Other Studies in Evolution." Posthumous "Essays" of John G. Romanes were edited by Charles Lloyd Morgan, and Part III was also published of his "Darwin and after Darwin." Sir John W. Dawson wrote on "Relics of Primeval Life: Beginning of Life in the Dawn of Geological Time, and Robert Munro, M. D., discussed "Prehistoric Problems." In this connection, perhaps, may be mentioned "The Dolmens of Ireland: Their Distribution, Structural Characteristics, and Affinities in Other Countries," in three volumes, by W. Copeland Borlase, and a new edition of Sir John Evans's work upon "The Ancient Stone Implements, Weapons, and Ornaments of Great Britain." In the "Biological Series of Cambridge Science Manuals" we had "The Vertebrate Skeleton," by Sidney H. Reynolds; "Light Visible and Invisible" was discussed by Silvanus P. Thompson; and Lord Armstrong wrote on "Electric Movement in Air and Water." "Some Unrecognized Laws of Nature" were investigated by Ignatius Singer and Lewis H. Berens. In "The Dawn of Modern Geography" C. Raymond Beazley gave a history of exploration and geographical science from the conversion of the Roman Empire to 900 A. D., with the account of the achievements and writings of the early Christian, Arab, and Chinese students and explorers. "An Essay on the Foundations of Geometry," by Bernard A. W. Russell, appeared in the "Cambridge University Press Series," and Part I of "The Tutorial Chemistry," devoted to "Non-Metals," by G. H. Bailey, was edited by William Briggs. "Papers and Notes on the Genesis and Matrix of the Diamond" were edited from the unpublished manuscripts of H. Carvill Lewis by T. G. Bonney. J. Norman Lockyer made notes on "Recent and Coming Eclipses," and the "Concise Knowledge Astronomy" was written by Agnes

M. Clarke, A. Fowler, and J. Ellard Gore. "The Concise Knowledge Natural History" came largely from officials of the British Museum, and "The Royal Natural History," edited by Richard Lydekker, contained 72 superb colored illustrations and upward of 2,000 engravings in the text. "Eggs of British Birds, with an Account of their Breeding Habits: Limicolæ," by Frank Poynting, contained 84 colored plates, and "Colored Figures of the Eggs of British Birds, with Descriptive Notices," by the late Henry Seebohm, was pronounced decidedly the finest work on British oology that has yet been published. "A Sketch of the Natural History of Australia," by F. G. Afllalo, contained also some notes on sport; "The Naturalist in Australia" was W. Saville-Kent; and W. C. McIntosh and A. T. Masterman wrote "The Life Histories of the British Marine Food Fishes." From Prof. I. C. Miall we had "The Natural History of Aquatic Insects"; W. A. Clarke compiled "First Records of British Flowering Plants"; J. C. Willis published "A Manual and Dictionary of the Flowering Plants and Ferns"; "The Yew Trees of Great Britain and Ireland" were the theme of John Lowe, M. D.; and J. H. Crawford was the author of two volumes, one upon "Wild Flowers of Scotland" and the other upon "Wild Life in Scotland," the last being illustrated by John Williamson. "The New Psychology," by E. W. Scripture, appeared in the "Contemporary Science Series," as did "Hallucinations and Illusions," by Edmund Parish. From Andrew Lang we had "The Book of Dreams and Ghosts," as well as a work on "Modern Mythology," most of which was written in refutation of "Contributions to the Science of Mythology," which were vouchsafed by Max Müller during the year, and W. T. Stead also told "Real Ghost Stories." Two volumes contained William Crooke's study of "The Popular Religion and Folklore of Northern India." Rev. H. N. Hutchinson examined "Marriage Customs in Many Lands," while "Teaching and Organization" were the theme of P. A. Barnett and others. Frederick Spencer contributed "Chapters on the Aims and Practice of Teaching"; Charles Morley made "Studies in the Board Schools," while "English Schools at the Reformation" were the theme of A. F. Leach. I. C. Miall gave the result of "Thirty Years of Teaching," and John Charles Tarrow told plain truths in "Some Observations of a Foster Parent." James Sully made a study of "Children's Ways," and "Foundations of Success," by S. de Brath, was a plea for rational education. "The Opus Majus of Roger Bacon" was edited, with an introduction and analytical table, by John Henry Bridges, in two volumes.

"Various Fragments" of Herbert Spencer were collected into a volume during the year. Upon divers themes they range in date from 1852 to 1896. Vol. I was issued of a "History of Intellectual Development on the Lines of Modern Evolution," by John Beattie Crozier, coming down to the closing of the schools of Athens by Justinian, and John Theodore Merz also published the first volume of "A History of European Thought in the Nineteenth Century." H. S. Nash traced carefully "The Genesis of the Social Conscience," showing the relation between the establishment of Christianity in Europe and the social question. In the "Social Science Series" appeared "Parasitism, Organic and Social," by J. Massart and E. Vandervelde, and "Allotments and Small Holdings," by J. L. Green, while "The Story of a Great Agricultural Estate," an account of the origin and administration of the Beds and Bucks and Thorney estates, by the Duke of Bedford, was an important contribution to the literature of the vexed question of ownership of land. J. A. Hobson attacked "The

Problem of the Unemployed," and Vol. IX was issued of "Life and Later of the People of London," edited by Charles Booth, containing "Comparisons, Survey, and Conclusions," "Rich and Poor," by Mrs. Bernard Bosanquet, was declared a wise and good book, at once suggestive and entertaining; Ernest Belford Bax published "Outspoken Essays on Social Subjects"; J. Maceum wrote on "Ethics of Citizenship"; "Social Switzerland," by William Harbutt Dawson, was a valuable study of conditions and experiments in that republic; and Bertrand Russell delivered six lectures on "German Social Democracy," which in book form contained an appendix on social democracy and the woman question in Germany by Alys Russell. "Juvenile Offenders" was the contribution of William Douglas Morrison to the "Criminology Series." "The Rational or Scientific Idea of Morality" was set forth by P. F. Fitzgerald, and from Bernard Bosanquet we had a study of the "Psychology of the Moral Self." "The Ethics of John Stuart Mills" were edited, with introductory essays, by Charles Douglas.

Coming to politics, we have "The Truth about Agricultural Depression" told by Francis Allston Channing, M. P. "War Famine and our Food Supply" were the theme of R. B. Marston; Ernest Edwin Williams complained of "The Foreigners in the Farmyard"; and William S. H. Gastrell considered "Our Trade in the World in Relation to Foreign Competition, 1885-1895." "Politics in 1896," an annual edited by Frederick Whelen, contained contributions by H. D. Traill, H. W. Massingham, G. Bertrand Shaw, and others, and "The Statesman's Yearbook," edited by J. Scott Keltie and I. P. A. Renwick, reached its thirty-fourth year of issue. "Government and Parties in Continental Europe" were reviewed by Lawrence Lowell; "Foreign and Colonial Speeches" of Hon. Joseph Chamberlain were collected in book form; and in "England and India" Romesh C. Dutt made a plea for a larger native participation in the government of that country. "The Coming Commonwealth," by R. R. Garran, discussed Australian federation. "Popular Fallacies regarding Bimetallism" were exposed by Sir Robert G. Edgumbe, and "The First Battle" contained the story of the great presidential election in the United States in 1896. "The Defense of the Empire" was the title given a selection from the letters and speeches of the late Earl of Carnarvon, edited by Sir George Sydenham Clarke, who inaugurated the new "Imperial Library" with a volume of his own upon "Imperial Defense." "National Defenses" was also the theme of Gen. C. P. Maurice. J. S. Risley made a study of "The Law of War." "The Eastern Crisis" was the subject of a letter to the Duke of Westminster from William E. Gladstone; "The European Concert in the Eastern Question" was a collection of treaties and other public acts, edited, with introductions and notes, by T. E. Holland; and "The Eastern Crisis of 1897 and British Policy in the Near East," by G. H. Perris, gave a key not only to the causes and the possible consequences of the Greco-Turkish War, but also to the larger developments and wider issues of the Eastern question. "War and a Wheel," by Wilfred Pollock, described the Greco-Turkish War as seen from a bicycle; "With the Turkish Army in Thessaly," by Clive Bingham, was illustrated and contained maps and plans, while two other war correspondents who vouchsafed volumes were William Kinnaird Rose, the author of "With the Greeks in Thessaly," and G. W. Stevens, who proclaimed "The Conquering Turk." "The Book of Parliament," by Michael Macdonagh, gave an account of the customs and curiosities of the two houses, and from Harry Furniss we had

"Pen and Pencil in Parliament." "The Municipal Yearbook of the United Kingdom, 1897" was issued by Robert Donald, and "Political Pamphlets" in the "Pamphlet Library" were selected and arranged by A. F. Pollard.

Among religious works are to be mentioned "ΛΟΓΙΑ ΙΗΣΟΥ: Sayings of Our Lord," discovered and edited by Bernard P. Grenfell and Arthur S. Hunt (see page 23 *ante*), who also edited Series II of "Greek Papyri"; "The Spirit on the Waters: The Evolution of the Divine from the Human," by Dr. Edwin A. Abbott; "Recent Advances in Theistic Philosophy of Religion," by Rev. James Lindsay; "Socrates and Christ," a study in the philosophy of religion, by R. A. Wenley; and "The Evolution of the Idea of God," a somewhat superficial inquiry into the origin of religions, by Grant Allen. "The Providential Order of the World" was the theme of the Gifford Lectures for 1897, by Dr. Alexander Balmain Bruce, and in the "Living Papers on Present-Day Themes Series" we had "The Truth of the Bible and Kindred Subjects," by Sir John W. Dawson, Rev. William Wright, Rev. M. Kaufmann, and others. "The Bible: Its Meaning and Supremacy" was the theme of Dean F. W. Farrar, and Dr. George Salmon offered "Some Thoughts on the Textual Criticism of the New Testament." "The Christian Ecclesia" was the title of a course of lectures by Fenton John Anthony Hort on the early history and early conceptions of the *ecclesia*, with which were included four sermons, and "Village Sermons" of the same divine were also published; the work of Dr. Edwin Hatch on "The Influence of Greek Ideas and Usages upon the Christian Church" was edited by A. M. Fairbairn; and "Outlines of the History of the Theological Literature of the Church of England from the Reformation to the Close of the Eighteenth Century" were the Bishop Paddock Lectures for 1896-'97 delivered by Dr. John Dowden. The Baird Lecture for 1897 was by Robert Herbert Story upon "The Apostolic Ministry in the Scottish Church." "The Celtic Church of Wales" came from J. W. Willis Bund. "Religious Thought in England in the Nineteenth Century" was discussed by Dr. John Hunt, and Hugh Mortimer Cecil was the author of "Pseudo-philosophy at the End of the Nineteenth Century: I. An Irrationalist Trio—Kidd, Drummond, Balfour." "Unthinkables" was by Frederick H. Balfour, and was somewhat in line with the "Foundations of Belief," by Arthur Balfour. "Christian Instincts and Modern Doubt" was the title of essays and addresses in aid of a reasonable, satisfying, and consolatory religion, by Rev. Alexander H. G. Crauford, and "The Ancient Faith in Modern Light" of a series of essays by various clergymen. "Oliver Cromwell: A Study in Personal Religion" came from Dr. Robert F. Horton; "Certain Aspects of Life" were considered by the Bishop of Durham; "The Revel and the Battle" was the title of a volume of sermons by the Bishop of Southwell; and "The Heritage of the Spirit" of another similar volume by Bishop Creighton, of London. Canon Gore gave a practical exposition of "The Sermon on the Mount." "Sermons Preached on Special Occasions" by Canon Liddon were collected, as were sermons, addresses, and essays by Rev. William Robertson Nicoll, under the title of "The Return to the Cross." "The Threshold of the Sanctuary," by Canon B. W. Randolph, consisted of chapters on preparation for holy orders, and John Telford wrote the "History of Lay Preaching in the Christian Church." "Later Gleanings," a new series of gleanings of past years, theological and ecclesiastical, were welcomed from William E. Gladstone, and Robert Anderson, the Assistant

Commissioner of Police in London, questioned "The Silence of God" on certain questions of life in reverent mood. Part II of Vol. III and Vol. IV of "New Testament Hours," by Dr. John Cunningham Geikie, completed that work, and "Gateways to the Bible" were supplied by Dr. Geikie, Rev. A. H. Sayce, William Elliot Griffis, and others. "The Incarnation: A Study of Philippians II, 5-11," by Canon Edwin Hamilton Gifford, was supplemented by "Philippian Studies," by Dr. H. C. G. Moule, and Dr. George Matheson caught "Side-lights from Patmos." S. Baring-Gould made "A Study of St. Paul." "The Power of an Endless Life, and Other Sermons" were by David Wright; Robert Lawrence Ottley delivered the Bampton Lectures before the University of Oxford upon "Aspects of the Old Testament"; and "Christianity and the Progress of Man, as illustrated by Modern Missions" was by W. Douglas Mackenzie. "Ideals of Strength," by John MacLaren Watson, contained a sketch of the author's life. W. Walsh revealed "The Secret History of the Oxford Movement." "Essays in Liberalism" were written by "Six Oxford Men," and a third series was issued of "Oxford House Papers." "The Observances in Use at the Augustinian Priory of St. Giles and St. Andrew at Barnwell, Cambs." were made public; T. W. Arnold examined "The Preaching of Islam"; and E. L. Butcher wrote "The Story of the Church of Egypt." Three volumes contained "The Book of the Dead," translated from the Egyptian text according to the Theban recension, by Dr. E. A. Wallis Budge, who also prepared "An Egyptian Reading Book for Beginners." Mrs. Annie Wood Besant discoursed upon "Four Great Religions." "The Hope of Israel" was the review of the argument from prophecy by Rev. Francis H. Wood; Benjamin B. Warfield set forth "The Right of Systematic Theology"; and "A Concordance to the Greek Testament according to the Texts of Westcott and Hort, Tischendorf, and the English Revisers," was the work of Dr. William F. Moulton and Rev. A. S. Geden. "A Guide to Biblical Study" was offered by A. S. Peake.

Books of a miscellaneous character which may as well be included here as anywhere were: "Progress in Printing and the Graphic Arts during the Victorian Era," by J. Southward; "Achievements of Cavalry," by Gen. Sir Evelyn Wood; "Stray Military Papers," by Henry W. Lovett Hine; "The Effect of Maritime Command on Land Campaigns since Waterloo," by Major C. E. Callwell; "The Naval Annual," edited by Hon. J. A. Brassey; and "Naval Gunnery," by Capt. H. Garbett, R. N.; "The British Mercantile Marine," a short historical review, by Edward Blackmore; "Chronicles of the Bank of England," by B. B. Turner; and "Great Public Schools," by various authors. "An Outline of the Law of Libel" was given by W. Blake Odgers, and "Four Lectures on the Law of Employers' Liability at Home and Abroad," by Augustine Birrell. "Lectures on the Actions of Medicines," being the course of lectures on pharmacology and therapeutics delivered at St. Bartholomew's Hospital by Dr. Thomas Lauder Brunton during the summer of 1896 were published, as were "The Sequels of Disease," the Lumsian Lectures before the Royal College of Physicians by Sir Dyce Duckworth, M. D., with observations in prognosis in disease. "Waste and Repair in Modern Life" was a timely volume by Dr. Robson Roose, and "Food and its Functions" was a text-book for students of cookery by James Knight. "Petroleum," in two volumes, by Boverton Redwood and George T. Holloway, contained maps in colors showing the principal petroleum districts of the world, and Ilyd I. Redwood wrote on "Mineral Oils and their By-products."

Samuel Rideal discussed "Water and its Purification," and W. J. Atkinson Butterfield was heard from on "The Chemistry of Gas Manufacture." A. J. Wallis Taylor proposed "Motor Cars; or, Power Carriages for Common Roads" and "Carriages without Horses shall go" was the title of a paper on horseless locomotion, read before the British Association at Liverpool by A. R. Sennett. A M. Drew Smith vouchsafed "Confidences of an Amateur Gardener," and "Gleanings on Gardens," chiefly on those of the ancient style in England, came from S. Felton. C. J. Cornish spent "Nights with an Old Gunner," which included other studies; and "Fish-Tails and Some True Ones," by Bradnock Hall, was intended for anglers. Vol. III of "The Sportsman's Library" was given to "The Sportsman in Ireland," and other issues were respectively "The Reminiscences of a Huntsman," by Hon. Grantley F. Berkeley, and "The Art of Deer Stalking," by William Scrope. "The Tame Fox and Other Sketches" came from Finch Mason, and "Mountain, Stream, and Covert: Sketches of Country Life and Sport in England and Scotland" from Alexander Innes Shand. Vol. III appeared of "British Dogs," devoted to "Practical Kennel Management," by Hugh Dalziel, D. G. T. Gray, Mrs. Jagger, and others, edited by W. D. Drury. In the "Isthmian Library" we had "The Complete Cyclist," by A. C. Pemberton, Mrs. Harcourt Williamson, C. P. Sisley, and Gilbert Floyd, edited by B. Fletcher Robinson, and illustrated; R. Allanson Winn gave his attention to "Boxing," and "Crocket" had its history, rules, and secrets set forth by Arthur Lallie in a book that was illustrated by Lucien Davis and others. "Golf in Theory and Practice" was by H. S. C. Everard, and K. S. Ranjitsingh wrote "The Jubilee Book of Cricket."

Poetry.—From the Laureate of England came "The Conversion of Winckelmann, and Other Poems" of no particular merit, and from William Watson we had "The Hope of the World, and Other Poems" and "The Year of Shame," to which last the Bishop of Hereford contributed an introduction, and which was in part a reprint of "The Purple East." "New Poems" were announced from Francis Thompson, and "Green Arras" was a rather striking volume by Laurence Housman. Theodore Watts-Dunton chronicled "The Coming of Love," and Arthur Symonds "Amoris Victima." "Poems" of J. L. Tupper were selected and edited by William M. Rossetti; Dora Sigerson (Mrs. Clement Shorter) published "The Fairy Changeling," with other poems; "Realms of Unknown Kings" came from Laurence Alma-Tadema; "Wild Flower Lyrics, and Other Poems," from J. Rigg; "A Light Load," from Mrs. Dollie Radford; "Ireland, with Other Poems," from Lionel Johnson; "Ogals," from Olive Custance; "The Song Book of Bethia Hardacre," from Miss Fuller Maitland; "Fidels, and Other Poems," from C. M. Gemmer; "Songs and Meditations," from Maurice Hewlett; "The Love-Philter, and Other Poems," from Helen F. Schweitzer; and "Poems," from Horace Smith. Richard Le Gallienne contributed a paraphrase of the "Rubaiyat of Omar Khayyam," and W. Alison Phillips translated "Selected Poems of Walter von der Vogelweide." "Australia to England" was the title of a poem by John Farrell on the occasion of the Queen's jubilee, and the "Jubilee Greeting at Spithead to the Men of Greater Britain" was written by Theodore Watts-Dunton. "Admirals All" was the title of a collection of vigorous verse about the sea and naval heroes, by Henry Newbolt; "A Day's Tragedy" was a novel in rhyme, by Allen Upward; "The Houses of Sin," by Vincent O'Sullivan, was as repulsive a volume as could be conceived in this decadent epoch, being given mostly to the praises

of corruption; and "Christ and the Courtesan," by R. H. Fitzpatrick, was an attempt at imitation of Rossetti. A. E. Hous was the author of "Hilfinn's Luck, and Other Poems," "Cairn's Song of 'Two Decades of Song,'" "James' Lament of 'Shreds and Patches,'" "Herbert Watson's 'By Severn Sea,'" Christian Burke's "The Flowering of the Almond Tree," Lisa Wilson's "Verses," and Clara S. Dickens, of "Margaret and Magdalen." "The Battle of the Bays," by Owen Seaman, the author of "With Double Pipe," "Haze at Cambridge," and "Tillers of the Sand," was a voluminous volume of humorous verse, recalling Calverley; "Songs of the Maid," by John Huntley Skrine, belong to the department of patriotic poetry; Scotland was the birthplace of "Poems," by J. R. Selkirk; "Songs of Love and Death," by Margaret T. Armour, were collected from magazines and papers; and a striking contribution to religious poetry was made in "The Desolate Soul," by Maria Monica. "From Dawn to Dark" came from George Milner; "Lays and Legends of the Wealds of Kent," from Miss Lillian Winsor; "Tatnall's, and Other Poems," from H. E. Clarke; "The Cross beneath the Ring," from E. F. M. Beneske; "Ver Lyric," from Charles Newton Robinson; "Ballads of Revolt," from J. S. Fletcher; and "Poems for Little People and those of Larger Growth," from J. R. Eastwood. Edward Verrall Lucas compiled "A Book of Verses for Children," and "Red Apple and Silver Bells" was a book of verse for children of all ages by H. Hendry, illustrated by A. B. Woodward. "Selected Poems" of John Stuart Blackie were edited with an appreciation by Archibald Stodart Walker; Arthur Symonds edited "A Selection from the Poems of Mathilde Blind"; Austin Dobson comprised in his "Collected Poems" all the verses written by him during the last thirty years in his opinion worthy of preservation; and George Meredith arranged his own "Selected Poems." "Selections from the Works of Sir Lewis Morris" were also published; Rev. D. C. Tovey accompanied "The Poetical Works of James Thomson" with a memoir and critical appendices; and E. K. Chambers edited "Poems of Henry Vaughan" in two volumes. "Chaucerian and Other Poems" were edited from numerous manuscripts, by Rev. Walter W. Skeat, as a supplement to his edition of "The Complete Works of Geoffrey Chaucer," and Vol. IV completed the Centenary edition of "The Poetry of Robert Burns," edited by W. E. Henley and T. F. Henderson. Among collections of poetry are to be mentioned "The Flower of the Mind," a choice among the best poems made by Alice Meynell; "A Collection of Old Ballads," collected and edited by Andrew Lang; Vol. VII of "English Minstrelsy," a national monument of English song, collated and edited with notes and historical introductions by S. Baring-Gould; "Scottish Poetry of the Eighteenth Century," edited by George Eyre Todd for the "Abbotsford Series"; "Bards of the Gael and Gail"; examples of the poetic literature of Erin, done into English after the meters and modes of the Gael by Dr. George Sigerson; "English Lyrics from Chaucer to Poe, 1340-1849" were edited by William E. Henley; "English Lyric Poetry, 1500-1700" was selected by Dr. F. Ives for the "Warwick Library of English Literature"; A. T. Quiller-Couch edited "English Sonnets" in the "Diamond Library"; "English Epithalamies," edited by R. H. Case, formed one of the "Border Anthologies"; selections from the poetry of Wordsworth were edited by Edward Dowden and Andrew Lang respectively in the "Athenium Press Series," and in the series of "Selections from the Poets"; John Churton Collins contributed two "Treasury of Minor British Poetry"; Francis Turner Palgrave compiled a second series of the "Golden

Treasury," embracing "Modern Poetry"; Dr Richard Garnett edited "The Poetry of Samuel Taylor Coleridge" for the "Muses Library"; "Four Poets: Selections from Wordsworth, Coleridge, Shelley, and Keats" came from Oswald Crawford; and "The White Ship" was the title of a little book of poems selected from the works of Dante Gabriel Rossetti. "The Poetry of Sport" was compiled for the "Badminton Library" by Hedley Peck. "The Case of Rebellious Susan" was a clever comedy in three acts by Henry Arthur Jones.

Voyages and Travels. Englishmen traveled far and wide during 1897, and many made record of their experiences. Sir W. M. Conway described "The First Crossing of Spitzbergen," J. W. Gregory, A. Trevor-Battye, and E. J. Garwood making contributions to the volume; Abel Chapman visited "Wild Norway"; Mrs. Alec Tweedie went "Through Finland in Carts"; and Charles Edwardes, the author of "Letters from Crete," told of travels "In Jutland with a Cycle." "The Mount," by the late Philip Gilbert Hamerton, was a narrative of a visit to the site of a Gaulish city on Mount Beuvrey, with a description of the neighboring city of Autun; Bickford Smith furnished "Cretan Sketches"; Mrs. R. M. King described "Italian Byways"; Dr. Hans Gadow was at home "In Northern Spain"; and R. Thirlmere published "Idyls of Spain." "Servia" was described as the poor man's paradise by Herbert Vivian, and "The Land of the Bora," by "Snaffle," told of sport in Dalmatia and Herzegovina. E. Whymper supplied "A Guide to Zermatt and the Matterhorn," and Grant Allen added "Cities of Belgium" to the series of "Historical Guides." Mrs. F. Max Müller wrote "Letters from Constantinople; The Sultan and his Subjects" were the theme of Richard Davey; W. M. Ramsay gave "Impressions of Turkey during Twelve Years' Wanderings"; Mrs. W. M. Ramsay described "Everyday Life in Turkey"; H. C. Thomson, the author of "The Chitral Campaign," in "The Outgoing Turk" recorded impressions of a journey through the western Balkans; and "Naples in the Nineties" came from Eustace Neville Rolfe. "Sketches of Travel in Normandy and Maine," by the late Edward A. Freeman, contained illustrations from drawings by the author, and a preface by W. H. Hutton. Clive Bingham took "A Ride through Western Asia"; "In Court and Kampang," by Hugh Clifford, contained tales and sketches of native life in the Malay peninsula; "The Ruined Cities of Ceylon" were visited by Henry W. Cave; "The Land of the Monuments," by Joseph Pollard, had an introduction by William Wright; Margaret M. Bottome in "A Sunshine Trip" caught glimpses of the Orient; "Picturesque Burma: Past and Present" came from Mrs. Ernest Hart; Sir George Scott Robertson's work upon "The Kadirs of the Hindu-Kush" was illustrated by A. D. McCormick; and "Korea and her Neighbors," by Mrs. Isabella Bird Bishop, from photographs by the author; J. Hosie spent "Three Years in Western China"; Vol. II of "The Cities and Bishoprics of Phrygia" was issued; and "Letters from Armenia," from the scene of the recent massacres, came from James Rendel Harris and Helen B. Harris. A revised fourth edition was published of "Transcaucasia and Ararat," notes of a vacation tour in the autumn of 1876 by James Bryce, with a supplementary chapter on the recent history of the Armenian question, and from the same eminent authority we had "Impressions of South Africa" gained in a tour made in 1895. F. R. Statham described "South Africa as it is"; H. Lincoln Tangey wrote "In South Africa"; "Soldiering and Surveying in British South Africa" was described by J. R. MacDonald; "British Central Africa"

was the theme of Sir Henry H. Johnston; and Mary H. Kingsley told of "Travels in West Africa." "Through Unknown African Countries" was an account of the first expedition from Somaliland to Lake Lamu, by A. Donaldson Smith; "The New Africa," by Aurel Schulz, M. D., and August Hammer, told of a journey up the Chobé and down the Okovanga rivers; and Vol. IV of "A Historical Geography of the British Colonies," by C. P. Lucas, covered "South and East Africa." Frances MacNab told of life "On Veldt and Farm"; "Nature and Sport in South Africa" came from no less an authority than H. A. Bryden, the author of "Kloof and Karroo"; and A. G. Bagot described vividly "Sport and Travel in India and Central America." Lord Brassey sailed "In the Sunbeam to New Zealand"; and Arthur P. Harper wrote of "Pioneer Work in the Alps of New Zealand." Albert F. Calvert described "My Fourth Tour in Western Australia." May Crommelin went "Over the Andes from the Argentine to Chili and Peru." "The Tenth Island," according to Beckles Wilson, was Newfoundland; G. W. Steevens termed the United States "The Land of the Dollar"; and Lady Howard of Glossop published her "Journal of a Tour through the United States." "Two Health Seekers in Southern California" were Dr. W. W. A. Edwards and Beatrice Harraden. "Leaders into Unknown Lands," by Arthur Montefiore, contained descriptions of six of the most famous journeys of recent explorers. The "Diary of a Tour through Great Britain in 1795" of Rev. William MacRitchie was edited by David MacRitchie; A. H. Rorway gave pictures of life "In the West Country," and described "Highways and Byways in Devon and Cornwall"; James J. Hissey illustrated his own wanderings "On Southern English Roads"; and H. Snowden Ward, with the assistance of Catherine Weed Ward, prepared "The Shakespearean Guide to Stratford-on-Avon." "The Avshire Homes and Haunts of Burns" came from H. C. Shelley. "The Pioneers of the Klondyke" was an account of two years' police service in the Yukon, narrated by M. H. E. Hayne, of the Northwestern Police, and recorded by H. West Taylor, illustrated by photographs taken on the spot by the narrator. "Roughing it in Siberia," by Robert Louis Jefferson, the author of "Awheel to Moscow," gave some account of the Trans-Siberian Railway and the gold-mining industry of Asiatic Russia; and "In the Land of Tolstoi," recording experiences of famine and misrule in Russia, was rearranged and rewritten by

Will Reason from the Swedish work of Jonas Stalling. Nansen's "Farthest North" was published simultaneously in England and the United States.

The table on p. 476 gives the figures of book production in England during the year, compared with those of 1896 from the columns of the "London Publishers' Circular."

LITERATURE, CONTINENTAL, IN 1897.

Notwithstanding the immense and ever-increasing mass of literary productions, it is believed that the following report, though necessarily condensed, gives a fair view of the year's work in both the highways and byways of literature:

Belgium.—Research in national history, active as always, has produced L. Delplacé's "La Belgique sous la Domination française"; Count Oswald de Kerchove de Denterghem's "Les Préliminaires de la Révolution belge de 1830" ("curious and piquant revelations"); H. Lonchay's authoritative "La Rivalité de la France et de l'Espagne aux Pays-Bas, 1635-1700"; Vol. I of "Monasticon Belgium," published by Dom Ursmer Berlière, a Benedictine monk; Victor Vander Haeghen's interesting inventory of the archives of Ghent; and H. Pirenne's curious "Livre de l'Abbé Guillaume de Ryckel, 1249-72" (accounts of the abbey of St. Trond, showing the economic situation in the thirteenth century). The useful "Dictionnaire encyclopédique de Géographie historique de la Belgique," by Jourdain, Van Stalle, and de Heusch, is completed. Other historical works are E. Gosart's "Charles-Quint et Philippe II" and "Elizabeth of England and her Suitors"; G. Kurth's "Ste. Clothilde"; and F. Magnette's remarkable "Joseph II et la Liberté de l'Escaut." E. Hubert tells much that is new about "La Torture aux Pays-Bas autrichiens pendant le 18. Siècle." Under "Geography and Travel" are listed "En Égypte, Palestine et Grèce," by Father Portmans; "En Congolie," by the brilliant Edmond Picard (converted from opposition to the colony almost to enthusiasm); and the delightful "Lettres de Voyage," by the late Émile de Laveleye, the third and last volume of whose "Essais et Études" has also appeared.

In religious history there are A. van Hoonacker's "Les Nouvelles Études sur la Restauration juive"; "Essai d'Anthropologie chinoise," by Mgr. de Harlez; A. Camerlynck's "St. Irénée et le Canon du Nouveau Testament"; and Franz Cumont's masterly "Les Mystères de Mithra." Maurice de Wulf has an original work on "L'Esthétique de St. Thomas d'Aquin," and Crahay one "Sur la Politique de St. Thomas d'Aquin." A. Sluys and J. Verkoyen have studied "La Vie et les Œuvres de Comenius." A. Proost considers the "Réforme des Humanités." E. Matthieu recounts "L'Histoire de l'Enseignement primaire en Hainaut"; O. Pyfferoen makes remarkable "Rapports sur l'Enseignement professionnel en Angleterre et en Allemagne"; similar interesting investigations are Eugène Nève's "L'Enseignement professionnel des Industries artistiques en Europe" and Omer Buysse's "Les Écoles professionnelles et les Écoles d'Art industriel en Allemagne et en Autriche." In economics and sociology there are Henri Vander Linden's promising "Les Gildes marchandes dans les Pays-Bas au Moyen-Âge," Gen. Brialmont's disquieting "L'Accroissement de la Population et ses Effets dans l'Avenir," socialist Hector Denis's "Histoire des Sciences économiques et socialistes," A. Allard's "La Crise agricole," and E. Nys's important "Études de Droit international." Literary history and criticism are contributed to in Tito Zanardelli's "Dante et ses Précurseurs," the interesting "L'Élément historique dans le Coronement Loëls," by Léonard Willems, Edmond Picard's paradoxical "Discours sur le Renouveau au Théâtre," and the Jesuit A. J.

Delattre's "Le Cerveau Picaresque," a satire against Picaud. Noteworthy prose works in *belles-lettres* are Georges Rodenbach's "Bruges-la-Morte" and "Le Carillonneur"; Arnold Godebski's "Le Thyrsos"; Paul Arden's "Vieilles Amours"; Eug. Demolder's "La Légende d'Yperlaume"; and Maurice Maeterlinck's drama "Aglavaine et Selys" in his familiar manner.

In poetry, there are a new series of "Poèmes" by the original and extravagant Émile Verhaeren, who in "Les Heures claires" appears "to wish to return to simplicity, clearness, and sincerity." Maurice Maeterlinck's "Douze Chansons"; Ad. Hardy's promising "Craquis Ardennais"; the late Jean Casier's "Chants intimes" and "Épaves" and Édouard Nod's "Poèmes," classed as "Catholic poetry"; Léon Hennebusch's "Poèmes d'Hier et d'Aujourd'hui"; Gustave Kahn's "Lignes de Lumières"; Victor Arnould's "Chansons et Ballades"; Jean Delville's "Frisson de Sphinx"; and "Aurore et Couchant," by Mme. Amélie Struman-Picard, an old writer, "Deep-rooted disagreements" and "violent invectives" are attributed to "the young ones," whose books, moreover, are said to excite but little enthusiasm. Writing for the stage seems to be rarely cultivated. Noteworthy efforts are G. van Zype's drama "Tes Père et Mère," R. Ledent's "Les Entraves," and R. Warsage's "Marguerite," a comedy in verse.

In contrast with the agitation and polemics of French literature in Belgium, Flemish literature is in "a state of dull placidity." However, literary activity is increasing in variety, and national history and archaeology, especially, are assiduously cultivated. Noteworthy work in this direction includes the curious "De Nammen ende korte Geschiedenis der Huizen van Mechelen," by Ad. Reydam; Julius Frederich's study on "the Inquisition in the old Duchy of Luxembourg up to the end of the sixteenth century"; the late J. J. Mulder's important study "on the stubborn resistance made by Antwerp in the sixteenth century to the edicts against the heresy of Protestantism in the reigns of Charles V and Philip II"; L. van Laeken's not very fair work "on the excesses of the Sansculottes in Flemish Belgium"; the celebrated "Keure van Hazebroek," published, with commentary, by Ed. Gailhard; and J. van Heerde's fine essay on the landscape painters Xaver and Cesar de Cock. M. de Quéker has studied "the action of official and private beneficence." Prof. Vercoillie is preparing a new edition of his excellent etymological dictionary of "the tongue of the Netherlands." Hipp. Meert's "Distels" deals with mistakes of style committed by most Flemish writers when using their mother tongue. Jan Bols, a priest, has printed "Hondert oude vlaamsche Liederen," and we are told that here, as in Holland, successful efforts are being made to popularize such old songs. There is little prose fiction of the first class. The freshest and most original is "De gouden Vliender," by Hendrik de Marez, a promising beginner; Cyrille Buysse has produced better work than the novel "Opt Blauwhuis"; "Driften," by R. Stijns, is called "a collection in extravagant colors"; and "Van Vrouwenleven" is uninteresting prose by Hélène Lapidoth-Swarth, whose reputation as a poet is borne up in "Diepe Wateren." There is no other poetry of real importance to record, and the plays published are generally mediocre. "De Herbergprinses" by Nestor de Tière is a libretto for which Jan Blokkx wrote admirable music; the piece enjoyed a brilliant success.

Bohemia.—Publications illustrating national development are the valuable work, describing all artistic objects in the kingdom, issued by the Bohemian Academy (third volume); L. Nisler's "O

původu Slovanů. Studie k. slovanským starožitnostem"; Hostinský's treatise on Bohemian popular songs and ballads; an ethnological description of Bohemia in course of preparation by the Academy; and Jaroslav Goll's interesting and not unpleasantly prejudiced "Čechy a Prusy ve Středověku" (relations between Prussia and Bohemia). Stolba writes of Holland "Na půdě moří urvané"; and St. Vráz has published, in the magazines, interesting pictures of the islands of eastern Asia. Of literary criticism and history there is little—Vrchlický's "Studies and Portraits," Jar. Vléek's "History of Bohemian Literature," Ernst V. Kraus's "Goethe a Čechy" (Goethe and Bohemia), Matthias Murko's "Deutsche Einflüsse auf die Anfänge der böhmischen Romantik," and biographies such as Vléek's "Safarik" and Jakubec's "Ant. Marek." "In fiction, Bohemian literature still lacks the modern novel of character." Stories are numerous, but originality is rarer. The most successful seem to be those describing the life of the country people of Bohemia, such as Raiš's "Pantáta Bezoušek," Vřesněký's "Na hrubé hroudě," and Klösterman's "Skláři" and "V srdci hvozdu šumavských." Also to be noted are "Návštěvy," "Maloměstská šlechta," and "God among the People" (a study of beliefs), by Herites, who lays his scenes, as usual, in small country towns; the popular Kosmák's "Kaleidoscope Pictures" of rustic life; Hermann's "Two Prague Idyls"; V. Mrštík's "Tale of May"; "Bavlnkové Ženy" (successful pictures of the Slavonians of Moravia), by the brothers Mrštík; M. Havel's "Poslední svého rodu" and "Rodiny dvou sester" (tales of middle-class society); and a third collection of gorgeous "Retouched Pictures" of past ages, by Zeyer. In poetry, too, there is little that rises above the mass of mediocrity, of first collections by young men. Noteworthy are Čech's "Prayers to the Unknown" (seems to mark the summit of his power); Vrchlický's "Collected Works" (reflective verses in a minor key); Neruda's posthumous "Friday Songs" (fine, powerful, patriotic); Machar's poems of 1893-'96 (among his best); Heyduk's pleasant lyrics "Ptačí Motivy" and "Nové cigánské Melodie"; Sládek's melancholy "In the Winter's Sun" Sová's "Calmed Mournings"; Drofák's "Meditations" (prominent among the works of the young Roman Catholic poets by its "fine language and earnest religious spirit"); and the fervent verse of Neuman (one of the "young authors who form the group of the 'Modern Review'").

Dramatic literature also includes many attempts by beginners, as well as Zeyer's "Donna Zancha" and "Zdob ružového jitra" (a "pretty pastoral of biblical times"), Vrchlický's tragedy "Marie Calderonová" and "Epinona" (drama of Christian martyrdom in Rome), and Svoboda's remarkable "Děleku, děleku!" (simple picture of domestic life). Literary vigor seems to have abated somewhat, on the whole, though much has still been published.

Denmark.—An important history of Denmark, by J. Steenstrup, E. Holm, Kr. Erslev, A. Heise, W. Møllerup, J. A. Fredericse, and A. D. Jørgensen, is appearing. Julius Clausen's "Frederik Christian, Hertug af Augustenborg (1765-1814). En monografisk Skildring"; H. Beyer's "Christen Berg: En dansk Politikers Udviklingshistorie, 1829-'66"; V. Dahlerup's "Det danske Sprogs Historie i almenfattelig Fremstilling"; F. Rønning's "Rationalismens Tidaldre. Sidste Halvdel af 18. Århundrede"; P. Hansen's "Den danske Skueplads. Illustreret Theatralhistorie" (completed); A. Aumont and E. Collin's "Det danske Nationalteaters Historie"; R. Petersen's "Frederik Barfod," all have a national interest. Hans Kaarsberg's "Nor-

dens sidste Nomade" describes the Laplanders. H. Voldskov writes on early "Sjæledyrkelse og Naturdyrkelse." In art criticism there are Karl Madsen's monograph on the Danish painter J. Th. Lundbø and F. Beckett's study of Florentine art and "Renaissanceen og Kunstens Historie i Danmark."

Not much of value seems to have appeared in *belles-lettres*, though in the matter of form a high degree of perfection has been reached. New novels and stories are the veteran H. F. Ewald's historical novel, "Liden Karsten, en Fortælling fra Kong Hanses Dage"; Herman Bang's "Ludvigsbakke" (showing "keen perception of the small things in character and human life"); Karl Gjellerup's "Møllen" (novel of country life, elaborate character analysis); Karl Larsen's "Uden for Rangsclasserne" (sketches of Copenhagen life and slang); the humorous stories of S. Schandorph ("Frigjort" and "Frøken Gram") and G. Wied; the humorous "Kuriøse Historier fra Heksenes Tid," by Woldemar (pseudonym); "Den yderste Dag," by Johannes Jørgensen, the brilliant poet, who has of late years gone deeply into religious speculation; Mme. Matilda Mallings "Eremitage—Idyllen" (idolizing Rousseau); Ernesto Dalgas, a newcomer, presents "Krøniker," tales, some collected, others original, marked by refined taste, though somewhat strongly colored. Lyric poetry is supplied in "Hinsides Bjergene" (Italian pictures in good verse) by Otto C. Fønns; the gifted young Helge Rode's volume of poems, showing serene yet intense feeling; and Aage-Matthison Hansen's "Stjernerne." A revised and altered edition of Holger Drachmann's "Strandby Folk" has been produced.

France.—Again the Revolution and the first empire have furnished subjects for a number of noteworthy books: Charles Gomel's "L'Histoire financière de l'Assemblée Constituante"; Henri Welschinger's excellent "L'Histoire du Roi de Rome"; Count Murat's "L'Histoire des Campagnes du Roi Murat en Espagne"; "L'Histoire de l'Armée de Condé," by Bittard des Portes; "Une Famille vendéenne pendant la grande Guerre: Mémoires de Bouteillier de Saint-André"; Col. de Pontbriand's "Les Guerres de la Chouannerie"; Countess Potocka's memoirs on Napoleon's stay in Poland; Baron du Bourgoin's "Souvenirs Militaires"; Marquis de Malleyssie's "Mémoires d'un Officier aux Gardes françaises, 1789-'93" (excellently edited by G. Roberti); the entertaining "Mémorial de L. de Norvins" (social history of the times); F. Masson's "Napoléon et sa Famille" (an "excellent guide through the enormous Napoleon literature of the last few years"); Albert Sorel's "Bonaparte et Hoche en 1797" (a clear representation of a decisive year); and Léon Lecestre's edition of Napoleon's "Lettres inédites (An VIII—1815)," which had been unpublished hitherto as likely to diminish the prestige of the emperor. M. C. d'Arguzon's book on Hortense Beauharnais is good, but to be taken *cum grano salis*. Continued interest in the second empire is shown in Villefranche's impartial "Histoire de Napoléon III"; Lamy's "Essai sur la Guerre de 1870" (favorable portrait of Napoleon); Gen. Fleury's very interesting "Mémoires"; the Marquis Philippe de Massa's "Souvenirs et Impressions, 1840-'71"; Imbert de Saint-Amand's "Louis Napoléon et Mademoiselle de Montijo" (dispassionate and truthful) and "Napoléon III et sa Cour"; and Palat's "Bibliographie générale de la Guerre de 1870-'71" (compiled with more diligence than judgment). Recent history is told in E. Zevort's "L'Histoire de la Troisième République" (an excellent, impartial summary); "L'Alliance franco-russe," by Jules Hansen, a Dane by birth; Jules Ferry's "Discours" (Vol. VI); Count de Mun's

speeches (6 vols.), a record of fascinating eloquence; Henri Doniol's "M. Thiers: le Comte de Saint-Valler; le général de Manteuffel, libération du Territoire, 1871-73. Documents inédits"; Chalmel-Lacour's speeches (masterpieces); the Duc de Broglie's "Histoire et Politique"; "Œuvres posthumes du Général Trochu: La Société, l'État, l'Armée, le Siège de Paris"; Jules Simon's posthumous delightful "Derniers Mémoires des Autres"; the ardent Bonapartist Prosper Mérimée's "Une Correspondance inédite" with the Legitimist Mme. de La Rochejacquin; and Victor Hugo's "Correspondance, 1815-35." Eugène Pierre describes the "Politique et Gouvernement" of France. Various older periods of French history form the themes of Maurice Prou's "La Gaule Mérovingienne"; N. Jorga's "Philippe de Mézières (1327-1405) et la Croisade au XIV^e Siècle"; Ch. Baudou de Mony's "Relations politiques des Comtes de Foix avec la Catalogne jusqu'au Commencement du XIV^e Siècle"; "Les Libertins en France au XVII^e Siècle," by P. T. Perrens ("libertins" here meaning "free-thinkers"); "Le Père Joseph et Richelieu," by Gustave Fagniez (picturing the dual rôle of the "Éminence grise" as missionary and diplomat); "Memoirs of the Duke du Crôly on the Court of Louis XV and of Louis XVI"; and Pierre de Nolhac's "Études sur la Cour de France, Marie-Antoinette, Dauphine." Édouard Drumont has issued a second series of his "Mon vieux Paris." Frantz Funck-Brentano traces "Origines de la Guerre de Cent Ans." Schlumberger's masterly "L'Épopée byzantine à la Fin du X^e Siècle" and K. Walliszewski's "Histoire de Pierre le Grand" are cited as good examples of thorough research presented in an attractive style. "Études d'Histoire du Moyen Âge, dédiées à Gabriel Monod," is a graceful tribute, which serves also to show French advance in historiography, a subject dealt with in H. d'Arbois de Jubainville's "Deux Manières d'écrire l'Histoire: Critique de Bossuet, d'Augustin Thierry et de Fustel de Coulanges." Miscellaneous contributions to history are Ch. Seignobos's "Histoire politique de l'Europe contemporaine, 1814-96" (remarkable for its range and insight); I. Bourlier's "Les Tchèques et la Bohême contemporaine"; M. A. de Bovet's "La jeune Grèce"; C. de la Jonquière's "Les Italiens en Érythrée"; Count Benedetti's "Essais diplomatiques" (new series); and Victor Bérard's "La Politique du Sultan" (history of the Armenian massacres). In biographical literature we have: F. Picavet's "Gerbert: un Pape philosophe"; B. de Monvel's "Jeanne d'Arc"; Eugène d'Eichthal's impartial, forceful presentation of "Alexis de Tocqueville"; Gagnière's correspondence of the Duchess of Burgundy; De la Brière's "Champollion inconnu"; Pierre de Ségur's life of the famous Mme. Geoffrin, entitled "Le Royaume de la Rue Saint-Honoré" (referring to her *salon*); "Une Éducation impériale: Guillaume II." by F. Ayme, instructor in French to the Princes William and Henry during 1875-77; Maurice Leudet's fairly unbiased "Guillaume II intime"; E. Maillard's "Le Président Félix Faure"; and "Pasteur: The History of a Spirit," by Duclaux. In the broad division "Description and Travel," including much social history and records of colonization, belong: H. Taine's posthumous "Carnets de Voyage: Notes sur la Province" (impressions of French provincial life); Pierre de Coubertin's "Souvenirs d'Amérique et de Grèce"; Mme. Alphonse Daudet's "Notes sur Londres"; Henri Ramin's "Impressions d'Allemagne" (not entirely trustworthy); J. G. Fresen's "Terre germanique: études sur l'Art, les Mœurs, la Politique"; J. C. Broussole's "Pèlerinages ombriens"; Pierre Leroy-Beaulieu's "Les nouvelles Sociétés anglo-saxonnes" (English colonies in Aus-

tralia and South Africa); Louis Malasse's "Impressions d'Égypte" (charming descriptions; anti-British); G. Vuillier's "La Tunisie"; Commandant Toutée's "Dahomé, Niger, Tonkine: Recet de Voyage"; "Une Mission française en Abyssinie" by Vigneras; P. Combès's "L'Abyssinie en 1896: le Pays, les Habitants, la Lutte italo-abyssine"; Émile Sémart's "Castes dans l'Inde" (studied with much philosophic method); and works by Blavet on Madagascar, Dubois on Timbuctou, Félix de Roca on the Amou Daria. Contributions to economics and sociology, numerous, as always, include the Vicomte d'Avenel's curious "Le Mécanisme de la Vie sociale"; Maurice Block's accurate and impartial "Petit Dictionnaire politique et social"; Ernest Babelon's "Les Origines de la Monnaie considérées au Point de Vue économique et historique"; Jules Roche's polemical "L'Impôt sur le Revenu" (against the income tax); Anatole Leroy-Beaulieu's vigorous arraignment of "L'Antisémitisme"; P. Guillot's "Les Assurances ouvrières"; P. de Roussier's "Le Trade-Unionisme en Angleterre"; A. Métin's "Le Socialisme en Angleterre"; E. Seillière's "Études sur Ferdinand Lassalle"; Henri Mazel's "La Synergie sociale"; Th. Funck-Brentano's "Morale politique, La Science sociale"; E. Durkheim's "Le Suicide: Étude sociologique"; A. Delvincourt's "La Lutte contre la Criminalité dans les Temps modernes"; F. Gairal's "Le Protectorat international"; I. I. de Fassin's "Principes de Colonisation"; and F. Quémin's "Histoire de la Colonisation française." A. Revivère's "Les Femmes dans la Science" appears in an enlarged edition. In naval circles F. E. Fournier's "La Flotte nécessaire: ses Avantages stratégiques, tactiques, et économiques" has received deservedly much attention. E. Dela-ferrière's "La France administrative et l'Armée" and "La France économique et l'Armée" deal with an important subject. Of philosophical works, the most noteworthy is Fouillée's admirable "The Positivist Movement and the World's Conception of Sociology." Th. Ribot writes of "L'Évolution des Idées générales." Albert Réville's "Jésus de Nazareth: Études critiques sur les Antécédents de l'Histoire évangélique et la Vie de Jésus" is another contribution to Christology. "Literary criticism," we are told, "is in a very flourishing state." The statement is borne out by noteworthy works, such as Virgile Rossel's conscientious "Histoire des Relations littéraires entre la France et l'Allemagne" and "Histoire de la Littérature française hors de France"; Adolphe Jullien's "Le Romantisme et l'Éditeur Renduel" (a history of a "period of brilliant literary vigor"); "Percurs et Poètes," by Gaston Paris; Father Pachen's "De Dante à Verlaine" (a "conscientious study of mysticism in literature"); Gaston Jourdan's authoritative "Histoire du Félibrige (1854-96)"; F. Brunetière's "Le Roman naturaliste"; E. Gilbert's "Le Roman en France pendant le XIX^e Siècle"; Hugo P. Thieme's "La Littérature française du XIX^e Siècle" (a bibliography, incomplete and deficient); Henri Weil's charming "Études sur le Drame antique"; Charles Dejob's "Études sur la Tragédie" (continuing his studies on the literary relations of France and Italy); Jules Lemaitre's lively and witty "Impressions de Théâtre" (treats the younger school fairly but does not favor it); René Doumic's "Essais sur le Théâtre contemporain" ("solid and a little gloomy"); E. M. de Lyden's "Le Théâtre d'autrefois et celui d'aujourd'hui" (anecdotes); Catulle Mendès's "L'Art au Théâtre" (replication of dramatic criticisms on plays produced in 1895); and Hippolyte Lencou's "Le Théâtre nouveau" (interviews with French dramatists, on the influences in contemporary French drama). Modern literary movements furnish matter for Ernest La

Jeunesse's readable "Les Nuits, les Ennuis et les Âmes de nos plus notoires Contemporains" (peculiar criticism, "of a sort of audacious impertinence"); Lucien Muhlfield's "Le Monde on l'en imprime" (indiscriminate praise of the "Jeunes"; style labored); Remy de Gourmont's "Le Livre des Masques" (disappointing; uniform laudation); Jacques Plowert's "Petit Glossaire pour servir à l'Intelligence des Auteurs décadents et symbolistes," and Victor Charbonnel's "Les Mystiques dans la Littérature présente," all three dealing with the symbolists; and Maurice Le Blond's "Essai sur le Nativisme" (heralded by the author as the very newest literary school). Monographs on individual writers are those by the Duc de Broglie on Malherbe, André Hallays on Beaumarchais (admirable), and Gaston Deschamps on Marivaux (all three in the series "Grands Écrivains français"); A. Rousset's "Lamennais intime"; Henry Harrisse's "L'Abbe Prévost"; Edmond Biré's laudatory book on Honoré de Balzac; "Autour d'Honoré de Balzac" (containing much new information), by Vte. Spoelberch de Lovenjoul, whose "La véritable Histoire de 'Elle et Lui'" (favorable to George Sand) and Paul Mariéton's "Une Histoire d'Amour" are two interesting works on the love affairs of George Sand and Alfred de Musset; Michel Revon's "George Sand"; a brilliant study of Leconte de l'Isle, by Jean Dornis (pseudonym of a lady); Hector Malot's autobiographical "Le Roman de mes Romans"; E. Toudouze's physiological, psychological, and pathological analysis of Zola; and Antoine Laporte's "Émile Zola: l'Homme et l'Œuvre" (contains an excellent bibliography). The literature of art has been enriched by Robert de la Sizeranne's "Ruskin et la Religion de la Beauté"; Gustave Larroumet's "Little Portraits and Art Notes" (showing fine and acute critical taste); Fiérons-Gevaert's judicial "Essai sur l'Art contemporain"; the useful and interesting "Répertoire de la Statuaire grecque et romaine" (Vol. I of which is a pocket edition of Clarac's "Musée de Sculpture"), by Salomon Reinach, author also of "La Sculpture en Europe avant les Influences gréco-romaines" and "Chroniques d'Orient," second series, 1891-'95.

Productions in prose fiction deserving special mention are Pierre Loti's Basque story "Ramuntcho" (hailed as a masterpiece, although some critics find that "washed-out emotionality" goes hand in hand with his "passionate passages of love" and "sad strains"); Vte. M. de Vogüé's "Jean d'Agrève" (brilliant style, delightful descriptions); René Bazin's "With all one's Soul" ("fine and searching analysis"); Anatole France's "L'Orme du Mail" (lively, witty sketches of life in the provinces); Émile Pouillon's delicate love idyl "L'Image"; Maurice Paléologue's "On the Ruins"; Paul and Victor Marguerite's gay "Le Carnaval de Nice" and "La Pariétaire" (short stories); Bernard Lazare's "Les Porteurs de Torches"; the late Alphonse Daudet's "Le Trésor d'Arlatan" (a sketch of the district Camargue) and "Fédor: Pages de la Vie"; J. K. Huysmans's "La Cathédrale" (in which the author "endeavors to interpret the cathedral of Charles"); Edouard Rod's "La-Haut" ("one of his best") and "L'Innocente"; and Paul Bourget's "Recommencements" (10 tales, admirably told) and "Voyagesses" (6 short stories). Further new works of fiction are E. Daudet's "Les Fiançailles tragiques," "Rolande et Andrée," and "Pauline Fossin"; G. Ohnet's "Le Curé de Favières"; François Coppée's "Coupable" (seems to differ from the ordinary *feuilleton* novel only in its exquisite style); J. H. Rosny's "Un double Amour" and "Une Rupture"; Léon Daudet's "Suzanne" (not very happily conceived nor composed) and "La Flamme et l'Ombre"; Marcel Prévost's "Dernières

Lettres de Femmes"; Hugues Le Roux's "Le Maître de l'Heure"; "Arc-en-Ciel et Sourcil rouge," by C. Mendès; P. Maël's "Castel-rouge" and "Bois d'Amour"; R. Maizeroy's "Joujou"; J. de La Brète's "L'Imagination fait le Reste"; Charles de Berkeley's "Marcelle," a pretty little love story; Émile Ollivier's "Marie-Magdeleine" (with an autobiographical tinge); "Passions de jeunes Filles," by P. Sales; "Noblesse Américaine," by Pierre de Coulevain (pseudonym of Mlle. A. Favre); "Un Divorce," by Th. Bentzon (Mme. Blanc), an early work, commonplace; Mme. Caro's well-written "Idylle Nuptiale"; Mme. H. Malot's "L'Amour dominateur"; and new issues in the series "Romans pour les jeunes Filles": A. Robida's "Le Mystère de la Rue Carême-prenant" ("admirable character studies, charming pictures of scenery, strong analysis"); Jean Thierry's bright "M. le Neveu"; and Jean Bertheroy's heavy, stilted "Les trois Filles de Pieter Waldorp." Poetry is still in a languid state. The Academy bestowed the Prix Boileau-Despréaux on "La Maison de l'Enfance," by Fernand Gregh, a newcomer (somewhat influenced by Verlaine), who has been much praised. Auguste Angellier's "À l'Amie perdue" also attracted attention. The following plays have been produced: Victorien Sardou's "Spiritisme" ("an anecdotal drama"; a "complete and deserved failure," says an American writer); "Messidor," a lyrical drama, text by É. Zola, music by A. Bruneau; Jules Casé's "La Vassale" (another sex-problem play); Albert Gainon's "Le Partage" (a mournful picture of the sufferings of a lover jealous of the husband of his mistress); Auguste Germain's brilliantly successful "L'Étranger"; Pierre Denis's drama "Jusqu'à la Mort" ("À la Vie! À la Mort"?) A dramatization of Gen. Boulanger's career; Pailleron's "Mieux vaut Douceur — — et Violence" (two one-act plays); Paul Hervieu's comedy "La Loi de l'Homme" (has same merits and faults as his "Tennailles"); "L'Évasion," comedy (a strong satire on the theory of atavism) and "Bienfaiteurs," comedy (didactically moral), both by Brieux; Abel Hermant's comedy "La Carrière" (great success, much literary merit); "Snobs," by Gustave Guiches; Maurice Donnay's "La Douleuse" ("a comedy of love," plot complicated, "surroundings cleverly reproduced"); and Jean Richepin's "Le Chemineau" (a rustic comedy, "an *opéra comique* in fine verse").

Germany.—In historical literature there has been a flood of patriotic publications, called forth by the centenary of the birth of William I, notably those by W. Oncken ("Unser Heldenkaiser") and O. Lorenz. Victor von Strantz's "Illustrierte Kriegschronik" is a republication of illustrations which appeared in 1864, 1866, and 1870-'71 in the Leipzig "Illustrierte Zeitung."

Further contributions to national history in its various phases are Hermann Grimm's "Beiträge zur deutschen Culturgeschichte" ("a noble little book," personal in tone); "Geschichte der rheinischen Städttekultur," by Heinrich Boos; Albert Naudé's reliable "Beiträge zur Entstehungsgeschichte des Siebenjährigen Krieges"; Heinrich Friedjung's "Der Kampf um die Vorherrschaft in Deutschland, 1859-'66" (thorough); Oscar v. Lettow-Vorbeck's excellent "Geschichte des Krieges von 1866 in Deutschland"; Albert Pfister's "Aus dem Lager des Rheinbundes 1812-'13" (full account of part played by Württemberg); Heinrich v. Poschinger's "Fürst Bismarck und der Bundesrat" (material collected rather than digested; adversely criticised by H. Kohl); L. Rösel's "Alt-Nürnberg" (1895); E. Reicke's "Geschichte der Reichsstadt Nürnberg"; and "Kaiser Wilhelm II als Redner: eine Sammlung der Reden des deutschen Kaisers"

von 1860 bis 1890." Bruno Wagener, in "Kaiser, lehre die Wahrheit," appeals to the Emperor to become a *Volkskaiser*, instead of remaining a *Hof- und Parteikaiser*. Georg Wislicenus shows us "Deutschlands Seemacht sonst und jetzt." Noteworthy additions to the history of other countries are A. Brückner's "Geschichte Russlands bis zum Ende des 18. Jahrhunderts"; Wittmann's "Abriss der schwedischen Geschichte"; Robert Davidson's valuable "Geschichte von Florenz" (critical, yet forms pleasant reading); Benger's "Rumänien: ein Land der Zukunft, 1866-96" (a record of recent progress); and N. I. Hofmeyr's "Die Buren und Jamesons Einfall in Transvaal." The Prussian Historische Institut in Rome has begun the publication of "Quellen und Forschungen aus italienischen Archiven." In ancient history we have Julius Beloch's "Griechische Geschichte" (Vol. II); Hermann Peter's "Die geschichtliche Literatur über die römische Kaiserzeit bis Theodosius I. und ihre Quellen"; and Otto Seeck's "Geschichte des Unterganges der antiken Welt" (Vol. II). Under "Description and Travel" are noted G. Hirschfeld's "Aus dem Orient"; Oswald Kunhardt's "Wanderjahre eines jungen Hamburger Kaufmannes: eine Reise um die Erde in 1000 Tagen"; Gustav Brühl's "Zwischen Alaska und Feuerland"; Bernhard Stern's "Zwischen Kaspi und Pontus: kaukasische Skizzen"; and Jean Habel's "Ansichten aus Südamerika" (valuable illustrations). New memoir literature and biography include C. Beyer's "Ludwig II., König von Bayern: ein Charakterbild" (offering little that is new); Martin Philippson's "Der grosse Kurfürst Friedrich Wilhelm von Brandenburg," 1. Theil: 1640-60 (not very original); Hans Blum's "Fürst Bismarck und seine Zeit" (Vol. VI, to 1895); Georg Schmidt's "Schönhausen und die Familie von Bismarck, bearbeitet im Auftrage der Familie"; M. Kronenberg's "Kant: sein Leben und seine Lehre"; Theodor Schlemmann's "Heinrich von Treitschke's Lehr und Wanderjahre, 1834-66"; Willibald Beyschlag's "Aus meinem Leben"; Wilhelm Lang's "Graf Reinhard: ein deutsch-französisches Lebensbild, 1761-1837"; Alfred Brückel's "Gutenberg: sein Leben, sein Werk, sein Ruhm"; "Tagebücher des Grafen August v. Platen," 1. Bd. (of interest); Mosapp's "Charlotte von Schiller"; "Zwingli's Stellung zur Schrift" (1896), by E. Nagel; and Georg Finler's "Zwingli-Bibliographie" (1897), both excellent; monographs by G. Buchwald, A. Nebe, Paul Kaiser, etc., called forth by the quadricentennial of Philip Melancthon's birth; "Briefe von Richard Wagner an seine Zeitgenossen, 1830-93, zusammengestellt von Emerich Kastner"; A. v. Wenckstern's "Marx"; and Jacob von Falke's "Lebenserinnerungen" (gives a picture of the minor German states, and of the revival of art industry in Germany). Sociological topics are dealt with in Ernst Grosse's excellent "Die Formen der Familie und die Formen der Wirthschaft"; Georg Adler's interesting "Die imperialistische Socialpolitik: D'Israeli, Napoleon III, Bismarck"; Alfred Vierkandt's "Naturvölker und Kulturvölker: ein Beitrag zur Socialpsychologie"; L. Stein's "Die sociale Frage im Lichte der Philosophie: Vorlesungen über Socialphilosophie und ihre Geschichte"; and Jos. Stammhammer's "Bibliographie der Socialpolitik." The relations of the Church to social conditions are dealt with in Fr. Naumann's "Was heisst christlich-social?" and Paul Göhre's "Die evangelisch-soziale Bewegung." Irma von Troll-Borostanyi, in "Das Weib und seine Bekleidung," pleads earnestly for dress reform. Rictaro Hata offers "Gedanken eines Japaners über die Frauen, insbesondere über die japanischen." Otto Dornblüth, in "Die geistigen Fähig-

keiten der Frau," favors the higher education of women. A steady stream of pamphlets on the woman question is pouring from the press (some recent ones are E. von der Decken's "Die gebildete Frau und die neue Zeit"; Eliza Lohenhäuser's "Die Ausnahmestellung Deutschlands in Sachen des Frauenstudiums" and M. Kronfeld's "Die Frauen und die Medizin," both favoring university education for women; "Die Erziehung der weiblichen Jugend in den höheren Berufsklassen vom 15. bis zum 20. Lebensjahre," two essays, by Louise Hagen and Anna Beyer; and O. Lassar's "Das medicinische Studium der Frau") and periodicals such as "Die Frauenbewegung" (Berlin), "Neue Bahnen" (Leipzig), "Die Gleichheit" (Stuttgart), "Die Frau" (Berlin), and "Die Hilfe" (Berlin) are representing the interests of women. "Der geniale Mensch" is considered by Hermann Türck. Educational history includes Georg Kaufmann's "Geschichte der deutschen Universitäten" (Vol. II); Athanasius Zimmermann's "Die Universitäten in den Vereinigten Staaten Amerikas: ein Beitrag zur Culturgeschichte"; third edition of Heinrich Schroeder's "Oberlehrer, Richter, Offiziere" (a picture of the wretched situation of German teachers); and H. Bonfort's pamphlet on "Das Bibliothekswesen in den Vereinigten Staaten." Eduard Hartmann philosophically illuminates "Tagesfragen," such as woman, the duel, gambling, etc., and aims at solving the problem of "Kategorienlehre." Otto Willmann's "Geschichte des Idealismus" (Vol. II) is written *con amore*. Max Schneidewin's theme is "Die Antike Humanität." "Nietzsche's Welt- und Lebensanschauung" is studied by Otto Ritschl. Ludwig Büchner strikes the balance of the century in the various branches of mental and public activity in "Am Sterbelager des Jahrhunderts: Blicke eines freien Denkers aus der Zeit in die Zeit." Among the literature called forth by the controversy on the ethics of dueling, two pamphlets by Georg von Below, "Das Duell und der germanische Ehrbegriff" and "Das Duell in Deutschland," deserve notice. Eduard Meyer's valuable "Die Entstehung des Judenthums: eine historische Untersuchung," Adolf Harnack's "Die Chronologie der altchristlichen Litteratur bis Eusebius," and Fritz Hommel's "Die alt-israelitische Ueberlieferung in inschriftlicher Beleuchtung" ("a strong protest against the modern school of Old Testament criticism") are noteworthy in the section "Religion and Theology." Noteworthy miscellaneous works are the brilliant Otto Goldmeier's "Essays: hrsg. von Freunden" (Vol. I); Albrecht Ritschl's "Gesammelte Aufsätze, neue Folge," collected by his son; Heinrich v. Treitschke's "Historische und politische Aufsätze" (Vol. IV); and Ludwig Bamberger's "Gesammelte Schriften" (Vol. V). In literary history and criticism there are Richard Wülker's very important "Geschichte der englischen Litteratur"; Carl Köhler's "Geschichte der isländischen Dichtung der Neuzeit"; Gustav Körting's unsatisfactory "Geschichte des griechischen und römischen Theaters" (Vol. I of "Geschichte des Theaters in seinen Beziehungen zur Entwicklung der dramatischen Dichtkunst"); Johannes Volkelt's interesting "Aesthetik des Tragischen"; Alfred von Berger's "Studies and Criticisms" (upholding "the exalted models of the great writers"); Ludwig Geigers "Dichter und Frauen" (essays on "loves of the poets"); Th. Gompertz's admirable "The Greek Thinkers"; J. Barnstorff's "Young's Nachtgedanken und ihr Einfluss auf die deutsche Litteratur"; "Litteratur und Theater," by Maximilian Harden, a clever critic but a *poseur*, anxious to be original, we are told; a little volume on theatrical matters in Berlin by Paul Linsemann, who finds much to criti-

cise; H. Milke's "Der deutsche Roman des 19. Jahrhunderts"; "Die deutsche Dichtung der Gegenwart: die Alten und die Jungen," by Adolf Bartels; Siegmund Schultze's "Wege und Ziele deutscher Literatur und Kunst" (adversely criticised); Alfred Bassermann's "Dante's Spuren in Italien," richly illustrated; "Dante, sein Leben und sein Werk, sein Verhältniss zur Kunst und zur Politik," by F. X. Kraus; Julius Burggraf's "Schiller's Frauengestalten" (dealing with the influence of woman on the poet); Friedrich Zarneke's posthumous "Kleine Schriften; 1. Band: Göthe-Schriften," collected by his son Eduard; Rudolf Steiner's "Goethe's Weltanschauung"; Hans K. Freiherr v. Jaden's "Theodor Körner und seine Braut" ("nothing new"); Erich Petzet's "Johann Peter Uz, Zum 100. Todestage des Dichters"; the third and last volume of "Gottfried Keller's Leben: seine Briefe und Tagebücher," by J. Baechthold; A. Römer's "Fritz Reuter in seinem Leben und Schaffen"; pamphlets by J. Wormstall ("Annette v. Droste-Hülshoff im Kreise ihrer Verwandten und Freunde"), J. Riehemann ("Erläuternde Bemerkungen zu Annette v. Droste-Hülshoff's Dichtungen"), and others, reviving the memory of a noted lyric poet; Michel Maria Rabenlechner's "Hammerling: sein Leben und seine Werke" (new material); K. Thdr. Galdert's "Emanuel Geibel"; A. B. Faust's "Charles Sealsfield, der Dichter beider Hemisphären"; Paul Gerber's "Wilhelm Raabe: eine Würdigung seiner Dichtungen"; and Adolf Bartels's "Gerhart Hauptmann." W. Dörpfeld and Emil Reich's "Das griechische Theater: Beiträge zur Geschichte des Dionysos-Theaters in Athen und anderer griechischer Theater" throws important light on the question of the form of the Greek stage. And in the literature of art there are Adolf Furtwängler's "Intermezzi: kunstgeschichtliche Studien"; Berthold Daun's well-written "Adam Krafft und die Künstler seiner Zeit: ein Beitrag zur Kunstgeschichte Nürnbergs"; W. von Seidlitz's concise and impartial "Die Entwicklung der modernen Malerei" (No. 265 of the "Sammlung gemeinverständlicher wissenschaftlicher Vorträge"); Carl Neumann's suggestive "Der Kampf um die neue Kunst," dealing with the modern tendency recently attacked by Anton von Werner and Lenbach; and Eduard Hanslick's "Fünf Jahre Musik, 1891-95; Kritiken."

A notable novel is F. Spielhagen's "Faustulus," good in characterization and dramatically consistent. Others are Adolf Wilbrandt's "Schleichendes Gift" and "Hildegard Mahlmann" (a study of a peasant poetess of the Ambrosius stamp); Ossip Schubin's "Heimkehr"; Eckstein's "Roderich Löhr"; Hermann Heiberg's "Ein doppeltes Ich" and "Die Rixdorfs"; "Ein Schlagwort der Zeit" (lifelike characterization) and "Heilendes Gift," by Feder von Zobeltitz; Rosegger's "Das ewige Licht: Erzählung aus den Schriften eines Waldpfarrers"; Wilhelmine von Hillern's "Ein alter Streit" (describes the ancient Bavarian custom of "Haberfeldtreiben"); Ida Boy-Ed's "Nichts" and "Eine reine Seele"; Annie Beck's "Dora Peters" (modern, objective; heroine well characterized); Gabriele Reuter's "Aus guter Familie: Leidensgeschichte eines jungen Mädchens" (directed against the system of education of young girls); Hedwig Dohm's "Sibilla Delmar" (a characteristic picture of the dissatisfied wife); Schober's "Art zu Art"; Max Halbe's "Frau Messek: eine Dorfgeschichte" ("peculiar technique, masterly command of material"); Ernst Clausen's "Judas," thoroughly conventional; Theodor Fontane's "Die Poggenpuhls"; E. Bertz's "Das Sabinergut"; "Theater," by Hermann Bahr, "a many-sided *poème*"; Willy Rath's "Prinzessin Sida"; A. Zapp's "Der Kampf um den

Dollar" and "Vornehme Proletarier"; and a group of historical novels: G. Ebers's "Barbara Blomberg" and "Arachne" (Egyptian again); F. Dahn's "Vom Chiemgau" (with the author's usual excellencies and faults) and "Ebroin"; Richard Voss's "Unter den Borgias"; Conrad Alberti's "The Rose of Hildesheim"; August Sperl's "Die Söhne des Herrn Budiwoj" (showing thorough historical knowledge); C. Erdmann Edler's "Beatrix von Hohenzollern" ("the monstrosity of the characters and the strangeness of the style render it repulsive"); and Otto Reichert's "Der Bürgermeister: eine Geschichte aus Leipzig's alten Tagen." Among short stories are noted: "Männertreu.—Der Sohn seines Vaters," "Verrathenes Glück.—Emerenz," and "Das Räthsel des Lebens und andere Novellen," by the virtuoso Paul Heyse, who turns rather much to the description of psycho-pathological and hysterical natures; F. von Saar's "Herbststreigen" (containing, notably, "Requiem der Liebe"); Ernst v. Wildenbruch's "Der Zauberer Cyprianus" ("profound in psychology" and "brilliant in coloring"); Richard zur Megede's "Kismet"; Paul Anselm's "Drei Novellen" (notably "Peter Paul," original, and fine in execution); J. J. David's "Frühsschein" (a "stormy story"); L. Ganghofer's "Hochlandsgeschichten"; L. Hevesi's "Althoffleute"; Rudolf Lindau's "Türkische Geschichten"; Herrenrecht's "In Sachen des Glaubens und Gewissens"; Adalbert Meinhardt's "Norddeutsche Leute"; Konrad Telmann's "Lucrecia" (simply entertaining, weak in character drawing) and "Vox populi"; Ernst Altkirch's "Ich, der Träumer" (rather light ware—old pictures and phantasies); "Tragikomödien: fünf Geschichten," by Josef Ruederer (imaginative, acute observer, satirist); Walli Glück's "Das Märchenschiff und Anderes"; Paul von Schönthan's "Enfant terrible und C. W. Radebeul & Cie." and "Wiener Luft: Stimmungen und Geschichten"; E. Eschricht's "Reine Liebe: Geschichten aus dem fernen Orient" (interesting descriptions of Eastern life); Hans Hoffmann's "Bozener Märchen u. Mären" (poetical stories); the late Heinrich Noë's "Edelweiss und Lorbeer: neue Bilder aus Tirol" (mannered); Detlef von Liliencron's popular "Kriegsnovellen"; "Alte Schule: Erzählungen," by Marie v. Ebner-Eschenbach, whose husband Moriz, in "Hypnosis perennis.—Ein Wunder des heiligen Sebastian. Zwei Wiener Geschichten," shows qualities similar to those which distinguish the work of his wife; Mme. Clara Sudermann's "Siegerin"; Mme. Lou Andreas-Salome's "Aus fremder Seele" and "Ruth" (fine characterization; lacks warmth); "Severin," simply and neatly told by Anna, Countess Pongracz; and Maria Janitschek's "Vom Weibe" (strong, but at times showing rampant sexuality). Carl Wolf's "Geschichten aus Tirol. 3. Sammlung" and "Drei Erzählungen" (peasant stories with feeling for dramatic effect) and Wilhelm Schäfer's "Die Zehn Gebote: Erzählungen des Kanzelfriedrich" (plain, true pictures of North German peasant life) seem to lead us naturally to those writers of the people of whom Karl Schrottenthal (pseudonym of Karl Weiss), editor of "Dichterstimmen aus dem Volke," has already introduced a number to the public. His latest issues are "Aus dem bayerischen Wald," stories by the peasant girl Emerenz Meier, "Franz Wörther, ein Dichter und Denker aus dem Volke" (deeply felt, simple poetry, without phrase), and a second edition of the poems of Stine Andresen, a daughter of Schleswig-Holstein, who writes simply and from the heart. Schrottenthal lays stress upon the culture-historical importance of all such work, as indicating a new literary current, but some critics reply that it is simply a matter of extravagant enthusiasm over "nature-poets." "Lyric and nar-

rative poetry is declining," we are told. "Selected Poems" and "Poggfried: Kunterbuntes Epica in zwölf Kantunen" (great, powerful humor, by the noted Detlef von Liliencron; the epic "Pineellade," by Ferdinand von Saar; Julius Wolff's "Assalide: Dichtung aus der Zeit der provençalischen Troubadours"; and "Das Lied der Menschheit, Bk. 3: Mose," by Heinrich Hart ("the only serious, worthy representative of epic verse to-day"), figure in the short list. Paul Heyse writes poetical reveries on "Das Goethe-Haus in Weimar." Further volumes of verse are "Emanuel Geibel's Gedichte aus dem Nachlass"; Otto Julius Bierbaum's "Pankrazius Graunzer, der Weiberfeind" (a delicious bit of neo-romanticism "in specifically modern mood"); J. V. Widmann's "Maikäfer-Komödie" (describing humanity in animal guise); "Verse, 1892-6," of Richard Schaukal, a type of the literary *débutant*, poet and dandy, discursive and restless; Adolf Wilhelm Ernst's "Empor! Gedichte" (simple, straightforward); Otto Frommel's "Wandern und Weilen: Gedichte" (simple and kindly); "Hohe Lieder," by Franz Evers, a mysticist and true artist in verse; Emanuel Freiherr von Bodman's "Erle: ein Gedichtbuch"; Carl von Arnswaldt's "Gedichte" (good in form); "Wiedergeburt: der Dichtungen 3. Folge," by John Henry Mackay, an original, thoughtful lyricist, who "wrestles with form"; Adolf Schaffheitlin's uncouth and unclear "Saturische Phantasiaen"; H. Landesmann's "Nachsommer: neue Gedichte von Hieronymus Lorm"; and "Traumgekrönt: neue Gedichte," by René Maria Rilke (not one of the great; has lyrical talent). E. v. Wildenbruch's dramatic legend "Willehalm" is described as a powerful allegorical picture of William I. Gerhart Hauptmann's "Die versunkene Glocke," a "tragedy of destiny in the guise of a fairy tale," attracted great attention in the dramatic world. As Kuno Francke says, it treats the theme of man's superhuman aspirations in a new and fascinating manner. Sudermann's "Moriuri" (the common title of three one-act pieces: "Fritzechen," "Teja," and "Das ewig Männliche") and "Johannes" (biblical in subject, modern in spirit), performance of which was forbidden by the censor, were highly praised. Other plays of the year are Georg Hirschfeld's "Agnes Jordan" and "Die Mütter" (exciting plot, strong characterization, a gloomy picture . . . of weak ambition), unsatisfactory in solution; Hermann Hango's "Nausicaa" and Leo Ebermann's conventional "Die Athenerin" (successful on the stage), classic in subject, but not in treatment; Ernst v. Wolzogen's comedies "Unjamwesi" (a literary whitewashing of Carl Peters), adversely criticised, and "Lumpengesindel," a picture of life in the Berlin *bohème*; Arthur Schnitzler's "Liebeslied" and "Freiwill" (concerned with honor and the duel); O. E. Hartleben's "Ein Ehrenwort" (also dealing with the duel) and "Die sittliche Forderung" (one act); Fulda's not remarkable comedy "Jugendfreunde"; Fedor von Zobeltitz's "Das eigene Blut" (hardly as strong as his "Ohne Geläut"); Marre's drama "Der Glückselige"; Paul Heyse's three one-act plays: "Der Stegreiftrunk," "Schwester Lotte," and "Auf den Dächern"; "Das Tschaperl" (showing decided advance), by Hermann Bahr, spirited, always surprising, always sensational; Oskar Frenz's "Das Kuckucksei," a "folk play"; Marie v. Ebner-Eschenbach's humorous one-act "Am Ende"; Carlot Reuling's "Das Stärkere"; Skowronnek's "Waidwund" (poor dialogue); Max Petzold's "Die Einzige"; Max Halbe's "Mutter Erde"; Eugen Zabel and Alfred Beck's "Der Gymnasialdirector" (an argument for new methods in education); Paul Lindau's "Die Venus von Milo"; Rudolf Lothar's "Ein Königsidyll" (weak, but promising); Walther

and Stein's "Papa Nietzsche"; Schottman and Koppel-Ellfeld's comedies "Die geliebte Lisa" and "Renaissance," harmless and smooth; Baumenthal and Kadelberg's farce "Hans Hackeborn"; Von Trotha's "Hofgunst"; Max Drewes' "Kühe" (original, "a vigorous and not overdone burlesque"); "Jenseits der Liebe" (comedy) and "Der Lange Preusse" (play), by Rudolf Stratz, both unsuccessful, and showing want of concentration; "Stückluft," drama by Franz Servaes (deep poetic feeling, coupled with a certain brutality); L. Ganghofer's "Meerleuchten" (modern tendencies, with a melodramatic tinge); Eduard Stucken's "Ysa" (strange platitudes in the language, yet promising); Fischer and Jarno's farce "Aschermittwoch"; and Juliane Déry's comedy "Die sieben mageren Kühe." Johanna Baltz, author of various popular patriotic plays, has written the festival plays "Zollernfrauen" and "Wilhelm der Grosse"; and Hans Neuert, a Bavarian actor and writer of peasant plays, wrote and produced "Zwergen der Laila" on the occasion of his jubilee. Innumerable other novelties have been produced.

Greece.—The Cretan incident and the resultant Greco-Turkish War have hampered literary activity. Of historical literature the late ex-Premier Epaminondas Deligorgis's interesting "Political Year-books" (dealing with the disturbed period 1859-62), Mme. Soteria Alimberti's "Amalia, the Queen of Greece" (anecdotes of the court), and an authentic biography of Theodor Grivas are noted. "Macedonia" (on Macedonian inscriptions and history), by Myaritis Dimitzas, "Chalera from a Physical and Medicinal Point of View," by Stephen Kallias, and George Papandreou's "The Dialect of Ancient Elis" are each of interest in its line. A. P. Kerameus published 40 unedited letters of the Patriarch Photius, with an introduction in Russian, and S. P. Lambros issued 144 unedited fables by George Etalos, a Greek writer of the sixteenth century. The Archaeological Society has undertaken the publication of Lolling's "Catalogue of the Epigraphical Museum," a periodical entitled "Monuments of Greece" (*Μνημεία τῆς Ἑλλάδος*), to contain phototypes of the most important works of art, accompanied by short explanatory texts, and Caweran's topographical and architectural plans of the excavations on the Acropolis, 1885-91. The Society *Ἡστορική* has begun the publication of an annual, *Ἐπερῆς*, containing contributions by various authors and reports on the very extended activity of the society. Gregor Marnas has projected and begun a useful series of translations of masterpieces, the work being carried out under the direction of Iysander Hadjiconsta, and including translations of Curtius's "Greek History," by Lambros; Ribbeck's "History of Roman Poetry," by S. Sakellariopulos; Macaulay's "History of England," by E. Rhodios; and Whitney's "Life and Growth of Language," by G. Hatzidakas. A new edition of the translation of Shakespeare by Bikelas has also appeared, "a healthy sign of revival at Athens."

Holland.—(Flemish authors under Belgium.) New historical works are P. L. Muller's "Onze gouden Eeuw"; "De Geschiedenis der Middeleeuwen" and "De nieuwe Geschiedenis 1517-1789" (Vol. I), both by A. G. van Dijk and P. F. C. Scharp de Visser; Jan ten Brink's "Parijs tijdens de Witte Terreur"; and "Amsterdam in de zeventiende Eeuw," by A. Bredius, H. Brugemans, G. Kalf, etc. Miscellaneous publications to record are F. Pijper's "Geschiedenis der Boete en Biecht in de christelijke Kerk," Vol. II; "Bijdragen tot de Geschiedenis van den nederlandschen Boekhandel," Vol. VII, Part I; Ch. M. van Deventer's "Platonische Studien" and "Helleense Studien"; and P. Zuckert's "Moderne Hollandsche Eetsters."

New novels are "Metamorphose" ("a dissection of a modern novelist which is autobiographical and interesting"), by L. Couperus, published in "De Gids"; Willem Paap's "Jean Collette," an anti-Semitic novel, "tolerably well written"; and "De Merelhof," by L. Stratenus. Here, too, the work of the younger writers is influenced by psychological, moral, and social theories. Examples of this class, dealing with the dark side of life, are Hora Adema's "Wormstekigen," half-scientific, half-fantastic; the much-discussed, not deep, somewhat affected "Vragensmoede," by Anna de Savornin Lohman, author also of "Levenserust"; and C. P. Brandt van Doorne's "Twyfel" (well told, in excellent style, both analyzing conflicts of faith; and Frans Coenen's "Een Zwakke," a depressing and uncomprehensibly realistic picture of the dreary misery of "genteel poverty." More romantic are Van Schendel's "Droeg" (the hero of which scorns worldly power, but his human nature proves stronger than ethical maxims) and Adriaan van Oordt's impressive "Irmelio," a dramatic story of the conflict between Christianity and heathenism in the Middle Ages. Annie Linden's "Gold" is a story of life in Dutch East India vividly told. Poetry of note is supplied in Frederik van Eeden's "Lieba: A Song of Loyalty," a beautiful dramatic poem, and Albert Verwey's "Aarde," reprints marked by "deep thought and stately rhythm." A costly illustrated edition of the poems of the late Jaques Perk has been issued. Pol de Mont, in a spirit of reunion, has brought out "Sedert Potgieter's Dood: Verzen van Noord- en Zuidnederlandse Dichters," an anthology of Dutch and Flemish poetry, in which connection a Dutch critic informs us that the briskness and advance of Dutch poetry is not accompanied by a corresponding regeneration in Flemish literature. It appears that the old "De Gids" is already publishing contributions by the literary reformers and revolutionaries of a decade ago, while the "Nieuwe Gids," edited by Willem Kloos, is deteriorating.

Hungary.—The millennial exhibition has left its mark upon the literature and life of the year. Many books of a national character have appeared, of which some possess permanent value: Mór Geléri's interesting "Hungary in the Times of its Millennium" (written by prominent specialists); "Millennial Hungary and its Population," by the statistician Joseph de Jekelfalussy; Julius Laurencie's finely illustrated "The Millennium of Hungary and the National Exhibition" (Vol. II); and "Millennial Hungary," a new richly illustrated fortnightly in three languages, edited by Laurencie and Adolf Agai ("Porzo"). Zoltán Ferenczi's excellent "Life of Petöfi" (praised at home and abroad), in three volumes, published at the expense of the Kisfaludy Society, and Tamás Szana's interesting and valuable "Life of Miklós Izsó" (the "pioneer of modern Hungarian sculpture") are important biographies. Elek Benedek has issued "Hungarian Fairy Tales and Legends," in five volumes. Zoltán Beöthy has written a "Little Mirror of Hungarian Literature," and has edited, with prominent scholars, a larger history of Hungarian literature. Antal Rado has published a "History of Italian Literature" of "exceptional merit." Gustav Heinrich is editing an "Old Hungarian Library" (annotated texts of old works). Joseph Diner-Dénes, a talented art critic, in "Past and Future," records studies and impressions of men and movements in literature.

In fiction there are Ferencz Herczeg's not very successful psychological novel "Szabolesz's Marriage" and "The First Swallow" (short stories in his "light and masterly vein"); Robert Tabori's "Cracked Columns" (a characteristic picture of

rotten county administration); "September," a satirical novel by Zoltán Ambrús; Tamás Kóbor's "Marianne" and "Demigod, and Other Stories" (both showing "intimate observation and dramatic talent"); the versatile István Szomaházy's "Summer Clouds" and "Biarritz & Co." (showing inexhaustible imagination, wit, and a terse and elegant style); "In the Dock," humorous sketches of the law courts, by Ignaz Balázs; "Female Beauty," by the realist Sándor Bródy; Szaniszló Timár's "Vanity Fair" (philosophizing novelettes); and "The Lady with the Golden Gloves," by Gyula Pekár (a "quaint, complex, and powerful novelist"). Poetry to be noted includes Sándor Endrödi's fine, patriotic "Kurucz Songs"; Lajos Pósa's tender "Dear Mother"; a volume of excellent lyric poems by Baron Sándor Nikolics de Rudna and "Iza, and other Poems," by Ferencz Martos, both new writers of talent; and a new volume of poems by Emile Makai (noted for polished form), who also published two successful plays in rhyme—"Adventures" and "New Adventures." Lajos Dóczy's fine play "Princess Ellinor" is poetical rather than dramatic; the comedy "The Guards," by Bela Ujvári, a new playwright, is effective; and Károly Gerő, in "Pink Letters," successfully leaves farce for comedy. The most popular play of the year—beside a translation of Du Maurier's "Trilby"—was István Géczy's "The Wild Flower of Gyimes."

Italy.—The study of history, we are told, "seems to be awakening, and to be abandoning the field of overminute inquiries for that of comprehensive syntheses or brilliant monographs on some particular point of history." Historical works of note and interest are Michelangelo Schipa's "History of the Duchy of Naples"; Del Lungo's studies on Politian, entitled "Florentia"; P. Molmenti's "Venezia: nuovi Studi di Storia e d'Arte"; the correspondence of the statesman Bettino Ricasoli, and of the historian Michele Amari; and the prolific Luigi Chiala's "La Vita e i Tempi del Generale Giuseppe Dabormida." Tommaso Caivano writes interestingly of Venezuela. Recent events have inspired A. Rossi's "Alla Guerra greco-turca, aprile-maggio 1897," and Arn. Nicoletti-Altinari's "Fragli Abissini." Noteworthy new editions of ancient texts are the "De Bello Gotico" of Procopius, edited by Comparetti, and the "Epistolario" of Coluccio Salutato, edited by Novati. The fine facsimile edition of Leonardo da Vinci's Codex Atlanticus is being issued under the auspices of the Accademia dei Lincei. Paolo Luotto's "Il vero Savonarola ed il Savonarola di L. Pastor" is an elaborate and convincing defense. "Per Antonio Rosmini, nel primo Centenario dalla sua Nascita," by a number of Rosmini's followers, constitutes "the solemn affirmation of a philosophico-religious school," and "the fundamental principle of Rosmini's philosophy, the idea of Being considered as the divine origin of human intelligence, is here developed in several different ways." Gaetano Negri issues moderate and effective "Meditazioni vagabonde" on religious and metaphysical problems. "L'Europa giovane," by Guglielmo Ferrero (socialistic, eloquent, imaginative, an acute observer), has been called the most interesting book of the year; though the author seems to base conclusions on insufficient testimony, he is remarkable as a prolific author of ideas. A. Loria deals with "La Proprietà fondiaria e la Questione sociale." Two interesting pamphlets by Jessie White Mario deal, respectively, with "Il Sistema penitenziario e il Domicilio coatto in Italia" and "Le Opere pie e l'Infanticidio legale." Angelo Conti makes an interesting study of "Giorgione." Literary criticism is flourishing vigorously. Among the numerous noteworthy publications in this field is Franco Ridella's "Una Sventura postuma di Gi-

as *como Leopardi*," completely clearing the poet's memory from Ranieri's accusations. National literature is also dealt with in A. Cerrati's "La Letteratura italiana"; G. Marchesi's "Per la storia della Novella italiana nel Secolo xvi"; E. Celi's "Il Paradiso terrestre Dantesco"; Ant. Zandonati's "Letteratura tridentina"; and "La Letteratura italiana nel Secolo xix," lectures (1871-'75) by Fr. de Sanctis, collected by F. Tortorella. G. Zano writes of "Shakespeare e la Scienza moderna."

The influence of D'Annunzio is "consummate artificer in words") and of Fogazzaro is felt in fiction, Luciano Zuccoli's "La Morte d'Ulisse" (short stories) and "Roberta" (novel) and Enrico Butti's novel "L'Incantesimo" being cited as examples of the former's influence. Prose fiction to be noted includes also "La Signorina X. di X." (anonymous; assumes the "unexpected character of an exegetical controversy"); S. Farina's "Madonna bianca"; A. G. Barrili's "Diamante nero" and "Galatea"; E. Castellnuovo's "Il Fallo di una Donna onesta"; Regina di Luanto's "La Prova"; "L'Amuleto," by A. R. Z. Neera; Renato Fucini's fine scenes of Tuscan peasant life "All' Aria aperta"; and Giacomo Morandotti's vigorous short story "La Veglia." "La Via del Male" is a promising "romanzo" by Grazia Deledda, whose "Anime oneste" is cited with "Marco Delinus," a tale by Fulvia (Rachele Saporiti) as proof that educational and juvenile literature shows improvement. Poetry is more spontaneous than the novel or the drama. The influence of the "barbarous" meters of Carducci and D'Annunzio is less marked than formerly, symbolism does not flourish, and sociological disquisitions and metaphysical speculations hold no prominent place in verse, although some of the younger poets draw their inspiration from the ills of society, as does Mercurino Sappa in his sincere and effective "Pie Rime." Poetry of note is found in Fortunato Vitali's "Epopea del Risorgimento" (23 meritorious sonnets; shows lyric rather than epic talent); "Nuge," by Attilio Tambellini; "Nell' Ombra," by C. A. Fabris; the beautiful "Ore campestri," by Cesare Rossi, one of the best poets of the young Triest school; Giovanni Cena's "Madre" (noble verse, evincing deep feeling); the murdered Countess Lara's posthumous "Nuovi Versi," musical, elegant, replete with imagery and sensual exaltation; Giuseppe Mantica's fervent and introspective "Speechio"; and Arturo Graf's "Le Danaidi" (naturalness of representation, with great simplicity in technique). The drama is not national but foreign in feeling, this outside influence being felt even in Marco Praga's "Mamma," which aroused such interest. G. Rovetta's "La Realtà," which won the prize at a recent competition in Rome, is disjointed.

Norway.—Fridtjof Nansen's picturesque account of "Fram over Polhavet" is well known through translations. Sophus Bugge's "Helge-Digtene i den ældre Edda, deres Hjem og Forbindelser" is rather philological. L. J. Vogt gives a scholarly account of "Dublin a Norse Town." The question of Norway's position in the union with Sweden has called forth books such as Yngvar Nielsen's account of the "Bodo Case" and Bredo Morgenstjerne's "Den Unionelle Ret," both advocating a firmer union. Legal works are F. Hagerup's detailed account of civil procedure and P. Kjersechow's codification of the criminal law. The mathematician Sophus Lie has rescued from oblivion Caspar Wessel, one of his predecessors. Philosophical literature is contributed to in H. C. Hansen's "Begrebet Frihed" (from Hegel's point of view), Alfred Eriksen's work on free will, Anathon Aall's "History of the Logos Idea," K. B. R. Aars's plea for "Moralen's Autonomi," and Chr. Benneche's "Tilværelsens Hem-

melighed" (an attempt to reunite religion and science). Theological literature includes new editions of Gisle Johnson's "History of Christian Dogmas" and "Christian Ethics," Knut Tønning's striking description of "The Process of Church Dissolution" (favoring a closer union of the Lutheran State Church with the Roman Church, an idea opposed by Jakob Sverdrup, Minister of Public Worship); and Axel Andersen's violent attack on "Church Pedagogics in Schools." In literary criticism there are Just Bing's "Tider og Idealer," Studier i fransk Poesie og Malerkunst, Erik Laas survey of general literature, and Vilhelm Sommerfeldt's monograph on Novalis (principally from a religious point of view). Snorre Sturlasson's sagas have been translated again by Gustav Storm, and issued in a finely illustrated *édition de luxe*, and a new edition of the voluminous works of Henrik Wergeland has appeared, with a delightful preface by Carl Nærup.

Noteworthy prose fiction includes Jonas Lie's "Dyre Rein" (well characterized); Thomas P. Krag's "Ada Wilde"; Hans E. Krag's "Sue" (clever character analysis); and "Fra Hav til Hav," and his wife Minna Rønne's interesting "Lømmen"; "Guvor Thorsdatter til Harbø" by Miss Alvide Prydz; Vette Vialie's fine "Solvendring"; Miss Dikken Zwilgmeyer's "Ungt Sind"; Mrs. Anna Munch's "Two Human Natures"; Jens Tvede's "Straumgr" (pictures of the western peasantry); and Sven Hilsen's "Proletar" (character sketches from the suburbs), all four classed as "psychological"; the successful historical novel "I Kancelliraden's Dage," by Trygve Andersen, a new author; Albert Brock-Utne's strong novelette "Vinter"; new work of no great importance by Mons Lie, Bernt Lie, Vilhelm Krag ("Den glade Løntant"), Peter Egge, and Otto Sindling; and new historical novels by Constantinus Flood, Charlotte Koren, and Marie. Also to be noted are Kristian Gløersen and Hagbart Wergeland's rural sketches and Capt. H. Angell's descriptions of "De sorte Fjeldes Sønner" from Montenegro literature, but not fiction). Sigbjørn Obstfelder, whose peculiarly elegant diction and entirely original character drawing have seemed slow in winning the public, scored a distinct success with his lyrical love story "Korset." Per Sivle and Nils Collett Vogt have sustained their reputation with a new volume of poems each. Hsen's gloomy "John Gabriel Berkman" naturally attracted attention both in Europe and the United States. Some found no flaws, while to others the technique seemed not as impeccable as hitherto, the characters were shadows, symbolical figures to fit theories. An American critic describes it as subtle, but a closet drama: "as a study, it is admirable; as a broad and free transcription of life, time will probably pronounce it to be a fine failure." Arne Garborg's masterly "Læreren," a pathetic tragedy of ideal Christianity, is written in dialect and therefore debarred from the stage. Johan Højer's first production, "Et Folketog," and "Sanct Olaf" (historical drama) were successful. Gunnar Heiberg's comedy "Folkeraadet," a keen satire on modern parliamentary methods in Norway, rather disappointing from a literary standpoint, called forth a scene of violent disorder on its production.

Poland.—Historical works to be noted, most of them dealing with national subjects, are A. Malicki's, "The Lekhs in the Light of Historical Criticism" and "Smaller Writings from the History of the Past"; Smolenski's "The Last Year of the Great Diet," a supplement to Kalinka's well-known work; P. Piekosinski's "On the Dynasties and Descent of the Polish Nobility"; M. Duboski's "Karol Prozer" (a contribution to the history of the rebellion of Kosciuszko); and Alkars "Prince

Repin and Poland." The publication of a jubilee edition of the works of A. Świentochowski has been begun. S. Dickstein's "Hołmę-Wronski: His Life and Works" deals with an enigmatic character; J. Mysielski describes "A Century of Polish Painting"; S. Tarnowski is the biographer of the painter "Matejko," and has issued two more volumes of "Literary Studies"; K. Bartoszewicz deals with "Books of Polish Humor"; and F. Hösick offers a three-volume biography of "Juliusz Słowacki," the "greatest Polish poet after Mickiewicz." Prose fiction to be noted includes, in the first place, "The Pharaoh," historical novel, by Bolesław Prus; two other historical novels, W. Przyborski's "The Knight Mora" (portraying types of seventeenth-century Poland) and T. J. Chomiński's "The Last Romans"; two excellent stories by A. Dygasiński, "As" (history of a dog) and "The Pen"; Sewer's "On the Threshold of Art"; "Belonging to Nobody," by M. Gawalewicz; "The Spoiled Girl," by W. Kosiakiewicz (a gifted narrator); M. Balucki's "Wis and Dziunia" (shows acute observation); M. Laskowski's "The Blasé Man" and "Grown into the Ground"; K. Gliniski's "The Defeat" (a rural idyl); W. Reymont's "The Female Comedian" and "The Ferments"; W. Gomulicki's poetical and thoughtful "Pictures of Venice"; Mme. W. Marrené's "History of an Ordinary Man"; Mme. G. Zapolska's naturalistic "A Fin-de-Siècle Wife"; Mme. Z. Kowerska's "In Service"; "Blagierzy," by I. Rogosz; and "Odrębna istota," "Pama Staryńska-Nemczys życia," and "Wielka partya," by W. Łos. In poetry attention is called to Mme. M. Konopnicka's excellent "Lines and Tunes," K. Tetmajer's selection of poems, and the work of L. Szezepanski, P. Kosmowski, J. Klemensiewicz, and J. Żulawski. Dramatists appear to have been active. "Cinderella" ("Popieczadło"), by the late J. Szutkiewicz (author also of "The Ball in the Foot"), A. Belcikowski's historical "A Market-Woman of Warsaw," and two comedies—M. Balucki's "The Female Slaves" and "The Women," by Z. Przybylski and Klemens Junosza—have been specially successful. Also to be recorded are E. Lubowski's "The Plaything," S. Kozłowski's "The Tournament" (tragedy in verse, strong principally in scenic effect), and S. Roniker's "tendency play" "Is it worth it?" Vol. I of F. Felicyan's "Dramatic Works" has appeared.

Portugal.—Few reports of literary activity reach us from this country. In *belles-lettres* there are José Ramos-Coelho's "Lampejos: Poesias" (1896); "Amores, Amores," by Teixeira de Queiroz (1897); and Alf. Botelho's "Azul e Negro" (1897). "Arte Portuguesa" is a prominent magazine. The periodical "O Archeologo Português, collecção illustrada de Materiaes e Notícias publicadapelo Museu Ethnographico Português—Prehistoria, Epigraphia, Numismatica, Arte Antiga" (Vol. I, 1895), takes up the work formerly carried on by the defunct "Revista archeologica e historica."

Roumania and Montenegro.—Roumania has its "Bibliographie de la Roumanie: Bulletin de la Librarie," published monthly at Bucharest. "Literatură și Știință" is a half-yearly collection of essays and articles, critical, literary, and scientific, published by C. Dobrogeanu-Gherea in collaboration with others. The publication defends the socialistic standpoint, and is one of the most noteworthy products of modern Roumanian literature. "Enciclopedia română publicată din înstărețirea și sub Aupiciile Asociațiunii transilvane pentru Literatură și Cultura Poporului român de C. Diaconovich" is in course of publication. Georges Bengesco, in his "Bibliographie franco-roumaine du XIX^e Siècle" (Brussels, 1895), says: "French works relative to Roumania, and especially writings published in French and in France by Roumanians, have in-

creased considerably within the last fifty years." Among such is "Histoire des Roumains de la Dacie Trajane depuis les Origines jusqu'à l'Union des Principautés en 1859: avec une Préface par Alfred Rambaud" (1896), two volumes, the substance of six volumes published by A. D. Xénopol in his mother tongue. A second series of Hélène Vacaresco's collection of Roumanian folk songs appeared (1894), under the title "The Bard of the Dimbovitza," in English translation, and "Legends from River and Mountain" have been gathered by Carmen Sylva (who produced a new drama, "Ullranda," in the same year) and Alma Strettell (1896).

In Montenegro Prince Nicholas, an interesting political personage, created a great sensation with his poem "Pjesnik i Vila" ("The Poet and the Fairy," 1893), which was "a fiery appeal to the people of the Slavic races 'to unite against their German and Austrian oppressors.'" The gifted prince's "Empress of the Balkans" gives evidence of his ability as a dramatist.

Russia.—Russian works in all departments of literature seem as numerous as ever in the publishers' lists, but not very much appears worthy of special note. K. Golovin (a novelist, known by the pseudonym Orlovski) in "The Russian Novel and Russian Society" dilates upon the intimate connection between Russian life and literature, and deplores the growing tendency toward superficiality. Equally pessimistic is Karéef in "Thoughts on the Essential Points of Public Activity," embodying "the sad pages of the history of Russian self-consciousness." The adherents of "Economic Materialism" and "Marxism" are doomed to disenchantment, according to Karéef and Slonimski. The latter's criticism appeared in the "Viestnik Yevropy," and, in fact, we are informed that much of the literary activity of Russia finds vent in the monthly reviews. This holds true also of *belles-lettres*, of which comparatively little appears in separate volumes. Many of the books published are on educational or technical questions. The enormous success of V. N. Liaskovsky's "A. S. Khomiakoff: His Life and Works" shows the hold that Slavophilism has, a fact commented upon in the "Russian Review" ("Russkoe Obosrénie") for February, 1897, by V. E. K., who calls Slavophilism "the very fruit of the life of our nation." As Herzen said, "in Russia there is a something which is peculiarly its own," and it is this which is being so earnestly studied. Hence the success of the books mentioned, and of the "Moscow Collection" ("Moskovski Sbornik"), by K. P. Pobedonostzev, praised even by the statesman's political and literary adversaries, and described as giving "a forcible, energetic, and logically founded exposition of our aims and ideals in the domain of religion, morality, and politics." Tshuproff and Posnikoff's "The Influence of Harvest and the Prices of Corn upon Some Points of Russian National Economy" (finding profit for peasants in plentiful harvests and low prices) has been mercilessly criticised. P. Boborukin's new novel "In a Different Way" (which appeared in "Viestnik Yevropy") is rather carelessly written, but shows his "quick grasp of all new manifestations of contemporary life"; he is thoughtful and observant rather than original. Further new works of fiction, all published in reviews, are K. Golovin's "Andrey Mologhin" and Miss Dmitrieff's "Mitinka the Teacher," in the "European Messenger" ("Viestnik Yevropy"); V. Svetloff's "The Little Corner of Colchida," Timkhovsky's "The Assistant Professor," "The Moujiks," a sketch by A. Tchekhof (author also of the unsuccessful comedy "Sea Swallows"), and P. Boborukin's "The Millions," in "Russian Thought"; Mme. B. Zhélykhovskaia's "Degeneration," in the

"Russian Review"; D. Olshanin's "The Irresponsible" and Orlovski's "The Honeymoon," in the "Russian Messenger"; Miss L. Gurevitch's "The Plateau," in the "Northern Messenger"; and Postapenko's "The Forgotten Sacristan" and M. Gorki's "Mr. Konovoff," in the "New World." In all of these, by authors of the most varying tendencies, describing all spheres of society, there is the same sadness, dissatisfaction, gloom.

Spain.—Here the section of national history is always voluminous. Noteworthy are the late Eduardo Pérez Pujol's incomplete "Historia de las Instituciones sociales de la España goda" (4 volumes), considered by some Spanish critics as in a measure conclusive, completed by A. Fernández Guerra, E. de Hinojosa, and Rada y Delgado in "Historia de España desde la Invasión de los Pueblos germánicos hasta la Ruina de la Monarquía visigoda"; Ricardo de Hinojosa's "Los Despachos de la Diplomacia Pontificia en España"; Lopez Ferreiro's "Los Fueros de Santiago y de su Tierra" (Vol. II.); Villamil y Castro's interesting "The Temporal Sovereignty of the Bishops of Lugo in its Relations to the Municipality" and "The Astorian Church of Santa Maria de Meira"; Dánvila's "History of the Reign of Charles III" (Vol. VI.); O'Callaghan's "Episcopologio de Tortosa"; the thirty-one "Relaciones históricas de los Siglos xvi y xvii," published by Chagón; Bove's "Assaig erítich sobre Ramon Sibiude"; "Recuerdos de cinco Lustris" and "Una Decada sangrienta," both contributions to contemporary history, by Villalba Hervás; the Marquis de San Román's "Guerra civil de 1833 á 1840 en Aragon y Valencia: Campañas del General Orúa" (Vol. II.); J. R. Carracido's "Estudios histórico-críticos de la Ciencia española"; Father Teixidor's "Antiquities of Valencia" (Vol. II.); Simonet's "Cuadros históricos y descriptivos de Granada"; "Joehs florals de Barcelona" for 1896; "Historia y Bibliografía de la Prensa sevillana," by M. Chaves; "Descripció de la Grandesa y Antiquitats de la Cuitat de Manresa" (first number in the "Biblioteca histórica Mauremna," edited by Soler); the unpublished work of Magi Canyellas, an author of the seventeenth century; Labaña's "Itinerary of the Kingdom of Aragon" (in the collection of Aragonese authors); the "Biblioteca Bascongada"; the celebrated "Tratado del Regiment dels Prínceps e de Comunitats" of Fr. F. Eximenis, published in separate sheets in the "Revista de Catalunya"; A. Rodríguez Villa's masterly essay on "Don Francisco de Rojas, Embajador de los Reyes Católicos"; Canal's excellent monograph on "San Isidoro" and his works; "Memorias de la Vida del Exmo. Señor Don José García de León y Pizarro" (Vol. III.); and "Segundo Proceso instruido por la Inquisición de Valladolid contra Fray Luis de León," printed in full, with notes by Father Blanco Garcia. Arabic studies are the interesting "Apuntes sobre las Escrituras Mozárabes Toledanas que se conservan en el Archivo Histórico Nacional," by Pons Boigues, and Ribera's "Bibliófilos y Bibliotecas de la España Musulmana," an extract from a larger work in course of preparation. Román y Zamora's "Repúblicas de Indias, Idolatrías y Gobiernos en México y Perú antes de la Conquista" forms part of the "Colección de Libros raros y curiosos que tratan de America." The "Historia del Descubrimiento y Conquista de Yucatán" is told by J. F. Molina Solís. G. Reparaz writes of "La Guerra de Cuba," R. Torres Campos reports on "La Geografía en 1895." A. and J. Luzán make an "Estudio geográfico de la Isla de Cuba," as does also F. Randeira Rodriguez, under the same title. In art history there are "Teatro lirico español anterior al Siglo xix," a collection of musical documents edited

by Pedrell, who is issuing also "Hispania: Schola Musica"; "Inventario de los Cuadros destruidos por el Gobierno intruso en Sevilla el Año de 1810"; and Part II of the "Catálogo del Museo Arqueológico-Artístico-Episcopal de Vico." Literary history and criticism have been contributed to in Pérez Pastor's valuable "Documentos Cervantinos hasta ahora inéditos"; Ramón Menéndez Pidal's "La Leyenda de los Infantes de Lara"; Menéndez y Pelayo's critical biography of José Martí de Azavedo in the second volume of the "Literary Works" of the celebrated abate; Cotarelo's "D. Enrique de Villena: su Vida y Obras" and monographs on the actresses Maria Ladrvenant and "La Tirana" (both in the series "Estudios sobre la Historia del Arte escénico en España"); and the incomplete second volume of the late Yxart's "El Arte escénico en España," a critical history of the contemporary Spanish stage. Noteworthy also are the speeches of reception at the Spanish Academy pronounced by Pérez Galdós and Pereda, and answered by Menéndez y Pelayo and Galdós, the themes being "relations between the novelist and the public" and "the local novel" ("la novela regional").

Prose fiction to be noted is Juan Valera's "Gente y Figura" ("a scabrous subject ingenuously and discreetly treated"); "Paz en la Guerra" (on the struggles between Carlists and Liberals, by M. de Unamuno, a young writer, whose works are defective in language, but show interesting, original thought; "Cartuchera," a story of Andalusian life, by Reyes, another young author; "Tierra de Campos," by Macías, and "Marroslán primero," by Mathen, both describing political life; A. Calderón's "Nenadas" ("at once a vigorous and profound expression of modern liberal ideas and a model of chaste and elegant style"); the risky "Cuentos y Chascarrillos andaluces," by four anonymous authors; and "Miscorordia" is characteristic and sympathetic picture of the poor of Madrid). Noteworthy examples of Catalan literature are Massó's fine "Crocus Pirenes" and N. Oller's "Figura y Paisatge." The little poetry of note includes Verdaguer's Catalan poems "Jesus Infant" and "Flors del Calvari"; Teodoro Cuesta's collection of Asturian verses; Rueda's "Fornos" and "Camafecos"; and Herrero's "Nelson," "La Muerta Viva," and "Canción," all three in one volume. The "Flores de Poetas ilustres de España" (Parts I and II) comprise works—many hitherto unknown—by poets of the sixteenth and seventeenth centuries. Of the drama, little need be said. Bonavent's "Gente conceida" shows excellent observation. An edition of the plays of Cervantes has been begun in the "Biblioteca Clásica," and Lope de Rueda's plays have been reprinted in the "Colección de Libros raros y curiosos."

Sweden.—Among new historical works there are H. Hildebrand's "Sveriges Medeltid" (Vol. II.); J. Linck's "Konung Oscar II"; "Konung Oscar II och Sveriges Folk," by A. Rydfors; O. Levertin's "Från Gustaf's III's Dagar"; and C. O. Nordensvan's "Krigarliv-Några Verklighetsbilder tecknade för Sveriges Ungdom." The jubilee of King Oscar II has been commemorated by the University of Lund in a "Festskrift." G. de Geer tells "Om Skandinavien's geografiska Utveckling under Istiden." To "Travel" belong C. Bildt's "Anteckningar från Italien af en svensk Diplomats"; R. Melander's "På Långtur. Färluftsbilder från Korvetten Frejas Expedition till Västindien, Vintern 1895-96"; and E. Hemberg's "Jakt- och Turistbildningar från Tsarernas Land" and På önadada Stigar: Jaktskizzer, Säger och Noveller från Lappland." Under "Jurisprudence and Political Science" are noted E. R. Sundén's "Om svensk Rättshänsätt till Upplösa Riksdag" and E. Hildebrand's "Svenska

Statsförfattningens historiska Utveckling från äldsta Tid till våra Dagar." To "Philosophy and Religion" belong E. Liljeqvist's "Antik och modern Solistik"; S. A. Fries's "Fredrik Fehr, hans Verksamhet och Betydelse som Teolog"; and C. Rohdin's "Religion og Kyrka." "Om svenskan om Skriftspråk" is by G. Cederschiöld. Fredrik Wulff offers suggestive ideas "Om Vårsbildning: rytmska Undersökningar." J. Mortensen considers "Profandramat i Frankrike." In "Svenska Pressens Historia till Statsförfattningen 1772," Otto Sylvan continues an excellent work. J. Vising presents a monograph on "Dante," and S. Adlersparre and S. Lajonhufvud one on "Fredrika Bremer." Finally, in the division "Belles-lettres" are classed G. af Geijerstam's "Kampen om Kärlek"; O. H. Dunrath's "Kvinnans Könslif"; Sægard's "Marie på Gyllene hästen"; and "Catharina Mansdotter," by Wilhelmina. It appears that there has been much complaining in regard to the slight attention given by the state to literature, especially in comparison with the condition of affairs in the two other Scandinavian countries, where state aid is quite generously given.

Grouping Finnish publications together, we have Axel O. Heikel's "Trachten und Muster der Mordvinen: hrsg. von der Societé finno-ougrienne" (in Finnish and German); "Japanesiska Studier och Skizzer," by K. Zilliacus; E. Favorin's "Kärlekens fria Religion"; and E. Aspelin's "Elias Brunner"—all issued at Helsingfors. Prof. Seiling, of the Polytechnic Institute in Helsingfors, published interesting statistics concerning the higher education and public position of women in Finland (see the "Nation," March 11, 1897, p. 182); the "Handbuch des Finnländischen Frauenvereins" gives further information on this subject; and Baroness Alexandra Gripenberg, Vol. I of whose work on "The Condition of Women in Europe and America" appeared a few years ago, has written a pamphlet on "Elizabeth Cady Stanton och Kvinnosaksarbetet."

LITERATURE. SPANISH-AMERICAN. While it is impossible to give full lists here of important publications, it will be attempted to mention from time to time some of the most noteworthy literary efforts of our Southern brethren. The "List of Books, Pamphlets, and Maps received at the Library of the Department of State," issued serially by the United States, always records numerous Spanish-American publications, mostly government reports and pamphlets.

A record of some books of the past two or three years is given herewith.

Cuba.—The unhappy state of affairs is not calculated to foster the gentler arts, but more peaceful times may bring forth new poets in a country which numbered among its writers Gabriel de la Concepción Valdez, Juan Clemente Zenen, José María Heredia, Antonio Bachiller y Morales, and, more recently, Gertrudis Gómez Avellaneda de Salazar ("Poesías liricas" and "Peregrina") and José Martí (killed in 1895). F. J. Balmaseda issued in 1894 "El Misceláneo: Colección de Producciones científicas y literarias."

Mexico.—"Antología de Poetas mexicanos," published by the Academia Mexicana; N. León's "Catálogo bibliográfico y crítico de Autores y Escritores referentes a Vegetales de México y sus aplicaciones, desde la Conquista hasta el Presente" (1895).

Argentine Republic.—A work on American languages (1894) by B. Mitre, F. A. Berria's "Resumen de las Leyes naturales de la Enseñanza (1896), and C. F. de Oliveira's pamphlet "El Cacique blanco" (1893).

Peru.—Cabello de Carbonera's pamphlet "El Conde León Tolstoy" (1894); Federico Elguera's

"Marionetes" (1894), viewing the world as a huge puppet show, healthy and clean in tone, free from the vicious cynicism so easily caught by the Spanish-Americans from the French; a "Geografía comercial de la América del Sur," by Carlos B. Cisneros and Rómulo E. García, to be complete in 12 volumes, begun in 1897. The vigorous young "Sociedad Geográfica de Lima" has been publishing in its "Boletín" (now in its seventh volume) important material from the literary remains of the distinguished scientist Antonio Raimondi, whose great work on Peru remains unfinished.

Chili.—The National Library, Santiago, issues an "Anuario de la Prensa chilena," a catalogue of books printed in Chili and received at the library. The volume for 1892 records 976 books issued by 176 publishing houses. Vol. XIII of J. T. Medina's "Colección de Documentos inéditos para la Historia de Chile, 1518-1818," has appeared. Among the new books are "Historia economica," by A. Brañas (1894); T. Guevara's "Incorrecciones del Castellano"; J. T. Medina's "La Imprenta en Manila desde su Origenes hasta 1810" (1896); "Juan Diaz de Solís: Estudio histórico" (1897); "Francisco de Aguirre en Tucumán" (1896); and A. Lopez Ferreiro's "Fueros municipales de Santiago y de su Tierra" (1896).

United States of Colombia.—Rafael M. Merchán's temperate "Cuba: Justificación de su Guerra de Independencia" (Bogotá, 1896).

Uruguay.—B. Fernández y Medina's "Antología uruguaya"; "Historia de la Confederación argentina" (1896, 5 volumes), by A. Saldías; D. Granada's "Reseña historico-descriptiva de antiguas y modernas Supersticiones del Rio de la Plata" (1896).

Brazil.—Cezar Zama's "Historia dos tres grandes Capitães da Antiguidade: Alexandre, Aníbal e Cesar" (1894) and "Traços biographicos e politicos dos tres grandes Oradores de Antiguidade: Pericles, Demosthenes e Cicero" (1896). There is a "Revista Brasileira," and an academy of letters has been established.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; and 1,118,587 in 1890. Capital, Baton Rouge.

Government.—The following were the State officers during the year: Governor, Murphy J. Foster; Lieutenant-Governor, Robert H. Snyder; Secretary of State, John T. Michel; Treasurer, Alexander V. Fournet; Auditor, W. W. Heard; Attorney-General, M. J. Cunningham; Superintendent of Education, Joseph V. Calhoun; Adjutant General, Allen Jumel; Commissioner of Agriculture and Immigration, Jordan G. Lee; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, S. D. McEnery, succeeded by Newton C. Blanchard, Lynn B. Watkins, Joseph A. Breaux, and Henry C. Miller—all Democrats.

Finances.—The assessment rolls, as made up in December, 1897, show a decrease in 12 parishes only, while the remaining 47 show increase. The total for 1897 is \$259,798,213.75, against \$251,911,316 in 1896. This increase is made up almost entirely in the country parishes. The increase from the parish of Orleans is \$256,418, while the country parishes show an increase over last year of \$7,630,479.75.

The decrease in some of the country parishes is due to the recent drought and overflow, and the decrease in the first district of New Orleans can be attributed to the bank failures.

As an evidence of the growing prosperity of the State it is noted that while ten years ago it was difficult for the State to secure a fiscal agent among

the city banks, the large banks were bidding against each other for the agency this year and offering bonuses or interest on deposits. The fiscal agent must pay the coupons on State bonds when they fall due and become the depository of all the State's funds. Formerly the agent had to advance money to pay the coupons as they fell due, but now the State's balances range from \$500,000 to \$2,000,000.

The condition of the State debt, Aug. 1, as given by the Auditor, was: Total consolidated bonds, \$10,776,100; total constitutional bonds, \$101,700; total bonded debt, \$10,877,800; total floating debt, \$1,177,931.39; total debt, \$12,055,731.39.

Education.—The latest statistics of the public schools available show the following figures for 1896: Number of white public schools, 2,077; number of colored public schools, 940; number of public schools, 3,017; white pupils enrolled, 103,898; colored enrollment, 66,079; white teachers employed, 2,630; colored teachers employed, 1,052; number of white private schools reported, 206; number of colored private schools reported, 60. There were 123 more public schools than in 1895, 5,630 more pupils, and 147 more teachers.

The State Board of Education adopted resolutions making it the duty of superintendents to see that the rule in reference to uniformity of text-books is observed, and that only those selected by the board are in use in the schools; and it was decreed that failure on the part of a teacher to comply after notice by the superintendent shall be deemed sufficient ground for his dismissal.

The Fisk Free and Public Library, in New Orleans, was opened this year.

The closing exercises of the sixth annual session of the Audubon Sugar School were held in New Orleans, July 3, when two seniors were graduated. The school is now made a part of the State University and Agricultural and Mechanical College, and removed to Baton Rouge. The experiment station at Audubon Park is to be continued, and the students of the Sugar School are to be brought to the experiment station during October, to remain for about three months, or during the grinding season. Having passed this period under the direction of experienced instructors in the culture of sugar, they will again return to the capital to resume their theoretical work.

The Sugar School grew out of the experiment station which was established in 1885 by Dr. W. C. Stubbs. The school was established in 1891, and has had more than 60 students; half of the number have been from Louisiana, mostly the sons of sugar planters. The requirements are that the students must be over seventeen years of age, and must possess a fair knowledge of English, arithmetic, plain geometry, and algebra through quadratics.

Public Library.—The Fisk Free and Public Library in New Orleans, in which are united the Fisk Free Library and the Lyceum or Public-School Library, was opened Jan. 18. It has 40,000 volumes, and in its reading-room are 30 daily papers and 200 periodicals. The circulation is about 300 books daily, and the daily average of readers is 500. This library is managed in harmony with the Howard Memorial Library, which has 35,000 books of reference.

Militia.—There were 44 companies in the State military service in July. An order was issued requiring all companies to have at least 40 privates each in September, or to be mustered out at that time. The first company of cavalry in the militia was organized in New Orleans, June 14, as the First Louisiana Cavalry Troop.

Banks.—Officers of two New Orleans banks that failed in 1896 were convicted this year. In May,

W. P. Nicholas, President of the Bank of Commerce, was convicted of embezzlement and sentenced to three years' imprisonment; the cashier was acquitted. Henry Gaines and Walter W. Grunault, of the American National, were convicted of embezzlement of the funds and it was held order-would, who was tried with them, was acquitted.

Cruelty to Animals.—In December in a case carried up from a recorder's court in New Orleans, the Supreme Court upheld the constitutionality of the laws for the prevention of cruelty to animals. The decision covers both State and city legislation for the protection of dumb animals, and declares that the penalties inflicted by the recorder's courts for offenses committed in the city's streets or other public places are proper and legal.

Industries.—The year was not in all respects prosperous. There were floods and droughts, and these consumed a large portion of the resources of the sections afflicted. The yellow fever cases and consequent excitement and quarantine caused interruption and loss to trade.

Suffering from Drought.—Distribution of supplies to the people of the drought-stricken district of north Louisiana began about Nov. 1, 1896. The \$65,000 given from the State treasury was exhausted by the end of January. Thirteen parishes were affected by the drought. Money and supplies were raised from various sources. In March the number of destitute people was estimated from 75,000 to 100,000, and there was little prospect of their being able to help themselves.

The Flood.—The Governor issued a call to the people of the Delta, April 3, saying, in part: "The vast flood now coming down the Mississippi has overtopped all the records. The volume of water which has to pass out to sea through the channels of the main stream and the Atchafalaya is undoubtedly greater than the levees have been heretofore called upon to withstand. After years of patient industry, enormous sacrifice, and burdensome taxation by the alluvial districts of our commonwealth, aided by the State at large and the National Government, protection against overflow, if not brought to a state of perfection, has at least reached a stage justifying the hope of an early consummation of a levee system secure against any contingency. These bulwarks should be held at all hazards. Their downfall means your impoverishment, and perhaps your ruin. Bear in mind that in this contest you have the advantage of fighting as an organized army with able commanders. The engineers of the United States, the whole corps of State engineers, the chiefs of the various districts, with all their staffs and disciplined forces, are now in action along the front."

The levees were strengthened and all possible precautions were taken against the coming flood. The first break in the State occurred April 16, in Madison Parish. The river reached its highest at New Orleans, May 13-14, when the gauge showed a flood mark of 19½ feet. The water only touched that point for one day, and then declined. This was an excess of 1-6 foot above any previous flood on record. But this extraordinary flood wrought in Louisiana a smaller damage than has ever been recorded of any overflow. The levees which failed were the weakest on the entire line, and even they were intact when the river at Vicksburg, nearly opposite, reached the unparalleled height of 52 feet above low-water mark. But when the flood rose half a foot higher those two levees succumbed. Below the mouth of Red river, hundreds of miles of embankment withstood the flood.

When the New Orleans Levee Board paid off its account of the cost of protecting the city against the flood the total was found to be \$174,000.

Fever.—The first case of yellow fever in New Orleans occurred about Sept. 6. The "Baton Rouge Advocate" said, Oct. 6: "For a month or more previous to the discovery of the first case in New Orleans a mild type of fever, which the physicians pronounced to be dengue, had prevailed at Ocean Springs and other points on the Gulf coast, and thousands of the citizens of New Orleans had come in contact with them by means of the cheap excursions which went out regularly every week from that city. In addition to this, hundreds of New Orleans families had spent the summer at these coast towns, and as soon as the Ocean Springs cases were announced to be yellow fever a wild stampede of these families took place, and the germs of infection were distributed over New Orleans. Never before, perhaps, did a disease break out under circumstances more favorable for its uncontrollable spread. To add to the danger of the situation litigation had tied up by legal process the funds set aside for the disposition of the garbage of the city, and owing to this fact New Orleans was probably filthier than has before been the case in twenty years."

Sept. 24 a mob gathered around a school building in which fever patients were to be treated, while it was being put in readiness. The police were unable to control the mob, and while they were engaged in front of the building two incendiaries, with a can of oil, proceeded to the rear and quickly had the building in flames. An alarm was turned in, but the first engine had scarcely arrived when its hose was cut. When other engines arrived, their hose also was destroyed by the mob; but the arrival of a large squad of officers enabled the firemen to work, and the main portion of the building was saved.

Lawlessness.—In May the President sent to Congress a message concerning the lynching of three Italians at Hahnville, Aug. 8, 1896, recommending an appropriation of \$6,000 for their families, without admitting the liability of the United States in the premises. In reference to the law that allows foreigners in Louisiana all the rights and privileges of citizenship while they are still under the protection of a foreign government, the "Picayune" says: "Nothing is more common than for Italians here to announce an intention of becoming citizens, although they never consummate citizenship. The mere declaration gives them the rights of citizenship in Louisiana and permits them to hold licenses as masters of vessels navigating American waters, which they could not do otherwise. But, although they may vote and hold office in Louisiana, they are foreigners still under the United States statutes, and are still under the care of their own governments. Probably nine tenths of the Italians who hold political rights in Louisiana, voting and holding office, are not actual citizens, but only prospectively so."

Three negro murderers were hanged by a mob at Amite City, Jan. 20, and three others, also accused of murder, were hanged by a mob at St. Gabriel, Dec. 12.

Political.—The new registration law requires that the applicant, with his own hand, and without the dictation or suggestion of any one, in the presence of the supervisor of registration or his clerks or assistants, shall write and fill up the blanks in a printed form which shall set forth the State and date of his birth, his age, the dates during which he has lived in the State and parish in which he desires to register, and whether he has ever been convicted of treason, embezzlement of public funds, malfeasance in office, bribery, illegal voting, or other crime punishable by hard labor or imprisonment in the penitentiary, or whether he is

an idiot or is insane, such persons being denied the right to vote. The applicant is required to make oath to his statement, and, if it be found satisfactory, he is then admitted to registration. If, from any cause, the applicant be unable to write, the supervisor of registration shall read to him the printed questions, and he may get some other person to write out the answers of the applicant for the filling out of the blank.

The constitutional-convention proposition has been accepted by the people by a majority of about 30,000. Nominating conventions were held, and candidates for members of the convention chosen, the election taking place at the same time that the question of holding the convention was voted upon, Jan. 11, 1898.

LUTHERANS. Three of the four general bodies and a number of independent synods are working toward unity in doctrine and in practical operations. The merging of small synods and the formation of new organizations brings the number of district synods to 61. The statistics for the United States and Canada, based on the report of 1897, presents the following totals: Four general bodies and 14 independent synods, numbering 6,206 ministers, 10,169 congregations, and 1,489,874 communicant members; 3,471 parochial schools, 2,777 teachers, and 204,048 pupils; 5,425 Sunday schools, 54,155 officers and teachers, and 510,832 pupils. The benevolent offerings for the year, reported through the regular synodical boards, amounted to \$1,262,988.51, but this does not include large contributions made by individuals and congregations. The latest revised statistics of Lutherans in the world, as they appear in the forthcoming seventh edition of "Lutherans in all Lands," by the Rev. John N. Lenker, D. D., are as follow: 33,365 ministers, 49,474 congregations, 57,069,526 baptized members, 101,121 parochial schools, and 9,446 deaconesses. The educational institutions of the Church in this country number 123, of which 25 are theological seminaries, 44 colleges, 40 academies, and 14 ladies' seminaries, aggregating property valued at \$4,355,551 and endowment amounting to \$1,539,391, employing 765 professors and instructors, and having 12,284 students, of whom 2,668 (many institutions not reporting this item) are in course of preparation for the office of the ministry. The purely benevolent institutions number 97, which report property valued at \$2,555,541, endowment amounting to \$199,562, and 44,270 inmates. There are 137 periodicals published in English, German, Norwegian, Swedish, Danish, Icelandic, Finnish, French, and Slavonian, and in the services of the Church in this country 14 different languages are employed.

The following tabular statement shows the numerical strength of the four general bodies and the independent synods:

NAME.	Synods.	Ministers.	Congregations.	Communicants.
General Council.....	9	1,177	2,010	338,604
General Synod.....	25	1,158	1,506	186,351
Synodical Conference.....	5	1,839	2,416	499,023
United Synod, South.....	8	213	431	41,038
Independent Synods.....	14	1,819	3,906	423,058
Totals.....	61	6,206	10,169	1,489,874

Of the four general bodies, the General Synod and General Council held their biennial conventions during the year, of which brief reports are here presented.

General Synod.—The thirty-eighth convention of this body was held in Mansfield, Ohio, June 9-17, 1897. There were 221 delegates present, including 115 clerical and 106 lay delegates. Official visitors

were present from the United Norwegian Church, the General Council, the General Conference of the United Brethren in Christ, and the General Synod of the Reformed Church of the United States, and letters of fraternal greeting from the United Synod of the Lutheran Church in the South, the General Synod of the Reformed Church in America, and the United Presbyterian Church of North America. The opening sermon was delivered by the retiring president, the Rev. H. Louis Baugher, D. D., of Gettysburg, Pa. The convention was opened according to the new order for the opening of synods as prepared by the Committee on Common Service, and the following officers were elected: The Rev. M. W. Hanna, D. D., president; the Rev. William S. Fries, D. D., secretary; and Louis Manas, treasurer. The work of the convention consisted in the consideration and action on the biennial reports of the boards by whom the affairs of the body are managed.

Foreign Missions.—The report of the Board of Foreign Missions was read by its secretary, the Rev. George Scholl, D. D. The receipts for two years ending April 30, 1897, amounted to \$85,120.99, with an indebtedness of \$7,176.80, occasioned chiefly by a diminished income from legacies and the failure of the coffee crop in the African mission. A retrenchment of \$4,000 was made in the work in India and of \$1,000 in Africa. Three missionaries returned during the biennium and five new ones were sent out. A hospital has been opened in India and the mission congregations and schools are flourishing. The force of workers in the India mission number 188, whose labors are distributed over a large territory, embracing 470 villages, 384 organized congregations, and 15,699 baptized Christians and 3,065 candidates for baptism. The mission has a printing establishment and bookbindery; a reading room and book depot; 148 Sunday schools, with 6,588 pupils; 177 elementary schools, with 165 teachers and 4,656 pupils; a boarding school, with 118 pupils; a college, which, together with its branches, employs 49 teachers, who instruct 882 students. This is an increase of 13 teachers and 208 students over the number reported two years ago. The medical department embraces a hospital and a dispensary with two woman missionaries in charge; also a zenana department with six missionaries in charge. The mission in Liberia, Africa, known as the Muhlenberg mission, with headquarters at Monrovia, consists of 4 missionaries, 1 native pastor, 223 communicant members, 2 Sunday schools, with 120 pupils, 3 schools with 2 native teachers and 80 pupils. The value of the industrial department of this mission is estimated at \$89,450, consisting of 480 acres of land, 60,000 coffee trees, and machinery.

Home Missions.—The report of the Board of Home Missions was presented by its secretary, the Rev. A. Stewart Hartman, D. D. The receipts for two years amounted to \$86,665.18, of which the Woman's Missionary Society contributed \$12,072.97 and the Sunday schools \$20,000. The board reported a deficit of \$13,500. The board has under its care 160 missions, served by 193 missionaries, reporting 16,993 communicant members. The missions enrolled and, with a few exceptions, receiving the aid of the board for the whole or part of the time since April 1, 1895, are distributed as follows: 39 in Pennsylvania, 20 in Nebraska, 15 in Kansas, 14 in New York, 11 in Ohio, 10 in Maryland, 9 in Indiana and Iowa respectively, 6 in California, 5 in Colorado and Illinois respectively, 3 each in Michigan and Missouri, 2 each in Kentucky, New Mexico, and Wyoming, and 1 each in the District of Columbia, New Jersey, Tennessee, West Virginia, and Wisconsin. Of these, 146 are English, 9 Ger-

man, 3 German-English, and 2 Scandinavian and English. With few exceptions these missions are in more than ordinarily promising and important fields, and the board expects to increase for the next two years. As an auxiliary to the work the Woman's Missionary Society has 500,000 in population. This society endorses 22 synods and societies, 722 auxiliaries, and a membership of 16,498. During the past two years they contributed \$42,807.74 to the work of the boards, and also sent 16,498 to dissemination, the contents of which were estimated at \$10,000. The Board of Home Missions received more than \$12,000 from this society.

The report of the Board of Church Extension, presented by the Rev. Harry H. Weber, secretary, showed receipts amounting to \$49,592.79 and appropriations made and granted to 178 churches, amounting in all to \$74,159.72. This represents 51 more churches aided than in the previous report. The assets of the board aggregate the sum of \$350,561.47. A resolution was passed to the effect that the sum of \$25,000 should be annually apportioned among the district synods.

Board of Education.—The biennial report of the Board of Education, presented by the Rev. Henry C. Hathcox, D. D., secretary, showed receipts amounting to \$30,631.36. The board reported the election of the Rev. Frank D. Allman as President of the Western Theological Seminary at Athens, Kan., in connection with Midland College, and that measures had been inaugurated for the transfer of the German Theological Seminary at Chicago to the same place and uniting it with the Western Seminary. The board aided the following named institutions: Carthage College, Carthage, Ill.; Midland College, Athens, Kan.; and Hartwick Seminary, at Hartwick Seminary, N. Y. In aiding these institutions the board expended the sum of \$19,715.20.

Deaconess Board.—The report of the Deaconess Board was read by its secretary, the Rev. Frank P. Manhart. This board has under its care a mother house and training school at Baltimore, Md. The institution was opened Oct. 31, 1895, with appropriate services. Six deaconesses were set apart for their special work. They had received their training chiefly in the Kaiserwerth institutions in Germany. The present number of deaconesses in the Baltimore house is 7, with 7 probationers and 1 candidate. The faculty of the training school consists of 14 instructors. The course of study is arranged to prepare deaconesses "to do efficiently all such work in a congregation and community as may properly be assigned by a Christian pastor to a Christian woman educated and set apart for a service and ministry of help and mercy." The course covers two years. This is the only institution of its kind that is under the direct management of a general church body. The receipts of the board amounted to the sum of \$7,733.97.

Publication Society.—The assets of this society amount to \$77,276.87, and the sales for the year ending March 31, 1897, amounted to \$66,727.87. The number of periodicals issued monthly was 284,000. 4 new works were issued, new editions of 10 works, and 11 books and pamphlets were published for others, besides the proceedings of nearly all the district synods connected with the general body.

The next convention of the General Synod will be held at York, Pa., beginning May 24, 1898.

General Council.—The twenty-sixth annual convention of the General Council of the Evangelical Lutheran Church in North America was held in Erie, Pa., Oct. 14-19, 1897. The services were delivered by the Rev. Frederick A. Kautsky, D. D., of N. Y. The following-named officers were elected:

The Rev. Edward F. Moldehnke, Ph. D., D. D., of New York city, president; the Rev. William K. Frick, of Milwaukee, Wis., English secretary; the Rev. Gottlieb C. Berkemeier, of Mount Vernon, N. Y., German secretary; the Rev. Gustav A. Brandelle, of Denver, Col., Swedish secretary; and William H. Staake, Esq., of Philadelphia, Pa., treasurer. Delegates were present from 9 district synods. The German synod of Manitoba (organized in 1897) was admitted as a member of the body. Official visitors were present from the General Synod, the United Norwegian Church, and the Danish Church in America. The convention represented more than half of the Lutheran Church in this country. This body is the most polyglot of all the general bodies of the Lutheran Church in the United States, and is drawing into closer union with synods that have hitherto been holding aloof from connection with general bodies, though organized on the same confessional basis as the General Council. Among these are the Danish and Icelandic synods and the United Norwegian Church, the latter of which is one of the largest Scandinavian organizations in the country. The work of the convention consisted chiefly in hearing and acting on reports of the general boards and standing committees, and legislating for the general interests of the Church. Two morning sessions were devoted to discussion of the "Principles of Faith and Polity," adopted at the time of the organization of the council in 1867. Following are the "Fundamental Principles of Faith":

1. There must be and abide through all time one holy Christian Church, which is the assembly of all believers, among whom the Gospel is purely preached and the holy sacraments are administered as the Gospel demands. To the true unity of the Church, it is sufficient that there be agreement touching the doctrine of the Gospel, that it be preached in one accord, in its pure sense, and that the sacraments be administered conformably to God's Word.

2. The true unity of a particular church, in virtue of which men are truly members of one and the same Church, and by which any church abides in real identity and is entitled to a continuation of her name, is unity in doctrine and faith, and in the sacraments, to wit: That she continue to teach and to set forth, and that her true members embrace from the heart and use the articles of faith and the sacraments as they were held and administered when the Church came into distinctive being and received a distinctive name.

3. The unity of the Church is witnessed to, and made manifest in, the solemn public and official confessions which are set forth, to wit: The generic unity of the Christian Church in the general creeds, and the specific unity of pure parts of the Christian Church in their specific creeds; one chief object of both classes of which creeds is, that Christians who are in the unity of faith may know each other as such, and may have a visible bond of fellowship.

4. That confessions may be such a test of unity and bond of union, they must be accepted in every statement of doctrine in their own true, native, original, and only sense. Those who set them forth and subscribe them must not only agree to use the same words, but must use and understand those words in one and the same sense.

5. The unity of the Evangelical Lutheran Church as a portion of the holy Christian Church depends upon her abiding in one and the same faith, in confessing which she obtained her distinctive being and name, political recognition, and her history.

6. The unaltered Augsburg Confession is by pre-eminence the confession of that faith. The acceptance of its doctrines and the avowal of them without

equivocation or mental reservation make, mark, and identify that Church, which alone in the true, original, historical, and honest sense of the term is the Evangelical Lutheran Church.

7. The only churches, therefore, of any land, which are properly in the unity of that communion, and by consequence entitled to its name, Evangelical Lutheran, are those which sincerely hold and truthfully confess the doctrines of the unaltered Augsburg Confession.

8. We accept and acknowledge the doctrines of the unaltered Augsburg Confession in its original sense as throughout in conformity with the pure truth of which God's Word is the only rule. We accept its statements of truth as in perfect accordance with the canonical Scriptures. We reject the errors it condemns and believe that all which it commits to the liberty of the Church of right belongs to that liberty.

9. In thus formally accepting and acknowledging the unaltered Augsburg Confession we declare our conviction that the other confessions of the Evangelical Lutheran Church, inasmuch as they set forth none other than its system of doctrine and articles of faith, are of necessity pure and scriptural. Pre-eminent among such accordant pure and scriptural statements of doctrine, by their intrinsic excellence, by the great and necessary ends for which they were prepared, by their historical position, and by the general judgment of the Church, are these: the Apology of the Augsburg Confession, the Smalcald Articles, the catechisms of Luther, and the Formula of Concord, all of which are, with the unaltered Augsburg Confession, in the perfect harmony of one and the same scriptural faith.

This general body is composed of various nationalities, and in its legislation must have regard for the needs and wants of a widely scattered constituency. There are within its bounds, or under the control of its district synods, 3 theological seminaries, 5 colleges, 3 academies, 12 orphanages, and 26 institutions of mercy. The next convention will be held in 1899.

Foreign Missions.—The Rev. William Ashmead Schaeffer, D. D., corresponding secretary, presented the report of the Board of Foreign Missions. The mission of the General Council is in the Madras Presidency, East India, with Rajahmundry as its central station. The total receipts of the board for two years amounted to \$40,606.25, and the expenditures to \$40,427.87. In view of the demands of the work in India, the Council determined to raise \$50,000 a year for the next two years.

Three missionaries returned, one (the Rev. N. Paulus) died, and two new ones were sent out. The following is a summary of the statistics of the mission: 7 missionaries and their wives, 1 native pastor, 3 zenana sisters, 4 evangelists and catechists, and 138 teachers. There are 7 principal stations, 113 villages where schools have been established, 191 villages where the Gospel is preached, 2,719 children in the schools, and 5,036 Christians, of whom 2,002 are communicant members of native congregations. The seminary at Rajahmundry, the principal school of the mission, is in charge of the Rev. Calvin F. Kuder; the girls' boarding school under the care of Miss Agnes I. Schade; and the caste girls' school under the care of Miss Kate S. Sadtler.

Home Missions.—The home-missionary operations are in charge of 3 general boards and the district synods. This work embraces 354 missions, at an annual expense of \$80,000. Only the 3 general boards render reports to the general body. The report of the board of English home missions was presented by the Rev. John E. Whitteker, superintendent of English missions. The income of this

board was \$26,351.26. In the period covered by the report the board aided 22 missions in Massachusetts, New Jersey, New York, Ohio, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, Utah, Washington, and Oregon. The estimate of expenses for the next two years was placed at \$40,000, which amount was apportioned to the district synods. The report of the Board of German Home Missions was presented by its chairman, the Rev. Prof. John Nicum, D. D. This board supported 9 missionaries, who served 55 congregations and preaching stations, with a baptized membership of 5,800. The principal field of operation is the western part of Canada, east of the Rocky mountains. Six missionaries care for the scattered Lutherans in this vast territory. The missionaries, by the advice of the board, organized a synod on their territory, under the title of the German Synod of Manitoba and the Northwestern Territory, numbering 6 ministers, 52 churches and preaching stations, and 3,000 communicant members. The synod was organized at Winnipeg, Manitoba, July 22, 1897. The constitution of the New York ministerium was made the basis of the synodical constitution. The constitution of the General Council was adopted and a resolution was passed making application for admission into the general body. The receipts of the German board amounted to \$6,580.21, and the expenditures to \$6,659.52. The report of the Board of Swedish Home Missions was presented by the Rev. Gustav A. Brandelle. The field of operation of this board embraces Swedish settlements in widely scattered portions of the country, especially in the South, and in Utah and Montana. Most of the missionary operations of the Augustana Synod are carried on by the conferences of that body, the General Board having only a general oversight of the work. The Augustana Synod supported 200 mission congregations and stations, at an annual expense of \$25,460.

The Lutheran Mission and Church Extension Society presented a favorable report of its work. The receipts were \$8,800.44. The total assets amount to \$31,700.90. Missions were aided to the extent of \$10,700 in Philadelphia, New York, Illinois, and Ohio. Recently the society has been centralizing its efforts on the missions at Portland, Ore., Seattle, Wash., Milwaukee, Wis., and Duluth, Minn.

Immigrant Mission.—During the past two years the Immigrant Mission seemed to have lost much of its former importance, on account of the decrease of immigration. Nevertheless, the number of persons who spent some time in the Emigrant House, in New York city, was nearly 12,000. The receipts amounted to \$2,150.21. During the past two years 6,000 persons were furnished with free meals at the Emigrant House, and money was given to 135.

Board of Publication.—The report of the Board of Publication was presented by the Rev. Frederick W. Weiskotten, secretary. Five new publications were issued, a new series of Sunday-school lessons and teachers' helps were begun which have been enthusiastically received, wall charts and a paper for the primary school were issued, a "Bible Story" for the intermediate department of the Sunday school was published, and "The Lutheran," the official organ of the body, was issued by the new management. The sales amounted to \$31,209.07.

Deaconess Work.—Prof. Adolph Spaeth, D. D., LL. D., of Philadelphia, presented the report of the committee on deaconess work. This embraced the statement on this subject in the "Annual Cyclopaedia" for 1896, and gave a general *resumé* of the work in this country. The number of women either actively engaged in this work or in course of training for it is 176, an increase of about 25 per cent. over the statistics of two years ago. The number of Lutheran deaconesses in the world is nearly 10,

000. The six mother houses included in the report are in Philadelphia, Baltimore, Chicago, Milwaukee, Minneapolis, and Omaha.

Synodical Conference.—The Synodical Conference, an almost exclusive German speaking body, held no convention during the year but its work was carried on by boards and committees. Following are the statistics for the present year: 134 district synods, 1,839 ministers, 2,416 congregations, and 430,623 communicant members; 1,165 parochial schools, 875 teachers, and 100,419 pupils; 468 Sunday schools, 307 teachers, and 24,591 pupils. (Though the reports of Sunday schools are far from complete.) The benevolent offerings of the congregations amounted to \$322,066.69, exclusive of contributions for current expenses of congregations and schools. The synodical institutions number 4 theological seminaries, 2 colleges, 7 academies, and 20 institutions of mercy. The next convention will be held in St. Louis, Mo., May 15, 1899.

United Synod, South.—The United Synod of the South held no convention this year. Its next convention will be held in 1898. It is composed of 8 district synods, numbering 213 ministers, 451 congregations, and 41,638 communicant members, whose benevolent offerings amounted to \$20,000. It supports 1 theological seminary, 4 colleges, 8 academies, 1 orphanage, and 1 women's mission.

Among the independent synods the Joint Synod of Ohio, the Norwegian and German Iowa synods, and the United Norwegian Church are large organizations, carrying on educational enterprises and missionary operations of their own in numerous States. The 14 synods comprise 1,819 ministers, 3,806 congregations, and 428,658 communicant members; 1,217 parochial schools, 1,594 teachers, and 79,822 pupils; 1,284 Sunday schools, 5,700 teachers, and 77,790 pupils; and the benevolent offerings of the churches amounted to \$428,997.83. They support 11 theological seminaries, 15 colleges, 17 academies, and 18 institutions of mercy.

Conference of Deaconess Mother Houses.—The second annual conference of Lutheran Deaconess Mother Houses in the United States was held in Milwaukee, Wis., Oct. 20-22, 1897. The various mother houses were represented by the following delegates: Philadelphia, the Rev. Carl Gosdel, Sister Magdalena Steinhilber, and the Rev. Dr. Adolph Spaeth; Omaha, the Rev. Erik A. Fogelstrom, Sister Bethilde Swenson and the Rev. Sven P. A. Landahl; Baltimore, the Rev. Frank P. Marchant; Minneapolis, the Rev. Simon R. Tolfsen, Sister Ingeberg Sparland, and the Rev. M. Falk Gjertsen; Milwaukee, the Rev. Dr. Jeremiah F. Ohl, Sister Martha Gensike, and the Rev. William A. Passavant; Brooklyn, the Rev. Martin H. Hogge and Sister Matilda Madland; the Rev. John N. Kiddahl appeared as visitor from the newly established Norwegian house in Chicago, and Sisters Tena Petersen and Cecilia Nelson, the former in charge of the Swedish Bethesda Hospital in St. Paul, and the latter engaged in parish work in Minneapolis, but both connected with the Omaha mother house. The opening service of the convention was held in the chapel of the Milwaukee mother house, with an address of welcome by the Rev. William A. Passavant. The business sessions began on Thursday morning, Oct. 21, and the conference was formally organized by the election of the following named officers: Dr. Rev. Dr. Adolph Spaeth, president; the Rev. Dr. Jeremiah F. Ohl, English secretary; and the Rev. Carl Gosdel, German secretary.

The following papers were read and discussed at the several sessions: "The Parish Deaconess," discussed by the Rev. Erik A. Fogelstrom, with supplementary paper by the Rev. Dr. George F. Wainwright, of New York city; "The Training of Deaconesses,"

theses by the Rev. Dr. Spaeth; "How may Interest in the Deaconess Cause be stimulated, and Devout Women be won for the Work?" by the Rev. Dr. Ohl; "The Relation of the Deaconess to the Training of Little Children," by the Rev. Carl Goeddel; and "Peculiarities in American Social and Religious Life to be considered in the Training and Work of Deaconesses in America," by the Rev. Frank P. Manhart. The Milwaukee mother house was requested, by resolution of the conference, to issue an English edition of Theodore Schaefer's "Die Weibliche Diakonie." The conference adjourned to meet in Omaha, Neb., in 1898.

Danish Union.—At a convention held in Minneapolis, Minn., Sept. 30 to Oct. 2, 1896, a union was formed among the Danish Lutherans in this country which embraces the two largest bodies formerly in existence. The new synod is incorporated under the title "The United Danish Evangelical Lutheran Church in America," and embraces the "Danish Lutheran Church Association in America" and the "Danish Evangelical Lutheran Church in North America." The first synodical organization among the Danes in this country was effected in 1872, when the "Danish Lutheran Church in America" was organized; but as its ministers, to a large extent, held the dogmatical views of Bishop Grundtvig, of Denmark, not all the Danish pastors and congregations united with it, and even among those who entered the organization there was not perfect unanimity of view. And when, in the course of time, other Danes arrived, whose views differed from the Grundtvigians, controversies arose concerning the doctrines of the Church. In 1883-'84 a second synodical body was organized, which was known as the "Lutheran Church Association in America."

This organization was effected on the basis of the Lutheran confessions, and was naturally opposed to the principles of doctrine maintained by the original synodical body, organized in 1872, and there was no intercourse among them. In the synod of 1872 controversies continued for years among the "Grundtvigians" and the "anti-Grundtvigians" until the year 1894, when the latter party withdrew and organized the "Danish Evangelical Lutheran Church in North America" upon the basis of the Lutheran confessions. Thus it happened that there were two synodical organizations, which virtually held the same confessional basis, and whose principles were sufficiently harmonious to enable them to work together. These two bodies were merged into one synodical organization in 1896, as a united church, and held their first convention at Blair, Neb., May 27 to June 3, 1897. The Rev. G. B. Christiansen, of Omaha, Neb., was elected president; the Rev. N. S. Nielsen, of Waupaca, Wis., secretary; and Mr. H. Andersen, of Blair, Neb., treasurer. The united synod numbers 68 ministers, 110 congregations, and 7,994 communicant members; 60 parochial schools, 30 teachers, and 2,500 pupils; 91 Sunday schools, 352 teachers, and 3,887 pupils. It has a theological seminary at Blair, Neb., a college and a high school at Elkhorn, Iowa, two orphanages at Albert Lea, Minn., and Elkhorn, Iowa, a publication house at Blair, from which it issues its synodical paper, the "Dansk Luthersk Kirkeblad." It is the largest of the Danish organizations in the country and carries on extensive missionary operations in various parts of the country. The old Danish synod numbers 42 ministers, 100 congregations, and 12,000 members, and maintains three high schools or academies.

M

MADAGASCAR, a French colony, formerly a kingdom, occupying the island of Madagascar, in the Indian Ocean near the east coast of Africa. It was finally recognized by the Queen as a French protectorate on Oct. 1, 1895, after the French troops had occupied Antananarivo, the capital; became a French possession by virtue of a convention concluded in January, 1896; and by a law promulgated on Aug. 6, 1896, was constituted a French colony, in which the Queen was retained as titular ruler of the natives, but a French Resident General assumed full control of the administration and a French military force remained in occupation of the island. The Queen is Ranavalona III, born in 1861, who succeeded Ranavalona II on July 13, 1883, and afterward married the Prime Minister Rainilaiivony, who was the real head of the Government, and who waged two wars in defense of the independence of the country against the pretensions of the French, who claimed political rights over the island dating from the seventeenth century.

The administration is attached to the French Ministry of the Colonies. The cost of the army of occupation is borne by France. The Governor General and commander of the troops is Brig.-Gen. Gallieni. The French military force in 1897 was composed of a regiment of marine infantry, three batteries of marine artillery, a colonial regiment, a battalion of the foreign legion, two companies of Senegalese guides, and two regiments of Malagasy rifles. The total strength was 5,639, including 191 officers. There were 4,558 infantry, 1,367 artillery, and 44 cavalry. Of the men, 1,229 were natives of the island and 560 were Algerians.

The area of Madagascar and dependent islands is

estimated at 228,500 square miles, and the population at 3,500,000, of whom about 1,000,000 belong to the Hova race, which from their country of Imerina, in the center, imposed their rule on the rest of the island, though it was often resisted by other tribes. Antananarivo has about 100,000 inhabitants; the port of Tamatave, on the east coast, which is connected with the capital by 735 miles of telegraph, has 15,000. Another telegraph line runs to the capital from Mojanga, on the west coast, a town of 10,000 inhabitants. About 450,000 of the Hovas are Protestants and 50,000 are Roman Catholics.

The native Government depended on the forced unpaid service that it exacted from all the inhabitants rather than on its revenue, though duties were collected on imports and exports, and a small poll tax was paid. Formerly considerable sums were obtained from gold-mining licenses and royalties. The local budget for 1897 was 4,376,427 francs; the expenditure of France, 15,875,233 francs. A debt of 15,000,000 francs was raised in France in 1886, of which 10,000,000 francs were paid to the French Government as a war indemnity. This debt, which paid 6 per cent. interest, was assumed by the French Government and converted, in 1897, into 3-per-cent. bonds running sixty years.

Besides gold, copper is mined in considerable quantities. Silver, lead, sulphur, graphite, and coal are found also. The chief occupation of the people is agriculture and the raising of cattle. Rice, sugar, coffee, and cotton are cultivated. The forests are extensive and contain valuable woods, which are being exported by European companies. The natives weave cloths from silk, cotton, and the fiber of the raffia palm, and are skilled also in metal work. The

chief exports are cattle, caoutchouc, hides, coffee, raffia, sugar, wax, gum copal, rice, and hemp. The trade is chiefly with Mauritius, Réunion, France, the United States, and Great Britain. The American trade increased in recent years.

The general revolt and outbreak of lawlessness that spread through the island in 1896 was put down by Gen. Gallieni, and in the beginning of 1897 comparative security was reestablished. Communications between the capital and the ports of Tamatave and Mojanga were reopened. The people in the north who returned to their villages were armed by the French to enable them to resist the robber bands. The south was still in an anarchic condition. Thousands of the natives were impressed under the Hova law into the work of building roads. The Hovas had a million slaves, all of whom were made free by French law when Madagascar became a French colony, but to counteract the evils resulting from the sudden abolition of slavery the Governor General prepared a new labor law. Medical, normal, and technical schools were established at Antananarivo. The rebellion of the Fahavalo, Bet-sileo, Sakalava, and other tribes, which might have resulted in a general massacre of the whites but for the prompt and vigorous military measures of the new Governor General, was secretly fomented from the court of Antananarivo. Hence Gen. Gallieni deposed the Queen and sent her in exile to Réunion, issuing on Feb. 27, 1897, a proclamation in which he said that France was sole mistress in the island, and would bring civilization and introduce among the people her guiding principles of justice, peace, and equality for all.

The Queen claimed that her courtiers, without her knowledge, compromised her by relations with the Fahavalo rebels. A house was fitted up for her at St. Denis, and the French Government gave her an allowance of 24,000 francs a year. The Protestants induced the English Government to intercede for them, but the French Government would receive no representations respecting native Christians, as Madagascar was French soil and they were subjects of France. Great Britain, by treaty with the native dynasty, enjoyed perfect freedom of trade, subject to import and export duties limited to 10 per cent., most-favored-nation treatment, and the right of consular jurisdiction. After Madagascar was declared a French possession the French proposed to assume jurisdiction over foreigners and to introduce their customs system. Lord Salisbury would not admit that the war and its consequences justified the abrogation of British rights that were unassailable under the protectorate. He offered to compromise by accepting French jurisdiction over British subjects in Madagascar in return for the reciprocal surrender of French rights in Zanzibar. M. Hanotaux was unwilling to admit, after Madagascar was annexed to France, that the cases were parallel. The British Government, having recognized the French protectorate over Madagascar with all its consequences, on the assurance that the rights and immunities enjoyed by British subjects there would not be affected, would not agree to the effacement as a consequence of annexation of these stipulations, on the strength of which France had attained her position in Madagascar. In the end, the French minister agreed to the compromise proposed in respect to Zanzibar. With regard to the trading privileges also, Lord Salisbury declined to admit that French annexation could affect rights created by a covenant that existing treaties should be respected, and by an assurance that the protectorate should not be disturbed. M. Hanotaux denied that France had ever entered into a specific engagement not to annex Madagascar, and that the treaties, which were still valid under the protectorate, were

extinguished when Madagascar became a French colony. Germany and the United States had agreed to abolish their consular jurisdiction without demanding compensation. The law subjecting Madagascar to the French customs tariff became law on April 17, 1897, but was not carried into effect till August. After the abolition of royalty the bands of marauders decreased considerably, and the holdes of Antananarivo who were held as hostages were released. The importation of laborers into the island without the sanction of the Governor General was forbidden by a decree published on June 16. In July an English missionary named Hall was expelled from Madagascar as a political agitator. The rivalry between Protestant and Catholic missionaries was so disquieting to the natives of Imerina that they asked for the establishment of lay schools at their own expense. Gen. Gallieni, who introduced schools wherever he carried his work of pacification, protected the native religions and customs equally with the Christian. A French company has undertaken to complete the canal from Tamatave to Andoveranto. A railroad is also projected to connect Tamatave with Antananarivo. A monthly steamship service was established between Havre and the ports of Madagascar and the east coast of Africa. The Sakalavas in the autumn still continued to attack the posts established in the west, but the troops gradually reduced them to submission and deprived them of their firearms.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,269 in 1820; 359,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,915 in 1870; 648,936 in 1880; 661,086 in 1890. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Llewellyn Powers; Secretary of State, Byron Boyd; Treasurer, F. M. Simpson; Attorney-General, F. A. Powers; Adjutant General, Selden Connor; Superintendent of Schools, W. W. Stetson; Commissioner of Labor, S. W. Matthews; Insurance Commissioner, S. W. Carr; Bank Examiner, F. E. Timberlake; Liquor Commissioner, J. W. Wakefield; Inspector of Prisons, Augustus W. Gilman; Secretary of the Board of Agriculture, R. W. McKeen; Supreme Judicial Court—Chief Justice, John A. Peters; Associate Justices, Charles W. Walton, Andrew P. Wiswell, L. A. Emery, Enoch Foster, W. P. Whitehouse, Thomas H. Haskell, and Sewall C. Strout; Clerk, W. S. Choate.

Finances.—The receipts in the treasury for the fiscal year ending Dec. 31, 1896, amounted to \$1,576,362.14; disbursements for all purposes, \$1,663,102.26; showing an excess of expenditures over receipts for the year of \$86,740.12. In the preceding year expenditures exceeded receipts to the amount of \$167,955. The fiscal year of 1896 closed with a cash balance on hand of \$203,500.58. The rate of taxation for the year was 2½ mills on the dollar, yielding a revenue of \$731,941.70. Owing to the reduction of one fourth of a mill in the rate of taxation, the amount of State tax assessed was \$81,130.60 less than in the previous year. The bonded debt of the State was reported at \$2,303,000, showing a reduction in two years of \$100,000. There was paid during 1896, as interest on the bonded debt, \$73,940; the aggregate sum paid as interest during 1895-'96 being \$249,380. The apportionment of the school fund and mill tax to the several cities, towns, and plantations amounted to \$509,589.10, which was divided *pro rata* among 210,264 pupils, giving to each pupil \$2.42.

Banks.—The Bank Examiner reported the total number of banks in the State at 104—52 savings

banks, 18 trust companies, and 34 loan and building associations. The aggregate amount of assets held by these institutions was \$70,459,586.26, showing an increase over the previous year of \$1,982,359.74. The total assets of the national banks doing business in the State were shown to be \$36,941,561.12, thus making the entire banking capital of the State \$107,401,147.38. These figures show that the capital invested in the State banking institutions was nearly twice that of the national banks in the State. The number of depositors in the savings banks was 163,115; amount of deposits, \$57,476,895.88; average for each depositor, \$352.37; average for each inhabitant, \$86.94. The amount of deposits had increased from \$1,466,457.56 in 1860 to \$57,476,895.88 in 1896. In 1896 the number of depositors had increased over 1895 by 2,899, and the amount of deposits by \$1,100,751.98. The aggregate of reserve and undivided profits amounted to \$3,134,393.02, being an increase of \$232,783.50 over the previous year. The amount of loans and investments within the State held by the savings banks was \$26,164,585.84, showing a larger percentage of the funds of these banks invested in the State than ever before. The total earnings of the savings banks for the year were \$2,461,361.67, being but 4.1 per cent. on the average amount of deposits. From these earnings all dividends, taxes, and expenses are paid. The amount of dividends paid depositors was \$2,096,927.82, an increase of \$32,464.65 over the previous year. The amount of savings-bank tax paid was \$381,208. The trust companies reported an increase of \$50,500 in capital stock, \$55,665.90 in surplus and undivided profits, \$310,254.90 in deposits, \$251,537.63 in loans and investments, and \$407.173 in the total assets. The aggregate of time deposits and certificates of deposit was \$2,706,898.57. The total amount of dividends paid to stockholders during the year was \$77,227.50. The total liabilities of the loan and building associations was reported at \$2,691,446.47; total resources, the same; number of shareholders, 8,226; dividends paid, \$163,966.35.

Insurance.—According to the report of the Insurance Commissioner the amount of fire insurance written in the State during 1896 was: Companies of other States and countries, \$110,273,315.44; Maine mutual companies, \$5,784,286.50; special brokers, \$397,075; total, \$116,364,676.94. This is the largest volume of fire insurance ever written in the State, and exceeds by more than \$8,000,000 the business of the preceding year. The premiums received by the companies amounted to \$1,642,427.50, and the losses paid to \$883,247.69. The marine insurance written in Maine during 1896 amounted to \$18,772,758, of which \$17,535,840 was written by domestic and \$1,236,918 by foreign companies. This shows a loss of \$136,300 compared with the amount written during 1895. The marine premiums on the business of 1896 amounted to \$264,462.14, and the losses paid during the year to \$215,924.67. The taxes paid the State by insurance companies on account of the business of 1896 were: Fire and marine companies, \$18,546.84; life companies, \$24,746.52; miscellaneous companies, \$1,376.16; total, \$44,669.52.

Railroads.—The total mileage of steam railroads in the State in 1896 was 1,726.02 miles, 91.78 miles having been constructed during the year. All excepting 148.92 miles of this mileage is standard gauge. The returns to June 30, 1896, show an increase in earnings over 1895 of \$500,380.22, being \$8,111,507.26, against \$7,611,127.22. The total number of passengers carried was 5,706,615, against 5,535,634 in 1895; total passenger train mileage in the State, 3,497,709, against 2,937,231 in 1895; number of tons of freight carried 5,229,084, against

5,003,834 in 1895; total freight-train mileage, 2,989,302, against 2,713,291 in 1895. There were 25,000 persons receiving entire support from railroad employment, or nearly 1 in 25 of the population of the State.

Industries.—The woolen industry was reported in an unsatisfactory condition. Eight mills showed a falling off in production of nearly 15 per cent., and 12 mills a falling off in wages paid of \$22,546 and a shortening of average running time. The cotton industry showed a healthier condition, 6 mills, with an output of \$5,044,494 in 1895, showing an increase in product of about 5½ per cent. The 6 establishments reported where agricultural implements are manufactured showed a falling off of about 5 per cent. in the output, also a decrease in time run and number of persons employed. Eleven shoe factories, with an output of \$2,209,668 in 1895, showed an increase of \$51,962, or a little over 2½ per cent.; an increase of three days in average running time was noted, and about 1 per cent. in working force; the rate of wages showed a change of a small fraction of 1 per cent., increasing the wages of men 1 per cent. per week, and decreasing that of women 4 cents a week. The output of 3 brickyards, which in 1895 was \$51,490, showed an increase of 2½ per cent. Four carriage manufactories, with an output of \$65,000 in 1895, showed an increase of 2 per cent. Chewing-gum establishments showed an increase of about 10 per cent., or a product valued at \$75,606. In cigar factories the decrease in value of product amounted to 3½ per cent., or a falling off from \$61,500 in 1895 to \$59,250 in 1896. Clothing manufactories reported a decrease in product of about 10 per cent.; confectioneries, 13 per cent.; door, sash, and blind factories, the product of which in 1895 was over \$500,000, about 3½ per cent. In fish curing the falling off in the output was nearly 8 per cent. Leather-board establishments reported a decrease in product of nearly 15 per cent., and in working force over 12 per cent. Lumber mills, with an output in 1895 of \$321,423, showed a falling off of over 6 per cent. in product, and about the same in working force. Machinery establishments reported a decrease of 5 per cent. in value of products. Pulp and paper mills, with an output in 1895 of \$656,856, reported an increase in value of product of 19 per cent., without any corresponding increase in running time or working force. Silver-plate manufactories, which did a business of \$74,300 in 1895, reported a falling off in product of about 11 per cent. Soap factories doing a business of \$11,760 in 1895, showed a decline of 8½ per cent. in product. The value of the output of the tanneries of the State was given at an average of about \$70,000. The tanning and finishing of leather is one of Maine's important industries, and by the last census was exceeded only by cotton goods, lumber, boots and shoes, and woolen goods, in the order of the value of their product. All the various kinds of leather are produced, but the manufacture of sole leather is the most important. In one tanning establishment 1,000,000 sheepskins are tanned annually.

Education.—The Superintendent of Common Schools reported for the school year ending in 1896 as follows: Whole number of persons in the State between the ages of four and twenty-one, 209,798; whole number of different pupils attending school during the year, 134,140; average registered attendance per term for the year, 114,584; average daily attendance per term for the year, 94,912; average length of schools for the year, twenty-seven weeks and one day; number of schools, 4,391; graded schools, 1,094; ungraded schools, 3,297; number of schoolhouses in the State, 4,196; built during the year, 126, at a cost of \$189,605; estimated value of

all school property, \$3,738,506; number of male teachers spring and summer terms, 428; fall and winter terms, 979; female teachers spring and summer terms, 4,261; fall and winter terms, 4,628; different teachers employed during year, 6,786; average wages of male teachers per month, excluding board, \$34.39; wages of female teachers per month, excluding board, \$22.44; paid for teachers' services and board and janitors' services, \$1,107,818; amount expended for free text-books, \$76,549. The resources and expenditures were: Amounts available from town treasuries, \$852,982; from State treasury, \$515,742; derived from local funds, \$49,482; total current resources, \$1,418,206; total current expenditures, \$1,317,717; balance unexpended, net, \$100,489; school money voted by towns, \$757,163; excess above amount required by law, net, \$230,408.

Free high schools: Number of towns having free high schools, 262; supported by towns, 241; supported by districts, 21; aggregate number of weeks, 6,477; schools having more than one term, 199; number of pupils registered, 17,090; average attendance, 13,133; whole amount expended during the year, \$191,004; amount paid by towns and districts, \$145,876; paid from State treasury, \$45,128.

The State College in 1896 had 316 students and 31 instructors; the approximate income, including State appropriation, was \$68,000.

There are in the State 52 free libraries, having a total of 145,000 volumes; the associate libraries, numbering 54, have a total of 180,000 volumes.

Live Stock.—The State Assessor's report for 1896 gave the number and value of live stock as follows: Horses, 132,334, value \$6,828,340; three-year-old colts, 7,293, value, \$263,078; two-year-old colts, 5,985, value \$176,387; one-year-old colts, 3,657, value \$77,479; cows, 146,044, value \$3,025,053; oxen, 15,473, value \$621,754; three-year-old cattle, 20,034, value \$359,976; two-year-old cattle, 30,274, value \$378,639; yearlings, 42,424, value \$291,421; sheep, 276,386, value \$365,002; swine, 48,831, value \$278,976; total value, \$12,896,105.

Sea and Shore Fisheries.—The Commissioner of Sea and Shore Fisheries stated in his report for 1896 that the total value of this industry was \$4,326,692 for that year. Some of the chief items are: Sardines, \$1,928,546; lobsters, \$790,276; herring, \$251,165; smoked herring, \$106,697; clams, \$248,642; smelts, \$71,704; swordfish, \$39,524; alewives, \$16,204; salmon, \$12,288; mackerel, \$84,566; shad, \$30,727; salt fish, \$202,530; fresh fish, \$504,294. There are licensed in the customs districts of the State 512 fishing vessels, of 10,122 tons, being 75 more vessels than in the preceding year. The fisheries employ 14,690 persons. There are 60 sardine factories in the State, valued at \$353,700; they employ 5,785 hands, who earn \$760,427 a year. There were 123 boats employed in taking sardine herrings; these boats took 837,820 bushels, valued at \$134,399; from this catch 840,587 cases of sardines were put up. The number of vessels employed in mackerel catching was 14; men employed, 235; value of vessels, \$44,200. Swordfishing is a comparatively new industry for the State; number of vessels engaged, 32; men employed, 256; pounds of swordfish caught, 1,300,750. Number of men employed in lobster catching, 2,708; number of lobsters taken, 7,825,757. Number of persons employed in catching clams, 781; bushels of clams in shell, 282,961; value in shell, \$110,878; cases of clams packed, 40,674, value \$119,379; barrels of clams for bait, 4,053, value \$18,385.

Game.—The Commissioner of Inland Fisheries and Game reported that more moose had been killed in 1896 than in any previous year, notwithstanding the fact that no cow or calf moose can be legally

taken. The number of working hunters increases year by year, and they do not spare themselves to the close season. Referring to the increasing scarcity of moose bulls, the Commissioner says: "Hordes of hunters visit the headwaters of the rivers in August and September, and during the winter period kill their game, hide it till October and then bring out the head alone, leaving the bodies to decay in the forest. . . . The rich peasant saves nothing for a fire so long as he can secure a good bowl, and August and September are very favorable months for his operations. Our forests are so vast that a system of wardenship could be arranged to stop summer killing. The caribou is also reported as fast disappearing, owing to summer and winter killing. It was estimated that at least 10,000 deer were killed in the State in 1896. Deer are found in each of the 16 counties of the State, and notwithstanding the great number killed annually, it is said that there is no apparent decrease. Complaints are frequently made by farmers of the destruction of crops by deer. Trout, salmon, white perch, black bass, and other fish are largely cultivated inland.

Prohibition.—In his inaugural address the Governor said: "A large majority of the people of our State are thoroughly and conscientiously devoted to the principles and practice of temperance. . . . They believe that the restraining influence of our prohibitory legislation has had a marked effect in eradicating the evils resulting from the liquor traffic. Doubtless there has not been a full realization of what the most ardent and enthusiastic advocates of prohibition prophesied and hoped, but certainly great good has been accomplished. In most of our rural country towns the groggery is a thing of the past, and we are moving in the right direction throughout the State."

Legislative Assembly.—Following are titles of some of the acts passed in 1897:

To authorize towns and cities to establish sinking funds.

To permit inland game to be taken for park purposes in the State.

For the better protection of girls.

To create a lien on leather.

To regulate the taking of eels and whitefish.

To establish a bounty on wild cats.

Authorizing the establishment of free libraries in villages and branch libraries in towns and cities.

To establish bank holidays, and to abolish days of grace on commercial paper.

To prevent the reproduction of prize fights by photographs.

For the promotion of medical education.

To prohibit the manufacture of cigarettes, and the sale thereof to miners.

MANITOBA. Politics and Government.—The Legislature was opened on Feb. 18, 1897, by Lieut.-Gov. J. C. Patterson with a speech from the throne, from which the following passages are taken:

"The preceding year has been one of business depression throughout the world, but fortunately Manitoba has been but little affected by it, the late advance in prices of the products of the farm having improved the situation greatly. It can be safely stated that the feeling throughout the province is now one of the utmost confidence in the future. The prospects of an increased influx of immigrants during the coming season are most promising.

"Since the last session of the Legislature the question whether the public-school system of this province shall be superseded by Federal legislation, and the system existing before the passage of the act of 1890 be reimposed upon the province, has been settled by a harmonious conference between the Federal ministry and my advisers. The terms

of settlement have already been made public, and a bill to amend the school law in accordance therewith will immediately be laid before you. The law as amended will be administered by my Government in a spirit of conciliation and with the desire to make the provisions effective in extending the benefits of our educational system to every class in the community.

"The discovery of mineral regions with possibilities of valuable development within the boundaries of the province necessitates the enactment of a system of mining laws applicable to lands the property of the province. You will be also asked to consider a bill codifying and declaring the law relating to partners, a bill amending the married woman's act, and bills to amend the Queen's Bench, the executor's act, the Queen's Bench suitor's fund act, the insurance act, and other measures."

There was no material change in the political conditions during the session of 1897. Mr. Greenway held his Government well in hand, only one change occurring, when the Hon. Charles J. Mickle became a member in place of Mr. Sifton, who had joined the Dominion Government. Mr. Mickle was re-elected, and two other vacated seats returned ministerial members. One other constituency, however, Turtle Mountain, elected a Conservative, and thus gave that party the first provincial victory in a by-election during many years. An important political matter was the acceptance of the leadership of the Conservatives in provincial politics by the Hon. Hugh John Macdonald, late Dominion Minister of the Interior.

The chief subject discussed by the Legislature was the so-called settlement of the Manitoba school question. The Liberal governments at Ottawa and Winnipeg had arranged a basis for common action, and the situation was thoroughly reviewed in the following extract from a speech made by Hon. J. D. Cameron, Attorney-General in the Assembly (March 18), supporting a bill to regulate the schools under the terms of the new agreement:

"The bill," he said, "embodied in almost identical terms the settlement that had been arrived at by the local government and the Dominion Government in November last. He proposed to review the later events which had led up to the settlement. It had been referred to the Supreme Court, and afterward to the Judicial Committee of the British Privy Council to define the power of the Governor General in Council and the Dominion Parliament regarding the appellant clauses of the Manitoba act; and the Judicial Committee had found that, in their judgment, certain privileges had been taken away from the minority; and that there was jurisdiction on the part of the Governor General in Council and the Dominion Parliament to deal with the matter. The Dominion Cabinet and Parliament shortly afterward took the position that the decision commanded the restoration of separate schools as nearly as possible as in 1890. The Legislature adopted a series of resolutions to the effect that it could not accept the responsibility of carrying out the mandate of the Cabinet at Ottawa. Shortly afterward trouble ensued at Ottawa, and the local government received a copy of an order in Council as a communication, asking this Government to state upon what lines they would adopt amendments. It was not until Dec. 20, 1895, that an order in Council was passed, that this Government firmly adhered to the views expressed in July of last year. No other conclusion could be come to than that what was demanded was a state-aided separate-school system; and this Government declined and then and there positively and definitely rejected, once and for all time, the idea of a separate and sectarian school system. Parliament met at Ottawa shortly after-

ward; and after a month or so the remedial bill was introduced by the Minister of Justice. Three commissioners came from Ottawa to see if some way could not be found of avoiding the impending crisis. These were Sir Donald A. Smith, the Hon. Mr. Dickey, and Senator Desjardins. They submitted a memorandum to Hon. Mr. Sifton and himself (Hon. Mr. Cameron) which contemplated a very peculiar separate-school system applicable to cities and towns, but not to rural districts. It provided that, not at the request of parents or by action of municipal councils, but as soon as there should be a certain number of children, there must be separate school boards. He and Mr. Sifton contended that this was precisely what they could not consent to; that by resolutions of the House, and by statements before the electors they had committed themselves to the principle that there should not be separation of the children by religions; and that it was utterly impossible for them to assent to what was proposed. After prolonged debate the bill was killed by time, Parliament having expired. The question then became an issue between the two parties all over Canada; and the result was that on June 23 the administration so long in power at Ottawa was defeated. Almost immediately after that time it became the duty of the Hon. Mr. Laurier to open negotiations with the Manitoba Government. The result was the settlement published in November last."

Then follows a summary of the measure itself:

The first section gives authority for religious teaching in the schools, to take place, either if authorized by resolution of the majority of the trustees, or petition of the parents or guardians of 10 children of a rural district, or parents and guardians of 25 children in a city or town. The principle of local option remains; there is nothing compulsory. Section 2 fixes definitely the hour at which religious instruction shall take place; that is, only between 3.30 and 4 o'clock. This is the practice adopted in New South Wales and in New Zealand. Section 4 provides that in towns or cities where there is an average of 40 Roman Catholic children or upward in a school, or in rural districts where there is an average of 25 or upward, at least 1 Roman Catholic teacher shall be employed if required by petition of the parents or guardians. The object is that, if there is to be religious teaching, it be made effective. Section 7 provides that there shall be no separation by religious denominations during the secular school work. Section 9 provides that no pupil shall be permitted to be present at any religious teaching unless the parents or guardians of such children desire it. Section 10 provides that when 10 pupils in a school speak any language other than English as their native language the teaching of such shall be conducted in such other language and in English, upon the bilingual system.

The measure passed by a large majority, though it was followed by a vigorous protest from the Orangemen, on the ground that it conferred favors and a special status upon the Roman Catholics. Archbishop Langevin, of Winnipeg, denounced it strongly as making permanent the abolition of their separate schools. Then came the visit of a papal legate, his report to the Vatican, and a period of patient waiting by the Roman Catholics for the Pope's decision.

FINANCES.—The budget speech was delivered by the Hon. D. H. McMillan, Treasurer, on March 2. The estimated expenditure for 1896 had been \$780,583; the actual amount was \$769,857. The actual revenue received was only \$665,553. He showed that for agriculture the expenditure had been \$31,547.51; for immigration, \$16,492.16; for the dairy school, \$8,045.85. Last year the dairy school was opened in Winnipeg, and about 97 attended either

the professional or the farm dairy course, while quite a number passed good examinations and were able to take charge of creameries and cheese factories. In the Attorney-General's department, the cost of administration of justice was \$30,659.54, which was about \$3,000 less than that of 1895. In the Public Works Department the total expenditure was \$115,095.82. The largest expenditure was for maintenance of public institutions, \$78,635.75. The revenue was principally made up by the subsidy from the Dominion Government, \$460,308.27; this was less than was received last year, and \$29,325 was received last year, which should have been paid the year before. Other items of revenue from liquor-license fees, fines, etc., made up \$205,513.14.

The estimates for 1897 were as follows: Legislation, \$39,400; executive, \$4,500; Treasury Department, \$37,750; Provincial Secretary Department, \$8,275; public schools, \$183,600; Department of Agriculture and Immigration, \$103,769; Attorney-General's Department, \$127,655; provincial lands, \$4,750; Railway Commissioners, \$4,800; public works, \$196,131; sundries, \$1,700; total, \$712,330.

Education.—The report of the Department of Education for 1896 was presented to the Legislature by the Hon. Mr. Cameron. It contained much statistical information, in addition to the reports of inspectors and of the principals of the collegiate and normal schools. The following excerpts will be of some value: School population, 50,003; pupils registered under five years of age, 85; five to twenty-one, 37,701; over twenty-one, 201. The average attendance was 23,247. There were 1,143 teachers employed—male, 585; female, 558. There were 4 provincial normal teachers, and 9 local. Two long and 5 short sessions of the normal schools were held, the former being attended by 454 students, and the latter by 341. There are 985 organized school districts in the province, 1,032 schools in operation, and 854 schoolhouses. The highest salary paid was \$1,800; the average for the province was \$604.94; for cities and towns, \$750; for rural schools, \$411.85. The legislative grant was \$143,001.74, and the amount raised by municipal taxation \$472,039. The school assets of the provinces were: Taxes due from municipal councils, \$407,976; value of school sites, etc., \$1,164,569. The legislative grant was spent as follows: Payments to schools, \$130,130.10; inspection, \$9,806.75; examination of teachers, \$1,007.12; normal school, \$5,628.09; office, \$3,989.78. The grants to collegiate institutes amounted to \$8,871.64; the grants to intermediate schools, \$5,000; while the ordinary grants amounted to \$130,130.10. There was also a grant of \$3,500 to Manitoba University. The report showed that 361 schools closed with religious exercises and 327 with prayer. The Bible was read in 236, temperance instruction given in 437, the Ten Commandments taught in 196, and moral instruction given in 708.

Railways.—The Greenway Government was anxious to obtain enlarged railway communication with the United States, and increased competition with the Canadian Pacific. To this end, a line was projected from Winnipeg to Duluth, and a considerable subsidy was promised. The scheme was widely discussed from the national as well as the provincial standpoint, and it still remains unsettled. During the year the Lake Manitoba Railway was opened at Dauphin, greatly to the advantage of Portage la Prairie and other points. The company controlling this line has other railways, which make its total liabilities to the province \$1,041,812. The total Government expenditure during 1896 upon local railway account was \$101,951.

Agriculture.—According to the December crop bulletin issued by the provincial Agricultural De-

partment, the total cereal production in Manitoba in 1897 was 32,404,625 bushels, of which 18,261,950 were wheat, 10,629,513 oats, 1,800,222 barley, 247,896 flax, 48,344 rye, and 44,291 peas. The averages per acre were: Wheat, 14.14 bushels; oats, 22.7; barley, 20.77. The oat and barley crops were failures. Three and a quarter million bushels of potatoes and roots were also grown, potatoes averaging 149 bushels per acre, and roots 160. The disappointing wheat yield of the August bulletin was not repeated owing to a blight that attacked the grain just before maturity.

The number of beef cattle exported from the province during the season was 15,000. Also, 16,500 stockers were shipped to the United States, as shown by the customs returns. The number of hogs shipped out of Manitoba, on foot or dressed, was 12,500. The number received by Winnipeg packers and butchers was 25,000. The poultry disposed of by farmers was as follows: Turkeys, 47,540; geese and ducks, 20,000; chickens, 184,055.

The season was favorable for all parties interested in the manufacture of butter and cheese. The products of creameries and cheese factories under the supervision of the Dairy Superintendent have been uniformly good. Home dairies have also kept well in line in the manufacture of good butter. There has been a ready sale of all dairy products at remunerative prices. The following is a summary of production and prices: Butter, creamery, 987,179 pounds, at 18 cents, value, \$177,692.22; dairy butter, 1,410,285 pounds, at 13½ cents, value, \$188,625.62; cheese, factory, 987,007 pounds, at 8½ cents, value, \$83,895.59; total value of dairy products, \$450,213.43.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and 1,042,300 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Lloyd Lowndes, Republican; Secretary of State, Richard Dallam; Comptroller, Robert P. Graham; Treasurer, Thomas J. Shryock; Attorney-General, Harry M. Clabaugh; Insurance Commissioner, J. Albert Kurtz; Superintendent of Public Instruction, E. B. Prettyman; State Tax Commissioner, Thomas J. Keating—all Republicans, except Prettyman, Democrat. Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, Charles R. Roberts, John P. Briscoe, William Shepard Bryan, and George M. Russom; Clerk, J. Frank Ford—all Democrats, except Russom, Republican.

Finances.—The total receipts into the treasury during the fiscal year ending Sept. 30, 1897, were \$2,772,055.40, which with the balance in the treasury proper on Sept. 30, 1896, \$916,042.76, and cash to the credit of the funds account of \$2,000, made the aggregate receipts \$3,690,098.16, as against \$3,863,443.83 for the previous year. There was received during the fiscal year 1896 from collectors of the State taxes \$844,620.35, and during 1897 the sum of \$1,019,631.76, or an increase of \$175,011.41, and a further increase from the tax on Baltimore city stock of \$3,447.72, aggregating \$178,459.13, this increase being largely attributable to an augmented taxable basis under the new assessment, as well as to extraordinary diligence in collecting the State's revenue. Nevertheless, the tax on incorporated institutions or stock companies produced \$716,000 in 1897 than in 1896, or the sum of \$84,332.50. The total disbursements during the fiscal year aggre-

gated \$2,980,959.58, being \$35,558.51 in excess of 1896. The balance of \$916,042.76 for 1896 included the sums due the insane asylum and the Penitentiary loans, namely, \$412,019.20, afterward paid, which accounts for the large disbursements of 1897. The balance for 1897, after such payment, was in excess of that for the previous year by \$203,115.02. Of this balance, \$436,607.07 was to the credit of the public schools on Oct. 1, 1897, \$227,625 thereof being apportioned and distributed as of that date, while nearly the whole of the remainder was devoted to special purposes and to meet the demands of the State government and the charitable institutions. The total receipts of the sinking fund were \$627,404.18, all of which was invested, as during the previous year, in Maryland, 3458. There were sold during the year, from stocks and bonds belonging to the sinking fund, \$74,000 of Frederick City 4-per-cent. bonds, and \$161,000 of Baltimore city stocks, aggregating the par value of \$235,000, which, deducted from the par value of stocks purchased, left \$378,475 as the net par amount invested for the year. This sum exceeded that of the previous year by \$70,775. The sinking fund for the defense redemption loan aggregated \$3,494,245 as against \$3,204,770 for the previous year. The total State debt at the close of the fiscal year was \$9,284,986.24. Deducting the productive assets of the State, as well as stocks and bonds to the credit of the sinking fund, at their par value of \$6,385,908.11 left as the net debt of the State Sept. 30, 1897, \$2,949,078.13, against \$3,338,553.13 for the previous year, or a net reduction of \$389,475 for the year.

The assessed value of property for State purposes, under the new assessment, was \$607,965,272—an increase of \$67,503,525 over that of 1896. The increased basis produced a corresponding increase in the amount of levy, which was \$1,079,138.27. One of the provisions in the new assessment law is the levying of a tax of $\frac{1}{4}$ of 1 per cent. on the income of mortgages, three fourths of such tax going to the counties in which the mortgages are to be recorded, and the remainder to the State.

The school-tax receipts from all sources were: City of Baltimore, \$1,109,652.40; counties, \$1,230,965.21; total, \$2,340,617.61; decrease for year over 1896, \$8,723.44. Paid for teachers' salaries: City, \$855,340.60; counties, \$835,400.22; total, \$1,790,749.82; increase, \$61,058.38. For building, repairing, and furnishing schoolhouses: City, \$311,333.95; counties, \$95,308.61; total, \$406,642.56; increase, \$156,245.36. Paid for books and stationery: City, \$60,497.68; counties, \$47,768; increase, \$1,579.77. For rent, fuel, and incidentals: City, \$74,907.52; counties, \$74,927.16; increase, \$7,190.38. Total expenses for public-school purposes: City, \$1,419,300.38; counties, \$1,230,965.21; total, \$2,650,265.59; increase, \$261,984.26.

The receipts for the oyster fund were \$66,783.90, which, added to the balance of 1896, made the total receipts of the fiscal year on that account \$67,270.73. The increase of the oyster revenue in 1897 was attributed almost solely to receipts from dredging licenses, the receipts in 1897 being \$42,058.14, while in the year previous they were only \$25,284.33. The disbursements were \$66,761.97, leaving a balance of \$508.76.

The net revenue from insurance for the fiscal year was \$157,221. The gross receipts from tobacco inspection were \$78,541, and disbursements \$72,238.

Education.—The number of schools in operation was as follows: City, 185; counties, 2,204; increase, 56; pupils in city, 89,752; in counties, 129,610; increase, 14,618. Highest enrollment—city, 62,868; counties, 116,479; increase, 3,117. Average in daily attendance—city, 50,680; counties, 72,547; increase,

1,665. Number of teachers—city, 1,667; counties, 2,949; increase, 103. Number of months schools were open—city, 10; counties, 8.7. In his report, the secretary of the Board of Education says: "The most important advance in the cause of public education in this State during the last school year was made by the passage of laws by the General Assembly of 1896 . . . providing for furnishing the use of text-books free of cost to the pupils of the public schools of the State, and making the annual appropriation therefor of \$150,000. It is already apparent, from the reports from the school officers of the several counties on file in this office, that the beneficial effects claimed for these laws have been realized. The attendance of pupils has increased from 10 to 30 per cent., and the efficiency of the schools has been greatly increased."

Charitable Institutions.—During the year the State appropriated funds toward the support of 45 charitable institutions, the aggregate of appropriations being \$314,000. The following are among the items of appropriation: Asylum and Training School for Feeble-Minded, \$20,500; Deaf and Dumb Asylum of Frederick, \$30,000; House of Correction, \$25,000; House of Refuge, \$15,000; House of Reformation for Colored Children, \$10,000; Hospitals for the Insane, \$74,000; School for the Blind, \$29,000; Home for Confederate Mothers and Children, \$3,000. In the Maryland Hospital for the Insane the daily average of patients was 496, and the average cost for each was \$212.50 per annum. The receipts at the Penitentiary during the year were \$27,817 in excess of expenses—an increase of \$10,000 over 1896. The greatest number of prisoners confined in the Penitentiary at one time during the year was 855, and the lowest 770. In the House of Correction the number of cells provided is but 232, "while frequently more than 300 prisoners are confined in the institution and the separation of the inmates with regard to sex is not possible."

Fish.—The United States Fish Commission took from the waters of the State during the year more than 70,000,000 shad eggs; the number of shad hatched was estimated at 50,000,000. Young shad were distributed in the different waters as follow: Susquehanna river and Chesapeake Bay, 24,457,000; Juniata river, 400,000; Bush river, 3,150,000; Gunpowder river, 2,250,000; Brandywine river, 1,500,000; Nanticoke river, 2,250,000; Deep river, Connecticut, 2,250,000; Hudson river, 3,150,000; Tuckahoe river, 900,000; Wicomico river, 900,000; Chester river, 900,000; Delaware river, 3,000,000. There have been deposited 500,000 striped-bass fry; 26,700 trout have been distributed in the northern and western parts of the State.

Coal.—The coal shipments in 1896 amounted to 3,700,000 tons; in 1897 to about 3,900,000 tons. About 4,000 men were employed in the mines.

Grain.—The largest cargo of grain that ever left the port of Baltimore, and said to be the largest load that ever left any American port, went out in August, on the British steamer "Knight Bachelor." The cargo comprised 64,000 bushels of corn and 264,600 bushels of wheat. Reduced to pounds, the cargo amounted to 15,724,600. It required 21 railroad trains of 20 cars each, to convey the grain to the water front.

Pea Packing.—The pea picking and packing industry gives employment to about 5,000 persons in the State. The farms where the heaviest crops are picked are in Anne Arundel, Baltimore, and Hartford Counties, the principal packing houses being in Baltimore.

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was

378,787 in 1790; 422,845 in 1800; 472,640 in 1810; 523,159 in 1820; 610,408 in 1830; 751,029 in 1840; 994,514 in 1850; 1,231,006 in 1860; 1,447,551 in 1870; 1,783,085 in 1880; and 2,208,244 in 1890. At the State census in 1895 it was 2,509,184. Capital, Boston.

Government.—The following were the State officers during the year: Governor, Roger Wolcott; Lieutenant-Governor, William M. Claiborne; Secretary of State, William M. Olin; Treasurer, Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hosea M. Knowlton; Adjutant-General, Samuel Dalton; Chairman of the Railroad Commission, John E. Sanford; Insurance Commissioner, G. S. Merrill, resigned in September, and succeeded by Frederick L. Cutting; Secretary of the Board of Education, Frank A. Hull; Secretary of the Board

spent in armories in 1897, was \$10,566.10. The former sum of \$13,070.00 was devoted to increasing the Fall River armory in 1897 from the previous year's appropriation.

There was appropriated for various purposes, including \$571,000, and \$96,280 was spent on the purchase of \$14,339.82 was spent for janitor service, \$7,144.40 for the maintenance of the public school steamships. Minutemen for the second regiment of the State \$4,882.15 of the \$4,000 appropriation.

Education.—The increase in the number of public-school pupils in 1896 was about 11,000.

A new State normal school building at Salem was dedicated in January. It is about 125 ft. x 180 feet in area and three stories high. The cost of the entire plant was about \$250,000. The building was occupied during the school year and nine hundred ladies were graduated in the winter of 1896.

The trustees of the Agricultural College have established three separate courses in order to carry out the purposes of the college. About one fourth of those who apply for entrance fail to enter the institution.

The report of the Boston University shows that the land and the building for the law school, with its furnishings, have cost more than \$200,000, on which a debt of \$155,000 has been incurred. At the close of the fiscal year Aug. 31, 1896, the assets of the university were: Real estate, about \$1,000,000; \$1,339,547.21; stocks, bonds, notes, receivables, etc., \$167,007.12; sundries, including cash, \$90,000.00, total, \$1,596,554.33.

The report of Tufts College shows that the teaching force remains practically the same, numbering 85. The final registration of students is as follows: college of letters, 251; medical school, 180; divinity school, 35; Broadfield-Pearson School, 6; a total of 472. A radical change has been made in the system of requirements for admission. The results of evolution, which has been tried for four years, have been good.

The Soldiers' Home.—The annual report of this institution shows that there were 241 men present on June 30, 1896; admitted during the year, 221; readmitted, 153; total, 615. At the close of the present fiscal year there were 187 in the home. The amount of pensions during the year was \$17,509; paid to pensioners and dependent relatives, \$9,896; retained by the home, \$7,733.

The State Prison.—The report of the Prison Commissioners for 1897 shows that the cost of support has been \$145,639. Deduct the net profits from the industries, amounting to \$21,724.03 and \$122,415.04 is the actual cost of the prison for the year ending Sept. 30, 1897. Compared with the preceding year, there is an increase of \$28,993.07. The cost per capita was reduced from \$481.61 in 1896 to \$174.33 in 1897. There was a constant increase in the population of the prison during the year. At the date of the last report there were 796 prisoners; at this date there were 826.

A life convict was shot while attempting to escape, Aug. 10. His brother, who was admitted to visit him, brought pistols, by the use of which they intended to force their way out—which involved the killing of three officers. A carriage was in waiting outside to take him away. Both brothers were shot and three officers were wounded, one very seriously.

Banks.—The annual report of the Savings Bank Commissioners on the co-operative banks of the State shows that during the year ending Oct. 31, 1896 the 122 banks in operation received \$3,282,949.24 for dues paid, \$1,240,182.91 for interest paid, \$60,346.56 for premiums paid, and \$47,313.22 for fines paid. During the same year the same banks returned to members \$3,400,000.00 for loans

ROGER WOLCOTT, GOVERNOR OF MASSACHUSETTS.

of Agriculture, W. R. Sessions—all Republicans; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, Charles Allen, Oliver W. Holmes, Marcus P. Knowlton, James M. Morton, John Lathrop, and James M. Barker; Clerk, Henry A. Clapp.

Finances.—The Treasurer's report at the beginning of the year showed that the gross funded debt of the State Dec. 31, 1896, was \$40,636,729; gross sinking funds, \$13,458,574; total debt, \$27,178,155. Of this gross funded debt, \$22,620,000 is contingent debt only; net funded debt, \$10,766,648. The total taxable property in the State was \$5,269,352,253, of which real estate was \$1,964,834,106 and personal property \$1,304,518,147. At the end of the year the real estate had increased \$77,087,293, and the personal \$3,751,100.

Militia.—The strength of the militia authorized by law is: Officers, 458; enlisted men, 7,899; the total number in service in December was 434 officers, 5,718 men. Returns from cities and towns show the number of enrolled militia 443,275, an increase of 11,944.

According to the report of the Adjutant-General marked progress has been made in rifle practice. There was appropriated for that department \$15,000, of which \$14,969.23 was expended. The total

on shares withdrawn, \$31,486.24 for dues on shares forfeited, \$1,174.901 for dues on shares retired, and \$262,507 for dues on shares matured—a total of \$3,962,590.19, which sum represents actual savings paid back to members. The same members received \$780,291.98 in profits returned. Four banks paid 7 per cent., and one only 4½. There were 81 which paid 6 per cent.

Insurance.—The report of the Insurance Commissioner shows that the income of the department for 1896 was \$59,176.20, an increase of \$1,984.34 over the previous year. The total expenditure was \$36,276.96, leaving a surplus revenue of \$22,889.24. The report shows that 13 mutual fire companies are in the hands of receivers.

Early in 1896 many policy holders of the Massachusetts Benefit Life Insurance Company appointed a committee to examine its affairs. As there was opposition to the examination on the part of the officers, the Legislature was appealed to, and a law was passed authorizing the appointment of a commission of the policy holders by the Governor, who should have full power to make such examination. The commission was appointed, and as a result all the officers and managers gave place to a new board and the by-laws were so changed that each policy holder has an equal right with every other policy holder in the ownership and management of the association.

Capital and Labor.—The report of a special committee appointed by the Arkwright Club to consider the matter of Southern competition with Northern cotton mills was presented in December, and another committee was appointed to devise methods of carrying out the recommendations contained in their report. Following are extracts from the report:

"The long hours run and the low prices paid, we believe, make the cost of labor in the South about 40 per cent. less than in the North. The working day in North Carolina is twelve hours, 24 per cent. longer than in Massachusetts, and the price paid per day for common labor in the mills is from 50 to 75 cents. So far as we could learn, there is no disposition to organize labor unions. The total cost of labor in several well-run mills was found to be under 4 cents per pound. We do not know of any mill in Massachusetts making similar goods in which the cost is less than 6 cents. It seems a duty to apply at once to the legislatures of the New England States to put us back upon a footing with the manufacturers in other parts of the country. It is particularly incumbent upon us to urge the Legislature of Massachusetts to repeal the legislation reducing the hours of labor to fifty-eight. Meanwhile, it is not possible for manufacturers to wait the slow action of legislatures, nor even to count upon it that their reasonable request will be granted."

The annual dividend list of the Fall River mills in December shows that the total capital represented, not including the Arkwright mills, which were organized this year, on which dividends are based, is \$22,933,000. The average per cent. of dividends paid on capital represented is 3.38. The average would be smaller were it not for the Bourne, which has paid a regular monthly dividend of 1 per cent. and an additional dividend of 6 per cent. in August. The mill is just across the State line in Rhode Island, and is subject to the labor laws of the latter State, though deriving all the benefit of the Fall River market.

At a general meeting of the Cotton Manufacturers' Association at Fall River, Dec. 8, it was voted unanimously to reduce all wages in the mills of the city.

At an operatives' conference, Dec. 8, at Fall River,

the following resolution was adopted, to be offered to the unions represented:

"**Resolved,** That we accept the reduction, as it would not be good business policy on our part to enter into a strike at the present time. But we inform our employers that as soon as we think there is a margin of profit sufficient for the restoration of the present scale we shall demand it, even if we have to go to the extremity of leaving our employment by going on strike."

A movement was made early in the year to curtail production, and many mills were idle in the summer.

It was found, in April, that several large corporations in New Bedford were insolvent, a large amount of their indebtedness having been left out of the reports submitted to the State. Receivers were appointed.

The report of the Chief of the Police Department for 1897 says that the evil of child labor in the State is growing less, and the reports of the inspectors show that the number of children employed in manufacturing, mechanical, and mercantile establishments and workshops is 13,324. Children employed between thirteen and fourteen years of age, 104; young persons employed between fourteen and sixteen years of age, 13,220.

Game and Fish.—The annual report of the Commissioners of Inland Fisheries and Game says that, despite all efforts to suppress the illegal traffic, a very large number of small lobsters are annually destroyed. During the last eight years the lobster fisheries have steadily decreased. In 1890 the catch of egg-bearing lobsters was 70,900; this year the returns, so far as received, indicate about 20,000, and of all others a decrease of 10 per cent. below last year and 45 per cent. below 1890.

The rearing and distribution of Mongolian pheasants during the past year has been fairly successful.

Cattle Commission.—The report of this commission for 1897 shows that the number of cattle paid for as tuberculous during the year was 5,275, and that the amount paid for them was \$179,867.52. Over \$5,500 was paid for 160 animals in which no lesions of the disease were found. Quarantine, killing and burial expenses, and arbitration brought the average amount paid for condemned cattle up to \$34.12 per head.

Commemorations.—New Bedford celebrated the fiftieth anniversary of its incorporation as a city, Oct. 11. An exhibition of the products of the city was opened, including those of about thirty lines of industry. Among other exercises of the day was a message of greeting from Bedford, England. Addresses were also made by the mayor, C. S. Ashley, the president of the day, W. W. Crapo, and George F. Tucker, the orator of the day.

On Dec. 17 a bronze tablet, set up at the birthplace of Gen. Israel Putnam, in Danvers, by the Daughters of the American Revolution, was dedicated.

A monument to Col. Robert G. Shaw, who was killed while leading the Fifty-fourth Massachusetts Regiment, the first negro regiment to serve in the civil war, in an assault on Fort Wagner, Charleston harbor, in 1863, was unveiled on Boston Common during the exercises of Memorial Day. (See article FINE ARTS.)

The one hundredth anniversary of the launching of the "Constitution" ("Old Ironsides") was celebrated at the Old South Church, Boston, Oct. 21. Maj. William H. Garland, who was a powder boy on the "Constitution" when she met the "Guerriere," was present. A poem which he had written, "Preserve the Ship," was read by Prof. Churchill, who also read Dr. Holmes's poem "Old Ironsides." Henry Cabot Lodge was the orator of the day.

The Bradford Manuscript.—The manuscript of Gov. William Bradford's "History of the Plymouth Plantation" was formally received at the Statehouse, May 26. An address was made by Senator Hoar, who mentioned the previous attempts to recover the document by John Sinclair in 1860 and by John Lothrop Motley in 1869. Nothing came of proposed attempts in 1877 and 1884. Then came the last and successful appeal started by the Senator himself.

This manuscript disappeared during the Revolution, and was supposed to have been taken by the British soldiers who occupied the Old South Church as a riding school, or to have been carried away by Gov. Hutchinson in 1774. It was discovered in the Fulham (England) Library, still bearing the book-plate of the New England Library.

Legislative Session.—The Legislature convened Jan. 7, and was in session till June 12. The new State government was inaugurated Jan. 7. Politically the Senate stood: Republicans, 33; Democrats, 7; and the House: Republicans, 151; Democrats, 58, and 1 Prohibitionist.

There was a contest before the Legislature in reference to the election of counselor in the Fourth District. The election commissioners declared the Republican candidate, Isaac B. Allen, to have been elected; but the Democratic candidate, John H. Sullivan, alleged that more than 340 ballots that should have been counted for him were improperly rejected because the mark which should have been placed in the square after his name was by mistake placed in the square opposite a vacant line just below his name, and these ballots were cast by persons who had voted for all other Democratic candidates. His opponent contended that the Legislature had no authority to go behind the returns. The legislative Committee on Election Returns decided that it was not necessary in this case to determine this important constitutional question, because the majority were of opinion that the ballots so marked should not be counted for the petitioner. The minority were of opinion that there should have been an examination. The majority report was accepted, and Mr. Allen was sworn into office.

Among the more important acts passed was that giving a charter to the Boston Elevated Railroad Company. The company promises to give five-cent fares and free transfers over all systems owned, leased, or operated by it, and if it pays dividends it will pay a franchise tax based upon the gross earnings of all such lines.

An act was passed which was intended to stop the killing of birds for ornamental purposes. As few Massachusetts birds are used in millinery, the act seems to have failed of its intent.

The Governor was authorized to appoint a special commission to investigate the subject of the relation between street railways and the municipalities of the State. He appointed Charles Francis Adams, William W. Crape, and Elihu B. Hayes.

Among acts passed were these:

Providing a special penalty for theft of bicycles.

Providing for inspection of dairy products.

To incorporate the Roman Catholic archbishopric of Boston.

Relating to newspaper libel.

Increasing the aid given for school purposes to towns having low valuations.

Resolution relative to exercises in the public schools commemorative of the inauguration of the President of the United States.

An appropriation of \$250,000 was made for use in the extermination of tuberculosis in cattle.

The mill school-tax bill was to authorize a State tax of a dollar on a thousand for the support of public schools. This the Governor vetoed on

the grounds that it would not necessarily increase the sum to be expended for their support, for it contained no provision preventing the towns and cities which will receive money under the proposed tax from reducing their own expenditures for schools by an equal amount. That it would not tend to aid the weaker and overburdened communities in maintaining schools, since a large proportion would go to cities and towns.

Political.—There were five tickets in the field for the State election in November. They were:

Republican: For Governor, Roger W. Weston; Lieutenant Governor, Winthrop Murray Crane; Secretary of the Commonwealth, William M. Allen; Treasurer and Receiver General, Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hoshea M. Knowlton.

Democratic National: For Governor, Dr. William Everett; Lieutenant Governor, James E. Carter; Secretary of the Commonwealth, Bernard M. Wolf; Treasurer and Receiver General, Horace P. Tobey; Auditor, Harry Douglas; Attorney-General, William W. McGlench.

Democratic: For Governor, George Fred Williams; Lieutenant Governor, Christopher T. Callahan; Secretary of the Commonwealth, Charles D. Nash; Treasurer and Receiver General, Thomas A. Watson; Attorney-General, John A. O'Keefe.

Socialist-Labor: For Governor, Thomas C. Brophy; Lieutenant Governor, Edward A. Buckland; Secretary of the Commonwealth, Addison W. Barr; Treasurer and Receiver General, George A. Brown; Auditor, Joseph Ballam; Attorney-General, William Harrison.

Prohibition: For Governor, John Bascom; Lieutenant Governor, Willard O. Wyllie; Secretary of the Commonwealth, Edwin Sawtell; Treasurer and Receiver General, Robert C. Habberley; Auditor, Herbert M. Small; Attorney-General, Wolcott Hamlin.

The People's party held a State convention Sept. 24, but put out no State ticket, although the "middle-of-the-road" section were opposed to fusion. The power to make nominations was given to the State Executive Committee, and it was instructed to confer with the Democratic party at its State convention. In accordance with these instructions fusion was effected, and one place on the Democratic ticket, that of Secretary of State, was given to the Populist candidate, Charles D. Nash.

At the Democratic convention, held in Worcester, Sept. 28, the Chicago platform was approved, and the proposal to substitute bank notes for national notes was condemned.

The resolutions favored legislation to encourage municipalities to establish their own systems of water supply, gas and electric lighting, heat and power distribution, street-railway service and other service of similar character; postal savings institutions; provisions to enforce the existing laws requiring returns of property for taxation; taxation of personal property at a uniform rate in all cities and towns; a tax on inheritance and successions; an income tax; abolition of irresponsible commissions; popular election of Senators; an eight-hour day for labor; more efficient inspection of factories, etc.; and amendment of the employers' liability act. They declared in favor of settlement of disputes between nations by arbitration, but were opposed to a treaty with one nation exclusively.

The National Democrats issued an address to the public in which they said:

"Our party is organized by those who believe that there ought to be a trustworthy political party pledged to establish a sounder and better system of banking and currency; to practice honesty and economy in expenditures; to use public office as a

public trust, and to eradicate the spoils system in both appointments and legislation; a party opposed, therefore, to protection, to paternalism, to fiat money, and to class legislation. It is an old party in its steadfast maintenance of the unchanging principles of justice and equal rights and in its disinterested devotion already fully proved; a new party in its clear and resolute aim to restore popular government in the United States to the purpose from which it is now diverted—the service of the American people."

At the Republican convention, in Boston, Sept. 29, the principles of the party were reaffirmed and the national administration approved. The platform said further:

"The Republicans of Massachusetts maintain their fundamental belief in the unsectarian free public school. They dare insist upon a full enforcement of the liquor law. They believe that the frequent approval of loans outside the debt limit is against wise municipal economy."

The election resulted in favor of the Republicans. The vote for Governor stood: Wolcott, Republican, 165,095; Williams, Democrat, 79,552; Everett, National Democrat, 13,879; Brophy, Socialist-Labor, 5,301; Bascom, Prohibition, 4,948.

At the city election in Boston, Dec. 22, Josiah Quincy, Democrat, was re-elected mayor by a plurality of 4,079.

At the town elections in March the most excitement was caused by the license vote. Of 85 towns reported, 13 voted "Yes," against 12 in 1896. The vote was changed in seven or eight.

MECHANICS, JUNIOR ORDER OF UNITED AMERICAN. This organization is an outgrowth of the American Mechanics' Union, established July 8, 1845, as a fraternal society, with headquarters in Philadelphia. This latter, afterward called the "Order of United American Mechanics," was the practical result of a movement begun in 1843 to restrict immigration and in several other respects to secure for native Americans privileges in keeping with the spirit of the Constitution. The restriction of immigration was given the first place in a statement of principles and leading ideas entertained by the founders of the order. Following this came advocacy of the Bible as a reading book in public schools; complete separation of Church and state; selection of native Americans as legislators, administrators, and executors of the law. The parent order published at the time of its inception six declared objects: 1. To assist one another in obtaining employment. 2. To assist one another in business, by patronizing one another in preference to foreigners. 3. To assist the unfortunate in obtaining employment suitable to their afflictions. 4. To establish a cemetery for deceased members. 5. To establish a funeral fund. 6. To establish a fund for the relief of widows and orphans of deceased members. Chief among the men who were active in establishing the parent order were Luther Chapman and Richard G. Howell.

The Junior Order of United American Mechanics was instituted May 17, 1853, the first meeting being held in the Concord schoolhouse, Germantown, Pa., not far from the historic battlefield. Its motto is "Virtue, liberty, and patriotism." Its watchword is "Patriotism." The credit of bringing this order into existence is largely due to Gideon D. Harmer, Elliott Smith, and William M. Weckerly. The declaration of principles includes the following opinions and resolutions:

"That the constant landing upon our shores of the hordes of ignorant, vicious, and lawless criminals of the Old World should be viewed with alarm by the loyal and patriotic citizens of this country.

"We affirm a warm and hearty welcome to all

immigrants who desire to better their condition and become a part and parcel of our nationality; but we have not one square inch of room for the anarchist, the socialist, or the nihilist, or for any one who is

EDWARD S. DEEMER,
SECRETARY OF JUNIOR ORDER OF MECHANICS.

not willing to bow allegiance to that flag which is powerful enough to protect them as well as us in the exercise of all civil and religious liberty.

"We affirm our devotion to the public-school system of this country. We believe in compulsory education, and that all teaching in our schools should be in the English language, to the end that future generations may be able to take their place in the ranks of our country's workers, educated in the history, customs, and manners of Americans.

"We guarantee to every man the liberty of worshipping God according to the dictates of his own conscience, and would give every assistance to protect all in the exercise of this liberty, but we object most strenuously to the interference of any Church, no matter under what name it may exist, in the temporal affairs of this country.

"We believe that the Bible should be read in our public schools; not to teach sectarianism, but to inculcate its teachings. It is the recognized standard of all moral and civil law; we therefore believe that our children should be educated in its teachings, but that no dogma or creed should be taught at the same time.

"We believe that patriotism and love of country should be instilled into the hearts of children, and that, with the sacred words of 'mother,' 'home,' and 'heaven,' our children should be taught that our flag is the symbol of all that makes a home for us. We would place a flag upon every public school in our land, and a Bible within, and the object lesson therein set forth should be a beacon light in every storm that threatens to engulf us.

"In the strictest sense we are a national political organization, but we oppose with unanimity the slightest taint of partisanship. 'Our Country' is our motto, and we keep this motto steadily before us."

The qualifications for membership are these: A white male person, born in the United States of North America, or under the protection of its flag. Of good moral character. A believer in the existence of a Supreme Being as the Creator and Preserver of the universe. Opposed to union of Church and state. Favorable to free education and the American public-school system. Between sixteen and fifty years of age for beneficial membership; over fifty years, honorary membership.

The weekly dues are from 10 to 15 cents, and the minimum entrance fee for charter members is \$2. Sick benefits range from \$2 to \$5 a week. Funeral benefits are graded from \$20 to \$250. The following extract from an official statement recently issued gives the present condition of the organization, or rather its condition at the end of 1896. The figures for 1897 are not yet complete, as the work of the order extends over the entire country: The amount paid for sick and funeral benefits to Dec. 31, 1896, is \$3,500,000. The amount received by subordinate councils is \$9,000,000, and the amount paid out for all purposes is \$7,500,000. The report of the national secretary to the National Council shows that the year ending Dec. 31, 1896, notwithstanding the stress of the times, was an evidence of the progressiveness of the Junior Order. It is as follows: Number of councils Dec. 31, 1896, 2,237, a gain of 103. Membership Dec. 31, 1896, 177,732 (about 200,000 at this writing), a gain for the year ending Dec. 31, 1896, of 10,899. The receipts of subordinate councils for the year ending Dec. 31, 1896, were \$1,562,297.28, being a gain of \$284,943.51 for the year. The amount paid for benefits and relief during the year ending Dec. 31, 1896, was \$350,000.29. The amount in the treasuries of subordinate councils Dec. 31, 1896, was \$1,624,846.94, being a gain over the last year of \$192,210.42.

In addition to the foregoing, the National Council has established a National Orphans' Home at Tiffin, Ohio, for the care of needy orphans of deceased members. The home has been in operation about one year, and 38 little ones have found their way to it. The property and improvements are valued at \$50,000, and are clear of debt.

"Our various State legislative committees have secured the enactment of laws providing that the United States flag shall be displayed on all public schools; providing for compulsory education and for free text-books, and much other legislation for the protection and advancement of the public-school system.

"The National Legislative Committee is endeavoring to secure from Congress laws to restrict immigration, to amend our naturalization laws, to prevent sectarian appropriations, to prevent the desecration of our flag, and other laws that are truly American in their operation."

The word "junior" in the title has no relation to the age of members. It was adopted to distinguish the order from the Order of United American Mechanics, and has no other significance. The word "mechanic" is not construed literally; it embraces every pursuit.

The following detailed exhibit, compiled from the last official report, gives an idea of the strength of the order in the respective States and Territories: The actual membership, as reported up to and for Dec. 31, 1896, was: Maine, 542; New Hampshire, 645; Vermont, 955; Massachusetts, 1,468; Rhode Island, 569; Connecticut, 879; New York, 5,343; New Jersey, 26,676; Pennsylvania, 78,803; Delaware, 2,081; Maryland, 16,987; District of Columbia, 1,088; Virginia, 5,271; West Virginia, 7,044; Kentucky, 998; Tennessee, 1,178; North Carolina, 974; South Carolina, 569; Georgia, 274; Texas, 680; Ohio, 13,534; Indiana, 1,041; Illinois, 301;

Michigan, 249; Wisconsin, 225; Minnesota, 482; Iowa, 280; Missouri, 1,507; Nebraska, 186; Kansas, 322; Colorado, 2,112; Montana, 211; Washington, 353; Oregon, 498; California, 2,452.

The official head of the order, known as the national counselor, is Joseph Powell, of Denver, Col.; the secretary is Edward S. Deemer, of Philadelphia. The next meeting will be held in Louisville, Ky., June 21, 1898.

METALLURGY. Iron and Steel.—The past ten years was characterized by Mr. E. G. Spensbury, in an address before the American Institute of Mining Engineers, as having been marked by many and varied improvements in all branches of mining and metallurgy, not so much in startling inventions as in the better adaptations of what was already in use. Among the improvements in mining are the adaptation of the steam shovel, the application of electrical power for mining, concentration, and conveyance, and improvements in wire-rope haulage and transportation. Radical and progressive changes have been made in furnace practice, by means of which increased production is obtained at lessened cost. Among the special improvements in the metallurgy of iron is the mixer of W. R. Jones, by means of which the products of one or more furnaces are tapped into a receiver and there so thoroughly agitated and mixed as to furnish an absolutely uniform metal for further treatment in the manufacture of steel. By allowing the fluid metal to remain a certain time in these mixers, or by the use of lime, the iron is thoroughly desulphurized. The silicon contents are lessened by casting the pig metal in chills, instead of into sand direct, and by Benjamin Talbot's process of pouring the metal as it is tapped from the furnace through a bath of molten oxide of iron. Improvements in the conversion of pig metal into steel have been made chiefly in the open-hearth processes and in the line of mechanical rather than of metallurgical adaptations. These have made it possible greatly to increase the size and output of open-hearth furnaces. Among these improvements are the mechanical charging machines of S. T. Wellman and the Wellman revolving furnaces. Improvements in basic hearths and linings made by Benjamin Talbot have greatly reduced the expense of parts of the process. The Bertrand-Thiel continuous open-hearth process has warm advocates in England. The Stockman process, by the use of nitrate of soda as a means of oxidizing the objectionable metalloids, does away with the necessity for all expensive blowing machinery. Mr. Edison's plant for mining, crushing, concentrating, and finally briquetting magnetic iron ore at the Ogden mine, New Jersey, is mentioned as a theoretical development and improvement of the very highest type, but its cost is very great.

Of two forms of iron of marked peculiarities, described by T. H. Norton, one, part of a mass taken from a deep crevice in the hearth of a blast furnace after the furnace was blown out, where the iron had been maintained in a liquid condition for more than a year, and had then cooled and solidified very slowly, was of a light, silvery color, and exhibited a very marked crystalline structure, with rectangular cleavage. It was, however, the reverse of brittle, and was highly malleable. The drill made but slight impression upon it. Portions were tempered, and attempts were made to pulverize them; a slight crumbling was manifested at first, but after a few strokes of the hammer the fragments became perfectly malleable. The piece could be split easily with a chisel, especially along the lines of cleavage. On analysis the only serious impurity in the metal was found to be phosphorus. The second specimen was the result of the prolonged action of the inner

part of a nonluminous Bunsen flame on ordinary steel; the steel having served to support the mantle of a Welsbach lamp which had been in steady use for two years, and having been exposed during that period to the combined action of a high temperature and the gases of the inner cone of the flame. As a result the steel had become so brittle that the upper half crumbled as easily as chalk. The lower part, less exposed to the flame, was covered with a brittle layer, while the central core was still pure steel. About six sevenths of the carbon seemed to have disappeared from the brittle part.

Hard, brittle white-iron castings may be softened and annealed, according to George Parker Royston, either by oxidizing the carbon—the older method, used and described by Reaumur in 1722—or by changing it from the combined to the free or graphite state. In the former method, the one most generally followed, the metal is heated in oxide of iron at a bright-red heat for a considerable period, the length of which is dependent on the thickness of the bar to be annealed. It may also be placed in lime, sand, or bone ash in lieu of oxide of iron, provided the atmosphere is used as the source of oxygen. The iron must be free from manganese and sulphur, or the elimination of the carbon will be delayed. The method by decomposing the carbide into graphite and free iron is effected by more or less continued heating between 850° and 650° C. Iron castings produced by this method are quite as soft as those obtained by the Reaumur method, but on account of the graphite present no bend can be obtained. There is no limit to the size of the castings that may be made, a large piece taking quite as short a time as pieces of smaller size. In another method of softening white iron discovered by the author the castings are carefully packed in some nonoxidizing material and heated to the temperature at which the iron would solidify after fusion—or about 35° C. below the melting point of the metal. As a result of this treatment the white iron becomes changed into a steel containing 1.5 per cent. of combined carbon, the remainder of the carbon being distributed through the metal in the form of finely divided graphite.

From his investigations of the contraction and deformations of iron castings in cooling from the fluid to the solid state, Mr. Francis Schumann deduces the conclusions that the deformation of prisms due to unequal contraction can be overcome by providing counter-deformation in the pattern, or by the addition of auxiliary parts that can be readily removed from the casting. In complex machinery castings the design should be so modified or chosen as to result in the least differences in the rate of cooling. Sudden changes in form cause severe initial stresses, if not fractures, and should be rigidly avoided. Imperfectly proportioned flanges, ribs, or gussets added to the main body of a casting for the purpose of increasing the strength of connections, may be sources of weakness. Hollow cylindrical columns, although cast of even thickness and left in the mold till cold, may become crooked by reason of the unequal rate of cooling between the upper and lower halves, due to the currents of air passing through the column and clinging to the under side of the upper half after the core arbor is removed, which is usually done shortly after pouring and while the casting is still red hot. This deformation is avoided by stopping the ends with sand immediately after the withdrawal of the core. Greater attention to the laws of cooling and correct forms and proportions of castings will result in increased strength and economy, besides the avoidance of annoying crooked castings and mysterious breakdowns.

The general advantages claimed to accrue from the addition of pure aluminum and ferro-aluminum to cast iron, as given in a paper by J. A. Steinmetz, are that it makes the iron more fluid, that it renders hard iron softer, that castings thus made are freed from hard spots and blowholes, that it lessens the tendency of the metal to chill, and increases the resistance of the metal to chemical action. It is also said that while good soft iron is made more fluid and benefited to some degree, yet the advantages of treating with aluminum are most evident with poor, hard white iron. It is an unquestionable fact, Mr. Steinmetz says, that the addition of aluminum very considerably affects the quality of the castings for the better. The general conclusion from tests made is that with white iron small additions of aluminum, such as would be used in ordinary foundry practice, increase slightly the fluidity; $\frac{1}{4}$ of 1 per cent. of aluminum and more decreases the fluidity. Gray iron is rendered decidedly less fluid by any addition of aluminum. Aluminum appears to reduce the shrinkage if enough is added. Perhaps one of the most striking results of the experiments is the increased time during which aluminum-treated iron will remain molten. This property of keeping fluid longer is of direct usefulness in a foundry where it is necessary to run a large number of small castings, when there is usually much trouble in keeping the ordinary metal fluid, unless it was very hot to start with. The general results prove that the molten bath of iron with aluminum will stay fluid twice as long as one without it. Another consideration is that cleaner, more solid, and softer castings are universally obtained, with a large reduction in the percentage of defective castings.

In a paper read by Prof. Gay before the American Society of Mechanical Engineers on the yield point of iron and steel, additional information is given regarding the increase of the ultimate strength and of the elastic limit of those metals. A test piece of iron, which under ordinary trial was shown to have a tensile strength of from 50,000 to 53,000 pounds per square inch, was tested just to the yield point, then allowed to rest free of stress for two weeks, and then tested again. The yield point was found to be considerably higher. The test was then repeated at times from one to three weeks apart till seven tests in all had been made, each showing a further increase in the yield point till it had been raised to 55,900 pounds per square inch, or considerably beyond the normal ultimate strength of the iron. The elongation in each test, except the last, was not carried beyond the yield point. In the last test it was continued to rupture without any increase in stress beyond the yield point, the total elongation of the piece being only 14.5 per cent., or one half of the elongation of the same iron when tested in the ordinary manner without resting. In a test of a bar of steel the elongation was carried to a point considerably beyond the yield point, rested seventeen hours, tested again when the yield point was found much higher, tested twice again with intervals of twenty-four hours, when a still higher yield point was given each time. The total strength of the bar was thus considerably increased over that of the bar tested in the usual way, but the elongation was reduced one half.

In his studies of the various aspects of the loss of strength in iron and steel by reason of use, Mr. Thomas Andrews has made exhaustive microscopic, chemical, and physical examination of rails of known age and condition of service on main lines of railway, and has obtained much valuable information on the subject. In a lecture upon it he

showed the difference between loss of strength from mechanical abrasion and the deterioration of the ultimate crystalline structure of the metal under the fatigue of stress consequent on the presence of internal micro-flaws. He also demonstrated the effect of low temperature in reducing the impact resistance of rails, the influences of corrosion, the manner in which vibratory stress induces microscopic internal growing flaws in rails, and the influence of various kinds of ballast on the permanent way.

Speaking on "Some Present Possibilities in the Analysis of Iron Steel," Mr. C. B. Dudley observes that few substances have received more study and few present chemical problems more difficult of solution than pig iron; and including the work that has been done upon the substances associated with it in manufacture and the substances derived from it, it is safe to say that the chemical work that has been done in connection with it has been greater than with any other substance in Nature. The complexity of pig iron is very great, and consequently the analytical problems presented are far from being easy of solution. Eighteen distinct substances besides iron are enumerated as having been found in analyses of it, 12 substances as alloyed with some form of iron or steel, and the 3 gases, oxygen, hydrogen, and nitrogen, as occurring in these metals and believed to have important influences on their physical properties. Having reviewed the present condition of the methods of analysis for five of these many substances—carbon, phosphorus, silicon, sulphur, and manganese—the author finds all the methods more or less imperfect and needing more work. "What," he asks, "will be our condition as chemists if, as seems probable, nickel, chromium, aluminum, tungsten, and the gases oxygen, hydrogen, and nitrogen, either free or combined, within the next few years come into prominence as constituents of iron and steel and are made elements in important commercial contracts? Still further, thus far our methods are concerned almost entirely with the total contents of the various constituents we are determining. We know very little about the compounds of the various constituents occurring in iron and steel, with the metal or with each other. Is the phosphorus present as phosphide or phosphate, or both? How besides as sulphide does the sulphur occur? Do the various carbides which are revealed by the microscope, and which are believed to be so closely dependent on the heat treatment which steel receives, and which are so intimately related to the value of the metal, differ from each other in carbon contents, or only in crystalline form? Who will be the first to isolate any of these carbides? Who will first give us a practicable, accurate, and sufficiently rapid method for determining oxides in steel? Who will first completely investigate the relation between the chemistry and the chilling properties of cast iron? And who will first give us a study on the form in which nitrogen occurs in this metal and a simple and accurate method for its determination?

The advantages to be derived from the formation of an international laboratory for investigating the methods of analyzing iron and steel were pointed out by Dr. H. Wedding in a paper read before the International Congress for the Unification of Methods of Testing. It was represented that the relations of buyers and sellers in the iron and steel trades would be put on a much safer basis if standard methods were appointed so that any chemist of ordinary skill could be trusted to carry them out. This could best be done at an international central laboratory, where the work done in various countries could be collected and reduced to a common standard. A competent director for such a labora-

tory had been found in Baron Jéptner von Jönstorff.

In a communication to the *German Journal "Stahl und Eisen"* concerning the microscope examination of steel, Prof. Lesclapart gives the results of experiments made by him upon the effects of service on steel rails. They show that old rails, as well as those that have been used for only a short time, have a surface layer of harder steel than the rest of the body. This layer, distinctly recognizable under a microscope, averages about $\frac{1}{16}$ inch in thickness, and when it is removed by filing the rail is brought to normal strength again. The effect of the continued use of a rail appears, therefore, to be to develop a thin layer of very hard nature at the wearing surface, which can be removed by reheating. Should the surface, however, show cracks the rail can not be restored to its original strength.

The Ellis-May steel process consists essentially of making the castings in a vacuum, thus precluding, it is claimed, the possibility of occluded air or gases in the metal. The system comprehends a closed casting chamber connected with other vacuum chambers by pipes and valves; these are exhausted by powerful vacuum pumps. When the metal is ready to be run into the mold the valves are opened, the air in the casting chamber is instantly drawn off, and the casting taking place *in vacuo*, a flawless, homogeneous piece is claimed to be the result. It is represented, also, that the process entails a considerable saving in metal, since there is no waste in large castings like that which exists with the ordinary process. Some steel makers say, however, that the process is accompanied with considerable difficulty and the operation of the machinery is costly.

"Nickel steel," says Mr. William Beardmore, "has won its spurs, and proved itself worthy of the confidence placed in it by those to whom its remarkable qualities are best known." The results obtained by the author in the manufacture of this alloy for a large variety of purposes have been, he says, eminently satisfactory. It fulfills all the purposes of a metal that can be worked without any special care on the part of the artisan; which in shipbuilding will enable us to reduce the scantlings, take from the weight of the boilers, and add to the strength and reliability of the propeller shafts; and "which will give the same results to-day or tomorrow in China or Peru." It can be bent and punched as successfully as ordinary carbon steel. It has a higher elasticity by 31 per cent. than ordinary carbon steel, and the tensile strength is 31 per cent. greater, while ductility is not adversely affected. It suffers less from corrosion by sea water than ordinary mild steel or wrought iron; whence its fitness for use in propellers is evident. As a material for tires and axles it has many claims on our attention. It is well adapted as a material for shafting, and equally for railway axles, by the fact that a crack appearing in it will not develop as in carbon steel. As a material for castings much can be said in its favor. There are many other interesting points connected with nickel steel," but the facts already cited show that "it fulfills in a most satisfactory manner the conditions required of a material for shipbuilding and engineering purposes."

Experiments by E. D. Campbell and S. C. Babcock have brought out the fact that phosphorus, like carbon, is capable of existing in steel in at least two forms, and that the influence of phosphorus upon the physical properties of the steel in which it is contained is as much dependent upon the form of combination in which it exists as upon the quantity. This peculiarity of phosphorus, with its varying influence upon the brittleness of the steel ac-

cording to the form present, will, the authors think, account for many of the apparent inconsistencies in the statements usually made by metallurgists in regard to the behavior of this element.

The power of aluminum to reduce carbonic oxides at high temperatures has been used by Prof. J. O. Arnold and F. R. Knowles to measure the permeability to furnace gases of clay steel-melting crucibles. In the opening of their paper on this subject, the authors say that in passing pure carbonic oxide over white-hot aluminum the metal became coated with a mixture of alumina and carbon. Also, on blowing 40 gallons of carbonic oxide through molten mild steel containing about 4 per cent. of aluminum, the percentage of carbon was raised. The experiments in measuring permeability were carried out by melting ingots of Swedish iron containing 99.85 of iron with calculated quantities of aluminum. The ingots were broken up and remelted, and it was found that in each case the greater part of the aluminum had been oxidized and the carbon liberated had converted the iron into hard steel. The most important practical feature of the experiment was the fact shown that the walls of a crucible form little protection against the absorption of sulphur by the metal inside it.

A patent has been granted for the use of carborundum, or carbide of silicon, in the manufacture of steel. The finer grades of this substance are used as abrasives, while the coarser qualities are not valuable for this purpose, and may be sold cheaply. Carbide of silicon in molten steel splits up and gives both carbon and silicon to the metal.

A rule adopted by M. A. A. Cunningham from the calculations that have been made on the subject for finding the approximate tensile strength of steel is, to a base of 40,000 pounds per square inch, to add 1,000 pounds for every 0.01 per cent. of carbon, and 1,000 pounds for every 0.01 per cent. of phosphorus, neglecting all other elements in normal steels. Radical variations between calculated and actual strength indicate mixed steels, segregation, incorrect analyses, or unusual treatment in manufacture. The author has been taught by years of experience that carbon is the most desirable element for giving strength to steel, that definite results can be produced by varying its amount, and that the gain of strength due to its increase is accompanied with less loss of desirable properties than is the case with any other hardeners. All other elements occurring in carbon steels may be considered impurities or antidotes.

In a method which he has patented for casting armor plates, and at the same time hardening the face, Mr. William Beardmore forms a mold box of metal with the usual lining, into which the molten metal is run through a pipe terminating at the bottom of the mold till the level has been reached that will insure the required thickness of casting of the tempered face. Meanwhile an immense number of jets of cold air are playing on the thin bottom, whereby temper is given to the metal as it sets from the bottom up. When the first thickness of metal has become sufficiently cool, softer metal to form the back is poured through another jet discharging at several levels, so that any desired thickness of the black metal can be insured. The composite plate thus made has to be machined in the usual way, and is subjected also to the customary face hardening by chilling.

In an American apparatus worked by electrical power for charging Siemens furnaces, described by Mr. Jeremiah Head at the spring meeting of the Iron and Steel Institute, a powerful frame or gantry is run up in front of the furnace, from which a massive arm is projected by means of an electric motor. This arm is provided with a grapple which

grasps by automatic means the boxes containing the furnace materials. The furnace door is opened and the arm carries the iron box, with its charge of pig iron or scrap, into the furnace; by another electric device the arm is rotated and deposits the materials into the fire, when the box is withdrawn by the arm. The operation is continued till the whole charge is in position on the hearth, when the apparatus is moved on to the next furnace.

The combined open-hearth process of Bertrand and Thiel embraces two open-hearth furnaces. The operations are divided into two stages, the metal being run when half treated through a header from the primary to a secondary furnace which has the nature of a finery. The perfect elimination of the phosphorus is not intended in the upper furnace, whence less lime may be added than would otherwise be necessary, and the quantity of slag to be melted is materially diminished. The plan of working adopted consists in charging nearly all the siliceous and phosphoric pig into the primary furnace, and nearly all the scrap into the finishing furnace, adding in each such quantities of ore, lime, etc., as are demanded. The advantages are claimed for the apparatus of an increased output and a material reduction in the consumption of lime and basic material for lining the furnace hearths.

The object of Mr. H. W. Hollis in designing his Weardale reheating furnace was to dispense with regenerating chambers, to obtain continuous working without reversing the course of the flame, to get rid of the disadvantages attendant upon frequent stoppages for clearing or renewal of brick checkerwork, and to introduce the flame in such a way as to obtain equal heating over the whole floor of the furnace chamber. This is accomplished by introducing a gas flame through a stratum of highly heated air in the roof of the furnace, the flame pouring down upon the slabs or piles to be heated and passing along the floor of the working chamber to an outlet port at each end.

A new process suggested for preventing rust in iron structures consists in treating the iron with a solution of ferro-cyanide. This forms a coating of cyanide of iron that is described as being uniform and impermeable, and of such a nature as effectively to protect the iron covered by it. The solution is mixed with a flaxseed varnish, to which a little turpentine or benzol has been added, so as to form a homogeneous emulsion which can be applied without difficulty. The evaporation of the alcohol leaves the flaxseed varnish, which forms a coat and protects the cyanide of iron deposited upon the metal. The iron requires no preparation for this treatment except cleaning from rust already formed.

In the Uehling casting process all heavy hand labor is supplanted by machinery, the sand in the pig iron is eliminated, and the large casting house, hitherto a considerable adjunct to the blast furnace, is dispensed with.

Precious Metals.—The treatment of the pyritic gold ores at Gibbonsville, Mont., consists, according to a detailed description by C. C. Burger, of amalgamation in the battery and saving of concentrates; roasting in twenty-four hours from 12 to 15 tons of concentrates with from 33 to 40 per cent. sulphur in a two-hearth Pearce turret furnace, supplemented by a small hand reverberatory furnace holding two 14-ton charges to insure dead roasting without diminishing the capacity of the mechanical furnace; chlorination in a 1½-ton Thies barrel; filtering with compressed air in steel-lined cylinders swung on trunnions; settling any slimes that pass the filter cloth; and precipitating with ferrous sulphate. The cost of chlorination is less than \$5 per ton.

The ore is low grade, the gangue consists of quartz and magnesium slate, and the concentrates are mainly pyrites.

At the Mercer mine, Utah, where the cyanide process was first successfully carried out in this country, the gold occurs, according to the account of R. P. Rothwell, in limestone, and a high extraction is obtained with coarse ore. If the pulp shows in panning particles of gold as coarse as the mesh aperture, an exposure of a week to the action of potassium cyanide has been found necessary to effect a satisfactory extraction. The ore best suited for cyaniding is one that is neutral or slightly alkaline and free from copper or very low in it. Leaching telluride ores raw has not been satisfactory, as the results vary greatly without any apparent cause. The reason, Prof. Rothwell believes, is probably to be found in the different behavior of the tellurium minerals with potassium cyanide. At present tellurides are roasted before leaching. Roasting can be carried on without an appreciable loss of gold by volatilization, but the gold is liable to be left in the form of smooth globules not readily attacked by cyanide. Furthermore, the ore must be deal roasted, as neutralizing the ore with a wash of caustic soda has been found in many cases to reduce the extraction. In making laboratory experiments to serve as a basis for planning a mill, chemical tests ought to be supplemented by sizing tests to show the subdivision of the gold in the pulp, and by microscopical examination to show the form in which it is present.

Stamp-battery slimes, including the excessively finely crushed part of the battery tailings, are now successfully treated for the recovery of the gold at several works in South Africa. The slimes are agglomerated and precipitated by the addition of lime water from the water in which they are held in suspension, and are then treated by agitation with very dilute solutions of cyanide and washed by settling and decantation. The gold is deposited by electrolytic action under the Siemens-Halske system. The process is easy with the freshly formed slimes in course of treatment at the works; but in the accumulated slimes, in which oxidation of the pyrites has taken place, the presence of finely divided ferrous sulphide and hydrate by withdrawing the free oxygen from the solution prevents the dissolution of the gold. This difficulty is overcome by supplying oxygen artificially, for which purpose jets of air or potassium permanganate may be used.

The ore atomic process for gold, which is said to be in successful operation in West Australia, consists in first crushing the gold-bearing quartz to lumps of a convenient size, which are then in a closed chamber from which the air is excluded submitted to the heat of a furnace and to the action of water and hydrogen gas. The sulphur in the ore is thereby eliminated, being driven off as sulphuretted hydrogen, and any oxide is reduced to the metallic state. After being thoroughly heated the material is suddenly quenched by the injection of cold water. This operation is repeated several times until the quartz is so softened as to be easily crumbled into powder by the fingers. The contents are then thrown into a tank and the gold is separated by washing. It is claimed that in this process no loss is incurred by "float gold" or by oxidation, but that all the gold in the ore is recovered.

Recent progress in the chlorination process for the extraction of gold from its ores lies mainly in the direction of improvements in the mechanical appliances which are used. The repeated efforts to prevent the oxidizing action exerted by chlorine on the unwashed sulphides in ores by adding salts such as niter to the mixture have now apparently been abandoned. Among the recent mechanical im-

provements has been the enlarging of the lead-lined steel barrels used in the Western American works. As now made, these barrels take a charge of 10 tons of ore, instead of 5. The filter inside of the barrel is retained, but the expensive asbestos cloth, which lasted for only a few charges, is replaced by a cheap sand filter, which, it is claimed, is not soiled by the rotation of the barrel, and does not become clogged until after it has been used for about a hundred charges. The Australians have at the same time abandoned the barrel, and the vats have been reintroduced at the Mount Morgan mine, greatly enlarged.

For the determination or extraction of gold, F. Servant introduces into the ground ore, in proportions calculated according to the percentage of gold, a mixture of sodium chloride and nitrate with sulphuric acid. When the reaction is completed the gold chloride is dissolved out by the addition of water and the gold is precipitated by ferrous sulphate.

In view of the theory that gold nuggets are built up of concentric layers deposited round a central nucleus, A. Liversidge has examined a large number of specimens from various sources. The nuggets were ground down or sliced through, to obtain sections, and these were polished and etched by suitable solvents. They all possessed a well-marked crystalline structure, and usually included foreign substances. The crystalline structure is not incompatible with an aqueous origin, and the author suggests that the gold has been slowly deposited from solutions, either at ordinary or at high temperatures.

The peculiar feature of a new process by P. Langhammer for saving gold consists in drying, sizing, and stirring the ore, which, it is claimed, detaches the films of gold and makes them amenable to the solvent—potassium cyanide—which is to be applied separately to each size.

In the beam process for roasting and converting gold ore, the furnace consists of a series of brick-built air-tight muffles, each 6 feet square, and capable of roasting half a ton of ore at a charge. The ore is crushed to a 40-mesh consistence, and then roasted at a low heat, whereby the sulphides are converted into sulphates, and the gold is left free. For the first half hour the ore is roasted without the admission of air, and it is during this time that the conversion is said to take place. A blast of hot air is then introduced on to the charge through pipes and valves. It is claimed that before the introduction of the hot air the product is in a condition that precludes loss by volatilization, and that for this reason the roasted product usually shows values in excess of those indicated by assays of the raw material. The product is ground after roasting, and in this condition the ore is ready for amalgamation.

While lead and silver in the ore are generally treated together—so that when one is missing, it is obtained and mixed with the other—there are cases, as where fuel is not procurable and the distance to a smelting center is too great for the silver value of an ore to bear transplanting to it; then its treatment by itself becomes necessary. Very marked improvements have been made in this work during the past ten years, especially in the line of more rapid means for roasting and chloridizing the ores for after-treatment. They consist chiefly in better construction, clearer knowledge of the chemical requirements for the constitution of ore charges, greater care in the choice and preparation of the fuel, and more perfect arrangements for the collection of flue products.

M. A. Granger has found that reduced silver kept in an atmosphere of phosphorus at 400° C. is slowly transformed into a definite phosphide, Ag_3P , which

is decomposed again at 500° C. So that silver, like gold, has the peculiar property of absorbing phosphorus at 400°, giving it up at 500°, and retaining it again at 900°.

Aluminum.—Almost the entire metallurgy of aluminum as it is practiced to-day, says Mr. E. G. Spilsbury, is the development of the last ten or twelve years. Previous to the introduction of the Cowles electric process in 1885 the aluminum of commerce was practically all supplied from France, where it was manufactured by the Deville process of reducing aluminum chloride by the aid of metallic sodium, and was sold here for nearly \$1 per ounce troy. The introduction of Castner's improved process for the manufacture of sodium made a reduction of price to \$7 a pound possible; in 1887 the Mabery and Cowles process of reduction in the electric furnace had advanced so far that aluminum was produced in the United States cheaply enough to drive out foreign competition. The manufacture of the metal has reached its present high development in this country by the aid of the process of Charles M. Hall, in which the alumina, being held in solution in a bath of molten fluoride, is reduced by electrolysis without decomposition of the bath, so as to allow practically of a continuous process, by which a nearly pure product is furnished. While the use of aluminum has extended very rapidly during the past few years, some disappointment is felt at the results of the more thorough knowledge of its characteristics that has been gained. As a metal by itself aluminum is probably never destined to supplant iron and steel in structural work. Its comparatively low tensile strength, with the extremely narrow limits of heat between which it must be worked to insure homogeneous structure, will always make it too treacherous for such purpose. On the other hand, the results obtained with alloys of aluminum point to wonderful possibilities in the future. So far the alloy that seems to give the best present results and the greatest promise is that with nickel. The addition of a few per cent. only of nickel to aluminum greatly enhances the strength and toughness of the metal and adds to its brilliancy without adding materially to its weight.

A. T. Stanton finds cadmium iodide a convenient solder for aluminum. If it be fused on an aluminum plate decomposition of the salt occurs long before the melting point of aluminum is reached. The result is generally the violent evolution of iodine vapor and formation of an alloy of aluminum and cadmium on the surface of the metal. The decomposition of the cadmium iodide is, however, too rapid to be convenient, and the pulverulent white residue is in the way. These defects are obviated by adding zinc chloride. The result, when the salts are completely fused together, is a flux which readily enables tin or other soldering alloy to fuse perfectly with aluminum.

In the Creelius process for casting light aluminum articles an iron mold with an ascensional feed is used. Before casting the molds are heated to a temperature above the melting point of the metal that is to be poured into them. The melted metal is poured into a gate at the top of the mold, which follows up the shrinkage of the casting, and the whole is placed in a cooling chamber through which compressed air is driven, whereby the temperature is reduced very rapidly.

The authorities differing greatly as to whether aluminum is acted upon by nitric acid, special experiments were made by Prof. Thomas B. Stillman to determine the question. His results showed that aluminum in the form of coarse turnings is readily acted upon by this acid, hot or cold, the solution of the metal being more rapid in nitric acid of specific gravity 1.15 than with the stronger acid of specific

gravity 1.45. If the metal is in thick plates the action of the nitric acid is much retarded. An experiment made in view of Menschutkin's statement that a layer of nitric oxide is formed, protecting the metal from further action, showed that while aluminum in thin foil or coarse turnings is easily dissolved in either the hot or the cold acid solution is materially retarded in the hot acid if the aluminum is present in thick plates, and under the same circumstances does not take place in the cold acid.

Copper.—In the mining, smelting, and refining of copper, Mr. E. G. Spilsbury observes, no less progress has been made in the past ten years than in the working of iron; mines which had been abandoned are now worked at a profit; and the cost of the metal has been considerably reduced. It is hard for a person not actively engaged in the metallurgy of copper to single out any one special invention or improvement which has more than another contributed to these results. In the native copper districts the improvements have taken the direction of handling enormous quantities of material with the least possible labor. In the Western copper regions of Montana and Arizona, in addition to these problems, the complex and refractory character of the ores has had to be taken into account. The successful matting of these complex ores, subsequent enriching by the Bessemerizing process, and finally parting and depositing the copper by the several electrolytic processes, have all come into general use during the decade.

Under a new process mentioned in "Industries and Iron," by which copper is cast pure, it is said that the metal acquires an additional tensile strength of 33½ per cent., and possesses a conductivity of 95 per cent. when compared with the best rolled copper. The new metal appears to carry the same current with only one third the weight ordinarily used. The change, which is represented as being effected in the molecular structure of the metal, may be accounted for by the theory that the shape of the crystals has been altered so that their lines are parallel, and that the molecules are consequently brought closer together and into more intimate contact with each other.

As the distribution of the precious metals and impurities in copper is very uneven and irregular, ordinary methods of sampling bars and pigs give unsatisfactory results. What is required, Mr. E. Keller says, is a form of sample bar in which the distribution shall be even. In pouring the ladle must be hot enough to prevent any scumming, as the liquid part is sure to show a different percentage of metal from that which solidifies on the ladle. A sample bar (or plate) the thickness of which is small in comparison with the length and width, has the desired form, as the concentration from side to center can not go farther than a distance equal to the thickness of the plate, because at that moment the entire plate will have solidified. The border of the plate for a distance equal to the thickness of it will show an irregular distribution, concentration having taken place in one direction only. A correct sample will result if the plate be punched or drilled through. Tests were made on plates 15 inches square and one inch thick. Seeking an explanation of the irregular distribution of impurities, the author ascertained by experiment that a charge of molten copper remained uniform in composition when it had once been made so by thorough agitation and mixing. The different elements show different degrees of concentration, which correspond generally, except in the case of sulphur, with their melting points. The more readily fusible the metal the greater is the unevenness of distribution. Atomic weight and specific gravity do not appear to have any special bearing upon the subject, but if

the concentration is compared with the atomic volumes of the elements a correspondence appears, the concentration being largest where the difference in atomic volumes is greatest.

The stream of emerald-colored water that used to flow from the Anaconda and St. Lawrence mines in Montana and go to waste is now made a source for the recovery of the copper. In the process for precipitating the metal, which is very simple, several acres of ground are covered with wooden vats filled with old scrap iron, upon which the water is run. After the precipitation is effected the water is drawn off and the copper slime is transferred to another tank, where further drainage takes place. These vats hold about 15 tons of the copper, which now has the appearance of a clayish substance. This is packed up and sent to the smelters. The product carries an average of 86 per cent. pure copper.

Compressed air, says a writer in the "*Chemiker Zeitung*," is used, following the systems of C. and H. Borchers and Siemens and Halske, in the electrolytic refining of copper. The air is introduced under pressure through lead pipes terminating in glass jets near the bottom of the vats. By this means arsenic and iron are precipitated as arsenate of iron, the liquid is circulated, and the current density may be safely increased from 20 to 100 amperes. When the electrolyte is saturated with bismuth and antimony taken up from the anode, it should be removed and treated with copper oxide and salt. After filtration and acidification the liquid can be used again.

A new process for separating nickel and copper, which has been tested by R. P. Rothwell, consists in smelting nickel-copper matte with oxide of manganese and cooling, when the mixture will separate into two parts, the "top" containing most of the copper and manganese sulphide, and the bottom most of the nickel sulphide. By repeating the operation the separation becomes perfect. The manganese, the author says, can be used over again, or a manganese bronze can be made of the top.

Alloys.—The report of M. Charpy, of the Commission des Alliages of the French Société d'Encouragement, concludes, respecting the copper-zinc alloys, that "the tenacity of the brasses is greatly increased by working; and annealing these alloys is effective at lower temperatures than has hitherto been supposed. Annealing may, in fact, begin at so low a temperature as 430° C. (or 800° F.), and is very efficacious at 500° C. (or 900° F.). Heating brasses at 900° C. (or 1,650° F.) causes a rapid diminution in the extensibility of the alloy; and in the commercial alloys, which contain 0.15 per cent. of tin and 0.2 per cent. of lead, this effect, which is technically known as "burning," is produced at a temperature below 800° C. (or 1,450° F.). If attention be limited to the copper-zinc alloys which admit of industrial application—namely, such a range as from copper alloyed with a minute proportion of zinc to copper alloyed with 50 per cent. of zinc—it will be found that the limit of elasticity, the resistance to penetration, and the hardness increase continuously with the proportion of zinc. The extensibility also increases with the percentage of zinc, is greatest in the alloy containing 30 per cent. of zinc, and then decreases rapidly. The compressibility and the reduction of sectional area increase with the percentage of zinc, reaching a maximum with 30 per cent. of zinc, after which they decrease. The tenacity increases with the proportion of zinc, attains a maximum with about 45 per cent., and then decreases rapidly. The alloys become fragile when they contain 50 per cent. of zinc.

M. Charpy represents that he has obtained impor-

tant light on the constitution of alloys by microscopic examination. He learns from it that solidification of these substances takes place like that of saline solutions, and that binary alloys are generally formed of two constituents only, whatever may be the number of definite compounds formed by the two alloyed metals. The type of normal constitution presents crystals of a simple metal, one of a definite compound enveloped in a second constituent, which is usually a eutectic mixture formed by the juxtaposition of two very finely divided elements, one of which is the same that forms the crystals. The composition of the eutectic mixture continues constant, and the proportion of isolated crystals varies with the percentage composition of the alloy.

Prof. W. C. Roberts-Austen's report of the Alloys Research Committee of the British Association gives an illustration of the value of the principle of the assimilation of two constituents of a fluid alloy which do not naturally mix, through the intervention of a third metallic solvent in the case of the estimation of ingots of South African gold. These ingots as imported are often alloyed with base metals to an extent which has hitherto been rarely met with in metallurgical industry. The base metals associated with the gold are usually lead and zinc, and their presence has given rise to unexpected difficulties in estimating the value of the ingots—difficulties arising from the peculiar distribution of the precious and the base metals, which renders it impossible to estimate the value of the ingots by taking, in any of the well-known methods now in use, the pieces of metal required for assay. Investigation of the subject by Col. E. Matthey showed that the distribution of gold in the mass was mainly determined by gravity. An ordinary cooling curve taken on such an alloy disclosed the existence of several subordinate freezing points, one of which was probably due to the zinc eutectic of the series. The alloy contained 8.1 per cent. of silver. After remelting it with the addition of silver, so as to increase the proportion to 15 per cent., a cooling curve was obtained in which the subsidiary zinc eutectic point could no longer be found, the mass proved to be practically uniform in composition, and no difficulty was met in determining its value by an assay piece cut in the ordinary way.

The term "eutectic alloy" was introduced by Guthrie to denote the most fusible alloy of two or more metals, comparing it to the mother liquor of a salt solution, which remains fluid after the bulk of the salt has crystallized out. The recording pyrometer, according to the report of the Alloys Research Committee, shows that the case is really far more complicated as regards alloys. Many alloys consist, when fluid, of more than one solution; and each of the several solutions leaves, on cooling, a solid deposit and a fluid mother liquor. These mother liquors, however, do not usually unite with one another; and a complicated series of conditions is established when the temperature has fallen sufficiently low for the whole mass to become solid. Each of these metallic mother liquors is a eutectic alloy, and may be included in the definition of eutectia actually given by Guthrie. Some alloys are of a simple character, and when fluid have only one eutectic alloy, that is, the deposits fall out from a single mother liquor. All the alloys which are used for the sake of their strength appear to be highly complicated. Thus in the alloys of copper and zinc there are four eutectic alloys, and in the copper-tin series there are at least six. The upper point on a cooling curve, at which the metal in excess begins to crystallize, has usually been termed the "melting" or "freezing" point; and difficulty has naturally been experienced in deciding what part of

the long range of temperature during which solidification takes place should be called the true melting or freezing point of the alloy. In the previous reports alloys with more than one freezing point have been referred to. The temperature at which one constituent begins to crystallize out was called the higher freezing point, and the temperature at which the eutectic alloy solidifies was called the lower freezing point. It may appear at first sight as though these points must be the beginning and ending of one continuous process of solidification; but as in the majority of cooling curves, the initial and eutectic freezing points are indicated by separate and distinct evolutions of heat, they may rightly claim to be separate, and not merely stages in a single operation. The fact that the lead-tin series has more than one freezing point is of industrial importance, for on it depends the facility with which an artificer can "wipe a joint" with plumber's solder. The latter contains 66 per cent. of lead, and its pasty condition when used is due to the fact that it has two widely separated points of solidification, the alloy consisting of granules of solid lead in a fluid mother liquor.

In the zinc-copper series of alloys, the upper eutectic probably consists of a mixture of copper with the compound CuZn . The mixture of these soft and hard substances produces great strength, as is evident from the fact that the strongest alloy of this series consists almost entirely of this eutectic; but the presence of a eutectic naturally diminishes the extensibility of a mass which contains more than a small amount of it. Both the annealing and the working of cast brass materially increase its strength; and this fact is of industrial importance, as it suggests that for certain purposes a brass containing nearly 50 per cent. of the cheaper metal may by suitable treatment be endued with properties which render it as useful as one richer in copper; its extensibility, however, would be small. Although brass containing from 60 to 70 per cent. of zinc is extremely weak, further additions of zinc are accompanied by a partial return of strength, which appears in some way to be connected with the presence of free zinc. Each apex of a curve representing mechanical properties seems to be in some way connected with a point on the freezing-point curve where the points of solidification tend to unite. In the copper-zinc series the connection is complicated by the simultaneous presence of more than one eutectic; but in the lead-tin series the maximum strength is possessed by the eutectic alloy of the series. In the copper-tin series the connection between a maximum strength and the union of the constituents of a given alloy in a single point, though generally clear, is sometimes masked by the wide range through which the eutectics extend.

As one fact which has been made more and more prominent in the alloys researches of later years, Dr. Etard, of the *École Polytechnique*, France, mentions the influence of very small quantities, the micropisms or chimions of some kind. A persistent study of steel has enabled the chimionic influence of such quantities of carbon, silicon, or phosphorus as might be expressed in atomic weights, for carbon and iron, by the formula Fe_{1000}C to be recognized; and whatever may be thought of this inadmissible formula, the relation of 1 atom of carbon to 1,000 atoms of iron remains a fact. Such quantities are actually employed in metallurgy when varieties of steel possessing certain properties are required. An attempt has been made to ascertain how far the properties of metallic masses are dependent on atomic movement and molecular grouping. The mechanical properties of alloys of definite series of metals have therefore assumed less prominence than the principles which affect

alloys generally. While the practical bearing of the investigation may have seemed to be somewhat remote, the establishing of the analogy between alloys and saline solutions has been eminently fruitful of practical results; for it has enabled the mechanical properties of alloys to be explained, and even to be predicted. The property of liquation possessed by saline solutions while freezing—which consists in rejecting a certain quantity, often very minute, of a fluid portion of the mass, and distributing or relegating it to a definite position in relation either to the mass as a whole or to individual crystals—is now recognized as being of fundamental importance in determining the mechanical properties of iron and steel, and of alloys generally. Attacking the problem of the constitution of alloys from the atomic point of view has enabled the influence exercised by the relative atomic volumes of the alloyed metals upon the mechanical properties of the mass of metal to be clearly revealed. It may now be accepted as proved that the influence exerted by an element added to a mass bears a direct relation to its atomic volume. The original problem proposed for consideration by the Alloys Research Committee, "Are the mechanical properties of metals and their alloys connected with their atomic volumes?" has been definitely answered in the affirmative by this and by researches on the European Continent and in America. The evidence which has been gathered that there is a constant and active molecular movement in solids can hardly fail to be of importance in all industries in which metallic alloys are employed.

In the manufacture of phosphor bronze as described by Max A. Wickhorst the phosphorus added to deoxidize the metal may be introduced as phosphorus or as a high phosphorus alloy, called "hardener." This contains 6 per cent. of phosphorus, with copper and tin in the ratio of 8 to 1, and is made by melting 90 pounds of copper and adding 11 pounds of tin. Seven pounds of phosphorus are put into a dilute solution of blue vitriol, and kept there till they are coated with metallic copper. This protects the phosphorus when it is dried in the air. After drying, the sticks of copper-plated phosphorus are introduced into the melted bronze, two or three at a time, and held to the surface of the metal by a cup-shaped tool. The phosphorus melts and combines with the metal at once, to form the "hardener." Phosphorus has the effect of hardening bronze, while it also makes it more fluid. The important property of phosphorus is, however, to deoxidize the metal, and it does this effectively.

In much of the manganese bronze used by foundrymen the manganese is added in the shape of ferro-manganese, which necessarily introduces considerable iron into the bronze. This iron is regarded by Mr. F. J. Davis as injurious, and the bronze so made as more readily corroded and not nearly so strong, tough, and ductile as bronze that does not contain iron. By using a rich alloy of manganese and copper, containing no iron, or other impurities, which is now offered, a pure manganese bronze of any desired grade can be procured. One of the best and cheapest bronzes—a very strong, tough metal—can be made of copper, 53 per cent.; zinc, 42 per cent.; manganese, 3.75 per cent.; and aluminum, 1.25 per cent. The presence of aluminum is essential to getting solid castings. For rolling into sheets, in which form manganese bronze is used for mining screens, a mixture is used containing more copper and manganese and less zinc. A substitute for German silver, composed of copper, 67.25 per cent.; manganese, 18.50 per cent.; zinc, 13 per cent.; and aluminum, 1.25 per cent., is of good color, resembling German silver closely, is strong, has superior casting qualities, does not corrode readily,

and has four times the electrical resistance of German silver.

The useful alloys of aluminum are divided, in a report published in the "Aluminum World," into two groups—the one of aluminum with not more than 15 per cent. of other metals, and the other of metals containing not more than 15 per cent. of aluminum. In the one case the metals impart hardness and other useful qualities to the aluminum, and in the other the aluminum gives useful qualities to the metal with which it is alloyed. More or less useful alloys have been made of aluminum with copper, chromium, tungsten, titanium, molybdenum, zinc, bismuth, nickel, cadmium, magnesium, manganese, and tin—these alloys all being harder than pure aluminum. It is, however, by combination of these metals, with perhaps additions of lead and antimony, that alloys of most value have been discovered. Some of them have been formed by the addition of only 1 or 2 per cent. of aluminum.

Experimenting upon the strength of alloys of aluminum and zinc in various proportions, Prof. W. F. Durand found the best results to be with mixtures not far from the proportion of two thirds aluminum and one third zinc. Comparative experiments with like bars of this alloy and cast iron indicated that the alloy is the equal of good cast iron in strength, and superior to it in the location of the elastic limit. The alloy is white, takes a fine smooth finish, does not readily oxidize, melts at a dull-red heat or slightly below, is very fluid, running freely to the extremities of the mold, does not burn the sand into the casting, coming out clean, and in good condition to work; is rather softer and more easily worked than ordinary brass, while it is not as liable to clog a file; and is brittle, and hence is not suited to pieces that require the toughness of brass.

Brass is understood to be a metal of good cutting qualities, and is used in the arts for purposes demanding a free working material of moderate strength. Its cutting qualities vary much according to its composition. As a rule, the lower the brass the more difficult it is to cut; and as the composition approaches pure copper, it becomes one of the most troublesome substances worked in the machines. These refractory qualities are good for such classes of material as spinning or cartridge brass, but are detrimental to such classes as clock brass or screw rod, for which purpose an alloy should be produced which can be worked free at a high speed. The method in most general use for producing such brass is by the addition of lead. The material produced thereby is known to the trade as "leaded brass," of which "clock brass" and "screw" or "drill rod" are two of the most common and largely used varieties. Mr. Edwin S. Sperry, who has experimented to determine the effect of lead in varying quantities in such metal, finds that for the best quality of screw-rod or clock brass the content of copper should not be below 60 per cent. or above 70 per cent., and the lead should not vary more than 0.20 per cent. from 2 per cent. Spelter should form the remainder. The alloy should be free from tin, or at least should not contain more than 0.10 per cent. of tin. Brass containing lead tarnishes more readily than the pure material, and it is also claimed that such an alloy is better suited for ships' sheathing than brass containing no lead. The alloy patented by Muntz for sheathing ships contains 56 parts of copper, 40½ parts of zinc, and 3½ parts of lead. The inventor claims that the lead plays a very important part in the alloy by giving it the property of oxidizing with sufficient rapidity to keep the ship's bottom clean. Experiments to determine whether lead has a tendency to combine with brass in any particular proportion did not give a definite result; but "it is

evident that lead forms a homogeneous mixture with brass if not a definite alloy." No brass is made now that does not contain more or less lead.

Heating a mixture of glucina, charcoal, and oxide of copper in the electric furnace, M. Moissan has obtained alloys of glucinum and copper. They are golden yellow, have properties similar to those of aluminum bronze, and are specially remarkable for their extremely sonorous qualities.

Miscellaneous.—The whole tendency of modern work, Prof. Roberts-Austen observed in an address delivered at the Toronto meeting of the British Association, has been to break down the supposed distinction between the metals and the elements styled nonmetallic. It has been further proved that the three states of matter, solid, liquid, and gaseous, merge imperceptibly into one another, and that even in a solid some molecules are present that retain the freedom of motion characteristic of gaseous molecules. It was shown that the behavior of a solid metal may closely resemble that of a fluid one, and that a fluid metal in turn shares the properties of an ordinary nonmetallic fluid. Water, flowing in a vertical stream through a narrow orifice breaks away into characteristic drops and droplets. The author had pictured such water drops by instantaneous photography, and had done the same with a fluid stream of pure metallic gold, when he found that the drops and droplets of metallic gold were identical with those of water. Again, a sphere falling from a height of a foot or two into water produced a remarkable splash, which within the tenth of a second changed from a coronet-shaped splash into a columnar one, about 2 inches high. Having photographed the splashes made by bullets of pure gold when they fell into a pool of molten gold, he found that the gold splash and the splash of water and milk were identical. When a solid projectile of steel was urged against a steel armor plate with a velocity of 1,600 feet per second, the projectile produced within one three thousandth of a second a splash of the solid steel plate, which in turn bore a strange resemblance to the fluid solid splash. Hence it was evident that the solid steel really behaved like a more or less viscous fluid. It is shown by experiments that metals will diffuse into each other, even when solid, just as gases diffuse into one another, but less rapidly. These facts teach that metals, even when solid, are not the inert things they have been supposed to be, but are really vibrating masses of great complexity.

The Engineer of the Melbourne Victoria Water Supply Board reports concerning the relative merit of wrought-iron and steel water mains, that it is established by his observations that the life of a pipe depends largely upon proper protection against corrosion. Tests of cast-iron pipes by breaking weight have shown that a new pipe gave 407 tons breaking weight, while similar pipes which had been in the ground from thirteen to twenty-nine years gave averages of 2.45 and 2 tons respectively, showing a deterioration of 50 per cent. by corrosion in twenty-nine years. The average life of cast-iron pipes is thirty years. Pipes taken up after about forty years' use have proved valueless even for scraps. Some wrought-iron pipes laid by the engineer of the San Francisco water works were found after twenty years' service to be as sound as when laid, owing to their having been coated with asphaltum. Steel pipes have been used in connection with the Melbourne water supply since 1886 with satisfactory results, and it is the opinion of the engineer to the board that, with asphaltum coating properly applied and pipes carefully handled, steel pipes would last as long as cast iron, and be more economical.

To remove the iron from the water supplied to

the city of Kiel—spring water of good quality except for the small proportion of iron it contains, which deposits in the distribution system and imparts a bad taste through the development of polyphosphates—the water is made to traverse a system of metallic channels and cascades, of which the channels are undulating and perforated. The water is then passed through a bed of coke, ten feet thick, which is divided into eight equal compartments and rests upon a perforated bed of iron. From this bed it falls slowly into receiving basins connected with two covered reservoirs. The iron deposited on the rough surface of the coke is washed off once a week by isolating one of the compartments at a time. Before use, however, the water, now containing only from one-sixth to one-seventh of the original quantity of iron, is passed through filters of coarse and fine stone and fine sand arranged in layers, whence it passes into covered reservoirs. The sand filter is cleaned by removing a thin upper layer of the sand and replacing it with clean sand. The treatment is said to have proved completely successful.

Difficulty is liable to occur in electric smelting of ores from the slags being usually poor conductors and liable when present in the furnace to cause breaking of the current and stoppage of the operation. A slag has been secured by M. Heibling of good conducting power by using a flux consisting of a mixture of lime and carbon—the mixture used for calcic carbide. Under the action of the arc part of the carbon takes up the oxygen in the ore under treatment, while another part combines with the lime, forming carbides which are fusible and good conductors. The fused carbides take up and hold the infusible portions of the ore in suspension, while the metal settles at the bottom of the surface. The slag remaining consists of a very impure carbide of calcium, which is, however, susceptible of being given a certain commercial value.

The researches of Ad. Carnot and M. Goutal into the state in which elements other than carbon are found in castings of steels led them to the conclusions that manganese, nickel, copper, and titanium seem to be simply dissolved in the steels; a portion of manganese may be in the state of sulphide or silicide in the cast metals. Chromium forms complex and perhaps multiple compounds with iron and carbon. Tungsten and molybdenum are in the state of definite combinations with iron which may be represented by the formulas Fe_3W and Fe_3Mo_2 . These elements, generally considered metals, behave therefore in steel like nonmetals, while arsenic plays a part analogous to that of the true metals.

A novel method of obtaining reproduction of articles in low relief, such as medals, has been devised by Joseph Rieder, of Thalkirchen, Bavaria. The inventor takes a plaster-of-Paris cast of the article about an inch in height, which is placed in an ebonite sleeve, so that only its face and back are exposed. It is then placed face upward in a vessel containing an electrolyte, so that the face of the cast is above the level of the liquid and is moistened by absorption only. A steel plate is placed on the face of the cast and is made the anode of the cell, while the cathode is a spiral wire placed in the liquid. The steel rests on the projections of the cast, through which a current flows that gradually dissolves the steel. The dissolution proceeds until the entire surface of the steel has been brought into contact with the cast, and a copy is produced.

One hundred and sixty-eight specimens of ores and minerals, comprising oxides, carbonates, and sulphides, were examined by W. N. Hartley and Hugh Ramage with reference to the dissemination of some of the rarer elements and the mode of their association in common ores and minerals. Among

these gallium occurred in 68 specimens, indium in 30, and thallium in 17. Rubidium occurred probably in 70, but unquestionably in 13. All the carbonates of iron and all the tin ores contained indium. With a single exception, all the bauxites contain gallium. Silver, copper, calcium, potassium, and sodium are very widely disseminated through all ores and minerals. The authors draw deductions as to the formation of beds and lodes of ore from the following facts, which they claim to have established: First, that certain groups of ores and minerals are pervaded by small quantities of the same metals as common impurities; second, the rare metals, more particularly rubidium, gallium, indium, and thallium, are associated with the same groups of minerals and also with allied groups. It is easy to trace the association of similarly constituted compounds to their connection with elements related to each other, as determined by the periodic system of classification. These compounds have certain properties in common, distinctive of the groups of elements and compounds to which they belong; hence in a given course of chemical changes similar compounds are formed and thrown together by precipitation or otherwise. All the minerals mentioned have undoubtedly had an aqueous origin. The presence of the alkali metals in all the specimens, but in variable proportions, has a special significance. In the analysis of many different precipitates, obtained both in neutral and even strongly acid solutions, the alkali metals have been found in combination with the precipitated substance. It has long been known that manganese, aluminum, and iron in the state of hydroxides combine with more or less of the alkalies, but in a great measure such combinations have been disregarded.

METEOROLOGY. Temperature.—In a paper on the mean monthly temperature of the British Isles, F. Gaster and R. H. Scott deal with the means of the daily minimum, average, and maximum temperatures for the various months in the twenty-five years 1871-'95. They point out that there is a great difference between the extent of range of temperatures at the coast stations and that recorded inland. The range between January and July amounts to about 16° at coast stations, but to more than 23° at the inland stations. The contrast between the temperature of the air at inland and at coast stations at different times of the year is due to the following causes: The constant tendency of the sun to heat the surface of the earth; the equally constant tendency of the earth to radiate its heat into space. Both of these influences are modified greatly by the aqueous vapor and the clouds suspended in the atmosphere. The third cause is found in the fact that the solid portions of the earth absorb and reflect heat much more readily than the water; and the fourth in the fact that while the ocean to the westward of the British Isles is of enormous size and great depth, the sea to the eastward is, comparatively speaking, limited in area and shallow, with the shores of Continental Europe only a short distance away.

From a study of the relation of meteorological conditions and the occurrence of sunstroke made during the extraordinary heat wave of August, 1896, and published in the "Monthly Weather Review," Dr. W. F. R. Phillips concludes that the number of sunstrokes follows more closely the excess of temperature above the normal than it does any other meteorological condition; that the number of sunstrokes does not appear to sustain any definite relation to the general humidity; that, although the absolute humidity was greatest during the maximum of sunstrokes, it does not appear that the variations influenced the number of cases; and that the liability to sunstroke increases in propor-

tion as the mean temperature of the day approaches the normal maximum temperature for that day.

In a table published in "Symond's Meteorological Magazine" showing the chief climatological elements at eighteen stations in different quarters of the earth for 1896, the highest shade temperature, 111.2° , is given as having occurred at Adelaide, South Australia, in January. A temperature of 104.8° was recorded at Malta, which appears to be unprecedented. Winnipeg, Manitoba, as is usually the case, excels all the other points in minimum shade temperatures and in daily and yearly range. The least daily and yearly ranges were recorded at Grenada. The highest mean temperature always occurs in Ceylon, and for 1896 was 81.5° . The average for fifteen years at Bombay was less than a degree below that in Ceylon. The station having the lowest relative humidity has for many years been Adelaide, and the dampest station Esquimaux. The highest temperature in the sun, 177° , was at Trinidad, and the lowest on grass was -23.5° at Toronto, the radiation temperature not being registered at Winnipeg. The greatest rainfall, 101.00 inches, was at Colombo, Ceylon, and the least 15.17 inches, much below the average, at Adelaide. The greatest amount of cloud was at Esquimaux, slightly exceeding that in London. The clearest day was at Grenada.

It was pointed out in the British Association by Dr. Van Rijkevessel that the curves of daily temperature for the different meteorological stations of Europe indicate a possible division of the continent into two regions with marked difference of climate: The eastern region includes Russia and adjacent countries, while the rest of the continent is in the western region. Small irregularities, such as secondary maxima and minima, are reproduced in all the curves for places in the same region, and serve to show that the temperatures are determined by external causes operating over the whole area.

In a new form of constant-volume air thermometer which shows the total pressure directly and may be graduated in degrees of temperature, employed by Mr. J. Erskine Murray, an arrangement is provided whereby the pressure of the atmosphere is eliminated by the adjustment of an auxiliary reservoir of mercury. The total pressure of the air, and hence the temperature, are measured directly by the height of a column of mercury. A barometer tube with a vacuum at the top is connected with the bent stem of the air tube and the stem is continued in flexible form to the mercury reservoir. The barometer tube is graduated in absolute degrees of temperature by fixing one point—the pressure for the temperature of melting ice—and dividing the tube mechanically. To make an observation of temperature the mercury is adjusted to a mark fixed on the bulb stem by raising or lowering the mercury reservoir, and the pressure of the inclosed air is given by the height of the mercury in the barometer tube over the mark in the stem of the air bulb. By closing a stopcock between the pressure gauge and the reservoir the bulb and the gauge may be completely cut off from external pressure.

The belief is general that anticyclonic conditions during the winter are likely to be accompanied by exceptional cold; but the observations of Mr. W. H. Dines have led him, so far as England is concerned, to the opposite conclusion, and he always expects a frost to break up as soon as the barometer gets much above 30 inches. A comparison of the tabulated barometer heights for all the cold periods during the three winter months of the fifty years 1841-'90 went to confirm this view.

Clouds.—Four methods of measuring the heights of clouds are in use at Blue Hill Observatory, Mass.

One is by synchronous theodolite observations of identical points, which when repeated at definite intervals enable the velocity of the cloud to be calculated. In another method, for the shadows of low clouds, the angle of the cloud from the observatory is measured, the angle of the sun with the horizon is found from tables, and the distance of the shadow on the landscape is ascertained from a map. These elements of a triangle enable the cloud height to be calculated, and its velocity may be determined from the time of passage of the cloud over low points. A third method, the only one by which certain high and uniform cloud strata can be measured, is by means of the light reflected upon them at night from kites. The angle which the center of the illumination makes with the horizon is measured, and, having the distance from the kite, the right-angled triangle may be solved. An accurate method for low and uniform clouds is by sending up kites into and through the clouds. The length of line and its angle when the kites disappear give the height of the lower surface, and the records of barograph and hygrograph, which are carried by the kites, determine the upper limit of the cloud, and therefore its thickness. Still another method for very low stratus or nimbus is to note the height of the base on the sides of Blue Hill. The mean height of the cirrus cloud is determined to be about 29,000 feet, though it is sometimes found as high as 40,000 feet. The mean height of the cumulus is 4,000 feet, or a little less than a mile, but the tops of the cumulo-nimbus, or thundershower clouds, penetrate into the cirrus region. The average height of the nimbus, or rain cloud, is only 2,500 feet, and it often sinks below the top of Blue Hill. The average velocity of the cirrus clouds is 89 miles an hour, but in winter they sometimes have the enormous velocity of 230 miles an hour. The observations show that the entire atmosphere, from the lowest to the highest level, moves twice as fast in winter as in summer, and that between the heights of 2 and 9 miles there is an almost continuous westerly current of great velocity, the increase of velocity from the lowest to the highest clouds being a linear factor of the height. Whenever clouds are visible, therefore, it is possible to ascertain the direction and velocity of the currents at the levels at which they float.

Precipitation.—In no district in the world is navigation so endangered by a combination of fog and icebergs as off the banks of Newfoundland. Maps showing the distribution of fog by months, compiled by Dr. G. Schott, for the routes of steam vessels between New York and 40° west longitude, show that the period of most copious fogs is from April to August, inclusive; that a sudden and considerable decrease takes place in September; and that the least amount is in April. Two regions of greatest frequency of fog are south of Nova Scotia and the eastern part of the Grand Newfoundland Bank. On the bank itself, especially on the western side, the frequency of fog is much less, because the water is considerably warmer there than on the eastern side, and because the sudden changes of the sea temperature do not occur there to the same extent as on the eastern side, where the two currents come into contact. Dr. Schott has also made studies of the currents of the banks, and finds the fact confirmed that the Gulf Stream does not exist as a warm current east of 40° west, and has no rapid movement east of 60° west; that the Labrador current does not anywhere touch the United States seaboard, and has nothing to do with the "cold wall"; that on the Grand Bank itself there is practically no current; and that the positions of the warm and cold streams are irregular movements difficult to account for.

Mr. R. C. Messman has found from the examination of the principal meteorological registers and weather records kept in London between 1813 and 1896 for notices of thunderstorms, lightning without thunder, fog, snow, hail, and gales, that the average number of thunderstorms during the period was 9.7 per annum, the maximum occurring in July and the minimum in September. The average number of fogs was 24.4, and "of dense fogs" 5.8 per annum. Ten-yearly means show that a steady and uninterrupted increase of fog has taken place since 1841. The average number of days with snow was 13.6 per annum. The snowiest winter was that of 1887-'88, with forty-three days of snow, while not an instance of snowfall was recorded in the winter of 1862-'63. The mean date of the first snowfall was Nov. 9, and of the last March 30. Hail appears as essentially a spring phenomenon, reaching a maximum in March and April. The minimum was in July and August. The average number of days with hail was 5.9 per annum.

Sir John Evans, in the British Association, illustrated the extent of the local variations in weather even in a country so small as England, by citing the difference in the amount of rainfall on the east and west coasts, which gives the almost absurd ratio of 1 to 8.

The phenomenon of rain gushes in thunderstorms has been considered by Prof. Cleveland Abbe in the "Monthly Weather Review." Several plausible explanations of it have been put forward from time to time, but have been rejected as erroneous. It is an open question whether the rain gushes bring about the formation of lightning or are provoked by it. The author makes several suggestions to serve as bases for experiments.

The question of the influence of forests on rainfall was reviewed by Prof. H. A. Hazen at the annual meeting of the American Forestry Association. Both the historical and the experimental evidence were found to be indecisive so far as they were cited to show that forests promote increase of precipitation to any marked degree. "It has been well established," the author says, "that forests have a most important bearing upon the conservation of rainfall; that the forest floor permits a seepage of water to the sources of springs, and thus maintains their steady flow; that woods hold back the precipitation that falls, especially in the form of snow, thus preventing or ameliorating the effects of dangerous freshets. There is not the slightest doubt of their importance to the welfare of man, but all these facts do not affect the question of their influence upon precipitation. The historical argument, depending on the contrast between the former fertility and present desolation of certain regions, is met by the answer that there is no evidence of any essential change in the absolute quantity of rainfall; but formerly, with large populations and high civilization, the water supply was taken care of in those countries and applied to irrigation, of which the remains of immense works are in evidence, while now it is all wasted. The coincidence of our dense forests with the greatest precipitation is probably the result of normal abundance of precipitation. Meteorologists are agreed that there has been practically no change in the climate of the world since the earliest mention of such climates." The "early and the latter rains" are experienced in Palestine now just as they were four thousand years ago. Jordan "overflowed its banks" today in February precisely as it did in Joshua's day. Comparative gauge measurements of precipitation in forests and the open have afforded no satisfactory results. What is probably the amplest record of such observations, that of Prof. H. A. Blanford, in India, showed a possible difference of 2 per cent. in favor

of the forest. This is "practically inappreciable." There is, however, a class of visual observations which seem to show effect upon rainfall of forests. "Probably many have seen heavy clouds passing over a plain, but which precipitated only as they passed over a forest. Also in a hilly region it is a frequent phenomenon that fog and low-lying cloud hover near a forest, and not over an open plain. One also notes very often, in passing into a forest on a damp day, that the trees drip moisture, possibly condensed from moisture evaporated from the damp earth underneath. Observations of this nature, however, can not ordinarily be checked by instrumental means, but show in a general way that the forest tends to conserve vapor and moisture, which in the case of the open field would be diffused into the atmosphere.

The director of the observatory at Odessa, Russia, has recently published a work on the distribution of rain and thunderstorms over the globe, in which he assumes that there exists on either side of the equator a zone of electrical activity exactly corresponding with the region of greatest rains. Throughout this region the thunderstorms exceed 100 a year; beyond it, up to 20° or 25° of latitude in both hemispheres, thunderstorms are of rarer occurrence; and in temperate climates they do not much exceed 30 a year. The most curious observations in the book relate to countries where thunderstorms are not known, and even where it is said never to rain. Such countries are Finland, Iceland, northern Siberia, eastern Turkestan, Nova Zembla, and all the arctic regions.

Winds.—From his investigations respecting wind velocity Prof. G. Hellmann has deduced the yearly period for all stations for which he could find a series of ten years' observations and for all parts of the world. His general conclusions are that the velocity increases with latitude and decreases from the coast inland; that in the yearly period the maximum in higher latitudes and exposed coasts occurs during the cold season, while in the interior of the continents it occurs between March and July; that the period of maximum velocity generally corresponds with that of the stormy season; that the minimum velocity generally occurs in August or September at those inland stations that have a spring maximum, while at coast stations which have a winter maximum the minimum takes place in June or July; that the amplitude of the yearly period is greater on the coast than inland, but greatest in districts subject to strong periodical winds and monsoons.

A summary of the conclusions reached by M. Maximilian Plessner from a study of the economies of wind as a source of power is given by M. Henry de Varigny in a paper on "Air and Life," published by the Smithsonian Institution. The irregularity of the wind forms the chief objection to placing reliance upon it, but much depends upon localities. There are places and large regions where it is fairly regular. It seldom fails at the seashore, and the trade winds are nearly constant; while in most parts of the globe it becomes more regular as the altitude increases. Hence, upon the whole, a considerable part of the world is well suited for investigations upon the best methods of deriving power from the winds. The first requisites of a wind-power machine are some sort of a motor driven by the wind, and an accumulator to store the energy and yield it at the required moment. Dismissing the old windmill and the æolian wheel as not fully coming up to the mark, M. Plessner turns to sails as affording a possible solution of the problem. "The utilization of the power of the winds," he writes, "and its transformation into mechanical work are only possible by means of sailing vehicles,

driven by wind upon a circular railway, the power generated by such rotation being transmitted to an axle and thence to machinery." On this railway a circular train, made of small cars coupled together, each carrying a mast and two sails at right angles with each other, is driven by the wind. The sails are automatically trimmed, and automatically also they expand or contract, or rather take in the wind or withdraw from it. As long as the wind blows the train continues rotating, and if it is connected with a central axle the latter may work dynamos and charge electrical accumulators. A similar apparatus might be arranged in water, boats taking the place of the cars, and, since the wind power is transformed into electricity, the latter may be stored and kept in reserve, or transferred to a distance to perform 10, 20, or 50 miles away any work that may be required.

In a paper on "Some Climatic Features of the Arid Regions of the United States," prepared by the chief of the Weather Bureau and presented to the National Irrigation Congress at Phoenix, Arizona, in December, 1896, the probable availability of the wind as a motive power and sensible or wet-bulb temperatures are discussed. Comparative charts of actual and sensible temperatures show that the greatest difference between the wet-bulb and the dry-bulb temperatures prevails in the regions of the West and South, where the relative humidity is low, while in the East and Northeast, where the relative humidity is much higher, the two temperatures most nearly agree. Effective winds appear to be abundant throughout the year on the plains east of the Rocky mountains, but to decrease as the mountains are approached.

Miscellaneous.—The first instrument, recording continuously and graphically, lifted by kites, was a thermograph made of light materials, constructed by S. P. Fergusson, which was raised at Blue Hill Observatory, Massachusetts, August, 1894, to 1,430 feet above the hill. By its use simultaneous observations could be obtained in the free air and on the ground. This method has been since then in regular use at the Blue Hill Observatory. In the present practice at Blue Hill, Eldy's Malay tailless kites, presenting a convex surface to the wind, are used, or Hargraves's cellular kites, consisting of two pairs of superposed planes, with side planes connecting each pair. The line holding the kites is a steel music wire, 0.033 of an inch in diameter, having a tensile strength of 300 pounds, and weighing 15 pounds per mile. Subsidiary kites are attached by independent cords to various points of the line. The meteorographs, recording pressure wind velocity, and air temperature, are composed mostly of aluminum, and weigh less than three pounds each. The wire is coiled upon the drum of a windlass, which may be turned by two men; a measuring device registers the length of wire uncoiled, while the angular elevation of the meteorograph, when it is not hidden by clouds, is observed from time to time. From these data, or from the barometric record, the altitude of the meteorograph is calculated. Kites may be flown in all kinds of weather. In his paper read at the British Association Mr. A. Lawrence Rotch, Director of the Blue Hill Observatory, gave as the greatest elevation to which kites had lifted a meteorograph 8,740 feet above Blue Hill, Oct. 8, 1896, when nine kites were used. The meteorograph remained during several hours higher than a mile, and good records of the atmospheric pressure, temperature, and hygrometer were brought down. More than one hundred records of atmospheric pressure, temperature, and relative humidity or wind velocity at intermediate heights up to 8,740 feet had been obtained when Mr. Rotch made his report to the American

Academy of Arts and Sciences, May, 1897. After this, on Sept. 19, 1897, a meteorograph sustained by 7 kites was raised to a height of 9,255 feet above Blue Hill, or 9,885 feet above the sea and on Oct. 15, to upward of 11,000 feet above the observatory. A few of the general conclusions mentioned by Mr. Rotch as having been deduced from his observations with kites are that at the height of about a mile the diurnal changes of temperature in the free air nearly disappear, although in fair weather the days are damper than the nights. "Cold and warm waves" begin in the upper air, as is proved by the temperature decreasing faster than normal, or even increasing abruptly with altitude, before the fall or rise of temperature begins at the earth's surface. Several ascents through clouds have shown the air above them to be usually warmer and drier than the air below. Kites furnish a ready and accurate method of measuring the heights of certain low and uniform clouds, which could not be easily measured otherwise in the daytime. Changes of wind direction in the different air strata are determined from the azimuths of the kites; these changes sometimes amount to 180°. The wind velocity usually increases with altitude, and vertical currents commonly prevail near cumulus clouds. During high flights the wire is strongly charged with electricity, but no measurements of the kind or potential had lately been attempted.

The experiments of the United States Weather Bureau with kites flown at distances of from one to two miles from the earth's surface have shown that the shifting of the wind occurs at the height of a mile from twelve to sixteen hours before the same change of direction on the surface; and the bureau hopes soon to be able to construct a telegraphic synchronous chart based on conditions of the atmosphere a mile above the surface of the earth.

Describing in the British Association the diversities of climate in Canada, Mr. R. F. Stupart spoke of the climate of the Pacific coast between the ocean and the mountain ranges as moist and temperate; while on the east side of the Rocky mountains, on the high-level plateaus of the Northwest Territories, and in Manitoba, large extremes of temperature prevail, but the atmosphere is bright, dry, bracing, and healthy. In the valleys of the St. Lawrence and Ottawa rivers a cold, bright, bracing winter is followed by a long, warm summer, while the maritime provinces have a climate that has been highly extolled. Among the marked climatological features of the mountain districts are the rapid changes of temperature that frequently occur in short intervals of time, the great variability in different years of the mean winter temperature and of the summer rainfall, and the warmth of the summer in the great Mackenzie basin, just under the arctic circle. The author further discussed the local features of the climate of Ontario and Quebec. The annual precipitation of the province of Ontario is between 30 and 40 inches, and is fairly evenly distributed throughout the year. In summer, however, the rain generally falls in thundershowers, and cloudy and wet days are rare. The Great Lakes never freeze over, but usually most of the harbors are closed by ice about the middle of December, and remain frozen over till the end of March or the beginning of April. The average date of the closing of navigation on the St. Lawrence is in December, and of the opening April 21. Harbors on the Gulf of St. Lawrence are likewise closed by ice during the winter months, but on the Bay of Fundy and the coast of Nova Scotia they are open all the year round.

A method has been suggested by Prof. E. C. Pickering for determining the distance and direction of one vessel from another in a fog by means

of a calculation based on the velocity of sound. "If, for instance," says R. De C. Ward, explaining the method in "Science," "two fog horns, A and B, are placed one east and one west of a given point in a north-and-south channel, and each two miles from the point, and these horns are blown simultaneously and automatically at regular intervals of about a minute, a captain who is trying to work his ship through the channel can readily get his bearings. Supposing that one horn has a higher pitch than the other, and that a vessel is one mile east of the channel between the two horns, the captain of the vessel will hear the high-toned whistle A five seconds after it is blown, because it is only one mile distant, but B will not be heard for fifteen seconds, because it is three miles off. If both horns are heard together, the vessel is in the middle of the channel. Another application of the same method of determining positions of vessels is suggested in the case of one vessel attempting to pass another in a fog, or in the case of the calculation of a ship's distance from the shore when the ship's time is within a second or two of that on shore, and when a whistle on shore is blown at the exact beginning of each minute. The determination of the velocity of the wind is also noted as being a useful application of this same method, especially in the case of very high winds, which are apt to injure anemometers.

A physical theory of the electrical phenomena of the higher atmosphere is suggested by M. Marcel Brillouin. Any metallic body charged negatively loses its charge when exposed to ultra-violet light, and it is shown by experiments that dry ice under similar conditions behaves likewise. But when the ice has a film of water upon it the loss is extremely small. As cirrus clouds consist of ice needles and receive ultra-violet radiations from the sun, negative electrification may pass from the needles into the surrounding air, leaving the cloud particles charged positively. Hence the author concludes that atmospheric electricity is produced by the action of ultra-violet solar radiations upon the ice needles in cirrus clouds, and that the initial electrical field is produced by the movements of the higher regions of the atmosphere relatively to the earth's magnetic field.

The centers of action of the atmosphere, or regions at which the mean barometric maxima and minima are situated, have been studied by D. H. H. Hildebrandsson. The monthly differences of the pressure of the air from the mean, as being the principal meteorological element, were calculated for the years 1875 to 1884 at 68 stations, distributed as widely as possible over the surface of the globe; the mean differences were then plotted upon monthly charts. The results obtained from the lines of equal difference show that the differences are greater in winter than in summer and increase from the equator toward the polar regions; and also that the barometrical variations at certain localities, for example, at the Azores and in the vicinity of Iceland, are almost always opposite in sign, especially when the figures are large; and that the greatest differences are found in January and July in the vicinity of Greenland and Iceland, on the one hand, and to the north of Russia, between the White Sea and St. Petersburg, on the other. The discussion seems to establish the fact that a kind of oscillation exists at all places in the pressure of the air between a center of high pressure and another adjacent center of low pressure. The author hopes to derive practical results from a closer study of these relations for the prediction of weather for long periods.

METHODISTS. I. Methodist Episcopal Church.—The statistical tables published in the

"Methodist Yearbook" for 1898 give as the total numbers in the 124 annual conferences, 10 mission conferences, and 12 missions of this Church—in all, 146 organizations—17,468 itinerant ministers, 1,756 of whom are on trial; 14,505 local preachers; 2,851,525 members, of whom 2,556,875 are "full members" and 294,650 are "probationers"; 31,355 Sunday schools, with 348,491 officers and teachers and 2,630,740 pupils; 26,114 churches, valued at \$110,646,885; 10,263 parsonages, valued at \$17,344,700; and 85,159 baptisms of children and 106,265 of adults during the year.

The receipts of the Tract Society for the year ending Nov. 30, 1896, were \$22,065, and the expenditures \$16,141. Grants of tracts were made during 1896 to all the mission fields of the Church, and tracts were distributed throughout the United States, and specially to pastors in their regular work, to immigrants, to the inmates of hospitals, prisons, and asylums, and to soldiers, the whole amount consisting of 10,065,168 pages, and 8,318,464 pages of the periodical "Good Tidings."

The total receipts for the year of the Board of Education were \$93,322, showing an increase of \$6,889. The whole number of students in 203 educational institutions connected with the Church was 47,830, or 4,508 more than in the previous year. The value of property and endowments, exclusive of debts, was \$28,526,869, having been increased \$344,190; the total value of the income of the schools was \$1,958,169, an increase of \$227,168, and the largest sum ever received on that account; and the total value of gifts received was \$597,639, an increase of \$229,044. Seventeen hundred and fifty-four students of 24 different nationalities had been aided from the funds of the society. Two hundred and eighty-three of the beneficiaries were women, and more than two thirds of the whole number were preparing for the ministry.

The total receipts of the Sunday school Union for the year ending Nov. 30, 1896, were \$21,949, and the expenditures were \$19,447. The number of Sunday schools reported was: In the United States 31,121, with 360,633 officers and teachers and 2,620,010 pupils; of schools in foreign lands, 3,739, with 9,317 officers and teachers and 163,890 pupils. The reports showed increase during the year in the United States of 862 schools, 8,006 officers and teachers and 34,832 pupils. Of the officers and teachers 312,682, and of the pupils 854,114 were church members or probationers. Two hundred and thirty-seven new schools had been organized during the year by means of the Rindge fund.

Church Extension.—The annual meeting of the Board of Church Extension was held at Pittsburgh, Pa., Nov. 4. The treasurer's reports showed that the total receipts for the year had been \$241,497, of which \$158,863 were on the general fund, and \$82,634 on the Loan fund. The increase in total receipts from the previous year was \$14,744. Five hundred applications had been considered, asking for donations of \$117,420 and loans of \$123,869, of which 439 were granted, in donations of \$57,325 and loans of \$79,200. The frontier churches procured by special gifts of \$250 each from generous friends, administered under the regular methods, represented the best part of the work. These gifts were often accompanied by loans of like amounts, and were applied by preference in new and growing frontier communities. The minimum cost of the churches was \$1,250, but the average of actual cost at the time of dedication was found to be more than \$2,000. Ten of these churches had been added during the year, making the whole number 605, accommodating 23,260

church members and 38,212 Sunday-school children, amid populations, at the dates of the dedications, of 482,000. Under the Mountain fund plan, new churches in destitute communities, costing from \$400 to \$800, were procured by special gifts of \$100, the people interested providing the remainder, as was done with frontier churches. Five such churches had been procured during the year, making the whole number 80. The whole number of churches aided from the beginning was 10,482. The subject of introducing the use of chapel cars was commended to the general secretaries to investigate and report upon it at the next meeting of the General Committee. The sum of \$295,225 was asked from the annual conferences for the work of the ensuing year.

Freedmen's Aid.—The annual meeting of the General Committee of the Freedmen's Aid and Southern Education Society was held in Brooklyn, N. Y., Nov. 8 and 9. The treasurer's report showed that the total receipts of the society for the year had been \$261,562, or \$47,491 more than in the previous year, and the expenditures \$292,438. The report of the Board of Managers showed an increase of 7,831 in the number of church members in the Southern conferences, and of \$238,328 in the value of church property. The 47 schools returned 9,213 students enrolled. Of these schools, 22, with 333 teachers and 4,995 students, were among the colored people, and 25 schools, with 171 teachers and 4,218 students, among the whites. The industrial-training departments had been attended by 2,022 young men and women, who had been taught agriculture, printing, painting, masonry, shoemaking, tinning, carpentry, cabinetmaking, blacksmithing, laundry work, baking, housekeeping, sewing, cooking, dressmaking, and nursing. The schools among colored people consist of 1 theological seminary, 11 collegiate and 9 academic institutions, and those among the whites of 2 collegiate and 18 academic institutions.

General Missionary Committee.—The annual meeting of the General Missionary Committee was held in Philadelphia, Pa., beginning Nov. 10. The treasurer reported that the receipts of the society for the year ending Oct. 31 had been \$1,131,940, and the expenditures \$1,130,169. The total debt of the treasury was \$276,149, being \$14,805 less than at the close of the previous year. Appropriations were made for carrying on the missionary work during the ensuing year, as follow: I. *Foreign missions.*—Germany, \$36,264; Switzerland, \$7,395; Norway, \$12,581; Sweden, \$16,490; Denmark, \$7,483; Finland and St. Petersburg, \$4,585; Bulgaria, \$9,000; Italy, \$40,438; South America, \$11,248; Mexico, \$48,015; Africa, \$14,250; China, \$110,590; Japan, \$47,000; Korea, \$13,975; India, \$129,066; Malaysia, \$9,100; total for foreign missions, \$577,490. II. *Missions in the United States*, including work among English-speaking populations, white and colored, among Welsh, Swedish, Norwegian and Danish, German, French, Spanish, Chinese, Japanese, Bohemian and Hungarian, Italian, Portuguese and Hebrew populations, and the American Indians (\$7,411), \$442,430. III. *Miscellaneous appropriations*, \$110,000. Total of appropriations, \$1,129,910. Conditional appropriations were further made, contingent upon the amounts being paid into the treasury for those purposes, of \$7,000 in all, for an orphanage, a school building, and a school in the Chinese and Malaysian missions.

Resolutions were adopted: "That the General Committee expects our missionaries in all our fields to maintain uncompromisingly the views taught by our Church of the inspiration and authority of the Bible, and of the divine origin of the evangelical doctrines which were preached by the founders of Methodism with the Holy Ghost and with power.

"That we urge our missionaries in foreign lands to teach both inquirers and students of our schools of every grade, and in our colleges and theological seminaries only these things which are most assuredly believed among us, avoiding doubtful hypotheses and all questions liable to perplex upon nonessentials those newly coming to the faith, or to diminish their reverence for the Bible as the only sufficient rule of faith and practice.

"That we request the corresponding secretaries in their communications and the bishops in their visitations to direct the attention of all teachers, preachers, and evangelists to these resolutions."

Woman's Societies.—The receipts of the Woman's Home Missionary Society for 1897 were \$182,216, of which \$147,721 were entered as cash receipts, and \$14,495 as derived from self-help in schools. During the last four years a debt of nearly \$50,000 had been reduced to less than \$30,000, while no missionaries had been withdrawn, three important buildings for industrial schools had been erected, many additions and improvements had been provided, and the deaconess work had been extended. The society had 86 distinct missions in the South and West and in cities, including deaconess homes. With the deaconesses it had more than 300 workers in the field, and hundreds of practical missionaries were doing service who had been trained in its schools. Since 1892 the value of the property owned by the society for its mission purposes had increased from \$225,000 to \$531,100. Of this sum, \$158,800 were in the South, \$48,000 in the West, and \$324,000 in deaconess homes and city missions. Among the special features of the general work are industrial schools and model homes in the South for the benefit of both races; labors in the West, among Mormons, Spanish Americans, Indians, Chinese, Japanese, and unchristianized populations, native and foreign; in cities missions for the neglected and needy; and provision of Christian welcome and safe protection for immigrant girls on their arrival.

The year's receipts of the Woman's Foreign Missionary Society were \$313,938, or \$28,114 more than the receipts of the previous year. The society supported in foreign fields (China, India, Japan, Mexico, South America, Bulgaria, and Korea) 175 missionaries, 24 of whom were medical, with 800 Bible readers, assistants, and teachers, and maintained 400 day schools, with about 12,000 pupils; 50 boarding schools, with about 4,000 pupils; 11 orphanages, with 450 orphans; 10 training schools, with 200 pupils; and 14 hospitals and dispensaries, administering to about 60,000 women annually.

Epworth League.—The third International Convention of the Epworth League was held in Toronto, Ontario, July 15 to 18. About 20,000 delegates were present, representing every State and Territory of the United States, all the provinces of Canada, Japan, China, and India. The programme assigned service to 236 persons as speakers, leaders of discussions, etc. The first day of the convention was occupied with welcoming addresses, mass meetings, addresses on league work, and lectures by Bishops Fowler and Newman. The second day was devoted to departmental conferences and mass meetings. On the third day denominational rallies were held, followed by an open-air patriotic service and mass meetings on temperance and civic righteousness. On the fourth day, Sunday, the members attended religious services, and a Junior League rally and farewell services were held. The resolutions pledged devotion to temperance and total abstinence; insisted on the exertion of personal influence for the maintenance of the Christian Sabbath; declared it a Christian duty to participate in matters that concern the national, State, and municipal government, and entreated all young

people, without regard to political affiliations, to ally themselves with all movements for civic reform and social righteousness; expressed a hope for perpetual peace between the United States and Great Britain and for the settlement of all international difficulties by arbitration; and declared concerning the position of the organization: "We make no apology for our existence as a denominational society, and deprecate the uncharitable utterances of those who by their words deny us the right of such organization. We express again our wish to co-operate with the young people of all denominations in all practical Christian work, and our willingness for federation with them." Three bodies were represented in this convention—the Epworth League of the Methodist Episcopal Church, the Epworth League of the Methodist Episcopal Church, South, and the Epworth League of the Methodist Church of Canada.

American University.—The enterprise of the American University at Washington, D. C., is advancing gradually. Payment for the site, a tract of 90 acres, was completed in 1895; the plans for locating the buildings and laying out the grounds have been drawn up; ground was broken for the building of the College of History, 176 feet in length, in March, and the corner stone was laid Oct. 1, 1896; and the marble walls and the roof of the structure were completed in June, 1897. The property of the institution, represented by the real estate, building funds on hand and pledged, endowment in bonds, securities, etc., and endowment pledged, was valued at the end of 1897 at \$1,100,000.

Church Congress.—The first Methodist Episcopal Church Congress was held in Pittsburg, Pa., Nov. 21 to 26. The topics discussed concerned denominational progress and the Church in its relations to literature, science, art, education, society, and the Church and its credentials. The opening address was by Bishop J. H. Vincent, D. D., who had first suggested the holding of the congress, upon "Service," and was followed by an address by the Rev. C. H. Payne, secretary of the Board of Education, on "The Young Life of the Church." Other addresses were on the scriptural ideal of godliness, the revival, the new psychology, evolution, modern research and criticism and their contribution to the science of interpretation, "The Catholic Spirit in Methodism" (a symposium in which, besides the general treatment of the topic, special presentations were made of it from the point of view of the negro, the German, and the Scandinavian), "The Vitalizing of Other Faiths by Contact with Christianity," church music, church architecture and decoration, the ideal worship, the state of sociological science, "The Institutional Church," "Present Religious and Literary Tendencies," "Ethical Legislation by the Church," the claim of the Christian faith upon the consideration of the theological student, and the higher literary culture of the ministry.

Methodist Church in Germany.—The union of the Methodist Episcopal Church in Germany and the Western Methodist Church in that country, which had been agreed upon by the British Wesleyan Conference and by the American General Conference of 1890, was consummated at the sessions of the conferences of the two churches in Germany in 1897. By this union the 31 ministers and 23,000 members of the German Wesleyan churches were added to the Methodist Episcopal Church, together with church property valued at \$200,000.

II. Methodist Episcopal Church, South.—The statistics of this Church for 1897 give it 5,000 ministers, 13,800 churches, and 1,482,665 communicants, showing gains during the year of 63 ministers, 75 churches, and 40,000 communicants.

At the annual meeting of the Book Committee, May 5, the amount of business done during the year in all the departments was returned at \$320,528, while the profits were \$41,030, the liabilities \$14,954, and the amount of cash on hand April 1 \$51,529.

The year's receipts of the Board of Church Extension from collections on the assessments, special appeals, and miscellaneous sources were \$20,863; from collections on loans, \$19,292; while \$5,505 had been contributed to the loan funds; making a total of \$54,670. The capital of the loan funds was \$135,140, which it was expected would soon be increased by the proceeds of two bequests not yet paid over to \$160,000. The General and Conference Boards had given aid to 404 churches in the amount of \$61,672. Including a few unpaid grants coming over from the previous year, the board made appropriations to 117 churches in the form of \$23,200 in donations and \$25,000 in loans. A rule was adopted by the board at its annual meeting requiring the Conference Boards of Church Extension or their Executive Committees to meet annually in March, and decide upon the relative importance and urgencies of the places within their respective jurisdictions seeking aid. A report was prepared stating the objections to the practice of making appeals to the public in behalf of local and special building enterprises.

The Sunday-School Board met at Nashville, Tenn., May 4, and appropriated \$2,650 to the foreign-mission fields. The subjects were considered of preparing a Sunday-school directory, of the disposition to be made of the moneys collected on Children's Day, and of appointing a missionary rally day. The quality of the Sunday-school literature was commended, and still further improvement and enlargement of it were advised.

The fifty-first annual meeting of the Board of Missions was held in Nashville, Tenn., May 5. The secretaries reported that the receipts for foreign missions had been \$244,463, an increase from the previous year of \$7,105, and for domestic missions \$133,948; while \$81,916 had been collected by the Woman's Foreign Mission Board and \$18,000 by the Woman's Parsonage and Home Mission Society, making the total receipts \$478,327. Appropriations were made for the ensuing year of \$198,376, and assessments were made upon the Church at large for \$350,000. From the 4 foreign-mission fields were returned 105 missionaries (including wives), 113 native traveling preachers, 155 native helpers, 8,756 members, showing an increase for the year of 906; 71 day and boarding schools, with 2,081 pupils; 247 Sunday schools, with 6,862 pupils; 19 Epworth Leagues, with 587 members; and 1 hospital, 3 dispensaries, and 12,015 patients treated in 1895. The property of the missions was valued at \$458,406.

III. Methodist Protestant Church.—The official statistical tables of this Church, published in December, 1897, give it 1,611 ministers, 1,105 preachers, 174,756 members, 5,111 probationers, 2,294 churches, and 512 parsonages; 2,193 Sunday schools, with 19,363 officers and teachers and 126,562 pupils; 731 societies of Christian Endeavor, with 23,881 active and 4,743 associate members, and 135 junior societies with 3,303 members; and \$4,813,809 of church property. The statistics of societies of Christian Endeavor are incomplete, some conferences not making any report of them. The educational institutions of the Church include Western Maryland College, Westminster, Maryland; Adrian College, Michigan; Kansas City University, Missouri (including 7 schools); Westminster Theological Seminary, Maryland; Yaddin College, North Carolina; and Westminster College, Texas. The

foreign mission is in Japan, where an annual conference has been organized, and has 14 stations and circuits, with 13 ministers and 17 other laborers, 31 appointments, 200 members and 38 probationers, 20 Sunday schools returning 932 pupils, a college, a seminary, 2 other schools, and churches, parsonages, and other buildings, having a total value of \$25,000. The Woman's Foreign Missionary Board returns 4 missionaries, besides native workers in the field in Japan, and 2 schools. Its income in 1896 was \$5,942. The Board of Home Missions, organized in 1888, supports and aids churches, of which the latest numbers are not given, and the Woman's Board of Home Missions, formed in 1893, co-operates with it. The Board of Ministerial Education has an invested fund of about \$6,000, and has aided more than a hundred young men, most of whom are in the ministry of the Church, and had 81 young men under its charge during the four years ending with 1896. The permanent literature of the Church has grown into a considerable library, and includes books by 39 authors. A Home for the Aged is sustained at Westminster, Md.

IV. American Wesleyan Church.—The Book Committee, constituting the Board of Managers for all the connectional societies, reported in August that the receipts of the past year from the business had been \$18,251, and that the net assets on June 1, 1897, were \$67,702, showing an increase of \$247,75. The receipts for home missions had been \$1,480, and the assets of the Home-Mission fund were \$3,453, while \$3,115 were invested in church buildings. The receipts for foreign missions had been \$3,818. The Educational Society had received \$2,340, showing a gain of \$282.59. The Bessie fund stood at \$41,404, yielding an income of \$4,648; the Jackson fund at \$3,100; and the Superannuation fund at \$955. The receipts by the Education Society of \$2,000 from the estate of Grace Elmer was recorded. The missionary work in Africa was represented as being in excellent condition.

V. Free Methodist Church.—The statistical reports of this Church for 1897 give it 24,512 full members, 3,623 probationers, 1,924 Sunday schools, with 6,353 officers and teachers and 34,327 pupils. The figures show a gain over the previous year of 733 full members, 52 probationers, 25 Sunday schools, 95 officers and teachers, and 1,029 pupils. The number of local preachers and evangelists is, however, 70 less than in 1896. The financial reports give \$176,679 raised for preachers, \$25,643 for district elders, \$4,650 for evangelists, \$12,636 for Sunday-school expenses, \$6,374 for the Superannuate fund, \$1,508 for Church extension, \$2,780 for home missions, \$2,702 for general missions, \$5,543 for foreign missions, \$27,443 for Church incidentals, and \$1,192,266 as the value of church and parsonage property. The total amount of money raised for all purposes in 1897 was \$9,683 more than in 1896; the valuation of church and parsonage property is \$39,763 greater.

At the meetings of the Free Methodist Boards held in Chicago in October the Board of Publication reported all departments of the business in better condition than in 1896. The sales of books had aggregated more than \$6,000. The Committee on the Publication of Sunday-School Literature had purchased the publications of the Rev. T. B. Arnold, and reported an increase in the subscriptions to the periodicals since then. The property of Orleans College, which had been purchased by members of the Methodist Episcopal Church, had reverted through the failure of the buyers to meet their payments, and was to be sold again—this time to Free Methodists. A Committee on the Publication of Tracts reported the purchase of a lot of plates and the publication of 235,000 copies of 60 tracts. The

Board of Missions returned a very encouraging increase of \$7,078 in the offerings for foreign missions, including what was given for the India relief fund. The whole amount contributed was \$12,279, of which \$2,079 were for the relief fund and \$6,207 were raised by the women's societies. A legacy of \$2,000 had also been received. Four missionaries were about to sail for India; and the directors were advised to send out three additional missionaries during the year, provided the funds should accrue and the desired workers were available.

VI. African Methodist Episcopal Church.—This Church returns for 1897 4,825 ministers, 4,950 churches, and 630,550 communicants. The increase from the previous year is 145 ministers, 100 churches, and 14,606 communicants.

The cash receipts for missions for the year were \$11,650, and the expenditures \$7,417. The statistical returns from the mission fields of this Church give it: In the Sierra Leone Conference, 7 ministers, 2 teachers; in the Liberia Conference, 358 members, 5 exhorters, 15 local preachers, 50 probationers, 5 new points organized, 6 Sunday schools with 22 teachers and 100 pupils, 15 adults and 20 infants baptized, 13 itinerant preachers, and property valued at \$4,050; Haytian Conference, 5 itinerant preachers; Ontario Conference, 4 itinerant preachers and 7 mission schools. An urgent request was mentioned for the organization of a school in Monrovia, Liberia. A good report was made of Sisson High School, Indian Territory.

VII. Wesleyan Methodist Church (British).—A condensed view of the present condition of this Church at home and abroad is presented in the following table:

COUNTRY.	Mem- bers.	Ch. total.	Min- isters.	Ch. per- centage.	Superan- nuation.
In Great Britain	438,969	31,876	1,647	153	306
In Ireland and Irish missions	27,161	950	109	33	25
In foreign missions	44,554	9,666	251	106	14
French Conference	1,766	158	29	2	7
South African Confer- ence	6,872	21,448	106	35	19
West Indian confer- ence	66,746	5,317	84	29	3
Totals	685,368	67,361	2,226	162	364

The numbers of ministers and members in the Australasian Wesleyan Methodist Church and in the Methodist Church of Canada are not included in this showing, but are given in the published minutes of their respective conferences. The totals for Great Britain also do not include the 73,367 young persons who are associated with junior-society classes.

The fifty-seventh report of the Committee of Education gives the number of school departments as 759, with 162,609 enrolled pupils and an average attendance of 128,085. The total income of the schools for the year was £245,458, being a decrease of £4,853, and the total expenditure £251,634, a decrease of £5,573. The income of the Education fund had been £5,881 and the expenditure £6,445. The deficit on current account was £1,173. Legacies amounting to £1,450 had been received. Statistics furnished by the Government Education Department showed that the total amount spent on school buildings since 1870 had been £604,625; and Government returns showed that in addition to this expenditure, the voluntary contributions, including endowments toward Wesleyan day schools, since 1870 amounted to £460,672. The amount spent on provision, as distinguished from maintenance, in the past twenty-five years aggregated £1,065,297.

The report of the Wesleyan Missionary Society gave the total home income on current account as

£127,858, and the expenditure as £128,693. The deficiency carried to the present account was £834. The extra income for payment of debt and on special plant account was £37,729. Gifts amounting to £919 had been received on account of the Indian Methodist Famine fund. The Woman's Auxiliary had expended £12,067. The financial prospects of the society had been greatly improved during the past twelve months. The increase in the contributions from the district auxiliaries had been £1,852, and the increase from all sources £2,698. Special reference was made to the condition of the missions in France and Italy, where the difficulties were very great; Germany, where it had been decided to grant the request of the district synod to be transferred to the Methodist Episcopal Church; China; Western Africa, "an important field of operations"; and the Transvaal and Swaziland district, where progress was being made in every department. In the missions under the immediate direction of the society, a church membership was returned of 44,573, being an increase of 1,935, with 9,695 on trial, an increase of 285.

The Conference met at Leeds, July 20. The Rev. William L. Watkinson was chosen president. Concerning home missions the reports represented that the annual income had been well maintained, although there was still a diminution in the yearly collection; but the present return showed an increase of £300 on the year. The mission cars were proving a successful evangelizing agency. Favorable reports were made of army and navy work, and of the Joyful News mission. In the Chapel Committee 380 new cases—an unusually large number—had been recently sanctioned, involving an estimated outlay of £290,738, and providing 19,559 additional sittings. Four special gifts had been received. One hundred and eighteen young men and 109 young women were attending the training schools Westminster and Southlands. The day-school departments numbered 747, with 150,307 pupils. The total income had been £245,593—an increase of £1,955. A report of a special Committee on the Order of the Conference Sessions was considered, upon which the Conference decided that as the pastoral session had not yet had an opportunity of voting on the subject, it was desirable to reconsider the whole question, and especially to consider whether the necessities of the case may not be met by rearrangement of the course of Conference proceedings. A new committee was appointed upon the subject. The subject of removal of the headquarters of the Home Mission Department from London to some other large city was referred to the Home Mission Committee for consideration. A proposal for the creation of a new representative body, or provincial synod, for Wales, to be called the Welsh Methodist Assembly of Wales, was provisionally agreed to. Concerning the extension of the term of ministerial appointment to a circuit, the pastoral session decided that the matter be dropped so far as it was concerned; and the representative session, that in view of the existing divided state of public opinion it was not desirable to proceed any further in the matter. The Wesley Guild, which had been sanctioned by the previous Conference, was represented to have 615 branches in Great Britain, and 34,617 members. Besides these, several guilds were returned from foreign-mission stations, and affiliated conferences—as in the West Indies and South Africa, had given a welcome to the organization. The President of the Conference was given the discretion to appoint a probationary minister to assist the secretaries of the guild. The magazines published by the B. M. B. S. had reached an aggregate circulation of 1,700,000 copies.

Several important matters affecting the civil and

religious rites of Wesleyans and Free Churchmen generally were referred to the Committee of Privilege. Among these are the nonconformist marriage bill, the place of worship (sites) bill, and the places of worship enfranchisement bill; also the extension to the entire country of the act for the regulation of metropolitan suburban race courses and the question of the formal recognition of Wesleyan ministers as chaplains in workhouses and jails. The committee was further instructed to consider during the year the electoral disadvantages to which Wesleyan Methodist ministers are subject in consequence of the itinerancy and to take such legal action as may be advisable in order to their removal. A special committee was appointed to deal with the proposals of any important measure concerning elementary education which may be introduced into Parliament; also a special committee to take charge of all legislative matters in reference to secondary education. A large committee was appointed to deal with Methodist aggression in London.

VIII. Primitive Methodist Church.—The Connectional reports made to the Conference in June gave the number of church members as 197,847, showing an increase of 1,219 during the year, with 10,550 class leaders, 1,125 ministers, 16,698 local preachers, 5,827 chapels and preaching places valued at £3,807,129, 619,393 hearers, and 4,410 Sunday schools with 61,745 teachers and 467,836 pupils.

The Jubilee Thanksgiving fund had received £7,311 during the year, making the whole amount £33,538. It is proposed to raise £50,000 for this fund.

The reports of the Connectional fund, Book Depot, Superannuated Ministers' and Widows' and Orphans' funds, Chapel Aid Association, and other interests, all showed increase. The General Missionary Committee had been successful at home and abroad.

The Conference met in Manchester, June 16. The Rev. James Jackson was chosen president. The report of the joint committee of this Church and the Bible Christians favoring union of the two connections was adopted by a very large majority, and is to be referred to the district meetings for their judgment, and a fraternal deputation was appointed to attend the Bible Christian Conference. The Committee on Union was reappointed. The principle of a sustentation fund, under which all ministers will be assured at least a minimum salary, was unanimously approved. The formation of circuit and district libraries for local preachers was approved. Changes were made in the mode of inviting probationers to circuits, with a view of enlarging the liberty of both circuits and ministers. Regret was expressed at the way in which the Armenian and Cretan questions had been treated by the Government. Resolutions were adopted protesting against recent educational legislation and opposing the re-enactment in any form of the contagious diseases acts. The district committees were empowered to deal with all educational questions, and it was provided that they should be affiliated with a central executive, to be appointed by the Conference. A proposition was considered for raising a fund of £25,000 for the aid of local preachers and other officers in old age and poverty. A deputation was received from the Eastern Primitive Methodist Conference in the United States, but the Conference was not able to grant a request that a deputation be sent to that body in the fall. It was also found impracticable to send a deputation to the Australian colonies. The village evangelists appointed to act under the control of the General Missionary Committee had done good work.

The question of the continued employment of them was referred to the Quarterly Missionary Committee. A permanent evangelist was, however, appointed to work under the authority of the General Missionary Committee.

IX. Methodist New Connection.—The meeting of the Methodist New Connection Conference for 1897 was noteworthy as marking the centenary of the denomination. It began at Sheffield, June 14. The Rev. John Innocent, missionary to China, was chosen president. The Centenary Committee reported that the subscriptions to the Centenary fund, which it was originally intended to make one of £50,000, had risen during the year from £88,000 to £100,000. Of this sum £8,000 were for Connectional institutions. The statistical reports showed a net gain of 12 members. The income for missions had slightly diminished, but an increase of 11 chapels, 200 members, and 149 candidates were returned from China, and 2 new chapels had been built in Ireland. The Conference decided to send an additional missionary to China. Fraternal deputations representing the nonconformist churches and the several Methodist churches were received, and an afternoon and an evening session were given to the several Methodist deputations, in which the different bodies were represented by the presidents of their respective conferences, or other representative men coming in the place of these.

A special celebration of the centenary of the Connection was held in the City Road Wesleyan Chapel, London, May 25, when a sermon was preached by the Rev. Joseph Parker, D. D., and a meeting was held, at which addresses were made by several persons, among them the Rev. Marshall Randles, D. D., President of the Wesleyan Conference.

X. United Methodist Free Churches.—The statistical reports of this association, presented to the annual Assembly in July, showed an increase of 1,324 in the membership. The number of ministers was 331; of local preachers, 3,054; of members, 70,602; of members on trial, 6,842; of Sunday schools, 1,216, with 24,476 teachers and 192,495 pupils. The Book Room had suffered a small financial decrease. An endowment fund of £20,000, yielding an income of £600 a year, had been secured for the Theological Institute. The missionary income had been £14,028, of which £8,402 had been raised at home. Resolutions were adopted in the annual Assembly looking to the institution of measures for increasing the scale of missionary contributions. Reports were made in the Assembly of the Chapel Relief, Loan, and Beneficent and Superannuation funds, and the fire Insurance Association, describing the work done in each department.

The anniversary of the home and foreign missions was held in London, April 26. The work of the home missions had been hindered by the lack of funds. The expenditure on foreign missions had been £22,922, leaving a deficiency of £382. Reports of encouraging progress were received from Jamaica, West and East Africa, and China. The number of members abroad was given as 10,614; of members on trial, 2,893; of missionaries, 68; of local preachers, 382; of leaders, 552; of chapels and preaching rooms, 312; of teachers, 605; and of pupils, 9,886. The committee was considering a scheme for a chain of missionary stations on the Tana river.

The annual Assembly met in Nottingham, July 13. The Rev. R. Swallow, M. D., missionary to China, was chosen moderator. Resolutions adopted on the relation of the Church to amusements, deprecated the present widespread and passionate love of amusements as likely to impair earnestness of character and life; but the need of physical culture

when subordinated to mental and spiritual improvement was recognized. The resolutions affirmed that it was not primarily the work of the Church to provide such amusements, and advised that no entertainments should take place in church premises without official supervision. Dramatic entertainments were included in the amusements thus deprecated. A resolution to discontinue the use of official designations, abbreviations of titles and initials in connection with the names of persons proposed for committees, except when it was necessary to distinguish between ministers and laymen, was referred to the Connectional Committee for consideration, with directions to report to the next Assembly.

XI. Bible Christians.—The Conference met at Exeter, July 28. The Rev. A. Tregrove was chosen president. A Miss Edwards, who had successfully passed the examination and had done acceptable mission work, was, on the recommendation of the Examination Committee, received as a minister in full connection. A plan for the education of candidates which had been worked out by a committee appointed for that purpose was adopted. The question of union with the Primitive Methodist Church was earnestly debated, and the report of the joint committee of the two bodies on the subject was adopted. This report recommended the union, described the constitution of the courts of the united Church, proposed the adoption of equal representation as between ministers and laymen, made the chairmen of all meetings elective, and suggested as the name of the united body "The Primitive Methodist and Bible Christian Church." Seven ministers and seven laymen were appointed to represent the Bible Christian Church in a new joint committee. A course of study and plan of examinations for local preachers were adopted as an essential qualification to the placing of candidates on the approved list, and, in addition to this, an optional course, extending over three years, with examinations and prizes, was approved. The public recognition of local preachers was provided for. A course of reading for young people was added. The income for missions at home had been £5,471. The total expenditure had been £5,761, leaving a deficit of £390. It was desired to clear this off and have an additional sum of £1,000 for extension. A net increase of 130 was returned in the membership of the home-mission stations.

The report of the Missionary Society showed that it has, at home and abroad, 134 missionaries, 747 local preachers, 398 chapels, 103 preaching places, 11,868 full members, 418 members on trial, 403 juvenile members, 2,856 teachers, and 24,054 pupils. An increase is shown in nearly every department.

XII. Australasian Western Methodist Church.—The General Conference met in Auckland, New Zealand, Nov. 10. It was opened with an address by the retiring president, Rev. W. Morley, who represented that since the last General Conference, three years before, there had been a net increase of 6,847 church members, 4,096 catechumens, and 30,469 members of congregations, while 204 additional churches had been erected. The decline in the population of Fiji had been necessarily accompanied by a decrease in the number of hearers, but this had been more than twice made up for by the increase in New Britain and New Guinea, and the Tongan district showed an advance of 30 per cent. The speaker referred to the possibility of doing something to arrest the decline of native Polynesian tribes by teaching in the schools or elsewhere the elements of sanitation and the general laws of health, as worthy of the attention of the Church. Union, according to the plan which was under consideration in all the Methodist churches in the colonies, had been con-

summed in New Zealand between the Wesleyan, Bible Christian, and United Methodist Free Churches. The plan of union was under various stages of consideration in the other colonies, with hopeful prospects. The Rev. H. T. Burgess, of South Australia, was chosen president of the General Conference. The General Secretary of Foreign Missions reported that the total receipts for that cause for the four years 1893, 1894, 1895, and 1896 had been £32,356, and the expenditures £57,250, leaving a deficiency of £4,894. The action of the Conference was in favor of continuing the missionary work in New Guinea, New Britain, and the other islands on its present scale and with its present efficiency, and of beginning work in continental Asia and Japan, and among the Chinese in northern Queensland whenever the means shall be forthcoming. Much interest had been felt by the ministers and members in the subject of intercolonial exchanges of ministers, or transfers from one conference to another, but no general action was taken by the Conference, which confined itself to authorizing certain particular transfers. It was directed that active members of Christian Endeavor Societies should be recognized as if meeting in class, and thus qualified for church membership. Recommendations of various constitutional changes were brought to the attention of the Conference, among them one providing for the direct representation of members in quarterly meetings, but the consideration of them was deferred, the general view of the members of the Conference being that in the near prospect of the union of all the Methodist Churches such measures should be postponed till that was accomplished and they could be decided upon by the united body. The formation of a new conference in Western Australia was decided upon, to be effected in the year 1900. It was resolved that a central institution for training candidates for the ministry should be founded in connection with Queen's College, Melbourne. Resolutions were passed condemning the holding of lotteries or games of chance for religious or charitable purposes, commending proportionate giving to the cause of God, and expressing solicitude for the welfare of the young and a desire to shield them from prevalent evils.

The Australasian Wesleyan Missionary Society, which has charge of the Wesleyan missions in Australasia and Polynesia, reports a deficiency on the past year's operations of \$7,990, the receipts having been \$67,195 and the expenditures \$75,185. The excess of expenditures was occasioned by the re-erection of buildings destroyed or injured by the hurricane in Fiji. The general expenditure was smaller than for some previous years, and even than it was thirty years ago. No white missionaries in active work died during the year, but the service lost two native laborers. Among the additions to the missionary force are a German missionary and his wife, sent to New Britain in order to make inquiries as to opening missionary affairs more convenient with the German authorities there. The report defines the situation in Samoa as hopeful, in Fiji as "both sunshine and shadow," and in New Britain as "bright," where steadily rapid progress has been made in New Guinea.

XIII. Wesleyan Methodist Church in South Africa.—The Wesleyan Methodist Conference in South Africa was constituted as an independent body in 1882, when it had 309 churches, 824 places of worship, 177 ministers, 1,313 local preachers, 3,146 English and 17,596 native members, making a total of 20,742 members, 87 junior members, and 14,710 pupils in day schools and 17,683 pupils in Sunday schools. For 1896 it returned 633 churches, 1,798 places of worship, 191 ministers, 171 evangelists,

2,941 local preachers, 3,714 class leaders, 5,585 English and 42,287 native members—making a total of 47,872 regular members, 10,692 junior members, and 21,448 on trial, making a total of regular members, "juniors," and members on trial of 80,012; 470 day schools, with 29,256 pupils; and 2,377 teachers and 29,701 pupils in Sunday schools. An increase in fourteen years of 27,130 regular members was shown. The missionary income for 1896 was £6,964 (£3,175 contributed by English and £3,789 by natives); circuit income, £35,036; "properties" income, £32,558; total income, £106,593; besides which the Church received grants from England of £4,389. These figures do not include the whole of South African Methodism, for the churches in the Transvaal, Swaziland, Bechuanaland, and Rhodesia are still under the Missionary Committee in London, and connected with the British Conference.

MEXICO. a federal republic in North America. The legislative power is vested in a Senate of 56 members, 2 from each State, elected for four years by indirect suffrage, and a House of Representatives of 227 members, elected for two years by universal suffrage. The President, whose term of office is four years, is Gen. D. Porfirio Diaz, who was elected for his fourth term and for the third consecutive time on July 15, 1896. The Cabinet was composed in 1897 of the following members: Secretary of Foreign Affairs, I. Mariscal; Secretary of the Interior, Gen. M. Gonzalez Cosio; Secretary of Finance and Commerce, J. I. Limantour; Secretary of Justice and Public Instruction, J. Baranda; Secretary of Fomento, M. Fernandez-Leal; Secretary of Communications and Public Works, Gen. F. Z. Mena; Secretary of War and Marine, Gen. F. B. Berriozabal; State Treasurer, F. Espinosa.

Finances.—The budget for the year ending June 30, 1898, makes the revenue of the Federal Government \$50,325,900, of which \$23,747,400 are derived from customs, \$20,738,500 from stamps, \$2,520,000 from direct taxes, \$1,720,000 from posts and telegraphs, \$200,000 from succession duties, and \$1,400,000 from various sources. The total expenditure is estimated at \$50,410,312, of which \$24,765,419 is allocated to finance, \$11,430,427 to war and marine, \$5,449,227 to communications and public works, \$3,673,038 to the interior, \$2,288,053 to justice and public instruction, \$531,742 to foreign affairs, \$436,821 to the Supreme Court, \$742,973 to the Department of Fomento, or public weal, and \$80,969 to the Executive.

In the budget for 1899 the revenue is estimated at \$52,109,500 and expenditure at \$52,089,485. The customs revenue is expected to amount to \$23,847,000 and the yield from internal taxes to \$23,092,500. The accounts for 1897 closed with a surplus of \$7,784,975. The receipts amounted to \$51,500,000, an increase of \$1,000,000 over the preceding year. The fall in the exchange value of the dollar to 25d. raised the estimate of the amount required for the external debt to \$14,792,240 in 1898, being \$1,162,177 more than the service of the debt in the financial year 1897. The public debt on June 30, 1896, amounted to \$183,206,679, consisting of a loan of \$51,091,600 raised in 1888, one of \$29,598,200 raised in 1890, and the 1893 loan of \$14,897,700, all bearing 6 per cent. interest, the Tehuantepec Railroad bonds for \$13,500,000 issued in 1889, paying 5 per cent., \$72,576,725 of internal interest-bearing debt, and \$1,542,454 paying no interest.

The Army and Navy.—The military forces consist of the active army, auxiliary troops, the reserve of the active army, and the general reserve. The strength of the active army on the peace footing in 1897 was 1,314 officers and 21,291 men in the infantry, 188 officers and 2,101 men in the artillery, and

566 officers and 6,683 men in the cavalry; total, 2,068 officers and 30,075 men. Including the auxiliary troops the peace effective is estimated at 60 generals, 3,300 officers, and 34,000 men, with 8,000 horses and mules. The war effective is about 3,500 officers and 120,000 infantry, 20,000 cavalry, and 6,000 artillery, making a total of 146,000 men.

The naval forces consist of 2 dispatch vessels, 2 gunboats, and 1 school ship, having a total tonnage of 2,100 and an armament of 18 guns. There are 5 torpedo boats of the first class now building, and the acquisition of 1 armor clad, 1 cruiser, 4 gunboats, and 2 transports is contemplated. The navy is manned by 84 officers and 425 men.

Commerce and Production.—The imports in 1896 were valued at \$42,253,938. The total value of the exports was \$105,016,902, of which \$40,178,306 represent merchandise and \$64,838,596 precious metals. The values of the chief merchandise exports were as follow: Coffee, \$8,103,302; henequen, \$6,768,821; timber, \$4,206,880; animals, \$3,546,770; lead, \$2,532,000; hides and skins, \$2,422,000; gum, \$1,527,838; vanilla, \$1,428,675; tobacco, \$1,461,090; zacaton root, \$616,492. Of the exports of precious metals \$26,345,160 consisted of silver bullion, \$20,377,663 of silver coin, \$10,885,479 of silver ore, \$5,246,418 of gold, and \$3,000,000 of copper. The commerce with the principal nations in 1896 is shown in the following table:

COUNTRIES	Imports.	Exports.
United States	\$30,143,763	\$79,651,085
Great Britain	7,905,076	15,067,149
France	6,069,193	2,080,942
Germany	4,363,259	2,808,732
Spain	2,174,258	813,162
Other countries	1,566,449	4,065,392
Total	\$42,253,938	\$105,016,902

The exports of live animals consist of cattle reared in the northern States of Mexico for the United States. Corn, rice, barley, wheat, and beans are the chief agricultural food products. Henequen fiber, of which 148,000,000 pounds were exported in 1895, is grown in Yucatan. In 1894 there were 16,247 tons of coffee exported, and of tobacco 356 tons were manufactured in Mexico and 1,506 tons exported. The cultivation of these products and of cacao is increasing rapidly. Other products are cotton, cane sugar, indigo, and rubber. The Government has assisted in introducing vines, olives, and other fruits, and all kinds of vegetables, and also silkworms, which have been distributed gratuitously among the country people. Mexico is exceedingly rich in minerals, the exploitation of which has been rapidly developed in recent years. Besides gold, silver, lead, copper, and iron, tin, quicksilver, cobalt, zinc, antimony, sulphur, coal, and petroleum are found. There are 4 mints and 7 Federal assay offices, and any producer can have bullion coined, paying 4-62 per cent. for gold and 4-41 per cent. for silver. The internal commerce of the country was greatly stimulated by the total abolition of interstate duties on July 1, 1896. Public companies demarcate lands for sale and occupation, receiving a third of the area surveyed and prepared for colonization. There were 10,985 colonists settled on the lands in 1892. In February, 1897, the Government entered into a contract with agents of the Japanese Government for the establishment in the fertile coast lands of the State of Chiapas of a colony of 5,000 Japanese, who are expected to introduce the culture of the tea plant, in return for which they will be exempted from taxation for many years. The number of mining enterprises in the country in 1894 was 3,167, of which two thirds belonged to Mexicans or Mexican companies and one third to foreigners.

The number of factories in 1893 was 3,844. The fall in silver, while acting as a check upon imports, has stimulated production and exportation and attracted the investment of foreign capital which is further encouraged by the protective duties. In the four years ending with 1897 about \$1,000,000,000 of foreign capital was invested in Mexico, \$345,310,000 by American, \$213,302,225 by English, and \$441,387,775 by French and German capitalists. A large number of new undertakings indicate the additional investment of immense capital by foreigners.

Navigation.—During the year 1895-96 there were 10,194 vessels, of 3,695,488 tons, entered and 10,234, of 3,653,476 tons, cleared at Mexican ports. The number of steamers entered was 4,471, of 3,300,444 tons, and cleared 4,378, of 3,242,711 tons. The mercantile marine of Mexico consists of 274 vessels, of which 52 are steamers.

Communications.—There were 7,430 miles of railroad in operation in 1897. The telegraphs have a total length of 40,990 miles, of which the Federal Government owns and operates 28,000 miles, while the rest belong mostly to the States. The number of letters and postal cards sent in the internal service in 1897 was 24,584,000, and in the international service 5,301,648. The receipts of the post office were \$1,246,880, and the expenses \$1,506,212.

Political Affairs.—Congress was opened on April 1. In his annual message President Diaz dwelt on the improvement in the finances of the republic, on the extension of Government telegraph lines and railroads, on contracts that had been signed for two new steamship lines for the Gulf of Mexico and two for the Pacific, and on the harbor improvements being carried out at Vera Cruz and the drainage and sanitation works begun in the city of Mexico. The international commission for the settlement of all controversies with the United States arising out of the changes in the beds of the Bravo del Norte and Colorado rivers had completed its studies relating to the distribution of the waters of the Bravo and the construction of an international dam near Ciudad Juarez, and had erected monuments to mark the boundary line on the so-called island of San Elizaria. In the 434 schools maintained by the Federal Government the staff of teachers had been enlarged, their salaries raised, and the buildings, furniture, and equipment improved, while seven new superior schools had been established in the Federal District and the Territories. A new educational law went into force on Dec. 19, 1896, the object of which is to provide a uniform system of education to serve as a preparation, not so much for professional careers, as for the social duties of life, on which youth ought not to enter until they have been trained in such a manner as to enable them to exercise a full control over their intellect and will. A new banking law was expected to lead to the foundation of banks of emission, mortgage banks, and banks for the promotion of agriculture, trade, and manufactures. A new law modifying the taxes on gold and silver was designed to remove obstacles to the circulation and exportation of the precious metals. The customs law also was modified in order to put an end to disputes between importers and the Government and to adjust the duties on certain classes of imports to their value and necessity. At the opening of the new congressional session on Sept. 16 the President said in his message that the excessive and sharp fall in silver had influenced the economic situation of the country, but the Government was taking prudential measures; there was no serious reason for alarm, because the nation would overcome the difficulty as it had some years earlier. On this day, the anniversary of Mexican independence, President Diaz was assailed with murderous intent by one Joaquin Arango Araya, just

as he was entering the Alameda. Gen. Mena turned aside the dagger, and the assailant was seized by members of the suite, who got orders from the President that the man was not to be hurt. On the following day a mob broke into the jail by battering down the doors, overpowered the warders, and killed Arroyo with knives. For the lynching 21 persons were arrested, and Eduardo Velazquez, the inspector-general of police, Lieut. Calbreera, of the detective service, and Commandant Mauro Salchez were placed under arrest for neglect of duty. The lynchers were detectives and policemen led by Col. Antonio Villavieco, an inspector of police, and Col. Velazquez confessed that he had planned the assassination of the prisoner. He said that he thought thereby to do a service to the country. Though closely guarded, Velazquez managed to obtain a pistol and shot himself, and his warden, Col. Campuzano, was in turn taken into custody and charged with negligence. The killing of Arroyo before he could be interrogated by the judge and the subsequent self-murder of the officer who had him put out of the way indicated that there was a plot in the attempt on Gen. Diaz's life, but left no clew by which the mystery could be solved.

End of the Yaqui War.—The insurrection of the Yaqui Indians, who have always been governed by their own laws and have refused to pay taxes and kept all intruders out of their domain, resisting all attempts to reduce them to subjection from the time of the Spanish conquest, was ended in June, 1897, by a treaty of peace. Having failed to subjugate them by force of arms, President Diaz adopted a policy of conciliation and concluded an arrangement advantageous alike to the Indians and to the republic. Jetiabile, the chief of the Yaquis, met a Mexican peace commissioner at a conference near the town of Guaymas, the one escorted by 800 warriors, the other by a regiment of cavalry. Just as formerly President Diaz put an end to brigandage by hiring the brigands with good pay as armed guardians of the public peace, so now he enrolled the Yaquis as citizens of Mexico into a militia for the State of Sonora and appointed their chief commander of the militia with the rank and salary of a Mexican officer.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; and 2,093,889 in 1890. By the State census of 1894 it was 2,241,641. Capital, Lansing.

Government.—The following were the State officers during the year: Governor, Hazen S. Pingree; Lieutenant Governor, Thomas B. Dunstan; Secretary of State, Washington Gardner; Treasurer, George A. Steel; Auditor, Roscoe D. Dix; Attorney-General, Fred. A. Maynard; Superintendent of Public Instruction, Jason E. Hammond; Land Commissioner, William A. French; Bank Commissioner, D. B. Ainger, succeeded by Commissioner Just; Railroad Commissioner, Sybrant Wesselsius; Insurance Commissioner, Theron F. Giddings, succeeded by Milo D. Campbell; Labor Commissioner, C. H. Morse, succeeded by Joseph L. Cox; Adjutant-General, E. M. Irish; Food Commissioner, E. O. Grosvenor; Oil Inspector, Thomas R. Smith; Chief Justice of the Supreme Court, Charles D. Long; Associate Justices, Claudius R. Grant, Robert M. Montgomery, Frank A. Hooker, and Joseph B. Moore; Clerk, C. C. Hopkins—all Republicans.

Finances.—The report of the Treasurer for the year ending June 30 was submitted in August. The balance on hand at the beginning of the year was \$912,422.43, and the total receipts for the year

were \$3,603,129.57. The disbursements were \$3,731,663.96. The outstanding bonds of the State are: Past due part-paid \$5,000,000 loan bonds, \$19,000, adjustable at \$578.57 per \$1,000 (not bearing interest) \$10,992.83. The trust-fund debt is as follows: Agricultural College fund, \$569,951.82; Normal School fund, \$65,945.12; Primary School fund, (7 per cent.), \$3,815,457.69; Primary School fund, (5 per cent.), \$829,069.38; University fund, \$529,621.59.

Outside of the tax department the largest sum turned into the treasury was from franchise fees, which amounted to \$32,715.43. Peddlers' licenses

HAZEN S. PINGREE, GOVERNOR OF MICHIGAN.

brought in \$2,513.06; deer licenses, \$296.50; fees for examining banks, \$8,794.21; fees from notaries public, \$2,707; fees for inspection of oil, \$11,625.50.

The total tax as computed for 1897 was \$2,379,907.23, and for 1898, \$2,012,227.02.

Some of the larger items that go to make up the aggregate for 1897 are as follow: University, \$207,183.33; normal schools, \$90,650; Michigan College of Mines, \$45,000; Agricultural College, \$16,700; Industrial School for Boys, \$66,500; for girls, \$46,750; Home for Feeble-Minded, \$76,788; Soldiers' Home, \$88,000; School for the Blind, \$28,000; School for the Deaf, \$82,050; Michigan National Guard, \$89,665.64; relief for Ontonagon fire sufferers, \$25,000; asylums for the insane, for improvements, \$49,575; repairs at prison and House of Correction, \$27,900; State Public School, \$33,767; Fish Commission, \$16,500; Dairy and Food Commission, \$18,000.

A decision in regard to tax titles, rendered in December, makes illegal a practice that has been in vogue for years. It was decided by the Supreme Court that, according to the correct rendering of the statutes, land once sold by the State for delinquent taxes can not again be taken by the State to enforce its lien for taxes of subsequent years until after the State has disposed of its title acquired at the former sale.

Education.—The school population is 697,689. The apportionment of the interest fund gives \$1.44

per capita. The enrollment in graded and ungraded schools is about 476,700.

The State University has more than 3,000 students.

The enrollment of the Mining School at the beginning of the year was 116.

The forty-first year of the Agricultural College opened in September. The attendance is larger than ever before. The whole number in 1896-'97 was 425, of whom 44 were young ladies. Statistics have been gathered showing that 41 per cent. of the graduates have become farmers or are engaged in the dairy, fruit, or other occupations in close connection with that of the farmer.

The street-railway line has been extended into the grounds, to accommodate the many students who board in the city, the dormitories being too small for the attendance.

A four weeks' dairy course was begun in November. The chemical department is working on methods of sugar-beet culture, the best variety of beets, and the kind of soil adapted to it.

Prisons.—The following statistics are from the report of the Labor Commissioner:

There are 58 employees at Jackson prison. The number of convicts in the prison Oct. 31, 1896, was 820. It costs a little over 9 cents a day to feed and clothe the convicts.

There are 55 employees at the State House of Correction at Ionia. The total number of convicts Oct. 31, 1896, was 518. It costs 84 cents a day to feed and clothe the convicts.

The branch prison at Marquette has 44 employees. The number of convicts in the prison Oct. 31, 1896, was 205. At this prison no convicts are employed on contract work, and none on work for the account of the State. Cost per day for feeding and clothing convicts, 124 cents.

At the Detroit House of Correction there are 45 employees. The average number of convicts was 477 during the past year. It costs about 8 cents a day *per capita* to feed the prisoners.

At the Industrial School for Boys there are 50 employees. Number of inmates Oct. 31, 1896, 504; received during the year, 330; released on parole, 268; died, 2.

At the Industrial Home for Girls, at Adrian, there are 36 employees. Number of inmates Oct. 31, 1896, 304; received during the year, 108; on leave of absence, 12; out on contract, 157.

Banks.—The October report of the Bank Commissioner showed, from the abstract of reports of 175 State banks and 3 trust companies, that the resources had increased materially since the opening of the year. The loans and discounts, Dec. 17, 1896, were \$36,942,440.70, and the stocks, bonds, and mortgages—\$28,451,447.71. Oct. 5, 1897, these two items were \$69,733,667.26. The savings deposits at the former date were \$42,055,852.60, and at the latter \$47,200,360.37. The commercial deposits subject to check increased from \$15,274,265.98 to \$17,985,788.97.

The affairs of the People's Bank have been in the courts through the year. The receiver brought suits against stockholders to compel them to pay their assessments for the benefit of depositors, and a decision in his favor was given in December. The receiver testified that the bank must have been insolvent for a year or more before it closed its doors, July 11, 1896. The opinion of the judge, reviewing the evidence, shows that the statements of the officers in regard to capital stock condition, etc., have been grossly misleading.

In proceedings brought to compel the receivers of insolvent banks to pay taxes upon the stock of the banks which were assessed before the failure, the court held that the receiver was not liable, that

these "taxes are strictly private, personal liabilities of the shareholders."

The State bank of Pontiac was placed in charge of the Bank Commissioner in June and the People's Savings Bank of Mount Pleasant failed in August.

Railroads.—About 260 miles of road were built this year. The new lines are the Lima Northern, from Tecumseh to Detroit; the Detroit and Mackinaw, 26 miles westward to Onaway; the St. Joe Valley, from Benton Harbor to Napsa, Ind.; and the Chicago and West Michigan, from Van Buren 34 miles eastward in the direction of Grayling. The South Haven and South Eastern has been changed from a narrow to a standard gauge railroad, with connections at Paw Paw and Lawton with other roads.

A legislative report on the railroads of the State says: "The 7,600 miles of Michigan railroads represent a cost of \$300,000,000, employ 25,000 people, which means support to 100,000 persons, carry 30,000,000 tons annually, and in 1896 paid \$24,000,000 on account of expenses for the management of lines. The earnings from Jan. 1 to Sept. 1 were \$17,974,681, a decrease of \$1,182,150.24 from 1896.

Insurance.—The report of fire insurance companies, given in February, shows that the total number of fire and fire and marine insurance companies doing business in the State is 129, of which 124 are stock, and 4 mutual companies. The stock companies did the following amount of business in Michigan last year: Fire risks written, \$284,156,820; inland marine risks, \$11,491,354; fire premiums received, \$4,262,872; inland marine premiums, \$166,404; losses incurred, fire, \$2,921,898; inland marine, \$162,385. Compared with 1895 the number of risks written shows a decrease. The report of life companies shows that the business of the 41 companies, including "industrial," compared with that of the previous year, was as follows: Policies issued, \$23,891,136, a decrease of \$611,712; insurance in force at close of year, \$129,925,280, an increase of \$2,074,915; premiums received, \$4,351,979, a decrease of \$5,736; losses incurred, \$1,583,188, a decrease of \$1,577. The receipts of the department for the year were \$213,451.21 and the disbursements \$10,285.63, leaving net earnings of \$208,169.63 to be turned into the State treasury.

Products and Industries.—The December crop report, issued by the Secretary of State, said the average condition of wheat in the State Dec. 1 was 88 per cent. of condition in average years. The total number of bushels of wheat reported marketed by farmers in the four months August, September, October, and November was 7,662,316. This is 2,966,642 bushels more than reported marketed in the same months last year.

Gold was discovered in the summer at Michipicoten, in the upper peninsula.

The game and fish wardens have had difficulty in enforcing the new law. Its constitutionality was assailed, but it was sustained by the Supreme Court.

The Dairy and Food Commissioner has been busy trying to enforce the oleomargarine law since it went into effect in September. In a case where a police justice refused to entertain a complaint against a dealer, the commissioner applied to the circuit court for a mandamus to compel him to issue a warrant. The court decided that the law is constitutional, and sustained the commissioner.

Mayor and Governor.—After the election of H. S. Pingree to be Governor of the State the question arose whether he could hold that office and at the same time continue to be mayor of Detroit. The case came before the Supreme Court, and it was decided that the two offices could not be held by one person at the same time.

Lansing.—The fiftieth anniversary of the locating of the State Capitol at Lansing was celebrated March 16, and at the same time the admission of Michigan to the Union, which took place Jan. 26, 1837.

Trials of State Officers.—Several former State officers—A. A. Ellis, J. W. Jochim, J. F. Hambitzer, and others—were charged with making false returns on the election of April, 1893, reporting that a constitutional amendment to raise the salaries of State officers was carried when it was really defeated. Two of the cases have been tried, and the jury disagreed each time. The cases were all *nolle prossed* in January at the request of the prosecuting attorney, who said that he believed no conviction could be had, since he was informed and believed that all the Republicans on the jury were for conviction, while the Democrats and Populists were for acquittal.

Court Decisions.—Several employees on the Grand Rapids "Democrat," in an editorial and reporterial capacity, and E. S. Toots, the mailing clerk, brought suit against the receiver of the concern for back salaries. In the lower court they won their case, but the Supreme Court reversed the judgment. The opinion says: "The labor performed by the petitioners, with one exception, was intellectual rather than manual. It was the work of professional men rather than the work of laborers (giving the word its ordinary acceptation), and is not such work as is intended to be covered by the statute. The exception mentioned is the work performed by Mr. Toots. His labor was manual, and is clearly within the terms of the statute."

A decision against the Michigan Land and Lumber Company settles a large number of similar cases. It involved the question whether the United States land patents, even when based upon erroneous survey records, had precedence over other grants made under corrected surveys and subsequent legislation. The United States Supreme Court decided that the Federal Government has full power to prescribe rules and regulations governing the sale and disposal of public lands, and that the State has no power to interpose new rules or obstructions to such disposition.

In the suit in which it was sought to have the Michigan assets of the Granite State Association paid to its Michigan creditors, the United States circuit court held that the law giving State investors a first lien on the Michigan assets of foreign building and loan associations is unconstitutional, because its object is not set forth in its title.

Legislative Session.—The thirty-ninth session lasted from Jan. 6 to May 28. The Lieutenant Governor presided over the Senate, with Senator Preston as President *pro tem*. W. D. Gordon was re-elected Speaker of the House and O. B. Fuller was Speaker *pro tem*.

The message of the retiring Governor recommended some radical changes, especially in the tax laws. He recommended also amendment of the franchise law so as to reach foreign corporations more effectually, and annual examinations of building and loan associations.

Gov. Pingree's message recommended that the caucus laws be so amended as to abolish party conventions, which he regards as the great agent of political corruption. He favored changes in tax laws for the purpose of making corporations bear their proper share of the burden. Other recommendations were: Making railroad passenger fares two cents a mile; referring important acts to popular vote; control of trusts; increase of liability of stockholders; repeal of the mortgage-tax law; change in the tax-title law; amendments to the laws permitting the granting of franchises to pub-

lic corporations; use of State products in State institutions; inheritance and income taxes; stricter supervision of banks; and a penalty for corporations exerting undue influence on elections.

In all 1,840 bills and joint resolutions were introduced, of which 504 passed. Railroad measures took up a very large proportion of the time of the session. A committee was appointed to investigate the railroads in the matter of freight rates. Their report did not show that any very serious cases of overcharge and discrimination had been established; but several recommendations were made. The Governor sent a special message urging higher taxation of railroads.

Of the railroad bills that passed, the important one was the Merriman bill, which was introduced early in February, but was not passed until near the close of the session. It provides for an increase in the specific tax of less than \$200,000. The State was receiving from that source about \$824,000. It provides that the roads shall pay to the Auditor a specific tax upon their business, computed on the gross income as by former laws, and graduated in like manner; but the percentages of tax are raised.

Other bills that passed affecting railroads were: Providing that railroads in the State shall issue 1,000-mile interchangeable books; compelling the placing of alarm bells at crossings; providing for the carrying of bicycles as baggage. An attempt to reduce all passenger fares in the lower peninsula to two cents a mile and in the upper peninsula to three cents was defeated.

An act of great interest to farmers provides for a bounty on beet sugar, stipulating that should the National Government at any time pay a bounty this Michigan bounty shall cease. The act makes an appropriation of \$10,000, and provides that if this is not enough to pay the one-cent-a-pound bounty, enough more shall be taken from the general fund to pay in 1897 and 1898.

Another bill benefiting farmers was the so-called anti-oleomargarine bill, to prevent deception in the manufacture or sale of imitation butter.

The game laws were amended in many particulars, as were also the insurance and school laws. It was provided that the national flag must be displayed on school buildings, and the truancy law was amended. A law that will go into operation Jan. 1, 1899, provides for uniformity in school textbooks throughout the State.

Some changes were made in the divorce law. One act defined what testimony of husband and wife shall be admissible in divorce suits. Another provided for the collection and publication of statistics of divorces.

The franchise fees for corporations were increased.

There were many bills amending the election laws, the general purpose of which was to prevent fraud.

Among the joint resolutions those of general interest were: Restoring Fort Mackinac to the United States, and making the apple blossom the State flower.

The appropriations aggregated about \$500,000 less than those of the preceding Legislature. For 1897 the sum of \$1,373,326.21 was appropriated, and for 1898 \$1,178,125.

An act to regulate and license the business of hawkers and peddlers was decided to be unconstitutional by the Supreme Court in December.

Other enactments were:

Extending the corporate life of life insurance companies.

Protecting hotel keepers.

Defining the duties and liabilities of hotel keepers.

Incorporating companies to insure bicycles.
 Providing life imprisonment for persons wrecking or attempting to wreck or rob trains.
 Providing for incorporation of labor associations.
 Authorizing the use of any thoroughly tested voting machine.
 Providing for inspection of elevators in factories and for dressing rooms for women where they are employed.
 Providing for punishment of persons fraudulently connecting, using, or obtaining water, electricity, or gas.
 Preventing corporations from issuing scrip for wages.
 Defining an agricultural course in public schools.
 Amending the divorce law, providing for alimony for education of minor children.
 Permitting foreign railroad companies to own lands in the State.
 Providing a penalty for threatening or blackmail.
 Providing for stamping of boots and shoes made wholly or partly of imitation leather.
 Limiting liabilities of sureties on bonds.
 Providing for guardians for habitual drunkards.
 To prefer ex-soldiers for public employment.
 Prohibiting using indecent, immoral, obscene, or insulting language in the presence of women and children.
 Permitting street railways to carry freight during certain hours.
 To prevent spread of fruit-tree diseases.
 To prevent destruction of prairie chickens.
 Providing for police matrons in certain cities.
 Providing that where estates are sold instead of distributed the widow shall receive a greater interest.
 Prohibiting the employment of females as bar-keepers.

Political.—An election was held April 5 to fill the offices of Justice of the Supreme Court and Regents of the University, also to decide on two proposed amendments to the Constitution—one to increase the salary of the Attorney-General to \$3,500, and one to provide a board of auditors for Kent County. The Republican nominations were: For Justice of the Supreme Court, Charles D. Long, renominated; for Regents, W. J. Cocker, renominated, and Charles G. Lawton. The candidates of the united Silver forces were: For Justice, George L. Yapple; for Regents, Stanley E. Parkhill and Thorne Rubert. The Prohibitionists nominated Noah W. Cheever for Justice, and William W. Tracy and Robert N. Mulholland for Regents. The People's party ticket had John O. Zabel for Justice, and Myron O. Graves and D. J. Porter for Regents. The candidates of the Democrats were: For Justice, D. P. Foote; for Regents, Levi L. Barbour and Edwin F. Sweet. The Republican candidates were elected, and the two proposed amendments were defeated. Following is the vote for Justice: Long, 210,721; Yapple, 139,307; Foote, 30,729; Cheever, 7,936; Zabel, 3,906; Lester H. Chappell, 2,166.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,301,826 in 1890. By the State census of 1895 it was 1,573,350. Capital, St. Paul.

Government.—The following were the State officers during the year: Governor, David M. Clough; Lieutenant Governor, John L. Gibbs; Secretary of State, Albert Berg; Treasurer, A. T. Koerner; Auditor, R. C. Dunn; Attorney-General, H. U. Childs; Adjutant General, H. Muehlberg; Superintendent of Education, W. W. Prendergast; Com-

missioner of Insurance, E. H. Dearth; Labor Commissioner, L. Y. Powers—*all Republicans*; Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, William Mitchell, Daniel Buck,

DAVID M. CLOUGH, GOVERNOR OF MINNESOTA.

Thomas Canty, and L. W. Collins. Justices Start and Collins are Republicans, the others are Democrats; Clerk, Darius F. Reese, Republican.

Finances.—The estimated receipts for the years 1898-'99, made on the basis of a tax levy of 14 mill, were \$2,454,000 for 1898 and \$2,543,000 for 1899. The disbursements were estimated at \$2,165,000 and \$2,425,000 for the two years, respectively.

Education.—At the last biennial report 359,189 pupils were enrolled in the public schools, and the average attendance was 135,702.

Prisons.—The ninth biennial report of the managers of the State Prison shows that the earnings of the past two years were \$100,855.44, of which the contract labor system netted the State \$71,810.81. A new contract for eight years was made for 200 men.

Since the inception of the parole system in 1892 the board has granted 177 paroles; only 17 men have violated their paroles. Three have escaped from the State.

The number of convicts received in 1895 was 235, and in 1896 the same number. July 31, 1896, there were in custody 469.

The ninth biennial report of the State Training School shows that 361 were present July 31, 1896, and the daily average for 1896 was 360.2; average time of detention of those released during the two years, two years and seven months.

The largest number committed were between fifteen and sixteen years of age. Twenty-six could not read.

An apparatus has been put in for the manufacture of sorghum sirup. Enough cane has been raised to yield about 1,500 gallons a year, all that is needed for the supply of the school. A cabinet shop has been added.

Banks.—The failure of the Bank of Minnesota in December, 1896, was followed by others. Three—the Germania, the Allemania, and the West Side,

all of St. Paul, none of them national—closed their doors Jan. 4. The Minnesota Savings Bank, of St. Paul, failed Jan. 18. An affidavit was filed, stating that the assets would amount to about \$250,000, while the liabilities are about \$230,000.

A joint committee of the Legislature appointed to investigate the insolvent banks, reported April 6, giving many details. In May indictments were found against several of the officers of the insolvent banks.

Products and Industries.—The wheat harvested this year was estimated at 36,000,000 bushels. The shipments of coarse grains at Duluth were reported very large at the close of the crop year, Aug. 31.

The season's ore shipments from Duluth, Superior, and Two Harbors were 5,560,000 tons. The year's Mesaba shipments were 2,376,063 tons; in 1896 they were 1,998,935 tons.

The discovery of a wonderfully rich deposit of iron ore on the Mesaba range, about 10 miles from Brwabut, was reported in September.

Gold has been discovered on Oak Point island in Rainy lake. It is said that, according to maps of the geological survey, the island is in Canadian territory, while by the treaty it is in the United States.

Garnets, opals, and abestos have been reported as discovered in Itasca County.

By reports of the factory-inspection force it appears that the total number of manufacturing establishments in the State is 1,918; the men employed, 37,252; women, 5,030; children, 298; total, 42,580. The census of the iron mines of the Duluth district showed a total of 3,097 employees.

Public Works.—An action was brought to enjoin the capital commissioners from continuing with the work at St. Paul, in the interest of another site for the capital city. It failed in the courts, and the work will go on. The basement will be of St. Cloud granite, and the superstructure will be faced with Georgia marble.

The monument at Gettysburg to the First Minnesota Regiment was dedicated July 2. Addresses were made by the Governor, Col. E. B. Cope, Government engineer in charge of the park, Judge Loehren, acting adjutant at the close of the second day at Gettysburg, Senator Davis, Col. Colville, who led the charge, Major Martin Maginnis, a member of the regiment, Mrs. Allerman, who assisted in caring for the wounded after the battle, and others.

The contract for beginning the dredging in the Duluth-Superior harbor was let in March, calling for over 20,000,000 cubic feet of dredging for \$1,655,645.

Lands.—An approximate estimate of the number of acres of vacant public lands in the States and Territories assigns 6,240,049 to Minnesota.

The biennial report of the Auditor has some important statements and recommendations in regard to railroad grants. The General Land Department business shows that the grants of land to railroad companies by Congress and by the State within the limits of Minnesota to aid in the construction of the 3,200 miles of line have amounted to over 20,000,000 acres. A reasonable valuation of these railroad lands is \$103,000,000, or \$32,000 per mile.

Forests.—The second annual report of the chief fire warden covers the year 1896. The Legislature of 1895 passed a law for the preservation of forests, under which the State Auditor is forest commissioner, and the supervisors of towns, mayors of cities, and presidents of village councils fire wardens of their respective towns, cities, and villages. There is also a chief warden, who may appoint other wardens. The law is specific about the careless setting of fires, or leaving them to burn, and fines are assess-

able on those who are convicted of such wanton carelessness, and imprisonment is also made a penalty.

The summary of forest fires for the year shows: Total acres burned over, 14,912; damage, \$16,059; and the causes are classified as follow: From clearing land, 12; from railroad locomotives, 9; from hunters and fishers, 11; from other causes, 22; unknown, 33.

Several wardens failed to answer a question calling for an estimate of the amount of damage done by forest fires previous to 1895, but the aggregate estimates of 75 fire wardens amount to \$4,232,000.

Legislative Session.—The Legislature met Jan. 6, and adjourned at the close of April. B. D. Jones was chosen Speaker of the House. George T. Barr was elected President *pro tem.* of the Senate April 19.

The appropriation bill carried a total of \$1,955,359.15. This is somewhat larger than those of 1893 and 1895; but the committee called attention, when it was introduced, to the fact that many of the items have heretofore been made the subjects of separate bills. For the State educational institutions—the university, normal schools, School of Agriculture, and experiment farms—\$217,000 was appropriated for current expenses, buildings, equipment and the like for 1898 and 1899, and \$36,000 for deficiencies, besides \$27,000 for repairs and completion of improvements. For correctional and charitable institutions, \$789,200 for 1898 and 1899 for current expenses, and for buildings, improvements, etc., \$406,500.

The law that was passed in regard to county conventions will have an important bearing on the conduct of political canvasses. It provides that when delegates are to be chosen to a State convention all the counties in the State shall hold their convention for the election of delegates to the State convention on the same day, the day to be fixed in the call issued by the duly authorized State committee, and when the convention to which delegates are to be elected is a district convention composed of more than one county, all the counties composing the district shall hold their convention on the same day, the day to be fixed in the call issued by the duly authorized committee.

It was provided that any county or municipality in the State may, by a two-thirds vote of the council or board of supervisors, elect to use a voting machine, and may adopt any one they deem most desirable.

Other enactments were:

For an inheritance tax.

Amending the game and fish laws.

A new railroad-tax law.

Requiring the assessment of grain in elevators.

Prescribing penalties for adulteration of food.

Prohibiting the sale or gift to minors of cigarettes or any substitute therefor.

Revising the military code, providing for reorganizing the militia.

Providing for parole of prisoners.

For encouraging sugar-beet culture.

For exterminating the San José scale.

Exempting a husband from damages arising from the torts of his wife.

Granting State aid to day schools for the deaf.

Providing for a gross-earnings tax on telephone companies, fast freight and equipment companies, express companies, and sleeping-car companies.

Prohibiting the admission of any one under twenty-one to dance houses, concert saloons, or any place where intoxicating liquors are sold or given away.

To prevent the desecration of Memorial Day, providing that no saloons shall be kept open, and that

no game of sport shall be played in towns where the graves of soldiers are to be decorated or where memorial exercises are to be held.

An investigation of the Labor Commission resulted in its vindication.

A bill was prepared by the Tax Reform Association which was a step in the direction of the single tax. It proposed a constitutional amendment authorizing counties, cities, villages, and townships to exempt from taxation, for local purposes only, the improvements on real estate, and increase proportionately the tax upon unimproved and idle land by vote at any general or town election. The bill received a favorable report from the judiciary committee of the Senate, but not early enough to permit of action by both houses before adjournment.

The need of a fourth hospital for the insane is conceded, and in a special message the Governor urged an appropriation of \$100,000 for the purpose. The Legislature decided on Hastings as the site, and the Governor vetoed the bill, which failed to pass over his veto.

An attempt was made to abolish department stores. A committee reported that they are "a serious menace to public property and detrimental to the general welfare of the people." It was proposed to divide merchandise into 59 classes and impose a graduated occupation tax; but the bill failed.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 25,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; and 1,280,600, in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, Anselm J. McLaurin; Lieutenant Governor, J. H. Jones; Secretary of State, J. L. Power; Auditor, W. D. Holder; Treasurer, Albert Q. May; Attorney-General, Wiley N. Nash; Superintendent of Education, A. A. Kinnannon; Adjutant General, William Henry; Revenue Agent, Wirt Adams; Land Commissioner, J. M. Simonton; Railroad Commissioners, M. M. Evans, J. D. Evans, and J. D. McInnis; Chief Justice of the Supreme Court, Thomas H. Woods; Associate Justices, Albert H. Whitfield and T. R. Stockdale, succeeded in May by S. H. Terral. All the State officers are Democrats.

Finances.—The condition of the finances previous to the special session of the Legislature will be seen from the statement of the Governor's message under "Legislative Session." The receipts for the fiscal year ending Sept. 30, 1897, were \$1,492,978.92, which, with the balance at the beginning of the year, made a total of \$1,510,985.60. The disbursements were \$1,457,134.54.

In accordance with the act of the Legislature, \$75,000 was borrowed at 5 per cent. and \$10,000 at 3½ per cent. The principal is made payable on or before Jan. 10, 1899, and the interest semiannually.

The collections made by the revenue agent for the past two fiscal years amounted to \$57,856.27. He has begun suits against the Yazoo and Mississippi Valley and Illinois Central Railroad Companies for about \$750,000 taxes, alleged to be due the State and the counties traversed by what is known as the L., N. O. and T. Railroad for the years 1892-'95, or what was prior to Oct. 24, 1892, the property of the Louisville, New Orleans and Texas company.

The time having expired for filing claims against the direct-tax fund, the balance of \$20,048 left of the original \$69,952 paid back to the State reverts to the State treasury.

In 1896 the State paid 3,363 pensioners \$18.75 each, and 6 \$75 each. In 1897 there were 4,400 who received \$17 each, and 9 who received \$75 each.

Education.—From a review of the history of the colleges of the State by Prof. Edward Mayes, of Millsaps College, it is learned that the oldest—Jefferson College, at Washington—has for only a few years had a curriculum that would entitle it to the rank of a college according to present ideas and never has granted a baccalaureate degree. Its endowment is \$40,000. It was incorporated in 1802, and is the oldest existent school in the South outside of Virginia and North Carolina.

Mississippi College, at Clinton, conferred the first degrees ever given in the State, and these were conferred in 1832 on two young women. The department for girls was discontinued about 1850. The institution has had a varied history, having been at different times under the care of the State and of the Presbyterian and the Baptist denominations, and having lost practically its whole endowment by the war, and again by the financial crisis of 1873. It has a high collegiate curriculum and about 250 students. This year it was not opened until Dec. 7, on account of the yellow-fever quarantine.

The University of Mississippi has had an average of about 210 students in the literary and 24 in the law department. Since its organization, in 1848, nearly 5,000 pupils have attended, of whom nearly 500 were law students. Its endowment is more than \$500,000.

The Agricultural and Mechanical College has a faculty of about 18, and an average attendance of 325 students.

Millsaps College, opened in 1892, has had an average attendance of about 180, and graduated a class of 7 in June. The new Webster Science Hall was dedicated in April.

The Chickasaw lands have been definitely laid down for each county this year, so that the school fund may be accurately divided—the division among the counties receiving it depending not upon the school population, but upon the quantity of Chickasaw land in the county. The fund this year amounted to \$25,526, and was divided among 23 counties. The University Summer Normal Schools had about 190 students in 1896, and 202 in 1897.

Penitentiary.—The number of convicts is more than 900. They are employed on 13 plantations, and a net annual profit of about \$50,000 is realized. Three of the plantations are owned by the State, 3 are rented, and 7 are worked on shares. During the overflow in the spring 200 or more of the convicts were put at work on the levees.

Militia.—The National Guard of the State has 1,600 men and 195 officers. An instructor has been furnished from the United States army.

United States Senator.—The death of Senator James Z. George, in August, caused a vacancy, which was filled by the Governor's appointment of Senator-elect H. D. Money, who was chosen to succeed Senator George in 1899, to fill the vacancy until the next session of the Legislature.

Banks.—The bank statement, July 19, shows that there were 83 State banks, an increase of 10 or 12 over the statement made in September, 1896. There were several other State banks in process of organization. The resources amounted to \$13,320,593.95; capital paid in, \$2,581,225.64; surplus, \$373,239.02; individual deposits subject to check, \$7,037,916.14. A tabulated statement published in August indicates that Mississippi has a smaller amount of money *per capita* deposited in banks than any other State in the Union.

Railroads.—A new road, the Mobile, Jackson and Kansas City, is under construction. The line crosses

Leake river into Mississippi at a point about 40 miles northwest of Mobile. This road will open to transportation a large tract of pine-timber land between Mobile and Jackson.

Insurance.—Indictments were returned, July 21, against 35 insurance companies as conspirators in a trust organization for the maintenance of rates of fire insurance premiums in Lauderdale County. The prosecution of the companies began at the April, 1896, term of the circuit court. The companies were brought to trial and fined \$500 each after conviction. The case was carried to the Supreme Court, which reversed the decision of the lower court and ruled that the indictment was defective in that no specific charge was made against the defendants that they had upheld agreed rates on insurance and thereby deprived the public of the benefits of competition in the premises. At this term the grand jury was instructed to reopen the investigation. The affidavits in the case are now so worded as to conform to the ruling of the Supreme Court.

Tax Titles.—The tax titles to large tracts of land in the delta have been attacked in the courts this year, but were sustained. It is estimated that not less than 3,000,000 acres of land in the delta passed through the Liquidating Levee Board at tax sales, the title to which depends upon the validity of the tax sales made to the board. The decision of the United States Supreme Court confirms the titles of the present holders.

Mob Violence.—A negro who confessed the murder of two citizens at Belen was lynched at Jonestown, April 2. Another who had murdered an old man near Crystal Springs was taken by a mob and hanged June 25, after confessing the crime. Two requests for troops to protect the prisoner had been telegraphed to Jackson, but as both the Governor and the Lieutenant Governor were absent from the capital, the troops could not be moved until it was too late. At Wesson, a negro, supposed to be the murderer of Mrs. Smith and her four children, Dec. 10, was hanged by a mob that took him from the sheriff.

The Mississippi Flood.—During the overflow of the river in the spring it was estimated by the Agricultural Department that 7,900 square miles in the State were under water, April 6. On this tract is a population of about 186,489, of whom about five sixths are colored. About 18,500 farms are included in the district. It was feared that the deluge would cause the depreciation of the value of the property; but a better crop was raised than ever before, and values are not affected. At Vicksburg, April 16, the gauge showed a flood of 52.5 feet, being 1 foot 5 inches above the flood of 1862, the highest record ever made in the historic period.

Yellow Fever.—This disease was discovered at Ocean Springs, Sept. 17. It was first pronounced dengue, or "breakbone" fever. Soon afterward cases of illness at Edwards were recognized as yellow fever, and strict quarantine was established around infected districts, which was not removed till Dec. 1. A report of the physicians having in charge Belle, Bay St. Louis, Waveland, McHenry, and Perkinston, a district having an aggregate population of 8,200, showed that 1,023 cases were reported, from which 50 deaths resulted.

A committee, appointed at Jackson, upon the announcement of the fever at Edwards, to receive subscriptions for relief reported collections amounting to \$933.70 and disbursements \$752.81, the remainder being reserved for the pay of trained nurses still on duty. The Mississippi refugees in St. Louis raised about \$2,500, which was sent to the sufferers.

Legislative Session.—The tax levy of 6 mills which was ordered by the Legislature of 1896 and

the sale of \$400,000 of bonds having proved insufficient to meet the expenses of the State, the Governor called a special session to meet April 27, naming in the proclamation as the object "to consider the subjects and matters of finance, including revenue and appropriations; and also, if in the judgment of the Legislature it is deemed proper, to consider the subject and matter of building a Capitol."

In his message the Governor gave the condition of the finances as follows:

"It was expected by your honorable body when in regular session last year that a levy of 6 mills State tax, with the contingent collections for which you provided and the sale of \$400,000 bonds, would realize revenue sufficient to meet all appropriations made for the years 1896 and 1897. This expectation failed to materialize, and on the 18th day of July, 1896, the treasury was first unable to pay all claims as presented, and this condition prevailed until about the 1st of January, 1897. The receipts for the fiscal year from Oct. 1, 1895, to Sept. 30, 1896, inclusive, were \$1,777,586.01, and the disbursements for the same period were \$1,759,579.33, as shown by the Treasurer's books. In the foregoing receipts for the fiscal year 1895 and 1896, ending Oct. 1, 1896, are three items, viz.: Special loan of \$150,000 and proceeds from the sale of \$400,000 bonds to the amount of \$413,698.85, under chapter xxxiv, page 27, of the acts of 1896, and \$7,660.35 balance from account 1894 and 1895. Deduct these three items, amounting to \$571,359.20, from the total receipts, and there remains \$1,206,226.81, which represents the receipts from all other sources from the 1st of October, 1895, to the 30th of September, 1896, inclusive.

"In the disbursements are two items, viz., refunding the aforementioned special loan of \$150,000 and \$1,633.32 interest thereon; deduct these two items, amounting to \$151,633.32, from the total disbursements, and there remains the sum of \$1,607,946.01, which amount represents disbursements for all other purposes; and \$401,719.20, the difference between \$1,607,946.01 and \$1,206,226.81, represents the amount of regular disbursements over regular receipts.

"In the disbursements is an item of \$195,495 of special warrant of 1894. Deduct this amount of indebtedness of the State paid during the fiscal year, and the amount of other disbursements is \$1,412,451.01, which is the amount of current expenses and the interest on the public debt, being \$213,884.55 more than the regular collections. This statement of receipts and disbursements is taken from the Treasurer's books.

"Of the \$18,006.68 on hand on Oct. 1, 1896, only \$506.68 was available, the remainder being a donation of the United States to the Agricultural and Mechanical colleges."

It was recommended that the Legislature provide for a new Capitol building which should cost about \$750,000.

The Governor and the Ways and Means Committee prepared a revenue bill for the emergency, and the Finance Committee prepared another.

The plan of the Finance Committee to authorize the Governor to borrow a sum not to exceed \$200,000, at a rate of interest not over 6 per cent., for defraying the State's expenses through the year, was adopted. The levy for 1897 was fixed at 6½ mills, and it was further provided that boards of supervisors may levy taxes for all purposes, which, added to the State tax, will make 16 mills on the dollar, and no more. Municipal bonds issued for the purpose of raising money for school buildings, lands, and improvements were exempted from taxation.

Other acts were:

To authorize the organization of loan and trust companies.

To authorize individuals already owning lands and personal property in the State exceeding in value \$250,000 to convey the same to planting and mercantile corporations, hereafter to be formed, in the *bona fide* payment of subscriptions to the capital stock of such corporations.

To create the office of road commissioner.

To create the Mississippi Department of Public Health.

To amend the law in reference to the refunding of purchase money by the State and county to purchasers of land sold for taxes.

The laws in regard to the Levee Commissioners were amended, enlarging their powers, and the issuing of bonds for levee purposes was authorized.

There was a bitter contest over the subject of the proposed new Capitol, to provide for which was one of the chief objects of the special session. Two plans were under consideration and two sites, and there was a difference of opinion as to the appointment of commissioners to have charge of the work. The House adopted the present site, the Weathers' plan, and decided that the commissioners should be elected by the Legislature, refusing, by a large vote, to allow the Governor to name them. The Senate declared for the Penitentiary site, the Gordon plan and the election of the commissioners, one by the House, one by the Senate, and one by the joint session—none by the Governor. After conferences, the two houses got together, the Senate yielding the site, the House the plans and manner of electing the commissioners, and the bill passed. The Governor sent a message saying that he had not time to consider the bill, and asking the Legislature to allow the matter to lie over till January. The session was extended five days, and the Governor sent in a veto, and an effort was made in the House to pass the bill over the veto, which failed by a vote of 53 to 59. A resolution was offered in the Senate, declaring that it was the expression of that body that the Capitol bill was "wholly free from any constitutional or other objections as stated in the Governor's veto." After a long debate, this was adopted by a vote of 18 to 8.

The session was adjourned May 27.

MISSOURI, a Western State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,395 in 1870; 2,168,380 in 1880; and 2,679,184 in 1890. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, Lon V. Stephens; Lieutenant Governor, August H. Bolte; Secretary of State, Alexander A. Lesueur; Treasurer, Frank I. Pitts; Auditor, James M. Seibert; Attorney-General, E. C. Crow; Adjutant General, M. Fred Bell; Superintendent of Education, John R. Kirk; Railroad and Warehouse Commissioner, T. J. Hennessey; Secretary State Board of Agriculture, John R. Rippey; Commissioner of Insurance, E. T. Orear—all Democrats except Mr. Kirk, Republican; Labor Commissioner, Arthur Rozelle, Populist; Secretary of the Fish Commission, F. P. Vennawine; Chief Justice of the Supreme Court, Theodore Brace; Associate Justices, Thomas A. Sherwood, Shepard Barclay, James B. Gantt, Gayon D. Burgess, George B. Macfarlane, Democrats, and Walter M. Robinson, Republican; Clerk, J. R. Green, Democrat.

Finances.—The receipts in the general fund in 1897 were \$2,489,357.99. The total receipts into the treasury were \$4,166,490.35, and the total disbursements to \$4,094,947.21. The general balance

in the treasury, all the funds, was \$577,463.05 on Jan. 1, 1897, and \$649,006.19 on Jan. 1, 1898. The receipts into the State treasury during the year were \$909,804.53. Of that fund \$173,547.30 was used to pay interest on the bonded debt, \$186,000 interest on school certificates, and \$52,711.96 interest on seminary certificates. The fund commissioners called in and redeemed \$500,000 of the bonds, leaving \$4,500,000 of 3-per-cent coupon bonds outstanding.

Valuations.—The aggregate values of real and personal property as assessed for taxes of 1897 are as follow: Real estate, \$760,105,425; personal property, \$216,235,897; total, \$976,341,322.

Militia.—The National Guard is reported as having an effective force of 2,650 officers and men—

LOAN V. STEPHENS, GOVERNOR OF MISSOURI.

an increase over the number the previous year, which was 2,462.

Education.—The school enumeration for the year was 973,147. In July an apportionment of \$876,622.25 was made—about 90 cents *per capita*.

The State University military department had an enrollment of 182 in November, the largest in its history. There is this year a regular class doing graduate work in law. The attendance in all departments surpasses all previous records. The standards of admission to several of the departments are higher than heretofore.

Banks.—The report on bank inspection, submitted Jan. 27, gave the following details: The law passed in 1895 providing for bank examination went into effect June 21 that year, and by July 1, 1895, two examiners were appointed, and the examination of banks was begun. There were 494 incorporated State banks, 96 private banks, and 7 trust companies, subject to examination. Since that time 725 examinations have been made, 28 banks have been permanently closed by the State, 4 banks have been closed by the State and permitted to resume, and 20 banks have gone into voluntary liquidation. In the meantime 41 banks have been organized in the State. There are 68 national banks doing business in this State. The Mullauphy Savings Bank, of St. Louis, was closed Feb. 27 by the examiner, and the Citizens' Bank, of Bowling Green, March 30.

The President of the Kansas City Safe Deposit and Savings Bank, which failed in 1894, was convicted, Nov. 11, of wrecking the bank, and was sentenced to two years in the Penitentiary. This was the largest savings bank in the State. It had \$2,000,000 in deposits, nearly all from poor people, and when it failed only \$11,000 in cash was in its vaults.

Products.—The Secretary of the State Board of Agriculture issued a statement in December, from which is taken the following:

"The agricultural productions were not so abundant for 1897 as last season. We produced 167,000,000 bushels of corn against 200,000,000 for last season; 9,400,000 bushels of wheat against 12,710,000 bushels for 1896; 26,000,000 bushels of oats against 21,660,000 bushels; 3,021,000 tons of hay against 3,510,000 tons; 550,000 bushels of flaxseed against 500,000 bushels; 32,150 bales of cotton against 33,197 bales; 7,200,000 pounds of tobacco against 7,000,000 pounds; and 3,650,000 bushels of potatoes against 7,830,000 bushels for 1896.

"Secretary Goodman, of the State Horticultural Society, estimates the apple crop, at \$12,000,000; peaches, \$3,500,000; pears, cherries, plums, and grapes, \$1,500,000; berries, \$2,500,000; a total of \$20,000,000 for the fruit crop of 1897.

"The shipments of agricultural products reported to us by the transportation companies and compiled this season show an output far in excess of our most sanguine expectations.

"The shipment of cattle was estimated at 700,000 head. The actual returns show 1,118,500 head. Hogs for the same period were estimated at 2,200,000 head, and the shipments amounted to 3,142,000 head. Horses and mules were estimated at 70,000 head, and we shipped 104,361 head; sheep at 300,000 head, actual shipments were 326,340 head; wool at 3,000,000 pounds, shipments 3,086,000 pounds; poultry 50,000,000 pounds, shipments 48,040,383 pounds; eggs 25,000,000 dozen, shipments 33,426,579 dozen; total timber product at 450,000,000 feet, shipments 518,000,000 feet; cotton 29,000 bales, shipments 33,197 bales."

The last half of 1897 shows an increase in the lead and zinc output over the corresponding part of 1896 of \$388,572.

Discoveries of gold in St. Charles and Montgomery Counties have been announced, and the finding of pearls in the Pomme de Terre and Osage rivers.

Floods.—Heavy rains in January caused overflows in all the streams, washouts, and other damage in western Missouri. The great flood in the Mississippi in April submerged about 1,750 square miles in the State. The report of the Agricultural Department, April 11, said: "The agricultural interests affected in Missouri represent a total capital of over \$9,000,000, the 5,300 submerged farms containing an area of about 470,000 acres.

Mob Violence.—Two men suspected of thieving were killed by White Caps near Mountain Grove, May 18, and the house of another, who was away from home, was burned.

St. Louis.—The city directory for 1897 indicates a large increase in the population. The number of names given is 212,859, indicating, by the rule estimating 3 inhabitants to each, a population of 638,577. The increase is said to be nearly 3,000 greater than the average annual gain.

By the city election in April the entire Republican ticket was elected with the exception of four members of the House of Delegates.

A proposition to impose a tax for a free library was carried by 35,212 majority.

Decisions.—According to a decision of the circuit court at Kansas City, Oct. 30, it appears that, by the Revised Statutes of 1889, even one day's residence in the State is sufficient in order to procure a divorce

if the offense proved was committed in Missouri, or while one or both of the parties lived in the State.

The court of appeals at St. Louis decided in May that bicycles are not baggage.

An opinion was given in the United States Circuit Court of Appeals in November that the boycott is not a legal weapon. One of the judges dissented in an opinion in which he said: "The only weapon of defense laborers can appeal to is the strike or the boycott, or both. These weapons they have an undoubted right to use so long as they use them in a peaceable and orderly manner."

The effect of a decision rendered by the State Supreme Court, Feb. 29, at Kansas City, is to open to women nearly all the elective county and State offices in Missouri. The decision was in the case of the State vs. F. P. Hostetter, clerk of the St. Clair county court. Mr. Hostetter was appointed to fill an unexpired term, and at the next election Mrs. Maggie D. Wheeler was elected to succeed him. He refused to surrender the office on the ground that women were ineligible to hold office. The State sued to oust him, and by the decision succeeded. The court held that a woman is eligible to hold any elective office in the State which is not specifically barred against her by statute.

Political.—The Union Reform Press Association was organized at Kansas City, Feb. 23, and General-Master-Workman J. R. Sovereign, of the Knights of Labor, was made its president. It was formed by the Populist editors who refused to recognize the right of President Paul Van Der Voort to call a meeting of the National Reform Press Association at Memphis. The new organization adopted resolutions on the line of the St. Louis platform and favoring co-operation with other friendly bodies, and adjourned to meet at Omaha, Feb. 22, 1898.

Legislative Session.—The thirty-ninth General Assembly met Jan. 6, and adjourned March 23. J. W. Farris was Speaker of the House.

The new State government was inaugurated Jan. 11.

A successor to United States Senator George G. Vest was to be chosen Jan. 20. The Democratic members nominated Senator Vest, the Republicans Richard C. Kerens, and the Populists O. D. Jones. Senator Vest was elected.

The laws in regard to aliens holding real estate were made more lenient. Aliens are now permitted to take mortgages to secure the payment of loans, and, in case of foreclosure and sale, to purchase and take the title to the property and hold it for five years, within which time it must be sold to a *bona fide* purchaser under penalty of escheat to the State.

A fellow-servant act was passed, making a railroad company responsible for damages sustained by one agent or servant by reason of the negligence of another; and persons in the service of such companies having control over others or with the duty of inspection are declared to be vice-principals of the companies, and not fellow-servants with the employees under their supervision. Contracts limiting the liability of a company for injury or death to agents or servants are declared void.

A measure passed, which was introduced by the Horse-Breeders' Association, prohibiting bookmaking and pool selling everywhere except on race tracks where races are being actually run, and allowing it then only for ninety days, upon a license issued by the State Auditor. This measure was designed to close pool rooms. The Supreme Court decided that it was class legislation, and therefore unconstitutional.

A school text-book commission was provided for, to be composed of the State Auditor, Attorney-Gen-

eral, State Superintendent of Public Schools, the principal of the Kirksville Normal School, and a public school-teacher, to be appointed by the Governor, who shall meet at Jefferson City and enter into contracts with publishing houses for school-books at greatly reduced prices. The cities of St. Louis, Kansas City, and St. Joseph are exempted from the provisions of the law. The bill is practically a re-enactment of the text-book law of six years ago.

A bill for the government of public schools, proposed by the St. Louis Civic Federation, provided for the appointment of a board of 9 members by the mayor, without regard to politics, and to receive no compensation. It was amended so as to provide for 12 directors, elective at large, and passed.

The law under which persons convicted of vagrancy were sold at public auction to the highest bidder was repealed.

A new parole law was enacted, under which any person under the age of twenty-five years convicted for the first time of any crime except murder, arson, or rape, may be released on parole at the discretion of the judge of the court before whom he was convicted.

Some changes were made in the election and revenue laws, and some important changes in the insurance laws, relating chiefly to the business of foreign companies; and an antitrust measure was passed.

For the contingent expenses of the Legislature and pay of members \$168,593.24 was appropriated, and for educational institutions: Kirksville Normal School, \$28,280; Warrensburg Normal, 20,500; Cape Girardeau Normal, \$23,000; Lincoln Institute, \$36,550; State University, \$100,000; School of Mines, \$16,000.

Resolutions were passed expressing sympathy for the Cubans, asking Congress to improve Grand river, and instructing the State's representatives in Congress to vote for a national park at Vicksburg.

The House also passed the following:

"Whereas, The press dispatches inform us that Grover Cleveland, a private citizen of the United States, is now aboard of a Government boat with a party of friends indulging his passion for duck shooting at public expense, and whereas the cost of running the Government boat, which the said Grover Cleveland appears to have confiscated for his own use, is heavy, and the taxpayers are already staggering under the burden of debt which Grover Cleveland, when a public official, greatly increased, therefore be it

"Resolved, By the House of Representatives of the thirty-ninth General Assembly of Missouri that the President of the United States is hereby respectfully memorialized to have an inquiry made into the reported confiscation of a Government boat by the said Grover Cleveland, and if the inquiry develops that the report is true, the President is respectfully asked to take immediate steps to recover the said Government boat and return it to its proper station."

Other enactments were:

Making the Home for ex-Confederate Soldiers at Higginsville and the St. James Home for ex-Federal Soldiers State institutions; appropriating \$24,000 for the former and \$10,000 for the latter, and providing that when the necessity for the homes no longer exists, on account of the passing away of the veterans, the property shall revert to the State.

To reorganize the State militia.

Prohibiting any preacher or other person who is not an American citizen from performing the marriage ceremony.

To prevent the adulteration of candy.

For the suppression of contagious diseases among animals.

Requiring biweekly payment of wages in lawful money.

Amending the fish and game law so as to allow the netting and seining of fish in back waters.

Giving juries in criminal cases discretion as to whether they will sentence to death or imprisonment for life.

Creating a State board of charities and corrections.

Authorizing each member of the Legislature to appoint two students to free scholarships in the university.

Creating a separate department for the inspection of building and loan associations.

To establish a board of dental examiners.

Making it a misdemeanor to mix grains of different grades.

Requiring the teaching of physiology and hygiene in public schools.

Requiring skimmed-milk cheese to be labeled as such.

The Governor vetoed a bill requiring all hangings to take place within penitentiary walls.

He also vetoed a bill providing that the assets of insolvent corporations shall constitute a trust fund for the benefit of creditors, and that no preferences shall be given.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,980 square miles. The population, according to the census of 1900, was 132,159. Capital, Helena.

Government.—The following were the State officers during the year: Governor, Robert B. Smith; Lieutenant Governor, A. E. Spriggs; Secretary of State, T. S. Hogan; Treasurer, T. E. Col-

ROBERT B. SMITH, GOVERNOR OF MONTANA.

lins; Auditor, T. W. Poindexter, Jr.; Attorney-General, C. B. Nolan; Superintendent of Education, E. A. Carleton—all elected on a fusion ticket of Democrats and Populists; Adjutant General, James W. Drennen; State Examiner, D. D. Beart, succeeded in March by John G. Moroney; Commissioner of Agriculture, J. H. Calderhead; Land Agent, James M. Page, succeeded by Henry Neill; Land Register, S. A. Swiggert, succeeded by H. D.

Moore in March; Chief Justice of the Supreme Court, W. Y. Pemberton, Fusion; Associate Justices, W. H. Hunt, Republican, and H. R. Buck, Democrat; Clerk, Benjamin Webster, Republican. Judge Buck died Dec. 6. William T. Pigott was appointed to succeed him.

Finances.—The receipts by the State Treasurer for the fiscal year ending Nov. 30 were \$897,096.53, compared with \$667,747.03 for the same period of 1896. The total receipts from the counties for the fiscal year of 1897 were \$532,912.47, compared with \$474,864.75 for 1896. The following increases are shown: Fees from State officers, \$23,425.03; register of State lands, sales, and leases, \$60,120.54; sale of bonds of State institutions, \$55,025; miscellaneous, \$13,151.20. The total expenses were \$525,520.

The Auditor's report shows balances in the important funds Dec. 1 as follow: General fund, 46 cents; stock indemnity, \$5,873.81; sheep indemnity, \$3,694.85; escheated estates, \$4,064.64; bounty, \$9,718.73; arid land, \$149.70; permanent school fund, \$210,644.85; permanent university fund, \$12,812.72; normal bonds, \$17.14; Fish and Game fund, \$344.85; Capitol building, \$2,246.98; university income, \$8,488.68; Reform School, cash received during year and on hand Dec. 1, \$7,695.24; warrants paid \$3,845.17, balance \$3,850.17 (in this fund there are \$17,517.27 outstanding warrants); Deaf and Dumb Asylum, outstanding warrants \$34,893.21, balance in cash \$509.43; School of Mines, outstanding warrants \$8,146.68, cash \$110.84.

Licenses for the sale of liquor contributed largely to the funds for running the State, county, and city governments. The total licenses collected in the State amounted to \$595,780.96. The total receipts for licensed gambling were \$34,182. The receipts from butchers were \$2,942; from brewers, \$4,826; and from hotels and restaurants, \$9,017.

The receipts at the office of the Secretary of State amounted to \$9,253, of which \$6,112.85 was for filing and recording articles of incorporation of Montana companies.

Valuations.—The total assessment of Montana for 1897 is \$130,757,411.55, against \$120,697,847 in 1896. The statistics show that the total real property in the State is \$67,175,589; the personal, \$49,907,770; and the total value of the railroad property, \$13,674,052.55. This is a large increase in railroad valuations, adding about \$100,000 to their tax.

Education.—There are about 30,000 children in the public schools, and during the year ending Feb. 28 the sum of \$844,344.78 was expended in the State for schools.

Money has been collected by ex-Gov. Rickards to complete the School of Mines, at Butte, and the brickwork was finished in November.

The State Normal School, at Dillon, was opened Sept. 6 with 5 instructors and 55 students. A building has been erected at a cost of \$50,000.

The Legislature provided for the construction of buildings for the State University, at Missoula, to cost \$100,000. The university has been occupying temporary quarters. Buildings for the Agricultural College also are in progress.

Charities.—The number of insane in the asylum Dec. 1 was 412, an increase of 34 over the number one year previously. The report says: "The contract now in existence provided for a 90-cent-per-capita-per-day payment; the new contract provides for keeping of the insane at a rate of 45 cents per capita per day. This will effect a saving of about \$37,000 a year."

The State Soldiers' Home, at Columbia Falls, was opened about the close of June. There were 24 inmates in November. There are accommodations for about 36, though the building when fully furnished will give room for 65.

Convicts.—There are 343 convicts in the Penitentiary. The contract for keeping them is let at 40 cents a day, an increase of 5 cents over the price of the previous year. The contractors agreed to furnish the convicts to the State free for all State work, while under the former contract they collected 5 cents a day.

Mining Products.—The State's output of gold, silver, copper, and lead in 1896 was of the value of \$50,732,099.13. The gold product was of the value of \$4,380,671; silver, \$20,234,877.47; copper, \$25,356,540.77; lead, \$70,000.87. The gold yield in 1897 was estimated in October at \$6,000,000. The silver product is apparently decreasing. The report of the great Anaconda Copper Mining Company for the year ending June 30, 1897, shows that in the year 132,364,198 pounds of fine copper were shipped in the form of electrolytic cathodes and converter bars. The shipments of silver, either in bullion or converter bars, amounted to about 6,200,000 fine ounces and of gold 20,380 fine ounces.

Live Stock.—The report of the Board of Stock Commissioners for 1897 shows that in the year the stock inspectors recovered 19,104 head of cattle valued at \$750,000. The board estimates the value of the stock output for the year at \$9,500,000. The first report of the sheep commissioners, published in November, shows that Montana in 1897 led the States in wool production. Since March 1 last there were sheared in this State 22,169,921 pounds of wool, which brought an average price of 11½ cents, or 4 cents more than last year. Allowing for shipments out of the State, which have been heavier this year than ever before, there are 3,670,855 sheep in Montana, a net increase over last year of more than 500,000. The value of sheep has nearly doubled this year.

Noxious Animals.—Statistics as to the number of stock-destroying animals that have been killed in the various counties for the fiscal year ending June 30, 1897, upon which the State will pay bounties show that in all 21,161 coyotes and 4,995 wolves were destroyed. The bounties amounted to \$78,468.

Banks.—The condition of the 21 national banks, July 23, as shown by the chief items was: Loans and discounts, \$7,068,696; due from banks, national and State, \$910,375; reserve in banks and deposited with reserve agents, \$3,731,744; of which \$669,674 was gold; total resources, \$14,886,414; liabilities, capital stock, \$2,655,000; surplus fund and undivided profit, \$985,935; due to banks, national and State, \$587,890; deposits, \$9,963,477. The average reserve held was 38.50 per cent.

The comptroller of the currency notified, Oct. 11, the stockholders of the First National Bank of Helena, which failed in 1896, that they were to pay \$100 on each share of stock, as it appeared from the accounts of the receiver that it would be necessary to enforce the liability of the stockholders to that extent.

The Northwestern National Bank, of Great Falls, one of the oldest institutions in the State, failed Feb. 5. The cashier was arrested in April.

The Merchants' National Bank, of Helena closed its doors Feb. 13.

In a suit involving the liability of a city treasurer and his bondsmen for city money which he had placed in a bank that afterward failed, the decision was in their favor.

Railroads.—But 12 miles of railroad were built in the State during the year. Following are the amounts assessed to the roads for State and county taxes: Northern Pacific and branches, \$170,777.91; Great Northern, Pacific extension, Montana Central, \$125,031.82; Oregon Short Line, \$12,865.20; Montana Railroad, \$401.10; Great Falls and Canada, \$4,754.80; Big Horn Southern, \$6,642.27; Montana

Union, \$8,980.21; Butte, Anaconda and Pacific, \$4,656.79; total, \$334,110.10.

Public Lands.—The report of the State Land Agent for the year ending Nov. 30 shows a large increase in the business of the office. Lands aggregating 922,310 acres have been appraised and apportioned among the funds for schools and State institutions. The grant for the State University is filled, and about two thirds of the others. There are still many thousand acres of indemnity school lands to be selected. The amount realized for the various funds from the sale and rental of lands from trespass and from timber sales and back rentals for the year ending Nov. 30, 1897, was \$102,896.53. There are 332,053 acres under lease at a rental of \$38,234.34.

The report of the United States Mineral Land Commission, Helena district, of lands examined and classified from Aug. 15 to Dec. 31, 1897, gives the number of acres of surveyed land as mineral, 64,200; nonmineral, 322,950. The land in the district remaining unclassified is 3,553,580 acres, of which 340,120 have been surveyed.

The ceded portion of the Fort Belknap Indian reservation in the western part of Choteau County was thrown open for settlement under the mining laws of the State, March 12. It contains a little more than 14,000 acres. The amount of money paid by the Government for this land was \$360,000, or about \$24.50 an acre. This amount is not to be paid all at once, but will be drawn from the Government treasury in four parts or \$90,000 yearly.

The Divorce Law.—The question arose this year whether that portion of the code which forbade the marriage of divorced persons within a certain time—two years for the party securing the divorce and three years for the other party—had been repealed. The Attorney-General decided in December that the repeal is operative.

School Elections.—It has been a question for several years whether it is lawful for women who are not taxpayers to vote at a school election where the question of issuing bonds is voted upon. In order to settle the matter until it can be passed upon by the Supreme Court, the State Superintendent prepared an opinion in which he held that the women can vote whether they are taxpayers or not.

The Cheyennes.—Trouble arose with these Indians in May, beginning with the murder of a sheep herder, apparently to prevent him from giving testimony as to the illegal slaughtering of beef by the Indians. It was feared that attempts to make arrests would cause an outbreak, and many settlers took refuge in Miles City. The confessed murderer, an Indian named Little Whirlwind, was arrested, and there seems to have been no more trouble except an unsuccessful attack in July by several Indians upon the home of one of the deputy sheriffs who aided in the arrest.

Legislative Session.—The fifth Legislative Assembly met Jan. 4, and adjourned March 4. On joint ballot the political division was: Democrats, 53; Populists, 19; Republicans, 19. The Governor was inaugurated Jan. 4. C. W. Hoffman was President *pro tem.* of the Senate, J. M. Kennedy Speaker of the House, and Albert I. Loeb Speaker *pro tem.* Of 334 measures introduced in the House about 100, for the most part appropriation bills, passed. In the Senate 130 bills were introduced, 30 of which passed both houses.

A new county, Broadwater, was formed, making the twenty-fourth in the State. Townsend is to be at present the county seat; but no courthouse is to be built until the valuation of the county exceeds \$3,000,000.

The Legislature of 1895 passed a law prohibiting all kinds of gambling; but it was declared void be-

cause its title described it as an amendment to a section that bore no reference to gambling. A similar law was enacted this year making it a penitentiary offense to play any game of chance for money, with cards, dice, or any other whatsoever, or any banking or percentage game. This also was attacked in the courts on the ground that as Broadwater County came into existence March 1, and had no representation in the Legislature of 1897, all acts passed after that date were void. The antigambling law was signed March 4. The court upheld the constitutionality of the law. The Attorney-General gave an opinion to the effect that the law does not apply to pool selling.

An inheritance-tax law imposes a tax of 5 per cent. on bequests to any beneficiary not a relative where the estate amounts to over \$100. The tax on estates directly inherited, where the value of the estate is over \$5,000, is 1 per cent. This, too, was resisted, but was declared constitutional by the Supreme Court.

A new fish and game law was enacted, differing in some important respects from the former one. There is no closed season for fishing; but it is forbidden to sell "trout or grayling taken for speculative purposes, except from private ponds. Only the hook and line can be used in catching fish except in the Missouri below the big falls and in the Yellowstone below the mouth of Big Horn river." There are provisions against the killing of more than a stated number of elk, moose, or deer by any one person in a single season. The open season for killing deer was changed, the new law fixing it between Sept. 1 and Dec. 3.

A license was made requisite for insurance companies doing business in the State, the law providing that all fire, life, and casualty companies must pay a license of \$125 a year where the receipts in premiums are from \$1 to \$5,000. All above the latter sum pay 2 per cent. upon the receipts.

A bill for free text-books for schools was so amended as to provide that the voters of each school district shall decide the question at an election.

A law imposing a license tax of \$10 a month on retail cigarette dealers was resisted, but was decided constitutional in a United States court.

One of the most important acts was an amendment to the law regarding the arid lands granted by the National Government. A fund for the reclamation of these lands is to be raised by the sale of bonds, the principal and interest of which are to be paid from the proceeds of sales of the reclaimed lands. The work is to be in the hands of commissioners appointed by the Governor. The former commissioners of arid lands resigned, and the Governor appointed C. O. Reed for six years, Donald Bradford and T. Marshall for four, A. H. Mitchell for two, and J. K. Toole for one year. The amount to be expended in 1897 was limited to \$500,000; each succeeding year to \$1,000,000.

A law to prevent ticket scalping was passed, and on a test case the Supreme Court pronounced it constitutional.

Other enactments were:

Prohibiting the wearing of buttons, badges, or other insignia of labor organizations by any persons not members.

Providing for a levy for a stock-detective fund.

For reorganizing the militia.

Relating to the adoption of children.

Requiring railroad companies to transport physicians on freight trains or engines in cases of emergency.

Changing the name of the Agricultural College of Montana to Montana State College.

A resolution was passed protesting against Presi-

dent Cleveland's order setting aside large timber reservations in the State, on the ground that it would seriously retard State development.

An appropriation of \$15,000 was made for an exhibit of the State's resources at the Omaha Exposition.

Among bills defeated was one for submitting a proposition to permit woman suffrage.

The Treasurer was authorized to sell \$100,000 bonds for completing and furnishing the university at Missoula. These were sold at private sale in April at a premium of \$25.

Toward the close of the session there were charges that bribes had been used in connection with the antigambling bill and the bills for county divisions, and the Capitol-building commissioners were also accused of corrupt methods. Committees were appointed to investigate, and most of the charges came to nothing. But one member of the lower house, Martin Buckley, of Jefferson County, was expelled, for the reason that he had confessed before the joint investigating committee that he had received money for supporting one bill and working against another.

The secretary of the Senate, John Bloor, was accused of secreting a bill that passed both houses until after adjournment, so that it did not receive the signature of the Speaker of the House. It was a bill relating to county salaries, and would have cut down the number of deputies and the salaries of officers and deputies about 33 per cent. The secretary of the Senate was tried and convicted on this charge, and was sentenced to one year in the Penitentiary.

MORAVIANS. The statistics of the Moravian Church, or *Unitas Fratrum*, for 1897 give it in the American Province 120 ministers, 112 churches, 14,220 communicants, and a total membership of 21,882 souls; in the British Province the total membership is 5,866; in the European Province, 8,752; and in the foreign missions, 97,812; making a grand total of 131,762. It will be observed that the total membership in the American Province is larger than that of the British and European Provinces combined, and that of the foreign missions exceeds that of all these three provinces together. At the close of the last fiscal year a deficit of \$26,000 was found to have been incurred in the foreign-mission work, and this only a short time after a large deficiency previously existing had been extinguished through the special efforts of the whole Church. The entire debt was assumed by a single member of the British Province; and he dying before the amount was paid, the executors of his estate discharged the obligation. A mission begun in 1895 in Alberta, Canada, now includes three organized churches and many other preaching places, where services are held among English, German, Norwegian, and Russian immigrants. The number of colonists from Volhynia, among whom the work was begun, is steadily increasing.

Reports made at the annual meeting of the London Association in Aid of Moravian Missions, May 6, represented that the income of the missions had been £9,645, an increase of £1,400. The legacies,

however, were about £2,200 less than in the previous year. Reports from the mission fields indicated the addition of 2,000 members to the congregations. Efforts were being made to obtain £7,000 for the purchase of a new mission ship to be used in the service to and from Labrador.

The attitude of the professors in the seminary at Gnadenfeld, Germany, on certain points of belief has caused attention to be directed to doctrinal questions in both Europe and America. The fourth synod in the Northern Province of America at its regular session adopted resolutions "in view of the increasing prevalence of the 'modern theology' in the Church in Germany declaring that it remained 'immovably fixed on the foundation of the apostles and prophets, Jesus Christ himself being the chief corner stone, even as our confession of faith and declaration of the principles of the Brethren's Church, given at the General Synod, clearly set forth; and that we must heartily indorse the resolution lately adopted at the conference of lay members of the Brethren's Church held in Gerlitz, Prussia, viz.: "Not a single jot or tittle of the Holy Scriptures, Old and New Testaments as they have been delivered to us, will we surrender."'" The president of the synod was requested to transmit this declaration to Herrnhut, for the information of the synod there.

On the subject of the theological attitude of the professors at Gnadenfeld the synod of the German Province declared a belief in Jesus Christ, the crucified, "made for us by God to be wisdom, justification, sanctification, and redemption. The Christ of the Scriptures remains our way and truth, and no other name is given whereby we can be saved. He only is our Lord, our Shepherd, and our Master." Emphasis is especially laid in the resolutions upon the personal appropriation of the salvation given us in Christ.

The Brethren's Church, it is further declared, has ever and will ever stand in an independent and free position over against the manifold and varying tendencies of scholastic theology which alter from age to age, especially because it emphasizes the truth that all proclamation of the Gospel is a testimony of heart's experience, not a scientific disquisition of doctrine. Beside the former the latter must always occupy a secondary position. "Nevertheless, doctrine as such is not a matter of indifference or of little consequence, least of all in our theological seminary in which our future ministers receive their training. After a thorough investigation of the actual situation the synod has come to the conviction that the type of theological research and teaching for which our seminary at present stands, although it has entered upon new paths of scientific presentation, does come within the bounds above described. It places in the center of its confession of faith and doctrine of redemption the crucified and risen Saviour, Jesus Christ, as the one to whom we are directed in life and death, for time and for eternity." The synod, however, expressly declared that this judgment had reference only to its own seminary, and that it did not thereby attach itself to any school of theology.

N

NATIONAL ACADEMY OF SCIENCES. The officers of the Academy in 1897 were: President, Wolcott Gibbs; Vice-President, Francis A. Walker, succeeded by Asaph Hall; Foreign Secretary, Alexander Agassiz; Home Secretary, Asaph Hall, succeeded by Ira Remsen; Treasurer, John S. Bil-

lings. Two meetings were held in 1897. The first or stated meeting was held in Washington city, April 20-22. On that occasion the following papers were read:

"On Recent Borings in Coral Reefs," by Alexander Agassiz; "On the Variation of Latitude," by

Seth C. Chandler; "The Position of the Tarsals and Relationship to the Phylogeny of Man," by Theodore Gill; "On the Energy Involved in Recent Earthquakes," by Thomas C. Mendenhall; "On a Ring Pendulum for Absolute Determinations of Gravity," by Thomas C. Mendenhall and A. S. Kimball; "A New Harmonic Analyzer," by Albert A. Michelson and S. W. Stratton; and "Notes of Experiments upon the Röntgen Rays," by Arthur W. Wright.

The following papers were read by scientists not members of the Academy: "The Influence of Environment upon the Biological Processes of the Various Members of the Colon Group of Bacilli," by Adelaide W. Peckham (presented by John S. Billings), and "Variation of Latitude and Constant of Aberration from Observations at Columbia University," by John K. Rees, Harold Jacoby, and Herman S. Davis (presented by Seth C. Chandler).

Also the following biographical memoirs were read: "Charles E. Brown-Sequard," by Henry P. Bowditch; "Thomas L. Casey," by Henry L. Abbot; "George H. Cook," by Grove K. Gilbert; "George Brown Goode," by Samuel P. Langley; and "Hubert A. Newton," by J. Willard Gibbs.

Forestry.—The principal public business transacted at this meeting was the presentation of a report by President Gibbs, in which he gave a summary of his action concerning forestry preservation. In 1896 the Secretary of the Interior addressed a letter to the President of the National Academy of Sciences calling for an official expression on the following points concerning the inauguration of a national forest policy of the forest lands of the United States:

"1. Is it desirable and practicable to preserve from fire and to maintain permanently as forested lands those portions of the public domain now bearing wood growth for the supply of timber?"

"2. How far does the influence of forest upon climate, soil, and water conditions make desirable a policy of forest conservation in regions where the public domain is principally situated?"

"3. What specific legislation should be enacted to remedy the evils now confessedly existing?"

In accordance with this request, a committee was appointed consisting of Prof. Charles S. Sargent, director of the Arnold Arboretum of Harvard University, as chairman; Dr. Alexander Agassiz, of the Museum of Comparative Zoology; Gen. Henry L. Abbot, a distinguished engineer officer; Prof. William H. Brewer, of Yale University; Arnold Hague, of the United States Geological Survey; and Gifford Pinchot, who has charge of the botanical work of George Vanderbilt's estate at Biltmore, N. C. This committee visited most of the forest reservations and other public forests of the United States, beginning that work on July 2, 1896, and submitted a report on Feb. 1 of this year, acting upon which the President of the United States set apart as a public reserve the following reservations:

The Black Hills Reserve, embracing the central portion of the Black Hills of South Dakota, with an estimated area of 967,630 acres; the Big Horn Reserve, in northern central Wyoming, embracing both slopes of the Big Horn mountain, with an area of 1,198,080 acres; the Teton Reserve, adjacent to the Yellowstone National Park, Timberland Reserve being south thereof, and containing 829,440 acres; the Flathead Reserve, embracing both slopes of the main Rocky mountain range or Continental Divide in northern Montana and extending from near the line of the Great Northern Railroad northward to the international boundary, with an estimated area of 1,382,400 acres; the Lewis-and-Clarke Forest Reserve, embracing both slopes of the Continental Divide in Montana, and

extending from a boundary near the line of the Great Northern Railroad southward nearly to the forty-seventh degree of north latitude, with an estimated area of 2,426,000 acres; the Priest River Forest Reserve, occupying the basin of Priest lake and Priest river, in the extreme northern part of Idaho and in northeastern Washington, and extending from a boundary a few miles north of the line of the Great Northern Railroad to the international boundary, with an area estimated at 552,990 acres in Idaho and 92,160 acres in Washington, making a total of 645,120; the Bitter Root Forest Reserve, on both sides of the boundary between Montana and Idaho, with an estimated area of 4,147,000 acres, of which 691,000 are in Montana and 3,456,000 in Idaho; the Washington Forest Reserve, in the State of Washington, extending from about the one hundred and twentieth degree of west longitude nearly to the one hundred and twenty-second degree, and from the international boundary southward a little below the forty-eighth degree of latitude, with an estimated area of 3,594,240 acres; the Olympic Forest Reserve, occupying the high and broken Olympic mountain region in northwestern Washington, and containing an estimated area of 2,188,000 acres; and the Mount Rainier Forest Reserve, originally established by executive order of Feb. 20, 1893, as the "Pacific Forest Reserve." The present proclamation extends the reserve southward along the two slopes of the Cascade mountains nearly to Columbia river, and changes the name from the Pacific to the Mount Rainier Forest Reserve. The proposed extension makes the total area of the Mount Rainier Reserve 2,234,880 acres; the Stanislaus Forest Reserve, extending along the slopes of the Sierra Nevada mountains in California, and embracing an area of 691,200 acres; the San Jacinto Forest Reserve, embracing the San Jacinto mountains in southern California and separated from the existing San Bernardino Forest Reserve by the San Geronimo pass, with an estimated area of 737,280 acres; the Uintah Forest Reserve, embracing both slopes of the eastern part of the Uintah mountain range in northern Utah, and the northern slope only of the western part of this range, the southern slope being part of the Uintah Indian Reservation.

The details of this action, which formed so large a portion of President Gibbs's annual address, are contained in a letter of the Secretary of the Interior to the President, "transmitting a report by the National Forestry Commission to the National Academy of Sciences, recommending the establishment of additional forest reservations" which has been published.

At this meeting, the following new members were elected: William Henry Dall, honorary curator of the department of mollusks in the United States National Museum, probably the first living conchologist in the United States; Frank Austin Goeh, Professor of Chemistry in Yale University, who has contributed important papers to the literature of his chosen science on analytical methods; Charles Sedgwick Minot, of the Harvard Medical School, who is a leader among biologists; and Edward Williams Morley, of the Case Scientific School, of Cleveland, Ohio, whose researches on the atomic weight of oxygen, have gained for him a high rank among American chemists.

Other business included the election of Asaph Hall to the vice-presidency of the Academy, in place of Francis A. Walker, deceased, and of Ira Remsen to the place of home secretary, made vacant by the promotion of Prof. Hall. The following gentlemen were elected members of the council: Henry P. Bowditch, George J. Brush, John S. Billings, Othniel C. Marsh, Simon Newcomb, and Arnold Hague.

The scientific session was held in Boston, Mass., Nov. 16-18, when the following papers were read: "The Secular Softening of Cold Hard Steel," by Carl Barus; "Comparison of the Theory of the Motion of the Pole with Recent Observations," by Seth C. Chandler; "The Influence of Borax and Boric Acid on Nutrition," by Russell H. Chittenden; "Evolution and Migrations of Land Shells on Hawaiian Islands," by Alpheus Hyatt; "Recent Observations on European Dinosaurs" and "The Jurassic Formation on the Atlantic Coast—Supplement," by O. C. Marsh; "On the Elastic Resistance of Steel Knife Edges," by Thomas C. Mendenhall; "Results obtained with a New Harmonic Analyzer," by Albert A. Michelson and S. W. Stratton; "Embryological Observations," by Charles S. Minot; "A Contribution to the Study of the Action of the Venom of the *Crotalus Adamanteus* [a species of rattlesnake] upon the Blood," by S. Weir Mitchell and Alonzo H. Stewart; "On the Ancient Molluscan Fauna of New England," by Edward S. Morse; "An Hypothesis to account for Movements in the Crust of the Earth," by John W. Powell; "On a New Method of obtaining Derivatives of Guanidine," "On the Boiling Points of Mixtures of Benzene and Alcohols," and "On Double Halides containing Organic Bases," by Ira Remsen; "On a Final Determination of the Relative Lengths of the Imperial Yard and of the Metre of the International Bureau," by William A. Rogers; "Ovarian Variations and Cannibalistic Selection as Factors in the Evolution of Species," "Notable Instances of Free Variation nearly unchecked by Natural Selection," and "Some of the Important Factors in the Evolution of the Marine Animals of Coral-Reef Seas," by Addison E. Verrill; and finally a dissertation on "The Mass of the Earth's Atmosphere," by Robert S. Woodward.

The following papers were read by scientists, not members of the Academy: "On a New Application of the Wave Siren," by Charles R. Cross, and "New Apparatus for Comparison of Thermometers and for Determination of the Heat of Combustion of Fuels," by Charles L. Norton.

At the business meeting, held Nov. 17, Miss Alice L. Gould, daughter of Benjamin Apthorp Gould, who was an original member of the Academy, presented to the organization a fund of \$20,000, for which the Academy is to select trustees. It is to be known as the Alice L. Gould fund, to distinguish it from the generous gift made to the Academy by the deceased astronomer, and the proceeds are to be used at the discretion of the trustees in furthering astronomical and mathematical research. The fund was accepted by the Academy, and the donor received a unanimous expression of the thanks of the members. The trustees chosen were Asaph Hall, of Cambridge, Lewis Boss, of Albany, and Seth C. Chandler, of Cambridge.

Other features of the meeting were a lecture at the Jefferson Physical Laboratory in Cambridge "On Electrical Discharges, with Exhibition of Apparatus for obtaining High Voltage," by John Townshend, and "An Account of the International Congress of Geologists in St. Petersburg," by Samuel F. Emmons. During the year the Academy lost by death the following members: Edward Drinker Cope, Matthew Carey Lea, Theodore Lyman, Alfred Marshall Mayer, John Hammond Trumbull, and Francis Annan Walker, sketches of each of whom will be found in this volume among the OBITUARIES, AMERICANS.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; and 1,058,910 in 1890. Capital, Lincoln.

Government.—The following were the State officers during the year: Governor, Silas A. Holcomb; Lieutenant Governor, James E. Harris; Secretary of State, W. F. Porter; Treasurer, J. B. Meserve; Auditor, J. F. Cornell; Attorney-General, C. J. Smythe; Adjutant General, P. H. Barry; Superintendent of Education, W. R. Jackson; Land Com-

SILAS A. HOLCOMB, GOVERNOR OF NEBRASKA.

missioner, J. V. Wolfe; Oil Inspector, J. H. Edmiston—all of the silver parties; Chief Justice of the Supreme Court, A. M. Post; Associate Justices, T. O. C. Harrison, T. L. Norval; Clerk, D. A. Campbell—all Republicans.

Finances.—The assessed valuation of property in the State, as returned by assessors in 1897, is \$165,085,582.92, which is \$1,992,687.45 less than the assessed valuation of 1896. The levy as fixed by the State board makes the total assessment \$1,183,069.57. The amount to be raised by all the counties is \$4,619.38 less than the assessment of last year. The total assessment of 1895 was \$1,196,276.83. The Legislature appropriated \$2,335,843.40 for expenses of the State for two years.

Treasury Defalcations.—The Governor sent a special message to the Legislature, Feb. 17, asking for an investigation of the State treasury, pointing out that \$537,762 still remained to be accounted for by the ex-Treasurer. A shortage of about \$25,000 had already been acknowledged by the ex-Auditor. Criminal and civil suits against the ex-Treasurer and ex-Auditor and their bondsmen followed, and both were convicted. Ex-Treasurer J. S. Bartley was sentenced, June 26, to serve twenty years at hard labor in the Penitentiary and pay a fine of \$303,768.90, which was twice the amount he was charged with embezzling in the count on which he was convicted. The Supreme Court affirmed the judgment of the county court. The civil suit to recover the amount of the shortage from Bartley and his bondsmen was not concluded at the end of the year. Ex-Auditor Eugene Moore was sentenced, Nov. 30, to serve eight years in the Penitentiary and pay a fine of \$46,816 for the embezzlement of \$23,000 State funds.

The legislative investigating committee received the final report in October from the expert accountant employed on the ex-Treasurer's books, which showed a loss to the State of \$870,164.39.

The city treasurer of Omaha, Henry Bolin, who was found in June, 1895, to be short \$105,000 in his accounts, was tried, convicted, and sentenced to serve nineteen years in the Penitentiary and pay a fine of \$211,000. The case was appealed, and in May, 1897, the Supreme Court affirmed the judgment.

Education.—The apportionment to schools in June was \$302,226, and in December \$377,366. The school population at the later date was 354,929, an increase in a year of 6,401.

The State University has about 1,700 students. In June 132 were graduated in the classical, scientific, electrical engineering, and law departments. The expenditure for the year was about \$176,000.

The Supreme Court declared unconstitutional the law of 1895, under which students in the county districts who were prepared for the high-school work were allowed to enter the high school of the nearest city or village, tuition at the rate of 50 cents a week being paid for each student by his own county. About 3,000 students were entered under this law, and a rehearing was strongly urged.

Banks.—The Omaha Savings Bank closed its doors Jan. 2. It claimed to be solvent, with \$200,000 assets in excess of its liabilities.

Frank M. Dorsey and E. D. Higgins were tried in the Federal court for violating the banking laws in conducting the Ponca Bank. The jury in November acquitted Higgins, but as to the guilt of Dorsey disagreed.

The First National Bank of Alma was closed by a bank examiner Jan. 9.

The Grain Harvest.—An estimate in October by a member of the Board of Agriculture gave the farmers \$105,000,000 worth of grain to send out of the State and \$90,000,000 to be fed to stock or sold to millers.

Insurance.—In the suit of the receiver of a fire insurance company against stockholders and directors, the Supreme Court gave a decision to the effect that the receiver of an insolvent corporation has authority to collect assessments; that the directors of an insolvent corporation who took part in its meetings are in no position to question their liabilities for the amount of assessments levied at such meetings because of the fact of no judgment having been rendered against the corporation.

Mortgages.—The State mortgage report for the first six months of the year shows that the amount of farm mortgages satisfied exceeds the amount of those filed by \$943,366.14. The number of farm mortgages filed, as shown by the report, was 6,589, amounting to \$6,267,374.55. The number released was 8,001, amounting to \$7,210,740.69. There were 2,182 town and city mortgages filed, amounting to \$1,883,175.58, and 2,996 released, amounting to \$3,198,173.35. Sheriffs' deeds and other forms of foreclosure are considered the same as releases, and the figures given above as releases include foreclosures. Sixty-four counties reported 750 farm mortgage foreclosures, amounting to \$951,129, and 176 town and city foreclosures to \$231,374.98.

Chicory.—The raising of chicory is a new industry in Nebraska and promises to be very profitable. The processes of manufacture are said to be more simple and less expensive than those for beet sugar. The growth of chicory roots began five years ago at O'Neill, Holt County, and, with the first year, a small plant for caring for the roots was put in. In 1895 the American Chicory Company was organized, succeeding the German Chicory Company at O'Neill, and this company at

once enlarged the capacity of the O'Neill plant and put in a manufacturing plant at Omaha and a drying plant at Fremont. Last year the company contracted for 1,200 acres of (chicory) and took every pound of it from the farmers.

State Boundary.—A compact has been made between this State and South Dakota and signed by the Governor, fixing the line between the States in the center of the main channel of Missouri river between a point directly north of the west line of Dixon County, Nebraska, and a point directly south of the east line of Clay County, South Dakota.

India Relief.—The India relief commission appointed by Gov. Holcomb has reported the result of its labors. The Governor is credited with being the first governor of the United States to call attention of the public to this charity. The commission gave its services. During the winter much corn was offered and refused, because it was not of such a quality as would bear transportation. Thirty-three car loads were hauled free jointly by the Union Pacific and B. and M. to San Francisco, and were there loaded on the steamer "Everett," which sailed June 12 for India. Three car loads were shipped to New York and exported. Freight on these was paid by Louis Klopsch, of the "Christian Herald." The sum of \$500.67 was received in cash and transferred to the Rev. W. E. Hopkins, of India, an American missionary.

Home for the Friendless.—The report of this institution in October gave the following items: Three hundred and ten persons have been received into the home. Fourteen came from other institutions. Sixty came from temporary shelter. The dismissals numbered 277. Of this number, 53 found work. The average size of the home family has been 1184.

The superintendent and assistant traveled 5,461 miles, more than 400 by team, in placing children, or visiting them.

Legislative Session.—The Legislature convened Jan. 5, and adjourned April 9. J. N. Gaffin was Speaker of the House, and Frank T. Rauschen president *pro tem* of the Senate. The Democrats had on joint ballot 7 votes, the Republicans 39, the Fusionists 57, and 30 were independent.

The principle of the initiative and referendum was embodied in limited form in a law applying only to cities and villages, in which it becomes operative after having been accepted by a two-thirds vote of the franchise holders. But authority is given to the mayor and council of any city to adopt it by a majority vote without submission. According to the provisions of the act, ordinances, including all measures within the power of the lawmaking authorities of the city or village, may be proposed by voters; if 15 per cent. ask to have any measure submitted to vote it shall be so submitted; and if 20 per cent. so require, a special election shall be called for the vote.

The powers of the State Board of Transportation were very greatly increased. A fine of \$500 to \$5,000 is imposed upon any railroad officer who fails to comply with the regulations of the board. The constitutionality of this law is attacked.

Important changes were made in the election laws. The precinct election boards were made appointive instead of elective. Appointments are to be made by county judges from the three parties casting the largest votes at the next preceding general election. The "blanket ballot" was adopted. Other changes were made in the details of the law.

A new charter was given to Omaha. It provides for an election to be held within thirty days, thus legislating out of office the entire city government, which was Republican. It deprives the Board of

Fire and Police Commissioners of office, and gives the appointment of a new board to the Governor. This provision was resisted and taken to the courts to be tested. Another provision was that city property shall be assessed at its full value.

An appropriation of \$100,000 was made for the Trans-Mississippi Exposition.

In response to a memorial from the Kansas Legislature, asking that a commission be appointed to represent Nebraska in a joint commission comprising representatives from Nebraska, Kansas, Oklahoma, Texas, and other Southwestern sections, in order to secure from existing railways rates to the Southern Gulf ports proportionate to those charged to Eastern ports, and to encourage or promote the building of a north-and-south railway to some Gulf port, to force other railways to afford favorable rates for the short haul to tidewater, a bill was passed authorizing such a commission.

It was made a misdemeanor "for any corporation doing business in Nebraska to contribute money, property, transportation, help, or assistance in any manner or form to any political party or to any candidate for any civil office or to any political organization or committee, or to any individual to be used as or expended for political purposes," under penalty of \$1,000 fine for the first offense, and for the second \$2,000 and loss of charter, or, if a foreign corporation, of the right to do business in the State.

A law in reference to fraternal beneficiary associations has a provision that each "such society shall have a lodge system, with ritualistic form of work and representative form of government."

An antitrust act was passed, and one to prevent insurance companies from combining on rates.

A bill abolishing deficiency judgments was passed just before adjournment, and became a law without the Governor's signature.

The sale of cigarettes was prohibited.

The sugar-bounty law was repealed, and the one placing a premium on the destruction of the Russian thistle.

Changes were made in the laws relating to the militia. The appropriation was \$30,000, as for the two bienniums preceding.

An appropriation of \$30,000 was made for a building at the Hastings Asylum for the Insane.

An act was passed vesting in the Governor and the Board of Public Lands and Buildings the management of the Home for the Friendless, for Orphans and Aged Women at Lincoln, and also of the Milford Home for Unfortunate Women. These have been under the care of boards of women.

A joint resolution was passed instructing Senator Thurston to vote for free coinage of silver.

Political.—The State election in November was to fill the offices of Justice of the Supreme Court and two Regents of the University. There were five tickets in the field.

The Prohibitionists held a convention at Lincoln, May 26. Their candidates were: For Associate Justice, D. M. Strong; for Regent, Mrs. Isabella Sperlock. The resolutions called for woman suffrage and suppression of the liquor traffic. This is the sound-money wing of the party, but no declaration was made on the financial question.

The National Liberty party, the silver wing of the Prohibition party, held a convention at Lincoln, June 29, and nominated Mrs. Zara A. Wilson for Justice, and for Regent Rufus C. Bentley. The resolutions favored, besides prohibition, woman suffrage, the adoption of a "system of full legal-tender paper money issued through Government banks on equal terms to all, the supply being regulated by the demand and the ability to furnish security; amendment of the Federal Constitution

so as to make contracts, past and future, payable in lawful money of the United States"; granting of public land to actual settlers only, and Government ownership of railroads and telegraphs, "and when necessary the collective ownership of all the means of production and distribution."

The Republican convention, at Lincoln, Aug. 26, renominated Judge A. M. Post, and chose as candidates for the office of Regent G. W. Kaley and John N. Dryden. On State issues the platform condemns the Governor for dereliction in duty in not calling for the regular reports on public funds, and thereby discovering the shortages earlier. It deplores the discredit that has been brought on the State by the Populist administration's attempt to array class against class for partisan purposes. It denounces acts of the last State Legislature in attempting to count in two Populist judges of the Supreme Court by falsification of the returns. It regrets the increase of freight rates on grain transported between Chicago and these parts, and calls upon the Interstate Commerce Commission for protection for the West from excessive charges.

The Democrats, the Populists, and the Silver Republicans united again, holding conventions at Lincoln at the same time, Sept. 1. They united on the following ticket: For Justice, John J. Sullivan, Democrat; for Regents, George F. Kenower, Silver Republican, and E. Von Forell, Populist. On State matters the three platforms were in substantial agreement, commending the administration and denouncing the frauds on the Treasury. The Democratic platform said further: "With great deference and respect, we humbly appeal to the Supreme Court of the United States for an early decision in the Nebraska minimum rate cases."

In regard to prosperity the platform of the Populists said: "We are thankful to Providence rather than to any man for the measure of prosperity with which our State has been blessed, and we attribute the rise in wheat to foreign scarcity rather than suppose it to be the result of dear sugar or an increased tariff."

The National Democrats held a convention at Omaha, Sept. 22, and nominated J. M. Woolworth for Justice. He declined, and the name of Warren Switzler was substituted. J. G. Morton and J. C. Crawford were named for Regents. J. I. Leas was later substituted for J. C. Crawford. Protests were entered against allowing the party names "Silver Republican" and "National Democrat" on the official ballot, as being contrary to the State law, but the Secretary of State decided to allow them both.

The fusion candidates were elected. Following is the vote for Judge of the Supreme Court: John J. Sullivan, Fusion, 102,838; A. M. Post, Republican, 89,009; D. M. Strong, Prohibition, 1,625; Warren Switzler, National Democrat, 718; Mrs. Wilson, National Liberty, 82.

When the canvassing board met to open the official returns, a protest was made against the canvass of the returns from 22 of the counties, because these returns had been opened in the office of the Secretary of State and some of them sent back to the counties for correction in regard to certain required forms, contrary to the law, which provides that official returns must be opened in the presence of the board at a stated time, and the result declared within five days. The charge was not denied, but the board overruled the objections.

NETHERLANDS, a constitutional monarchy in western Europe. The legislative power is vested in the States General, consisting of a First Chamber of 50 members elected by the provincial councils for nine years, one third being renewed every three years, and a Second Chamber of 100 members elected for four years by the votes of all qualified

Dutch citizens. The reigning sovereign is Queen Wilhelmina, born Aug. 31, 1880, who will come of age in 1898. The royal prerogative is exercised in her name during her minority by her mother, the dowager Queen Emma, relict of King Willem III. The ministry, constituted on May 7, 1894, was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. J. Roell; Minister of the Interior, Dr. S. van Houten; Minister of Finance, Dr. J. P. Sprenger van Eyk; Minister of Justice, Dr. W. van der Kaay; Minister of the Colonies, J. H. Bergsma; Minister of Marine, H. M. van der Wyck; Minister of War, C. O. H. Schneider; Minister of Public Works and Commerce, P. W. van der Sleyden.

Area and Population.—The area of the kingdom is 12,648 square miles. The population on Dec. 31, 1896, was estimated at 4,928,658 persons, of whom 2,438,975 were males and 2,489,683 females. The number of marriages in 1896 was 35,929; of births, 167,763; of deaths, 91,818; excess of births, 75,945. The number of emigrants was 2,188. The city of Amsterdam had 494,189 inhabitants at the end of 1896, Rotterdam had 286,105, and the Hague 191,530.

General Election.—The first election held under M. van Houten's new electoral law took place in June, 1897. The franchise was bestowed by that measure on all Dutch citizens above the age of twenty-five who pay at least 1 guilder yearly in direct taxation, or own or rent a boat of a certain capacity, or have held the same employment for a certain length of time, or are in receipt of an official pension, or have at least 50 guilders deposited in the savings bank. All householders and male citizens having their own lodgings possessed the franchise under the former law. The new law more than doubled the number of electors, which was only about 350,000 before. The extension of the franchise worked, as in Belgium, to the advantage of the compactly organized religious elements opposed to secular education, which in Holland consisted of two camps, theologically divided, but united temporarily in a political alliance, namely, the Roman Catholics, led by Dr. Schaepman, and the Orthodox or Anti-Revolutionary Protestant party, led by Dr. Kuyper. In half the districts the first ballot gave the Roman Catholics a great lead over the Liberals, while the Calvinistic Anti-Revolutionists won nearly as many seats as they. In the other half second ballots were necessary. The Minister of the Interior, who was the author of the extended franchise, was beaten in the first ballot, and the Minister of Justice was doomed to defeat in the second. A Christian Historic party had been organized by moderate Orthodox Protestants in opposition to the Calvinistic and Catholic union. This party elected no candidates on the first ballot, but it exercised an important influence on the second elections. The Socialist and the Radical Labor parties were not benefited materially by the extension of the franchise. The question of free trade or protection was involved as well as that of education, the Catholics and Calvinists being protectionists. The Clericals were also opponents of the introduction of obligatory personal military services. The Liberals of all shades combined against the Catholic and Calvinistic union, the Historic Christians gave their votes to the Liberal candidates, and the Calvinists themselves, although they won most of their districts only by the aid of Catholic votes, rebelled against their leaders and deserted their allies, and in every district where the contest was between a Catholic and a Liberal voted for the Liberal candidate or remained away from the polls. Thus the Clerical coalition was kept from winning a majority. At the same time

the Moderate Liberal Cabinet was left in a minority, for most of the Liberals who were returned belonged to the Progressive wing of the party. In the last Chamber there were 57 Liberals, 3 Radicals, 15 Anti-Revolutionists, and 25 Catholics. The new one consisted of 48 Liberals, 20 Catholics, 21 Anti-Revolutionist Protestants, 4 Historic Christians, 4 Radicals, and 3 Socialists. Even numbering the Historic Christians with the Catholics, there was an Anti-Clerical majority of 19, but it was composed of the most heterogeneous elements, embracing former Conservatives, Liberals of every kind, and Socialists.

Change of Cabinet.—The ministers had expected to resign after the elections, having carried out their programme of the extension of the franchise. On June 28 Jonkheer Roell tendered the collective resignation of the Cabinet to the Queen Regent. A new Cabinet, Liberal throughout, but more Progressive than the outgoing one, was constituted on July 24 as follows: President of the Council and Minister of Finance, Dr. N. G. Pierson; Minister of Foreign Affairs, W. H. de Beaufort; Minister of Justice, P. W. A. Cort van der Linden; Minister of the Interior, H. Goeman Borgesius; Minister of Marine, J. C. Jansen; Minister of War, Major-Gen. K. Eland; Minister of Waterstaat, Commerce, and Industry, C. Lely; Minister of the Colonies, J. T. Cremer. The new Ministers of the Interior and Justice were prominent Progressives, and the Foreign Minister alone belonged to the moderate section of the Liberals.

The new Minister of War prepared a bill to establish on a solid basis the principle of conscription in the army, doing away with substitution, but not disturbing the existing organization of the army. In the speech from the throne at the opening of the States General on Sept. 21, a bill was promised modifying the customs tariff without changing the present system. On Dec. 15 the Second Chamber refused by 46 votes against 41 to grant 3,600,000 guilders for the construction of a small battle ship of improved type. In consequence of this vote the Minister of Marine resigned, and Gen. Eland took the portfolio *ad interim*. A permanent commission of the State was constituted by the former Cabinet for the preparation under the presidency of M. Asser of a code of international private law according to the programme communicated to the powers by the Government of the Netherlands at the convention of the Hague in 1896.

Finances.—The budget for 1897 makes the total revenue 131,393,965 guilders. Of this 33,080,000 guilders are derived from direct taxes, including 12,160,000 guilders from the land taxes, 9,350,000 guilders from the personal tax, 6,950,000 guilders from the tax on incomes from investments, and 4,620,000 guilders from the tax on professional incomes. The excise receipts are 43,070,000 guilders, of which 26,400,000 guilders are raised by the duty on spirituous liquors and 16,670,000 guilders by duties on other articles. The stamp, registration, and succession duties yield 20,320,000 guilders; customs, 8,215,000 guilders; assay fees, 225,900 guilders; domains, 2,450,000 guilders; the post office, 8,624,000 guilders; telegraphs, 1,404,000 guilders; lottery, 659,000 guilders; shooting and fishing licenses, 128,000 guilders; pilot dues, 1,600,000 guilders; mining royalties, 5,865 guilders; railroads, 3,885,000 guilders; various receipts, 7,727,200 guilders. The total expenditures in 1897 were estimated at 138,726,839 guilders, of which 800,000 guilders were for the royal household, 673,887 guilders for the superior authorities of the state, 850,918 guilders for foreign affairs, 5,455,665 guilders for justice, 14,112,164 guilders for the interior, 15,583,554 guilders for marine, 23,728,839 guilders for war, 32,643,745

guilders for the public debt, 9,481,617 guilders for finance, 9,341,457 guilders for payments to communities in compensation for the suppression of the *octroi*, 1,969,662 guilders for worship, 1,337,579 guilders for the central administration of the colonies, 22,697,752 guilders for the Waterstaat, commerce, and industry, which includes 1,935,000 guilders for the railroads and 50,000 guilders for unforeseen expenses.

The public debt, nearly two thirds of which pays 2½ per cent. and the rest 3 per cent. interest, amounted in 1897 to 1,072,792,650 guilders, including 3,013,700 guilders for railroad bonds assumed when the lines were transferred to the state, but not including 15,000,000 guilders of paper money. The annual interest charge is 29,333,235 guilders, and the sinking-fund charge and the cost of converting debt to 3 per cent. under the law of Dec. 30, 1895, was 2,708,500 guilders.

The Army and Navy.—The main reliance for the defense of the country still rests on the enlisted soldiers. Besides these, 10,400 young men are drawn into the service every year by conscription, who serve, or their substitutes serve, twelve months with the colors and six years longer on leave of absence. All other able-bodied citizens are inscribed in the *Schuttereyen*, or civil guard, for ten years, and up to the age of fifty years every man who can bear arms belongs to the *Landstorm*. The peace effective for 1897 was as follows: Staff, 206 officers; 46 battalions, 985 officers and 16,884 men; 16 squadrons and 3 depots, 143 officers and 3,003 men; 21 batteries, 3 divisions of train, and 3 depots, 157 officers and 2,752 men; 40 companies of fortress artillery, 217 officers and 1,976 men; 4 companies of artillery for armored forts, 15 officers and 202 men; 2 companies of pontonniers, 14 officers and 196 men; 2 torpedo companies, 12 officers and 206 men; 9 companies of engineers, 98 officers and 726 men; 3 sanitary-service companies, 3 officers and 108 men; 1 corps of gendarmes, 19 officers and 767 men; 2 companies in recruiting service for the colonies, 13 officers and 62 men; total, 1,882 officers and 26,972 men, with 5,755 horses.

The naval force consists of 13 armored or protected vessels, 12 ironclad monitors, 5 river gunboats, 22 gunboats, 37 torpedo boats, and 14 minor vessels, besides 3 stationary hulks, 24 school ships, and one torpedo transport; the total armament is 879 guns and 33 torpedo ejectors. The crews number 6,918 men. A naval militia is drawn by conscription to serve a nominal term of five years, but all the men in actual service are recruited by enlistment.

Communications.—There were 1,680 miles of railroads in operation on Jan. 1, 1897. The Government telegraph lines had a total length of 3,560 miles, with 12,640 miles of wire. The number of messages sent in 1896 was 4,621,954, of which 2,427,708 were internal and 2,161,090 international paid messages, and 33,156 were official. The receipts were 292,792 francs, and expenses 4,349,289 francs, not including 662,029 francs of extraordinary expenditures. The post office in 1896 forwarded 70,264,000 internal and 24,175,000 foreign letters, 36,650,000 internal and 6,645,000 foreign postal cards, 120,919,000 internal and 15,837,000 foreign printed inclosures, and 3,358,000 internal money orders and letters of the value of 324,002,000 francs, and 548,000 foreign ones of the value of 107,750,000 francs.

Commerce.—The special imports in 1896 were valued at 1,628,200,000 guilders, not including 6,700,000 guilders of specie, and the exports of Dutch produce and manufactures at 1,336,100,000 guilders, not including 1,300,000 guilders of specie. Of the imports of merchandise 495,300,000 guilders were alimentary articles, 593,700,000 guilders raw mate-

rials, 267,000,000 guilders manufactured products, and 272,200,000 guilders miscellaneous merchandise. Of the exports, 457,400,000 guilders consisted of alimentary products, 464,200,000 guilders of raw materials, 261,600,000 guilders of manufactured articles, and 152,900,000 guilders of miscellaneous products. The amount of trade, in guilders, with the several foreign countries in 1896 is shown in the following table, which includes specie:

COUNTRIES.	Imports.	Exports.
Germany.....	278,700,000	679,700,000
Great Britain.....	255,700,000	290,300,000
Belgium.....	174,200,000	164,000,000
Russia.....	223,400,000	5,500,000
France.....	23,600,000	23,400,000
Sweden and Norway.....	22,000,000	9,100,000
Roumania.....	49,000,000	
Turkey.....	8,700,000	5,800,000
Italy.....	5,100,000	6,200,000
Spain.....	36,400,000	1,200,000
Dutch East Indies.....	239,200,000	52,800,000
British East Indies.....	41,500,000	2,400,000
Africa.....	7,600,000	16,800,000
United States.....	166,800,000	46,500,000
Brazil.....	13,000,000	
Peru and Bolivia.....	20,800,000	
Other countries.....	68,000,000	33,800,000
Total.....	1,634,000,000	1,337,400,000

Navigation.—During 1895 there were 1,456 sailing vessels, measuring 990,209 cubic metres, and 9,597 steamers, measuring 21,340,457 cubic metres, entered at Dutch ports, and 1,495 sailing vessels, measuring 900,863 cubic metres, and 9,271 steamers, measuring 20,850,175 cubic metres, cleared. Of the arrivals 1,209 sailing vessels, of 927,180 cubic metres, and 9,013 steamers, of 20,570,567 cubic metres, and of the departures 1,115 sailing vessels, of 535,431 cubic metres, and 6,059 steamers, of 11,315,847 cubic metres, were with cargoes. The sailing vessels belonging to the Dutch mercantile marine among those entered numbered 607, of 277,115 cubic metres; the Dutch steamers numbered 2,429, of 5,467,415 cubic metres, and of the vessels cleared 662 sailing vessels, of 280,992 cubic metres, and 2,385 steamers, of 5,472,647 cubic metres, were of Dutch registry. The merchant marine on Jan. 1, 1896, consisted of 440 sailing ships, of 278,888 cubic metres, and 172 steamers, of 555,817 cubic metres.

The Dutch East Indies.—The Dutch possessions in Asia comprise the colony of Java and Madura and the outposts, which include Sumatra, parts of Borneo and New Guinea, the Riau-Lingga Archipelago, Banca, Billiton, Celebes, the Molucca Archipelago, and the minor Sunda islands. The area of Java and Madura is 50,554 square miles. The population in 1895 was 25,700,946, of whom 25,372,247 were native Malays, 51,489 Europeans, 257,489 Chinese, 16,569 Arabs, and 3,152 Hindus and others. The outposts have a total area of 685,846 square miles, with an enumerated population of 8,378,219. Batavia, the capital of Java, has 114,566 inhabitants; Surakarta, 104,589; Sourabaya, 124,529; Palembang, in Sumatra, 53,788; Bandjermassin, in Borneo, 45,028.

The Governor-General of the East Indies is Jonkheer C. H. A. van der Wyck, appointed in 1893. The estimated revenue for 1897 was 127,773,578 guilders, of which 18,169,345 guilders were the proceeds of sales of coffee, 117,216 guilders from cinchona, 17,110,000 guilders from tin, 15,156,000 guilders from the farming of the opium monopoly, 17,339,000 guilders from the land tax or tithe, 8,558,000 guilders from the salt tax, 2,000,800 guilders from posts and telegraphs, 10,577,000 guilders from railroads, and 33,239,542 guilders from other sources. The expenditures were estimated at 142,746,809 guilders.

The merchandise imports of private persons into

Java in 1895 were 98,405,000 guilders, and into the outposts 46,646,000 guilders; imports of the Government, 8,185,000 guilders; total imports of merchandise, 153,236,000 guilders. The exports of private individuals from Java were 151,693,000 guilders, and from the outposts 49,959,000 guilders; exports of the Government, 22,281,000 guilders; total exports of merchandise, 223,933,000 guilders. The total imports of specie were 8,294,000 guilders; exports, 1,154,000 guilders. There were 1,102 miles of railroad in operation, and 415 under construction in Java in 1897, and in Sumatra 200 miles were in operation and 20 under construction. The shipping arriving in 1895 comprised 3,418 steam vessels, of 3,866,000 cubic metres, and 1,090 sailing vessels, of 517,000 cubic metres. The merchant fleet numbered 2,002 vessels, of 244,340 cubic metres.

The army of Netherlands India had on Jan. 1, 1897, a total effective strength of 1,674 officers and 40,346 rank and file, comprising 514 staff officers and 2,553 men attached to the staff, 901 infantry officers and 32,561 men, 38 officers and 982 men in the cavalry, 147 officers and 3,451 men in the artillery, and 74 officers and 799 men in the engineers. The army was composed of 16,066 Europeans, 55 Africans, and 22,938 natives. The reserves numbered 7,742 men, including 4,263 in the armed Indian corps. The fleet consisted of 1 protected cruiser, an old ironclad, 13 gunboats, 1 armed steamer, and 1 torpedo boat, besides 2 stationary vessels and 3 in hydrographic service. The fleet was manned by 2,134 officers and men.

The war against the troublesome Acheenese of northern Sumatra, which has disturbed the formerly flourishing finances of the Dutch East Indies for many years and cost the lives of a large number of Dutch soldiers every year, has been brought nearer to a termination by the vigorous tactics of the Dutch commanders. Already in January, 1897, the troops were chasing the insurgent chief Tokoe Oemar, whose residence near Gentool they captured and destroyed. His followers were driven into their mountain fastnesses, but occasionally they resumed the offensive, taking a Dutch fort near Gentool in one of their incursions. After being beaten and losing one of his best forts in a warm engagement near Poeding, Tokoe himself fled to the eastern part of the colony, whither the victors pursued him. In May, Sohang, near the frontier of Kloemang, was taken by the Dutch. The chief Panglima Palim, who had erected three fortified positions at Glieng, was surprised by a large Dutch force, and fled after a stubborn resistance, leaving a large quantity of rifles and ammunition in the hands of the Dutch, who killed 63 of the enemy and lost 25 killed and 40 wounded. Following up their victory, they captured two more important forts and occupied Fjot Glie, near Indrapura. In the mountains of this section a vigorous campaign was prosecuted throughout the rest of the season. In a fierce combat fought in July several of the insurgent chiefs were slain. A simultaneous movement was carried out against the rebels that had taken up their quarters in the mountains near Selimoen by several columns of troops that marched out from Kotaradja. A Dutch force was surprised in August by a furious attack of the rebels near Gigin, but the latter were beaten off and finally fled, leaving 84 dead and hundreds of wounded on the field. Later a band of Tokoe Oemar's followers, descending from the mountains, fell upon a Dutch patrol in Lepong, killing several men. Notwithstanding such occasional forays, the entire plain of Acheen, from Ololeh to Selimoen was effectively held by the Dutch. The people, protected by the untiring vigilance of the troops, were becoming gradually accus-

tomed to Dutch administration, and the increasing confidence inspired by the civil authorities enabled the commanders so to extend the organization of their spies that the disaffected could hardly make a move without their being made aware of it. The aggressive campaign in the mountains dealt a severe blow to the war party in Pedir, and a second expedition to be undertaken from the other side was expected to crush out the spirit of resistance in that district. These forward movements, however, entailed fresh sacrifices of life. The women of Holland began an agitation, which was taken up by the press of the country, in favor of appointing a Government commission to study the conditions in Acheen with a view to bringing by any means this apparently interminable war to a conclusion.

In the autumn a disturbance arose among the usually peaceable inhabitants of the island of Lombok. Stirred up by some local grievance, the natives of the village of Sisela murdered a Dutch official. The prison at Paya was seized by marauders, who set the prisoners free. This band was pursued, and 20 were killed by a Dutch patrol. The disturbance spread until the arrival of additional Dutch troops, who occupied Kampong, killing 25 of the insurgent Sasaks.

The long controversy with the English Government over the illegal seizure by the Dutch East Indian authorities of an Australian whaler was referred to the arbitration of the Emperor of Russia, and decided on Feb. 25, 1897, by the award of Prof. de Martins, who held the Dutch Government responsible and fixed the total indemnity to be paid to the officers and crew and the owners of the "Costa Rica Packet" at £11,082, including the costs of arbitration. This sum was paid over on March 3. Capt. Carpenter, who was thrown into prison at Macassar, received £3,150. He had taken possession of a Dutch prauw which he had found floating derelict at sea in 1888, and had appropriated the cargo. The owner, instead of proceeding in English courts for his remedy, if any was due, obtained a warrant from the court at Macassar on which Carpenter was arrested when he touched at Ternate in November, 1891, and his vessel was detained during a part of the whaling season. The Macassar court decided that it had no jurisdiction in the case, and released the whaling captain after a month's detention, but his ship remained in port till the following April, and was then sold at a reduced price, while he and his employers reclaimed substantial damages. Owing to this negligence on their part the damages given were much less than the amount claimed.

NEVADA, a Pacific coast State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870; 62,266 in 1880; and 45,761 in 1890. Capital, Carson City.

Government.—The following were the State officers during the year: Governor, Reinhold Sædler; Lieutenant Governor, C. H. E. Hardin; Secretary of State, Eugene Howell; Treasurer, W. J. Westerfield; Comptroller, C. A. La Grave; Superintendent of Public Instruction, H. C. Cutting; Attorney-General, James R. Judge; Adjutant General, C. H. Galusha—all of the Silver party, except Galusha, Republican; Chief Justice of the Supreme Court, C. H. Belknap; Associate Justices, M. S. Bonnisfield, W. A. Massey; Clerk, Eugene Howell—all of the Silver party.

Finances.—The Governor's message gave the following information on financial conditions: The general school fund amounted to \$1,240,208.33. The Orphans' Home had \$4.56 of the 1896 appropriation still on hand, and the State Prison had used but \$57,779.22 of its \$63,000. The Board of

Health had cost \$1,000, the asylum \$68,663.38, and the weather service \$1,200 a year. There was no floating debts except \$10,462.50 for rent of armories and \$531 for railroad transportation of militia.

The Government appropriation for the Carson mint was \$19,300.

Education.—The school population is 9,089. The securities in the State school fund are: Irredeemable State bonds, \$380,000; Nevada State bonds, \$275,364.20; United States bonds, \$640,000; total, \$1,429,969.04, command bonds.

The State University, at Reno, has about 300 students. Its financial condition at the close of the year was unsatisfactory, described as follows: "There are in the State University fund \$50,000 in United States bonds and \$74,000 in State bonds. This fund is irreducible and, as in the case of the State school fund, the interest only can be applied to the payment of the university expenses. This interest is not sufficient to defray the expenses of the university. The Legislature at the last session appropriated for the support of the university and laboratory \$32,500, payable out of the contingent university fund and the interest-account ninety-thousand-acre grant, \$16,250 from each. Unfortunately the money is not in these funds, and as the university must be provided for other means have to be resorted to. The State Board of Education decided to dispose of \$10,000 of United States bonds and have the State substitute its own bonds for the amount, the money to be applied in paying contingent expenses of the university. While the State is willing to loan its credit to the university, the trouble is the borrowing power of the State, under the constitutional limit, is nearly exhausted." The National Government contributes \$25,000 a year to the support of the university. The salaries amount to about \$38,000.

The State Prison.—There were in the prison in September 67 men and 1 woman. During the past two years substantial improvements have been made in the buildings—a new hospital, new baths, and a new engine house with modern machinery.

Live Stock.—On account of the heavy shipments to Eastern markets in 1896, the number of cattle on the ranges in the early part of the year was far below the average, which is about 50,000.

Wild Horses.—The act passed by the last Legislature authorizing the killing of wild horses throughout the State has developed a profitable industry, and camps of hunters have been established at all of the springs and water courses where the bands resort. The hides sell for \$2 each, and the hair of the manes and tails bring 15 cents a pound. The first hunters to take the field after the law went into effect realized handsomely, frequently shooting from 6 to 10 a day; but since the slaughter began the animals have come to view man as a relentless foe, and as soon as one is sighted or scented by a band they bound away over hill, plain, and cañon at a speed that defies pursuit. The vast plains, hill slopes, and valleys in Humboldt County west of Humboldt river, extending to the Black Rock and Pueblo mountain ranges on the Oregon and Idaho borders, are a favorite grazing region for wild horses, bands numbering thousands roaming over them, keeping in fine condition, subsisting on bunch grass, which, when they are exterminated, will feed countless herds of cattle prevented heretofore from ranging in the same locality, for the wild horses attack fiercely any cattle that venture within their boundaries.

Mob Law.—A murderer was taken from the sheriff at Genoa in December by a mob of two dozen men, hanged to a tree, and shot. Efforts were made at the close of the year to bring the lynchers to justice.

Mining.—The statistics of the production of precious metals in 1896, as sent from Washington in June, credit Nevada with \$2,468,300 value in gold and \$1,355,895 in silver. Of the prospects of the State the Salt Lake "Tribune" says: "With the rest, Nevada is on the up grade. One gold mine, the De Lamar, last year gave up 90,000 tons of ore, which yielded \$2,000,000. This was far in the southeast portion of the State, 150 miles from railroads, while 100 miles north of the railroad extensive works have begun on the copper and placer gold of that region, and the old camp of Tusearora is in evidence as much as it was twenty years ago."

It was announced in May that a rich strike had been uncovered in the Buckeye mines in the Pine Nut group. The want of water is a serious drawback to work in this region, and plans have been made for an aqueduct from Alpine County, which will cost about \$1,000,000.

The new camp of Gold Creek, 60 miles from Elko, has attracted attention this year, and the gold and copper camp of Salmon, 60 miles north of Wells. In August was announced a valuable discovery in the Sierra Nevada mine. A crosscut run into the ledge showed 4 feet of ore which is reported to assay \$60 a ton in gold, and 5 feet of ore assaying about \$25 a ton.

Eastern capitalists have bonded the immense copper mines a short distance from Yerrington, 50 miles from Carson, and are to build a mill and smelters at once. The opening up of the copper industry in Nevada promises to extend further.

A new process for reducing ore tailings, by which it is possible to work up to 98 per cent. of the assay value of ore tailings of any grade, is in use near Dayton.

Legislative Session.—The Legislature convened Jan. 19 and adjourned March 15. Alexander McCone was President *pro tempore* of the Senate, and Lemuel Allen Speaker of the House.

The term of United States Senator John P. Jones expired, and he was made the candidate of the Silver party for re-election, George S. Nixon having been also a candidate before the caucus. William McMillan was the Republican candidate, and received 4 votes out of 45, Mr. Jones receiving 40 and Mr. Fitzgerald 1.

The Legislature passed 116 bills and 7 joint resolutions.

The most noted act of the session, giving rise to comment almost exclusively unfavorable all over the country, was the act "to restrict and license glove contests or exhibitions between man and man," thus legalizing prize fighting and allowing of the notorious fight which took place at Carson, March 17. The license for such an exhibition was placed at \$1,000. Later in the session a resolution was passed to submit to the people at the next general election the question whether this act shall be repealed.

The tax for State purposes was raised from 90 cents on the \$100 to 92, and an act was passed providing for the payment of taxes in semiannual installments, after Jan. 1, 1898. This bill had been passed at the preceding session and vetoed by Gov. Jones, and was now passed over the veto.

Militia affairs are placed under a new law, making it the duty of counties where military arms and the like are received for the use of the National Guard, to provide armories, at a rate not exceeding \$50 a month for each company, except that where guns requiring horses are used not more than \$5 additional may be allowed for each piece. In order to receive public money for support, a company must meet for drill and instruction not less than one hour at least twice each month, and practice at

rifle firing twice each month during five months of the year.

A new probate law of many sections was passed.

A resolution for a constitutional amendment restricting regular legislative sessions forty days and extraordinary sessions to ten days was passed.

An act "relating to the location, relocation, manner of recording lode and placer claims, mill sites, tunnel rights, amount of work necessary to hold possession of mining claims and the rights of co-owners therein," makes radical changes in the mining law in these respects. It was provided that the State superintendent should make a pamphlet compilation of the mining laws for publication.

The appropriations in the general bill aggregated \$304,080. This included—besides salaries of State officers—\$200 for expenses of teachers' institutes, \$33,500 University Book fund, \$6,120 armory rents, \$700 indexing State reports, \$73,500 for the State Insane Asylum, \$30,400 for the State Orphans' Home, \$50,500 for the State Prison, and \$4,000 for the education of the deaf, dumb, and blind.

An appropriation of \$12,000 was made for the building and equipment of a mechanical building at the university at Reno, and for completing the gymnasium; and another of \$11,746 to complete payment for the dormitories there. In returning this bill with his signature, the Governor charged extravagance in the furnishing of the building and the management of the University, and suggested the appointment of an investigating committee. A joint resolution for a committee to investigate State expenditures was passed.

Among other acts were:

Abolishing the office of Fish Commissioner from Sept. 1, 1897, and for protecting fish—the close season in lakes to be from Jan. 1 to June 1; in rivers from Oct. 1 to April 1.

Empowering the State Board of Education to grant life diplomas to residents of Nevada who have taught ten years.

Licensing the sale of cigarettes and cigarette papers—quarterly license, \$15.

Authorizing farmers and others to form mutual insurance companies. Providing for a fire insurance fund in the State treasury.

Authorizing the formation of corporations for the transaction of business as sureties on bonds.

Appropriating \$32,000 for a legislative fund.

Providing safeguards for school elections.

Amending the act for the preservation of wild game, beaver, and otter.

To prevent adulteration of candy.

Providing for payment of the militia.

To provide for free public libraries.

To provide for better preservation of mining records.

Authorizing the destruction of all wild or unbranded horses, mares, or colts over the age of six months running at large on public range lands.

A resolution for an amendment to allow woman suffrage passed the Senate by a vote of 9 to 5, but was lost in the Assembly by a vote of 15 to 15.

Vetoes were sustained on a bill giving mine-owners greater protection from ore thieves, and on one concerning the marking of mining claims.

NEW BRUNSWICK. Politics and Government.—The second session of the present Legislature was opened Feb. 4, 1897, with a speech from the throne by the Lieutenant Governor, the Hon. A. R. McLellan, of which the following are the significant portions:

"I am happy to be able to congratulate you upon the fairly prosperous condition of the business of the province. Providence has given to our farmers average crops, and wherever farming has been pursued upon correct principles results have been sat-

isfactory. Throughout the province there is a gradual improvement of methods in agriculture. The rapid development of the dairy industry in the province within the past few years and the many recent changes and improvements in agricultural methods has led my Government to consider carefully the state of laws with regard to agriculture with a view of bringing them up more fully to the requirements of the times.

"Our lumbermen have also had a prosperous year, and are looking to the future more hopefully than for some time past. The policy of my Government in conserving, as far as possible, the forest lands of the province has had an excellent effect upon the lumber business.

"While our province has during the past year been blessed with an abundant harvest and a large measure of general prosperity, a serious calamity has befallen our fellow-subjects in India, where a famine of almost unprecedented severity has desolated the wide extent of territory and brought suffering and death to many thousands. The bond which unites all dependencies of the Crown is happily such that disaster can befall no part of the empire, however remote, without exciting a responsive sympathy throughout the whole. Much has been done to alleviate the acute distress and suffering which mark the progress of this great disaster, but unhappily much yet remains to be done. I am satisfied that it is only necessary for me to point out to the people of this province how urgent is the call upon them from our suffering fellow-subjects in India to insure a ready and benevolent response.

"The subject of cold storage has occupied much of the attention of my Government during recess, and they have tried to arrange for the construction of such depots as will meet the requirements of the various sections of the province. Thus far their efforts have not met with the desired success.

"At the last session of the Legislature an appropriation was made to provide for the importation of cattle, sheep, and swine. My Government, after giving the matter careful consideration, did not for various reasons deem it expedient to make an importation of cattle during the then current year. A number of pure-bred swine were imported and distributed in various sections of the province, and I am pleased to inform you that this has met with general approval."

The Legislature adjourned on March 13. The following are the more important measures that were passed:

To incorporate the St. John Railway Terminal Company.

To provide for redemption of certain provincial debentures.

To amend the public-health act.

In amendment of the elections act of 1889.

To revise the act incorporating the Woodstock and Centerville Railway Company.

To amend and consolidate the acts relating to arrest, imprisonment, and examination of debtors.

To establish almshouses in the various municipalities.

In amendment of the succession duty act.

In addition to and in amendment of the liquor license act.

Government Changes.—The retirement of the Hon. James Mitchell, from failing health, took place in October, 1896, and he was succeeded in the premiership by the Hon. H. R. Emerson. Mr. Mitchell died soon afterward, amid general regret. Mr. Emerson retained his old post of Commissioner of Public Works, and the rest of the new ministry was unchanged. Hon. A. S. White became Attorney-General, Hon. L. J. Tweedie Provincial Secretary, Hon. A. T. Dunn Surveyor General, Hon. C. H. La-

billos Commissioner of Agriculture, Hon. L. P. Ferris minister without portfolio.

Finances.—Mr. Tweedie's budget speech was delivered Feb. 17, 1897. In the course of it he said:

"There have been five issues of bonds altogether. In November the Government sold \$40,000 of 4-per-cent. bonds at a rate of 105.96½. The bonds were issued for the construction of permanent bridges under 59th Victoria, chap. 10. They had forty years to run, and had no provision for optional redemption before maturity. A sinking fund was provided. In December \$7,000 of redemption bonds were sold at 105.52½, with twenty years to run and no optional redemption. In the same month there had been sold \$35,000 of Gulf Shore Railway bonds at 103.52½, with forty years to run, optional redemption after ten years. On Jan. 1, \$2,500 of bonds in account of deep-water wharves and grain elevators, St. John, had been sold, with forty years to run, and no option of redemption, at 106.06. On Feb. 8 there were sold on Parliament-bridge account bonds to the amount of \$25,000, under the same conditions as the issue of November, at 106.06½. Turning to the estimated expenditures for 1896 it would be seen that while the estimate for administration of justice was \$14,400, the actual outlay was \$42,705.14. Upon agriculture the estimate was \$24,150, while the actual expenditure was \$21,888.46. This was owing to the fact that only \$2,000 of bonds for importation of horses were retired instead of \$4,000, and the sinking fund was now all paid up. These bonds would come due in July, and the money was now in the People's Bank to pay them at maturity. The expenditure was also increased by the fact that no importation of cattle had been made last year as was intended. For the Boys' Industrial Home \$1,500 had been paid instead of the \$500 estimated. This institution was well worthy of support, and upon the representation of the trustees that the full amount authorized by law was needed, it was paid by the Government. Contingencies had been estimated at \$13,000, while the actual outlay was \$14,941. This amount varied from year to year somewhat, and was difficult to estimate. It included all the contingencies of the departments and all the expenses of the Legislature except salaries. The estimate of \$188,914.48 upon education had been slightly exceeded, the actual figures being \$191,638.21. The excess over the estimate had been applied to common schools. The expense for elections had been placed at \$6,000; the amount paid was \$5,844.87. The estimate for executive government was \$28,420, which had been exceeded by \$720.08. That increase was fully accounted for by increased salaries paid in the Board of Works. The work of that department was much greater than it had been formerly.

For fisheries protection \$1,200 had been asked, of which \$939.66 was expended. The allowance under the free-grants act, \$2,000, had been exceeded by \$48.50. For game protection \$2,000 had been voted, of which \$1,971.43 was expended. Interest on the bonded debt had been estimated at \$117,000, but \$119,375.97 had been expended. The cost of the Legislature was \$29,741.79, which was \$753.21 less than the amount voted by the House. The expenditure upon the marine museum of \$41,872 was slightly within the estimate. Upon mining \$500 was estimated, but only \$200 was expended. Grants of \$125 had been made to the Natural History Society and New Brunswick Historical Society. Public health had cost \$1,337.09, which was \$762.91 less than estimated, and \$4,400 had been expended upon public hospitals. The grant for public printing was \$11,000, and the amount actually expended on this service was \$11,433.36. Public works had cost \$203,150 as compared with the vote of \$195,150. Re-

funds, Crown lands, came to \$179, while the amount voted was \$200. For relief of the sufferers by the Chatham fire \$500 had been paid. For surveys and railway inspection the expenditure was \$1,879.51, while the estimate was \$2,000. Stumpage collections had cost \$9,250 as compared with the estimate of \$9,000. Unforeseen expenses had reached a total of \$1,465.55, or \$534.45 less than expected, making in all a total expenditure of \$701,462.03, while the estimate was \$699,879."

Mr. Tweedie said the actual normal revenue of the province last year was \$698,437.96, leaving a deficiency of \$3,015.07.

Education.—The annual report for 1896 of the Chief Superintendent of Education was voluminous. It shows that the total number of day schools was 1,724, with 57,612 pupils five to ten years of age; of Sunday schools, 1,020, with 32,707 pupils five to sixteen years of age.

The average yearly salaries were as follow: Grammar-school teachers, \$884.61; superior-school teachers, \$563.84; first class, male, \$504.59; second class, male, \$296.09; third class, male, \$227.77; first class, female, \$314.31; second class, female, \$235.48; third class, female, \$188.97.

The expenditure on schools for the year, not including district assessment for school buildings, apparatus, fuel, etc., was: Provincial grants, \$158,135.23; schoolhouse grants, \$955; county fund, \$91,527.88; district assessment (approximate), \$211,114.77; total, \$461,732.88.

Agriculture.—In his annual report, issued in December, 1897, Mr. Chipman, Secretary for Agriculture, gave the following estimate of the production for the year in tons: Hay, 756,384; oats, 1,715,826; wheat, 166,189; barley, 227,530; rye, 23,500; buckwheat, 203,896; beans, 25,193; potatoes, 4,352,898; turnips, etc., 1,491,784.

NEWFOUNDLAND. Legislation.—The Governor is Sir Herbert H. Murray, K. C. B. The legislation of the session of 1897 was not important, being mainly routine. The supply and revenue acts provided for the expenses of the civil government of the colony and for the continuance of the usual duties on imports. A grant of \$125,000 was made for construction and repairing of roads and bridges.

The railway act provided for the construction of three branch lines from the present trunk line, to Clarke's Beach, to Carbonear, and to Burnt Bay; also for fencing certain lines and laying heavier rails. The payment for these is to be in debenture bonds bearing interest at 3½ per cent. and maturing at the end of fifty years.

The act regarding the French treaties' act continues this act and the *modus vivendi* till Dec. 31, 1898.

The act amending the education law commemorates her Majesty's jubilee, 1897, by appropriating \$600 annually, for three scholarships.

An act respecting the administration of local affairs provides for the establishment of local boards to take charge of roads, etc.

An act to amend the deer-preservation act of 1896 provides that the close season for deer shall be from Feb. 1 to July 15, and from Oct. 7 to Oct. 20 in each year; and that no person is allowed to sell any part of a carcass from Feb. 20 till July 15.

The act for the preservation of beavers makes a close season for beavers from April 1, 1897, to Oct. 1, 1900; breaches of the law to be visited by penalties not exceeding \$200, or imprisonment for three months.

The act to amend the law of evidence provides that an entry in a banker's book shall in legal proceedings be received as *prima facie* evidence of such entry and of matters therein recorded.

The act respecting the summary jurisdiction of magistrates and justices of the peace provides that any person convicted of an offense for which a fine or penalty is provided who is unable to pay the fine may be imprisoned for a term proportioned to the amount of the fine—seven days for \$2.50; fourteen days for \$5, etc. Any person convicted of being drunk, or of carnally knowing any girl under sixteen years of age, may be fined and imprisoned, or imprisoned for six months with hard labor.

The usual money-appropriation bills for the various services of Government closed the legislation of the session.

The act to amend chapter cxxiv. of the Consolidated Statutes (second series), entitled "of the coast fisheries," and an "Act to amend the election act of 1889 and the acts in amendment thereof," were reserved for the consideration of her Majesty's Government, and were not assented to by the Governor. The last-named act was finally disallowed by the Imperial Government.

Fisheries.—The seal fishery of 1897 was one of the poorest on record, the total catch of seals having been only 126,628, and their weight 2,737 tons. The average number of seals taken annually of late years is about 300,000. There were 20 steamers engaged in this industry, and their crews numbered 4,888 in 1897.

On the Labrador coast and the northeastern bays the cod fishery in 1897 was a failure, but elsewhere it was fairly good. The total catch was about 1,000,000 quintals, being 300,000 below an average. Only 48 vessels engaged in the bank fishery, the crews numbering 616. Their catch reached 54,802 quintals. Along with this falling off came a very serious decline in the price of dried codfish, amounting to \$1.50 a quintal. This was caused largely by the glutted condition of European markets and the poverty of the people in those fish-consuming countries. The consequences were disastrous to the fishermen of Newfoundland, of whom many are in a very impoverished condition and suffer privations during the long winter. Prices of fish are now improving. The French are the great rivals of Newfoundland fishermen in European markets, and, being sustained by a large bounty, they are able in many places to undersell the Newfoundland exporters.

The lobster fishery of 1897 was the best on record. The quantity taken was 60,000 cases, each case containing 48 pounds. The value was about \$400,000. The price of lobsters is steadily advancing in all countries, owing to increasing scarcity.

The herring fishery of 1897 was excellent. Not fewer than 60,000 barrels of fresh herring were exported in a frozen condition from Placentia Bay alone to the United States. The export of pickled herring was about 80,000 barrels. Were this industry carried on in a skillful and intelligent manner, and herring cured and packed in the country instead of being sold fresh to others, at \$1 a barrel, it would be worth \$3,000,000 annually.

The salmon fishery was a disastrous failure. The once prolific salmon rivers were neglected and ruined by "barring" and overfishing. They are now thoroughly protected and placed under the guardianship of the Department of Fisheries. So depleted had they become that years must elapse before they are restored to their former condition.

In the artificial propagation of lobsters Newfoundland leads the world. The average number of young lobsters hatched and planted annually in the bays is 450,000,000. This is done by means of floating incubators, the invention of A. Nielsen, Superintendent of Fisheries. Twenty-eight men are employed in working these incubators, at an annual cost of \$1,650. The work had been going on for

seven years, and the good results are more apparent every year. There are 25 stations along the shores of the large bays where this artificial propagation is carried on.

At the Dildo cod hatchery, Trinity Bay, the number of cod fry hatched ranges from 180,000,000 to 225,000,000. In that bay there is already a marked increase in the number of codfish of various ages, giving promise of success for this experiment.

Finances.—The revenue, according to the latest returns, reached \$1,564,457. The value of the imports was \$5,990,571; of the exports, \$6,638,187. The funded public debt at the close of 1896 was \$13,096,945. By judicious retrenchments the annual expenditure of the colony for civil services has been reduced by nearly \$500,000—an amount which will pay the interest on the public debt—while the efficiency of the public service is not impaired by the reduction. The finances of the colony are now in a sound condition, and its credit abroad is excellent. The interest on the public debt is about \$500,000.

The grant for education in 1895-'96 was \$164,888; for the relief of the poor and support of lunatics, \$262,552; for the support and extension of telegraph lines, \$25,325.

Commerce.—In 1895-'96 the colony imported 88,223 tons of coal, value \$190,160; 14,515 barrels of beef, value \$145,150; 732,800 pounds of butter, value \$109,920; 362,923 barrels of flour, value \$1,270,230; 1,338,463 gallons of molasses, value \$334,165; 945,005 pounds of tea, value \$136,919; 2,625,800 pounds of sugar, value \$83,615; tobacco, 284,885 pounds, value \$28,359; wines and spirits, 52,688 gallons, value \$59,125.

On Dec. 31, 1896, the registered shipping was: Sailing vessels, 2,308, of 98,718 tons; 32 steamers, of 5,661 tons.

In 1896 the value of imports was as follows:

From the United Kingdom	\$1,975,754
From Canada	2,281,641
From the British West Indies	296,018
From the United States	1,473,721

The value of the exports for the same year was as follows:

To the United Kingdom	\$1,726,167
To Canada	635,833
To the British West Indies	303,314
To the United States	467,065
To Spain	290,432
To Portugal	1,345,544
To Italy	314,174
To France	18,526
To Brazil	1,092,277

Events.—The most important event of the year was the completion of the transinsular railway, 550 miles, from St. John's to Port-au-Basque, at the southeastern extremity of the island. This line passes through the great valleys of the Exploits, Humber, St. George's, and Codroy, and opens up the best agricultural, timber, and mineral lands of the colony, thus rendering possible the development of its resources and the settlement of the interior. The cost of the line was about \$13,000,000. The contractor received \$15,600 a mile for construction in debentures of the colony, bearing interest at 3½ per cent. For operating the line for the first ten years he receives a concession of 5,000 acres for each mile of railway, to be selected along the line in blocks of one mile fronting the railway and eight miles in depth, the Government taking alternate blocks. If the land along the line is swampy or useless, the contractor can select his concessions elsewhere. His total land grant is thus 2,500,000 acres. He has built a fine steamer to ply between Port-au-Basque and Sydney, in Cape Breton. She makes the run in five or six hours. Placentia is at present the port of departure, as the wharves,

stores, etc., at Port-au-Basque are not completed. Newfoundland has now a semiweekly mail, instead of a fortnightly one as formerly. The railway is equipped with the finest palace cars, and hotels will be erected at the most desirable places.

A coal field has been discovered at Grand lake. The good lands along the line will be sold to settlers. When all is complete a passenger will be able to leave St. John's and in fifty hours arrive at Montreal.

Early in 1898 the contractor who built this line entered into a contract with the Government to operate all the railways of the colony which have been consolidated under his management for fifty years. He has also purchased the dry dock at St. John's for \$325,000 and contracted to work it on a large scale; also he is to build eight steamers for local service on the bays. He has leased the coal areas, and undertakes to work them and pay a royalty on the output. He is to complete and operate three short branch lines of railway. At the expiration of fifty years the reversion of the railway will belong to him, and for this he pays to the colony now \$1,000,000.

The general election was held Oct. 28. The result was, that the political party, led by Sir William Whiteway, who had held the reins of power for eight years, was defeated by a very large majority, and Sir James Winter became Premier, his principal colleagues being the Hon. A. B. Morine, Receiver General, and the Hon. A. Robinson, Colonial Secretary.
